FOREWORD

International Balkan and Near Eastern Congress Series brings together many distinguished social and behavioral science researchers from all over the world. Participants find opportunities for presenting new research, exchanging information, and discussing current issues.

We are delighted and honored to host the IBANESS Congress Series in Plovdiv / Bulgaria. Presented papers have been selected from submitted papers by the referees. Sincere thanks to those all who have submitted papers.

We hope that through exchange of the presented researches and experiences, the Congress will enhance communication and dissemination of knowledge in Balkan and Near Eastern Countries.

Abstract: This paper in the comprehensive aspect is of a combined character, which includes the summary and research features of the research topic, providing sufficient knowledge for the employment relationship and rights from this field in Kosovo. The paper initially contains historical aspects of the development of law and labour relations in Kosovo. In addition to this, it further contains important comparative aspects, offering the possibility of dealing with labour disputes, as well as to analyse the advantages and difficulties offered by the legal framework in dealing with this issue. The paper presents the role of responsible institutions, including the court, respectively, the trend of judicial practice for conflicts arising from labour relations. On the other hand, it also includes statistical data based on the annual work reports of the competent institutions that inspect the respect of the rights derived from the employment relationship. The importance of this paper is also increased by the active research activity argued through interviews conducted with judges and representatives of institutions that deal with labour complaints and disputes. As a result, the primary objective of this work is to examine the legal framework, starting from the employment institutions and up to the practice of these institutions that deal with the relevant disputes from the employment relationship. In order to secure the data, the comparative method of interweaving the main legal sources that determine the field of competence of the competent institutions was used. The second method is the research method through interviews conducted with officials in charge of state institutions whose duty is to protect the rights of this category. In order to provide numerical data, a statistical method was used, through which the number of complaints received by the Independent Supervisory Council for the Civil Service of Kosovo was presented, and on the other hand, the total number of employees without labour contracts in the inspected institutions by the Labour Inspectorate was presented in three last years. The research indicates that the Law on Labour is a basic and general law dedicated to all employed citizens in the Republic of Kosovo, creating an obligation for state and private institutions to respect and take measures to protect labour rights. Based on the interviews conducted with judges, it is emphasized that regarding the nature of the disputes that are presented the most are: requests for the annulment of the employer's decisions which, as a result, have caused the termination of the labour contracts, complaints for returning to the workplace with all the rights guaranteed by law as well as requests for the cancellation of competitions. The data indicate that during these last three years, the year 2021 has been the year with the most complaints registered by the Independent Supervisory Council. Also, it is the same year during which the Labour Inspectorate recorded the largest number of employees without labour contracts.

Keywords: Employment Relationship, Labour Disputes, Legal Framework, Employer, Labour Rights.

1. INTRODUCTION

When a person feels damaged because a right has been violated, regardless of the category to which it belongs, he will feel violated and look for the opportunity to seek protection, respectively to return what has been damaged or lost, whether it is a material good or immaterial. In situations where a right that consists in the employment relationship is violated, this creates significant difficulties in terms of treatment and providing protection, since state institutions must be very careful in providing the right protection. The fact that the victim and society need proper protection, that a right not only exists but must be implemented, that those who violate this right will be punished, present a need and necessary acts that guarantee the provision of proper protection, especially disputes related to the employment relationship. The treatment of these disputes is also a test for society and the state, which treatment proves how democratic the state is in general.

The importance and the basic purpose of this topic is based on the need that at the present time in the Kosovar society, the most difficult aspiration for every citizen is the establishment of an employment relationship based on the preparations and qualifications that they possess. Until recently, the large number of unemployed has been quite evident, which had created convenience and opportunity for employers to terminate the employment relationship at any time and hire new employees, especially in the private sector. Discrimination in terms of gender equality, political interventions, nepotism, the lack of a proper institutional approach, bureaucratic difficulties within the organization are some of the reasons that affect the initiation of judicial

proceedings where the subject of the case are disputes from the employment relationship. On the other hand, the cases of the termination of the employment relationship without a legal basis, the termination of the labour contract, the termination of the employment relationship unilaterally, are some of the reasons on which this study will focus.

The first objective of this paper is the observation of the legal framework, starting from the employer institution, up to the judicial practice related to the disputes that arise from the employment relationships examined in many aspects. This review aims to highlight the importance and role of institutions in dealing with and providing proper protection in these disputes. The next objective is the categorization of the complaints received by the Independent Supervisory Council depending on the object that was disputed during the years 2019, 2020 and 2021. In the framework of statistical data, this paper also follows the quantitative treatment of the inspection activity of the Labour Inspectorate in relation to the identification of employees who have employment relationships without formal contracts and its influence and role in the legalization of employees and economic entities. The final objective of this paper is to look at the practise of institutions work, through a research aspect that deal with such disputes in the framework of the employment relationship.

Initially, the comparative method of interweaving the main legal sources with the secondary ones was used, through which the competent bodies act in treating complaints or disputes from the employment relationship. The second method is the research method through the interviews conducted with responsible officials of state institutions, specifically with judges who deal with civil cases, especially disputes from the employment relationship, who were asked to present their experiences with which types of disputes from the employment relationship they faced the most of the work. This method has also been used with the Chief Inspector of the Labour Inspectorate in relation to his professional evaluations for the efficiency of the implementation of the Labour Law and other acts from this field. A statistical method was used to provide numerical data, in which case the number of complaints received by the Independent Supervisory Council for the Civil Service of Kosovo for the years 2019, 2020 and 2021 was presented. Also, this method was used to provide data that refer to the inspection activity of the Labour Inspectorate to present the number of employees who have established employment relationships informally or without labour contracts during the years 2020, 2021 and 2022. In the framework of this method, an attempt has been made to provide numerical data in terms of the number of employees and economic subjects that have been legalized during these years.

2. BASIC KNOWLEDGE AND HISTORY OF THE DEVELOPMENT OF LABOUR LAW

Labour law represents a branch of the positive legal system, which treats employment relationships as one of the relations that make up a special group of social relations with special importance and characteristics. Since the labour law has employment relationships as its object of treatment, it turns out that it is not only the positive law of employment relationships and other rights derived from this field, but that this law also deals with the theoretical study and practice of legal regulations and other provisions with the aim of advancing labour rights by providing employees with instruments and a favourable environment for guaranteeing the rights derived from the law and the labour contract.

The notion and basic element of the labour law is the labour itself, which represents a conscious and voluntary activity, natural but tiring, because it contains effort and the appropriate commitment for the creation or processing of a useful activity, whether material or immaterial (intellectual). This activity is associated with the element of compensation, since the employee is rewarded for the job performed on the basis of the salary, so that the result of a work done will have effects for the social community as well (Çela, 1998). Labour law aims to reveal the narrow circle of employment relationships and this happens because not every job performed constitutes an employment relationship in the scientific and legal sense of labour law. If an individual works on his own account, without seeking the help of others or other services and performs independent work, he is called an independent employee.

The history and development of labour relations in the informal aspect dates from the slave ownership system, a system in which the slave was the main producer of all material values in agriculture and crafts. Although the slave did not have freedom and in legal terms was treated as an object under the unlimited power of the slave owner, this situation in itself contains elements of a compensated employment relationship in the primitive forms of that time. Even in the feudal system, there were no formalized and regulated employment relations in return for what was worked and produced. The social relations of this period were characterized by the dependence of the serf on the feudal lord and that the latter had the right to sell or buy the serf, except that it was a rule that he did not have the right to kill the serf (Ismajli, 2005).

The labour law and the employment relationship in terms of content begin to appear at the end of the 17th century and the beginning of the 18th century when the industrial revolution came to England, which period is accompanied by the production of cars, especially the steam car, penetrating into European countries and other countries of the world. All this was accompanied by the change of systems from feudal to capitalist. According to Aliu (2010), in the past employment relationships were regulated by civil law, because this was convenient for the ruling-capitalist class, since it was able to exploit the working class more easily. In the absence of an agreement for the equality of the parties, the means of production were in the hands of one person and this enabled the exploitation of the employee.

Today, labour law is an independent branch of law that was formulated at the beginning of the 19th century as a result of the largest intervention of the state in the regulation of employment relationships, and for most of the states it became evident that employees must have their rights. The constitutionalising of the right to work and other rights related to work comes after the approval of the Weimar Constitution of 1919, while the recognition and incorporation of this right in the constitutional texts occurs especially after the Second World War (Hasani & Cukalovic, 2013).

2.1. The history and development of employment relationships in the Republic of Kosovo

Based on the fact that Kosovo for a long time was part of the Republic of former Yugoslavia, until recently employment relationships within the province were regulated by the Yugoslav law on basic employment relationships. Regarding the legal regulations, Kosovo until the Law on Labour was issued in 2010 was faced with a number of provisions distributed in many laws and regulations which were issued in different economic, social and political circumstances. In this regard, UNMIK Regulations 1999/24 and 2000/59 had defined the legislation in force and according to these regulations, as laws in force in Kosovo were the laws that were in force until March of 1989 and the UNMIK Regulations, respectively in the field of labour were: the Law on Labour of the KSA of Kosovo of 1989, the Law on Labour of the former Yugoslavia of 1977 as well as the UNMIK Regulation 2001/27 on the Basic Law on Labour in Kosovo of 2001. From this combination of legal acts, the judges have had a lot of difficulty in identifying the legal norm that must be applied in order to apply the material right. With the entry into force of the Law on Labour, the unification of labour legislation has been made and the right of employees to seek judicial protection has been largely guaranteed.

For a long time, since the Second World War, citizens of Albanian nationality were deprived of compliance with the provisions of the Convention on Discrimination in the Field of Employment and Occupation of the International Labour Organization of 1958. This convention also obliged Yugoslavia as a signatory state. The Convention defined the concept of discrimination and provided for the obligation of the signatory states to fully implement the affirmative provisions that refer to opportunities and equal treatment in employment and occupation. According to the Convention on Discrimination in Employment and Occupation (1958) any difference, exclusion or preference based on race, sex, religion, public opinion, national origin or social origin that has the effect of disrupting or distorting equality is prohibited of opportunities or treatment in the field of employment or profession. In the preamble of the Constitution of the International Labour Organization, among other things, the establishment of social justice and the improvement of working conditions as the main prerequisite for maintaining peace in the world is foreseen as the main goal (Riza, 2011).

Albanian citizens in almost all forms of rights realization, including labour rights, were deprived of the main principle guaranteed by the Universal Declaration of Human Rights regarding the employment relationship, which guarantees that each person enjoys the right to work, namely the right not to be discriminated against in this regard (United Nations Human Rights, 1948). It is worth noting that until the nineties, the only thing that was favourable for the Albanians of Kosovo, which in economic terms probably had its own advantages, was that the Kosovar Albanians were allowed to work outside the borders of the former Yugoslavia, alongside citizens of other nationalities. Therefore, many citizens of Albanian nationality manage to create employment relationships in Western countries, but also in many other countries of the world, and all this thanks to the agreement that the Yugoslav state had with the respective countries.

After the nineties, the former Yugoslavia began to disintegrate due to territorial claims. Then the entire autonomy of Kosovo is suppressed, and with this the right to work, where the Albanian citizens of Kosovo were deprived of almost every right, including that of establishing an employment relationship. The repressive system forced the Albanians, through pressure, mistreatment and other forms, to expel them without any right from the employment relationship, a situation which caused a poor socio-economic condition. All the legislation that had to do with the employment relationship was just fictitious, because the Albanians were

limited in all ways and opportunities to claim their rights, one of them being the right to work. After the end of the war in Kosovo 1998/99 and after the approval of resolution 1244 of the UN Security Council, the international monitoring mission - UNMIK is installed in Kosovo, which mission finds Kosovo in a chaotic state regarding the socio-economic infrastructure, the legal one in general and the legal infrastructure related to the employment relationship in particular.

In 2001, the UNMIK mission managed to issue a regulation 2001/27, which regulation was the only act that actually contained the designation as a law, or as it was called the "UNMIK Regulation on the Basic Law on Labour. Such a regulation, regardless of the time it was issued, contained many aspects of harmonizing issues related to the employment relationship. Among other things, this regulation prohibited discrimination at work, determined the minimum age for work, prohibited forced labour, and guaranteed the right to organize trade unions. It also regulated other issues related to the labour contract, working hours, annual leave, official holidays, maternity leave, medical leave, necessary inspections and punitive measures if employers did not comply with this regulation (United Nations Interim Administration Mission in Kosovo, 2001). The history of the regulation of the employment relationship continues to be accompanied by difficulties, since despite the establishment of temporary self-government institutions in March 2002, the Government and the Assembly attempted to issue a more advanced law, but without success.

On April 30, 2010, the Government of Kosovo approved the Law on Labour and this was the third time after 2006 and 2008 that the Government approved this law, with some changes in content. The non-approval of the Law on Labour until this time has been justified by the high financial cost, then some of the businesses in Kosovo have opposed some aspects of the Law on Labour, which according to them could burden businesses financially and would discourage foreign investments. On the other hand, the employee organizations persistently demanded the approval of the Law on Labour and other laws in this field. As mentioned above, the main reasons given for disapproval of the Law on Labour were the high financial cost of the law, the underdeveloped economy, foreign investments, pressures from the International Monetary Fund, etc. (Instituti për Studime të Avancuara, 2010). Regardless of this, the Law on Labour entered into force in December 2010 and constitutes the basic legal framework for the regulation of many aspects of the employment relationship. After it, many other by-laws were issued that largely regulate issues related to the employment relationship in Kosovo. Among the legal acts within the national level, the most sublime act regarding the legal basis in a parliamentary state is the Constitution of the country. The constitution as the highest act is a creative norm from which created norms arise. Therefore, it presents a contract between the people and the state and this contract is an agreement to organize as a legal state (Traja, 2000).

3. THE IMPORTANCE OF TREATMENT OF EMPLOYMENT RELATIONSHIPS AND LABOUR DISPUTES

The rights derived from the employment relationship are treated as inalienable and unlimited rights where both the employer and the institution are obliged to respect them and enable the employees to realize these rights. The socio-economic situation in a society is an aspect in itself that also includes human security, therefore even in this context the right to work plays an important role in achieving human security. People without employment relationship are either dependent on aid, which is a burden on society, or have no perspective at all. The rights of employees not only include ensuring suitable working conditions, but also include protection against discrimination and exploitation in the workplace. Essentially, work is not only about ensuring well-being, but also about many relationships that determine participation in society, being closely connected in this way with human dignity. The opposite of all this, which coincides with optimal conditions and standards, can lead to personal insecurity, danger, unhealthy and unfair conditions. Therefore, unemployment and the denial of rights derived from the employment relationship attempt to create unrest and instability in society.

In order to understand the importance of all this, in the human dimension of the workforce, it is necessary to understand what labour disputes are and how the Law on Labour and other acts in Kosovo regulate them. Dispute should be understood as the situation in which a person claims to have a subjective civil right against another person, while the latter denies its existence, or for some other reason denies his obligation to behave in a certain way (Brestovci et al., 2017). In a broader sense, the labour dispute is a dispute that arises when the rights provided by law from the employment relationship are violated or when certain obligations to the employee arising from the employment relationship are fulfilled. In contrast to the dispute, Musa (2013) defines the concept of the contentious issue by emphasizing that it represents the certain vital relationship (material-legal relationship) in which a subject considers and verifies that in relation to other legal subjects, the legal right belongs to him, while the other legal subject contests either the existence of the subjective right

itself or the existence of legal authorizations. The employee whose right has been violated by the employment relationship can request its protection from the competent institutions, starting from the employer, the labour inspectorate bodies, the trade unions and finally the protection and realization of the right can also be requested from the court as the final body to decide on the disputed issue.

Historically, protection at work includes all provisions, technical, health and social measures aimed at ensuring the most suitable conditions to prevent accidents at work, occupational diseases and other diseases related to the work environment (Ligji i Punës, 2010). Historically, protection at work includes all provisions, technical, health and social measures aimed at ensuring the most suitable conditions to prevent accidents at work, occupational diseases and other diseases related to the work environment (Ligji i Punës, 2010). The idea of socio-economic security is a priority of many worldwide governments, so that in this direction in the international aspect, the rights of workers before the Second World War when the International Labour Organization was founded in 1919 were framed in its legislation. Such a practice continued even after the Second World War in the regulation of standards with the establishment of the United Nations.

3.1. Disputes from the employment relationship according to the Law on Labour and other acts in force

It is understandable that the persons who are in the employment relationship, in addition to the obligations towards work, they also have rights derived from the employment relationship. These rights are primarily regulated by the Law on Labour, then by internal acts as well as by collective contracts. Since neither the Law on Labour nor the Law on Contested Procedure determine in any provision what is a dispute from the employment relationship, we must always assume that the employer is obliged to create opportunities for employees to realize their rights from employment relationship. If these rights are not respected or employees are prevented from realizing them, a labour dispute is presented. According to Ismajli (2005), in the broadest sense, a labour dispute is a dispute that arises when the rights foreseen by law from the employment relationship are violated, or when certain obligations to the employee are not fulfilled. The employee who is in an employment relationship has the right to request the realization of his rights or he has the right to oppose the decision that was taken regarding his rights by expressing his displeasure and disagreement with the given decision.

If we approach the comparative aspect of the two basic laws in force that regulate these disputes, in terms of content, almost both of these laws include general clarifications of disputes from the employment relationship. According to the Law on Labour (2010), the employee who believes that the employer has violated the relevant right from the employment relationship, can submit a request to the employer for the realization of the violated right. The employer is obliged to decide according to the employee's request within fifteen (15) days from the date of receipt of the request. The decision is delivered to the employee in written form within eight (8) days. On the other hand, the employee who is not satisfied with the decision by which he thinks that his rights have been violated or does not receive an answer within the deadline set by this law, in the following period of thirty (30) days may initiate labour dispute in the competent court. Procedural rules from the field of employment relationships are aimed at providing protection for the employee's rights as quickly as possible and preventing the illegal acts of the employer against the employee.

The advantages that are evident in the Law on Contested Procedure in the dealing of disputes from the employment relationship, especially in the case of setting deadlines and convening court hearings, the court will always take into account the need for urgent settlement of eventual disputes. In the judgment by which the fulfilment of any obligation is ordered, the court sets the deadline of seven (7) days. Also, for this category of disputes, the law offers the most efficient possibility of protection where it determines that the deadline for filing an appeal against the judgment is seven (7) days (Ligji për Procedurën Kontestimore, 2008). As regards the assignment of competence in disputes arising from the employment relationship, the rules apply that if the plaintiff in the dispute arising from the employment relationship is the employee, then the court of territorial jurisdiction over the defendant is competent for trial, but also the court in the territory of which the work is performed or has been performed or the court in the territory of which the employment relationship was established. (Ismajli, 2005).

In the following, we will present the role of the court in resolving disputes from the employment relationship based on the provisions that determine the procedural acts of this institution. Referring to all the possibilities offered by the legal framework to find the protection of legal relations that coincide with the employment relationship, as the last possibility for the parties, it remains to turn to the competent court. Many countries in the world today have special courts and specialized judges who judge only contested cases from the

employment relationship. However, such a thing is not expected to happen in Kosovo, because the Law on Courts does not provide for such a division, since disputes from the employment relationship are resolved by the basic courts. If the large number of cases and the small number of judges are taken as a basis, these disputes, despite the importance and advantages given by the law, remain untreated. Above is mentioned the situation if the employee considers that his rights have been violated by the employment relationship and the legal opportunities that are guaranteed to him for submitting a request to the employer for the purpose of protection and the realization of the rights that he claims have been violated. The employer is obliged to decide according to the request of the employee within the period of fifteen (15) days.

Any employee who is not satisfied with the decision from the above-mentioned situation or does not receive an answer within the deadline, then in the following period of thirty (30) days can initiate a labour dispute in the competent court. If the court finds that the termination of the labour contract by the employer is illegal, based on the provisions of the Law on Labour (2010), the Collective Contract or the Employment Contract, it will order the employer to execute one of these compensations:

- To pay compensation to the employee, in addition to the allowances and amounts due to the employee under the aforementioned acts, in such amounts as the court considers fair and adequate, but which must not be less than twice the value of any compensation which belongs to the employee at the time of dismissal;
- If the dismissal is deemed illegal according to the law, the court may return the employee to the workplace and order the compensation of all wages and other benefits lost during the illegal dismissal;
- The employer is obliged to implement the decision of the competent court within the specified period.

Regarding the judicial procedure in the treatment of disputes from the employment relationship, it is important to mention some of the aspects provided by the Law on Contested Procedure. When setting deadlines and convening hearings in labour disputes, the court must always take into account the need for an urgent resolution of disputes. In the judgment by which the fulfilment of the obligation is ordered, the court sets the deadline of seven (7) days. The same deadline applies to the submission of the appeal against the judgment or decision. Favouring the treatment of disputes from the employment relationship is also added by the issue of revision as the possibility of using the legal remedy. The law has determined that against the judgment of the first instance, the parties can present a revision within the term of thirty (30) days from the day on which the judgment was delivered to them (Law on Contested Procedure, 2008). In terms of providing legal protection and the role of the court in this regard, the legal framework supports the protection of employment relationships in criminal cases as well, as it has sanctioned acts that contradict the legal acts that regulate this field. The Criminal Code of the Republic of Kosovo has defined the actions that consume elements of the criminal offense from the field of labour such as: Violating rights in labour relations, Violating rights of employment and unemployment, Violation of the right to management, Violation of the right to strike, Misuse of the right to strike, Violating social insurance rights and Misuse of social insurance rights (Kodi Penal i Republikës së Kosovës, 2019). As a result of the materialization of the protection of this right also in terms of criminal liability, in practice these articles are little or not at all implemented because the phenomenon of reporting violators of these rights is accompanied by fear and uncertainty due to numerous political, nepotistic, religious and other obvious reasons.

In order for the paper to acquire the form of importance in terms of providing decisive protection, research has also been developed on the trend of the judicial practice of the Basic Court in Prizren in the treatment of disputes from the employment relationship. In this way, interviews were conducted with judges who deal with civil cases, particularly labour disputes. From the evaluations of the judges, it is emphasized that in terms of the nature of the disputes that are presented the most are: requests for the annulment of the decisions of the employer with which the labour contracts were terminated in violation of the Law on Labour and other acts in force, requests for restitution in the workplace with all rights deriving from the employment relationship, requests for annulment of decisions for candidate selection (cancellation of competitions) as well as lawsuits for annulment of employers' decisions with which any disciplinary measure has been imposed on employees.

4. THE ROLE OF THE INDEPENDENT SUPERVISORY COUNCIL FOR THE CIVIL SERVICE OF KOSOVO AND THE LABOUR INSPECTORATE IN THE PROTECTION OF WORKERS' RIGHTS.

4.1. The history and mandate of the Council

The Independent Supervisory Council is foreseen in the Constitution of the Republic of Kosovo as the highest legal act of the state, according to which this council ensures compliance with the rules and principles that

regulate the civil service, reflecting the diversity of the people of the Republic of Kosovo (Kushtetuta e Republikës së Kosovës, 2008). According to the Law on the Independent Supervisory Council for the Civil Service of Kosovo (2018), this Council is an independent body that reports to the Assembly of the Republic of Kosovo. The Council was originally established by UNMIK Regulation no. 2001/36 on the Civil Service of Kosovo and began to function in 2004 within the framework of the Ministry of Public Services. The functions of this institution are focused on: examining and making decisions on complaints of civil servants against the decisions of the employment body in all Civil Service institutions in accordance with the rules and principles set forth in the Law on Civil Service of Kosovo; decide if the appointments of civil servants at the management level are made in accordance with the legal rules and principles, as well as supervise the implementation of the rules and principles of the civil service legislation.

Civil servants of Kosovo and applicants for employment in the Civil Service can complain to the Council, provided that the complainant must use the internal procedure of the employment body. So, at first one should complain to the complaints commission of the employment authority and then to the Council, unless the latter excludes this request due to the reasonable fear of retaliation, the failure of the employment body to resolve the complaint within thirty (30) days or for any other reasonable reason. The Council must issue a written decision within sixty days (60) after the end of the appeal procedure, justifying the decision and the legal and factual basis of that decision. In cases where the Council is convinced that through the disputed decision the principles or rules of the Civil Service of the Republic of Kosovo have been violated, it issues a written decision which is addressed to the high-level management official or the main person in charge of the relevant employment body. Regarding the execution of the decisions of the Council, they represent administrative decisions in the final form and the execution must be done within a period of fifteen (15) days from the day of acceptance of the decision.

At the end of each year, the Council prepares and publishes the work report with detailed data and information for all activities and works performed. Specifically, this report includes the work that was carried out in the framework of the function of reviewing and deciding on the complaints of civil servants and candidates for admission to the civil service, the function of supervising the selection procedure and deciding on the appointments of civil servants at the high management level as well as the function of monitoring the implementation of the rules and principles of the civil service legislation. Also, depending on the activities, the report may contain data regarding the Council's representation in judicial proceedings, cooperation with local and international institutions, as well as the Council's involvement in important meetings related to reform processes in public administration.

Table 1: Complaints received, by complaint subject matter

		Complaint reporting over the years		
		2019	2020	2021
No.	Object of complaint	Number of complaints		
1	Disputed recruitment	405	70	209
2	Material compensation	97	101	310
3	Request within employment relationship	86	126	425
4	Termination of employment relationship	53	26	68
5	Disciplinary measure	53	45	98
6	Transfer	47	18	43
7	Performance appraisal	13	11	33
8	Preventive suspension	13	19	12
9	Violation of right to salary	7	20	28
10	Failure to enforce a decision of Complaints Commission	4	2	0
11	Demotion	2	2	3
12	Against appointment of acting in duty	1	0	1
13	Career advancement issues	1	1	2
14	Non-extension of employment contract	0	2	1
15	Total	784	444	1235

Source: Note. From "Work report of the Independent Supervisory Council for the Civil Service of Kosovo for the years 2019, 2020, 2021" by the Independent Supervisory Council Civil Service, (<https://kpmshc.rks-gov.net/>). Copyright 2019 by the Independent Supervisory Council for the Civil Service of Kosovo.

From the work reports for the respective years, it can be seen that during 2019, the Council received a total of seven hundred and eighty-four complaints, which had a different object of complaint. As can be seen from the results, one of the issues that has been complained about the most is the disputed recruitment, which in our country is quite widespread as a phenomenon. After this, other complained categories continue, accompanied by not very big changes, in which case the second one that ranks according to the report has to do with material compensations and request within employment relationship. In the same number, there were complaints regarding the termination of the employment relationship and disciplinary measures imposed on the employees due to non-fulfilment of duties and behaviour according to the responsibilities defined by law. A small number of complaints were registered in categories such as demotion, against appointment of acting in duty and career advancement issues.

From the data provided, it can be seen a noticeable decrease in the submission of complaints in 2020. In contrast to the previous year, where at the top of the list of complaints were disputed recruitment, this year a total of one hundred and twenty-six complaints were submitted that derive from the employment relationship. Material compensation has marked a slight increase with four complaints more than the previous year, while disputed recruitment have marked a marked decrease with three hundred and thirty-five fewer complaints. In addition, there has been a decrease in the number of complaints regarding the termination of the employment relationship, disciplinary measures, transfers and appraisals made in the framework of the work. Complaints for failure to enforce decisions of Complaints Commission and demotions remained the same, with minimal changes. However, unlike the previous year, this year there is an increase in the violation of the right to salary with thirteen more cases and two cases of non-extension of employment contract.

Compared to the previous two years, the year 2021 has marked an enormous increase in terms of the submission of complaints to the Independent Supervisory Council. The data from the report indicate that the complaints from the employment relationship have continued to show a significant increase, which indicates that our society from year to year is facing dissatisfaction and irregularities in the exercise of the rights that are due to the Law on Labour. Mainly during these three years, it is mainly these categories with the most reported complaints. The number of complaints regarding termination of employment and disciplinary measures this year was higher compared to the previous two years. Violations of the right to salary have marked a slight increase, while categories such as demotions, suspensions, career advancements and non-extension of employment contract have a similar number in terms of complaints to the Council.

4.2. The role of the Labour Inspectorate in the protection of rights from the employment relationship

Inspectorates in many countries with advanced democracies, but also in Kosovo, are formed as special bodies with an administrative character whose role is the implementation of laws in practice. One of the reasons for the establishment of inspectorates has to do with the implementation of laws in practice, since this activity is not easy because each of the institutions must have a clear mandate, be well organized and be responsible for the fulfilment of tasks entrusted by law. In Kosovo, a number of different inspectorates have been established that take care of the implementation of laws in the responsible areas.

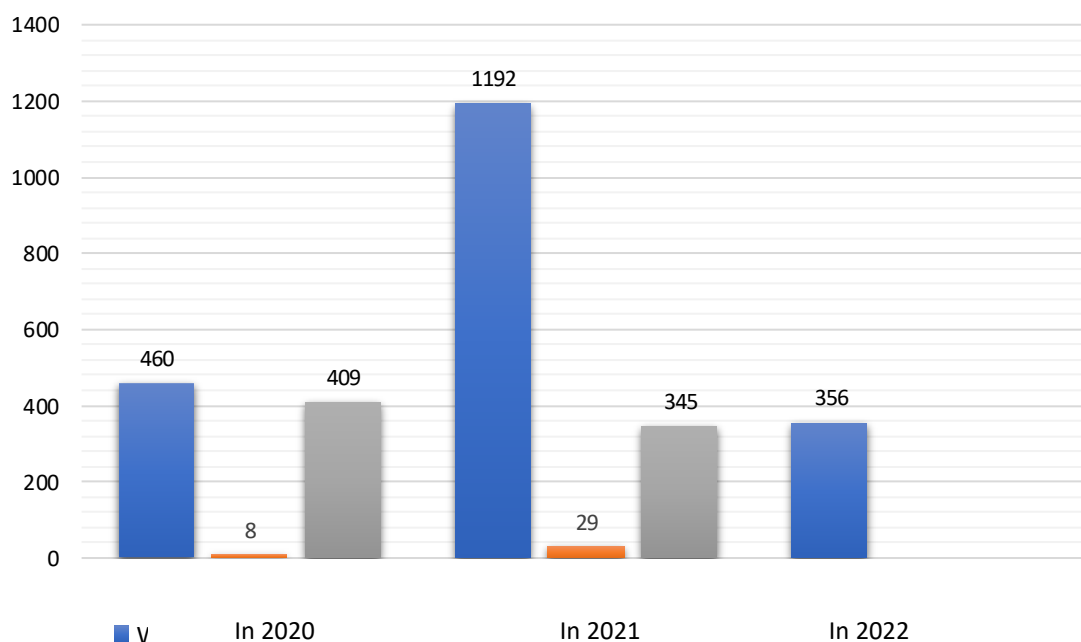

The Labour Inspectorate is competent for the supervision of the implementation of the laws in force, specifically the Law on Labour, the Law on Safety and Health at Work as well as the provisions of several other laws such as the Law on Tobacco Control, the Law on Strikes, the Law on Qualification, Re-qualification and Employment of Persons with Disabilities, as well as by-laws arising from these laws. So, the Labour Inspectorate is the primary institution charged with the responsibility of overseeing the implementation of these laws, which operates within the framework of the Ministry of Labour and Social Welfare. Also, this institution supervises the respect of the rights of the parties arising from the employment relationship. About work, commitment and many other aspects, the Chief Inspector of the Labour Inspectorate was discussed, who points out that since the Law on Labour was very well received by employees and trade unions, it is estimated that, unfortunately, this law is not being implemented properly. From the work reports of this institution, as well as the research reports of many organizations that have monitored the situation of law enforcement and the efficiency of the Labour Inspectorate, it turns out that there are many delays in the implementation of the Law on Labour, such as: working outside the schedule, working during the weekend, work without contracts and the violation of the rights of workers, especially in the private sector or even non-declaration of workers. Some employers sign short-term contracts with employees due to maternity leave, in such a way that they terminate their contracts in case of pregnancy in order not to pay them for maternity leave.

The Law on the Labour Inspectorate (2002) has enumerated the responsibilities and functions of this institution, such as:

- Supervision of the implementation of the Law on Labour, working conditions and protection at work;
- Provision of technical information and advice for employers and employees for the most effective implementation of legal provisions;
- Notifying the Minister of Labour and Social Welfare or any other competent body of any absence or misuse of the applicable law;
- Providing information and advice to employers and employees in accordance with the law and warning the competent authorities of any defects or misuse that are not included in the legal provisions.

In order to implement the law from its area of responsibility, the authority of the Labour Inspectorate coordinates actions and cooperates with municipal governments, tax or health inspections, etc. The Chief Labour Inspector is appointed by the Government on the proposal of the Ministry of Labour and Social Welfare. Municipal inspectors are elected by the Municipal Assembly. An appeal can be made against the decision of the labour inspector (first instance) within 8 days to the Labour Inspectorate (second instance), which is obliged to decide within 60 days according to the complaint. The complaint can also be submitted against the decision of the Labour Inspectorate by opening an administrative dispute in the competent court within 30 days. The appeal filed against the labour inspector's decision does not postpone the execution of the decision.

Chart 1: The number of employees without a labour contract, as well as the number of economic entities and legalized employees

Source: Note. "Work report of the Labour Inspectorate for the years 2020, 2021, 2022" by the Labour Inspectorate, (https://ip.rks-gov.net/?page_id=2703). Copyright 2022 by the Labour Inspectorate.

Based on the legal framework in Kosovo according to which the labour relationship is regulated, the Law on Labour also defines the types of labour contracts, which division is based on the time period of their signing and validity. Therefore, relying on this definition, the employment contract can be concluded for: an indefinite period, a certain period and for specific jobs and tasks. If the contract does not contain any details about its duration, then this type of contract should be considered as a contract for an indefinite period. In such an employment relationship, it is not known in advance how long the employment relationship will last. In such a situation, the employee can terminate the employment relationship at any time (Ismajli, 2005). The contract can also be concluded for a certain time or period formalized with the signature of the parties. If this contract is continued for a period of employment longer than ten (10) years, it will be considered as a contract for an indefinite period of time. The last type of contract is related to a specific task, which in terms of duration

cannot be longer than one hundred and twenty (120) days within a year. The employee who establishes such an employment relationship has legal rights and obligations, except that he does not have the right to annual leave.

If we analyse the inspection activity of the Labour Inspectorate during the last three years, it can be seen that the total number of employees who have been without a contract is a total of two thousand and eight employees. Sharing this general result, during 2020, four hundred and sixty employees exercised their activity in a non-formal way. In 2021, the exercise of working duties without labour contracts has marked an enormous increase with a total of one hundred and ninety-two employees without labour contracts. However, the year 2022 is characterized by a decrease in the number of employees without employment contracts compared to the previous two years. The report indicates that during 2020, four hundred and nine employees who were in informal employment or without labour contracts and eight economic entities were legalized. Meanwhile, during 2021, the Labour Inspectorate has influenced the legalization of a total of three hundred and forty-five employees and twenty-nine economic entities. The work report for 2022 does not contain data regarding the number of employees without labour contracts or data for legalized subjects or employees.

Despite the fact that efforts are always made to specify the issues of the contract as a whole, again it may happen that all the rights and obligations are not included in the provisions of the institution itself or even in legal acts. Therefore, in such cases, if difficulties of this nature appear, the interpretation of the contract takes place. Such an interpretation of the contract is mentioned in the Law on Obligational Relationships according to which the provisions of the contract are applied as they have their content. In the case of the interpretation of the contested provisions, one should not be bound only by the textual meaning of the expressions used, but the common purpose of the contractors should be researched and the provision should be understood as it responds to the legal principles (Ligji për Marrëdhënien e Detyrimeve, 2012).

5. CONCLUSION

In terms of the legal framework, the Law on Labour is a basic and general law that is dedicated to all employed citizens in the Republic of Kosovo, obliging all public and private institutions to respect every provision that comes out of this law regarding the rights of work. In this regard, there should be no conflict of laws, nor double standards, legal loopholes or even dominance of by-laws over legal acts. Therefore, it is requested to harmonize the laws that regulate the employment relationship. At the time when Kosovo was part of the former Yugoslavia, employment relationships were regulated by Yugoslav law. Until the issuance of the Law on Labour in 2010, the legal system of Kosovo was faced with a number of provisions that were spread over many laws and regulations. After the end of the war in 1999, the employment relationship was regulated by the UNMIK Regulation of 2001. For a long time, specifically since the Second World War, Albanian citizens have been deprived of compliance with the Convention on Discrimination in the field of Employment and Occupation of the International Labour Organization of 1958, which at that time also obliged Yugoslavia as a signatory state. In December 2010, the Law on Labour entered into force as the legal basis for regulating many aspects of the employment relationship. This law also served as a basic document for issuing other by-laws for the regulation of the employment relationship.

At the national level, the rights from the employment relationship are firstly proclaimed and guaranteed by the Constitution of the country as the highest legal act in the hierarchy of legal acts. The paper indicates the progress and procedure of treating disputes from the employment relationship, so that if the employee considers that his rights have been violated in this field, he can submit a request to the employer for the protection of the violated right as a first instance. If the employee considers that even in the first instance, he did not manage to realize the violated right, then he can go to the competent court by opening a dispute from the employment relationship. Different countries around the world have foreseen the establishment of special specialized courts for examining and resolving disputes from the employment relationship. Well, Kosovo has not followed this model since the Law on Courts does not foresee such a division of courts at the country level. Not only that such a division has not been foreseen, but the judicial system is faced with a small number of judges, a situation that causes a number of unresolved judicial cases. For the employee whose right has been violated, the court can decide that the employer should pay the compensation, return him to the workplace, forcing the employer to implement the court decision. The research indicates that from the evaluations of the judges as a result of the conducted interviews, the disputes that are presented most often for treatment are: termination of the employment contract in violation of the law, requests for return to the workplace, requests

for the cancellation of competitions as well as lawsuits for the annulment of employers' decisions by which any disciplinary measure has been imposed on employees.

The research indicates an increase in the number of complaints addressed to the Independent Supervisory Council for the Civil Service of Kosovo. In 2019, this authority received a total of seven hundred and eighty-four complaints, where the categories with the most complaints mainly have to do with disputing recruitments, material compensations and requests from the employment relationship. In 2020, there was a decrease in complaints to this institution with a total of three hundred and forty fewer cases. If we analyze the data provided by the research, the most complained about categories remain the same as those mentioned above during the year 2019. In 2021, there is a marked increase in the complaints presented to the Independent Supervisory Council with all seven hundred ninety-one cases. Similar to previous years, this year also the same categories with the largest number of complaints remain, starting with requests related to the employment relationship and two other remaining categories such as material compensations and disputed recruitments.

The research indicates that the Labour Inspectorate during the last three years has provided the relevant reports with detailed data on how the rights are respected in the employment relationship. During the inspection activity, a considerable number of employees were observed who work informally or without employment contracts, with a total of two thousand and eight employees, throughout the years 2020, 2021 and 2022. In 2020, four hundred and sixty employees exercised their activity in an informal way. During this year, a total of four hundred and nine employees and eight economic entities were legalized. In 2021, there is a significant increase in the number of employees with a total of one hundred and ninety-two employees without employment contracts. During this year, the Inspectorate managed to legalize a total of three hundred and forty-five employees and nine economic entities. Meanwhile, in 2022, a decrease in the number of employees without a work contract is observed, with a total of three hundred and fifty-six employees. Unlike the previous two years discussed, the 2022 report does not contain data regarding the legalization of employees and economic entities. As a result of this, it can be concluded that in order to effectively formalize and protect the employment relationship in Kosovo, as well as to eliminate informality, the institutional support of the Labour Inspectorate is required. This support can be achieved by increasing the number of inspectors in order to be as present as possible in the working environments, to educate and inform employees about their rights and obligations in submitting complaints if they are faced with a violation of rights by employers. In conclusion, it is requested that more repressive measures be applied to the violators of the rights arising from the employment relationship, in order to prove the institutional commitment to the protection and promotion of the rights from the employment relationship.

Abstract: The study of the payment system in Albania is a topic that always attracts the attention of researchers, as it is one of the important pillars of the country's economy, which directly affects the acceleration of economic growth or its slowdown. This paper aims to study the transformation of the system towards electronic payments, which constitutes a new advantageous means of making payments. The progress or percentage of change in different states is different. Albania cannot be called a country that uses electronic money in most cases, as the use of cash is still predominant, especially compared to other countries in the region and Europe. In order to analyze the development and progress of Albania towards the modernization of payments, data on cards and the number of ATMs or POS distributed in different areas of Albania should be considered. These two tools are interrelated and cannot be conceived without being connected to each other. The study carried out in Albania by the statistics of the Bank of Albania brought out some very interesting results, taking into account the periods of the study carried out. From the studies it was highlighted that the growth of electronic money has increased simultaneously and in parallel with the growth of banking transactions.

Key words: Payment System, Electronic Payment, Debit Card, Credit Card, Economic Growth.

1. INTRODUCTION

With the continuous development of the economy and society, the payment system in Albania has evolved at a dizzying speed. In just 20 years, it has gone from a system based mainly on cash payments and partly on bank transfer payments to a payment system based mainly on electronic money and only a small part on cash. In Albania, the history of the recognition of electronic money begins in 2003 with the opening of a small number of ATMs. Automated Teller Machines or ATMs are able to perform a number of routine transactions for bank customers. Some of these transactions are: withdrawing money, obtaining information on the balance of the bank account, transferring money between different bank accounts. The biggest advantage that ATMs offer to customers is that they are open 24 hours a day, 7 days a week. As for banks, the advantage of using ATMs is that they are very economical for the types of transactions they perform. In recent years, the number of ATM users has increased a lot. This increase has mainly come as a result of the transfer of budget employees' salaries through commercial banks. The increase in the number of electronic money users in Albania has been parallel to the increase in banking transactions. The term "electronic money" or e-money refers to transactions that are carried out without cash money being transferred, but mainly assisted by payment tools such as ATMs, POS devices, a computer or a smartphone. The payment system based on electronic money offers many advantages for the development of the economy of a country, advantages of reducing costs, saving money, speed in the execution of transactions, stimulating the circulation of money, etc. Today, we see that there is a very wide (globally) reach of Smart phones.

Although online commerce has several forms, it is worth mentioning bank card payments, which today are being transformed into a new form of use, moving from computers to smartphones. Mobile applications bring a number of advantages to its user, such as ease of use, making applications as practical as possible and offering a number of offers or discounts to attract as many customers as possible. The only problem with this payment method is the security of the card data. Given that with the development of technology we also have the development of cyber-attacks. But by saving these data, then when they will make a purchase, then it is enough to set only the password. With phones that also offer the option of encryption, a single wallet can be easily and securely created without the need to carry cards with you. It is the idea of the 'virtual wallet' account. Smart phones and the internet are the main tool that has helped online trading. Bank cards will be the basis of payments.

But as a term it has a wide usage and includes a number of mechanisms that make possible the circulation of electronic money. What is observed in the world today is the increasing use of electronic money mechanisms, replacing cash money every day. It is defined as an electronic store of monetary value on a technical device that may be widely used for making payments, without necessarily involving bank accounts in the transaction,

but acting as a prepaid bearer instrument (European Central Bank, 2000). Electronic money is enabled through cryptography and digital signatures. However, their essence is that banks and customers have decryption codes. These decryption codes are always a pair: a public code, known only by the customer, and another private code, which is known and used only by bank employees who have been assigned this task. All the information that the private code encodes, the public code can decrypt and vice versa. Banks and customers use their codes to encode (for security reasons) and sign (for identification reasons) numerical data representing payment orders. The use of electronic money is enabled by the electronic payment system, which consists of:

1. Issuers
2. Costumers
3. Traders
4. Regulators

With all the advantages that electronic money offers, it also has its disadvantages. Some of these include fraud, technology failure and the uncertainty it gives people. One of the biggest concerns is that counterfeiters could create their own type of electronic money, which would be indistinguishable from real money. The factors that negatively affect the development of the payment system are: Technological factor - Despite the development of technology, it is still not in Albania used and implemented properly. The dominant economy in Albania is that of cash and the payment system is not fully automated. Red tape abounds - Most individuals and businesses think that banks impose numerous requirements, procedures and bureaucracy. This is a factor that drives them to perform their cash transactions as the simplest payment instrument. In the business context, the factors that negatively affect this direction are:

- avoidance of tax obligations
- the high rate of poverty in the country
- lack of information about other payment instruments

The Albanian payment system can be considered as one of the newest systems in the countries Central and Eastern Europe. This system has a legal framework developed with standards and principles for its proper functioning. Payments play an important role in a country's economy. Through them, financial exchanges between economic agents become possible. And is precisely the payment system that enables their movement freely, at the right time, so that them to be used productively.

2. Research Literature

The payment system is an essential part of the financial system of a country. In order to intensify financial and business transactions, there must be effective channels of money circulation, with as little cost, time, and as much circulation effectiveness as possible (Aminova, 2022). Banks and other financial institutions are the main actors in the implementation of the payment system. The Central Bank, as a supervisory and policy-making institution, has a key role in the smooth functioning of the payment system, but also in its continuous reformation to respond to market demands (Liudmyla Polovenko, 2021). Payment systems support financial stability by reducing systemic and settlement risks, acting as firewall to prevent contagion of losses, facilitating proper liquidity management, and through the effective transmission of monetary policy. Also, payment systems are a critical enabler of financial inclusion. Transactions accounts allow people – including the “unbanked” – to make and receive payments in a cost-efficient way. Payment systems also promote economic and financial development: improvements in the national payments system lead to savings for the overall economy, while financial markets benefit from efficient post-trade processing and the safe custody of securities (World Bank Group, 2018). Payment systems facilitate the exchange of goods and services for money and, as such, enable the economy to function. A payment system is a set of rules and processes for transferring money. A payment involves sharing and verifying instructions, in a process referred to as “clearing,” and the transfer of funds to discharge the obligation, referred to as “settlement. Clearing and settlement in payment systems require (1) parties to the transaction and a network of participants – a sender, a receiver, and often one or more financial institutions; (2) an asset or set of assets that are transferred among those participants; and (3) a transfer process that defines the procedures and obligations associated with the transaction. Physical currency is the simplest form of payment and embodies many essential features that noncash payment

systems seek to emulate. A payment in cash settles immediately, does not rely on an extension of credit by a third party, and enables recipients to access the proceeds of a transaction immediately. Cash is also nearly universally accepted, does not carry an additional charge or fee per transaction, and typically protects users' privacy, which may be valuable for a wide array of consumers including vulnerable populations (Department of the Treasury Report, 2022). Businesses increasingly prefer new forms of payment of obligations, which do not include cash, but only transfers of rights and obligations through virtual monetary values. This happens because cash is always difficult to manage (Abrazhevich, 2004). It is very important for businesses to find sophisticated means of payment to manage their daily operations with efficiency, to reduce costs, risks of lack of liquidity, risks of damage and loss of cash, minimizing the time of transactions, creating accurate tracking of transactions, etc (Oladeji 2014). E-payments are the solution to many problems of the lack of cash, the risk of transportation, the speed of execution of the transaction, so another e-payment systems are payments made in electronic commerce environment in the form of money exchange through electronic means, offering many advantages for doing business (Karamjeet Kaur, Ashutosh Pathak, 2015). E-payment appears to be a commercial exchange between the seller and the buyer in a virtual market created through the Internet, a market which has no start and end time, but is accessible at any time (Ravi Kalakota, 1997). The history of e-payment can be traced back to 1918 the time when currency was first moved in United States (U.S) by the Federal Reserve Bank with aid of telegraph. The credit card industry dates back to 1914 when large manufacturers and owners of large hotel chains distributed vouchers to their employees to purchase goods and services. Such an initiative in Albania started only in the last 10 years. Some researchers consider any form of transfer of funds through the Internet as an e-payment, expanding in this way the concept of e-payment in the entire financial system, for all electronic exchanges of funds (Peter M Ogedebe, Babatunde Peter Jacob, 2012). Another researcher defines e-payment as any transaction that takes place between parties who exchange rights and obligations through an electronic source and not by having physical elements of cash or other physical forms of its expression (Wendy Ming-Yen Teoh, Siong Choy Chong, Binshan Lin, Jiat Wei Chua, 2013). The banking system in Albania has developed rapidly these 30 years, and during this period of radical changes the Albanian markets have adapted to the new forms of daily operations, the best case being the forms of payment. Something similar has happened in other developing countries, moreover in Ghana a great evolution has been noticed in the last 15 years towards a cashless system (Stephen Kwadwo Antwi, Kasim Hamza, Shadrach Wusah Bavoh, 2015). However, this system also faces a multitude of challenges that the markets try to turn into advantages every day, minimizing risks and maximizing profits. In relation to these challenges, the advancement of technology in this field always comes to the rescue, making possible the permanent change in the way of life of businesses, families and individuals (Haruna, 2012).

3. Methodology

For the purposes of this study, we built a questionnaire which was addressed to the general population starting from the age group of 22 years and above, the age group from which generally young Albanians begin to secure income through work relationships, and as a result create the possibility of using e-payment techniques. About 220 people answered the questionnaire validly. According to the results of the questionnaire, the majority of the respondents lived in the Tirana region, 90.4%, and a surprising result is that 75% of the individuals who completed the questionnaire belong to the female gender, while the other 25% belong to the male gender, which will say that women make up the majority of the Albanian population that uses electronic money services and its forms. A quite expected result was the age of the respondents. The interaction of young people with digital technologies, from a very young age, is fundamentally different from that of only one older generation, and perhaps this explains the fact why the majority of young people around the age of 22-30 (31.3%) use such services, while the 30-40 (12.5%) and 41-50 (6.3%) age groups seem to have slightly lower usage. Based on the answers, it was found that 65.6% of the respondents use electronic money and its services, of which 71.9 have a university education level and 28.1% have a secondary education. As a result, we can conclude that education and employment level play an important role in the use of bank accounts, bank cards and many other services. In general, those individuals who have a higher or secondary education and are employed use these services for personal or work reasons. On the other hand, individuals who do not have a level of education and are not even employed do not want and do not feel the need to use electronic services. What is worth mentioning is the fact that students also make up a large part of the population in the use of electronic money. For all those individuals who claimed to use electronic services, we continued with some more detailed questions, one of which was to understand which form of electronic money Albanians use the most and why. Below we will present the result answers for each form.

- Credit transfers: Turns out to be the most used form of electronic money. Albanians find it easier to transfer money from their bank account to another, either inside or outside Albania.
- Bank cards (debit/credit/prepaid cards): Widely used in Albania but not so massively. Based on the answers, we find that for reasons that we will argue below, Albanians use bank cards only to withdraw money from ATMs and not for purchases or card payments.
- E-Banking and Mobile Banking: It seems that their use has increased a lot in recent years, because based on the answers, the result seems to be very close to that of bank cards.
- Periodic payment orders: Based on the answers, periodic payment orders are not used by Albanians. This is probably also due to the lack of information on how this payment method works.
- Cryptocurrency: They are a method of payment which apparently is and still remains a term not heard at all by the Albanian people because most of the respondents had not heard and did not even know what cryptocurrencies are.
- PayPal/Express Pay: For the most part, especially for young people, this form of money seems to be a good way of payment mainly for purchases outside Albania.

A very current topic in the last years has been the situation caused by COVID-19 and for this reason we asked citizens what impact the pandemic had on the use of physical money, did the desire to know more forms of online payments increase. According to (CNBC) "Over the past six to eight months, we've seen the use of cash fall even further, and that's a trend we'll see continue." The Covid-19 pandemic was expected to cause a drastic decline in the use of cash due to the risk of contagion. Precisely, for this reason, the Albanian people became aware of the use of physical money and about 36.8% of the people questioned say that they have avoided all physical payments by using different forms of electronic money. Finally, in the questionnaire we asked you all to give your opinion that if you could change or improve the electronic service/s, what would it be. What the citizens feel as the most important difficulty is the lack of information. Many of them still do not know what electronic money or online banking is. There should be more advertising in the television media for the third age (with voice and image) because not everyone has this information. The more information the population has, the more it will become possible to use bank cards, with the use of these cards a long line of these payments for Albanian pensioners will be avoided. If I had the opportunity to do something to help at the third age, it would be the transfer of pensions to a credit card, preferably with 0 commission, and the queue for them would be avoided once and for all.

4. CONCLUSION

In conclusion, the Bank of Albania, in fulfillment of its legal mandate in the field of payment systems, plays a pro-active role in promoting the use of electronic payment instruments through their regulation and supervision, as well as from the point of view of the reformer and the instigator through the means coordination of actors' actions. The main role in this direction is played by the National Committee of the Payment System. In the Albanian market, thanks to the efforts and energies channeled by the banking system, it has been achieved that today cards are one of the most familiar payment instruments for Albanians. Bank cards are considered one of the most familiar payment instruments for Albanians. Currently, there are over 1 million cards in the Albanian market. However, analyzing the Albanian market, some important facts are evident:

- Only 41% of the employed Albanian population owns a bank card.
- Over 90% are debit cards
- Only 20% of the total card transactions are for payments, while the rest are cash withdrawals from ATMs.
- The number of Points of Sale (POS) offered by traders is low, compared to the countries of the region and with a high concentration in urban areas, mainly in Tirana.

Under these conditions, the challenges for the future remain great, such as:

- Penetration - a great effort is needed to expand the population that owns a supported card, this also with the expansion of businesses that offer this payment alternative.

- Changing the ratio in favor of the use of cards as a means of payment in physical and virtual POS compared to the use simply for withdrawing cash.
- Expansion of physical POS as well as virtual ones in strategic sectors such as tourism, which seems to have a high development recently.
- Promotion of innovative products that help significantly in the financial inclusion, especially of the population categories that do not have access to a bank account. An example of such an instrument is prepaid cards, which support the reduction of the use of physical money.

The use of cash money is closely related to fiscal administration. Taxes and taxes that businesses pay by paying monthly obligations or carrying out actions related to export and import are generally realized with the use of physical money. Although the transfers are made to the account, most of the businesses go on the specified dates and deposit the obligations in the state budget accounts, naturally forwarded to the destination through the payment system. In this regard, we would recommend that the state compel businesses to performed the actions only through bank transfers or electronic platforms of banks. The same recommendation also applies to the payment of obligations for electricity, water and telephone, for television operators, for the rent of various premises, payments for various institutions such as kindergartens, schools and other monthly payments that can be administratively ordered not to be made. in cash, but only in transfers, let's say in amounts not less than a sepecific amount of money. Gifts are among the best wishes that are made by every person, family, social and tribal, especially for the end of the year holidays. Even here there is a place to reduce cash payments. Gift cards are very widespread in developed countries - people buy prepaid cards in shopping malls, fashion stores and give them to relatives for these events.

Abstract: The purpose of the research was to determine whether there is a statistically significant relationship or correlation between the quantity of COVID-19 instances per million and GDP per capita average life expectancy. The study used data from 174 countries obtained from the World Data Bank website for the period 2019-2020. According to descriptive findings, there were an average of 222,158,9146 coronavirus cases during the time period, with cases ranging in number from 15.12 to 941,125.25. The range of the mean GDP per capita in 2020–2021 was 161,491.3528, the range of the mean life expectancy was 72.38786127, and the range of the mean GDP per capita was 53.25–84.63. The results of the correlation analysis revealed a strong correlation between the number of cases per million and average life expectancy (correlation coefficient = 0.541) and a moderately positive correlation between the number of cases per million and GDP per capita (correlation coefficient = 0.415). Regression analysis was also employed in the study to examine the statistical significance of these connections. The data provided did not include the regression analysis's findings. The findings of the study can help policymakers and public health officials make informed decisions about how to allocate resources and respond to the pandemic. For example, the strong correlation between COVID-19 cases and life expectancy suggests that countries with lower life expectancies may be more vulnerable to the virus, and targeted interventions may be needed in these areas to prevent further spread. Additionally, the moderately positive correlation between COVID-19 cases and GDP per capita suggests that economic factors may play a role in the pandemic's spread, and policymakers may need to consider economic support measures alongside public health measures to combat the virus effectively. Overall, this research provides valuable insights into the complex interplay between COVID-19, public health, and economic factors.

Keywords: COVID-19, GDP per capita, Life expectancy, Correlation analysis, Regression analysis, Public health.

1. INTRODUCTION

The COVID-19 pandemic has affected almost every country in the world, with varying degrees of severity (Demirkiran, 2023). While some countries have been able to control the spread of the virus, others have struggled to contain its spread and have experienced a significant number of cases and fatalities. The impact of the pandemic on the global economy has also been profound, with many countries experiencing a decline in their gross domestic product (GDP) and an increase in unemployment rates (Morris, Correa & Leiva, 2023; Sarker et al., 2022). Additionally, the pandemic has raised concerns about the impact on public health, particularly in terms of life expectancy (Schöley et al., 2022). Coronavirus pandemic 2019 is the current pandemic caused by SARS-CoV-2 and was first detected in Wuhan, the capital of Hubei Province, China in December 2019 (Rabaan et al., 2020). So far, more than 113 million cases have been confirmed in 215 countries. According to reports, the disease caused more than 2.51 million deaths and more than 89 million were recovered (World Health Organization, 2020). To date, at least 10 different vaccines have been developed and licensed by official organizations. It is expected that more licenses will be obtained soon. Vaccination started in late 2020 and has so far exceeded 218 million and the daily vaccination rate has exceeded 6 million (World Health Organization, 2022).

This paper aims to examine the correlation between COVID-19 cases, GDP per capita, and life expectancy across 174 countries. The study will analyze data from a variety of sources, including the World Health Organization, the World Bank, and other reputable sources. By exploring the relationship between these variables, this paper seeks to provide insights into the impact of the pandemic on both public health and the global economy. The findings of this study could have important implications for policymakers and public health officials as they continue to respond to the pandemic and plan for the future. By better understanding the relationship between COVID-19 cases, GDP per capita, and life expectancy, policymakers can make more

informed decisions about how to allocate resources and prioritize interventions to mitigate the impact of the pandemic on public health and the economy. For this study, data were obtained from the World Data Bank website for the period 2019-2020 regarding the number of Covid-19 cases per million, average life expectancy and GDP per capita.

The main research questions of this study are:

1. Which is the association between the number of cases per million and average life expectancy?
2. Which is the correlation between the number of cases per million and GDP per capita?

The dependent variable is defined to be the number of cases per million and the independent variables are defined to be the average life expectancy in the 174 countries under consideration and the GDP per capita in these countries. The study's contribution is that it provides empirical evidence of the relationship between COVID-19 cases, GDP per capita, and life expectancy, which can be useful for policymakers in formulating strategies to address the pandemic. The study's novelty lies in its comprehensive analysis of a large number of countries, which enables a more accurate understanding of the relationship between these variables. Additionally, the study may identify specific factors that contribute to the spread of COVID-19, such as healthcare infrastructure and income inequality. This information can be used to guide future research and policy interventions aimed at mitigating the impact of pandemics. Overall, the study's contribution and novelty lie in its examination of the complex relationship between COVID-19 cases, GDP per capita, and life expectancy, which has important implications for public health and policy.

2. LITERATURE REVIEW

2.1 COVID-19 and its impact on GDP Per Capita, and Life Expectancy

The COVID-19 pandemic had far-reaching economic consequences, leading to the second largest global recession in recent history (Onyeaka et al., 2021). There was a sharp decline in business activity in the service sector during the lockdowns (Kolomak, 2020; Xanthopoulou, 2022), as well as a sustained stock market crash (especially during first year of the pandemic), while also unleashing an unprecedented global supply chain crisis with rising prices and shortages in final and intermediate goods (see, for example, the global shortage of micro-chips from 2020 to date). The pandemic has also resulted in a sustained increase in the prices of energy products and several basic food items. Price increases were felt more by socially and economically vulnerable populations. At the same time, almost all social, cultural and sporting events have been canceled or held online, while the overall impact on the tourism sector as well as commerce has not yet been definitively assessed. In short, the global economic system due to the COVID-19 pandemic has faced and continues to face unprecedented uncertainty, and there is considerable disagreement among experts both about the overall extent of the pandemic and its long-term effects, duration and the qualitative characteristics of the economic recovery that appeared from mid-2021 (Siddique et al., 2021). According to a study conducted by the World Bank (2020), the global economy is estimated to have contracted by 4.3% in 2020, which is the largest recession since the Second World War. This economic contraction has been primarily driven by the COVID-19 pandemic and the resulting lockdowns and social distancing measures. The same study suggests that countries with lower GDP per capita have been hit the hardest, as they have weaker health systems, more limited fiscal space, and are more dependent on external trade and tourism. Another study by the International Monetary Fund (IMF) (2021) found that the pandemic has caused a significant decline in GDP per capita for both advanced and emerging market economies. The study suggests that the pandemic's impact on GDP per capita is likely to be long-lasting, as countries with lower levels of economic development are likely to take longer to recover. A study conducted by the Brookings Institution suggests that the pandemic has exacerbated existing inequalities within countries (Graham, 2020). The study suggests that countries with high levels of income inequality have been hit the hardest, as the pandemic has disproportionately affected vulnerable groups, such as low-wage workers and informal sector workers. Several studies have explored the impact of COVID-19 on life expectancy. The same view share Henry (2020) who writes that COVID-19 had caused a significant reduction in life expectancy in several countries, including the United States, Brazil, and Mexico. The study suggests that the reduction in life expectancy is primarily driven by COVID-19 deaths, but also by indirect effects, such as disruptions to healthcare services. A research conducted by the World Health Organization

(2022) suggests that the pandemic has had a significant impact on mental health, which may also contribute to a reduction in life expectancy. Many studies (such as Ahmed & Sifat, 2021; Varma et al., 2021; Elhadi et al., 2021; McLafferty et al., 2021; Xanthopoulou & Plimakis, 2021) revealed that the pandemic has led to increased levels of stress, anxiety, and depression, which may increase the risk of suicide and other mental health conditions. In general, the pandemic has led to a significant increase in excess mortality in several countries, including the United States, the United Kingdom, and Spain. The increase in excess mortality is likely to have a long-lasting impact on life expectancy (Bianchi, Bianchi & Song, 2023). Overall, the literature suggests that COVID-19 has had a significant impact on GDP per capita and life expectancy. The pandemic has caused a significant economic contraction, particularly in countries with lower levels of economic development. The pandemic has also caused a significant reduction in life expectancy, primarily driven by COVID-19 deaths, but also by indirect effects, such as disruptions to healthcare services and mental health impacts. As the pandemic continues to evolve, further research is needed to fully understand its impact on GDP per capita and life expectancy. A study by the International Monetary Fund (IMF) found that the pandemic has caused a significant decline in GDP per capita for both advanced and emerging market economies. The study suggests that the pandemic's impact on GDP per capita is likely to be long-lasting, as countries with lower levels of economic development are likely to take longer to recover (IMF, 2021).

3. METHODOLOGY

The present study will utilize a cross-sectional design, which involves collecting data at a single point in time. This design allows for the examination of relationships between variables without manipulating any factors (Johnson, 2001; Rindfleisch et al., 2008). The authors collected data from various sources, such as the World Health Organization (WHO), World Bank, and other official government websites. Data on COVID-19 cases will be obtained from the WHO COVID-19 dashboard, while data on GDP per capita and life expectancy will be obtained from the World Bank database. The sample for this study will include 174 countries with available data on COVID-19 cases, GDP per capita, and life expectancy. The sample will be selected based on data availability and completeness. The main independent variables in this study are GDP per capita and life expectancy, while the dependent variable is the number of COVID-19 cases. Other potential control variables, such as population size, healthcare system capacity, and government policy, may also be considered in the analysis. This research will use various statistical techniques to analyze the relationship between the independent and dependent variables. Descriptive statistics, such as means and standard deviations, will be used to summarize the data (McCarthy et al., 2022). Bivariate correlation analysis will be conducted to examine the relationship between the independent and dependent variables (Temizhan, Mirtagioglu & Mendes, 2022). Multiple regression analysis may also be used to control for potential confounding variables and identify the unique contribution of GDP per capita and life expectancy to COVID-19 cases. The study will adhere to ethical guidelines for research involving human subjects. No personal identifying information will be collected, and all data will be kept confidential. The limitations of the present research are related to its cross-sectional design, which cannot establish causality between variables. Additionally, the data used may be subject to measurement error or bias. The study also relies on the assumption that the reported COVID-19 cases are accurate and representative of the actual number of cases in each country. Overall, the study aims to examine the relationship between COVID-19 cases, GDP per capita, and life expectancy across 174 countries, using various statistical techniques to identify potential patterns and associations.

3. RESULTS

The descriptive results for the indicators used in this survey are presented below. Figure 1 shows the number of cases per million in descending orders for the period 2019-2020. Overall, regarding the studied period it is observed that the average rate is in To Sao Tome and Principe in Guinea and is 103.257,4. The highest rate of cases is in Israel and is close to one million and more specifically 965639.24 cases and the lowest rate is in Vietnam with 276,56 cases. Moreover, in Greece the number of cases reaches 281.839,61.

Figure 1. Number of cases per million in 2019-2020 (Source: World Data Bank, 2021)

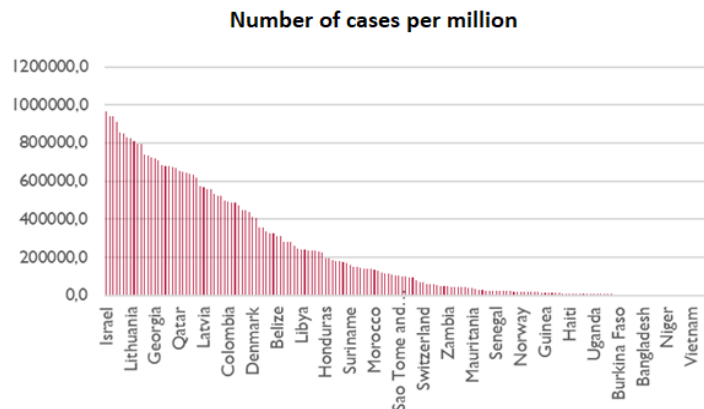

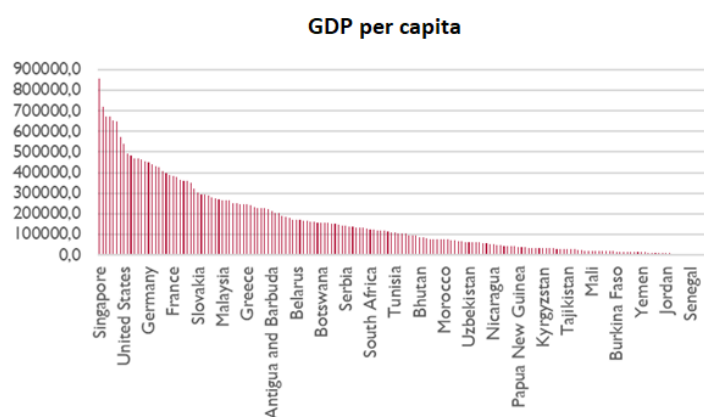

Figure 2 presents the findings regarding the GDP per capita in a phylogenetic order in 2019-2020. Overall, during the study period, it was observed that the average rate is found in Tunisia with 108.493,0. The highest percentage of GDP per capita is found in Singapore with 855.353,83. While on the contrary, the lowest percentage is found in Senegal with 2.470,58. Also, in Greece the GDP per capita is at 245.743,8.

Figure 2. GDP per capita in 2019-2020 (Source: World Data Bank, 2021)

Finally, Figure 3 shows the average life expectancy in descending order in 2019-2020. Overall, the average rate is found in Paraguay with 74,3. The highest rate observed during the study period is in Japan with 84,63. While on the other hand, the lowest rate was observed in Côte d'Ivoire with 57,78. In our country the rate is 82,24.

Figure 3. Average life expectancy in 2019-2020 (Source: World Data Bank 2021)

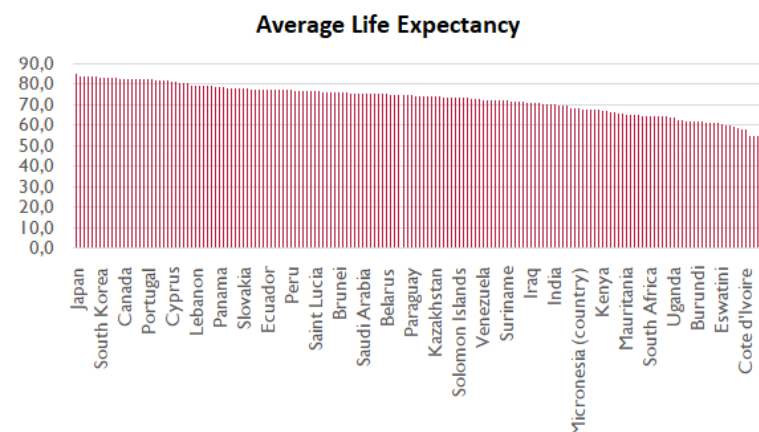

Table 1 shows the descriptive results for the survey variables. Data analysis revealed that the average number of coronavirus cases during 2019-2020 was 222.158,9146. The number of coronavirus cases ranged from 15,12

the minimum and maximum 941.125,25. Moreover, the median was equal to 96.802,63. Regarding GDP per capita in 2020-2021, it was found that the mean was 161.491,3528. The per capita ranged from 92,6 the minimum and 855.353,83 the maximum. Also, the median was equal to 105.819,36. Finally, the average life expectancy was 72,38786127. The average life expectancy was 53,25 minimum and 84,63 maximum. The median was equal to 773,92.

Table 1. Descriptive data for the survey variables for the period 2019-2020.

	Number of cases	GDP per capita	Average life expectancy
Average	222158,9146	161491,3528	72,38786127
Typical error	20541,5555	13072,07587	0,564772946
Median	96802,63	105819,36	73,92
Prevailing Price	–	–	76,88
Average Square Deviation	270181,9792	171936,3137	7,428428309
Fluctuation	72998301906	29562095966	55,18154714
Curvature	-0,028503388	2,182204592	-0,414217153

Range	941110,13	855261,23	31,35
Minimum	15,12	92,6	53,28
Maximum	941125,25	855353,83	84,63
Sum	38433492,23	27938004,03	12523,1
Crowd	173	173	173

Correlation and regression analysis were conducted for this research. Initially, scatter plots were formed to obtain graphical evidence as to the linear relationship between the variables. Correlation is a statistical relationship involving dependencies, although under normal conditions, it usually refers to the extent to which two variables have a linear relationship with each other (Taylor, 1990). Table 2 presents the findings of the correlation analysis using the correlation coefficient. There is a moderate positive correlation between the number of cases per million and GDP per capita. The correlation coefficient is set at 0,415. On the other hand, there is a high correlation between the number of cases per million and GDP per capita. The correlation coefficient is 0,541.

Table 2. Results of correlation analysis between the number of cases per one million, GDP per capita and average life expectancy. (World Data Bank, 2021)

	Number of cases per million	GDP per capita	Average life expectancy
Number of cases per million	<u>1</u>		
GDP per capita	0,415	<u>1</u>	
Average life expectancy	0,541	0,633	<u>1</u>

Regression is a well-used statistical modelling technique to study the association between a dependent variable and one or more independent variables (Freund et al., 2006). Figures 4 and 5 show the findings on multiple linear regression with the dependent variable being the coronavirus ticks per million and the independent variables being the average life expectancy and GDP per capita per country. The results showed that the independent variables explained 30,12% of the variability in the number of cases. Among the independent variables, significant determinants of the number of covid-19 cases are GDP per capita (coefficient= 0,19594243 and value-P= 0,141) and average life expectancy (coefficient= 17.112,86447 and value-P= 0,000).

Figure 4. Multiple linear regression with average life expectancy as the independent variable (World Data Bank, 2021)

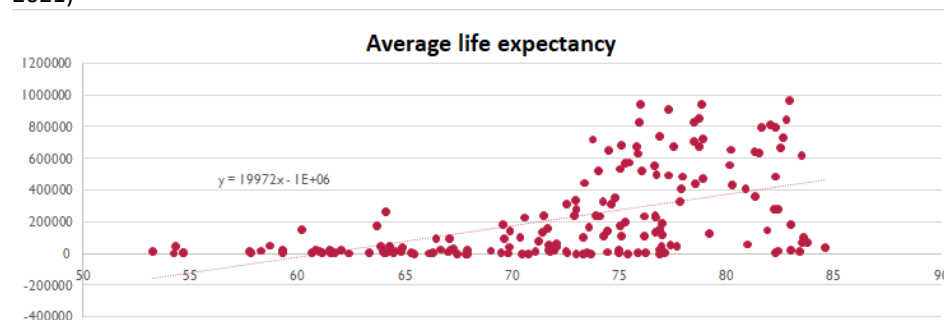

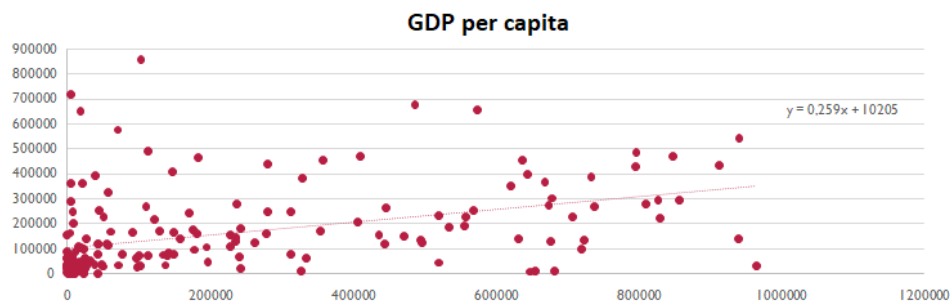

Figure 5. Multiple linear regression with GDP per capita as independent variable (World Data Bank, 2021)

4. CONCLUSIONS

The aim of this study was to investigate in which level the number of coronavirus cases per million in the 174 countries selected for the study impact on average life expectancy and GDP per capita. Pandemic, GDP per capita, and life expectancy are all factors that can be related to each other. Specifically, higher GDP per capita can be associated with better healthcare systems and access to medical resources, which could potentially help to reduce the impact of a pandemic. Similarly, higher life expectancy can also indicate a better overall health status, which could also help to reduce the impact of a pandemic. On the other hand, a pandemic can have a negative impact on both GDP per capita and life expectancy. For instance, lockdowns and social distancing measures that are implemented to contain the spread of a pandemic can cause disruptions in economic activities, leading to a reduction in GDP per capita. Additionally, increased mortality rates associated with the pandemic can lead to a reduction in life expectancy. In summary, the relationship between pandemic, GDP per capita, and life expectancy can be complex, and various factors could affect how they are related to each other. Findings showed that, there is an interaction effect between GDP per capita and life expectancy on COVID-19 cases, suggesting that the relationship between these variables and COVID-19 cases is more complex than previously thought. For example, some high-income countries with high life expectancy may have experienced higher COVID-19 case counts due to their more elderly populations. Overall, this study provides insight into the complex relationship between COVID-19 cases, GDP per capita, and life expectancy across different countries.

The results of the regression analysis indicated that the independent variables together explained 30,12% of the variability in the number of cases. Additionally, the regression coefficients and p-values suggest that both average life expectancy and GDP per capita are significant determinants of the number of Covid-19 cases. The coefficient of GDP per capita is 0,19594243 with a p-value of 0,141, which reveals a positive relationship between GDP per capita and the number of Covid-19 cases. The coefficient of average life expectancy is 17.112,86447 with a p-value of 0.000, which suggests a negative relationship between average life expectancy and the number of Covid-19 cases. Furthermore, results showed that Singapore had the highest percentage of GDP per capita, with a value of 855.353,83, while Senegal had the lowest percentage, with a value of 2.470,58. Greece's GDP per capita during the study period was 245,743.8. The description indicates that Paraguay had the highest average rate of life expectancy during the study period, with a value of 74,3. Japan had the highest life expectancy rate observed during the study period, with a value of 84,63. Côte d'Ivoire had the lowest rate of life expectancy, with a value of 57,78, and the country associated with the description had an average life expectancy rate of 82,24.

The findings regarding the relationship between COVID-19 cases, GDP per capita, and average life expectancy have important implications for public health policy and resource allocation in the fight against the COVID-19 pandemic. Firstly, the results suggest that countries with higher GDP per capita have a higher number of COVID-19 cases. This may be due to several factors, such as increased international travel, higher population density, and more advanced healthcare systems that are better equipped to detect and report cases. Therefore, public health policies and resource allocation should take into account the impact of economic and social factors on the spread of COVID-19, and targeted measures may need to be implemented in higher-income countries to mitigate the impact of the pandemic. Secondly, the results suggest that countries with higher average life expectancy have a lower number of COVID-19 cases. This may be due to a healthier population, better access to healthcare, and more effective public health measures to prevent the spread of the virus. Public health policies and resource allocation should prioritize the implementation of measures that promote and protect population health, such as vaccination campaigns, health education, and measures to prevent the spread of infectious diseases. In summary, the findings on the relationship between COVID-19

cases, GDP per capita, and average life expectancy have important implications for public health policies and resource allocation in the fight against the COVID-19 pandemic. They suggest that a comprehensive approach that takes into account economic and social factors, as well as population health, is essential for effective pandemic management.

Abstract: In this article, we provide the results of our empirical work at the macroeconomic level, which aims to answer the questions, about the relationship between the Sustainable Development Index, Human Developing Index, and Foreign Direct Investment in Albania, analyzing data covering 21 years (1999-2019). The Brundtland definition is taken as a starting point in the Sustainable Development Index measuring sustainable development. HDI measures development along two social dimensions and one economic dimension to provide a slightly broader indicator based on widely available population measures. The Sustainable Development Index (SDI) is focused on ecological efficiency in delivering human development. Foreign Direct Investment (FDI) describes a business decision to acquire a substantial stake in a foreign business or buy it outright to expand its operations to a new region. Multiple Regression technics are used to carry out the objective. Referring to our results there was a positive strong significant correlation between Sustainable Development Index and Human Developing Index. Foreign Direct Investment has had a positive trend over the years, increasing on average by 0.014 every year and an average value for the period of 0.777. The Human Development Index (HDI) has had a positive trend over the years, increasing on average by 0.013 every year and an average value for the period of 0.742

The impact of Foreign Direct Investments (FDI) on SDI lasts an average of 8.9 years while on HDI it lasts an average of 14 .3 years. Foreign Direct Investments remain an important factor not only for well-being in general but also for sustainable well-being in Albania.

1. INTRODUCTION

1.1 Economic Measurement, Sustainable Development Indicators. Literature Review

Economic measurements go back centuries, but modern versions have their origins in the Great Depression of the 1920s and 1930s. In the decades that followed, the original idea was debated and resolved by many economists. Kuznets, Leontief, and Stone received work related to national accounts. Many other researchers, such as Hicks, and Frisch, have contributed to improving the system (Studenski, 1958). Estimates of GDP have been made over very long periods of time for almost every country in the world. Sustainable development: Development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Human well-being: A broad concept that is not confined to the utility derived from the consumption of goods and services, but is also related to people's functioning and capabilities (i.e. the freedom and possibilities they have to satisfy their needs). Consumption: represents the utility that consumers derive from the use of goods and services. It is usually measured in terms of final household consumption expenditure. Capital: A stock or resource from which revenue or yield can be extracted. Gradually, the capital concept has been broadened to include natural, human, and social capital. Ecological well-being: A concept that focuses on the intrinsic value of nature and its ecosystems, not necessarily reflected in the value these systems have for human beings.

The Brundtland definition is taken as a starting point in measuring sustainable development which states that sustainable development is a development that “meets the needs of the present without compromising the ability of future generations to meet their own needs”.

The Brundtland definition introduces both a time dimension (present and future) and a space dimension. The space distribution of human well-being, which should be seen in a broad sense and not be restricted to income, deals with the differences in well-being between countries. The distribution of well-being between countries is referred to as the transboundary impact and the distribution within a country as distributional issues or

inequality. Essentially, sustainable development is a matter of distributional justice across time and space. The well-being of present and future generations crucially depends on how society uses its resources. Resources are not limited to material items such as machinery, equipment, energy, and other mineral resources, but also include knowledge, the quality of the natural environment, as well as the quality of social and institutional structures. These resources are at the core of the capital approach, which comprises economic, human, natural, and social capital. Capital is measured in terms of stocks, which are built up through investments. Consumption can be seen as a subset within this overall concept of human well-being. It represents the utility that consumers derive from the use of goods and services and focuses exclusively on the command people have over commodities. However, having certain commodities at one's disposal is not enough to generate well-being. People should be free and able to use these commodities in such a way that their needs are truly satisfied. This perspective relates to the "functioning and capabilities" stressed by Amartya Sen (Sen, 1993; 2000). Sen's approach emphasizes the importance of freedom: the more freedom people have, the larger their range of opportunities and the greater their quality of life. Society has a number of available resources that are necessary to maintain human well-being over time. These resources can be described in terms of economic, natural, human, and social capital (UNECE, 2009). The discussion on sustainable development often emphasizes the special nature of natural capital. Without natural capital, humanity could not survive. This approach to natural capital is anthropocentric, as natural capital is only considered of value if it provides ecological services for the benefit of humans. However, certain types of natural capital, such as biodiversity, have an existence value irrespective of their use by society. This aspect is represented by the term "ecological well-being". Some argue that natural capital is the broadest and most important asset and that the other capital stocks (and human existence) are a subset of the ecological system. From an intergenerational perspective, sustainable development is the development that ensures for future generations a level of human well-being at least equal to that prevailing today. A necessary condition for this is that the per capita stock of wealth does not decline, which requires replacement or conservation of the elements of that wealth (i.e. stock of economic, natural, human, and social capital), the time dimension: "now" versus "later". Therefore, the only way to monitor the extent to which today's society is on a sustainable path is by monitoring the volume of assets and thus establishing whether resources are being preserved for future generations. At the same time, population dynamics are a vital element in sustainable development and should be taken into account. The Brundtland definition also provides the tools to analyze the transboundary impacts of sustainable development, i.e. to assess to what extent countries influence the process of ensuring the well-being of their populations. In building up human well-being, a nation can use its own resources, but it can also import them from abroad. Due attention should therefore be paid to the international transfers of different types of capital, and in particular on how economic activities in one country impact the natural capital available in others and in a global perspective. A country's human well-being can be affected by imports and exports of economic capital (machinery and equipment), as well as by imports and exports of human capital (e.g. through the transfer of knowledge associated with migration). The concepts of human well-being and its sustainability have a long history. These notions have been developed in a variety of disciplines such as philosophy, economics, and natural sciences.

2. DESCRIPTION OF HUMAN DEVELOPEMENT INDEX,SUSTAINABLE DEVELOPMENT INDEX, AND FOREIGN DIRECT INVESTMENT

2.1 The Human Development Index (HDI): Human Development Index was created by the United Nations Development Program to measure human development, wellness, and quality of life in society across multiple dimensions. Thus, HDI measures development along two social dimensions and one economic dimension to provide a slightly broader indicator based on widely available population measures. A study by (Churilova et al.2015) compared HDI with other variables of well-being and found it to be a strong indicator of human development. HDI has also been critiqued for its limitations as a comprehensive measure of population well-being and the many other dimensions it ignores (Ranis et al., 2006). However, HDI has become the most widely used and accepted international measure of development and due to the alternatives lacking complete data, we use the HDI. (1) per capita GNI (as a proxy for material or economic well-being), (2) population life expectancy (as a crude proxy for general health and bodily wellness), and (3) an education index based on averaging the mean years of schooling for adults over 24 years old and expected years of schooling for school-aged children (as a crude proxy for the mental development of human capabilities). There are two steps to calculate HDI values. Minimum and maximum values are set to transform the indicators expressed in different units into indices between 0 and 1. They are set at the following Values:

Table 1: Indicators for calculation of HDI.

Dimension Indicator	Indicator	Minimum	Maximum
Health	Life expectancy (years)	20	80
	Expected years of schooling (years)	0	18
Education	Mean years of schooling (years)	0	15
	GNI per capita (2017 PPP\$)	100	75000

Source: Human Development Reports

Having defined the minimum and maximum values, the dimension indices are calculated as:

$$\text{Dimension index} = \frac{\text{actual value} - \text{minimum value}}{\text{maximum value} - \text{minimum value}} \quad (1)$$

Because each dimension index is a proxy for capabilities in the corresponding dimension, the transformation function from income to capabilities is likely to be concave (Anand and Sen, 2000) that is, each additional dollar of income has a smaller effect on expanding capabilities. Thus, the natural logarithm of the actual, minimum, and maximum values is used for income. The HDI is the geometric mean of the three-dimensional indices:

$$\text{HDI} = (\text{I}_{\text{Health}} * \text{I}_{\text{education}} * \text{I}_{\text{income}})^{1/3} \quad (2)$$

2.2 Sustainable Development Index(SDI): The Human Development Index (HDI) has long been criticized for not taking into account ecological sustainability. This limitation is becoming increasingly problematic given the growing crisis of climate change and ecological breakdown in the 21st century. All of the HDI top performers are notable for dangerously high levels of ecological impact, which is driving a global crisis. The countries suffer disproportionately from the negative impacts of climate change and ecological breakdown, with significant costs to human economies and living systems; indeed, climate change is now beginning to reverse key development indicators in some regions, as agricultural yields decline and hunger rates rise. In this sense, HDI embodies a contradiction whereby the process of generating high levels of development in some nations constrains development and even drives de-development in other nations. For a development indicator that purports to be universal, such a contradiction is indefensible. Any ecologically rational vision for human development needs to respect the principle of planetary boundaries. In other words, resources should be mobilized to improve human development, but without violating the parameters of ecological sustainability. The objective is to accomplish both human development *and* ecological sustainability at the same time. This aim is now widely accepted and is official. The Sustainable Development Index (SDI) addresses these concerns by focusing on the ecological efficiency of nations in delivering human development. It starts with the base components of the HDI (life expectancy index, education index, and income index modified with a sufficiency threshold) and divides it by ecological overshoot: the extent to which consumption-based CO₂ emissions and material footprint exceed per-capita shares of planetary boundaries). For the details of the methodology see United Nations Sustainable Development Index. Countries that have high human development with low ecological impact rise to the top of the SDI. Countries with low human development, and countries with high human development but a high ecological impact, fall to the bottom of the SDI. In this way, the SDI promotes a new vision for progress in the 21st century, one compatible with the ecology of our planet. To succeed in terms of SDI, poor nations must significantly improve human development while keeping their ecological impact within planetary boundaries, while rich nations must maintain or enhance human development while significantly reducing their environmental impact down to sustainable levels. Of course, income is an important component of human development, in terms of giving people choice, economic agency, empowerment, and security. The sufficiency threshold brings the income index in line with the other human development indices (education and life expectancy), in terms of what we know of the relationship between income and social outcomes while ensuring that countries need not pursue ecologically destructive levels of economic growth in order to score well. The data for the components of the development index is derived from the United Nations Development Program, using the same dataset that underlies HDI. Average overshoot (AO) is calculated as follows:

$$\text{AO} = \sqrt[2]{\left(\frac{\text{MF}}{\text{Boundary}}\right)^3 - 1} * \left(\frac{\text{CO}_2}{\text{Boundary}}\right)^3 - 1 \quad (3)$$

Material footprint and emissions values are each divided by their respective per capita planetary boundary (which varies by year depending on population size) to determine the extent of boundary overshoot (or undershoot). This also standardizes the units. If the result of either division is less than 1 (undershoot) it is rendered as 1. Then the results are averaged using the geometric mean. This method ensures that a country cannot compensate for overshooting one boundary by undershooting the other. Overshoot of either boundary will yield an average overshoot of greater than 1. To succeed in terms of SDI, poor nations must significantly improve human development while keeping their ecological impact within planetary boundaries, while rich nations must maintain or enhance human development while significantly reducing their environmental impact

down to sustainable levels. Of course, income is an important component of human development, in terms of giving people choice, economic agency, empowerment, and security. The sufficiency threshold brings the income index in line with the other human development indices (education and life expectancy), in terms of what we know of the relationship between income and social outcomes while ensuring that countries need not pursue ecologically destructive levels of economic growth in order to score well. The data for the components of the development index is derived from the United Nations. The ecological impact index can be described as follows: Development Program, using the same dataset that underlies HDI.

$$EII = 1 + \frac{e^{AO} - e^1}{e^4 - e^1} \quad (4)$$

Overshoot of either boundary will yield an average overshoot of greater than 1.

$$AO = \sqrt{\left(\frac{MF}{Boundary}\right)^3 - 1} * \left(\frac{CO_2}{Boundary}\right)^3 - 1 \quad (5) \text{ If } AO \leq 4, \text{ Then } EII = AO - 2 \quad (6)$$

The planetary boundaries are calculated as follows. For material use, the sustainable threshold is regarded as about 50 billion tons per year (Bringezu et al. 2015). Dividing this by the global population in any given year renders the boundary in per capita terms. For 2019, the boundary is 6.52t per person. For CO₂ emissions, we can use the IPCC's 2018 SR15 report to estimate the carbon budget for a 67% chance of staying between 1.5C and 2C and render this budget in per capita terms. For 2019, the boundary is 1.58t per person per year. In the ecological impact index, AO is indexed on a natural exponential scale. Adding 1 ensures that the minimum result is 1 (no overshoot). For countries that have no overshoot, their development index is therefore unaffected. Once overshoot reaches four times the planetary boundary the ecological impact index registers 2, thus cutting the development index in half. Thereafter a linear function applies. This method ensures that the SDI is an indicator of strong sustainability. Countries cannot use low ecological impact to compensate for poor performance in human development. And strong performance in development cannot compensate for the high ecological impact. Material footprint and CO₂ emissions are rendered in consumption-based terms; in other words, they account for international trade by adding the materials and emissions embodied in imports (including the upstream materials and emissions involved in producing and shipping imported goods) and subtracting that which is embodied in exports. The material footprint indicator measures the total weight of a nation's material extraction and consumption, including biomass, minerals, fossil fuels, and construction materials. Material footprint is a key indicator because material extraction from terrestrial and marine ecosystems has an impact on land-use change, chemical loading, biodiversity loss and other key processes represented in the planetary boundary framework. While material footprint is not a direct indicator of ecological impact, it is a well-established and widely-used proxy in the policy literature and enjoys robust empirical grounding for this purpose (Krausmann et al. 2009,). (Van der Voet et al. 2004) find that while the mass flows of individual materials are not indicative of their ecological impacts, and while impacts vary as technologies change, at an aggregate level there is a high degree of correlation (0.73) between material throughput and ecological impacts. For the data on material footprint see the UN International Resource Panel Global Material Flows database.

2.3 Foreign Direct Investment (FDI) is a purchase of an interest in a company by a company or an investor located outside its borders. Generally, the term describes a business decision to acquire a substantial stake in a foreign business or buy it outright to expand its operations to a new region. In our study, we use Foreign Direct Investment net inflows in the host country (% of GDP) as the variable of FDI. The investment brings not only foreign currency but also employment growth, the potential transfer of technologies and technical expertise, and increased efficiency and competitiveness. Potentially, FDI can also introduce cleaner technologies that might contribute to sustainable development. However, FDI is driven primarily by the need to meet shareholder expectations, especially for investment returns. Their objective is to maximize their competitive advantage and financial returns.

But what kind of economic growth does FDI bring, especially in developing countries, and is it sustainable in the longer term? The debate on the environmental consequences of FDI is one of the central issues in the wider

discussion about globalization and sustainable development and has been very heated. Some commentators are concerned that countries will lower environmental standards to attract FDI, others argue that foreign investment brings more environmentally friendly technologies. In this view, FDI is the best way to disseminate new and cleaner technologies. Moreover, a slow but steady increase in environmental standards might result (Zarsky, 1999). There is also the argument that poverty is the main cause of environmental degradation and that increased economic wealth will therefore enable countries to afford better environmental protection, and that with rising income levels consumer expectations for more environmentally friendly products will also grow (Panayotou, 1999).

3. DATA SOURCE, ANALYSIS TECHNIQUES, AND OBJECTIVES OF STUDY.

3.1 Data Source

In this article, we provide the results of our empirical work which aims to offer answers to the questions of the relationships between the Human Development Index (HDI), Sustainable Development Index (SDI), and Foreign Direct Investment (FDI) in Albania. A country-year time series on FDI is taken from World Bank Indicators. A country-year series of data on the Human Development Index and Sustainable Development Index is taken from the United Nations Development Program. We use Foreign Direct Investment net inflows (% GDP) as a variable of FDI. The variables used in the econometric analysis, their symbols, and data sources are briefly presented in Tab.2

Table 2: Variables used in the analysis.

Variables	Symbol	Unit of measure	Source
Human Development Index	HDI	0-1	United Nations Development Programmer, Human Development Reports
Foreign Direct investment net inflows (% of GDP) in host countries	FDI	%,(% Of GDP)	World Bank Indicators 2019
Sustainable Development Index	SDI	0-1	United Nations Development Programmer, Human Development Reports 2019

3.2 Regression Analysis and Estimation Method

In the study, we used the method of desk-literature review, descriptive statistics method, and regression method. Among the descriptive statistics, we used statistical ratios and graphical presentation. By the notation X_{ij} , t denotes the time period, and j is, as usual, a label to indicate one of the k explanatory variables. Y_t is the dependent variable, explained variable, or regressand; X_{ij} are the explanatory variables. Let's denote the set of all independent variables in the equation at time t . Further, X denotes the collection of all independent variables for all time periods. It is useful to think of X as being an array, with n rows and k columns. This reflects how time series data are stored in econometric software packages: the t th row of X is X_t , consisting of all independent variables for time period t . Therefore, the first row of X corresponds to $t=1$, the second to $t=2$, and the last to $t=n$.

By combining the time series across a reasonable number of years, we have identified a relationship between changes in the Foreign Direct Investment, Human Development Index, and Sustainable Development Index

The regression analysis commonly makes use of the least-squares (LS). The HAC method (heteroscedasticity and autocorrelation consistent) is used for the estimation of model parameters. Accounting for explained or explanatory variables that are trending is fairly straightforward in regression analysis. If nothing about trending variables necessarily violates the classical linear model assumptions. If we ignore this possibility, we may find a spurious relationship between Y_t and one or more explanatory variables. The phenomenon of finding a relationship between two or more trending variables simply because each is growing over time is an example of a spurious regression problem. By adding a time trend we have eliminated this problem. If it is omitted in the model, then no de-trending occurs, and Y_t might seem to be related to one or more of the simply because each contains a trend, and the results change in important ways when a time trend is added to a regression, then the initial results without a trend should be treated with suspicion. When the dependent variable satisfies linear, quadratic, or any other polynomial trends, it is easy to compute a goodness-of-fit measure that first nets out the effect of any time trend on Y_t . (Jeffrey.Wooldridge, introductory econometrics, sixth ed). We have

applied the so-called Koyck transformation, the geometric distributed lag model to establish the dynamic link between FDI and SDI, between FDI and HDI, and between HDI and SDI (Koyck, 1954).

The underlying data and models along with a full range of results are reported in our estimation appendix. We used the Gretl program, a cross-platform software package for econometric analysis.

3.3 Objective and hypothesis of the study

We tried to answer some questions, based on macroeconomic data analysis. The data for the desired variables are available for 21 years. The relationship between the Human Development Index, Sustainable Development Index, and Foreign Direct Investment, is analyzed in terms of the following hypotheses: a) Foreign Direct Investment (FDI), has had a positive impact on Human Development Index (HDI), and a positive impact on the Sustainable Development Index (SDI). b) Foreign Direct Investments (HDI) have had a greater impact on prosperity measured by HDI, compared to sustainable development measured by SDI. c) The effect of the impact of Foreign Direct Investments (FDI) on Well-Being measured by HDI and sustainable development measured by SDI is not only in the year of investment but extends the effect over time.

4. RRESULT AND DISCUSION

4.1 A Short Description of Foreign Direct Investment in Albania

The value of the stock, for the year 2019, has been 8,542 million euros and has increased by 939 million euros, (or 12.4%) compared to the previous year. The largest part of the stock is occupied by investments in the energy sector at 28.3%, followed by the extractive industry sector at 14.4%. After them, comes the information and communication sector with 13.1% and the financial and insurance activities sector with 12.7%. According to the countries, the largest part of the stock is occupied by Swiss investments at 18%, followed by Dutch investments at 15%, Canadian and other investments. (Bank of Albania Statistics 2020),(Merollari et.al., 2021)

Albania offers a quite friendly legal framework as far as foreign investments are concerned. The Law "On Foreign Investments" is based on the principles of equality, non-discrimination, and protection of investors. There is no need for prior authorization for foreigners to open a business in Albania and have the right to repatriate all funds and contributions in kind of their investments.

Investors are treated in conditions no less favorable than those provided for domestic investments in similar circumstances. Companies with the participation of foreign investments have the right to employ foreign citizens. In all cases and at all times, investments have the equal and impartial treatment and enjoy full protection and security.

4.2 Discussion: The data show that there was a strong positive relationship between foreign direct investments, FDI, and the HDI Human Development Index ($r=0.795$), as well as a stronger positive, statistically significant relationship between foreign direct investments, FDI and Sustainable Development Index SDI ($r=0.815$).

The Sustainable Development Index (SDI) has had a positive trend over the years, increasing on average by 0.014 every year and an average value for the period of 0.777. The Human Development Index (HDI) has had a positive trend over the years, increasing on average by 0.013 every year and an average value for the period of 0.742. Foreign Direct Investments have played an important role in the Sustainable Development Index (SDI). The 1% change in Foreign Direct Investments has been accompanied by a 1.4% change in the Sustainable Development Index. This impact does not appear within the first year but extends the effect for several years. The λ coefficient, such that $0 < \lambda < 1$ is known as the rate of decline of the lag, and $1-\lambda$ is known as the speed of adjustment. The implication of this is quite clear. The effect of lag on Y_t becomes progressively smaller. As the value of λ is closer to 1 the slower the rate of decline thus the distant past values of X will have a sizable impact on Y_t . Whereas the closer λ is to zero the more rapid the decline and the influence of X on Y_t dies out quickly. For Model Table 7: $Y_t = SDI, X_t = FDI$: Rate of decline $\lambda = 0.899$ or 89.9%; speed of adjustment $= (1-\lambda) = (1-0.899) = 0.101$ or 10.1%; Median lag $= -(\log 2 / \log \lambda) = -(\log 2 / \log 0.899) = 6.5$ years; Mean lag $= \lambda / (1-\lambda) = 0.899 / (1-0.899) = 8.9$ years. For Model Table 8: $Y_t = HDI, X_t = FDI$: Rate of decline $\lambda = 0.935$ or 93.5%; speed of adjustment $= (1-\lambda) = (1-0.935) = 0.065$ or 6.5%; Median lag $= -(\log 2 / \log \lambda) = -(\log 2 / \log 0.935) = 10.31$ years; Mean lag $= \lambda / (1-\lambda) = 0.935 / (1-0.935) = 14.38$ years. For Model Table 9: $Y_t = SDI, X_t = HDI$: Rate of decline $\lambda = 0.619$ or 61.9%; speed of adjustment $= (1-\lambda) = (1-0.619) = 0.381$ Median lag $= (\log 2 / \log \lambda) = (\log 2 / \log 0.619) = 1.4$ Mean lag $= \lambda / (1-\lambda) = 0.619 / (1-0.619) = 1.6$ years.

4.3 Conclusions:

Foreign Direct Investments have given half the effect on the Sustainable Development Index (SDI) within the first 6.5 years, the effect lasts an average of 8.9 years. Foreign Direct Investments (FDI) have given half the effect on the Human Development Index (HDI) within the first 10.3 years, the effect lasts an average of 14.3 years. The impact of the Human Development Index (HDI) on the Sustainable Development Index (SDI) is short-term, the effect lasts 1.6 years and gives half of the effect within 1.4 years. Without denying the fact that foreign direct investments in Albania have played a very important role not only in the economic development of the country but also, in sustainable development, there are still big challenges ahead. Some investors continue to perceive Albania as a difficult place to do business due to corruption, the informal economy, frequent changes in fiscal legislation, unfair competition, etc. Many challenges remain for improving and implementing environmental impact rules and facilitating procedures for investments in sectors such as renewable energy, etc.

<https://orcid.org/0000-0002-6794-8782>

Abstract: Egg production in intensive chicken farms is a well-known industry in Kosovo and other countries. The current market of Kosovo is consolidated in the production of eggs and meets almost all local needs, while in the production of meat it meets a very small part of the market. This industry, as part of the agricultural sector, faces numerous risks in production, marketing, financing, law enforcement and human resource management. Seen in this context, the continuation of the sustainable development of this industry requires special attention and is quite complex, especially in terms of the large number of risks in agriculture and poultry. The purpose of this paper is to identify and determine the risk factors in human resources using the qualitative assessment model and the variation analysis model. We also aim to suggest practical recommendations for managing human resource risk events. For this purpose, a questionnaire with nine questions was drawn up, which is based on the literature but also on the knowledge of the reality in Kosovo. Through 33 face-to-face interviews with farmers and farm economists, we rated the likelihood and impact of risk events on human resources on a Likert scale from 1 (very low) to 5 (very high). Then, based on the accounting documentation, we derive the financial loss for each risk event. The qualitative analysis and interpretation of the results highlights the risk factors, which we have grouped according to aggressiveness and levels. The results show that two human resource risk events have mouse aggressiveness (or are low and very low risk factors); four human resources events have the aggressiveness of the rabbit; two events have shark aggressiveness (or are medium, high and very high risk factors); and a drive has the aggressiveness of a lion (or are very high risk factors). The quantitative analysis and interpretation of the results highlights a relatively high distribution of 89%, but if the events were to occur, they are characterized by a large standard deviation (€24,139) and a very high coefficient of variation (175%).

Keywords: human resource risk, probability, qualitative and quantitative evaluation, matrix, Kosovo.

JEL Classification: M10, O13, Q14

1. INTRODUCTION

Thanks to the geographical position, number of sunny days, fertile soil, road infrastructure, suitable market, consumer culture, Kosovo has developed a competitive egg production industry. Eggs are an important food product and are a traditional food with higher per capita consumption even in economically developed countries with a high standard of living (Pllana et al., 2015). Currently, producers in Kosovo operate in a functional market and meet domestic consumption requirements for eggs. According to the MAFRD (2016), unlike the situation with eggs, the chicken meat sector is under development, meeting the needs of consumers is at a low level and the market is dominated by imported production. Even in this sector, the investments that are being made in the construction of farms, slaughterhouses, but also in companies dealing with meat processing will affect the increase in production and will gradually replace the need for imports. The development of intensive farms for the production of eggs and meat has a relatively short history in Kosovo (the last two decades). The poultry sector, specifically that of poultry in the country, is a fairly consolidated sector (Murrja et al., 2022).

The Republic of Kosovo has an area of 10,908 km². It is located in the center of the Balkan Peninsula (SOK, 2001), in the part of South-Eastern Europe, bordering Albania, Montenegro, Serbia and North Macedonia (KAS, 2016). The population is 1,798,188 inhabitants (KAS, 2020). Kosovo is divided into 7 regions and 38 municipalities (KAS, 2016) and its capital is Pristina (Murrja et al., 2022).

The poultry sector (broilers, laying hens, poultry, other chickens and turkeys, oysters, ducks and geese, other birds: African chickens, pigeons, etc.) in Kosovo is mainly oriented towards egg production, but recently there began to develop the production of chicken meat. (MAFRD, 2016). In 2020, the total number of birds in Kosovo has increased by 4.4% compared to the previous year (MAFRD, 2021). The average consumption per capita is estimated to be 206 eggs/year and we can say that Kosovo meets about 99% of the egg consumption needs, while with the current production Kosovo manages to cover only 7.1% of the consumption needs (MAFRD, 2021).

In Kosovo, the cost of egg production is higher compared to other countries, considering the fact that the size of the farms is small, as well as the technology is outdated. The average production per head is about 295 eggs per year (MAFRD, 2016). The average price of eggs was 2.30 euros/pack (30 eggs), while after the Covid-19 pandemic and the war in Ukraine, prices range from 3.59 euros/pack to 4.19 euros/pack. According to a study by MAFRD (2016), variable expenses make up 81% of total revenues. Within the expenses, about 70% are expenses for feed and 23% for the purchase of broiler chickens (18 weeks old), while the rest are other expenses such as municipal, veterinary and slaughter expenses, as well as expenses related to packaging and delivery. Expenses account for 4% of total revenue. Based on variable costs as well as fixed costs, the production cost for one egg was €0.07, while today it is still higher (Murrja, Ndergjoni, Kapaj et al., 2022).

Subsidizing poultry through direct payments first started in 2013. The unit payment has varied depending on the number of chickens on the farm. Applicants who had 2,400-10,000 chickens on their farm were supported with €0.50/head, those with 10,000-20,000 chickens with €0.40/head and those with more than 20,000 chickens with €0.30 /head. The same way of subsidizing has continued in the following years (MAFRD, 2016; MAFRD, 2019; Murrja, Ndergjoni, Kapaj et al., 2022).

The agriculture, livestock and poultry sectors are diverse. Risk events in these sectors are also different. Previous research in the poultry sector has focused; in egg production costs (MAFRD, 2016; Maloku et al., 2017); in "salmonella" disease (Hulaj et al., 2016; Rizani et al., 2015; Rizani et al., 2017); as well as the use of antibiotics in chicken feed (Heta & Shehu, 2018). Based on this fact, there is a research gap in risk management in the poultry sector in Kosovo. In the three previous papers, production risk events (Murrja, Nderca et al., 2022) and market risk events (Murrja, Ndergjoni, Prendi & Maloku, 2022) and financial risk events (Murrja, Ndergjoni, Kapaj et al., 2022) were analyzed. This paper focuses on the identification of risk factors of human resources in intensive chicken farms, their assessment and familiarization of the Kosovar farmer with the aggressiveness and levels of human resource risk events. Also, this study aims to recommend to the farmer the tools or strategies for coping with human resource risk events. In order to have a complete panorama in the management of the five risks (production, market, financial, legal and human resources), in another paper we will analyze the legal risk.

2. LITERATURE REVIEW

2.1. Risk in agriculture, livestock and poultry

The nature of agricultural, livestock and poultry activities is associated with various uncertainties and risks (Shannon and Motha, 2015; Ullah et al., 2015; Gunduz et al., 2016; Riwthong et al., 2016; Saqib et al., 2016 et al., 2016; Jankelova et al., 2017), because, on the one hand, it depends on the nature of weather conditions (Girdžiūtė, 2012; Janowicz-Lomott and Łyskawa, 2014; Oliveira et al., 2022) and on the other hand, it has shown vulnerability to biological factors such as plant pests and diseases (Ranjbar et al., 2021; Murrja, Maloku and Meço, 2021), animals and birds. These circumstances make agriculture and livestock among the most risk sectors in the economy. In addition to dangerous natural and biological events, farmers face economic, fiscal, political, social, human risk events that are not controlled by them (Murrja et al., 2019; Murrja & Braha, 2021; Murrja et al., 2022).

2.2. Human resource risk on agricultural and livestock farms

People themselves are a source of risk on the farm (Carne et al., 2013). Human resource risks are events related to individuals and their relationship to each other. These relationships include relations with family members, farm employees, suppliers and customers. Also, recruiting and training of the new employees, and retaining professional employees is an important source of human risk for agricultural producers (Sciabarrasi, 2021). Labour costs constitutes the largest share of the total farm costs (Reynolds-Allie et al., 2013).

The probability of death and disability of the owner, manager, employees threatens the survival of the farm. Divorce also has a negative impact on the survival and stability of the farm (Drollette, 2009). "Divorce, Death, or Disability" is known as the "3D risk" of on-farm human resources (Sciabarrasi, 2021). Or Divorce, Death, Disability or Disagreement: known as the "4D risk" of on-farm human resources (Green, 2003).

Other risks include: accidents with machinery used on the farm; loss of life of employees death, illness of family members, negative impact from pesticide use, animal-to-human diseases (Harwood, 1999), migration, socio-political unrest, spread of dangerous diseases (Helamo, 2018), as epidemics and pandemics that have had and are having serious impacts on farm activity.

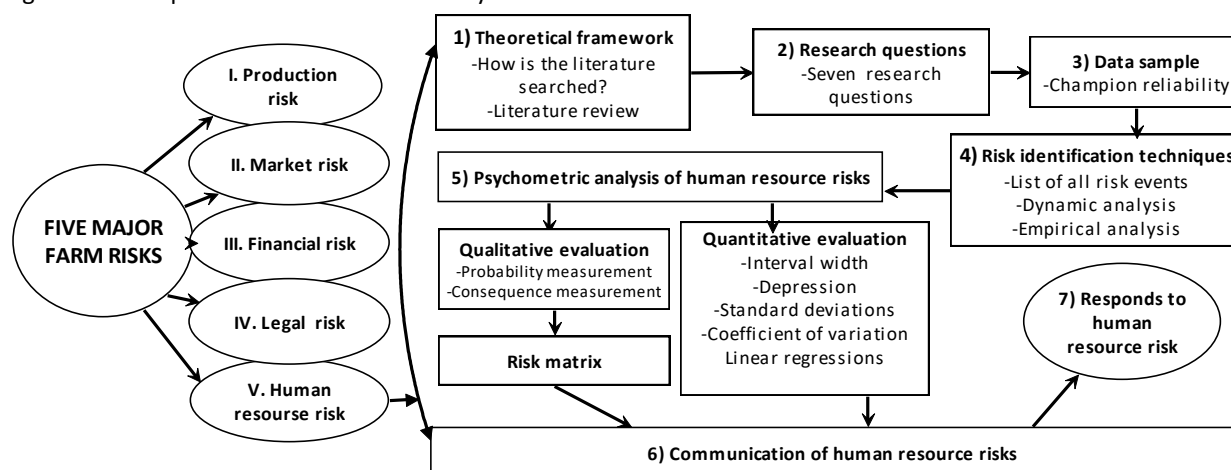

While not as visible as other types of risks, these human risks cannot be ignored and should be recognized and managed in order to sustain successful activity of the farm (Drollete, 2009).

2.3. Conceptual framework of the study

Researchers are unanimous regarding the classification of farm risks. They classify them into five main risks or otherwise call them the Big Five Risks of the farm. These risks are: (i) Production Risk; (ii) Market risk; (iii) Financial risk; (iv) Legal risk; (v) The risk of human resources (Murrja et al., 2019; Murrja, Maloku, & Meço, 2021; Murrja & Braha 2019; Murrja et al., 2022; Murrja & Ndrejoni 2022). Komarek et al., (2020) identifies that the largest number of studies are related to production risk, followed by those related to market risk, legal risk, financial risk, and human resource risk. The present study aims to provide an understanding of how farmers' perception and attitude towards human resource risk can influence their decisions, regarding management (Ullah et. al., 2015) and risk management. In this paper we will analyze the risk of human resources. According to Marshall and Alexander, small businesses face many different types of risk: manufacturing, marketing, financial, legal, and human. Managers generally spend most of their time dealing with production, marketing, financial, and legal risks and pay little attention to resource risk. The role of human resources is very important. This should be given serious attention because people are the key component in many risk management strategies.

The conceptual framework of the study is presented in figure 1. To build this structure, we have based on previous studies of production risk, market risk and financing risk in intensive chicken breeding farms in Kosovo (Murrja, Nderca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al, 2022).

Figure 1. Conceptual framework of the study

Source: Adopted to our study from Murrja, Nderca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al, 2022.

3. MATERIAL AND METHODS

The literature review research is conducted to answer the requirements of the theoretical framework (Pham et al., 2019). The research of similar literature was done with these phrases: "Method of qualitative assessment"; "Method of quantitative assessment"; "Method of qualitative and quantitative assessment"; "Farm/Agricultural Risk Analysis" (Murrja, Nderca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al., 2022); "Legal context of human resources"; "Farm/agricultural risk management"; "Qualitative assessment of human resources on the farm"; "Quantitative assessment of human resources on the farm".

3.1 Study research questions

This study addresses the following research questions:

- RQ1: Which human resource risk events are risk factors with very low and low level or have mouse aggression?
- RQ2: Which human resource risk events are moderate risk factors (high and very high probability and small and very small impact) or have the rabbit aggressiveness?

- RQ3: Which human resource risk events are moderate risk factors (low and very low probability and large and very large impact) or have the shark aggressiveness?
- RQ4: Which human resource risk events are risk factors with a very high level or have the lion aggressiveness?
- RQ5: Does the risk perceived by farmers match the value of the caused damage?
- RQ6: What is the relative variation of the loss from human resource risk events (quantitative assessment to measure objective risk)?
- RQ7: What is the projected monetary damage of human resource risk events for the farms with 40,000 heads of chicken? Comparing the actual damage with the average market damage?

3.2 Selection of the sample

The study includes intensive poultry farms for egg and meat production. The total number of intensive poultry farms in Kosovo is 160 (MAFRD Kosovo, 2018). We have divided the farms into four groups: In the first group, are farms with up to 10,000 chickens; the second group includes farms with up to 20 20,000 chickens; the third group includes farms with up to 40,000 chickens; and the fourth group includes farms with up to 80,000. A sample of 33 farmers or farm managers or farm economists, who were randomly interviewed in 7 regions of Kosovo, was used to assess human resource risk factors (20% of the total number of farms).

The reliability of the sample has been verified in previous studies of production risk, market risk and financial risk (Murrja, Ndreca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al., 2022).

3.4 Human resource risk identification techniques

A list of all human resource risks has been made, based on event dynamics and empirical analysis (reliance on practice and experience) (see Table 3). Eleven events of human resource risk were identified, while nine of them were analyzed, because the event "non-payment of employees" and the event "disputes or conflicts with neighbors" resulted to have no impact (zero probability and consequence) in farmers surveys.

3.5. Psychometric risk analysis of farm human resources

Risk is the combination of probability and consequence. (IRM; IIA; Orange Book). Ranking risks based on the product of probability (P) and consequence (C) provides a risk factor (RF) (Cooper et al., 2005). Farmers or managers were asked to rate the incidence and severity of each human resource risk source on a Likert scale from 1 (very low) to 5 (very high) in order to express how important they considered each source to be. danger. These results are combined in the risk matrices in **Figure 3 and Figure 4. Table 2 and Table 3 present** the general descriptions and qualitative assessment of probability and consequences for human resource risk events.

Table 2. Generic description and qualitative assessment (in numbers, words and colors) of the event probability

Possibility of event occurrence	Frequency in 5 years	Scale	Probability in words	Color rating
Event occurrence almost impossible (1%)	1 time	1	Very low	Green
Rare event occurrence (2%)	2-10 times	2	Low	Light green
Possible event occurrence (3-9%)	11-30 times	3	Average	Yellow
Frequent event occurrence (10-39%)	31-40 times	4	High	Orange
Almost certain event occurrence (over 40%)	Over 41 times	5	Very high	Red

Table 3. Generic description and qualitative assessment (in numbers, words and colors) of the event consequences

Consequence description	Value of damage	Scale	Consequences in words	Color rating
Very low consequence	Up to 1,150€	(1-3)	Very low	Green
Low consequence	1,151€ - 2,300 €	(4-6)	Low	Light green
Average consequence	2,301€ - 10,150 €	(7-9)	Average	Yellow
High consequence	10,151€- 44,000 €	(10-12)	High	Orange
Very high consequence	Over 44,000€	(13-15)	Very high	Red

Source: Murrja, Ndreca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al., 2022. (Table 2 and Table 3).

Questionnaire design: The questionnaire is structured in 9 open questions, divided into two sections. In the first section, farmers were asked to qualitatively assess the probability and impact of the event according to the Likert scale from 1 (low) to 5 (very high) for each question. In the second section, the farm's economists were asked to calculate the financial balance according to the farm's accounting documentation. The questions are formulated according to the generic assessments of the probability in Table 2 and the generic assessments of the impact in Figure 3. The interview was done face to face with the farmer and the economist for all the human resource risk events presented in Table 4. The combination of the probability with the consequence or otherwise the factors of risk for each event and economic bull are presented in Table 5. The study period includes five years (2017-2022).

The conversion of concepts into measurable variables for the study was carried out according to the table below:

First section/qualitative assessment				Second section/quantitative assessment	
Variable	Qualitative measurement method	Likert scale	RF		
Human resource risk event	Probability (P)	(1) Very low	RF = P * C	1 time	Frequency in 5 years
		(2) Low		2-10 times	
		(3) Average		11-30 times	
		(4) High		31-40 times	
		(5) Very high		Over 41 times	
	Consequence (C)	(1) Very low		Up to €1,150	Value of damage
		(2) Low		€1,151 - €2,300	
		(3) Average		€2,301 - €10,150	
		(4) High		€10,151 - €44,000	
		(5) Very high		Over €44,000	

Source: Author own elaboration.

3.5.1 Psychometric qualitative risk assessment of the farm's human resources

Table 4. Nominal assessment of human resource risk events (codes or symbols)

Human resource risk events		Symbol
1	Managerial incompetence of the farm owner	R _{h1}
2	Premature death of the farm owner	R _{h2}
3	Divorce in the family	R _{h3}
4	Displacement of family members from the farm	R _{h4}
5	Professional incompetence of employees in agriculture	R _{h5}
6	Environmental pollution (chemicals, pesticides, waste)	R _{h6}
7	Failure to train employees	R _{h7}
8	Lack of legal provisions knowledge	R _{h8}
9	Accidents of employees at work	R _{h9}

Source: Author own elaboration.

Risk matrix: Using the matrix to illustrate the likelihood and magnitude of the risk impact (risk factor) is a very important risk management tool (Hopkin, 2018; Murrja et al., 2022; Murrja & Ndrejoni, 2022). **Figure 3** presents the matrix according to the financial risk levels from 1 (very low) to 5 (very high) and **Figure 4**, presents the human resource risk aggressiveness matrix.

Figure 4. Matrix of qualitative risk levels

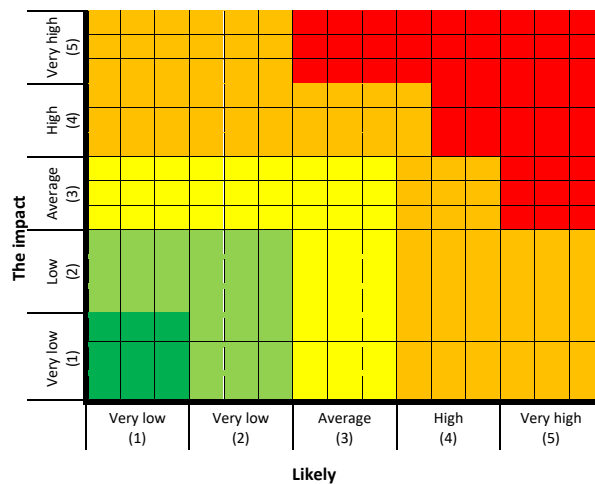

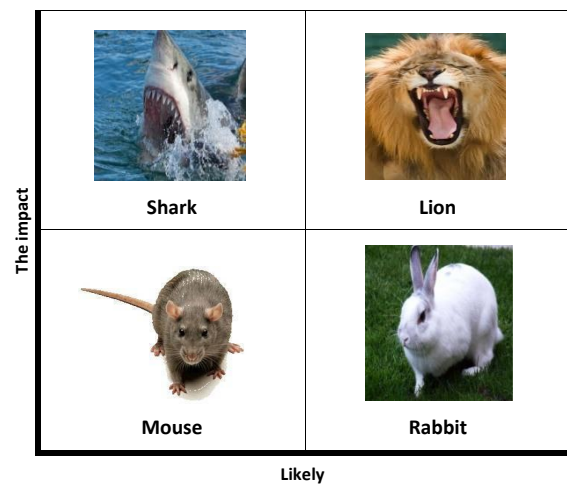

Figure 5. Risk aggressiveness matrix

Source: Murrja et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al., 2022; Murrja & Ndrejoni, 2022.

3.5.2 Quantitative estimation of human resource risk

In order to evaluate quantitative human resource risk this study has employed followig statistical estimates:

1. Interval width: $I_{width} = X_{max} - X_{min}$
2. Dispersion: $D^2 = \sum (x_i - \bar{x})^2 / n - 1$
3. Standard deviation $D = \sqrt{D^2}$
4. Coefficient of Variation $C_v = (D / \bar{x})$;
5. Linear regressions $y = a + bx$

These statistical measures have been used in previous risk analysis studies: production (Murrja, Ndreca et al., 2022), market (Murrja, Ndrejoni, Prendi & Maloku 2022), financing (Murrja, Ndrejoni, Kapaj et al., 2022) in intensive chicken farms in Kosovo.

3.6 Human resource risk communication

One of the objectives of the study is the communication of risks to farmers and other interested parties (Murrja, Ndreca et al., 2022; Murrja, Ndrejoni, Prendi & Maloku, 2022; Murrja, Ndrejoni, Kapaj et al., 2022).

4. DISCUSSION AND RESULTS

4.1. Psychometric qualitative risk assessment of the farm's human resources

Table 5 shows the average probability and consequence results for human resource risk events and their combination (risk factor), as well as the average value of financial loss in euros for the last five years (2018-2022).

Table 5. Combined probability assessment with consequence (risk factor) and damage values in euros for each event

Risk code	Human resource risk events	Probability	Consequence	Risk factor	Damage value
(1)	(2)	(3)	(4)	(5)=3*4	(6)
R _{h1}	Managerial incompetence of the farm owner	3	10	30	5,000
R _{h2}	Premature death of the farm owner	2	4	8	4,000
R _{h3}	Divorce in the family	2	15	30	75,000
R _{h4}	Displacement of family members from the farm	3	8	24	6,600
R _{h5}	Professional incompetence of employees in agriculture	3	7	21	1,600

R _{h6}	Environmental pollution (chemicals, pesticides, waste)	1	9	9	60
R _{h7}	Failure to train employees	5	7	35	5,500
R _{h8}	Lack of legal provisions knowledge	4	12	48	25,000
R _{h9}	Accidents of employees at work	2	2	4	1,200

Source: Author own elaboration.

The perception of human resource risk factors in the seven events does not follow the trend of financial losses, which means that the perception of farmers does not match the value of the damage caused. Specifically for the events: R_{h1} "Managerial incompetence of the farm owner" has high perception but average monetary damage; R_{h3} "Divorce in the family" has a very low perception, but if it happens, the damage is catastrophic; R_{h4} "Displacement of family members from the farm" has average perception but low monetary damage; R_{h5} "Professional incompetence of employees in agriculture" has average perception but low monetary damage; R_{h6} "Environmental pollution" has an average perception but very low monetary damage; R_{h8} "Failure to train employees" has a high perception, but moderate monetary damage. Farmers' perception follows the trend of financial losses for only two events: R_{h2} "Premature death of the farm owner" and R_{h8} "Lack of legal provisions knowledge"

Figure 5. Matrix psychometric human resource risk assessment

Consequence	Very higt (13-15)	Rh3				
	High (10-12)				Rh8	
				Rh1		
	Avarge (7-9)	Rh6				
				Rh4		
	Low (4-6)			Rh5		Rh7
	Very Low (1-3)		Rh2			
			Rh9			
Human resource risks on intensive growth farms in Kosovo		Very Low	Low	Avarge	Higt	Very higt
		1	2	3	4	5
		Propability				

Source: Author own elaboration.

For the evaluated nine human resource risk events, farmers' perceptions are as follows: one event is a very high risk factor, three events are high risk factors, three events are average risk factors, two events are low risk factors and one event is very low risk factor.

4.2. Analysis of the quantitative assessment of human resource risk

Table 7. Calculation of statistical estimation of human resource risk events (in euro)

n	x_i	\bar{x}	$(x_i - \bar{x})$	$(x_i - \bar{x})^2$
1	5,000	13,773	-8,773	76,965,529
2	4,000	13,773	-9,773	95,511,529
3	75,000	13,773	61,227	3,748,745,529
4	6,600	13,773	-7,173	51,451,929
5	1,600	13,773	-12,173	148,181,929
6	60	13,773	-13,713	188,046,369
7	5,500	13,773	-8,273	68,442,529
8	25,000	13,773	11,227	126,045,529
9	1,200	13,773	-12,573	158,080,329
Interval width (l_{width})				74,940
(Dispersion) (D^2)				89%

Standard deviation (D)	24,139
Coefficient of variation (Cv)	175%

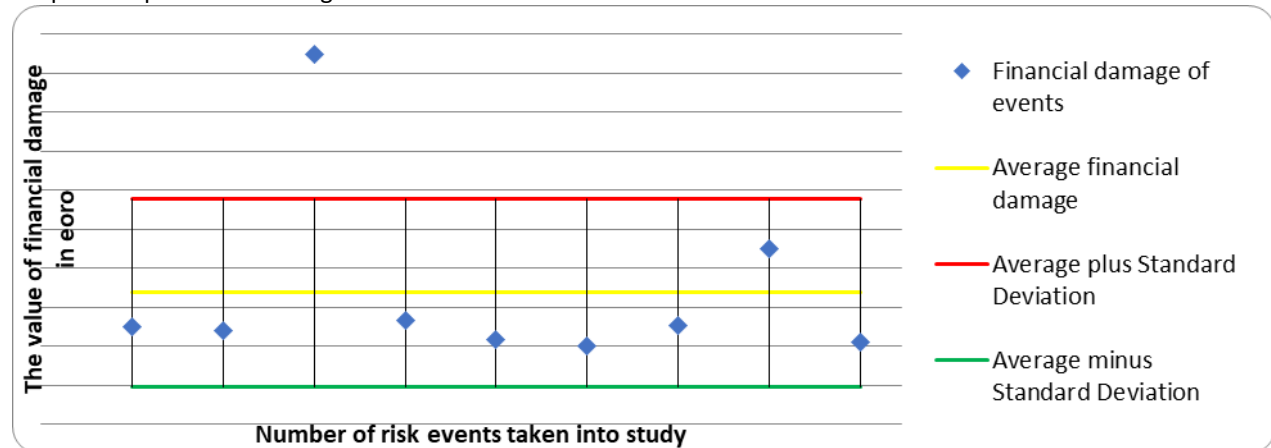

Source: Author own elaboration.

Human resource risk events are characterized by a large interval width (€ 74,940), large standard deviation (€ 24,139) and high coefficient of variation (175%). The assessment is made according to the financial consequence segments in Table 3.

4.2.1. Analysis of dispersion and standard deviation

The dispersion of damage from human resource risk events is reflected in **Graph 1**. From the overall 9 human resource risk events, 7 are below the average market damage value.

Graph 1. Dispersion of damage from human resource risk events

Source: Author own elaboration.

Of the 9 human resources risk events, 8 of them are included in the average value of the damage plus and minus the standard deviation. Dispersion is equal to 8/9 or in other words 89% of human resources risk events can occur.

4.2.2. Linear regression analysis

Linear regression analysis are used to predict the impact of human resource risk events on farms of 40,000 chickens in relation to the average market damage in Kosovo. To construct the linear regression equation $D_y = a + bD_x$ we focus on the data provided in the **Table 8**. Where, D_y is the financial damage of the farm group up to 40,000 chickens; D_x average market damage in Kosovo; component (a) represents the intersection with the vertical axis; and component (b) represents the slope of the linear line.

Table 8. Calculation and construction of linear regression

n	X= D_x	Y= D_y	$X^2=D_x^2$	$Y^2=D_y^2$	$X*Y=D_x * D_y$
1	2,000	5,000	4,000,000	25,000,000	10,000,000
2	7,000	4,000	14,000,000	20,000,000	28,000,000
3	100,000	75,000	200,000,000	375,000,000	7,500,000,000
4	7,600	6,600	15,200,000	33,000,000	50,160,000
5	600	1,600	1,200,000	8,000,000	960,000
6	60	60	120,000	300,000	3,600
7	1,000	5,500	2,000,000	27,500,000	5,500,000
8	5,000	25,000	10,000,000	125,000,000	125,000,000
9	1,000	1,200	2,000,000	6,000,000	1,200,000
n=10	$\sum D_x =$ 124,260	$\sum D_y =$ 123,960	$\sum D_x^2 =$ 248,520,000	$\sum D_y^2 =$ 619,800,000	$\sum D_x * D_y =$ 7,720,823,600

Source: Author own elaboration.

n -is the number of human resource risk events.

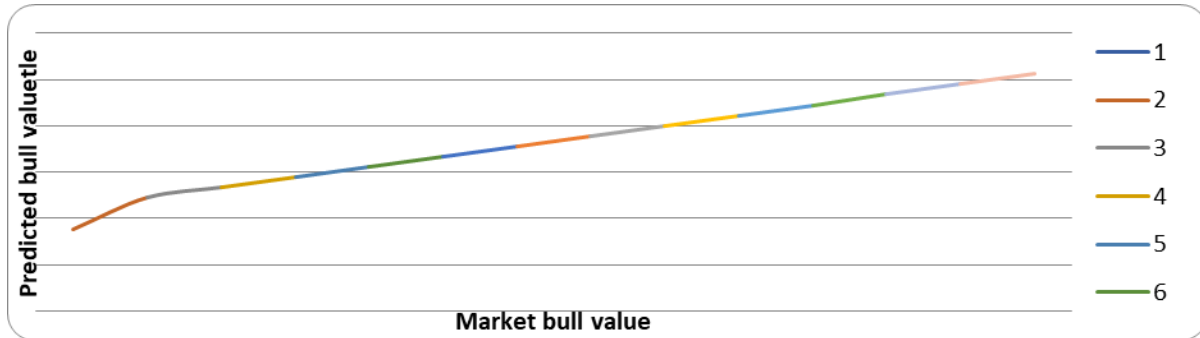

$$b = \frac{\sum x * y - [(\sum x)(\sum y)]}{n \sum x^2 - (\sum x)^2} = -0,0000223$$

a - is calculated as below:

$$a = \frac{\sum y}{n} - b \frac{\sum x}{n} = 13,804$$

The linear regression equation is $D_y = 13,804 - 0,0000223D_x$ and in **Graph 2** is presented the linear regression function.

Graph 2. Function of linear regression equation ($D_y = 13,804 - 0,0000223D_x$)

Source: Author own elaboration.

With the linear regression equation we predict the damage for the farm group up to 40,000 chickens, when the average market loss is known (see Table 9)

Table 9. Prediction of damage from human resource risk events for the farms up to 40,000 chickens

D_x	a	b	$D_y = 13,804 - 0,0000223D_x$
7,000	13,804	(0.0000223)	13,804
8,000	13,804	(0.0000223)	13,804
9,000	13,804	(0.0000223)	13,804
10,000	13,804	(0.0000223)	13,804
11,000	13,804	(0.0000223)	13,804
12,000	13,804	(0.0000223)	13,804
13,000	13,804	(0.0000223)	(greater than the market) 13,804
14,000	13,804	(0.0000223)	(equal to market) 13,804
25,000	13,804	(0.0000223)	(lower than the market) 13,805

Source: Author own elaboration.

5. CONCLUSIONS

Communication and response to research questions, and recommendations for using tools or strategies to address human resource risk events are presented in Table 10.

Table 10. Communication of human risk events and response strategies

Risk events	Risk factor	Aggressiveness of risk events	Risk factor impact	Risk response strategies
R _{h9} - Accidents of employees at work.	Very low		Inconsiderable	1) Self-financing.
R _{h6} - Environmental pollution.	Low		Unimportant	Do not affect farm objectives
R _{h1} - Managerial incompetence of the farm owner.	Average		Moderate	1) Practice good human skills with family members, neighbors and employees.
R _{h4} - Displacement of family members from the farm.			There is fear/ambiguity	2) Training of farm members and employees.
R _{h5} - Professional incompetence				

of employees in agriculture. R _{h7} - Failure to train employees.				3) Motivation of employees at work.
R _{h2} - Premature death of the farm owner. R _{h3} - Divorce in the family.	High		Large Their impact brings serious damage	4) Talent management. 5) Stress management. 6) Evaluation of alternative sources of work.
R _{h8} - Lack of legal provisions knowledge	Very high		Very large The impact is catastrophic	7) Consultation of farmers with a lawyer, jurist, veterinarian, and zootechnician, etc.

Source: Author own elaboration.

Based on the above table, the specific weight in percentage of events is reflected in **Table 11**. The number of events in column 1 corresponds to the number of events in column 1 of **Table 10**.

Table 11. Percentage of risk events in total events by the level of aggressiveness

Number of events	Percentage	Risk level	Aggression of risk events	Predicted consequence	Response strategies
2	22%	Very low and low	Mouse aggressiveness	Up to 1,150 €	Self-financing
4	44%	Average	Rabbit aggressiveness	1,151-2,300 €	Prevention
2	22%	High	Shark aggressiveness	2,3001-10,150 €	Transfer
1	12%	Very high	Lion aggressiveness	Up to 10,151	Elimination

Source: Author own elaboration.

In conclusion, we suggest farmers to consider the above recommendations in order to address human resource risk events, so that the risk factor is mitigated or reduced from medium to low or very low.

Integrating People in the Organization: A Neglected Management Function?

Boryana ROBEVA-STOYANOVA ¹

¹University of Ruse, brobeva@uni-ruse.bg, ORCID: 0000-0003-0489-2731:

Abstract: The paper studies the position of people integration in the general scheme of the functional distinctness of human resource management in modern organizations. The aim is to semantically define the concept of people integration in the organization and to functionally distinguish it from the other well-known management functions. Using qualitative thematic analysis and content analysis methods, an attempt is made to answer two questions: "What is people integration?" and "What is not people integration?". Integrating people into the organization is defined as the process of exerting managerial influence on employees during which they become permanently committed to the goals of the organization and a functionally indivisible part of it. The paper tries to distinguish employee integration from other constructs, both antipodal and related, such as coordination, specialization, manipulation, motivation, consolidation, unification, affiliation and inclusion. It is concluded that the unique contribution of integrating people compared to the classic management functions consists precisely in ensuring the bond between an employee, a group and an organization. Since the growing global competition between organizations imposes higher demands on the effectiveness of the human factor, the need for such a bond in modern organizations is constantly increasing. Only by integrating people in the organization it is possible to use employee knowledge and skills to their full potential – both in the interest of their holders and in the interest of the organization.

Keywords: employee integration, management functions, inclusion, affiliation, human factor.

1. INTRODUCTION

The integration of the individual into the organization is of paramount importance for its successful functioning (Kotsev, 2008). Integration is embedded in the genesis of the very idea of organization – even our forefathers were aware that if they wanted to survive enemy raids and the vicissitudes of nature, they had to unite and work together. Later, similar motives became the reason for the Romans to invent the cohort – its notorious invincibility was due not to its large number (up to 600 warriors), but to the cohesion and cooperation of its members (not by chance, a term that has a common root with the word "cohort" – cohesion – is used as a synonym for unity and cooperation). It is only when their enemy finds a way to destroy this unity between person and organization that the cohort becomes vulnerable. Therefore, even then the following principle was valid: *the lower the degree of integration in the organization, the higher the probability that it will cease to exist.*

The main responsibility for the survival and development of any organization lies with its management. This gives reason to assume that, protecting the interests of the organization, management will be interested in reaching a higher degree of integration. Moreover, "in order to effectively manage the process, managers must maintain team cohesion on a daily basis by also initiating new integration activities" (Kotsev, 2008, p. 9). It is hard to dispute Drucker's (1993) assertion that the integration of an organization is more important than the education and skills of its managers.

These words sound especially relevant today. There are several prerequisites for this:

- *Never before have people had such a wide choice of organizations to join.* This makes it relatively easy for them to make decisions about leaving one organization and joining another. Driven by a desire for a better life, their willingness to take such actions should not be questioned (we witness the depopulation of entire countries that have failed to integrate their citizens). In order to adequately respond to this challenge and retain qualified personnel, organizations should not limit themselves to using only economic and legal mechanisms – high salaries, binding contracts, etc. It is much more efficient from the point of view of the organization to make efforts in the direction of employee integration.
- *Never before have people had access to such a volume of information.* Regardless of the organization in question (a state or a grocer), the use of this information in the direction of the goals and interests of the organization becomes particularly important. An individual or a group that does not feel an integral part of the organization can, in some cases, even threaten its security (let's recall the statements of a sufficient number of experts, according to which it is possible to make a bomb with information available from the Internet).

- *Competition between organizations has never been so intense.* Organizations that do not manage to obtain an optimal result in the use of their resources fall out of the market race. The fierce competition and high stakes can find expression in "hits below the belt" between organizations – for example, insufficiently integrated individuals or groups could be recruited by the competition.
- *Never before has the internal environment of organizations been so complex.* This presents their members with a double challenge – on the one hand, to be able to meet the increasing demands for specialization of knowledge and skills, and on the other hand, to maintain constant contact with colleagues from other professional or functional areas. Often the dilemma is resolved in favor of specialization and the organization loses the advantages of the synergistic effect that would result from the interaction of more organizational members

2. THE NEED FOR INTEGRATION AS A CONSEQUENCE OF MORE COMPLEX MANAGEMENT

The deeper and more large-scale the processes of specialization in organizations become, the more strongly the need to integrate individual and group activities emerges. It is not the isolation of these processes, but their interdependence, inter-functional coordination, communication and knowledge sharing across the organization between departments and work units influences positively organizational development (Solanky et al., 2019). In this sense, the race for overall effectiveness of organizational performance also intensifies. Therefore, the continuous complexity of the internal environment (Kabalina et al., 2019) is already becoming a factor of increasing importance, imposing employee integration as objectively necessary.

A natural effect of the increased complexity of the internal and external organizational environment is the complicated management of organizations. As a supplement to the above-mentioned prerequisites and at the same time a kind of verification of them, the statement of Andreeva (2003, p. 93) can be accepted that "the more management becomes complicated, the more the need to integrate all private functions and activities into a single whole grows".

The growing role of integration raises the question of its place among the other management functions that managers today have to perform. Times are changing and it seems that the dominance of the classic management functions (planning, organizing, coordinating, staffing, leading and controlling) is about to become history. There are not a few scholars who argue that goal setting, motivation, even following (Kotsev, 2021; Kotsev, 2022; Kotsev, 2023) should be added to them. It seems normal to ask the question: isn't it time to include integration in the composition of the main functions of management?

The claim that integration as a concept is still looking for its place among other scientific categories could be justifiably criticized – for example, the term "integration management" has gained some popularity in the last two decades. However, it refers to the management of all processes, procedures and control systems in the organization and aims to ensure their unidirectionality with decisions and their implementation. In other words, the object of integration management are the organizational processes, procedures and systems, and the subject – their integration. Obviously, this paper is not about "integration management", but about people integration as part of management. Here, the object of integration is the human factor, and the subject – its commitment to more general (group or organizational) goals.

In order to guarantee the initial vitality of a concept seeking its place among scientific categories, it must be semantically defined and functionally distinguished from the rest. In the case of integration, this is not such a difficult task, since it is not a question of expanding the existing terminology. The acceptance of integration among the main functions of management is rather a legalization of the right to relative independence, as has been accepted and outlined for the other management functions under the existing status quo.

3. SEMANTIC IDENTIFICATION OF THE CONCEPT OF INTEGRATION

Two questions – "What is integration?" and "What is not integration?" – are the basis of the semantic identification of the concept. An answer to the first question gives the following definition:

The integration of people into the organization is a process of purposefully exerted managerial influences, in which individuals or groups are permanently committed to the goals of the organization and become a functionally indivisible part of it.

There are five key points in this definition.

First, integration is a process. It should not be considered as a one-time act with a quick and certain result, but as a sustainable management activity over time.

Second, integration requires targeted impact, not just interaction as it often seems. The impact is exerted by the integrating subject on the object of integration. Its purpose can be overt or covert.

Third, the object of employee integration can be both individuals and whole groups. However, when the object of integration is the group, the process becomes significantly more complicated – the manager must first ensure favorable group characteristics (level of cohesion, nature of group attitudes and values, adequacy of team roles, etc.) and only then move on to the real integration.

Fourth, integration finds expression in a constant commitment to the goals of the organization. Most often, this is also the main purpose of integration.

Fifth, integration refers to the functional aspect of employee activity. In other words, without affecting the structural independence of individual jobs and departments in the organization, it strengthens their multifunctionality and interchangeability.

In order to crystallize the essence of integration, it must be clearly distinguished from some concepts, both close and antipodal.

Integration is not coordination. In coordination, the goal is to achieve physical (spatial and temporal) synergy between the individual elements, while people integration is driven by the ambition to mentally gather the elements (individuals or groups) around a common goal.

Integration is not specialization, although narrow specialists need it most. Integration acts as an antidote to the narrow-mindedness that sooner or later appears in too clearly functionally differentiated activities.

Integration is not manipulation. The integration process does not require distorting the truth and building relationships on false foundations. Usually subjects of integration are aware of the impact on themselves, while subjects of manipulation often do not even suspect it.

Integration is not motivation. The manager's goal in motivating is to make an employee or a group of employees want what he/she wants. In the case of integration, this appears to be only an intermediate goal (a circumstance that allows motivational techniques to be considered as a toolkit of integration). "Once implemented, integration is characterized by a relatively higher degree of end result sustainability than motivation" (Kotsev, 2008, p. 13).

Relatively closer to integration are *merger* and *unification*. However, it would be a mistake to view them as synonyms, as here too some differences are observed.

Both merger and unification are one-time acts that enable two or more interested parties to consolidate their efforts and resources. It can be imposed "from within" (for example, the unification of West Germany and East Germany, a result of the desires and initiative of regular German people) or caused "from outside" (for example, the mergers observed in the last decades of some of the world's car manufacturers, dictated by the increasing competitive pressure in the automotive industry). In the first example, the integration process was already in full swing at the time of unification, while in the second it had yet to be developed. From this point of view, unification and merger can also be seen as phases of integration, whose place, depending on the specifics of the situation, can be at the beginning, middle or end of the process.

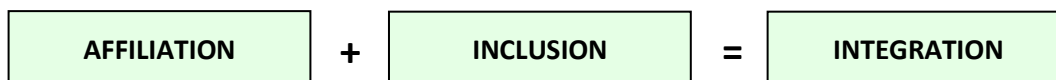

This conclusion can be misleading if the unidirectional relationship between these terms is not taken into account. In other words, it is possible that the unification or merging of two or more objects does not lead to their integration, while the ultimate success of the integration process is not possible without unification or merging.

The other significant difference between the three terms is observed when analyzing the results of the respective process. When merging or unifying, parties mechanically increase their strengths, but it is also possible for some problems to appear that reduce the effect of this process (for example, inadequate coordination mechanisms, intercultural differences, technological inconsistencies, etc.). Integration not only avoids these problems, but also provides additional opportunities (which are usually based on factors such as economies of scale, synergistic effect, increased motivation, etc.) to improve final results.

As if closest in meaning to integration are two other terms – *affiliation* (in its meaning as *joining*) and *inclusion*. To a certain extent, the two are mutually complementary: the former expresses legal or physical unity, the

latter – mental or spiritual unity. Such an understanding allows for a new, simplified definition of integration in which accession and inclusion are seen as intrinsic elements of the integration process (Figure 1).

Figure 1: Elements of Integration

Source: Own observation.

From the perspective of the practicing manager, the above scheme may prove particularly useful. It allows for the formulation of one main conclusion – it is not possible to achieve high effectiveness of the employee integration process if it does not involve accession and inclusion of organizational members or groups. Focusing on or limiting to just one of the two elements can not only make integration more difficult to succeed, but also jeopardize the security of the system as a whole.

4. FUNCTIONAL DIFFERENTIATION OF INTEGRATION

As for the functional differentiation and distinction of integration from other management functions, it can be done by seeking an answer to the following question: What is the functional "niche" that employee integration fills?

If the existence of such a niche is not just a figment of the imagination, it should meet two conditions – independence and usefulness. In order to be independent, it must have its reserved, independent place among the management functions already recognized by specialists. In turn, proving usefulness is about revealing the necessity to integrate people in the organization.

With regard to the first condition, it is sufficient to indicate the unique contribution of each management function for the organization. This is not particularly challenging: planning determines the way and the means, organizing brings order, leading ensures that the chosen goals are followed, and controlling measures the degree of their achievement (Kotsev et al., 2012). All these functions derive from the interests of the organization. However, none of them affect the two-way relationship "employee – organization". *The unique contribution of integration consists precisely in providing the cohesion between an individual, a group and an organization.*

Regarding the second condition, practice shows that providing such a cohesion is a major problem (and necessity) for most organizations (Van Thi & Tran, 2019). One of the possible explanations for getting into such problematic situations is the neglect of integration as a function of management among scholars. This is reflected not only in the lack of broader interest – the focus is on integration of minorities and people with disabilities (e.g. Kalagy & Braun-Lewensohn, 2022; Howe Jr, 2019), but also in the curricula of most business majors. With few exceptions, nowhere in the process of their training do future managers discuss issues of integration. Deliberately centered by their professors on the classical postulates (it is quite natural that it would be so – after all, this is the matter they know), already at their first appointments, the former students are greeted with a cold shower – the reality turns out to be quite different from what they have expected. And one of the essential differences is precisely the necessity to exert constant efforts to ensure unity between people and organization – as it turns out, a key management function missed in business education due to the lagging of theory from practice.

5. CONCLUSION

The need for unity between people and organization in the modern organization is constantly increasing. The growing competition between organizations increases the requirements for the effectiveness of the human factor. We live in a world where knowledge is the most valued commodity, but also the most offered; skills are the most useful asset, but also the most rapidly depreciating. Integrating people into the organization enables knowledge and skills to be used fully and in a timely manner – both in the interest of their owners and in the interest of the organization.

However, the degree of employee integration must not be unlimited. According to White (1987), one of the researchers of organizational members' commitment, there is a risk that unconditional agreement and

fanaticism will take over the organization if the line is crossed. Therefore, the manager must manage this process and not seek complete integration at all costs.

One thing, however, remains beyond doubt – managers must be convinced that their efforts are aimed at increasing cohesion, not disunity, between organizational elements. The old Roman strategy of "Divide and conquer" is gradually losing its validity. In the organization of the future, managers will have to follow the principle of "Integrate and succeed".

Abstract: The fiscal system implemented during the last decade (2009–2020) in Albania has resulted far from the expectations and standards used by EU members and has been the subject of frequent discussions. The necessary reform of the system according to the new fiscalization platform (2021), reports financial data in real-time and can contribute to the formalization of the economy by increasing transparency in the business environment and FDI-s, etc. The objective of the paper is to analyze the process and identify the challenges and achievements so far of the fiscalization reform in the Albanian economy. The analysis of the general data results that the new fiscalization platform offers a better adaptation to economic processes. The new digitalized system is based on the use of software, it is advanced and relatively easy to implement. While the concerns of small businesses facing some additional initial costs have not been considered, more support is needed for financial administration (taxes and businesses) on new tax practices, especially in rural areas.

Key words: fiscalization, informality, budget revenues, Albania.

1. INTRODUCTION

The successful implementation of the fiscalization process constitutes one of the current challenges of the Albanian economy. Institutions (eg the Ministry of Finance) and economic actors (eg chamber of commerce, etc.) have been its promoters, emphasizing that the implementation of the new platform can contribute to an increase of about 2–3 points (%) of Gross Domestic Product income. It is believed that until its full implementation and extension for a medium-term period, the process will affect the reduction of informality rates, increase the level of tax revenues in the state budget, and make it easier and more accurate to issue tax bills, etc. The new fiscal platform is implemented in a relatively difficult period for the Albanian economy, considering the successive challenges, such as damages caused by the earthquake (2019) and the social-economic consequences, the period of the Covid-19 pandemic, lockdown, growth slowdown, etc., which are also combined with the inherent logistical-digital and technical-administrative difficulties of using the new fiscal platform.

As a result, the business is faced with challenging processes and difficulties within a short period of time. Fiscalization reform and its implementation since January 1, 2021 (figure 1), has gradually influenced the improvement of the functioning of business-to-government, business-to-business relations (July 1, 2021), and business to consumer (on September 1, 2021).

Figure 1: Implementation stages of the fiscalization process.

Source: GDT and design of the authors.

The implementation of the new fiscalization process has been proactive and comprehensive. A number of entities have been subjected to the new technological approach, such as public institutions, banks, financial and non-banking institutions, etc., and all taxpayers who issue invoices for the sale of goods and services. The new system tracks the business by combining the e-filing portal in My Taxes, the Self-Care portal, and software installed by the business. The process for a company to be subject to taxation/fiscalization is characterized by a number of factors. The operator must be equipped with electronic certificates by applying through his own business credentials from e-Albania. This certificate can be obtained from ISA (Information Society Agency of Albania), the fee costs 4000 All, and is valid for a period of 1 year. The business operator for issuing tax invoices must be equipped with software connected to the new fiscal platform. The new technology

set required includes access to an electronic device, computer, laptop, tablet, phone, etc., and a stable internet connection. In addition, the connection with a non-fiscal printer or a cash register suitable for fiscalization should be ensured. The operator issuing invoices must be registered in the system 24 hours in advance. The new fiscalized invoice has a standard and is equipped with security elements:

1. NIVF — Unique invoice identification number;
2. NSLF — Invoice Issuer Insurance Number;
3. QR code — The barcode of the invoice that can be scanned from the mobile phone and leads directly to the Self-care portal.

Practically for every supply of goods or services, an electronic invoice must be issued at the time of supply of these goods and/or services. In the case of returned goods, the seller must make a correction invoice according to the return, and the document that accompanies the goods during transport must be exactly the correction invoice. In cases where there are purchases from individuals who are not registered with the unique identification number of the taxpayer, in the case of the fiscal platform, the buyer must provide his name and last name and an ID. With the implementation of the platform which is connected to e-Taxes, the data from the purchase and sale books that come out of the platform are used to complete the VAT declaration. While other declarations will continue to be made as before in the e-filling system. The issued invoices come with a status to be accepted or rejected, if the invoices are not accepted within the 10th of the following month, then they are automatically accepted by the system and go directly to the book as purchase or sale. Regarding the opening of new operators, the ID of the employee is obtained from the payroll of the economic entity.

If the employee is added to the payroll 24 hours before the start of work, in Self-care platform he/she will be added after 48 hours. The procedure has not been changed, only the method of issuing the invoice has been fully digitized. Therefore, documents with unused serial numbers must be handed to the tax administration. In cases when enterprises import goods/services, the customs declaration appears on the self-care platform. Based on the declaration, the entity creates the invoice itself within three days of the submission of the customs declaration. Compared to the previous system when the tax cash register was closed at the end of a workday, with the new system this procedure is no longer necessary as every transaction goes straight to the tax administration in real-time. Keeping in mind that an internet connection 24/24 is a must for the operation of the fiscal platform, and, if the enterprise for different reasons experiences malfunction with the internet connection, the Self-care platform will be unavailable to issue the invoice with the NIVF code. In such cases, it is mandatory for the enterprise to provide internet and to fiscalize the invoices not equipped with the unique identification number within 48 hours.

In case there is a malfunction of the device used to issue tax invoices, the tax administration makes available a separate book of invoices until the device is repaired or replaced with a new one. It is absolutely necessary that the invoices cut in the book are thrown into the self-care portal within 5 days. If the enterprise uses several devices for issuing the tax invoice, it is not necessary to issue an electronic certificate for each device, since the certificate is unique for the enterprise. From the procedural point of view, it is important to emphasize that when the tax invoice is issued, it must be checked whether it has been fiscalized or not, and this check is done by scanning the QR code. The invoice after fiscalization cannot be changed. However, if changes need to be made must be created a new invoice called a correction invoice to change the data of the fiscalized invoice. This is according to the fiscalization and value-added tax law.

2. THE NEW PROCESS OF FISCALIZATION — SOME CHALLENGES AND ACHIEVEMENTS

Referring to the number of employees and the level of the annual turnover of businesses in Albania, it results that most of the economic entities are micro-businesses. In total, they constitute a measure of about 88% of current businesses. During the process of discussions for the implementation of the new fiscal platform, the experts business representatives, etc., were in favor of the idea that small businesses should not become part of the system, based on the fact that this part occupies a very small weight in terms of income in the state budget. The arguments for this were the post-pandemic economic situation, lockdowns, etc., and the inclusion of small businesses that could be affected by the delays of the process. However, this suggestion was not supported by the relevant institutions and small businesses also became part of the fiscalization process. The new reform has increased the business costs, meanwhile, the business has to adapt to the new technology. To implement the fiscal platform and issue invoices through the Self-Care portal, the enterprises must either adopt the current tax register or use software solutions. In the event that the small business adapts the current cash register, they have to pay for the updated cash register, which costs about 50 euros, the cash register

maintenance costs about 43 euros/year, the internet card costs about 17 euros/year, and the issuance of the electronic certificate costs 4000 all/ year without needing a thermal printer as the case also serves as a printer. So the cost is around 130–140 euros/year. This is an approximate calculation from the experience so far of micro-enterprises assisted throughout the implementation of the fiscalization process. However, such processes may be characterized by other specific unpredictabilities (eg location, etc.). So, If for example, a new case is to be purchased, there is also the extra-cost of purchasing the case plus (figure 2), which costs, according to market prices, about 264 euros.

Figure 2. Adaptation of the previous case to the fiscal platform.

Source: <https://efiskalizimi-app.tatime.gov.al/>

Another possibility is to implement the fiscal platform through the use of a software company, in this case, the costs could be:

1. Buying a computer or tablet that costs approximately 10,000 –20,000 All;
2. Software solution 10,000 All;
3. Thermal printer 10,000 All;
4. Internet 12,000 All/year for a small line; And
5. 4,000 All/year electronic security certificate.

More specifically, the cost can be around 400 euros if you install the software solution on a tablet (figure 3) and around 480 euros if you install it on a computer (figure 4).

Figure 3. Installing the software solution on the tablet.

Source: <https://efiskalizimi-app.tatime.gov.al/>

Figure 4: Installing the software solution on the computer.

Source: <https://efiskalizimi-app.tatime.gov.al/>

3. RESULTS

During the first year of implementing the fiscal platform, enterprises generally reacted positively. Of the 118,627 active enterprises observed until the end of 2021, approximately 71,117 were fiscalized in total (table 1). The data are general and the sectors (eg agribusinesses) cannot be specified. Perhaps a comparison of similar data on fiscalization progress within a year in another country in the region or the EU where the reform has been implemented could be valuable at this stage.

Table 1: Progress of fiscalization of businesses in 2021.

Fiscalized businesses	71,117	59,9%
Non fiscalized businesses	47,510	40,1%
Total of active businesses	118,627	

Source: GDT and authors' calculations.

Meanwhile, it can take more time to observe the process if the implementation of the new fiscal platform will continue to have a positive impact on the income generated by businesses in the state budget. However, a comparative look at the short-term tax revenue from value-added profit tax, revenue from social and health insurance contributions, and revenue generated from personal income tax for the periods before the implementation of the fiscal platform and the period after that it can be valuable to understand the trends and dynamics. Therefore, we can refer more concretely to the year 2020, which is the year before the start of the implementation of the new fiscalization process, and the year 2021, which coincides with the first year of use of the new platform (table 2) and the dynamics testify to positive and growing economic indicators.

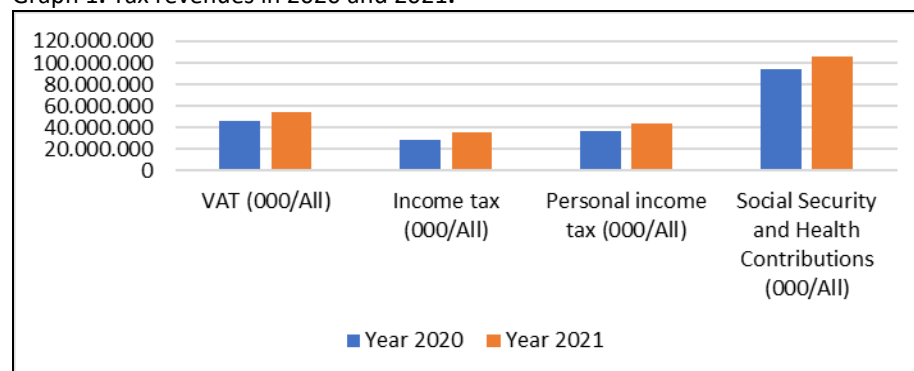

Table 2: Changes in the level of tax revenue in the state budget.

Tax revenue	Year 2020	Year 2021	The changes
VAT (000/All)	46,174,825	54,461,470	17.95%
Profit Tax (000/All)	28,358,795	35,664,554	25.76%
Personal income tax (000/All)	37,069,163	43,801,087	18.16%
Social Security and Health Contributions (000/All)	94,116,872	106,266,159	12.91%

Source: GDT and authors' calculations.

Thus, in 2021, with the beginning of the implementation of the fiscal platform, an increase in the level of VAT revenues in the state budget is observed (about 17.95%). In addition, revenue from profit tax is observed at a growth level of 25.76%. There is also an increase in personal income tax and social and health insurance contributions revenues. Accordingly, this increase is 18.16% and 12.91%. Summing up, we can say that the increase in these revenues shows that the implementation of the new fiscal platform has a positive effect on the increase of revenues in the state budget, fulfilling one of the goals of its implementation. So, the tax administration is expected to have higher control over business taxes. With the new system, the Self-Care platform now enables 24/24 monitoring of enterprises. In the graph below (graph 1), the difference in the growth of tax revenues in 2021 compared to the previous year 2020 can be seen more clearly. It should also be emphasized that 2021 is the first year of the implementation of the fiscal platform and, however, there are changes. Therefore, it is expected that the changes will be more pronounced in the following years when the new fiscal platform is implemented to its 100% extent.

Graph 1: Tax revenues in 2020 and 2021.

Source: GDT and authors' calculations.

From the analysis of the most influential factors in the new process of fiscalization in the Albanian economy (table 3), we emphasize that the expectations are that the new reform will affect the general increase in

economic performance, the strengthening of the role of economic actors and the increase in transparency. It represents an important development towards the digitization of the economy, contributing to the business environment, a possible attraction for foreign investments, and bringing the Albanian economy closer to the integration processes and the EU.

Table 3: SWOT analysis of the fiscalization project.

SWOT Analysis			
		Helpful	Harmful
		Strength	Weakness
Internal factors	Opportunities	1. Digitalization of the economy; 2. Increases revenues in the state budget; 3. Higher control over business; 4. Improve public services; 5. It is easier to prevent abuses; 6. Exchanging information between buyers and sellers; 7. Increases formality and decreases unfair competition; 8. Correcting fictitious inventories; 9. Business modernization 10. Fights fiscal evasion;	1. It increases business costs; 2. It requires internet 24 hours a day, the lack of internet causes the system malfunction;
External factors	Threats	1. Fiscalization as a preparatory measure for Albanian membership in the European Union;	1. The transitional phase of its implementation may cause informality as a result of a lack of information on the use of the system. 2. Monopolization of the fiscalization service delivery center.

Source: Analysis of the authors.

4. CONCLUSIONS AND RECOMMENDATIONS

The fiscal reform, based on this new platform undertaken for implementation in the Albanian economy, has led to a number of major achievements. The main effects on Albania's economy are positive and multi-faceted. It has influenced the efficiency of public services, offering the tax administration better monitoring of businesses and possible problems. The new platform has influenced the growth of pro-social behaviors and the climate of citizenship, encouraging trust in institutions, and making citizens and businesses protagonists in the prevention of abuses on the ground, especially in rural areas. During this time, the Albanian economy, in parallel with the digitalization of public services, has also improved the digitalization of the financial services system, making all services digital; this means that the new developments are steps towards a functional digital economy. The comparison made regarding tax revenues in the state budget for the years 2020 and 2021 shows a significant increase in indicators, reinforcing the idea that the new fiscalization platform has influenced the increase in tax revenues in the state budget. Within the general picture of the economy, the generation of real-time data on businesses can also serve as a resource for policymakers (eg local, and national) to better reason and formulate the necessary instruments in the transition towards a modern economy. In a digitized-modern economy, sustainability and acceleration of growth are based on institutional-professional capacities for adequate formulations and solutions.

The modernization of stakeholder networks (eg social innovations) and the sophistication of the environment (eg new networks) and businesses (eg technological innovations) also represent an important direction for the development of the economy in which the newly implemented fiscal platform practically contributes. Now enterprises are using pre-filled documents, eliminating errors, and above all, correcting fictitious inventories. Buyers and sellers can better communicate with each other in accepting and rejecting invoices through the Self-Care system. These are some indicators that testify to the expected increase in formality and decrease in anti-competitive behavior and unfair competition in the market, etc. Furthermore, the analysis (table 3) suggests that the fiscalization process is a necessary measure for the economy to also meet the standards of Albania's integration into the EU. Any new system that is implemented for the first time or the improvement of the existing one is also expected to create extra costs. Potential business concerns about extra costs are legitimate and offsets could have been a valid alternative. Good governance, professionalism and a pro-business culture should be the core of institutions. Some problems during the implementation in the use of the equipment have been initial, and can be neglected. Finally, the new system of fiscalization has been successful in EU countries in which it has been implemented, such as Croatia, Slovenia, the Czech Republic, etc., and the expectations are for a good performance in Albania as well. At this early stage of the reform anyway, the recommendations go for increasing the assistance on the new fiscal use for the tax and financial administration of businesses and especially for sustainability and cyber security. In the conditions of large uses of cash and the general fiscal culture in society, further research is necessary to examine the dynamics. However, a question of research interest remains: Will the new fiscal platform help formalize the economy?

The Impact Of Public Investment On Economic Growth: Empirical Evidence From Southeast Europe

Desislava STOILOVA¹

¹Associate Professor, PhD., South-West University „Neofit Rilski“ – Blagoevgrad, Bulgaria, dstoilova@swu.bg

Abstract: This paper aims to study the impact of investment spending financed by central and local government budgets on economic growth. The methods used are descriptive and comparative analysis of the main indicators of government spending and investment activity. Correlation and regression analysis of panel data is applied to estimate the effects of public investment on economic growth in nine countries located in Southeast Europe (SEE), namely Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Montenegro, Romania, Serbia, and North Macedonia. The study covers the period 2010 – 2021. The results show cyclical dynamics of government spending and great heterogeneity in the size of the public sector as a percentage of gross domestic product (GDP). At the same time, the correlation and regression analyses indicate a negative impact of total government expenditure and government consumption on the growth rate, while the effects of public investment at both central and local levels of government are negative but not statistically significant. These findings suggest low efficiency of public spending. The main conclusion is that public investment is not an effective tool for fiscal impact on the economic development in the nine selected SEE countries.

Keywords: public investment, economic growth, Southeast Europe

1. Introduction

There are numerous studies on the relationship between government spending and economic growth, covering different samples of countries, research methods and periods. In general, they look for evidence of the effects of the total amount of government spending and/or disaggregated expenditure items on economic performance. However, neither the classical nor the modern economic literature provides unanimous and conclusive empirical evidence on the strength and direction of the impact of public spending on growth. Several authors have found confirmation of the negative impact of total government spending on growth (e.g. Engen and Skinner, 1992; Folster and Henrekson, 2001; Esener and Ipek, 2018; Pratama, 2023), but their findings have been disputed by a number of research papers (e.g. Attari and Javed, 2013; Al-Fawwaz, 2016; Leshoro, 2017; Alzyadat and Al-Nsour, 2021), who argue that government spending has significant positive growth effects.

Regarding public investment, opinions vary widely, from a positive growth-supporting impact (e.g. Leshoro, 2017; Chu, Hölscher and McCarthy, 2018) to no significant impact (Barro, 1991; Schaltegger and Torgler, 2006; Al-Fawwaz, 2016) and a significant negative impact on growth (e.g. Devarajan et al., 1996; Ghosh and Gregoriou, 2008).

This paper aims to provide further evidence on the impact of investment expenditure financed by central and local government budgets on economic growth in nine countries located in the region of Southeast Europe (SEE), namely Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Montenegro, Romania, Serbia, and North Macedonia. The period covered by the study is between 2010 and 2021. The paper is structured in five sections. After this brief introduction, the second section provides a literature review. The third section described the methodology used for the purposes of the study. The fourth section discusses the main findings from the descriptive, comparative, correlation and regression analyses. The last section concludes.

2. Literature review

There are numerous studies on the relationship between government spending and economic growth covering different samples of countries, research methods and periods. In general, they look for evidence of the effects of the total amount of government spending and/or individual expenditure items on economic performance. At the same time, neither the classical nor the modern economic literature provides unanimous and conclusive empirical evidence on the strength and direction of the impact of public spending on growth.

Several authors have found confirmation of the negative impact of total government spending on growth. For example, Engen and Skinner (1992) use data from 107 countries over the period 1970-85 and argue that increases in government spending reduce output growth rates. A paper by Folster and Henrekson (2001)

conducts a regression analysis on a panel of rich countries covering the 1970-95 period and conclude that there is a strong negative relationship between the size of government and economic growth. Esener and Ipek (2018) apply the static panel data approach and dynamic generalized method of moments (GMM) techniques on a panel data for 33 upper and lower middle-income countries over the period 1999-2014. They report significant decreasing effects of public expenditure on economic growth.

A recent study by Pratama (2023) applies multiple regression on data from twelve districts in West Java for the period 2015-2020 and confirms a significant negative effect of government spending on economic growth. Chindengwike (2023) applies the Vector Error Correction Model (VECM) and Granger Causality approach to time series data covering the period 1970-2021 and also concludes that government expenditure has a negative short-and long-term impact on economic development in Sub-Saharan Africa.

An influential work by Barro (1991) analyzes data for 98 countries for the period 1960-1985 and concludes that growth is inversely related to the share of government consumption in GDP, but insignificantly related to the share of public investment in GDP. These results are further confirmed by Schaltegger and Torgler (2006), who study the relationship public expenditure - economic growth within a rich country using the full sample of state and local governments in Switzerland over the period 1981–2001. They find a strong negative relationship between government size and economic growth, but unlike public spending from operating budgets, there is no significant impact on economic growth from capital budget spending.

At the same time, there is a number of studies that challenge these results, such as the works of Attari and Javed (2013), Al-Fawwaz (2016), Leshoro (2017), Alzyadat and Al-Nsour (2021), who argue that government expenditure has positive and statistically significant growth effects. Attari and Javed (2013) use time series data for Pakistan for the period 1980-2010 and report a positive relationship between government expenditure and economic growth in the long run. Al-Fawwaz (2016) studies the impact of government spending on economic growth in Jordan over the period 1980-2013 and finds a positive impact of both total government spending and current government spending on growth, while the relationship between capital government spending and growth is insignificant. This is further confirmed by a recent study by Alzyadat and Al-Nsour (2021), who apply the vector auto regression (VAR) and vector error correction models (VECM) on annual data for the period 1970-2019 and conclude that public expenditures have a positive effect on economic growth in Jordan. Leshoro (2017) uses the autoregressive distributed lag (ARDL) technique on annual data for South Africa covering the period 1976-2015 and claims that both government consumption and investment spending are positively related to economic growth in the long term, as well as in the short term.

Another set of studies reports mixed positive and negative effects of disaggregated public spending on growth. For example, Devarajan et al. (1996) use data from 43 developing countries over a 20-year period and find that an increase in the share of current expenditure has a positive and statistically significant effect on growth, while the relationship between the capital component of public expenditure and growth is negative. This is further confirmed by Ghosh and Gregoriou (2008), who apply generalized method of moments (GMM) technique on a panel data for 15 developing countries over a 28-year period and detect that current spending has significant positive effects on the growth rate, while capital spending has significant negative impacts.

In contrast to these findings, Chu, Hölscher and McCarthy (2018) apply ordinary least squares (OLS) and generalized method of moments (GMM) techniques to panel data from 37 high-income and 22 low- to middle-income countries for the period 1993–2012 and show that a shift in government spending from non-productive to productive forms of expenditure is associated with higher levels of growth in both high-income and low- to middle-income economies.

3. Research methodology and data

This research uses a regression analysis on panel data to study the impact of public investment on economic growth in nine countries located in the region of Southeast Europe (SEE), namely Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Montenegro, Romania, Serbia, and North Macedonia. As a basis of the regression model is accepted the endogenous model proposed by Barro (1990) and further developed by Davoodi & Zou (1998), who concluded that the long-run growth rate of per capita output is a function of the taxation and the shares of spending by different levels of government. Our empirical study follows the common approach applied in most of the researches on this topic. The conventional simple specification tries to explain the economic growth by government spending and tax revenues, so the regression equation (1) has the following simplified structure:

$$y_{it} = b_0 + b_1TS_{it} + b_2TR_{it} + \varepsilon_{it} \quad (1)$$

The dependent variable (y_{it}) is the annual growth rate of GDP of country i in year t , measured as a percentage change on the previous period. The independent variables are the government spending to GDP for each country and year (TS_{it}) and the total revenue from taxes and social contributions presented as a ratio to GDP for each country and year (TR_{it}). The parameters of the model are β_0 , β_1 , and β_2 . The symbol of ε_{it} marks the error term.

This simple specification is further extended to take into account different types of government spending (consumption and investment) as well as different levels of government (central and local government).

Thus, the variables included in the regression analysis are as follows:

GDP_GR $_{it}$ – growth rate of the real GDP of country i in year t (percentage change on the previous period);

GOV_EXP $_{it}$ – total government expenditure of country i in year t (percentage of GDP);

GOV_INV $_{it}$ – total government investment of country i in year t (percentage of GDP);

GOV_CONS $_{it}$ – total government consumption of country i in year t (percentage of GDP);

CG_EXP $_{it}$ – central government expenditure of country i in year t (percentage of GDP);

CG_INV $_{it}$ – central government investment of country i in year t (percentage of GDP);

CG_CONS $_{it}$ – central government consumption of country i in year t (percentage of GDP);

LG_EXP $_{it}$ – local government expenditure of country i in year t (percentage of GDP);

LG_INV $_{it}$ – local government investment of country i in year t (percentage of GDP);

LG_CONS $_{it}$ – local government consumption of country i in year t (percentage of GDP);

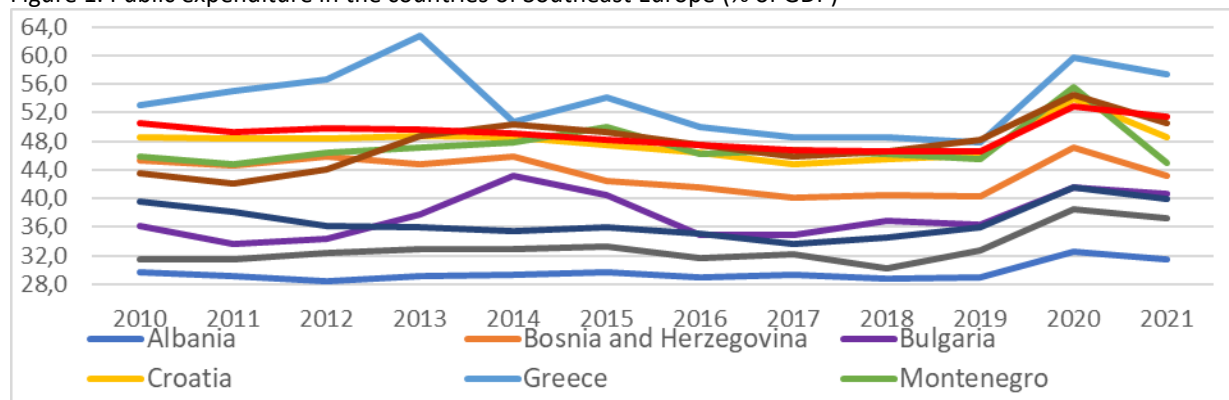

TAX $_{it}$ – total revenue from taxes and social contributions of country i in year t (percentage of GDP);

The Ordinary Least Squares (OLS) method is used to estimate the parameters of the regression model. OLS estimations are reported in Table 1. A correlation matrix of the main variables of the regression model is provided in Table 2. Hypotheses for bilateral causal relations are tested by Pairwise Granger Causality Test (Table 3). The study covers annual data for the period 2010-2021 extracted from Eurostat database and International Monetary Fund's Government Finance statistics.

4. Results and analysis

Government expenditures in the nine selected SEE countries show a cyclical dynamics during the analyzed period (Figure 1). At the same time, the total size of the public sector varies considerably across countries. Albania, North Macedonia, Romania and Bulgaria have quite conservative fiscal models, with the ratio of government spending to GDP rarely exceeding 40%. Public expenditure in Bosnia and Herzegovina is higher and varies between 40% and 46% of GDP. Public sectors in Serbia, Montenegro and Croatia range around the EU-27 average (46-52%), while Greece reports the largest size of the public sector (50-60%) among the selected SEE countries.

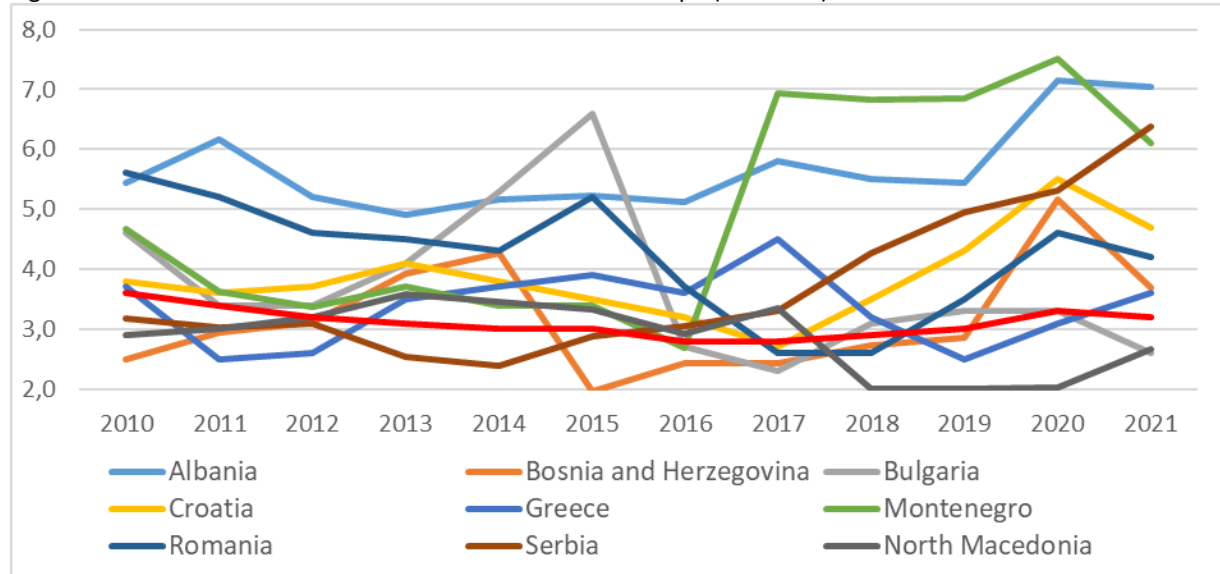

Figure 1. Public expenditure in the countries of Southeast Europe (% of GDP)

Source: Eurostat

Public investment in Southeast Europe (SEE) also demonstrates cyclical dynamics, but does not vary as widely across the selected countries (Figure 2). With rare exceptions, government investment varies within narrow limits between 2.5% and 5.5% of GDP. In some countries the development of this variable shows a clear upward trend (e.g. Albania, Montenegro, Serbia, and Croatia) and even exceeds 6% of GDP at the end of the analyzed period, while public investment in Romania and Bulgaria tend to decrease. Government investment in Greece, North Macedonia, and Bosnia and Herzegovina ranges around the EU-27 average (2.5-3.5% of GDP).

Figure 2. Public investment in the countries of Southeast Europe (% of GDP)

Source: Eurostat

The results from the OLS estimations are reported in Table 1. Separate specifications of the regression equation have been constructed by different combinations of independent variables. As a starting point, the parameters of the regression are estimated under the simplest version of equation (Model 1), which includes total government expenditure and total tax revenue as independent variables. Subsequent models include disaggregated spending variables. Model 2 studies the influence of total government investment and consumption spending, Model 3 estimates the impact of central and local government expenditure, while Model 4 examines the effects of investment and consumption spending incurred by central and local governments. The probability of the F-statistic confirms the adequacy of the applied models. The Durbin-Watson statistic indicates that there is no autocorrelation in the residuals from the regression analysis. The coefficient of determination indicates that around 30% of the variation in the dependent variable can be explained by the variation in the independent variables in the regression models, which is acceptable given the complex nature of GDP.

Asterisks (*, **, ***) indicate the significance level (10%, 5%, 1%) of the coefficients.

Contrary to conventional economic theory, the regression results show a significant negative impact of general government spending on the GDP growth rate, while tax revenue has a positive impact. In addition, the expenditure shares of the different levels of government (central and local) also have a negative effect on the economic development of the selected SEE countries. Government consumption has a strong negative effect on the growth rate, while the impact of public investment is also negative, but not statistically significant. These findings suggest low efficiency of public spending in the nine selected SEE countries.

The correlation matrix (Table 2) presents the correlations between each pair of variables, included in the regression model. Correlation coefficients between some of the independent variables exceed 0.2, indicating multicollinearity. The correlation analysis confirms that total government spending and economic growth are negatively correlated. There is also a negative correlation between government consumption and growth. It is interesting to note that the correlations between all types of public investment and economic growth are extremely weak. These results confirm that public investment at both the central and local levels is not an effective tool for fiscal impact on economic development in the nine selected SEE countries.

The results from the Pairwise Granger Causality Tests (Table 3) indicate that there is a bidirectional causality between the total government expenditure and the GDP growth rate. Such type of causal relationships also exist between the variables government consumption, central government spending and central government consumption, and economic growth. The null hypothesis cannot be rejected for the variables government investment, central government investment, local government investment and total tax revenue, so it seems that these variables do not cause GDP growth.

Table 3. Pairwise Granger Causality Tests

Null Hypothesis:	Obs	F-Statistic	Prob.

Source: Author's calculations. Note: lags=1

Although unconventional, our findings are supported by various authors. Confirmation for the negative impact of total government spending on growth is provided by Engen and Skinner (1992), Folster and Henrekson (2001), Esener and Ipek (2018), Chindengwiye (2023), and Pratama (2023). At the same time, there is a number of studies that challenge our results, such as the works of Attari and Javed (2013), Alzyadat and Al-Nsour (2021), Al-Fawwaz (2016), and Leshoro (2017), who found that government expenditure has positive and statistically significant growth effects.

Our findings for the insignificant impact of public investment on economic growth are supported by the works of Barro (1991), and Schaltegger and Torgler (2006). At the same time, variety of studies challenge our results and report positive or negative impact of public investment on GDP growth. For example, the works of Devarajan et al. (1996), and Ghosh and Gregoriou (2008) argue that the relationship between the capital spending and economic growth is negative. In contrast to these findings, Chu, Hölscher and McCarthy (2018) claim that a shift in government spending from ordinary consumption to productive investment is associated with higher levels of GDP growth.

5. CONCLUSION

The correlation and regression analysis on panel data from the nine selected SEE countries (Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Montenegro, Romania, Serbia, and North Macedonia) show a significant negative impact of total government spending on the GDP growth rate, while tax revenues have a weak positive impact. Government consumption has a detrimental effect on growth, while the effects of public

investment at both central and local levels of government are not statistically significant. These findings suggest low efficiency of public expenditure. It seems that tax systems in the nine selected SEE countries do not hinder economic growth, but public investment is not an effective tool for fiscal impact on the economic development. Policymakers can support economic growth by reducing the share of the public sector in GDP, or at least by trying to limit its escalation and increase its efficiency.

Abstract: Internet has changed all aspects of businesses and clients, especially within the bank sector. Main result is greater efficiency and effectiveness in all bank transactions. Banks give opportunities for e-banking services, but also its their source of extra profit and gaining competitive advantage.

Technology has opened a lot of opportunities in our everyday life. E-banking become one of the key role services that can give bigger satisfaction to the customers, also ensuring better competitive advantage for banks. E-banking has the main role when promoting quality of the services and is strengthening banking sector. Electronic payments give great satisfaction for the customers, better productivity, faster and greater payments, but also lowers bank costs.

It is important for Macedonian economy within banking sector to know what possibilities are open, how they can be used from the customer and what causes greater satisfaction for them. We have concluded this research in the Macedonian banks and Macedonia customers in order to realize what difference does technology and finance innovations gave to e-banking services and to the whole banking sector, what opportunities are open and how they affect customers satisfaction. From the results we hope to realize are those innovations clear enough for Macedonian customer or they should have some education in order to clearly accept those innovations that can make greater satisfaction and easiness in our lives.

Keywords: E-banking, Banks, Republic of North Macedonia, Customers, Satisfaction

1. INTRODUCTION

In the literature, the services for electronic banking promotion are listed with different terms such as: new banking services (von Hippel and Riggs, 1996), innovative banking services (Kashmari A, Nejad AHG, Nayebyazdi A., 2016), new banking services (Prugsaapron T., 2015) Success factors in developing new banking services: a case study of consumers' perspectives in relation to internet banking service provided by the Bangkok Bank PCL (Bualuang iBanking service) and modern banking services (Miranda-Petronella V., 2009). The new banking services are defined as services that apply modern instruments, platforms and channels to present banking services to customers (Tash et al., 2014).

The main benefit of applying information technology and innovative solutions in the banking sector is the improvement of the efficiency and effectiveness of the services (Mahmoodi S., Naderi H., 2016), since the traditional banking activities are carried out manually, and the factors related to human errors may have negative effects on bank transactions.

E-banking has become one of the key services which, if properly implemented, can increase customer satisfaction and it can give the banks a competitive edge. Knowing the relative significance of service quality dimensions can help the banking industry focus on what mostly contributes to customer satisfaction. E-banking has become an integral part of the global financial environment. The improvement of technology and financial innovations make the e-service in the banking sector the most influential part of this study. Our literature review reveals that these aspects can be grouped under efficiency, reliability, privacy, security, responsiveness and communication.

2. STRATEGIES FOR ELECTRONIC BANKING ADVANCEMENT - MODERN BANKING SERVICES

2.1 Contactless payment

The payment cards of some of the banks can simply be digitalized through the available applications and stored safely in smart phones. This provides contactless payment with a smart phone instead of a card.

The applications make the digital card payment possible on POS terminals that have the technology for contactless payments, without the actual use of physical bank card and with the possibility to choose the digital card for payment.

The possibilities for the use of digital cards are reconciled with the disposable funds on the physical debit card account, i.e. with the balance on the credit card account.

The advantages of the applications for contactless payment are: possibility to make payments with a phone instead of a card wherever there are POS terminals with this contactless payment method; possibility to make payments without active Internet connection; quick, simple and secure payment at a large number of points of sale throughout the world with the most up-to-date technology for payment and protection; they are free to download and activate and most frequently there are no charges for card digitalization.

2.2 Contactless payment via smart watch

The contactless payment service with a smart watch is a service created in the spirit of today's dynamic time, intended for people who are always on the move, and allows making payments even in the absence of a wallet, payment card or a smart phone.

In our country, the Garmin Pay service of Halkbank is available and it allows fast and simple payment with a Garmin watch, now it is also available for the users of Visa cards, issued by Halkbank.

In order to use the Garmin Pay service, the holders of Visa cards issued by Halkbank, need to digitalize their visas through Garmin Connect application which can be downloaded from "GooglePlay Store" on a mobile device with an Android operating system or from the "App Store" for an iOS mobile device. After the successful digitalizing of the cards, payments can be made quickly, safely and in a simple way by using only a Garmin watch. (Halkbank, 2023).

2.3 ATMs

Automated service gives companies a good opportunity to provide new models of services, strategies and development of new services. This means that it reduces the loads of manual and paper work within the banking system.

The banks' modern ATMs, placed in a large number of locations throughout the country, enable the customers to have quick access to cash at any time. ATMs provide: cash payments (deposits or credits), conversion of Euros into denars, possibility to transfer funds from one account to another within the same bank and without commission, possibility to pay debts with a credit card, possibility of displaying a brief report on the recent transactions made with the card, possibility to change the pin, as well as checkup of the account's balance at any time.

Innovations regarding the offer of ATM services refer to the cash payment service known as cash-in. Users of debit and credit cards have the opportunity to pay cash into their account at a large number of visibly marked cash-in ATMs located throughout the country. Cash-in ATMs make the financial transactions fast and efficient. With these technologically advanced devices, money can be transferred to debit or credit cards without the need to visit the bank counters, and at any time 24/7.

2.4 Internet banking and mobile banking

The internet banking and mobile banking enable the customers to use a large number of banking services whenever needed – at any place and time, 24 hours a day, completely independent of the bank's working hours.

The internet and mobile banking of most banks provide the following services: insight in the balance and the daily changes of transactional denar and foreign currency accounts, savings deposits, payment cards, loan sub-accounts, collection of balance statements for denar and foreign currency accounts, collection of balance statements for payment cards, checkup of debt amortization schedule and all transfers for loan repayment, review on the archive of orders, review on undistributed inflows in foreign currency accounts, payment of public services and other denar payments within the country, transfer of funds from one's own savings deposit account to one's own transaction account, transfer of funds to a term deposit account and sight deposits, transfer of funds to credit cards, purchase and sale of foreign currency, delivery of payment orders to non-

residents in denars within the country, change of card limits, online complaints for card transactions, closing standing orders, correction of assigned subscriptions, updating personal data, change of card status.

2.5 Electronic identification

The latest achievements in terms of digitalization among banks in the Republic of North Macedonia refer to the availability of electronic identification through OneID application, which provides easy, secure and fast access to a huge number of products and services from anywhere in the world and at any time. Electronic identification is a state-of-the-art digital solution with a high level of confidentiality to access banking products and services online.

The electronic identification service is currently available only at Komercijalna banka AD Skopje, through OneID mobile application, a product of the company Nextsense and KIBS AD Skopje. The OneID mobile application enables creating personal electronic identification, with which you can identify and electronically sign documents with your own electronic signature from anywhere in the world. The creating of electronic ID is easy and it starts with downloading the OneID mobile app. The Application is available on Google Play, App Store and App Gallery (minimum version Android 6.0 (API level 23) or iOS 11.4). (Komercijalna Bank AD Skopje, 2023).

3. EMPIRICAL RESEARCH ON THE CUSTOMERS' PERCEPTION OF THE USE OF MODERN ELECTRONIC BANKING SERVICES DEPENDING ON THE CORRESPONDENT BANK

3.1 Research methodology

In order to research the customer's perception on the use of modern electronic banking strategies depending on the correspondent bank, the survey method was used and combined questions of different types were used. The data were obtained through an online questionnaire that contained closed-ended questions, and a Likert scale was used for certain specific questions. The questionnaire was created with Google Forms and was sent via email to the respondents. 188 respondents answered the questionnaire. The questionnaire covered respondents from the region Pelagonia.

The questionnaire which was used in the research is consisted of two parts with a total of 15 questions. The first part of the questionnaire contains three questions related to information about the respondents (sex, age, education). The second part of the questionnaire contains 12 questions that refer to the use of particular electronic banking services by the respondents depending on the correspondent bank. The statements make up a Likert scale with five degrees: "1- it does not affect at all", "2- it does not affect", "3- it partially affects", "4- it affects" and "5-it significantly affects", by which the respondent expresses the intensity of his/her feelings.

The calculation of the results and the χ^2 test were processed in the SPSS software package.

3.2 Analysis of the research results

The first group of questions refers to the sex, education and the age of the respondents who answered the questionnaire. Table 1 shows that the respondents are covered almost equally by sex; in terms of education, most of them have a higher education and master's degree; and in terms of age, most of the respondents belong to the age group 41-45. The structure of the respondents by education and age is shown in Table 2 and Table 3.

Table 1: Percentage of respondents by sex

Gender	Percent
Male	52.13%
Female	47.87%

Source: author's own research

Table 2: Percentage of respondents by education

Education	Percent
High School education	7.45%
Higher education	54.26%
Master's degree	33.00%
PhD	5.32%

Source: author's own research

Table 3 : Percentage of respondents by age

Age	Percent
18-30	6.38%
41-45	68.10%
46-60	18.10%
>61	7.45%

Source: author's own research

In this paper, there is a separate analysis of the answers from the second part of the questionnaire, which refers to how much the use of particular electronic banking services depends on the specific correspondent bank, and this analysis aims to see if there are differences in the responses by clusters, that is , by sex, age and educational structure of the respondents.

First, the arithmetic mean and the standard deviation of the responses will be calculated according to separate questions i.e. the questions about sex, education and age structure, in order to see their perception regarding the relevance of the separate statements i.e. indicators and the reconciliation of their opinions about the separate statements.

Table 4: The Arithmetic mean (M) and the Standard Deviation (SD) of the respondents' answers to separate questions by sex

No.	Questions	M(M)	M(F)	SD(M)	SD(F)
1	Does the availability of the service- Payment for public services online -significantly affects your choice of a bank?	3,69	3,40	3,34	3,12
2	Does the availability of the service- Transfers with PP30, PP50 and PP53 online- significantly affects your choice of a bank?	3,71	3,33	3,35	3,03
3	Does the availability of the service – Changes of the credit card limits online- significantly affects your choice of a bank?	2,98	2,89	2,71	2,64
4	Does the availability of the service –Blocking/ unblocking of the credit cards online – significantly affects your choice of a bank?	2,71	2,91	2,52	2,62
5	Does the availability of the service – online complaints about cards -significantly affects your choice of a bank?	2,71	2,76	2,44	2,53
6	Does the availability of the service – Opening a standing order online- significantly affects your choice of a bank?	2,69	2,93	2,46	2,72
7	Does the availability of the service – Purchase and sell of foreign currency online - significantly affects your choice of a bank?	2,86	2,84	2,68	2,61
8	Does the offer of the co-branded cards of some of the banks significantly affects your choice of a bank?	2,16	2,82	1,84	2,53
9	Does the availability of the service- Contactless payment with a smart phone instead of a card on POS terminals - significantly affects your choice of a bank?	2,82	2,71	2,60	2,43
10	Does the availability of the service – Cash-in available on ATMs of most of the banks- significantly affects your choice of a bank?	3,10	3,20	2,83	2,96

11	Does the availability of the service- Payment for public services without commission / printing balance statements for transaction account through the digital kiosks of the banks - significantly affects your choice of a bank?	2,59	2,84	2,36	2,59
12	Do the banks' security systems during internet transactions with cards significantly affect your choice of a bank?	4,10	3,91	3,69	3,60
Average of arithmetic mean and standard deviation		3,01	3,05	2,74	2,78

Source: author's own research

Based on this table, it could be concluded that both, male and female respondents have high values for the indicators 1,2,10 and 12 and they consider them as relevant, because the arithmetic mean for these indicators is higher than the average. This means that the services of electronic banking: Payment for public services online, Transfers with PP30, PP50, PP53 online, Cash-in payment available on ATMs of most of the banks and Security systems of banks during the internet transactions with cards, significantly affect the respondents' choice of a bank. Most of the respondents, both male (M=4.10) and female (M=3.91), positively stated that the bank's security systems during internet transactions with cards significantly affect their choice of a bank. This means that, according to the respondents, this indicator has the greatest relevance. While, on the other hand, the majority of the respondents believe that the use of the other electronic services does not affect their choice of a bank.

However, it is important that the same indicators considered to be relevant by the respondents, have higher standard deviations than the average, which means that the respondents' reconciliation in relation to the assessment of the relevance is at a low level. Based on the data on the standard deviation (deviation from the arithmetic mean), it can be concluded that the standard deviation has the highest value for statement no. 12, which refers to whether the bank's security systems during internet transactions with cards significantly affect the choice of a bank, for both the results were as follows: for male respondents SD=3.69 and for female respondents SD=3.60, which means that a large number of respondents have no harmonized position on this specific question, that is, they differ in their responses. On the other hand, the standard deviation for male respondents has the lowest value for statement 8 (SD=1.84), which refers to whether the offer of co-branded cards by some banks significantly affects the choice of a bank, and the standard deviation for the female respondents has the lowest value for statement 9 (SD=2.43), which refers to whether the availability of the service- Contactless payment with smart phones instead of cards on POS terminals- significantly affects the choice of a bank, which means that the majority of the respondents have a harmonized position on these two questions, i.e. they do not differ in their responses.

Table 5 : The Arithmetic Mean (M) and the Standard Deviation (SD) of the respondents' responses to separate questions by education

No.	M (High school education)	M (Higher education)	M (Master's degree)	M (PhD)	SD (High school education)	SD (Higher education)	SD (Master's degree)	SD (PhD)
1	3,57	3,55	3,55	3,60	3,34	3,22	3,25	3,16
2	3,57	1,31	3,68	3,60	3,38	3,44	3,29	3,29
3	2,86	2,20	3,06	3,00	2,67	2,74	2,79	2,61
4	2,43	1,76	2,90	2,60	2,33	2,76	2,66	2,37
5	2,71	2,02	2,84	2,80	2,51	2,51	2,62	2,68
6	2,57	1,98	3,00	2,80	2,39	2,63	2,77	2,68
7	2,29	2,40	3,19	2,60	2,14	2,60	2,96	2,28
8	2,00	2,89	2,65	2,60	1,51	2,02	2,42	2,19
9	3,14	2,40	3,10	2,40	2,93	2,27	2,88	2,10
10	2,57	1,38	3,52	2,40	2,62	3,13	3,14	2,00
11	3,29	2,27	2,71	2,40	3,16	2,47	2,50	2,10

------	------	------	------	------	------	------	------

Source: author's own research

Based on the table, it can be concluded that the respondents with high school education have high values for the indicators 1,2, 9,11 and 12 and they consider them as relevant, because the arithmetic mean for these indicators is higher than the average. However, for all these indicators the standard deviation is higher than the average, which means that the respondents have no harmonized position on these questions. Respondents with high school education have the most harmonized position on statement 8, because the lowest value for the standard deviation was obtained for it. Respondents with higher education have high values for the indicators 1, 3, 7, 8, 9 and 11 and they consider them as relevant. Only the indicator 1, out of all the indicators, has a greater standard deviation than the average, which means that the respondents have no harmonized position only on this indicator considering their responses, while they agree on the rest of the indicators. It is noteworthy that the lowest value of the arithmetic mean for this class of respondents is for statement 12. Respondents with a master's degree have high values for the indicators 1,2, 7, 10 and 12 and they consider them as relevant, and for all these indicators the standard deviation is greater than the average, which means that, although respondents from this class consider them as relevant, they do not have a harmonized position on them. Respondents with a PhD have high values for the indicators 1,2, 3 and 12 and they consider them as relevant, and for all these indicators the standard deviation is higher than the average, which means that, although the respondents from this class consider them relevant, they do not have a harmonized position on them. Besides the abovementioned, the respondents from this class do not harmonize their positions on statements 5 and 6.

Table 6: The Arithmetic Mean (M) and Standard Deviation (SD) of the respondents' responses to separate questions by age are:

No.	M (18-30)	M (31-45)	M (46-60)	M (over 61)	SD (18-30)	SD (31-45)	SD (46-60)	SD (Over 61)
1	3,50	3,53	4,18	2,29	9,33	10,31	14,24	4,00
2	3,00	3,66	3,94	1,86	6,67	10,78	12,82	2,29
3	2,33	3,00	3,29	2,00	4,67	7,31	9,29	2,86
4	2,50	2,94	2,82	1,86	5,33	7,22	6,47	2,29
5	2,83	2,81	2,76	1,86	7,67	6,41	6,35	2,29
6	2,83	2,86	3,00	1,86	6,33	6,94	7,65	2,29
7	2,50	2,97	2,88	2,00	6,00	7,56	6,59	3,71
8	3,17	2,44	2,59	2,00	8,67	4,75	4,71	2,57
9	3,50	2,75	3,06	1,57	10,33	6,28	7,29	1,14
10	3,50	3,27	3,18	1,71	11,00	8,81	8,35	2,00
11	3,83	2,53	3,41	1,71	11,33	5,03	10,00	2,29
12	3,50	4,11	4,35	2,71	9,33	13,91	15,18	6,86
	3,08	3,07	3,29	1,95	8,06	7,94	9,08	2,88

Source: author's own research

Based on this table, it can be concluded that respondents aged 18-30 have high values for the indicators 1, 8, 9, 10, 11 and 12 and they consider them as relevant, as the arithmetic mean for these indicators is higher than the average. However, for all these indicators the standard deviation is higher than the average, which means that the respondents do not have a harmonized position on these statements. Respondents aged 31-45 have high values for the indicators 1, 2, 10, and 12 and they consider them as relevant. However, for all these indicators the standard deviation is higher than the average, which means that the respondents have no harmonized position regarding these statements. Respondents aged 46-60 have high values for the indicators 1, 2, 3, 11 and 12 and they consider them as relevant. However, for this class of respondents, the standard deviation for all these indicators is higher than the average, which means that the respondents do not have a harmonized position regarding these statements. Respondents aged over 61 have high value for the indicators 1,3,7,8 and 12 and they consider them as relevant. However, for this class of respondents, only for indicators 1,7 and 12 the standard deviation is higher than the average, which means that they do not have a harmonized position on these statements.

Based on the research, the following **two general hypotheses** are put forward:

H01- The use of modern electronic banking strategies depending on the correspondent bank does not depend on the customers' education

H02- The use of modern electronic banking strategies depending on the correspondent bank does not depend on the customers' age

And the separate hypotheses arising from the general hypotheses are:

H1 - The availability of the service- Payment of public services online- significantly affects the choice of a bank;

H2 - The availability of service- Online transfer with PP30, PP50, PP53- significantly affects the choice of a bank;

H3 - The availability of the service- Changing card limit online- significantly affects the choice of a bank;

H4 - The availability of the service- Card blocking/unblocking online -significantly influences the choice of a bank;

H5 - The availability of the service- Online card complaints - significantly affects the choice of a bank;

H6 - The availability of the service -Opening standing order online- significantly affects the choice of a bank;

H7 - The availability of the service- Purchase/sell of foreign currency online- significantly affects the choice of a bank;

H8 - The offer of co-branded cards by some of the banks significantly affects the choice of a bank;

H9 - The availability of the service- Contactless payment with a smart phone instead of a card on POS terminals -significantly affects the choice of a bank;

H10 - The availability of the service- Cash-in available at ATMs of most banks- significantly affects the choice of a bank;

H11 - The availability of the service- Payment for public services without any commission/printing of balance statements for transaction account through the banks' digital kiosks- significantly affects the choice of a bank;

H12 - Security systems of banks during Internet transactions with cards significantly affect the choice of a bank.

By applying χ^2 test in the SPSS software package, as a result of the input information, as well as the corresponding empirical and calculated (theoretical) values of the respondents' answers to the separate questions, the following results were obtained:

-General hypothesis 1:

Number of Columns: 5

Number of Rows: 4

Alpha Error: .05

Degrees of Freedom: 12

Critical chi-square: 21,026

Table 7 : The empirical values of the respondents' answers by education

The empirical and theoretical values for this hypothesis are presented in the following graphs:

Source: author's own research

Source: author's own research

Results:

Critical chi-square: 21.026

Computed chi-square: 64.676

Conclusion:

Since the calculated χ^2 test is greater than the critical (table) value ($\chi^2_{pr} = 64.676 > (\chi^2_{(0,05;4)} = 21.026)$), it can be concluded that the use of modern electronic banking strategies depending on the correspondent bank depends on customers' education, which means that the hypothesis is rejected.

The statistical conclusion is: The first general hypothesis is not accepted.

General hypothesis 2

Number of Columns: 5

Number of Rows: 4

The empirical and theoretical values for this hypothesis are presented in the following graphs:

Source: author's own research

Source: author's own research

Results:

Critical chi-square: 21.026
 Computed chi-square: 222.740

Conclusion:

Since the calculated χ^2 test is much higher than the critical (table) value ($\chi^2_{pr} = 222.740$) ($\chi^2_{(0,05;4)} = 21.026$), it can be concluded that the use of modern electronic banking strategies depending on the correspondent bank depends on customers' age, which means that the hypothesis is rejected.

The statistical conclusion is: The second general hypothesis is not accepted.

Only one variable with one string of results is used to test the separate hypotheses, so the number of degrees of freedom is $n-1$, where n is the number of cells (in the example the number of cells is 5), so the number of degrees of freedom for all special hypotheses is $p-4$.

For all separate hypotheses the expected frequencies are the same.

The summary values for each of the separate hypotheses will be given.

Critical chi-square:	9.488
Computed chi-square:	108,809

Since the calculated χ^2 test of all variables is much higher than the critical (table) value, it can be concluded that all the separate hypotheses are rejected, which actually confirms the results of the two general hypotheses.

4. CONCLUSION

Based on the conducted research, a number of conclusions can be drawn related to the use of modern e-banking services and the dependence of their use on the correspondent bank. Namely, individuals are well acquainted with some of the services and they use them extensively. Such are: electronic and mobile banking for making payments for public accounts and transfers with PP30, PP50 or PP53, some are less well informed and use services such as: credit card blocking/unblocking service, card complaints, opening a standing order and purchase/sell of foreign currency, use of co-branded cards, smart watches and digital kiosks. For those respondents who are better acquainted with and use modern e-banking services, the choice of a correspondent bank is important.

Regarding the cluster analysis, it can be stated that there is difference in the customers' attitudes regarding the relevance of separate banking services and their use depending on the correspondent bank, according to the customers' age and education.

In order to eliminate the barrier of the use of modern e-banking services, face-to-face communication and educational techniques could contribute to better informing the citizens about the benefits and ways of their use. By doing so, customers would increase their knowledge about the types of contemporary electronic services, their opportunities, ease of use and security aspects.

Abstract: One of the impacts of the digital revolution in consumer behavior is the coexistence purchases in physical stores and online purchases. The online consumer is a new agent in distribution channels, creating a new research category. The consumers started shopping online mainly for convenience, in response to the new lifestyle.

Online shopping is the process of buying goods directly from a seller without any intermediary, or it can be called the activity of buying and selling goods over the internet. Online shopping deals offer the customer a variety of products and services, where consumers can compare them with other products as well and choose one of the best deals for them.

The buying pattern of food products is part of the consumer's lifestyle. Every trend that interferes with the lifestyle of consumer affects his purchasing behavior. One of the biggest advantages of online shopping is saving time. If the consumer values the time in relation to the distance of the purchase place, this convenience factor needs to be discussed.

Despite the enthusiasm toward the consumer's positive perception for online shopping, this paper aims to bring a research in relation to the factors that limit consumers buying food products online. The purpose of the paper is to look at the influence of lifestyle and time use as an element of convenience in curbing online shopping.

Keywords: food products, online shopping, lifestyle, convenience

1. INTRODUCTION

The need for research on online grocery shopping began in the 1990s with the increased use of information technology. Consumers started shopping online mainly for convenience. This has also come as a response to the new lifestyle (Gomes and Lopes, 2022). Online shopping is the process of buying goods directly from a seller without any intermediary, or it can be called the activity of buying and selling goods over the internet. According to Mehmeti and Luga (2021), this process is facilitated by the use of information technology. Online shopping deals offer the customer a variety of products and services, where customers can compare them with other brokers' deals as well and choose one of the best deals for them (Sivanesan, 2017). It is interesting to understand if the online purchase decision making process is the same as the offline one. Engel, Kottat and Blackwell (1978) contributed to the well-known as EKB model of consumer decision making which is widely accepted. Gong and Maddox (2011), have adapted this model in five stages such as: need or problem recognition, information search, evaluation of alternatives, purchase decision, post-purchase behavior. Increasing the experience of online shopping, focusing the process in two stages: first that include searching, comparing and selecting the product, following by placing an order. This is termed as ordering stage and second stage is termed as order tracking and keeping or returning termed as order fulfillment stage (Liao et al., 2010). Online consumer can be seen in different perspectives or with two identities as an online buyer and a computer user (Gong and Maddox, 2011). How is every stage affected by online experience perceived by the consumer?

The purpose of this paper is the analysis of the factors that encourage consumer's hesitation to use the online purchase method of buying food products with focus the influence of life style as a psychological factor and time saving as convenience.

2. CONSUMER BEHAVIOR IN FOOD PRODUCTS

From the perspective of consumer behavior toward food products the main factors that influence consumer behavior in the food sector (Font-i-Furnols and Guerrero, 2014) are presented in the figure 1, emphasizing that the sensorial factors are very distinct for the purchasing decision of food products. Buying food products online requires attention because while the products remain the same, the form of decision-making is influenced by the online way of buying. The scheme of Font-i-Furnols and Guerrero (2014), presents the factors that influence the consumer's choice for food products.

Figure 1: Multidisciplinary model of the main factors affecting consumer behavior in a food domain.

Source: Font-i-Furnols and Guerrero, (2014)

According to Figure 1, consumers orient their purchasing behavior under the influence of psychological, sensorial and marketing factors. Sensory characteristics such as appearance, texture, taste, freshness, color and flavor are essential motivating factors that drive consumers towards the purchase and consumption of convenience food products (Imtiyaz, H, 2021).

According to Gracia and de Magistris (2013), visual appearance characteristics (color, fat content, marbling, loss of spots) are cues of product quality. Color has been reported to be one of the most important characteristics in the evaluation of fresh meat that can be ascertained in stores (Gracia & de Magistris, 2013). Texture is a multi-parameter sensory attribute (Szczeniak, 2002) and consumer perception e.g. meat tenderness and juiciness are quality attributes that positively influence most consumers' preferences for pork. If consumers value these factors in the selection of food products, how can this experience be ensured through online sales? Creating the possibility of online shopping as a new form of product obtaining deserves to be studied especially in case of food products.

3. ADVANTAGE AND DISADVANTAGES OF ONLINE FOOD PRODUCTS SHOPPING

The development of online shopping models has brought a series of advantages and disadvantages for consumers. Consumers claim that the most important determinant and advantage of online business success is the convenience of online shopping. It is noted that there are different types of online shopping facilities such as: access, search, evaluation, transaction and convenience. Customers can order the products wherever they are. There is more information because customers can get a variety of comparative information about the company, product and competitors (Charlebois et al., 2021). This highlights the fact that consumers have more choices and can save time. Convenience is perceived in different aspects. Convenience in term of ease of access means that consumers can buy at any time and from places such as: home or office. The convenience of research, related to the possibility to research and compare products without physically visiting stores. The convenience of the transaction is associated with the simplicity and ease of online payment, even if online sellers know that payment and the difficulty of using payment methods often cause consumers to abandon their purchase at the last minute. Ease of possession means online shopping reduces consumer effort and time spent on purchasing products. Consumers do not have to leave their seats to shop or wait in long lines (Jiang et al., 2013).

Another advantage of online grocery shopping for consumers is that they have access to a greater range of stores and products from around the world through the internet (Ramus and Nielsen, 2005). A major influence on consumer preferences to purchase food products online is the time savings related to transportation, rather than paying delivery fees (Huang and Oppewal, 2006).

However, there are some disadvantages of online grocery shopping. Thus it can be mentioned that the risk of purchases through the wrong evaluation of some products due to the fact that the images may not always be high-quality images, or the image may be completely missing, making it more difficult to estimate size, weight and value his current (Karpińska-Krakowiak, 2014). Also, consumers would like to try the products as there is a lower probability that consumers will buy new products online, without having the opportunity to taste and smell the product during the presentation in the store (Karpińska-Krakowiak, 2014). According to Katawetawaraks while making an online purchase, customers cannot see, touch, feel, smell or try the products that they want to purchase (Katawetawaraks, 2011) which limits online purchases. Some personal motivators are limited during online shopping. Consumers need sensory stimulation and physical activity while shopping. A similar situation is related to social needs. Consumers need to experience social interaction, feel the

satisfaction of shopping and communicate with other consumers. Other examples of the disadvantage of online grocery shopping can be the high costs of searching, or the waiting time for receiving the product (Verhoef and Langerak, 2001). An important determinant of consumers' intention to buy food products online is related to their fear of selecting and handling perishable products, such as: vegetables, eggs and meat products. The expiration date of the fresh products must be known, which is impossible to do online (Galante et al., 2013; Toomey and Wysocki, 2009). This is consistent with Brown et al., (2003) findings that product category is a more important determinant of online purchases than the individual's propensity to buy.

The number of food products purchased online is less than those of other products. Many consumers who do not shop for groceries online will have online shopping experience with other products (Huang and Oppewal, 2006). Regarding privacy and security, research shows that for these consumers with online shopping experience, they are less of an issue (Forsythe and Shi, 2003). Therefore, security does not appear to be the only or primary reason for the low uptake of online grocery shopping.

4. PURCHASE MODEL AS PART OF LIFESTYLE

Lifestyle is a way of living of individuals, families (households) and societies, which they manifest in coping with their physical, psychological, social, and economic environments on a day-to-day basis. A universally accepted definition defines that a new product, a new process, a new market, a new organization, a new business, a new model or resource is an innovation when it gains market acceptance and success and is economically viable (Chanaron, 1998). The official OECD definition is also interesting:

"The implementation of a new or significantly improved product (good or service), or process, a new marketing method or a new organizational method in business practice, workplace organization or external relations" (OECD, 2005).

The study of lifestyle is interdisciplinary, measuring different aspects of consumer behavior such as products and services. In this regard the way the customer disposes the products through a purchase model is part of its lifestyle. It draws on a variety of disciplines such as anthropology, psychology, sociology and economics (S. Sathish, 2012). Marketing uses this eclectic approach to segmentation, targeting and positioning that forms the core of marketing strategy.

The lifestyle construct has an important role in the history of marketing research. First introduced by Lazer (1964), it was used primarily as a term for measuring arbitrary assortments of "activities, interests, and opinions". It is acknowledged that there is a vagueness to such a definition. Furthermore, in today's world, people's lifestyles should not be consistent across different areas of life, and that efforts to describe lifestyles should be focused on specific areas such as food (van Raaij and Verhallen, 1994). Food-related lifestyle is expressed through five elements: purchase motives, purchase methods, quality aspects, cooking methods and consumption situations. This lifestyle concept has been widely applied in nutrition research.

Purchase intentions can be used to test the implementation of a new distribution channel to help managers determine whether the concept deserves further development and decide which geographic markets and consumer segments to target through the channel (Morwitz et al., 2007) Most purchasing behaviors fall into one of three categories: impulse buying, habitual buying, buying solutions to consumer problems (Bagozzi et al., 1998).

Impulse buying generally occurs because an external (e.g. display in a store) or internal stimulus (e.g. hungry) has caught the buyer's attention coupled with the ease of securing the product. An impulse purchase decision is made with little commitment from the consumer (Zhuang et al., 2006).

In the case of the habitual purchase, prior learning is essential for the consumer. According to Bagozzi et al., (1998) although needs usually initiate the purchase in such cases, cognitive processes predominate and include the execution of action sequences and the evaluation of limited decision criteria.

According to Zhuang et al., (2006), food shopping in malls is more of an impulse purchase, especially when people can easily get food from nearby markets or supermarkets, so it is often driven by external or internal impulses of a buyer and not from any prior purchase intention. Contrary to this, other research has shown that food purchases tend to be habitual and repeated over time (Gardner et al., 2011). But there is a consensus regarding the fact that "purchase intent" did not have a significant impact on shoppers buying food or beverages.

5. TIME - SAVING AS CONVENIENT FACTOR

Time is an antecedent and consequence of purchase (Jacoby et al., 1976). There are several perspectives on time. From an economic point of view, time is considered an intangible good that exists in limited and finite quantities, and can be purchased by trading another resource such as money or effort (Becker, 1965; Jacoby et al., 1976). In the long term, studies have focused on time use patterns, dividing time between work time, time home, and leisure time; and how consumers spend time in different stages of consumption and acquisition of products (problem recognition, information search, evaluation of alternatives, purchase and post-purchase evaluation) (Jacoby et al., 1976; Graham, 1981; Usunier and Valette - Florence, 2007). The term time style originated from Feldman and Hornik (1981) to describe the allocation of time between the various activities involved in the consumption of goods and services. The economic value of time or the value one gives to time is attributed to the value established in its absence (De Voe and Pfeffer, 2011). Clients who see time as a scarce resource often plan their use carefully and prefer a polychrome use of it (Jacoby et al., 1976). According to Bercik (2016) the consumers are influenced by time in their purchase decision making (Berčík et al., 2016). More educated and somewhat higher income consumers intend to shop online, mainly for time saving aspects (Mehmeti and Luga, 2021).

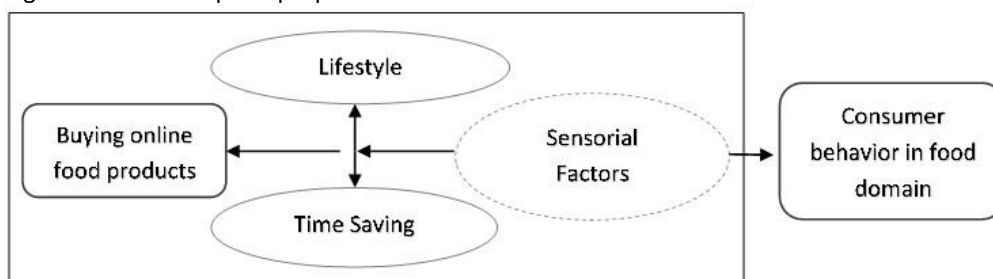

According to Huang et al., (2006), the long travel time to the physical store and time pressure affect the perception of the convenience of shopping for food products online. From here we can deduce that the shorter the travel time to the physical store and the lower the time pressure, the less the online purchase model will be adopted and vice versa.

6. THE EFFECT OF SENSORIAL FACTOR AS MEDIATOR

Sensory characteristics such as taste, appearance, freshness, texture, color, and smell are essential motivating factors, driving consumers towards shopping and consumption of convenience food products. Due to advances in food processing and packaging technology, the sensory appeal of convenience food products has been considerably improved in recent years. The sensory appeals undoubtedly are believed to influence consumers' perception, purchase intention, consumption, and satisfaction towards convenience food products significantly (Imtiyaz, 2021). Prescott et al., (2002) revealed that convenience, sensory appeal, quality, safety, price, and health are the important determinants influencing consumer shopping and consumption of convenience food. However, the magnitude and importance of each determinant may vary across countries. Wang et al., (2015) revealed that sensory attributes, particularly taste, were the most important motivating factors positively associated with consumers purchase intention of traditional and Western convenience food in mainland China. Customers can feel and touch items and communicate with salesclerks, those who like shopping in-stores enjoy leisure time and social interaction there, while online shopping could not provide such experiences (Chen, 2021). The quality of food products also drives consumers towards its purchase and consumption. Therefore, it is directly linked to the consumers' perception, purchase decision, and consumption behavior (Imtiyaz, 2021). The food quality certification from authorized agencies and brands provide the details of production process, ingredients, nutritional facts, shelf life, cooking instruction, and place of production, sensory appeal, quality, safety, environmental issues, which are the primary concerns of consumers while purchasing convenience food (Arvola, 2008).

The conceptual model that we propose is explained by the following scheme. We propose that lifestyle (purchase model), time for receiving and waiting the product and convenience limit the consumer to use online channels for the purchase of food products. These limiters are reinforcing by the presence of the sensorial factors or the inability to have direct contact with the products.

Figure 2: The conceptual proposed model

Source: Authors

While the sensorial factors are important factors in the choice of food products, the influence of these factors in changing the purchase model and the perception of time saved is present. For a customer to have the opportunity to touch, smell, taste the products, he must be in a physical store. If the literature tells us that physical distance and time pressure affects the perception of online purchases, we can deduce that this is more obvious in the case of food products. The greater the influence of sensorial factors in the selection of food products, the more difficult it is to change the purchasing style of consumers.

The literature suggests that many consumers discontinue online shopping whenever the initial trigger disappears. This can also happen when they are dissatisfied with specific or general aspects of the shopping experience. From this it appears that the process of adopting a new model of purchasing behavior is not always the process by which an individual becomes committed to continue using a new model of purchase. As Hand et al., (2009) suggest, the adoption of online shopping is complementary to in-store shopping, not a substitute. Most consumers never stop shopping at traditional stores.

7. CONCLUSIONS

Consumers purchase food products through purchases in physical stores and/or online stores. It is noted that the popularity of online shopping for food products is not the same as online shopping for other products. Consumers started shopping online mainly for convenience. This has also come as a response to the new lifestyle. Visual appearance characteristics (colour, fat content, marbling, loss of spots) are signs of product quality. Consumers value these factors in the selection of food products. This will make online grocery shopping a challenge for consumers and marketing strategies. Covid- 19 was a factor that increased online shopping. The adoption of such a model by consumers seem to be difficult. This is related to the fact that consumers find it more difficult to change the old model of purchases or as soon as a limiter like e.g. Covid- 19 disappear, consumers return to their previous behavior. This is due to the fact that consumers value the sensorial factors of the purchase. The process of selecting the model of purchase is influenced by the proximity of the stores, the short time of buying products. The relation between the time of choosing and waiting for the online purchased product to arrived and proximity of the stores and time will effect the purchasing model. This relation will be reinforced by the presence of sensorial factors. Therefore the study of the future of online purchases of food products deserves more attention.

Abstract: The role of women and men in agriculture is different and their vulnerability and efforts to adapt to climate change is expected to vary. Addressing the inequity of gender-based climate change effects is very important not only for a better adaption and mitigation of climate change but also in order to reduce inequalities in terms of impact. In order to better respond to climate change it is necessary to understand its consequences using a gender lenses. The perceptions and attitudes of agriculture extension service experts are a source of knowledge for exploring the opportunities for adaption and mitigation in agriculture for both women and men. This paper analyses the effects from climate change and the adaptive capacity of farmers based on their gender division of tasks. The study is based on a structured survey conducted during the period November 2019-February 2020 with 140 experts and local government representatives, mainly staff members of Albanian agricultural extension officers in Albania. The study found that men are more informed and have higher access on crop cultivation techniques, pest management and water management compared to women while are less informed and prepared to adaption measures on livestock management. Considering the division of tasks and the concentration of women and men labor in the related activities, the adaption capacity of women is limited and therefore additional actions are required to enhance the role of women in coping with climate change.

Keywords: Climate change, agriculture extension service, gender, adaption, mitigation.

1. Introduction

A wide literature have highlighted the important linkages between climate action and gender equality (Kristjanson et al, 2017). In global level researchers and development practitioners are increasingly aware of the importance of providing gendered actions for addressing climate change and overcoming climate shocks. The studies has identified the social and environmental cost of neglecting the large 'gender gap' that persists in capacities to respond to climate change (Denton, 2022). The importance of gender relations and their actions toward climate change is evidenced in studies as socially constructed element (Acosta et al, 2021).

Considering the existing awareness it is of high importance to raise the attention of policymakers by providing empirical evidence on the gendered impact of climate change and the gender gaps existing in adaption, especially in countries with high vulnerability toward climate change and higher gender disparities in terms of contribution and returns from agriculture, such as Albania. Previous studies carried on women in agriculture such as UNWOMEN (2016), Gerdoci and Mece (2017), Dauti and Zhllima (2017) have identified a higher engagement of women especially on field crops cultivation and animal husbandry activities. However, women contribution in agriculture is scarcely perceived and rewarded (Zhllima et al, 2021). Although Albania projections of expected climate change negative effects are high, there are no evidences of these effects by gender.

In this context it became necessary to explore the de-facto situation of gender equality in relevance to impact and adoption capacities from climate change. Given that women and men, according to previous studies, have at a certain extent an evidenced tasks distribution in agriculture (UN Women, 2016) in this study we expected that women and men are impacted differently from climate change. By assessing the concentration of women in a certain sector agriculture, one can indirectly assess the effect of climate change and the capacity of women to adapt to climate change shock. For instance, in case of climate change effect on prevalence of diseases to yearly field crops and animals, which consist in increase of humidity and fluctuation of temperatures, there is expected a reductio of yields and increase losses which where there is a certain dominance of women work. The potential lower capacity of women for climate change adaption compared to men might influence the returns from their activities. Following this approach, in this study we aimed to identify through expert (extensions services) assessment possible evidence of climate change, measure the capability to adaption and provide recommendations for capacity building. This is similar with the approach used by Jost et al (2016) which collected information not directly with small holders but through opinion leaders.

However this approach has certain limitation. As Nelson et al (2022) emphasise major part of studies exploring gendered impacts of natural hazards are difficult to provide clear prediction and quantification of consequent

social changes given the fact that climate change may reveal a variety of manifestation due to varying occurrence and vulnerabilities in regions. In addition, casualties of climate change according to gender are not predictable given the shifts in gender relations in some agriculture sectors occurred in some countries.

The findings of the study are of high importance for the policymakers. In Albania, policy steps to carry gender mainstreaming in climate change policies are yet not thoroughly addressed by national policies. Except gender considerations inserted at the legal components related to climate change, there are no separate gender sensitive objectives and actions and the language used especially in the narrative description of these strategies is almost gender blind (Zhlilima, 2021). Therefore the study addresses the gaps in the empirical literature and provides inputs for policy finetuning.

2. Review of literature on climate change and social impact

The literature on impact of climate in the economic and social conditions of women and men in Albania is limited. According to REC (2011) and World Bank (2011), it is predicted that increasing temperature and reduced precipitations will change the harvesting period for cereals, winter heat and grassland production. The findings also emphasize that due to change of temperature and humidity, it is expected a change of reproductive cycle of weeds and pests also causing the appearance of new diseases. The first projections on climate change has been offered by World Bank (2013) where was found that the direct temperature and precipitation effects of future climate change is mixed. The study found positive expectation on yields of wheat and irrigated alfalfa and negative predictions on yields for grapes and olives. A study of Sutton et al. (2013) found that certain vegetables, yields will reduce in lowland areas. None of these studies could control for climate change effect according to gender, considering the type of activities observed.

Majority of studies has indirectly expressed smallholders in rural areas in the lowland regions has suffered from rapid precipitation, especially in the areas of Fier and Vlore in the vicinity of Vjosa river delta. According to Balla (2015), the floods of 2015 created a loss in terms of livestock such as cattle (30 heads), small ruminants (2850 heads), pigs (270 heads) and poultry (slightly less than 15000 heads). In this occasion, UN Women in close collaboration with World Bank, UNDP, the EU Delegation and FAO carried a rapid gender assessment of the impact of floods (UN, 2016). The assessment underlined: damages to crops and land were a major concern to women, as they clearly suffered significant losses of products for both personal consumption and sale, including loss of livestock and animal feed, as well as damage to barns, which further exacerbated the situation. Damages to the home, furniture and household equipment, as well as persistent dampness were major concerns. According to 64 per cent of respondents, domestic violence increased after the floods, and unexpectedly, women heads of household reported a higher incidence of violence (73.1 per cent) than women spouses. Women were found to be affected not only by domestic violence, but also by violence outside the home. Women reported having been treated differently than men as concerns the distribution of aid by municipality officials, where men had easier access to municipality staff and benefited more from state support (UN Women, 2015).

Situation was again repeated in the year 2017, although no gender impact assessment was carried. According to reports provided by the Emergency Unit of Fier (Balla, 2017) in the Administrative Units of Levan, Frakull and Dermenas there were subject of damage houses (232 dwellings), farms (1,137 farms) and other economic activities (27 non-agricultural business) and public institutions such as health centers and schools. Given that major part of livestock activities such as animal care, milking and sale is maintained by women (UN Women, 2016), there is a higher cost created on their behalf in terms of limited opportunities to gain cash. During the floods, due to high precipitation and weakened capacity to drainage, a large area of agricultural land (5,000 Ha in 2017) remained under water. In this milieu, opportunities to work for men in these areas are negatively affected also since they are the most responsible to provide animal feed.

3. Methodology

As identified from the literature review on Albania, major part of the studies were not able to provide evidences on climate change according to the gender of the farmers operators. Considering the difficulties to make a national survey for this purpose this study offers a rapid assessment of the climate change impact, based on statements and perceptions of agriculture extension service members. However, the method has a limitation considering the risk for assessment bias of the extension service members on reporting the scale of effect and the capacity of men and women in climate change adaptation.

In order to collect field evidence, a structured survey was conducted in the period November 2019-February 2020 with 140 experts and local government representatives, mainly staff members of Albanian agricultural extension officers, operating throughout the 12 regions of Albania. The sample has extensive coverage of the overall population considering that public agriculture extensions service has a staff of 270 experts.

The survey collected the opinions of the experts on the climate shocks experienced during the recent decade as well as the experienced adaptive capacities and perceived ability to apply mitigation actions. The focus was specifically on sectors which are more relevant to rural activities such as agriculture and livestock activities.

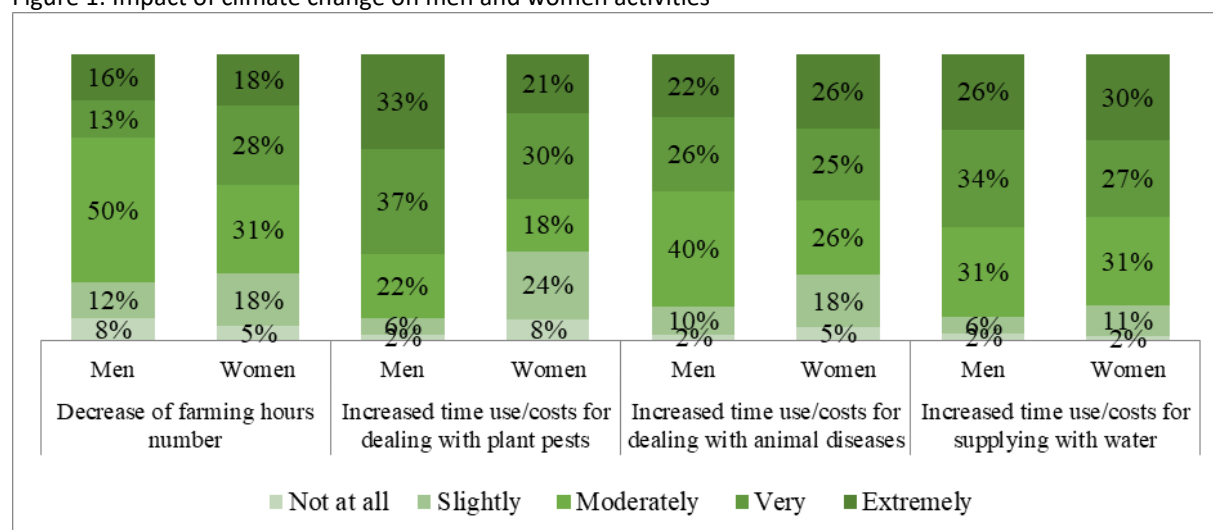

The opinions were collected through a structured questionnaire which was filled via email. The results were complemented and validated with qualitative information collected from semi-structured interviews with farmers and community leaders mainly in regions of southern coastal Albania, namely Fier and Vlore, where highest frequency of climate shock is evidenced in the past. Data were entered in excel spreadsheets and processed using SPSS software. Data were subject to simple descriptive analyses.

4. Results

According to the experts the climate shocks were influencing both males and females in rural areas. More than half of the respondents (57% of the experts) stated that climate change is affecting differently women and men. Approximately 75% of the respondents believing that climate change effect on human activity differs by gender, believe that women are affected mostly. Based on semi structured interviews, major part of those thinking that women are more affected base their statement on the higher engagement of women in certain agriculture activities.

According to the experts, climate change would affect farming hours (by decreasing the number of hours spent carrying farm activities) at a level of above moderate, for both women and men according to respondent answers (Figure 1: first two pillars). Above 50% of respondents outline that climate change would impact (very and extremely) towards the increment of time use/costs of dealing with plant pest and diseases (Figure 1: second two pillars) for both gender groups, but, the percentages of men are higher-meaning that men are more affected regarding these activities, having to spent more hours and costs. While women, as based on expert opinions, are slightly more vulnerable to increased time and costs for dealing with animal diseases and water supply (Figure 1: the last four pillars).

Figure 1: Impact of climate change on men and women activities

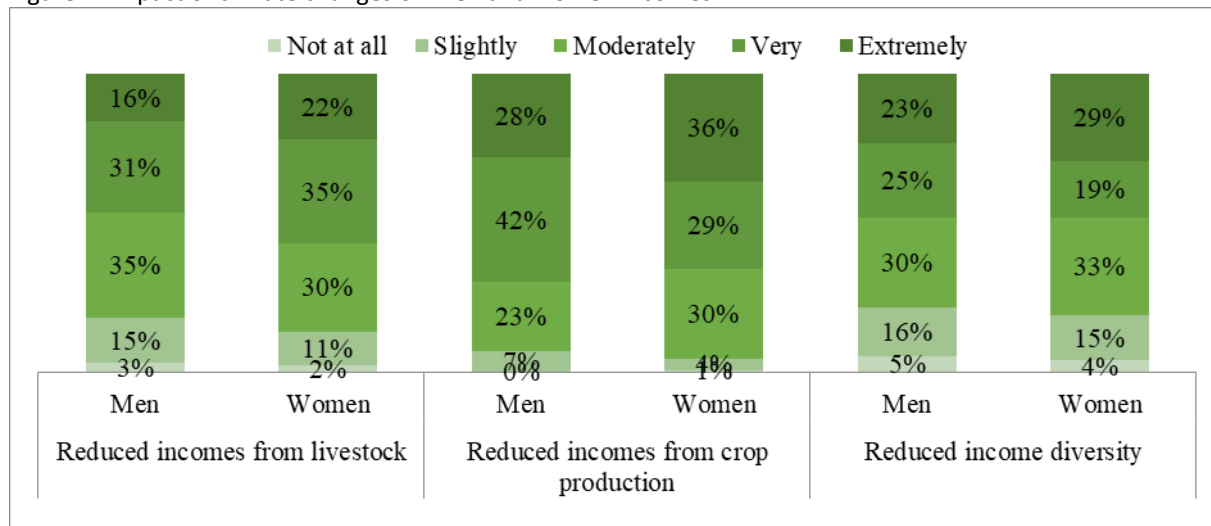

Source: Structured survey results

Regarding incomes from livestock and crop production, women are affected more than men when there is a reduction of incomes from livestock and crop production but also from income diversity reduction (percentage differences between men and women for the level of impact indicated as extremely– Figure 2). The arguments stand on the over presence of women compared to men in activities related to animal husbandry such as feeding, cleaning, milking and then milk sale and/or processing. Moreover, as women are more engaged on post-harvest preparation and conservation of agriculture and livestock production for self-consumption and sale, they are more shocked due to climate shocks. Women are also supporting on land maintenance and plant

treatment for field and greenhouse vegetables. Men are more present on activities related to irrigation, transport and harvest of animal feed, fruits (pruning and spraying) and input use in cash crops produced in field and greenhouse (plant protection treatment) as well as sale activities. Expert opinions provide a clear gender pattern where women are more included in open field vegetables, cattle and greenhouse vegetables compared to men.

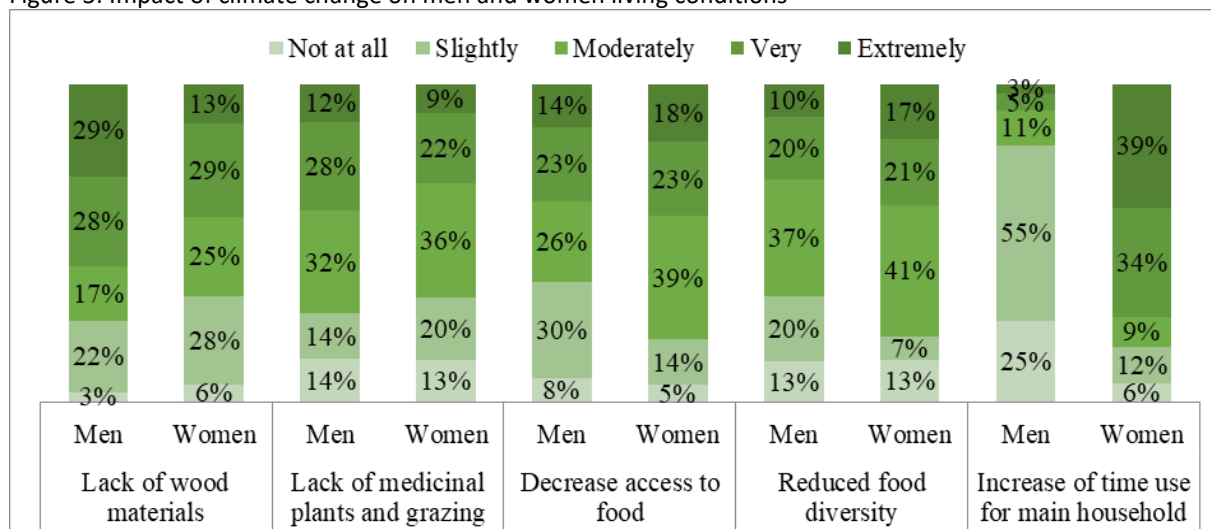

Figure 2: Impact of climate changes on men and women incomes

Source: Structured survey results

Lack of wood materials seems to impact more men than women (first two pillars in Figure 3). While regarding lack of medicinal plant, grazing materials, reduced food diversity and decreased access to food seems to impact both genders equally. Two last pillars indicate that women are impacted the most by the increase of time use for main household chores (cleaning, cooking, etc.), mainly due to loss of access to water, need to recover from flood and loss of domestic equipment's.

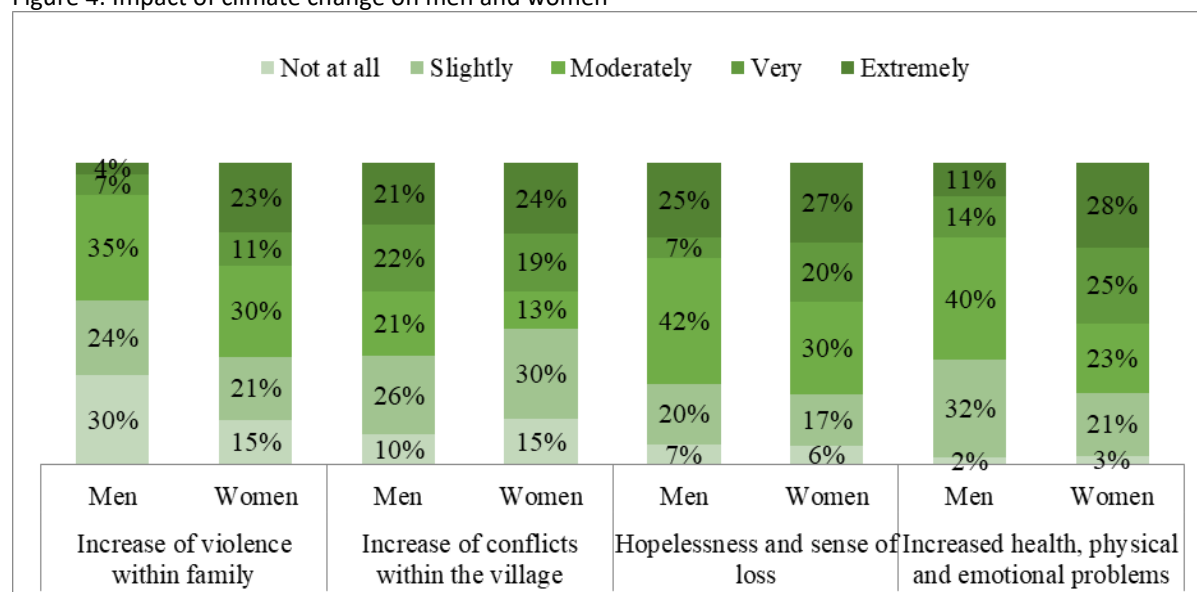

Figure 3: Impact of climate change on men and women living conditions

Source: Structured survey results

Climate change might impact more women's health, physical and emotional problems compared to men (Figure 4-last two pillars). The reason behind is the additional burden women have in caring about household chores, especially on shocks related to floods, access to wood and water. On regards to the effects resulting from increased conflicts in the village and the hopelessness and senses of loss, respondents indicate no distinctive differences between men and women.

Figure 4: Impact of climate change on men and women

Source: Structured survey results

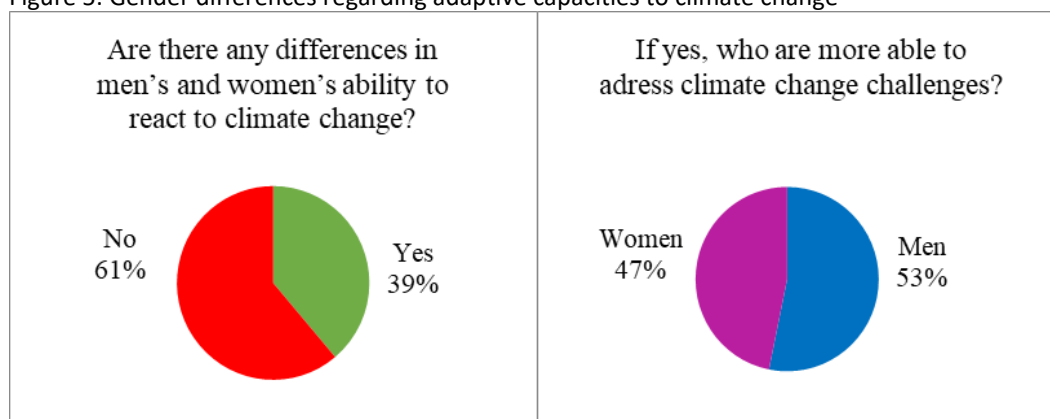

Through the survey, local experts were asked on their perceptions to future effects on climate change. According to survey respondents, climate change would affect farming hours and increase of time use/costs of dealing with plant pest and diseases for both gender groups, but, the percentages of men are higher-meaning that men are more affected regarding these activities, having to spent more hours and costs. While women, as based on expert opinions, are slightly more vulnerable to increased time and costs for dealing with animal diseases and water supply.

Women are expected to suffer more from deteriorated profits from livestock activities due to influence of disease on livestock production yields. Incomes from milk sale and/or processing makes up more than 60% of majority of farms in rural areas. Considering that family farms are more vulnerable to land fragmentation in hilly and mountainous areas, it is estimated that livestock activity importance is higher in these areas. Geographically, mountainous areas are also the areas where major part of rural poor are living.

In the lowland coastal areas, land deterioration and livestock deterioration due to floods and fluctuated temperatures, would increase costs for plant treatment and reduce profits for field and greenhouse vegetables. Men are more present on activities related to irrigation, transport and harvest of animal feed, fruits (pruning and spraying) and input use in cash crops produced in field and greenhouse (plant protection treatment) as well as sale activities. Expert opinions provide the basis for a lower resilience on regards to women due to their higher engagement on agriculture activities, compared to men which are slightly more integrated in off-farm paid activities such as working in urban areas, or opting for seasonal migration.

Capacities to adaptation and mitigation at local level are weak. Major part of the agriculture areas has small farms, oriented to self-sustenance. Returns from agriculture and livestock activities are deteriorated. However, based on the survey, 61% of the respondents agree that there are no differences between men and women regarding capacities to react to climate change (Figure 5: left). The other part, 39% of the respondents agree with the fact that there are differences regarding gender and that men are more ready to react to climate change phenomena (53%) –Figure 7: right. However, the opinion that men are able to react both through adaptation and mitigation is provided by a minor share of the respondents. Main reasons, according to the respondents who accepted that there is a difference in the capabilities to react to climate change are the access to information, accessibility to services and equipment as well as relations to suppliers and service providers.

Figure 5: Gender differences regarding adaptive capacities to climate change

Source: Structured survey results

5. CONCLUSIONS

The study results are indicative for local feminist organisations and provides a methodological guide on how to address local gender inequality patterns in agriculture and climate change adaptation processes. The results offer a series of recommendations for promoting equitable participation and influence by women and men in adaptation decision-making processes and achieving equitable access for women and men toward financial resources and other benefits resulting from investments in adaptation.

Capacity building interventions should consider the constraints hampering women efforts on participating to capacity building events such as training and field demonstration. Moreover, weak awareness to climate change impact and weak financial support, increases the need for a provision of awareness campaign and budgetary support (grants and investments) vis a vis to capacity building interventions. Therefore, for overcoming women and men difficulties in capital, is required support with technology packages (protocols, demonstration equipment, laboratory kits for land and water analyses), support of transport costs and support of advisory services and coaching in groups are recommended.

Considering the scarce efforts made on regards to gender mainstreaming, this paper presents an analyses the state of gender equality in relevance to impact from climate change and adoption capacities to address climate change. The results show that in terms of service accessibilities, men have more access than women. Accessibility to information from advisory services. Men are also in vast majority representing the farm in the administrative unit, deciding on investments, and contracting with a buyer (76%) etc., are mostly carried out managed by men. Respondents indicate that mostly men have the right to move free outside the village.

Therefore, considerations have to be taken on involving more women, especially on cultivation techniques, pest management and water management. Information and preparation are higher on women in regard to livestock management. However, since men are more involved on reparation of feeding (forage cultivation and harvesting), both groups should be carefully targeted. On regards to energy efficiency improvements, women are perceived to be more informed and prepared compared to men. Actions related to wood preservation men are perceived more informed and prepared than women. However, women are more aware and influence by issues regarding to biodiversity.

Establishing The Problems Of Olive Processors In Albania Regarding Other Actors In The System And The Possibility Of Solving Them

Dr. Eglantina PAZAJ¹

¹The Agricultural University of Tirana, Faculty of Economics and Agribusiness, Department of Economics and Rural Development Policies, e-mail: epazaj@ubt.edu.al, ORCID: 0000-003-4325-9680

Abstract: In recent years, the olive production and processing sector in our country is seen as a profitable sector for many agro-processing companies. Investments in planting olive seedlings have increased. However, the processing factories are mostly small and operate with not very modern technology. The government has also increased support policies for many olive growers by providing various grants or subsidies. The trend of olive production has fluctuated and this fluctuation has also been felt in the production of olive oil. In the production and processing sector, i.e. in the entire chain, a malfunction is observed among the actors in the system. The links of the agribusiness system do not work properly between them as there is a lack of mutual connection between all the actors in the system. There are many influencing factors, but some of them can be avoided. Several possible solutions are offered in this study. We will mainly focus on one of the links of the system, that of olive oil processing, to present some of the problems faced by this sector and then to offer some of the possible solutions in order to improve the agribusiness system.

Keywords: agribusiness system, mutual relations, system actors, problems, agro-processing sector, possible solutions.

Background

The production and olive sector in Albania is a very important sector. Production and investments in this sector have fluctuated continuously, but the last few years reflect an increase in investment by farmers in this sector as well as an increase in subsidies from the government. The direct survey conducted on farmers and processors will reflect some of the problems that exist between the actors in the system, where the greatest attention will be paid to the olive oil processing sector.

This study refers to information gathered from 100 agro-processing enterprises and about 136 olive cultivation farmers. The information was collected through a questionnaire that was tested directly on olive growers and farmers in some areas of our country. Through the information gathered from the direct survey, some of the problems between the actors in the system will be identified, mainly we will focus on some of the challenges or problems faced by the olive agro-processing sector in our country. The expected results of this paper will be the provision of some of the tools that will enable some possible solutions to these problems between the actors participating in the system.

Objectives

- To evaluate the contribution of domestic production in the development of agro-industry for the fillet taken in the analysis.
- Assess the possibilities and problems related to the use of the production-processing contracting system.
- Assess the levels of production capacity utilization in all three links of the system.
- Analyze and evaluate the problems and causes of opportunistic behaviours among actors in the chain.
- Analyze and evaluate the value chain for the thread under study and provide proposals to increase the role of raw material producers in the chain.

Methodology and Data

- Bibliographic review
- Office work
- Field survey (surveys)
- Implementation of a multifactorial linear econometric model of the form:

$$Y = a_0 + a_1x_1 + a_2x_2 + \dots + a_kx_k + e$$

for the assessment of factors affecting the possibility of concluding agricultural contracts.

- Use of analysis of variance (ANOVA) to discuss differences between genders, professions, and levels of education in terms of assessing the importance and role of contracts.

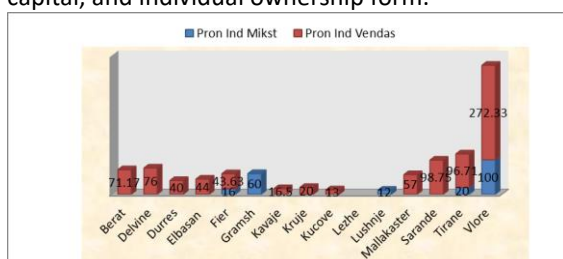

Hypotheses

1. The problem of contracts is determined by the real possibilities for concluding contracts, by the experience of contract implementation, the presence of limited offers, the reliability of the partners, and the risk that accompanies the problem of contracts.
2. Perceptions of the possibility and role of contracts do not depend on the gender, level of education, and profession of the persons involved (farmer, agro-processor).

Production Capacity And Percentage Of Utilization Of Production Capacities

Agro-industries generally have a low production capacity since the technology they use is not recent. Most of the agro-industries use second-hand technology, which reflects a higher production cost. The graph below shows the average production capacity.

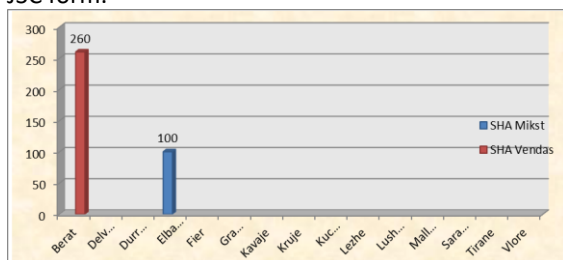

Figure 1. Average production capacity (tons of olives per oil) is estimated in the year of creation by districts, capital, and individual ownership form.

The graph above shows that the average total production capacity for sole proprietorships using mixed capital is equal to 41.60 tons of olive oil while the average production capacity for sole proprietorships using fully domestic capital is = 93 tons of olive oil. So the average production capacity for these enterprises is higher.

Graph four shows the average production capacity estimated by the year of establishment, capital, and the form of the joint-stock company.

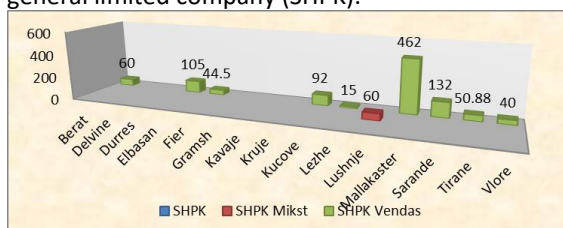

Figure 2. Average production capacity (tons of olives per oil) is estimated in the year of creation, capital, and JSC form.

JSC-type enterprises (**joint-stock companies**) operating with wholly domestic capital turn out to have a higher production capacity than JSC-shaped enterprises operating with mixed capital.

According to the form of organization KPS (generally limited company), the average production capacity estimated by the year of creation and capital turns out to be as in the following graph:

Figure 3. Average production capacity (tons of olives per oil) estimated in the year of creation, capital, and form general limited company (SHPK).

The average production capacity estimated according to the year of creation, capital, and form general limited company (SHPK), turns out to be 60 tons of olive oil for those enterprises operating with mixed capital and 81 tons of olive oil for those enterprises operating with domestic capital. General limited company (SHPK)-type enterprises operating with entirely domestic capital are presented with a higher production capacity.

Oil Production For The Years 2019, 2020, and 2021

Our country generally has small agro-processing enterprises which the owners themselves manage. They employ a small number of workers who in most cases are not declared in the state. In general, there is a lack of specialists in the field where a worker deals with some technological processes. These but also the influence of other factors affect a low degree of competitiveness. As a result, exports will be small and producers' incomes will be low. The markets are dominated by imported products, as local production does not cover the local demand for the year. Olives are harvested from October to February. Agro-processing enterprises are mainly built near areas cultivated with olives so that the olives are processed within 2-3 hours of harvesting to produce the highest quality oil. Below we present the oil production in tons for the three years taken in the analysis to see how has been the trend of olive oil production for these three years.

Olive oil production during 2019 experienced an increase of 2% compared to a year ago. Production reached up to 20 thousand tons of olive oil.

Among the cities with high olive production, we can mention: Berati, Fieri, and Vlora, while the other districts had a lower production level. A part of the olives is sold directly for consumption at the table and the rest is processed into oil. According to the Institute of Statistics, of the total olive production, 79% is represented by oil olives and 21% by table olives. In recent years, investments in the olive sector have increased in our country, being seen as a very profitable sector for producers. Also, the government has increased subsidies for this sector. Olive production has fluctuated in reference to the years 2019, 2020, 2021 and 2022. The production boom has reached the year 2020

and 2022. Even in 2022, the price of olive oil decreased so much that it had the same price as sunflower oil (of 400 ALL). While the market reflected an increase in prices for all the basic products of the basket, the price of olive oil for 2022 and 2023 until now is low. The market meets the demands of local consumers, but the producers, even though they have a super production, most of them cannot export olive oil because they do not have a certified product. Most of the producers are small and cannot be integrated into the international markets even though they produce very high-quality oil. During 2020, there was a production boom, and at that time humanity was facing the "Covid 19" pandemic, which influenced a large increase in demand for olive oil seen by consumers as a product with high health values. Quarantine during the pandemic had the effect of restricting the movements of individuals. It also damaged the individual's supply of olive oil from neighbouring countries due to pandemic restrictions. Thus the demand for domestic olive oil increased. The closing of restaurants and the restriction of movement during this period affected the decrease in consumption. This increase in demand for olive oil during the pandemic affected the increase in price, affecting the increase in producers' income. While for the years 2022-2023 as above, the price of olive oil has fallen due to the high production it has had in these years, even though the country is facing high levels of inflation due to the Russia-Ukraine war.

The problem for processing factories remains the product logo and certification. The fact that the processors are small does not have a destination for the international market. Only a few large producers in the country have been able to certify the product and export it to international markets represented and with a product logo. The sale of oil in the local market is informal since the producers, being small, are not declared. Olive oil is sold in the market informally. Informal farmers cover 90% of market demand while the rest is covered by 5% from local processors and 5% from imports. This high degree of informality affects the reduction of the profits of the actors in the system, but not only, but it also affects the unfair competition between the actors in the system. Also, the raw material (olive) that they sell to the processors without VAT, on the other hand, the processors must do the analysis of the quality of the production, which has high costs. These factors have influenced an upward trend in the price of olive oil and at the same time have oriented processors to import the raw material as it gives them a lower cost in production.

Forms Of Olive Processing

Olive processing in our country is done mainly in two forms: oil production and salting. There are currently two operations in oil mills:

1. Purchase of olives on behalf of the factory and
2. Olive processing on behalf of the feeder

The processing factories are built mainly near the areas with olives. In most cases, they are factories built to serve farmers to process olive trees. So, being small factories, they do not have a market destination. On the other hand, there are few olive processing factories (5-6) agro-processing, out of 100 that have been interviewed, which invest in contemporary technology, aim at growth, and the market to maximize their profits. Of these processors, packages that have a destination and the international market are often impossible to access, as the olive oil often has high acidity, not meeting European standards. Of course, we cannot say that it is the manufacturer's fault for the quality of the oil. There are many factors that affect the relationship from the farm until the product reaches the processor. We can say that there are problems with all the links in the chain. First, we can say that in order for the olive oil not to have acidity, it must be processed within 2-3 hours of the olive harvest, but it is impossible for the farmer to process his production within 2-3 hours. Farmers do not have the opportunity in most cases to transport the product to the processor, in some areas, there are problems with the infrastructure, and sometimes the way the product is transported in unsuitable conditions damages it, affecting the quality of the olive oil. On the other hand, the processor has not created a collaboration with the farmers, to conclude contracts between them in such a way that the processor himself takes over the production of the farm or other collaborations, such as the processor cooperating with the farmer by contributing to all the services he needs. olives so that the final product is as healthy as possible, etc. So the problems that exist are numerous, which require specific policies to be improved in the future since due to the climatic conditions that our country has, we have the opportunity to have competitive advantages with other countries in the region.

Supply of raw materials

Regarding the provision of the raw material, the processor mainly provides the raw material to the farmers. There are cases when olive production is low and the processors import the raw material. In some other cases, the processor is also a farmer, so he produces a part of the raw material himself and buys the rest in the market. We are talking about those few processors whose destination is the market and the maximization of profits and not about those processors, who are more numerous but who have mainly built small factories in the service of farmers (for them to process their products and you they sell themselves in the market informally) against a certain payment for the service they offer or compensation with litres of oil. Also, from the observations made on 100 agro-processors, it turned out that only three of them used domestic and imported raw materials, while the rest, 97 agro-processors used 100% domestic raw materials. In recent years, there has been an increase in new olive groves and an increase in the interest of processors to support farmers from a technical-financial point of view (we emphasize that some of the farmers, being small, do not have information on agronomic olive services), in the way to ensure a product as healthy as possible for processing and to ensure access to international markets. However, the mutual interaction between the actresses continues to be small.

Determinants Of Growth In Processors' Exports

Our country has the opportunity to increase its comparative advantages with neighbouring countries and other countries in the region, but some factors have affected it in a not favourable way, such as The fragmentation of the plots, the lack of technical-financial services for the olive roots, the lack of labour power since in recent years our country is facing a very high rate of inflation, etc. These factors, but not only, have influenced the decrease in exports.

An element of the solution to the above problems could be the creation of cooperatives where different farmers operate as one. This would increase the benefits for each member first in all perspectives. And another element is definitely to start functioning the signing of contracts between farmers and processors since until now there have been oral agreements which have not been respected in most cases. The employment of specialists in the field (agronomists) in farms and specialists in processing factories would affect the realization of the high-quality final output and its certification.

The impact of agricultural contracts in the agribusiness system

The signing of agricultural contracts between all actors in the agribusiness system has a very positive impact on the integration of actors, increasing profitability between them, guaranteeing markets, guaranteeing the quantity and quality of supply, etc.

Some of the impacts of signing agricultural contracts between actors in the system according to a study by the international organization FAO are given as follows: Agricultural contracts are:

- Are elements of problem-solving in the system.
- Affect the maximization of integrated profits.
- Anyone can become better than the profit realized.
- Signing contracts affects the reduction of operating costs.
- Guarantees the required quantities of products.
- Guarantees product quality.
- Guarantees supply deadlines, etc.

Source: FAO

Agricultural contracts have significant benefits for both farmers and processors. However, after the advantages, problems also appear. Below we present some of the advantages and problems, first from the point of view of farmers and processors.

Problems Faced By Olive Processors In A Contractual Relationship

In addition to the advantages, of a contractual relationship, problems arise, some of which are presented below:

1. Farmers who have entered into contracts may face land restrictions due to a lack of secure ownership thus endangering long-term operational viability.
 2. Social and cultural constraints can affect farmers' ability to produce, manage and specialize.
 3. Poor management and lack of consultation with farmers can lead to farmers' dissatisfaction.
- Farmers can sell without a contract, thus reducing turnover for processing plants. Farmers analyzed sell their products:
 1. On the street they sell only 16.8% of their production
 2. They sell only 43% of their production directly to processors
 3. At the collection points they sell 26.7% of their production.
 4. Farmers may divert the supply of credit inputs for other purposes, thus reducing yields.

Advantages of Olive Processors when signing an agricultural contract

Some of the advantages that processors may have involved in contractual relationships with other actors in the agribusiness system are as follows:

1. Agricultural contracts with small farmers are more politically acceptable than with other farmers. 2. Working with small farmers also overcomes land constraints.
3. Production is more reliable than purchases in open markets so sponsoring companies face less risk by not being responsible for production.
4. A good quality product can also be purchased in open markets.

The signing of agricultural contracts - Concrete situation

During the field interviews, it was found that the relations between farmers and agro-processors are built based on oral agreements. No contract was signed between farmers and agro-processors.

The biggest obstacle to signing agricultural contracts was on the part of farmers. The interviewed farmers in most cases did not have information on how signing a contract worked, while in some other cases, they were not interested in signing a contract. It was enough for them to agree verbally with the processors where they would sell their products, as the processing factories were set up mainly near the olive production areas. Another reason that there are no signed contracts between farmers and agro-processors is the fact that some farmers are not able to provide agro-processors with the quantity and quality of products they want. Another

reason for avoiding contracts is that signing a contract by the rules will increase the total costs, thus increasing the notary costs.

Methodology And Hypotheses

1- Econometric Model On The Possibility Of Concluding Contracts

Dependent variable: the possibility of concluding contracts (*MUNKON*) (*possibility of concluding contracts*).
 Independent variable: in this model Risk is taken as the independent variable. As a model is applied the linear econometric model is a factorial of the form:

$$Y = a + bx + e$$

Dependent Variable: MUNKON				
Method: Least Squares				
Sample: 1 100				
Included observations: 100				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	0.868387	0.313174	2.772861	0.0067
RISKS	0.376501	0.105933	3.554159	0.0006
R-squared	0.114181	Mean dependent var		1.900000
Adjusted R-squared	0.105142	S.D. dependent var		1.243163
S.E. of regression	1.175994	Akaike info criterion		3.181902
Sum squared resid	135.5303	Schwarz criterion		3.234006
Log-likelihood	-157.0951	F-statistic		12.63205
Durbin-Watson stat	1.489447	Prob(F-statistic)		0.000585

Here the one-factor econometric model of the form is applied:

$$Y = a + bx + e$$

$$MUNKON = a + bRisks + e$$

$$MUNKON = 0.86 + 0.37Risks + e$$

A = 0.86 indicates the possibility of concluding contracts (Y) when X (Risk) is zero and when the effect of other factors does not change.

B = 0.37 indicates that when X (Risk) increases by one unit then Y (MUNKON) will increase by 0.37.

e --- is the influence of other factors.

The coefficient of determination = 0.114 indicates that 11.4% of MUNKON is explained by Risks and the rest is explained by other remaining factors (e).

The correlation coefficient = 0.105 indicates the strength of the relationship, in this case, the relationship is positive but not too close to 1 which indicates a not very strong relationship between risk and MUNKON.

If the risk will decrease by one degree then MUNKON will increase by 0.37 degrees.

Model on the possibility of concluding agricultural contracts

Dependent variable: the possibility of concluding contracts (MUNKON) (*possibility of concluding contracts*).

Independent variable: *implementation of contracts regarding supply quantity implementation (ZBATSAS)*

Dependent Variable: MUNKON				
Method: Least Squares				
Sample: 1 100				
Included observations: 100				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	0.737096	0.226867	3.249024	0.0016
ZBATSAS	0.454259	0.077998	5.823954	0.0000
R-squared	0.257117	Mean dependent var		1.900000
Adjusted R-squared	0.249536	S.D. dependent var		1.243163

S.E. of regression	1.076944	Akaike info criterion	3.005928
Sum squared resid	113.6611	Schwarz criterion	3.058032
Log-likelihood	-148.2964	F-statistic	33.91844
Durbin-Watson stat	1.431057	Prob(F-statistic)	0.000000

Here the one-factor econometric model of the form is applied: $Y = a + bx + e$

$$MUNKON = a + bZBATSAS + e$$

$$MUNKON = 0.73 + 0.45ZBATSAS + e$$

A = 0.73 indicates Y (CAN) when X (ZBATSAS) is zero and the effect of other factors does not change.

B = 0.45 indicates that when X (ZBATSAS) increases by one unit then Y (MUNKON) will increase by 0.45.

e --- are the other remaining factors.

The coefficient of determination = 0.25 indicates that ZBATSAS explains 25% of Y (MUNKON) while the rest is explained by the other remaining factors.

The correlation coefficient = 0.24 indicates that the correlation is positive between ZBATSAS and MUNKON but not very strong. So 'ZBATSAS' has a small impact on 'MUNKON'. If 'ZBATSAS' will improve by one degree then 'MUNKON' will improve by 0.45 degrees.

ANOVA Analysis of Variance was used to evaluate the indicators obtained in the analysis, which explains the sources of variation. Do we try to explain if there are significant differences between the sexes, between professions, or between different levels of education regarding contract issues?

For this, we used the analysis of three-factor variance (gender, occupation, education) and as a dependent variable, we took the variable "contracts".

The results of the analysis are presented in the following overview:

Analysis of Variance for Contract - Type III Sums of Squares

Source	Sum of Squares	Df	Mean Square	F-Ratio	P-Value
MAIN EFFECTS					
A: EDUCATION	0.26609	2	0.133045	0.11	0.8965
B: GENDER	1.0821	1	1.0821	0.89	0.3475
C: Profession	1.72818	4	0.432045	0.35	0.8402
RESIDUAL	155.783	128	1.21706		
TOTAL (CORRECTED)	159.088	135			

The differences are not significant, (only by gender it seems that the evaluations for the contracts are somewhat important). For them to be significant the probability must be less than 0.05. In the table, it turns out to be larger. So all the interviewed farmers generally give the same opinion regarding the contracts, they are differentiated neither by gender, education or profession. So for all three of these indicators, the differences do not turn out to be significant.

The hypotheses we have raised for this study are confirmed through analysis of variance (ANOVA) where all interviewed farmers generally give the same opinion about contracts so they are not differentiated by gender, education, or profession. So for all three of these indicators, the differences do not turn out to be significant.

CONCLUSIONS

During this study, it was found that in our country there are fragmented farms which in most cases produce for self-sustenance and very little for the market. Farmers sell 16.8% of their production informally on the street; 43% are sold to processors and only 26.7% of the production is sold to collectors. Very few processors produce and have a logo for their products. Infrastructure and transport continue to remain a concern for all actors included in the system. The informality of sales constitutes another problem. The processors are dependent on the farmers for the provision of raw materials and their quality. Non-declaration of the workforce, especially in processing factories, continues to remain a problem in our country. As a result of the existence of a series of problems in all links of the agribusiness system and the actors who participate in it. The culture of

implementing an official document such as agricultural contracts has started very little these two years, since before there were only oral agreements.

According to the model:

$$MUNKON = 0.86 + 0.37Risks + e$$

- Determination coefficient = 0.114 and correlation coefficient = 0.105. So the risk explains only 11.4% of the possibility of concluding contracts while the bond strength, in this case, is positive but not very close to the unit. So the risk has a positive impact but is not too great on the possibility of concluding contracts.

According to the model:

$$MUNKON = 0.73 + 0.45 ZBATSAS + e, \text{ where it turns out that:}$$

- Definition coefficient = 0.25 and correlation = 0.24. From the statistical result, it is noticed that the quantitative implementation of contracts has a positive impact on the possibility of concluding contracts and explains only 25% of it while the rest is explained by other remaining factors e.
- Both the Albanian farmers and agro-processors in question did not have any written contract, but the farmer-agro-processing agreement was realized mainly orally, mainly for sales that took place within the country.
- All the problems raised for the possibility of concluding contracts are present and critical between farmers and agro-processors.
- According to the second hypothesis that we have set up for this study, it is confirmed through analysis of variance (ANOVA) that all interviewed farmers generally give the same opinion about contracts, so they are not differentiated by gender, education, or profession. So for all three of these indicators, the differences do not turn out to be significant.

RECOMMENDATION

Based on the problems concluded during this work, we offer the following recommendations as possible solutions:

It is recommended to increase cooperation between farmers by organizing agricultural cooperatives as an opportunity to increase their benefits, reduce fragmentation, reduce production costs, increase profits, etc. In order to solve some of the problems that exist between farmers and processors, the signing of agricultural contracts must definitely work in order to have first the farmer security in the sale of the product, but on the other hand security for the processor in securing the raw material both in terms of quantity and the quality. Increasing cooperation between all the actors in the system for solving the problems that exist in the agribusiness chain, increasing competitiveness in international markets, and increasing the benefits between them. Even more special attention is required from the government in the adaptation of specific policies, the increase of subsidies or the support that this production sector requires. For processors, it is recommended to expand their activity, improve technology, put a logo on their product so that it is not sold informally, and very important product certification to affect the increase in exports and competitiveness in international markets.

Abstract: Disasters from natural and other causes are a recurring element of life. To varying degrees, households and governments anticipate and prepare for unexpected negative shocks to income and wealth. The interactions between public and private responses to disaster threats and between budget accounting and public decisions have implications for national policies and public budgeting. This paper explores those implications, identifies mechanisms that may influence the success of public and private efforts to reduce disaster losses, and compares the results with some current practices. The devastating economic effects of the pandemic have required many people to reassess their finances and cut back on spending. Some have found small ways to save, such as canceling unnecessary subscriptions, while others have had to make bigger changes, such as moving in with family members to save money on housing. Meanwhile, others have seen their finances improve significantly, enabling them to save more than they would in a typical year. This study aims to investigate the effect of the Covid-19 pandemic on the budgeting process in different countries that were affected by this emergency, including Albania. For this purpose, an analysis was examined through the SPSS program which, through the established variables, will help in reaching the conclusions and recommendations of this paper. The objectives of this paper are to identify the contemporary literature on the budget and other macroeconomic factors that contribute to it, to analyze the budget in emergency and pandemic situations in the framework of the economies of the affected countries and to identify the main findings through the econometric model implemented. In general, this paper aims to contribute to the literature by evidencing the evolution, trends and importance of a state's budgeting in emergency situations, revealing the historical contexts as in the case of the Covid-19 pandemic, as well as changes in research methods, research topics and underlying frameworks.

Keywords: budget, covid-19, economy, pandemic

1. INTRODUCTION

The government may be able to reduce disaster losses beyond the reductions achieved by private action if it is better able than individuals to assess and manage exposure to disaster risk. Specifically, if people tend not to prepare for disasters (Sawada and Shimizutani, 2005), the government can help by increasing national savings and adopting additional measures to reduce risks and losses before the event.

However, the success of disaster policies requires that the government acts before a loss occurs, rather than waiting until it occurs. By waiting, the government loses the option to support consumption by conserving production and income before the disaster and reducing losses from the event. After the loss, it can only provide aid by redistributing from those who did not suffer the loss or by borrowing. In both cases, because of its power to tax, the government may have an advantage over private reliance on altruism and private credit.

It is possible for management to make the most profit by taking advantage of opportunities in a competitive environment, but only by anticipating the future and planning corporate activities in advance. The ability of companies operating in a dynamic and constantly changing environment to ensure their existence and make provisions anticipating the possible risks they may face in the future requires forecasting and planning for the future. Planning, which is one of the functions of management, refers to the systematic work of companies for the future. Budgets prepared for this purpose help in planning the company's activities. There is a close relationship between plans and budgets. While the plan defines the goals and actions necessary to achieve those goals, the budget is the numerical expression of those plans in physical or financial terms, or both (Hansen & Mowen, 2006). A budget is a comprehensive plan that contains information about the acquisition and use of resources for a given period of time and is a quantitative expression of management's future action plan (Codesse et al., 2015). The budget is a formal format that shows how the company's resources will be used for the next period for the specified purposes (Kaygusuz & Dokur, 2009). Budgets are a tool that supports the scope of corporate activities, the determination of necessary resources and the efficient use of these resources (Vazonienė & Stončiuvienė, 2012). Budgets have an intentional and guiding function (Shim & Siegel, 2005). In short, budgeting is the conversion of verbal words, concepts, policies and activities into numbers and money.

Budgeting is the technical, mechanical method and procedure of the administrative budget that depends on the planning, regulation and control of the budget. Budgeting is the process of planning inputs and outputs of enterprise resources in the next period of activity (Kaygusuz & Dokur, 2009). Budgeting involves setting predetermined goals, reporting actual performance results, and evaluating against predetermined goals. Budgeting includes planning, coordinating, evaluating activities, motivating and evaluating staff performance. It also supports the company's internal control system (Budgets are widely used in management practice worldwide in both the private and public sectors due to their versatility for various purposes such as decision making, planning and resource allocation, coordination and control, communication, learning and interpretation, evaluation of performance and incentive contracts (Lueg & Lu, 2013). In all countries, the magnitude, timing and location of disasters are uncertain. However, individuals and policymakers form expectations about loss events and act on those expectations. Currently, expected losses appear to be increasing, especially from the effects of global warming and economic concerns (Taleb, 2007; Heipertz and Nickel, 2008).

2. BUDGETING IN DISASTER AND PANDEMIC SITUATIONS

2.1. Disaster Financial Management Activities

The complexity of managing funds from different programs requires extensive subject matter expertise. A best practice is to establish a multidisciplinary team of planning, grant management and financial management experts to develop a disaster financial management plan before an incident occurs and help execute it after a disaster. Forming such a team is a critical step after a disaster, even if the jurisdiction did not take this approach before the disaster. A financial disaster management team helps with budget forecasting, cash flow management, debt monitoring, payroll, risk avoidance, disaster assessment and damage reimbursement, emergency response, management of waste, timely tracking and reporting of costs and long-term disaster recovery funding flows.

2.1.1. Initial Post-Disaster Activities

Initial cost recovery begins concurrently with response operations and is typically completed within weeks of an incident. For some disasters, such as a hurricane, costs can start piling up before the disaster strikes. It is important for the jurisdiction to track everything before and during a disaster. Proper organization and documentation from the start helps prevent denials, appeals and funding delays. A jurisdiction that uses processes and a database or accounting tools to record and track disaster response and recovery costs can quickly provide the documentation needed to obtain reimbursement. Jurisdictions without a centralized repository for expenses will waste valuable time trying to collect documentation. Accuracy in documentation is also critical to avoid errors and audit findings. For example, using an ambulance during a disaster for a medical emergency requires a different billing code than transporting a medically fragile individual. Such a seemingly small mistake can result in months of refund challenges.

2.1.2. Long-Term Post-Disaster Activities

Jurisdictions should continue good disaster financial management practices throughout response and recovery. Many critical financial management activities must be completed during the initial recovery effort, but some activities occur later in the recovery process. Many disaster recovery financing programs become available to jurisdictions months after the disaster has occurred, and more long-term recovery financing programs may be implemented years into the recovery process. Localities also see impacts to their tax revenues in the long run. By incorporating long-term post-disaster activities into the regular rhythm of disaster financial management, emergency managers and recovery managers continue to reduce disaster financial management risk and improve financial practices for potential future disasters.

2.2. Budget Problems During the Covid-19 Pandemic in Albania. Comparison with The Balkan Countries

Albania entered the COVID-19 crisis immediately after the devastating earthquake in November 2019. The spread of COVID-19 hit Albania even harder. To explore the consequences of this unprecedented shock on Albanian firms, the Enterprise Analysis Unit of the World Bank and IFC undertook a survey in June 2020, re-contacting the same businesses that participated in the Enterprise Survey in 2019. COVID-19 took a staggering toll on Albanian firms, but the country is no longer exceptional in the scale of the impact: 71% of firms in Albania reported a drop in demand, which is less severe than in Greece and Moldova, comparable to Italy. Georgia and Bulgaria, and worse than Slovenia and Croatia. Employment adjustments in Albania have been

very widespread. Twenty-eight percent of firms reduced the number of permanent workers, a much higher percentage than in Greece, Italy, Moldova and Croatia, but comparable to other countries. On average, Albanian firms reduced their number of permanent full-time workers by 11%, which is significantly worse than in Greece, Italy and Croatia, although better than in Georgia and comparable to levels in Slovenia, Moldova and Bulgaria. The differential impacts on employment may have been partly related to the structure of the government's COVID-19 support packages.

3. Methodology of the Study

The purpose of any economic activity is to achieve the goal and improve performance. Performance indicates a certain level of results obtained for defined business goals. In today's competitive conditions, competitive advantage, efficiency and effectiveness are among the most important organizational criteria. There are different ways to evaluate performance based on financial indices such as financial turnover, market share, return and profit.

3.1. Methods and Material

In this research, the relationship between the crisis management steps and the Planning, Programming and Budgeting System was examined. A statistical population of this study is 60 managers of power plants in our country. Relationships between variables were tested using Smart-PLS software. According to the issues discussed in this research, using the following conceptual model, the relationship between the variables is tested. The current study is of a descriptive-applicative type which was carried out in the survey method. The tool for data collection in this research is the questionnaire which includes 17 items.

3.2. Validity and Reliability of Research Variables

Since the questionnaire used to test the variables is standard, first the selected indices were translated and then, referring to the elite, the necessary corrections were made. The strength of the relationship between the factor (latent variable) and the observable variable is indicated. The factor loading is between 0 and 1. If the factor loading is less than 0.3, the relationship is considered weak and is withdrawn. Factor loading between 0.3 and 0.6 is acceptable, and more than 0.6 is highly desirable. Based on the results of the measurement model, the factor loading observed in all cases is greater than 0.5, which indicates that there is a good correlation between the invisible variables and their latent variables, as well as based on the results of the measurement model, the Bootstrapping sum (t-statistic) in all cases is greater than the critical value 1.96, which indicates that the correlation between the invisible variables and its latent variables is significant. Thus, it can be concluded that each latent variable has been correctly tested by its manifest variables and for the findings of this scale we can test the research hypotheses.

3.3. Analyses and Results

The relationship of the variables studied in each research hypothesis was tested based on a general structure with the partial least squares (PLS) technique. In the general research model, the measurement model (the relationship of each observable variable with the hidden variable) and the path model (the relationships of the hidden variables with each other) were calculated. To test the significance of relationships, the t-statistic was performed, calculated with the Boot Strapping technique. The intensity of the effect of crisis management on programmed budgeting was calculated to be 0.425, and the test probability statistic was also 5.430, which is more than the critical value at the 5% error level (1.96) and shows that the effect observed is important. Therefore, with 95% confidence, crisis management has a positive and significant effect on the programmed budgeting of the power plant, and the main hypothesis is confirmed. To examine this effect, we first examine the value and significance of each of the subadditive sections and then calculate the value of the overall effects. The intensity of the effect of pre-crisis criteria on crisis management is calculated 0.409 and the test probability statistic is obtained 13.485, which is more than the critical value t at the error level 0.05, which is, 1.96, and shows that the observed effect is important. The intensity of the effect of crisis management on programmed budgeting was calculated 0.425, and the test probability statistic was obtained 5.430, which is more than the critical value t at the error level 0.05, i.e. , 1.96, and indicates that the observed effect is significant. All calculations related to the analysis of direct paths and sub-paths were made by SmartPLS software and presented in a table called total effects. As a result, we can observe the general and meaningful

impact of all variables. It is noted that a significant value for the total effect of pre-crisis criteria on programmed budgeting is calculated 5.907, which is more than the critical value t at the error level 0.05, i.e. 1.96 and shows that the observed effect is significant.

4. CONCLUSIONS

This study investigated the effect of the Covid-19 pandemic on the budgeting process in various states that were affected by this emergency, including Albania.

For this purpose, an analysis was examined through the SPSS program which, through the established variables, will help in reaching the conclusions and recommendations of this paper. Based on the results of the measurement model, the factor loading observed in all cases is greater than 0.5, which indicates that there is a good correlation between the latent variables and their latent variables, as well as based on the results. of the measurement model, the Bootstrapping sum (t -statistic) in all cases is greater than the critical value 1.96, which indicates that the correlation between the invisible variables and its latent variables is significant.

Alignment with the management and accounting literature and empirical testing of the aviation sector provides a contribution to crisis management practice and thus fills the lack of operationalization and empirical testing in the crisis management literature. Budgeting underlies the management of most organizations and this research provides evidence for its use in increasing the effectiveness of crisis management in the context of externally induced crises. Therefore, this research fulfills its purpose of providing a deeper understanding of crisis management and a theoretical contribution to crisis management research and practice. It is difficult to forecast the future but governments especially those in developing countries like Albania, have started to be more attentive and careful in eventual disasters situations.

Abstract: There has been an ongoing debate among the academic circles regarding the teaching methods in the field of English for Specific Purposes, Business English being part and parcel of it.

The research will focus on two major stakeholder and agents in the context of Business English. This paper will investigate first, through a case study conducted at the Agricultural University of Tirana, Albania, among the Bachelor student of the first year studying in the department of Economics and Rural Developments Policies, enrolled in the Business English course module the comparative efficacy of the Grammar Translation Method and Communicative Language Teaching (CLT) approach.

The research instrument used is a pre-test and a post post-test aimed at identifying and measure the progress of the students in language skills acquisition as well as the feedback of the students. Secondly, the research will use observations of the language instructors in the English department to analyse the development of speaking skills after the application of CLT method among the students enrolled in a Business English course

Keywords: English for Specific Purposes, Business English, Communicative Teaching Approach.

1. Introduction

During the last twenty-five years, the Albanian economy has been in continuous development to adapt to the European and world economy. This development of the economy and business has been the main driving force for the growing demand for English language courses due to communication needs. In addition, the efforts to integrate into the European Union have brought the increasing dominance of the English language which has become the main foreign language (lingua franca) for communication between pundits not only at the international level but also at the national level as various business documents, contracts, reports etc., in English language are extensively used by economics graduates in their daily work.

As a result, the teaching process of the English language in the faculties of economics in universities should reflect these changes that are vastly happening in Albanian society. The new course programs should put more emphasis on the new communicative skills that current economics students need in order to integrate into the labour market.

This expanding demand and urge of the labour market for communication competence in English language has pushed the language specialist, course designers and course instructors to hone their teaching practices towards better and more up to date teaching methods in order to enhance the students' communicative skills.

The main objective of the study is to carry out a comparative analysis aiming at evaluating the implementation of Communicative Language Teaching (CLT) method versus Grammar Translation Method (GTM) when conducting Business English classes among the first year Bachelor students, in the department of Economics and Agrarian Policies of Rural Development. GTM has been used since the start of Business English courses in Agricultural University, hence the need to study and compare the efficacy of both approaches towards more competent language communicators.

The quasi -experimental study was applied to 2 groups of students, with a total number of 60 students. The research involves a pre-test and a post post-test from which, both qualitative and quantitative datas were obtained. One group, called experimental group was taught using the CLT approach while in teaching the other group, the conventional GTM approach was used.

Through triangulation, the results of the pre-test and post-test were processed aiming at the comparing and assessment of the students' achievement after the application of CLT approach and GTM approach while teaching Business English.

2. Grammar Translation Method

Grammar translation method (GTM) is a classical method used to teach students the grammatical rules and how they apply to sentences translated between the target language and the native language. Dominant in foreign language classrooms from the mid 19th century to the mid 20th century and initially utilised in Greece and Rome to teach classical languages such as Latin and Greek, the Grammar-Translation Method promoted the goal of developing the ability to read and translate classical texts. (Chastain 1988).

In theory and practice, the main focus of GTM remains on the improvement of primarily only two skills, that of reading and translation, little or no attention is dedicated to teaching speaking or listening. The method is obviously established on the assumption that language consists of structures and vocabulary, is acquired by studying those elements and using them to translate sentences, paragraphs and longer texts.

The classes conclude in several exercises that ask students to translate from their target language to their native language or the other way around. The exercises involve excerpts of literary texts, the text from second language is translated into local language; vocabulary and grammatical rules are memorized, or “they consist of separate sentences designed to illustrate the grammar points at hand.” (Thanasoulas, 2002).

The primary emphasis remains on the development of mainly only two skills namely reading and translation skills, little or no attention is dedicated to teaching speaking or listening.

One of the major drawbacks of Grammar-Translation method is that it is profoundly textbook centered and follows its content intently. Another disadvantage is that it is teacher centered because the teacher's role is to explain the material and to correct students' translations, therefore not encouraging the active participation of the learners. The instruction as a rule, is mostly carried out in the learner's native language.

3. GTM Techniques Used in Control Groups

-Translation of a Literary Passage The translation is **to be written or read aloud**. Literal translation involves translating passages that involve specific vocabulary and grammatical structures due to be studied to be studied later.

-Specific context, focused on translation – The process of contextual translation highlights interpreting the full meaning of the source text and while considering relevant background information before reproducing the same meaning and speech text in another, most possibly the target language.

-Reading Comprehension Questions - Questioning is a strategy that readers use to engage with the text. Questioning techniques help the reader clarify and comprehend what he is reading.

-Antonyms/Synonyms/Cognates – practices a given vocabulary, finding Antonyms/Synonyms of words or sets of words, learning spelling, sound patterns that correspond between the learners first language and target language

-Deductive Application of Grammar rules - A deductive approach, a teacher-centred approach to presenting new content. to teaching language focuses on giving learners rules first, followed by examples, and then practice.

-Fill in the Blank -filling in gaps in sentences with new words or phrases of a particular grammar or vocabulary type.

Exercises to practice grammar rules

-Composition - focuses on writing, students write about a topic using the target language

Through these techniques which mainly focus on reading and writing not on communication there is no interaction and no socialization in the classroom, errors are instantly and constantly corrected, teacher act as authority in the classroom.

4. Communicative Approach

The communicative approach, CLT dates back to late 1960s and became popular in mid 1970s (Swan, 1985a.). It was started in reaction to situational and structural approaches to language teaching and focuses on the students' ability to communicate in the foreign language they are being taught and interact both with the course instructor and with one another. Students were now put into real-life situations in order to integrate their learning with the outside experiences they will be exposed to after graduation, at their workplaces.

Theories of British Functional Linguists (Widdowson, and Halliday), as well as American sociolinguists (Hymes, Gumperz, Wilkins, and Labov) formulated basis for communicative language teaching, considering target language as a means of effective communication (Demirezen, 2011).

Noam Chomsky originated the theory in 1960s when he stressed the concept of competence and performance in language learning and disapproved of the grammar translation method on the account of using futile mechanistic pattern drills, learning by heart grammatical structures and useless reinforcement rather than giving preference to teach foreign language for real life communication. In the 1970s Michael Halliday and Dell Hymes anticipated theory of communicative competence, which formed the basis of communicative approach and CLT emerged as a response to the Audio-Lingual Method (as cited in Nunan, 1999). Hymes's (1972) theory of communicative competence illustrates the skill a speaker needs to possess so as to communicate competently in a speech community. As we mentioned earlier in this article, previous conventional approaches focused on learning grammatical rules and teaching methods such as those based on grammar translation and only involving the learner passively. Those approaches and techniques were consequently were gradually swapped by more efficient ones of communicative language teaching which required such techniques as role plays, group work, pair-work, sharing opinions, language games, interviews, information gaps etc

The teacher's role and the learners' changed as well. Teachers became facilitators of learning. Students became negotiators in a collaborative relationship, due to CLT encouraging active participation more than any previous language teaching approach. The shift from teacher-centred classroom to student-centred learning created this problem because it is obvious that students who are encouraged now to talk more than the teacher are less accurate than the teacher. However, the benefits of CLT approach are greater considering the fact that language production, fluency, and general comprehensibility are considerably enhanced.

5. Techniques used in Communicative Language Teaching (CLT)

Some of the techniques of communicative language teaching practiced in the classroom setting to develop the learners' skill of speaking include the use of authentic material, role-play, Strip Story, Information gap, Language Games interview, Interaction group work, opinion sharing, Real context use of language in the classroom

-Authentic Materials are audio, print and video materials that have not been designed with the intention of using them in the English language classroom. They fall into two main categories - print and auditory. The print category involves job applications, magazines, newspapers, journal articles, leaflets, novels etc. The auditory materials include TV commercials, Radio broadcasts, songs, e-books etc.

-Real context use of language in the classroom means facilitating activities that enable students to think about potential and real-world applications of their communicative knowledge. At the same time, it ensures integration with real-world and workplace tasks into classroom activities and assessment as a way to teach the content.

-Scrambled Sentences, a passage (a text) is given to unscramble the sentences or the lines of a mixed-up dialogue to their original order. Scrambled sentences teaches about the cohesion and coherence properties of the language

-Logic, cohesion, -firstly coined by Halliday and Hasan (1976) in the book, Cohesion in English. Cohesion refers to the connectivity of ideas and to the many ways (grammatical, lexical, semantic, metrical, alliterative) in which the elements of a text are linked together.

-Language Games (scavenger hunt) are used to advance the learner's ability to speak. Usually the games involve puzzles, play scissors and paper, make a match, scramble sentence, or ball throwing. Language games are fun activities aiming at learning sharpening the drills, retention, repetition of students' memory through these games. In addition, these activities make the students capable of producing new words and using phrases in sentences. Consequently, Carr, Palmer & Hagel et.al (2015) rightly state that active learning activities highlight the application of games.

- Free communication, free expression of ideas and opinions, -Opinion sharing is an activity concentrating on basic competence or intended to the rehearsal of the students' speaking. In opinion sharing activities, the role of the teacher as a facilitator is to prepare the students to be able to speak English well. Alrashidi (2015) claims

that teachers are supposed to organize and coordinate the process of acquisition and requirement to act as a facilitator

- **Strip Story**, or a picture strip story, is a series of pictures that have a story sequence, that are designed to be read as a narrative or as a chronicle in sequence. Teachers can use picture strip stories as visual aids to help students to learn the four skills—listening, speaking, reading and writing-- more effectively because of the motivational benefit embedded in the stories.

- **Group Work**- Group work is a unique activity used in this research, for fun to make students more active, respectful, persuasively, and motivated in learning English, especially speaking. Tweedie et.al (2018) claim that the CLT approach is effectively used to increase the opportunities for language speaking to improve English speaking in fluency, accuracy, and clarity.

-**Role Play** - Role-play is an oral activity commonly prepared in pairs or groups, which provides the chance for the students to conduct communication in other places or different social contexts.

-Information Gap

Information gap urges students to use available vocabulary, grammar, and communication strategies to complete a task. Besides that, according to Goh (2007, p. 105) states that these activities motivate the learners to freely describe their feelings therefore enhancing their speaking skills .

-Interview- Denzin & Lincoln (1994) in Borg (2006) state that interviews are conversation activities or the art of questioning, answering, and listening . Interviews are activities to develop speaking skills in teaching English. The interviews are used in language classrooms , so the learner may yield more information from their peers and therefore improve communication in the target language.

6. Research methodology

In order to assess and compare the efficacy of GTM and CLT, a quasi-experimental study using a pre-test and a post-test is conducted to determine whether CLT activities were effective for enhancing students' speaking skills. Cohen, L. Manion, L and Morrison, K state that this research design is one of the most used quasi-experimental design in educational research. Besides the test, classroom observation with the use of rubrics was used to record the performance of students in classroom activities. The pre-test was used to collect quantitative data before the intervention. During the second semester, two groups of students (the experimental groups) were taught using the CLT approach while one group (the control group) was taught using the same method as the first semester, the GTM.

The results from the pre-test were used for comparison with the post-test results in terms of students' speaking ability. The aim of the post-test administered to the students was to determine whether they benefited from the intervention and for comparison with the control group to reveal any progress.

The Pre-test

The pre-test was administered at the end of the first semester of the academic year 2022-2023 among 60 students of the first year Bachelor studies from the department of Economics, Agrarian Policies for Rural Development, Agricultural University of Tirana, Albania. The test took place after 30 lessons of Business English course taught using the conventional GTM and the respective techniques of reading comprehension, translation, gap filling etc. The test yielded the first quantitative data while the observation recorded how the students were performing in speaking activities. The observation was carried out in collaboration with another teacher to better record the performance of students in speaking skills.

The Intervention

The experimental group continued to have 2 classes per week for a total of 15 weeks using activities characteristic of CLT. During these classes, the following activities were carried out: interviews, role-playing, free discussions, language games, pair work and group work. Authentic materials such as videos, newspaper articles, etc, were used more often than the textbook. Meanwhile, the control group continued to have classes in the traditional way .

The Post-test

At the end of the second semester, the same test was administered to the three groups of students in order to collect the quantitative data. Before the test, during 3 classes, the observation using rubrics was carried out to evaluate communication and the speaking skills for both experimental and control group.

7. The Results of the study

The observation

The observation involved all the 90 students from both the control and experimental groups and was carried out during the last three classes of each group. With the help of an assistant, notes were kept on a table which included techniques used in the two teaching methods, CTL and GTM.. The table below indicates the frequency for each question all the relevant information on the overall answers collected from all the tables and notes.

Table 1. The class work observation

Observation items	Always		Sometimes		Rarely	
	GTM	CLT	GTM	CLT	GTM	CLT
Does the teacher speak only English during the lesson?		X	X			
The teacher creates opportunities for easier communication student-student and teacher-student?			X			
Do the students speak only English during the lesson?		X	X			
Teaching is focused more on grammar and grammatical rules?			X	X		
Error correction is done constantly and continuously?		X	X			
The main aim of the lesson is Communicative Competence		X			X	
Teaching is focused more on functional use of language and communication?		X			X	
The teacher focuses more on accuracy	X			X		
The teacher focuses more on fluency?		X			X	
Activities are mainly developed on group or pair work		X			X	
The objective of the lesson is to give students the opportunity to express their opinions and develop their social and creative thinking skills		X			X	
The activities used in the classroom include real communication		X			X	
Practice with authentic material is one of the aims of the lesson?		X			X	
Teaching is student-centered?		X	X			
Teaching is teacher-centered?	X		X			

The table clearly indicates that the teacher **always used only English** as a medium of instruction in the classroom with the experimental groups where CLT method principles were used. In comparison, while teaching the control groups where GTM methods principles were practised the teacher sometimes spoke **only English** in the classroom, which means that the teacher also spoke Albanian (native language of the learners) . The teacher in control where GTM techniques are applied, was **always more** focused on accuracy and **rarely** on fluency while error correction was **always** done constantly and continuously. The situation on experimental groups was quite the contrary The students activities show the same frequency in speaking, involving both the native and the target language. The CLT activities **always** involved students on group or pair work, and the goal of the of the lesson was to give students the opportunity to express their opinions and develop their social and creative thinking skills, while the teacher, playing the role of the facilitator, created opportunities for easier communication student-student and teacher-student, On the other hand, the on the control groups, these activities happened less frequently measuring **sometimes** only.

Teaching conducted through CTL method **always** focused **more** on functional use of language and communication and **rarely** on grammar and grammatical rules. The use of authentic material was evident in boosting real communication, and communicative competence which is the main objective of CLT approach.

The teaching process resulted to be always student-centered in experimental groups, while the control group which was on GTM and teaching was **sometimes** teacher-centered.

The pre-test, intervention, post- test study.

The results produced by the groups throughout two achievement tests, pre-test and post-test are illustrated in Table 2.

Table 2: Statistical results of pre-test, and post-test of both groups.

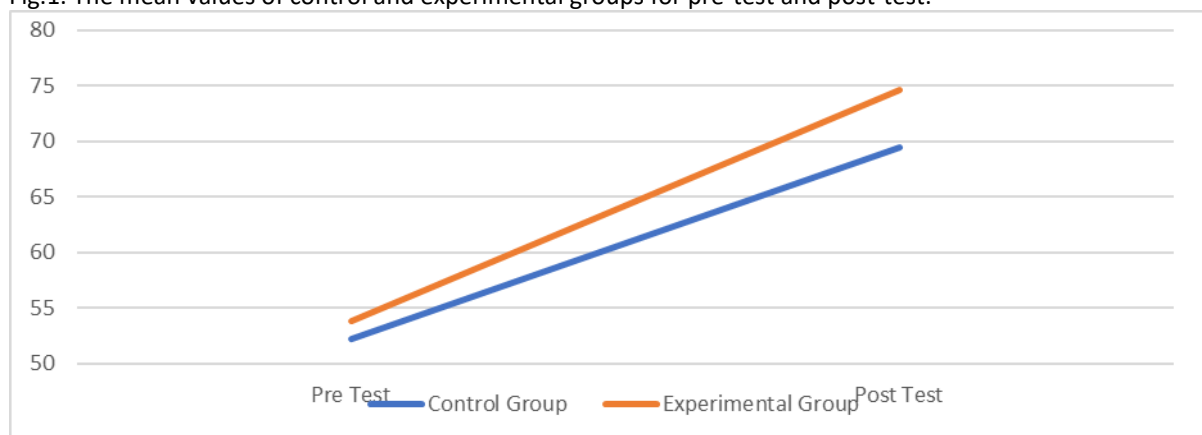

Tests	Group	Valid N	Mean	Mean Difference	Std. Deviation	Std. Error	F	Sig
Pre-test	Control	30	52.2173	1.6476	12.2704	1.1352	.352	270
	Experimental	30	53.8649		10.5401	1.6616		
Post -test	Control	30	69.4285	5.2207	15.7224		12.507	001
	Experimental	30	74.6492		10.2619			

From the results in Table 2 it is clearly evident that the total average of all skills tested in the control group in the Pre-test scored around 52 out of 100 whereas the mean average for the experimental group centered around 54. Nevertheless, considering the fact that statistical results show that the mean difference is significantly low between the CG and EG groups in this test: $p = .352$, it should consequently be concluded that both groups have accomplished proficiency of three language skills in the same level in the Pre-test.

The outcome of the Post-test highlighted that the control group was able to achieve above the average mean value showing a progression in the acquisition of the language skills. The control group was able to reach a score just above the average score of 69.4285. On the other hand, the experimental group significantly increased the gap and achieved a result of 74.6492 out of 100. The results yield a considerable improvement of language skills for the experimental group versus the control group which were taught entirely based on the conventional Grammar Translation Method and strictly adhered to the official syllabus of the course.

The figure below shows the progress of control group and experimental groups in pre-test and post-test

Fig.1. The mean values of control and experimental groups for pre-test and post-test.

8. Discussion

The results of this case study suggest that both approaches to teaching English have their strengths and weaknesses. Communicative language teaching is more effective in helping students communicate in real-life situations, while grammar-based teaching is more effective in improving accuracy. However, it is important to note that both skills are important in language learning, and a balanced approach that incorporates both approaches is likely to be the most effective.

9. Conclusion

The debate between communicative language teaching and grammar-based teaching is likely to continue. However, the results of this case study suggest that a balanced approach that incorporates both approaches is likely to be the most effective in helping students learn English. Language teachers should consider the goals of

their students and the context in which they are learning English when choosing an approach to teaching. Ultimately, the most important factor is helping students achieve their language learning goals in a way that is engaging and effective.

JEL Classification: M10 K10, F40

INTRODUCTION

In the form of bilaterally negotiated trade partners in the world, it was indefatigable to the need to impose liquid rapprochement with the international economy. It was such an even that the most entrenched stash of protectionism of the century was not in the sense that you should be able to read in front of the site the damage sustained as the result of over-accumulated use on protectionist barriers for international exchanges.

Therefore, one part of the progressive economic force in the world stocked after the second holy war in order to establish a multilateral principle on the international relationship that were designed to form an International Trade Organisation (ITO).

1. Survival of the bargain for customs and trade since 1947 - GATT

The relationship between the forceful suit and the interests of the developed countries that have been hard to break from the dominance of the world. In 1947, in Geneva where it was supposed to form a International Trade Organization, but it didn't get signed because of the strongest forces of those times.¹

A general agreement for custom duties and trade since 1947 -GATT

At the conference, 23rd most developed country signed only the general bargain for customs duties and trade (popularly known as the short-term name - GATT) which was supposed to be one of the agreements while forming the international trade organisation and should have ensured liberalisation in the re-national exchange on cattle.

The general agreement of customs duties and trade was based on three basic principles:²

- The principle of the liberalization that should ensure the removal of trade and non-export barriers from international exchanges on livestock and service. Because of the difference in the degree of the economic spread, it was allowed for the national economy to enforce customs protections, but in due course it should be lured out, in the end, to disappear.

- The principle of multilateralism and convertability, which is essential to the importance of revival of the international economy in terms of which the country is already driven by the world, just not the United States, they weren't able to provide gold coverage for its national currencies. The site of the GATT had to be strived for macroeconomic stability on its economy and how the basic prerequisite for ensuring convergence on its

¹ Srimvasan T.N.: Nodiscrimination in GAT/WTO: was there anything to begin with and is there anything left? In World Trade Review, 4:1, United Kingdom, 2005, p.100

² Richard Blackhurst, "The WTO and Global Economy", Global Trade Policy, The World Economy, August. 2000, p.536

national currency, which was necessary to ensure the principle of multilateralism in the the uncipled exchanges. Multilatering in the international exchange supported the ability to use the positive balance from trading to cover the negative balance from trading in other countries.

- The principle of non-discrimination on trading partners, which should provide the same treatment on trading partners, which is what happened to the clause for the most intended treatment in the Nazis. The cause for the most privileged treatment in Nazi countries - the GATT privileges - will be provided for one of its trading partners to be transferred to other trading partners, without negotiating a deal.³

The set principles on GATT got attached to economic entities in the world. The number of multilateral trading deals increased in a short period of time, in the end of the year, to present a total of 120.

The work at GATT has been going on in a long time, with some of the negotiations taking place in the beginning of the year. At the beginning of the negotiation, you should concentrate on the power of abolishing non-customs barriers and defining the use of customs to protect national rates from foreign competition. It was certain that there was no way to abolish it the night before night, and therefore should have to mention one of the pre-desecrated period for stabilisation and reconstruction at the destructive national rate, which was expected to come to the end of the year on these above-mentioned trading instruments.

The negotiating cycles are ordered to negotiate. In the negotiations, we organized a swarm of land, cattle per cattle. This means that the country shouted partner bill dolled in to report to the negotiations and negotiate for an overarching trade regime for specific cattle. At the end of the negotiation process, the bilateral basis was to publish a T.N concession list that lists the cattle site for which the above-traded regime would be amended, as well as the promise to amend the tenants. Although the negotiations took place on a bilateral basis, the agreed privileges and privileges in the two countries on the concession list stood for the common purpose of the site of the second article on GATT. So the number of rounds to negotiate has increased. This protracted revelation that not only was it difficult to organize negotiations to earn a stacked number on the "lazy fight" now in GATT gained so much as the country's ultimately undeveloped footing. Interests and needs on undeveloped countries were diametrically different from those developed.⁴ That's why negotiating departments are having a tough time, and the negotiation rounds have been complications and prolonged. Many developed countries initially rejected GATT - claiming that this multilateral deal presented a "club on a developed land," so why not have this world-class industrialization at the very beginning of the developed land, they're going to beat the foreplay of the orientation of the primary production.

For the first time, the Kennedy Round on the GATT negotiations, which lasted from 1962-1967, developed a land that would provide a 50% increase in customs sticks in the exchange of salt developed to the country, and that is an unreciprocatory basis. This means that the undeveloped countries that had the right to ram kite on GATT to go to the GATT and to gain status on the T.N. land in development, did not have to respond to the privileges of providing them with developed countries - exercise exchanges of so-called privileges from their parties.⁵ On the contrary, not only did they have the right to conduct high customs protections for sophisticated forms of industrial products, they were entitled to prolong the period for use on non-customs barriers, before the contingent was re-elected.

The falls of GATT are known for :⁶

- This multilateral bargain failed to ensure liberalization on the supply of trade for land products. Expressions of protectionism in this production were not only indistinguishable from the fight to develop the country.

- In the frames of GATT it came to lowering the nominal customs sticks on industrial products made of developed earth. But , the lowering on customs sticks for primary products either. . On this it came to the

customs escalation, i.e. the effective customs for protection of the industries of the developed countries and the international price relationship (terms of trade) for primary products has originated from the advanced development of the country. GATT is effective on the customs sticks for final induction and development of the products on the bazaars in the developed countries. However, the following conditions on the proportions led to the fall from their hands to the hands of other economies.

- GATT not only led to a customs escalation in the united exchange of fighting from the end to the 70s led to a sharp application to the re import on the contingent in the developed country. This problem was noted in Tokyo's round of negotiations, but the circumstance for the removal of non-customs barriers in the overarching trading regime in developed countries did not give any obvious results.

The negotiations began in 1986. During this period, it was clear that many of the provisions were violated, and you would be in violation of the rules of non-compliance, therefore there is no mechanism for implementing the sanctions on those who do not comply with the rules.⁷

One of the possible way to re-run the rules was to form a regional interactions. In the case of the formation of the GATT, the possibility of the privilege of the second range of the regional integrations is automatic on the site ~lenka off GATT but if the regional intergrade had local cell formicate to the new integrated country. The order would have been a procession to regional intergrade, but the osseous success of the sense of fasting is a common European economic fore beautiful. The processor on regional intergrade that they created for the local infanthood of the order at GATT discrimination on site trading partners {this does not expire from the ova's regional integration.⁸

2. Change the terms of the | international trade

Although, she is the most impressed economist in the world's 20th military year, there has been no such weak export to the country's share of the country's declination on the overreach of trade. The slow growth in trades to main force products in 1913 and 1929, extreme falls on the range on these trading years to depression, as well as the tendency to coefficient on the overarching trading connotations recorded in many countries, led to assumptions for lures to the jurisdiction of the trade. Unfortunately, this assumption implied technological progress, which was driven by industrialization, scathing real incomes and other forces that led to me and the nation's economy in this year led to decline the promise of national trading. The problem with advanced industrialization was partly the technology on the substitution, which replaced natural and synthetic (artificial) technologies produced by local resources. Technological advancement and economies of scale for use in harsh, wasteful products, as well as improving the restoration and use of waste. It was thought that the development would slow the growth to the barriers for crude, soda trading, as well as trading water, at least as it was driven to production.⁹

The industrialization of many economists was a reduction factor for traders. Although it was known that, in the beginning, industrialization would be reduced to the trading levels of so-called capital products, diffusion on the technological significance of the whole world would eventually fill the gap in comparative price advantages, in a way that would reduce trade. In a distinctive way, it was expected to be industrialised to guide the continuous imported substitution of salt consistently dampened on the trade of so manuinflage products. It is diluted, successful industrialization means a rise to 'living standards' in newly industrialised areas. Since this story, some other economists have been bothered by what they see as industrialization. These economists thought that the share of trades would be used to export some traditional exports to industrialised countries, such as textile products.

The rise in real incomes, too, was an argument for discouragement in traders. The country's prediction of legislation on Engels's dietary products is declining the faction on the growing real income per head to the nurture the consequences and the consequences of an advanced industrialized country serving the component

of national production tends to grow, concentration was achieved on the world's food trade and land supplies, and in the overarching trade ratio to the overall production to work on services - as residential services, publicly educated and governed - coo, mainly, have been produced and used on a domestic plan and may not be contributing slightly to the overarching trade.¹⁰ The other argument, which coincided with secular stagnation across the U.S. for imprisonment on the U.S. border and the scale of the domestic economic growth of the 1930s, highlighted the gradual drain on the expansion of the trade force generated by the integration of the world's economies into early 1930s. Salt is barely absorbed in these regions of the world economy, salt (on the world's barricades and promotions to transport technologies, the force boosters on trade integration were suppressed, consequently slowed down to the stick on the overhead trading of the walkie-talkie on the overall production.

It has been noted that the vulnerability to advanced industrializes on economic instability would lead to a political squeeze on effective control over economic activity, which would have a devastating effect on international trade. In the pursuit of economic stability, governments were forced to release a national economy from the world's Largest Trade Market, which could not control it, and that I would extend the domestic economy that I control to a certain degree. In the face of effective international means of economic control and stabilization, these defensive actions, NE nationalism and autarchic attitudes, have driven the coefficient to the jurisdiction of trade and contributed to some of these trends in the overarching trade to be the next leader evolve year.

These arguments point to an future contraction in world trade that, of course, no one has to be fully pricked by the economists. For some critics of the assumption of overarching trade, industrialization has been a distraction as it gains traverse the overarching trade of salt on the world's barriers to a new line. Arguments based on the law on Engels and the place on the structures of the world's barricades were, at the same time, precocity attitudes. In particular on the world's trade in the world's most productive products has increased in the number of barriers for traders and specialties.

CONCLUSION

The fast-growing world trade rate has generally been a staple of economic growth, which has been a rocky year. Although after the second, the world's military was set to accelerate growth in international trade, blessed at the high tide of economic growth to the end of the post- economy, especially in Western Europe. At the same time the international trade rules are being proposed to establish the basis for building on a stable system. In 1974, taka was a - GATT (Surviving Bargain for Customs and Trade) in 1974, as a forum for trade negotiations at the international level, which had a huge role to play in defining the current trading flows, especially in developing countries. Shortly before the start of the Uruguayan round of negotiations, discrimination imposed by regional intellectuals, namely the EEZ, is preparing a partnership from preferential trade deals to some highly developed countries (the US and Australia). Taka for them EEZ has begun to pretend to be a trading claim. The situation was unfavourable in trading on land products, EEZ cadets protected all production not only with high tariffs beating and salt on the contingent, while forcing exports on all land products per pat on intensively subsidized by the joint bucket in Brussels.

Typology of Subordinate Managers: A Problem Solving Perspective

Emil KOTSEV¹

¹University of Ruse, ekotsev@uni-ruse.bg, ORCID: 0000-0001-6848-3051:

Abstract: The paper studies subordinate managers and their psychological readiness to get involved in problem solving situations. The aim is to classify the different personalities of managers according to their propensity to participate in the decision making phase and their propensity to participate in the decision implementation phase of the problem solving process. Using qualitative content analysis and thematic analysis methods, a two-dimensional matrix is defined and four types of managers are identified. According to their propensity to participate in the decision making process (first dimension), subordinate managers are divided into two groups: managers, who prefer to take part in the decision making and share responsibility for the decision with the superior and managers, who would like to leave the decision process to the boss. According to their propensity to participate in the implementation of the decision (second dimension), they also form two groups: managers with a high inclination to participate in the implementation and managers, who are less willing or unwilling to participate in the implementation of the decision. On this basis, a typology of subordinate managers is suggested and the peculiarities of each type (passive, implementative, assertive and proactive) are discussed. It is concluded that managers as subordinates have to counteract their propensity to participate either only in making a decision or only in its implementation. Thus, they will be able to objectively assess the problem situation and align with the behavior that is most consistent with their individual and organizational goals.

Keywords: subordinate manager, problem solving, decision making, decision implementation, superior.

1. INTRODUCTION

In recent years, there has been a sharp increase in the number of proposed models for classifying managers on one or another basis. Focusing their research on team managers, Flak, Hoffmann-Burdzińska, & Yang (2018) suggest a classification method based on the system of organizational terms. Gryazeva-Dobshinskaya & Dmitrieva (2020) offer a more universal typology that implies a differentiation of managers into 16 subgroups by rating 4 indicators: transformational and transactional leadership, strategies aimed at results and efficiency. Other researchers use as a basis for the classification of managers their preferred approaches to communication with subordinates (Hodorenko & Slavenko, 2019) and possessed communication skills (Nazari, Sohrabi, & Ehsani, 2016; Nazari & Sohrabi, 2021), applied leadership styles (Oshagbemi & Ocholi, 2006; Saha & Sharma, 2019), the level of their competence (Luhova, Serikov, Serikova, & Kovalova, 2021), the degree of job satisfaction and trust of their subordinates (Kim, 2020), the degree of adhering to ethical norms and high standards of good behavior (Husaković, Husetović, & Mahmić-Muhić, 2021), their education (Poznanska & Shkurat, 2013; Pavlov, 2021), or the characteristics of their financial and accounting performance (Korzeniowska, 2016; Hosseini, Izadinia, & Ali Ahmadi, 2022).

The literature also knows attempts to classify managers according to their approach to problem-solving (e.g. Zieniewicz, 2009) and management of change (e.g. Vlček, 2016). However, the requirements for managerial effectiveness in solving problems (Nedyalkov, 2020) determine the need for further, more in-depth study of managers' attitudes and behaviors in making management decisions and their attitudes and behaviors in the decision implementation process. These behaviors form the five phases through which the problem-solving process goes: problem formulation; generation of alternatives; assessment and selection of an alternative; implementation and control (Aldag & Stearns, 1987).

In addition to problem specifics and leadership styles of their immediate supervisors, the work of managers in each of the problem solving phases is also determined by their individual characteristics (temperament, knowledge, skills, experience, etc.). Number of studies have recently re-examined this issue (e.g. Répáczki, 2020; Birknerová & Uher, 2021; Ruskova & Spasova, 2021; Mistry *et al.*, 2022). However, most of them tend to focus on the personalities of superior managers in their role as leaders, failing to identify the influence of the individual characteristics of subordinate managers performing their dual role as a follower and a leader (Kotsev, 2021).

Therefore, the purpose of this paper is to shed light on some issues related to the influence of subordinate managers' temperament on their behaviors, classifying them according to their propensity to participate in decision-making and their propensity to participate in decision implementation.

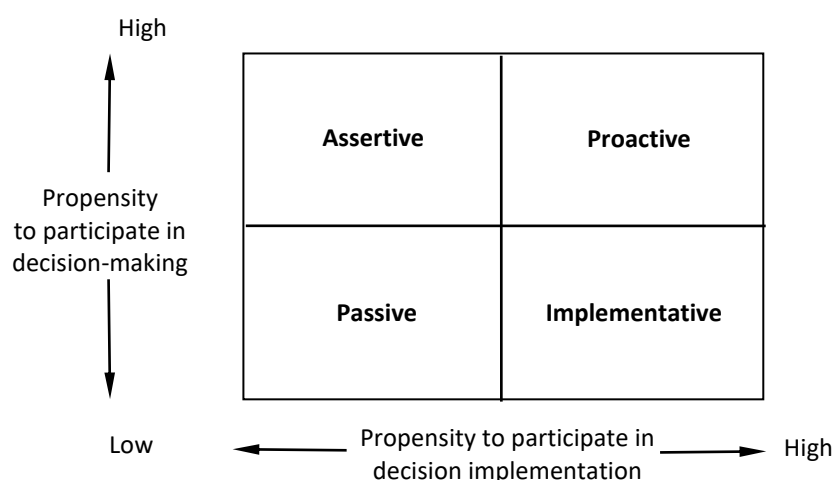

2. TWO-DIMENSIONAL MODEL OF MANAGERIAL PROBLEM-SOLVING BEHAVIOR

According to their propensity to participate in decision-making, managers can be divided into two groups: managers who wish to share with the superior the responsibility for the decision made and managers who prefer that someone else bear all the responsibility. Managers in the first group can be extremely helpful in gathering information and generating alternatives, but sometimes may hinder their immediate supervisor in the final selection of approach to counter the problem at hand. Managers from the second group do not burden their supervisor with alternative opinions and critical comments, but they also do not contribute anything to the choice of a better solution.

Depending on their propensity to participate in decision implementation, managers can also be divided into two groups: managers who are highly willing to participate in the implementation of the decision and managers with a lower will to participate in the implementation of the decision. Managers from the first group invest more energy and enthusiasm, which most often contributes to the timely achievement of the set goals. However, it is possible that their excessive efforts to follow received instructions make it difficult to reveal possible inaccuracies and errors in the decision already taken. Managers from the second group prefer to avoid making extraordinary efforts in the implementation of a given decision. When unexpected obstacles arise, it is relatively easy for them to give up or look for compromise options to fulfill the assigned task. Such "rationality" rarely supports the final successful solution of the problem.

Thus, two dimensions of managerial problem-solving behavior are formed: propensity to participate in decision-making and propensity to participate in decision implementation. To facilitate the analysis of the subordinate manager's behavior, the two dimensions can be considered in a matrix, covering and grouping all possible combinations (Fig. 1). Thus, four managerial types can be distinguished:

Figure 1. Types of subordinate managers

3. CHARACTERISTICS OF DIFFERENT MANAGERIAL TYPES

3.1. Passive type

These managers are distinguished by a low degree of desire to participate both in the process of making the decision and in its implementation. This attitude determines their negligible contribution to solving problems. Often the basis of their reluctance is a lack of motivation. There is a possibility that it is also caused by low self-esteem, fear of not being able to cope with work, lack of competence. They are not suitable for a management position – they lack the desire to manage, which is the main characteristic of an effective manager. The interests of the organization dictate that they be immediately relieved of managerial duties. However, some senior executives with an authoritarian leadership style willingly include passive individuals in their management teams because they do not see them as an immediate threat. As an exception, their passive behavior can be justified if the adopted organizational culture (in particular, the decision made) implies a violation of certain ethical norms recognized by the rest of the society.

3.2. Implementative type

Characteristic of this type of subordinate managers is their tendency not to participate in the decision-making process, combined with a strong desire to participate in its implementation. Their contribution to solving problems consists in organizing and controlling the implementation of specific tasks that have arisen as a result of the decision made. Their driving forces can be summarized in one sentence: "Dedicate yourself entirely to delivering excellent work performance". In a highly structured environment, their work performance can provide positive results. Usually, these are subordinate managers who prefer not to be burdened with "extra" information and not to bear additional responsibility, which predetermines their lower efficiency in a dynamic environment (especially when unexpected problems arise that require quick reactions).

Lack of interest in the nature of the decision could hamper the vertical flow of information in the organization. In addition, their extreme efforts in implementing decisions do not always find support from their own subordinates, which can cause a rapid depreciation of managerial potential and an increase in the level of psychological stress. The discrepancy between the expected by the implementative type team activity and the actual team performance is a prerequisite for the emergence of intragroup conflicts. The broken balance of mutual expectation should not be understood "only as a discrepancy between the collective and the individual, but also the opposite – a discrepancy between the individual and the collective" (Yolov & Gradev, 1986, p. 91), in which the manager does not find sufficient (according to his/her subjective criteria) support and empathy from the subordinates.

One of the opportunities to avoid such adverse consequences and take advantage of the full potential of these managers is to reduce the relative share of assigned routine, structured tasks at the expense of the share of unique, unstructured tasks to be performed. Thus, they will be forced to lead the implementation in conditions of uncertainty and make "ad hoc" decisions. If applied properly, this technique can provide positive results, but its correct application depends on the successful use of a differentiated approach to this type of managers. It is particularly risky if the subject of its application are subordinate managers that lack competence and experience.

Another, relatively safer option is to encourage the Implementative managers to participate in the initial phases of the problem-solving process. The type and form of this encouragement depends on the specific situation. However, it is recommended that their involvement be directed towards making programmed decisions at first in order to more easily overcome their negative attitude and lay the foundations for building a sense of self-confidence.

3.3. Assertive type

These subordinate managers can be distinguished by their apparent psychological readiness to participate in the decision-making process and low degree of desire to participate in its implementation. This also determines the nature of their personal appearance when solving problems. Their main principle is: "Take responsibility." To be successful in management, it is not enough to accept responsibility, but also to take it willingly. They can be especially useful for the team and the organization as a whole in a high degree of uncertainty of the environment – they provide up-to-date information to their superiors and colleagues and are not afraid to make independent decisions when the circumstances require quick reactions. The opportunity to be equally responsible with the senior manager and the other members of the organization to comply with their opinion is a main driving force in their work. In addition, by participating in the discussion of alternatives and decision-making, they can directly influence the distribution of tasks for the implementation of the decision.

Sometimes managers of this type get used to their role as the "right hand of the boss" and leave the "dirty work" to their colleagues. In this way, they gradually isolate themselves from everyone – the senior manager begins to perceive them as "intruders", their colleagues consider them privileged, and their subordinates gradually get used to rarely seeing them. This is a prerequisite for creating a communication barrier between them and the rest of the organization members and for the emergence of interpersonal conflicts at different levels of the organizational hierarchy.

The danger of the emergence of such a tense atmosphere can be reduced by purposeful actions on the part of the senior manager to include the assertive manager in the process of decision implementation. For example, he/she can be assigned as a priority to lead the implementation of unprogrammed decisions. The ability to apply non-traditional approaches and take responsibility for the ultimate success is a challenge that will motivate assertive managers to complete the assigned task.

When implementing programmed decisions, their desire to participate can be encouraged if they are previously allowed to participate in the process of making them. When they perceive a decision as their own, they feel personal responsibility and are more committed to its implementation. In this way, the creative potential of the assertive type of subordinate managers will be fully utilized and the efficiency of the management team will increase.

3.4. Proactive type

A distinctive feature of these managers are their strong desire to participate in both decision-making and decision implementation. The peculiarities of their temperament (most often sanguine), combined with their high motivation for charge, are the main prerequisites for their proactive thinking and behavior. They live with the problems of the organization. They are often informal leaders in the management team and 'infect' others with their dedication and diligence. They do their best to bring the work started to a successful end.

Sometimes, however, their efforts can have a destructive effect on the group's work. If their activity does not correspond to the adopted company culture, it is possible that the other members of the management team, including the senior manager, feel their authority threatened. Possible defensive reactions can trigger the emergence of interpersonal conflicts. Excessive activity is not recommended even in individual work – instead of showing the necessary patience and purposefully working on the task that requires more time and energy, thoughtless and unbridled zeal can lead to permanent complications of the problem situation.

Regardless of these risks, with sufficient maturity of proactive managers (professional and personal), their drive to perform can be beneficial to the organization by being used to stimulate teamwork. Their efforts must be supported and directed in the right direction. In this way, avoiding the distraction of efforts, they can keep their high motivation and increase their contribution.

In addition, their willingness to participate in making and implementing decisions ensures a certain consistency in solving the relevant problem. Their involvement from the beginning in this process reduces the probability of error in generating and evaluating alternatives, while at the same time eliminating the danger of neglecting some duties concerning the control of the actual implementation.

4. CONCLUSION

Based on the above considerations about the advantages and disadvantages of individual managerial types, it is not difficult to come to the conclusion that a certain balance between autonomous proactivity and strict implementation is necessary, regardless of the position held in the management hierarchy. Undoubtedly, the manager should be proactive, but she/he should not overstep the limit of her/his delegated authority. Doubtlessly, she/he must be implementation-focused, but not forgetting that the nature of managerial activity requires decisions to be made. Researches shows that it is necessary to establish a relationship of dynamic equilibrium between initiation and execution, which will enable subordinate managers to optimize the effect of their work performance in solving problems.

Therefore, subordinate managers must be able to counteract the propensity to participate only in making a decision or only in its implementation. Thus, they will be able to impartially assess the situation and orient themselves towards behavior that is most consistent with their personal and organizational goals.

Abstract: Leasing is a special form of financing for the use of immovables, capital assets, equipment, future assets, manufactured assets etc. Leasing is a commercial activity through which households and commercial entities are enabled to use mobile or immovables for a specified period and for a specified fee.

Leasing, as a special commercial activity, is of special importance for the functioning of trade companies, especially small and medium-sized (SMS) enterprises that are not able to finance the purchase of the necessary equipment or immovables for the commercial activity for which they are registered.

The subject of analysis in this paper is the legal regulation of the leasing agreement. The emphasis is on Macedonian legislation. The authors, also, will make a comparison with leasing legislation of international organizations, UNIDROIT Model law on leasing, UNIDROIT Convention on international financial leasing and legal framework of some EU countries.

The authors, will emphasize the comparison of the data of leasing use among SMEs in the EU and in the Republic of North Macedonia, so for contribution of leasing to economic development of SMEs. Based on the performed analysis, will be given recommendations for the further development of leasing agreement and its use in the Republic of North Macedonia.

Keywords: leasing, agreement, SMEs, model law, finance.

1. DEFINITION OF LEASING AND TYPES OF LEASING

Leasing agreement is typically agreement in commercial law, which had developed in accordance with procurement of assets, or other equipment, without investing own finance and without concluding credit agreements.

Although leasing¹ has been used for thousands of years, it was evolved during the last decades, when it was faced as a specialized financial service rather than a manufacturer-selling technique, with the establishment of the first independent leasing company in 1952 in the United States (Mavrogiannidou, 2012).

The user of leasing (lessee) has a great advantage because he collects income by servicing the equipment or thing he uses for leasing, and with the income thus acquired he can pay the leasing fee. The provider of the lease (lessor) also has an economic interest in participating in this type of activity, because through the lease, he receives compensation greater than the funds he invested in the object that is the subject of the lease.

Leasing is an international term that is used to describe the transfer of the right to use a fixed asset from the lessor to the lessee for a certain payment for a specific number of years in the form of lease.

From an economic perspective, leasing can be defined as "a contract between two parties where one party (the lessor) provides an asset for usage to another party (the lessee) for a specified period of time, in return for specified payments" (Fletcher et. al., 2005).

This is also reflected in accounting-related definitions: According to the Accounting Standard IAS 17 "a lease is an agreement whereby the lessor conveys to the lessee in return for a payment or series of payments the right to use an asset for an agreed period of time".

Leasing represents an organizational-legal form of integration between manufacturers, traders, financial institutions and consumers (users of the goods) (Dabovic. et al., 2012).

According to Report prepared for Leaseurope by Oxford Economic (2015), 30.5% of European SMEs investments are in cash/equity, 18,9% of investments are made by using leasing, 17.8% by other debt, 15,5% by loan for period longer than 3 years, 10% by loan for 1-3 years and 7.3% short term credit. According to

¹ The term leasing origins from English word „lease“which means to rent out, to hire out.

Leaseurope, it is estimated in absolute numbers that leasing provides significant support for Europe's SMEs with 104 billion € of SME investment financed through leasing and supporting over 9 million SMEs.

In legal theory, several types of leasing are differentiated based on different criteria.

Depending on the object of leasing, is made a distinction between equipment leasing and leasing of real estate; between leasing of consumable goods (cars, equipment) or investment leasing (machines and other equipment); leasing of immovable property or leasing of movable property.

According to the properties of the leasing provider, leasing can be through a leasing company, concern leasing, production leasing, production-financial leasing, etc.

Of particular importance in practice is the division of leasing into operating (service) and financial leasing. The IAS 17 effectively accounts for the economic substance of the two major types of leasing that are: service (operating) leasing and finance leasing. The first indication that proves whether a lease is operating, or finance is to assess the risk and rewards of ownership have been transferred to the lessee.

Operating (service) leasing is also called short-term leasing. In this type of leasing, it is usually a matter of leasing consumable goods where profitability is realized only by giving the object of leasing multiple times, so it must be about such an object that can be used multiple times. In this type of leasing, most often the lessor is the manufacturer or owner of the object of leasing and most often he retains the obligation to service the items, purchase of spare parts, etc. (service leasing). In the case of long-term leasing (finance leasing), as a rule, it deals with the leasing of objects of great value (Kapor & Carič, 1979). In financial leasing the risk of obsolescence and the term of failure of the equipment, as well as the costs of insurance, maintenance and repairs are borne by the lessee, since the service provider does not provide other services than financing the work (Andonovski & Krstanovski, 2011). In the professional literature, there is a dispute about the length of time according to which short-term leasing will be distinguished from long-term leasing.

In financial leasing, the lessor finances the total amount of the asset or equipment and then the lessee, who requires the equipment or machinery, uses it in exchange of fixed payments. This particular type of lease is also known as Full Payout Lease and there is a full transfer of all the risks and rewards related to the asset from the lessor to the lessee. In this type of lease the lessor has only the role of the financier. Big industrial equipment is a common example of finance lease. Financial leasing has become the mainstream finance tool only after the bank credit in the west developed countries now. In addition, as it is said that nearly 1/3 of investment in the world is finished by financial leasing, which has become one of top five pillars, taking the same important position in finance as bank, insurance, trust and security (Miao, 2009).

Depending on the number of persons participating in the leasing activity, there are indirect leasing or direct leasing (Kolpak et al., 2016). In indirect leasing there is a three-dimensional relationship between the supplier (manufacturer or seller), the leasing provider and the leasing user. With this type of leasing, are concluded two contracts: a sales contract between the supplier and the lessor and a leasing contract between the lessor and the lessee.

Financial and investment leasing are of particular interest from the perspective of the corporate sector for the development and financing of their business activities.

2. LEGAL FRAMEWORK FOR LEASING IN COMPARATIVE LAW

The leasing agreement, as a creation of the law of the USA, was not legally regulated in the law of the countries of Europe for a long time. Things have started to change significantly because of the economic benefits that this instrument provides. Thus, from the common law system, the leasing agreement will first be regulated in the legislation in Europe that belongs to the Romanian procedural civil law system. Indeed, only some of the European countries: France, Great Britain, Portugal, and Italy had their own national leasing legislature. These leasing laws were paying more attention to the matters of status of firms that can, in accordance with their provisions, engage in the leasing business, rather than on the very essence of the leasing agreement/or nature of the leasing cooperation between lessor and lessee. By the end of the first decade of the XXI century, there is almost no country in Europe that had failed to regulate in some manner the leasing business, or at least some of its forms.

The group of countries that already have the leasing law from the end of the last and the beginning of this century was joined by some other countries: Poland, Federation of Bosnia and Herzegovina, and others by

developing the leasing law within the framework of the Civil Code, i.e., the Law on Lien. Some other countries have adopted separate leasing laws like Spain, Croatia, Republic of Srpska, and others, while some other ones passed the law on financial leasing like Russia and Serbia. Due to this trend, the leasing agreement was also legally regulated in Macedonian law at the beginning of XXI century.

Analysis of the legal regulation of leasing in European countries shows that there is a more common approach under which the issue of leasing activities and the definition of the contractual structure of leasing is primarily regulated by civil laws, which fix the original conceptual models of leasing, fundamental principles, essence of obligations, status of contracting parties, and other issues that are elaborated within special legislation.

At the international level, the UNIDROIT Convention on International Financial Leasing remains the most serious comprehensive leasing effort. Indeed, recognizing the need for certainty in international trade, the International Institute for the Unification of Private Law UNIDROIT began work in 1970s aspects of Draft Rules designed to govern "the civil and commercial aspects" of international financial leasing. The effort culminated in 1988 in a Convention on International Financial Leasing (Ottawa Convention).

The goal of the Convention on International Financial Leasing was to provide a basic international legal framework within which international financial leasing can be carried out. The need for this framework is a product of two factors: the potential for the expanded use of international financial leasing as a method through which capital equipment financing can be facilitated and the varying treatment of financial leasing under the national laws of countries.

The Convention addresses several central aspects of financial leasing for which there was a generally recognized need for an internationally uniform approach. Many issues that arise in the context of lessor-lessee-supplier relationships are left to be regulated, either by application of the underlying principles of the Convention or by the applicable law.

Convention has five key objectives: recognition of the typical tri-partite relationship, transfer of the responsibility for nonconforming equipment from the lessor to the supplier, restriction of the lessor's liability to third parties, safeguarding the lessor's property interest in the event of the lessee's insolvency and ensuring the effectiveness of provisions for some of the lessor's default remedies, such as accelerated payment, liquidated damages, etc.

The Convention is structured into three main parts preceded by a preamble. The first part includes articles which delimit the Convention sphere of application both substantive and geographic and include general provisions. (Chapter 1, Article 1-6). The second part represents the main body of the Convention and contains substantive provisions dealing with the rights and obligation of the parties (Chapter 2, Article 7-14). The third part includes final provision (Chapter 3, Article 15-25).

The Convention applies when the lessor and the lessee have their places of business in different States and those States and the State in which the supplier has its place of business are Contracting States or both the supply agreement and the leasing agreement are governed by the law of a Contracting State.

The Convention governs financial leasing transactions. The financial leasing transaction is a transaction which includes the following characteristics: the lessee specifies the equipment and selects the supplier without relying primarily on the skill and judgment of the lessor, the equipment is acquired by the lessor in connection with a leasing agreement which, to the knowledge of the supplier, either has been made or is to be made between the lessor and the lessee and the rentals payable under the leasing agreement are calculated so as to take into account in particular the amortization of the whole or a substantial part of the cost of the equipment.

Financial leasing according to the Convention represents a "distinctive triangular relationship" requiring three discrete parties: a lessor who advances funds for the purchase of the equipment which constitutes the subject of the leasing transaction, a lessee who selects the equipment and pays a rental fee for the right to use it and a supplier who sells the equipment to the lessor. Financial leasing also links two separates, albeit interrelated, contracts: a leasing agreement between the lessor and lessee, and a supply agreement between the supplier and lessor.

The Convention applies when the lessor and the lessee have their places of business in different States and those States and the State in which the supplier has its place of business are Contracting States, or both the supply agreement and the leasing agreement are governed by the law of a Contracting State.

The Convention is not a code of law dealing with international lease financing but intended not only to facilitate international leasing operations, but also to serve as a model for future national legislation. Indeed, the number of ratifications (20 countries by now)² shows the success of the Convention. The influence of the Convention does not stop here. This Convention also created the basis of work that led to the UNIDROIT Model Law on Leasing in 2008.

Developed by UNIDROIT in 2008, the Model Law on Leasing attempts to aid the international expansion of leasing. In summary, the Model Law on Leasing focusses on the private law aspects of leasing, thus steering clear of its fiscal, accounting and supervision aspects. It applies only to commercial leases and, therefore, does not extend to consumer leases, thus focusing on the transactions judged to be most critical to economic development. The Model Law on Leasing applies to an extended range of assets, in short encompassing all those categories of asset used in the trade or business of the lessee (and plant, land, capital goods, equipment, future assets, specially manufactured assets, plants and living and unborn animals). It covers a broader range of leasing transactions than the Convention, the idea being, while recognizing that financial leasing is the most powerful engine of growth in this field, to avoid channeling the development of the industry into any category of transaction: it, therefore, applies to both financial leases and non-financial leases.

The Model law on Leasing contains 24 articles, organized in IV Chapters: General provisions, Effects of a lease, Performance and Default and termination.

3. ECONOMIC PERSPECTIVES OF LEASING FOR SMEs

The legal regulation of leasing agreements in countries in Europe has helped the development and financing of small and medium-sized enterprises (SMEs) also in the EU.

For example, in 2019, the overwhelming majority (98.9%) of EU businesses forming part of the non-financial business economy were micro or small enterprises employing (SMEs) fewer than 50 persons. Their economic weight was lower in terms of their contribution to employment or value added: micro and small enterprises employed just under half (48.4%) of the EU's non-financial business economy workforce, while they contributed just over one third (35.3%) of the value added (Eurostat 2022). Among the EU Member States, micro, and small enterprises (SMEs) contributed the highest shares of value added in the non-financial business economies of Malta (55.8% of total value added generated by micro and small enterprises), Cyprus (52.9%) and Estonia (52.6%). Meanwhile, medium-sized enterprises contributed the highest shares of value added in Estonia (26.0% of total value added generated by medium enterprises), Latvia and Lithuania (both 25.1%).

Small and medium-sized enterprises (SMEs) today are the backbone of Europe's economy. They represent 99% of all businesses in the EU. They employ around 100 million people, account for more than half of Europe's GDP and play a key role in adding value in every sector of the economy. SMEs bring innovative solutions to challenges like climate change, resource efficiency and social cohesion and help spread this innovation throughout Europe's regions. They are therefore central to the EU's twin transitions to a sustainable and digital economy. They are essential to Europe's competitiveness and prosperity, industrial ecosystems, economic and technological sovereignty, and resilience to external shocks.

In most industrial countries, leasing is a key source of investment financing provided by equipment manufacturers, banks, and independent leasing companies. Starting out as a manufacturer's tool for increasing sales, it has evolved into a specialized service that serves most sectors of the economy including agriculture (farm equipment leasing contributes to over 10 percent of the US\$242 billion U.S. leasing industry) (Nair et al, 2014). Because of these benefits of leasing, leasing is increasingly being used by SMEs. Leasing is a possibility for SMEs to expand their access to short- and medium-term financing (Kraemer & Lang, 2012). According to European Commission Analytical Report the most widely used external sources of financing by SMEs in 2011 were bank overdrafts (40%), leasing/hire purchase/factoring (36%), trade credit (32%) and bank loans (30%). (SMEs access to Finance, 2011 pg.18),

According to the obligations of the lessor, the lessee acquires the right to possess and use asset, capital goods, equipment etc., that are necessary for lessee commercial activity. The lessor relies on the lessee's ability to generate sufficient cash flows to pay the lease rentals (rather than to rely on the lessee's other assets or track record/credit history). Leasing enables also borrowers with limited track record / credit histories and collateral

² Status - UNIDROIT retrieved on 18.02.20223.

to access the use of capital equipment, often even in cases where they would not qualify for traditional commercial bank lending.

According to European Commission Survey on the access to finance of enterprises (SAFE) 2022, leasing or hire-purchases was a relevant source of financing for 47% of enterprises, while 51% say it is not relevant for their firm. Just over one in five SMEs used leasing or hire-purchases in the last six months, making it the second most used form of external finance. Moreover, the category leasing (including hire-purchase and factoring) was the second most frequently cited source of external financing in the EU (following the category bank overdraft, credit line or credit cards overdraft). According to the Report one quarter (25%) of SMEs have not used this form of financing in the past six months. At the national level, leading country is Poland where 40% of SMEs used leasing in the past 6 months. The EU countries from the region are below EU average (21% of SMEs used leasing in the past 6 months), Croatia with 19%, Greece with 15% and Bulgaria with 13% of SMEs using leasing in the past six months (European Commission, 2022).

The European statistics show that leasing is more used in construction (28%) and industry (25%) SMEs than in trade or services-oriented SMEs (20%) (European Commission, 2022). SMEs lease a broad range of assets, passenger cars and other commercial vehicles < 3,5 t are the most hire with 19,4%, the second type of assets that is the most lease are other machinery and industrial equipment with 16, 3%, the third type of prefer assets are IT and communications equipment with 15,5% (Oxford Economics, 2011).

According to Oxford economics survey results (2011, p.18) the main reasons why SMEs prefer leasing are: prices (compared to other form for financing), tax benefits and absence of collateral requirements. According to the survey for small enterprises is not very important the easiness for obtaining the lease. In a survey conducted by the EBRD Evaluation Department (2011), the reason for leasing with which most respondents (80%) agreed was that business had grown due to using leased equipment. And opposite of Oxford survey results, the second most important reason (77% agreement rate) was that it was "quicker to obtain lease finance" for SMEs (EBRD Evaluation Department, 2011).

The numbers show out that the leasing is an alternative instrument to facilitate access to finance; it enables in particular new/young enterprises (including the so called "gazelles") without credit track record and limited possibilities to provide collateral the use of capital equipment. As such, it also mitigates market weaknesses of SME lending (Kraemer & Lang, 2012).

4. LEASING IN THE REPUBLIC OF NORTH MACEDONIA

The leasing agreement in the Republic of North Macedonia was for the first time regulated as a special named agreement by the Law on Leasing (Official Gazette of the Republic of Macedonia" No. 4/2002) which was adopted in 2002, 6 years before UNIDROIT adopted the Model law on leasing. In Macedonian law, the leasing agreement was regulated in a special law because the Macedonian civil material law has not been codified yet.

Leasing in Law on Leasing is defined as an activity that refers to a movable thing and an immovable thing, during which the lessee determines the thing of leasing that is purchased or produced by the lessor and is given to the lessee for use for an agreed period of time, in exchange for the payment of a fee for the use of the leased thing, based on the leasing agreement concluded between the provider and the lessee, according to the conditions specified in it.

According to the Law, two types of leasing are defined: financial and operating leasing. According to the National Classification of Activities, financial leasing as a commercial activity belongs to the group of other financial-service activities, except for insurance and pension funds.

In the basic text of the law, the legislator did not differentiate between the provider of financial and operating leasing in relation to the conditions for performing this activity. In the beginning, basic capital and permission from the Ministry of Finance were prescribed for the establishment and operation of lessors, regardless of the type of leasing they provide. However, in 2011, considering the importance of financial leasing, the legislator again prescribed a minimum basic capital and the mandatory obtaining of a license for establishment and operation, however, this time only for lessor.³

3 About the situation in the Republic of North Macedonia in the period from 2006 to 2011, more at Boskovska Diana, Leasing Sector in Macedonia-States and Trends, Annals of the University of Petrolane, Economics, 11(4), 2011, 45-52.

The legislator stipulated that the provider of financial leasing should be established with a minimum basic capital in the amount of at least 6 million denars and that the basic capital must be in monetary form, be paid in full and not come from loans and credits.

According to the data published by the Ministry of Finance on 22.12.2022, in the Republic of North Macedonia 8 trading companies are registered as providers of financial leasing, of which the first trading company was licensed to work in 2006, and the last two were licensed in 2022.⁴

Of the registered providers of financial leasing, it is characteristic that all providers have a much larger basic capital than the legally stipulated minimum. Thus, one of the companies has a basic capital 120 times greater than the legal minimum, 4 of the providers have a basic capital 6 or more times the legal minimum and 3 providers have a basic capital greater than 2 times the legal minimum.

The Law on Leasing further reserves the rights and obligations of the contracting parties in the leasing agreement. In order to protect the contracting parties, the legislator provides mandatory form of the leasing agreement in written or electronic form, and for it to be notarized.

Considering that the macedonian Law on Obligations (Official Gazette of the Republic of Macedonia No 02/2001... 215/2021) is subsidiarily applied, it is considered that the requirement for a written form is fulfilled when the parties exchange letters or come to an agreement with the help of some means of communication that makes it possible to reliably determine the existence and content of the statement, such as and the identity of the person giving it.

With the adoption of the new Law on Notary (Official Gazette of the Republic of Macedonia 72/2016), the problem of the certification of the agreement drawn up in electronic form has been overcome, because the possibility of drawing up a notary document in electronic form is legally regulated, if the notary and all participants have signed it with a qualified certificate issued by an authorized issuer (electronic signature) and fulfills the other conditions stipulated by special laws that refer to documents in electronic form.⁵

In order to obtain publicity and effect erga omnes of the leasing agreement, the law stipulates that the leasing agreement must be registered within five working days in the special Leasing Register, which is kept in the Central Register. All changes to the contract are also registered in the Leasing Register. Acting in contravention of these provisions constitutes an offence.

The legislator, with the aim of greater protection of the lessee as an economically weaker and dependent party, as well as with the aim of greater predictability and transparency of contractual rights and obligations, prescribed the mandatory provisions of the leasing agreement. So, the leasing agreement must contain provisions for: description of the object, the total value of the object, the amount of the down payment, the time period during which the leasing agreement was concluded, a provision that will submit the request for registration of the object of leasing, for the registration of any change in the leasing agreement and deletion of the leasing object in the special register in the Central Register, total amount of compensation paid by the leasing user, number and amount of separate payments and the deadline for their arrival.

According to the Report on the financial stability of the Republic of North Macedonia in 2021 (National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy), the "leasing" sector has a small role and significance for the domestic financial system, both due to its small volume and weak connection with other segments of the financial system.

In 2021, leasing companies continued to grow, but at a slower pace compared to the previous year. The use of alternative financing instruments in North Macedonia is very low in comparative perspective, which also adds to the limited access to finance. Leasing is one such example, as well as factoring, business angels, etc.⁶ The small impact of the leasing sector on financial stability is also seen through the low participation of the debt of households and the corporate sector towards leasing companies in relation to the total debt of these two sectors. The debt of the corporate sector based on leasing agreements accounts for 1.5% of the total debt of

this sector, while the debt of the population based on leasing contracts represents 0.9% of the total debt of the population.

In 2021, active leasing agreements amounted to 9,224 million denars, while in 2020 they amounted to 5,158 million denars, including here the leasing contracts where both households and the corporate sector are beneficiaries (National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy, 2022, pp 125-128). As comparisson in 2008, active leasing agreements amounted to 4,007 million denars and in 2010 active leasing agreements amounted to 1,863 million denars. (National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy, 2011, pp 153).

Table 1: Values of active leasing contracts according to their original maturity date

period	Legal entities (million denars)		
	Up to 1 year	1 - 5 years	5 -10 years
12/31/2017	29	3,312	550
12/31/2018	87	4,246	724
12/31/2019	22	4,657	1,015
12/31/2020	48	5,164	1,338
12/31/2021	21	5,586	1,700

Source: National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy, 2022.

Leasing companies in 2021 participated with 0.8% of assets in the total financial assets in the financial sector of the Republic of North Macedonia, where the participation of banks is still the most dominant with 79.1% (National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy, 2022).

According to data in the Report on the financial stability of the Republic of North Macedonia in 2010 (National Bank of the Republic of North Macedonia Directorate for Financial Stability and Macropudential Policy), corporate sector in 2008, 2009 and 2010 lease at most cars (passenger cars), the second kind of leasing objects are cargo vehicles and trucks, and least lease are assets and equipment (National Bank of the Republic of Macedonia Directorate for Financial Stability and Macropudential Policy, 2011, pp 153). This trend is clearly shown in all Reports on the financial stability of the Republic of Macedonia/North Macedonia, starting from the beginning of establishment of leasing sector till nowadays.

5. CONCLUSION

The leasing agreement has become an important part of the legislative of more and more countries in the World. The number of countries which have a special law for leasing, or some part of civil codes dedicated to leasing, these days, is increasing. By the end of the first decade of the XXI century, there is almost no county in Europe that had failed to regulate in some manner the leasing business, or at least some of its forms. The Republic of North Macedonia has a modern law on leasing, that was adopted in 2002, few years before UNIDROIT adopted Model law on leasing. Macedonia legislator, as the most of legislators in other countries, is paying more attention in the leasing law to the matters of status of firms that can, in accordance with their provisions, engage in the leasing business (lessors), rather than on the very essence of the leasing.

Based on the above, it can be concluded that leasing as a special commercial activity and financing opportunity in the Republic of North Macedonia is not so widely used. Still, the largest number of leasing companies are oriented towards vehicle leasing. From the analyzed data it can be concluded that although the number of lessors is gradually increasing, also the number of leasing agreements that are concluded, as well as their value, the participation of leasing in the financial sector in Republic of North Macedonia is still at an enviable level.

The conclusion remains that the corporate sector still does not use leasing as an opportunity for financing business activity, for equipping and performing the commercial activity for which they are registered, in the way and to the extent that SMEs from the EU use it. However, for the development of the economy and SMEs, which are an important segment of the Macedonian economy, the development and promotion of investment leasing is of great importance. SMEs from the Republic of North Macedonia have lack information about investment leasing, the benefits and risks of using leasing, opposit to information about the use of bank loans.

Perhaps the reasons for this situation should be sought from the lessors themselves and their lack of proactivity, relatively small number of registered lessors, their object of interest (mostly focused on vehicle leasing), poor public information about the benefits of using investment leasing, etc., besides solid legal framework, with the adopted *lex specialis* for leasing and a well-established Registry of leasing.

Abstract: The study of foreign languages in advertising has been a novelty in the last 15 years. The conducted research has tried to delve in the relationship between the foreign languages and the advertised product, the reasons behind the use of foreign languages, and the peculiarities of the targeted audience which may define if the use of foreign languages in the ads is successful or not. English is the most used language in ads nowadays. Due to its importance on the global stage, in the political and economical aspects alike, as well as due to its interconnected nature with the global world and urbanisation, its status as lingua franca comes as no surprise. Advertisers, as sharp observers of reality, dedicate much attention to the fact in how their message reaches the consumers and the foreign language is one of the most effective tools used to influence the latter. Having at their disposal a limited arsenal with which they can impact on the consumers, advertisers endeavour to use foreign language terminology in order to make the product as stunning as possible. For this reason, they try to emphasise the quality of the product under the veil of the foreign language which dons the product with various overtones and peculiarities in order to enchant the consumer. This paper will endeavour to examine the rich corpus of terminology that is used by advertisers and elucidate the ways in how the former influences the consumer's choice of products.

Keywords: advertisement, linguistics, english, terminology, marketing, lingua franca

1. Introduction

What role does foreign language comprehension play in advertising? How do consumers evaluate foreign languages in advertisements? Why do brands use a foreign language to communicate with their consumers? These pertinent questions have come to haunt in recent years the academia which is just now dealing with this novel technique by advertisers to latch on to the consumers. Advertisers, as keen observers of reality, pay very much attention to how their messages are delivered. Being aware that people feel happier with the idea of foods that are natural rather than synthetic, they use common language so as to mean something to the consumer. Having a limited amount of space in order to try to capture the potential consumer's attention, an advertiser will always make conventional usage more attractive. For this purpose he will highlight the product's quality by making associations between the product and something that already possesses the characteristics he needs to claim for the product. As the researchers Lakoff and Johnson clearly state, the very essence of metaphor is the "understanding and experiencing one kind of thing in terms of another."¹

According to the researcher Ingrid Piller, marketing communication makes frequent use of foreign or second language elements in branding and advertising². Content analyses support the intuition that English is the language of international marketing communication displayed in many advertisements (ads) to non-native English speakers. Beyond opinions, empirical research investigating the differential effects of language choice in advertising to multilinguals with variable levels of fluency focuses on two main issues: (1) psycholinguistic differences between first and second language cognitive processing and (2) sociolinguistic differences in emotional or attitudinal reactions as a result of language choice. The classic study of the influence of foreign languages in ads is Leclerc et al. (1994), who investigated the impact of foreign branding on measures such as attitude towards the brand and attitude towards the ad. The starting point of this study was the notion that foreign languages seem to connect with characteristics of the country where the language is typically spoken (e.g. France—hedonism, USA—utilitarianism).

The use of foreign languages in advertising is not a new phenomenon. In the 1980s, academics in other domains became more interested in studying foreign languages in advertising, for instance researchers examining issues of globalization in the domain of business and advertising. A first observation from our review is that there is a wide academic interest in foreign languages in advertising. While the interest in foreign languages in advertising until the 1980s was mainly limited to researchers in linguistics (as documented in

¹ Lakoff, George and Johnson, Mark, *Metaphors We Live By*, University of Chicago Press, Ltd., London, 2003.

² Piller, I. (2003). Advertising as a site of language contact. *Annual Review of Applied Linguistics*, 23, 170–183.

Piller, 2003), the end of the twentieth century has seen the study of the use and effects of foreign languages in advertising in a range of different fields, including marketing and advertising. While some disciplines are closely related (e.g. 'marketing' and 'consumer research', or 'international advertising' and 'advertising'), other disciplines are clearly distinct (e.g. 'marketing' and 'sociolinguistics'). The general picture that emerges testifies to a multidisciplinary interest in the phenomenon.

Effects of foreign languages in advertising —A number of studies have sought to determine the effects that foreign languages in advertising have on the audience, for instance on the attitude towards foreign language use (e.g. Rash, 1996), the attitude towards the ad (e.g. Ueltschy & Ryans, 1997), and the comprehension of the foreign expression (e.g. Foster et al., 1989; Rash, 1996). Petrof (1990) examined various different measures of effectiveness of the use of foreign languages. Below, the article shall try to dissect some different aspects of the usage of foreign words in ads and how this usage is entrenched in linguistic and discourse.

1.2. Code switching

According to the linguistic researcher David Crystal, language can have various functions and may be used for a wide variety of purposes: for example, to express feelings and emotions (the expressive function); to offer advice and recommendations or to persuade (the directive or vocative function); to inform, to report, to describe or to assert (the informational function); to create, maintain and finish contact between addresser and addressee, for example small talk (the inter-actional or phatic function); to communicate meaning through a code which could not otherwise be communicated (the poetic function)³. Although it might be expected that the informational and directive functions would dominate in advertising discourse, because advertisements are frequently multitype, hybrid discourses, examples of all these functions can be found in individual advertisements. Such hybrid transference between languages is called code switching has long been recognized and studied by sociolinguists. In the words of John J. Gumperz, code-switching can be defined as 'alternation among different speech varieties within the same event'⁴. Code switches may also be motivated by the desire to mark, assert or adopt an ethnic or regional identity, and this is known as tag or emblematic switching.

Lexical borrowing of foreign words is an accepted and established practice among translators, and David Crystal defines a loan word as 'a linguistic unit (usually a lexical item) which has come to be used in a language or dialect other than the one where it originated'⁵.

Janet Holmes in her book "Introduction to Sociolinguistics" (1992) lists manifold possible reasons for code-switching – some or all of which may also be used in combination. The reasons are the followings:

i. The linguistic fetishism

The evolution of the usage of certain words can be traced, starting from a point at which a word is explained or an equiv-alent or general term is given, to the use of the term as self-evident. 'Bundesbank' is a good example of this. No longer explained as Germany's central bank in many English texts, it generally stands alone now in media texts. This appears to be an obvious, logical and even wel-come progression. After all, is it not a good thing for the reader to be confronted with 'foreign' words, to have to learn what they mean, to have to realize that the world is not monolingual?

ii. Association

Advertisers, as keen observers of reality, pay very much attention to how their messages are delivered. Being aware that people feel happier with the idea of foods that are natural rather than synthetic, they use common language so as to mean something to the consumer. Having a limited amount of space in order to try to capture the potential consumer's attention, an advertiser will always make conventional usage more attractive.

⁵ *Ibid*, Crystal, D., p. 227.

For this purpose he will highlight the product's quality by making associations between the product and something that already possesses the characteristics he needs to claim for the product.

iii. Elitism

According to the philosopher, Theodor Adorno, in his essay 'On Foreign Words', he argues that 'foreign words should not be protected as one of the privileges of education':

There is, therefore, this idea that 'foreign' words give a text an elitist flavour. This is, in and of itself, an interesting attitude, particularly in relation to the Anglophone worlds. While it is of course true that only those with access to a certain level of education have the opportunity to acquire a second language, this is really only the case in the industrialized world – since the vast majority of the rest of the world grows up bilingually if not multilingually.⁶

Thus said, elitism is more seen as a globalising tool and mostly piques the interest of youth than old people. As Piller rightly points out, the employment of English words in German texts makes the young, educated elite targeted by such strategies feel good⁷. However, this can also alienate other groups, for example, elderly German people for whom the meaning of the 'smart' 'cool' etc., and other English linguistic decorations may be an affront to their sense of linguistic nationality.

iv. Mythology

Ad about a product usually comes with a brand and a history behind it, a myth of sorts which exemplifies the product and for which it stands for. In his volume of essays entitled 'Mythologies', Roland Barthes has pointed out that 'advertising texts mythologize products for consumers, and this mythologizing includes the supposed national culture of the particular product, alluded to by the language'.⁸ A product mythologizes a brand, a nation and this brand or image is necessarily an external phenomenon, it is how the country is viewed from outside even though it may have been formulated domestically, and it is necessarily a simplified view. The German *Fachkenntnisse* (expertise) is lauded among the lovers of cars, with German cars such as Volkswagen and Mercedes being hailed as durable with high longevity – such is the projection of the German car industry worldwide.

v. Foreign languages in food advertisement

An ad is a type of discourse which make use not only of the language but also of the images in order to 'hook' the customer. Language, of course, is not the only mighty tool at the hands of the advertisers when it comes to the promotion of the product or brand building. Nonetheless, the question still persists: do brands influence the customer when they are used in conjunction with foreign languages? Are foreign words a bait that dangle before our eyes and served us as an enticement to buy the product? Do foreign terms such as 'organic', 'wholemeal', 'natural ingredient', 'farm fresh', 'low-carb' or 'low fat'? Specifically speaking, what unconscious image or metaphorical concoction is enacted in the minds of consumers and drives them in their purchasing decisions? Should we trust these foreign words in ads that advertisers are so keen on plastering our tv screens with? Do they warrant enough trust from the English-speaking world by acting as emblems of reliability? These are daunting questions that a consumer must take into account and be aware of them so that he may not fall into that enticing oblivion of foreign words that may drive their purchasing decisions.

The advertisers try to dangle the foreign terminology in front of our eyes in a way as to suggest that their product is of high quality and they always emphasize the fruitful ingredients that they product beholds. In such a digitalized word in which the Content Marketing is supplanting the traditional marketing as a more cost effective means, the usage of a foreign language by the advertisers is a novelty and a strategic 'weapon' used by them in recent years. Of course, the field itself is still in its infancy and needs further research on the influence of foreign languages in ads.

⁶ Adorno, T.W. (1974) Notes to Literature, Vol. 2 (New York and Oxford: Columbia University Press).

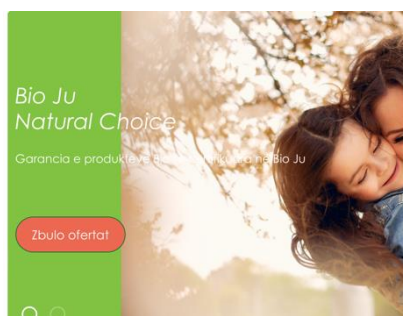

⁷ Ibid. I. Piller (2001)

⁸ Barthe, R (1970), *Mythologies*. Farrar and Strauss, the Noonday Press. p.193-247

Advertisers use language that suggests their product is of especially high quality and they only emphasize the beneficial ingredients their products contain. It is their purpose to find ways through which to arouse customer's interest. Perhaps we do not know exactly how much of this language influences the consumer's attitude and how much of it is used just a marketing strategy but, what we do know for sure, is that metaphor has become an indispensable tool in advertising for the purpose of persuading the audience into buying the products advertised. We believe that slogans are more effective and their effectiveness increases even more when using metaphors. Although they are short and often abbreviated they contain a large amount of conceptual metaphors which offers them the possibility to be interpreted in different ways.

In Albania, a new tendency has come to light in the recent years – namely, the fascination with organic and natural products. An increase in the number of organic shops has been noted recently, shops which operate mostly not only with physical shops but come with a full-fledged online infrastructure.

The number of such operators currently certified in Albania is on the upswing and the array of products that they offer is increasing on a daily basis. For exemplify this trend, I would like to mention (not for marketing reasons) the first organic supermarket in Albania, 'Bio Ju' which opened in 2018. And according to their website, it offers over 6000 organic products in their catalogue; other organic shops such as 'Goodies Farm', 'Marcato',

Source: Albanian Tv and online retail

'Organico' etc., offer a wide array of food products with foreign labels such as 'charge me up', as well as German words such as 'Butterkaese' (cheese). Needless to say, the German language is not so widespread in Albania but German terminology such the former and the ones mentioned during this article stand now as a staple for the German brand and nation. Under the same breath we can mention the Italian words used profusely in the cosmetic sector by the Albanian operators, an emblem for fashion and beauty.

Not only the food products but also the bar cafes are brimming with words such as 'Shisha Lounge', 'Bakery&Pastry', 'Breakfast&Brunch' etc. Thus said, it is fair to assume that the trend of foreign words has penetrated in the food ads in Albania and the trend is going to increase in the following years.

2. Conclusions

The persuasive power of an advertisement varies according to the advantages brought by the proposed product. The image of taste has to be based on the elements that create a natural effect. The key concept differentiates the product from the other products existent on the market. The most important elements of the

argument correspond to the slogan and to a specific and unique sensation with which the product is associated. Advertisers take advantage of the food domain by creating a multitude of messages which are meant to make their customers believe everything and buy their products. The English language would appear to be the most successful 'foreign' language in global advertising. It can not only take on a number of different associations and fetishes (exp. cosmopolitan, modern, but can also function as a lingua franca in international advertising 'communication', and it is the default language for media that are global or pan-national operators. Everyone wants to be perceived as a global player, and such as perception is best achieved through the use of English and other western foreign languages such as German, French, Italian etc., which attest to the domination of the western languages in the marketing discourse, for now at least. The study of the influence of foreign languages in ads is still in its infancy, especially in Albania, but with the growth of online marketing and the increasing awareness of the consumers will drive further forays in the research of this field.

AUT University Students and Their Approach Towards Business English Module

Dr. Esmeralda SHERKO¹

Dr. Elsa ZELA²

¹Agricultural University of Tirana, Albania, esherko@ubt.edu.al

²Agricultural University of Tirana, Albania, ezela@ubt.edu.al

Abstract: English for Specific Purposes (ESP) has become widespread nowadays. Not only HE institutions offer such courses now, but also language centres have seen a considerable increase in the demand for ESP courses. In the globalization era that we are living studying Business English has become a must for professionals. Since its introduction in the 1960s to this day it has already become a separate unit in EFL (English as a Foreign Language) teaching.

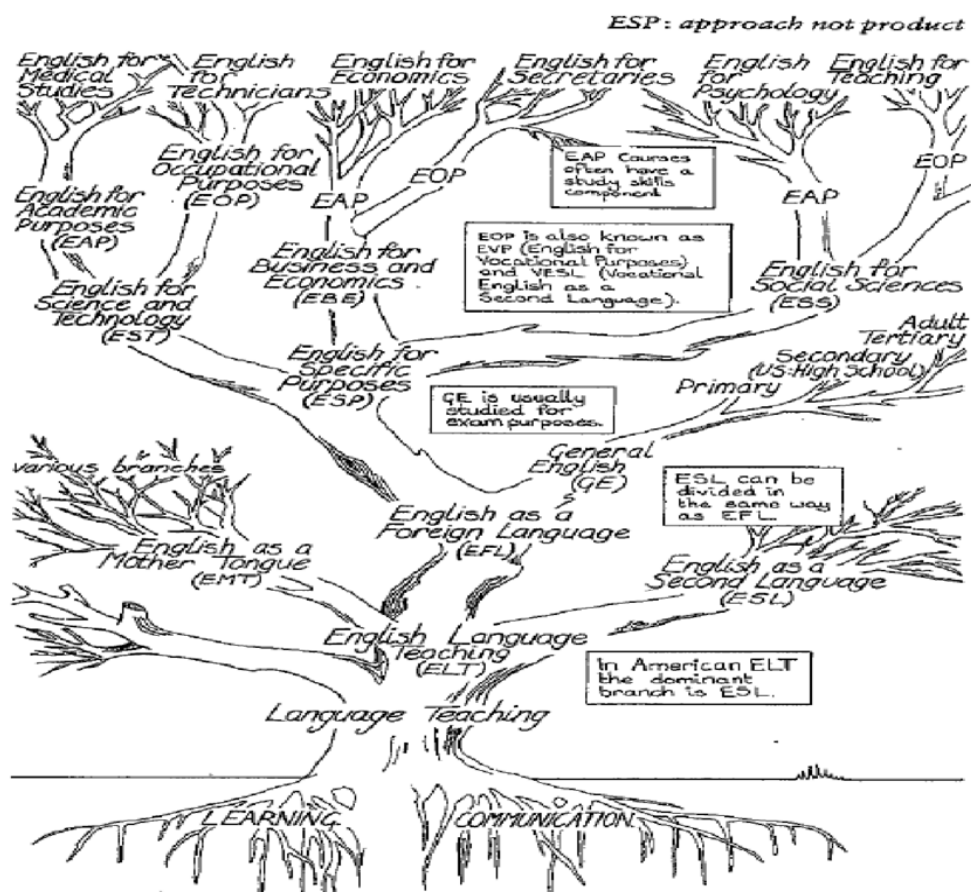

AUT (Agricultural University of Tirana) offers ESP courses during the first-year bachelor cycle in all specialities as a compulsory module. The module has been tailored to meet the needs of our students. The feedback from the students is generally positive, however there are several difficulties they find. The study is focused on the pros and cons of studying ESP, specifically Business English. The questionnaire was conducted with the students of the Faculty of Economy and Agribusiness and the results will consider the different approaches based on CEFRL (Common European Framework of Reference for Languages) from previous education, type of education (high schools vs vocational schools) and gender. Results will also be drawn to compare the change in students' attitude from the beginning of the year to the end of the first term. Our Business English teaching is not solely based on grammar, but also on lexical units, discourse and communication in particular contexts.

Key words: ESP, Business English, AUT, students, questionnaire

INTRODUCTION

ESP (English for Specific Purposes)

English for Specific Purposes can be defined as the teaching and learning of English as a foreign language which is designed to meet the needs of the learner in a particular field or environment. The origins of ESP have been defined by several scholars. It is thought that socio-economic changes during the 1960s resulted in the emergence of ESP as a separate branch in ESL teaching. Hutchinson and Waters (1987) argue that ESP emerged due to the development of the world's economy, which entailed the progress of technology, the economic power of oil-rich countries, and the increasing number of overseas students in English-speaking countries (pp. 6-7). Hutchinson and Waters supported this theory based on three main reasons: the demands of a brave new world, a revolution in linguistics and the focus on the learner. Whereas according to Johns and Dudley Evans (1991), the international community recognized the importance of learning English, not only as a means to achieve the transmission of knowledge and communication, but also as a neutral language to be used in international communication (pp. 301-302). ESL teaching introduced teachers and students to specific terminology as the demand to learn English has been increasing progressively. This is perfectly illustrated by the tree of Hutchinson and Waters, which considers ESP as an approach, not a product.

Source: The Tree of ELT (Hutchinson and Waters, 1987, p. 17)

Another approach in ESP teaching has been given in terms of absolute and variable characteristics, with several attempts by scholars to define them. However, we would like to highlight a modified definition from a 1997 Japan Conference on ESP, by Dudley-Evans. The revised definition of Dudley and St. John is as follows:

Absolute characteristics:

1. ESP is defined to meet specific needs of the learner.
2. ESP makes use of the underlying methodology and activities of the discipline it serves.
3. ESP is centred on the language (grammar, lexis, register), skills, discourse and genres appropriate to these activities.

Variable Characteristics:

1. ESP may be related to or designed for specific disciplines.
2. ESP may use, in specific teaching situations, a different methodology from that of general English.
3. ESP is likely to be designed for adult learners, either at a tertiary level institution or in a professional work situation. It could, however, be for learners at secondary school level.
4. ESP is generally designed for intermediate or advanced students.
5. Most ESP courses assume some basic knowledge of the language system, but it can be used with beginners.

There are different definitions and arguments on this topic, nonetheless we think that English for General Purposes (EGP) and ESP are interrelated and they cannot be seen as entirely separate, as none of them can be taught without the other.

English as a Second Language (ESL) in Albanian schools

It goes without saying that English has gained the status of lingua franca nowadays. Not only globalization has had its significant influence on this, but digitalisation has definitely revolutionized the status of the English language worldwide. Not only there has been an ongoing increasing demand in the ESL community to teach English, but people also use different apps to learn a new language. Because of children exposure to screens at a really young age, the number of bilingual babies is increasing constantly, often leading to speech problems or a delay in speaking and the need for intervention through speech therapy. However, these recent-year-problems have been preceded by the growing interest and eagerness to learn foreign languages as well as the need to intervene in school curriculums. The Albanian educational system has undergone several reforms over the recent years trying to meet the needs of a global market as well as to match our school curriculums to European ones. These reforms often chaotic and launched as pilot projects have often run into obstacles when it comes to implementation. Pupils started to be taught a foreign language in the 3rd grade several years ago, whereas now they do in the 1st grade. Not only have they included foreign languages in the curriculum since elementary school, but they also have to take the exam of English language as they finish compulsory education after the 9th grade, as well as in the Matura exam after the 12th grade. All these years of being taught a foreign language, predominantly English, pupils in Albanian schools are supposed to have a B2 level of English upon high school graduation.

On the other hand, the Higher Education Institutions in Albania signed and implemented the Bologna process in 2003, which was followed by a series of interdisciplinary reforms. Attempts to teach ESP until then had been sporadic and limited in topics and resources. ESP in university level has been considered as a surplus in the curricula to meet the needs of the market as well as to comply with the principles of accreditation. Accreditation is a recent phenomenon for Albanian universities.

ESP in AUT

AUT (Agricultural University of Tirana) offers ESP courses during the first-year bachelor cycle in all specialities as a compulsory module. The module has been tailored to meet the needs of our students as the module in our university is specific for each specialty, thus our academic offer includes English for Business and Finance, English for Veterinary Medicine, English for Agriculture and Environment, English for Food and Technology and English for Forestry. The feedback from the students is generally positive, however there are several difficulties they run into. This paper aims to identify the advantages and disadvantages of teaching and learning Business English. Our ESP teaching is not solely based on grammar, but also on lexical units, discourse and communication in particular contexts. In addition several topics have been adopted to meet the needs of Albanian students as some topics include data from Albanian firms, or phenomena. Students are given the opportunity to study and draw comparisons between the foreign and domestic markets, or study cases of outsourcing and garment-making factories within the Albanian context.

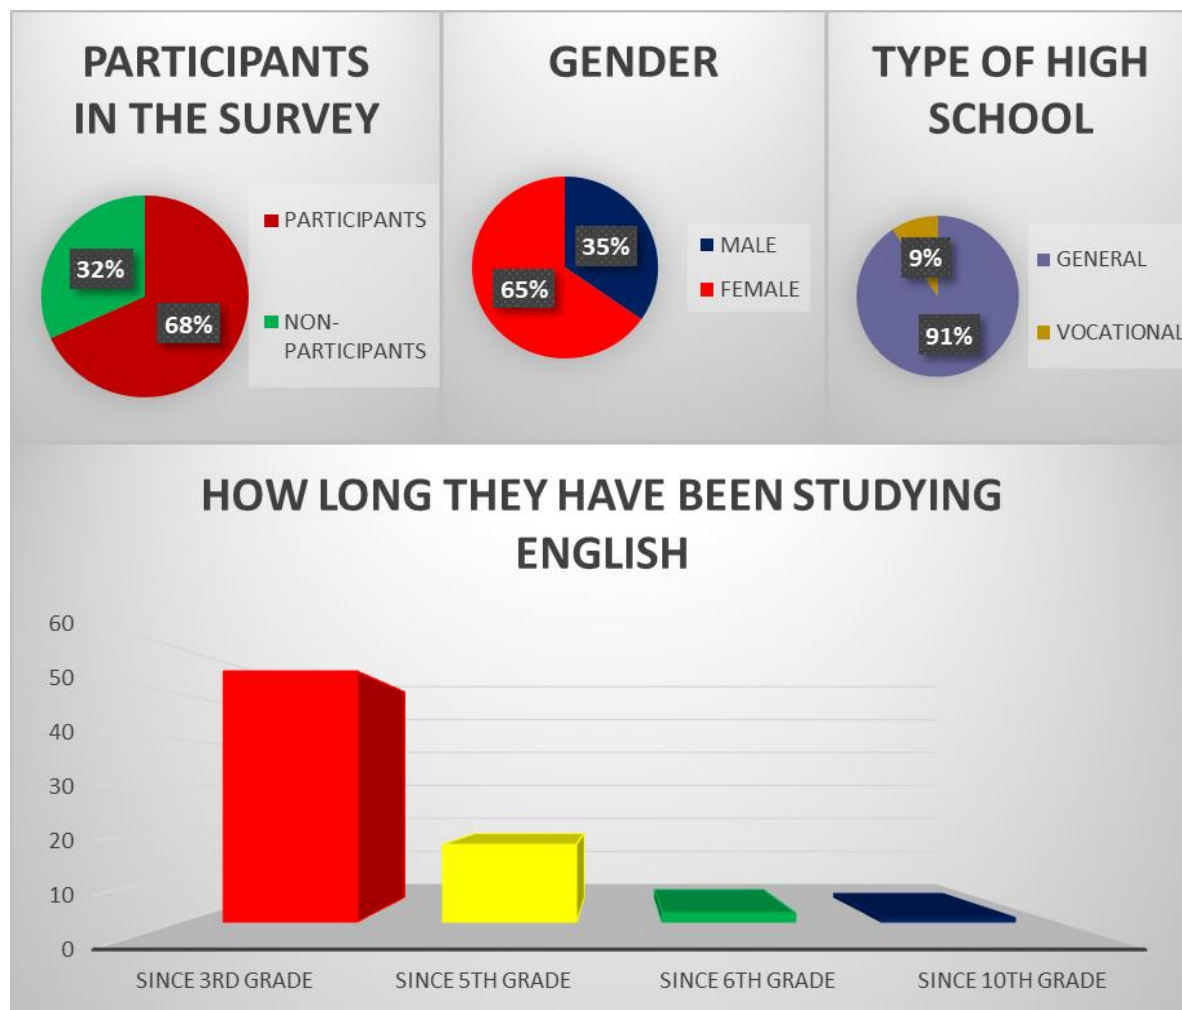

Methodology

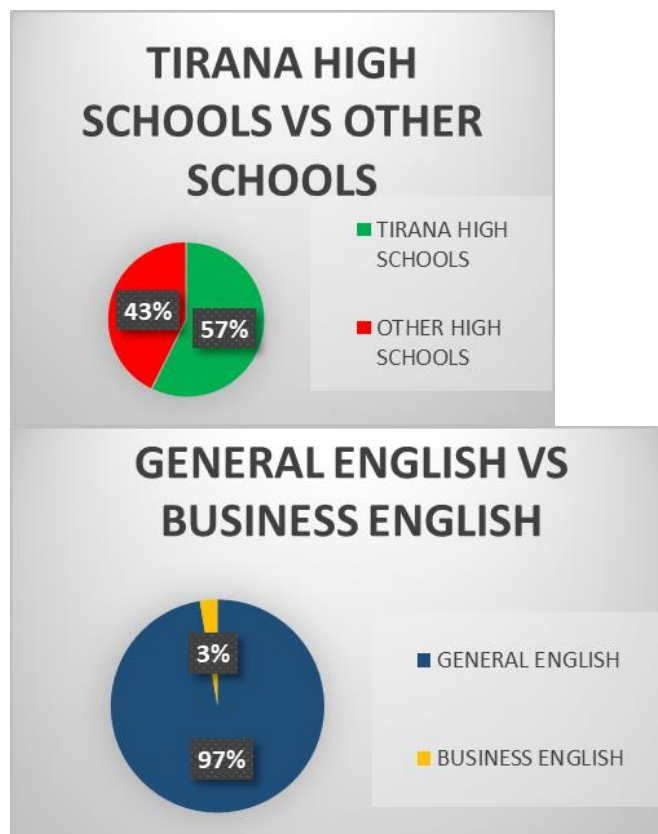

The study is focused on the pros and cons of studying ESP, specifically Business English. The questionnaire was conducted with the students of the Faculty of Economy and Agribusiness, Department of Agribusiness Management, 1st year 2022-2023. The results will consider the different approaches based on CEFRL (Common European Framework of Reference for Languages) from previous education, type of education (high schools vs vocational schools) and gender. Results will also be drawn to compare the change in students' attitude from the beginning of the year to the end of the first term. The students intended to take information about different areas, such as:

1. How long they have been studying English?
2. General English versus Business English
3. Type of high school: general versus vocational
4. Gender / Tirana high schools versus other schools
5. Difficulties from October to March

Results of the survey

The total number of students who participated in the survey was 75, out of 110. 49 girls and 26 boys. 68 come from general high schools, whereas 7 come from vocational high schools. 55 have started learning English in the 3rd grade, 17 in the 5th grade, 2 in the 6th grade and 1 in the 10th grade. 43 come from high schools in Tirana, whereas 32 from other cities. Only 2 students report that they have studied Business English before. Level of difficulty when introduced to Business English at the beginning of the first term is considered high, however the students also comment that the level of difficulty is related to transition from high school to university as it is the same for all the subjects, not specifically for English. The students do report that as the first term is over, they have been used to the new cycle of studies not only considering the teaching methods and approach, but also their learning skills and methods have been adopted to the new cycle. The above-mentioned data have been presented into charts as follows:

The majority of the students report that the basic difficulties come as a result of basic knowledge they lack from high school. According to the Ministry of Education and Sports high school pupils are supposed to have a B2 level according to CEFR upon graduation from the Matura Exams. Unfortunately, the reality is different. Although students think that they meet their basic needs for communication in English they run into difficulties when they take exams in our module. Exposure to digital media has helped them with their communication skills, however Google Translate is a shortcut they use to get by.

CONCLUSIONS and RECOMMENDATIONS:

Studying ESP at university is an added value for each student who is preparing to enter the competitive market, however students need more support during their school life. Graduated students have often reported that they have put into practice a lot of their knowledge from ESP books in their working environment, be that in the banking sector, or call centres which are widespread in Tirana. However, a lot more can be done to improve the results and make students have more interest in studying ESP as a subject targeted to be useful in the future.

One key issue to be taken into consideration is their lack of knowledge from high schools. It is indispensable to intervene immediately in high schools. However, at this point we should be able to offer solutions to make up for it. Students need to be encouraged to participate in placement tests so that they study in a differentiated way. Last but not least, as the famous quote goes: "If a child can't learn the way we teach, maybe we should teach the way they learn", we should explore new ways in our teaching techniques, so as to rise the interest of our students and offer them the opportunity to learn doing their best.

The Effects of Foreign Direct Investments on Economic Growth: The Case of North Macedonia

Filip TASKOVSKI¹

¹ UKLO, Faculty of Economics – Prilep, filip.taskovski@uklo.edu.mk, ORCID: 0009-0002-6440-3944

Abstract: Based on the analysis made on a global level, foreign direct investments have a positive impact on the economic growth of countries. Although the degree of influence differs from country to country depending on the economic, political and social characteristics of the national economy, the interest for FDI is a strategic determination of almost every developing country, including the Republic of North Macedonia primarily because of: 1) the transfer of new technology, 2) the inflow of foreign capital, 3) the improvement of export performance and 4) the reduction of unemployment. For this purpose, the governments of the countries constantly create different models and policies for attracting FDI in order to offer a more favorable and competitive business climate in relation to competing countries.

The purpose of this paper is to examine the impact of FDI on the economic growth of the Republic of North Macedonia and give a precise result as to which industry has the most significant impact on economic growth. In this research paper, data from secondary sources will be used, namely relevant state institutions such as the National Bank of the Republic of North Macedonia, the Ministry of Finance and the State Statistics Office.

In the empirical research, the multiple linear regression model will be applied due to its accuracy and precision in this type of research. 6 variables will be applied in the model, whereby the economic growth of RNM for the period from 2004 to 2018 is treated as a dependent variable, and 5 sectors that record a significant inflow of FDI in RNM are taken as independent variables.

From the research it can be concluded that only part of the covered industries has a positive correlation with economic growth and FDI does not have a significant participation in the economic growth of the Republic of North Macedonia.

Keywords: Foreign Direct Investment, Impact, Economic Growth and Industry.

1. INTRODUCTION

Foreign direct investments, based on previous empirical research, have positive effects on the economic growth and development of countries, although the effect varies from country to country, they are one of the key determinants for: 1) technological development, 2) improvement of export performance, 3) increasing economic growth and 4) reducing unemployment. This is exactly the reason that they are often an exploited topic for researchers, but they are also the focus of the economic programs of a large number of governments of developing countries.

Globalization and its benefits are still the subject of research and examination, although a number of authors have different views regarding it, with globalization, the free flow of goods and services, capital and labour, which are manifested through economic growth and development. As a result of the free flow of capital, significantly favourable conditions were created for foreign direct investments, which are of particular importance for developing countries such as the Republic of North Macedonia. Namely, although the effects of FDI on developing countries are still subject to examination and measurement, they permanently strive to attract as many foreign investors as possible for the positive effects both on a micro and macro level. In the area of the micro economy, the inflow of FDI enables: 1) transfer of new technology for domestic small and medium-sized companies, 2) training and upskilling of the workforce and 3) incentive for the implementation of internationally accepted trade and production standards by domestic companies, and on a macro economic level the benefits refer to: 1) reduction of unemployment, 2) inflow of foreign capital and 3) improvement of export performance, and with that and on the balance of payments.

By creating measures and policies aimed at helping foreign investors through various fiscal exemptions and financial assistance, the Republic of North Macedonia constantly strives to attract as many FDI as possible, namely in the last few years the inflow of FDI in the Republic of North Macedonia has been continuously increasing, and according to the researches and the positive effects as they have a growing trend.

The focus of this research paper is the examination of the effect of FDI in the five industrial sectors that recorded the highest inflow of FDI on the economic growth of RNM in the period from 2004 until 2018.

The research paper provides an overview of the economic growth of the RNM and the amount of FDI in the five sectors that record the highest amount of FDI inflow, and descriptive statistics are also made in order to better

analyse the situation. The research was conducted using the multiple linear regression model. The economic growth of RNM (2004-2018) has the treatment of a dependent variable, and the five industrial sectors that record the highest amount of FDI have the treatment of independent variables.

2. LITERATURE REVIEW

2.1.FOREIGN DIRECT INVESTMENTS

According to UNCTAD (UNCTAD, 2001, P.4), foreign direct investments can be defined as an investment that involves a long-term relationship and reflects a permanent interest and controlled by a resident, subject in one economy (foreign direct investor or parent company) and an enterprise that is located in a country that is different from the country of the investor (FDI enterprise, partner enterprise or subsidiary). According to the definition of FDI, it can be stated that the foreign investor has a significant influence on the management of the company located in another country.

According to UNCTAD (UNCTAD, 2001, P.4-5), foreign direct investments incorporate three components: 1) capital, 2) reinvested profits and 3) internal loans.

In the last few decades, many authors have researched the effect of FDI on economic growth, as a result of which many empirical studies related to the relationship between FDI and economic growth have been incorporated into several theories that explain the relationship between FDI and economic growth, namely: Accelerator theories, the Keynesian theory of economics, neoclassical theory and theories of marginal efficiency of investment (Osano and Koine, 2016).

2.2. THEORIES OF FDI

Although there are different theories about the causality of FDI and economic growth, the theory of modernization and the theory of dependence are the foundations on which the rest of the theories are built and the empirical research is based upon.

Modernization theory is based on neoclassical and endogenous growth theory, which suggest that FDI is a prerequisite for economic growth in developing countries. According to the modernization theory, the economic growth of developing countries is conditioned by the existence of new capital that can contribute to increasing economic activity (Hodrab, Maitah, Kuzmenko, 2015, p.3).

The claim of the new theories of growth is based on the transfer of new technology, namely according to the new theories advanced technology is key to the development of economic infrastructure such as: 1) the level of education of the working population, 2) economic, political and social stability and liberalized markets (Calvo and Sanchez-Robles, 2002).

In addition to the factors already mentioned, key prerequisites for economic growth are disciplines and resources such as: 1) marketing, 2) managerial skills and 3) access to modern global supply chains (Kumar, Padhan, 2002).

Based on the above, it can be concluded that FDI is not only aimed at the inflow of foreign capital, but also enables access to foreign markets, acquisition of new knowledge and skills.

According to endogenous theories of economic growth, FDI has an impact on economic growth, but not directly (Borensztein, De Gregorio and Lee, 1998). according to these theories, FDI has an indirect impact on economic growth through: 1) capital generation, 2) education and upskilling of the workforce and 3) transfer of new technology (Blomstrom, Lipsey and Zejan, 1996). Contrary to these theories, the neoclassical theories, whose subject of processing is FDI and economic growth, indicate that FDI does not have a significant participation in the economic growth of developing countries (Chowdhury and Mavrotas, 2005).

According to the dependency theory, FDI is expected to have a negative impact on economic growth, namely foreign investments create a monopoly, and as a result they do not use all resources (Bornschieer and Chase-Dunn, 1985).

Different studies related to examining the interdependence of FDI and economic growth have produced different results and conclusions. Some researchers conclude that FDI have a significant effect on the economic growth of countries, this claim is characteristic of countries with high GDP per capita (Borensztein, De Gregorio

and Lee, 1998). For developing countries, it is characteristic that the inflow of FDI does not have a significant meaning, that is, the effect is indirect (Carkovic and Levine; 2005).

Based on research related to FDI and economic growth in countries in Eastern and Central Europe, it can be concluded that a large part of FDI during the 90s is the result of transition and privatization, in the following decades FDI in these countries refers to greenfield investments that do not amount to more than 6% of GDP, and economic growth varies in relation to world economic trends (Russian economic crisis in 1998, financial crisis in 2008 and debt crisis in the countries on the periphery of the euro), consequently it can be concluded that FDI does not have a significant impact on economic growth in Eastern European countries, which are mostly developing countries (Miteski, Janevska-Stefanova, 2017, p.8-11).

2.3. ECONOMIC GROWTH

Economic growth, as an economic category, was introduced by Kuznets at the end of the 18th century (Poliduts, Kapkaev, 2015, p.2). Although several definitions of economic growth can be found in literature, a large number of researchers define economic growth as an increase in the amount of goods and services produced per capita in a calculation period, usually a fiscal year. In practice, there are several concepts of economic growth and its measurement, but the most generally accepted way of measurement is the real growth of the gross domestic product (GDP) (Susilo, 2018, p.2-3).

According to the expenditure approach, nominal GDP is calculated as a function of: 1) private consumption, 2) gross private investment, 3) government consumption and 4) export-import.

$$GDP = C + I + G + NX \quad (1)$$

Real GDP represents the ratio between nominal GDP and the GDP deflator.

$$Real\ GDP = \frac{Nominal\ GDP}{GDP\ deflator} \quad (2)$$

3. METHODOLOGY

The research will be realized by applying secondary methods, which includes the use of data that have already been published in reports, analyses and other sources. When selecting data, several criteria will be applied, such as: the date of publication, the reliability of the source, the quality of the analyses, and others of such in order to increase the quality and reliability of the results. During the research, the following basic methods will be applied: 1) method of induction, 2) method of deduction, 3) method of analysis and 4) method of synthesis. Within the framework of the research, the multiple linear regression model will be applied, which will incorporate 6 variables, one of which is a dependent variable, and five independent variables, descriptive statistics will also be made in order to give a clearer picture of the data. Before applying the multiple linear regression model, the data will be tested using the Augmented Dickey Fuller test. EVIEWS 12 and Microsoft Excel packages will be used for data processing.

The research is based on the following hypotheses:

Hypothesis 1: FDI in the five industries that record the highest amount of FDI in the period 2004-2018 have a significant positive impact on the economic growth of RNM.

- Hypothesis 1.1: FDI in the industry "Production of food products, beverages and tobacco" has a positive impact on the economic growth of RNM.
- Hypothesis 1.2: FDI in the industry "Oil, chemicals, pharmaceuticals, rubber and plastic products" has a positive impact on the economic growth of RNM.
- Hypothesis 1.3: FDI in the industry "Vehicles and other transport equipment" has a positive impact on the economic growth of RNM.
- Hypothesis 1.4: FDI in the "Construction" industry has a positive impact on the economic growth of RNM.
- Hypothesis 1.5: FDI in the "Accommodation and service" industry has a positive impact on the economic growth of RNM. In the multiple linear regression model, 6 variables will be taken into account:

Dependent variable:

- Y (ED) - The economic growth of RNM.

Independent variables:

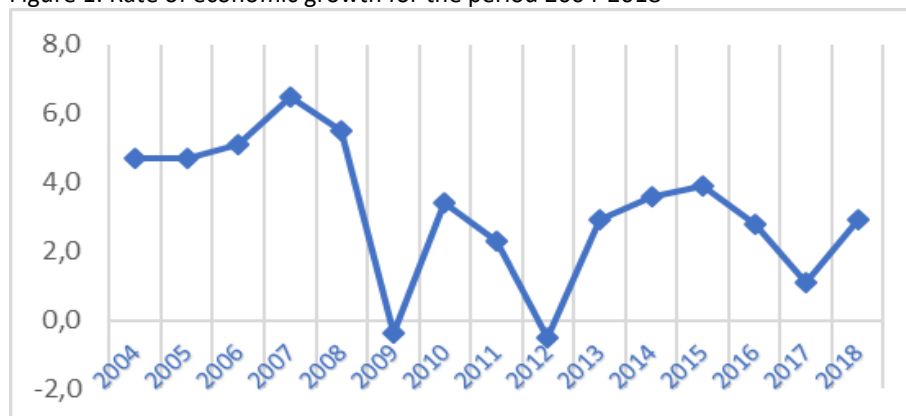

- X1 (FPB) – FDI in the industry Manufacturing of food products, beverages and tobacco.
- X2 (OCP) - FDI in the industry Oil, chemicals, pharmaceuticals, tires and plastic products.
- X3 (VOT) - FDI in the industry Vehicles and other transport equipment.
- X4 (C) - FDI in the Construction industry.
- X5 (AS) - FDI in the accommodation and service industry.

4. RESULTS AND DISCUSSION

4.1. RATE OF ECONOMIC GROWTH

Presentation of the rate of economic growth for the period 2004-2018, based on data from the State Statistics Office of RSM.

Figure 1: Rate of economic growth for the period 2004-2018

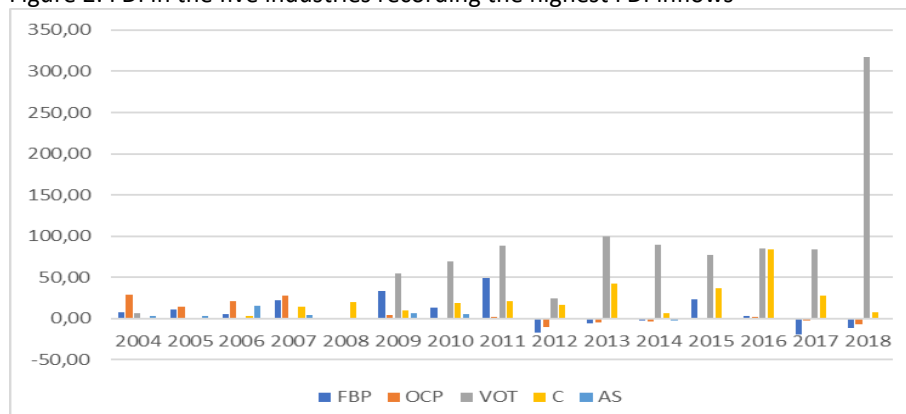

Source: State statistical office of RNM. (2004-2018). GDP of the Republic of North Macedonia
<https://www.stat.gov.mk/PrikaziSoopstenie.aspx?id=140&rbr=13432>

According to the presented data, it can be concluded that the highest rate of economic growth was achieved in 2007, 6.5%. It is characteristic that in 2009 and 2012 the rate of economic growth is negative.

4.2. FDI IN THE FIVE INDUSTRIES COVERED IN THE SURVEY

The Figure 2 shows FDI inflows in the five industries covered in the survey according to the data presented in the NBRNM reports.

Figure 2: FDI in the five industries recording the highest FDI inflows

Source: National bank of the Republic of North Macedonia. (2004-2018). Direct investments in the country.
https://www.nbrm.mk/direktni_investicii_dvizenja.nspk

From the data presented, it can be concluded that from 2009 to 2018 the industry for the production of vehicles (auto parts) and other transport equipment has the highest inflow of FDI. It is characteristic that in 2008 FDI inflows were noted only in the construction sector, and no FDI was noted in the other four industries, primarily due to the financial crisis.

4.3. DESCRIPTIVE STATISTICS

Table 1 shows descriptive statistics for the variables applied in the model. The calculation was made using EViews software.

Table 1: Descriptive statistics

	ED	FBP	OCP	VOT	CO	AS
Mean	3.233333	7.516770	4.730515	66.49990	20.61778	2.819579
Median	3.400000	5.500000	0.000000	69.03000	16.59000	1.250000
Maximum	6.500000	49.27000	28.46772	317.1900	83.54000	15.32000
Minimum	-0.500000	-18.83000	-10.79000	0.000000	-1.630000	-2.460000
Std. Dev.	2.020844	18.84587	12.30887	79.59594	21.58193	4.285403
Skewness	-0.456966	0.594490	0.919784	2.108753	1.712115	1.699158
Kurtosis	2.532791	2.837612	2.524959	7.709785	5.851181	5.876082
Jarque-Bera	0.658473	0.900026	2.256046	24.98089	12.40911	12.38775
Probability	0.719473	0.637620	0.323673	0.000004	0.002020	0.002042
Sum	48.50000	112.7516	70.95772	997.4985	309.2667	42.29368
Sum Sq. Dev.	57.17333	4972.338	2121.117	88697.20	6520.914	257.1055
Observations	15	15	15	15	15	15

Source: EViews 12 – Author's calculation

From the descriptive statistics, it can be concluded that economic growth was the lowest, that is, it had a negative value of -0.5%. It can also be noted that the industry for vehicles and other transport equipment records the highest inflow of FDI, and the industry for the production of food products, beverages and tobacco records the highest negative amount in relation to other industries.

4.4. A MULTIPLE LINEAR REGRESSION MODEL

Table 2 shows the results of the multiple linear regression which was made using the Data analysis tool in Excel. The linear regression model was not applied after testing the data using the Augmented Dickey Fuller test.

Table 2: Application of multiple linear regression model

	Coefficients	Standard Error	t Stat	P-value	Lower 95%	Upper 95%
Intercept	-0,018712106	0,804522513	-0,023258648	0,982093084	-1,921105551	1,883681339
FPB	-0,030505764	0,027914571	-1,092825802	0,310646759	-0,096513237	0,035501709
OCP	0,005345874	0,082618241	0,064705736	0,950217387	-0,190015223	0,200706971
VOT	0,006363353	0,009117975	0,697890948	0,50775742	-0,015197233	0,027923938
C	0,013273288	0,027791099	0,477609302	0,647481418	-0,05244222	0,078988795
AS	-0,122911824	0,082737216	-1,485568771	0,180977019	-0,318554251	0,072730603

Source: EViews 12 – Author's calculation

- Multiple R = 0.663
- Adjusted R Square = 0.039

Based on the results of the regression model, it can be concluded that the relationship between the dependent variable and the independent variables is relatively stable, and only 3% of the variability of economic growth is explained by FDI in the five industries in RNM that record the highest FDI inflow. It can also be stated that only three of the observed industrial sectors have a positive correlation with the economic growth of RNM, namely the Oil, chemicals, pharmaceuticals, tyres and plastic products industrial sector, the Vehicles and other transport equipment industrial sector and the Construction industrial sector, the rest industrial sectors have an inverse correlation with the economic growth of RNM. From the calculation, it can be concluded that

dependent variables do not have a significant impact on the economic growth of RNM, that is, the economic growth of RNM is not determined by FDI.

4.5. DISCUSSION

A large number of researchers in the field of macroeconomics indicate the importance of FDI for economic growth and development, especially for developing countries such as RNM. Also, FDI as a current category is still the subject of research, so in the USA and in Western European countries many studies of this type can be found (Susilo, 2018, p.12), although different models can be identified in them, however the results indicate that developed countries have the primacy in attracting FDI primarily due to the high degree of development of the market economy, the rule of law, stability and predictability, which is lagging behind in developing countries. In the domain of the effect of FDI on economic development, inconsistency can be ascertained, namely some authors claim that there is a positive correlation between FDI and economic growth in the United States (Borensztein, De Gregorio, and Lee 1998), and some authors claim that there is no positive correlation.

For the Republic of North Macedonia, this research is very important and fully justified because it gives a clear picture of the effect of FDI and economic growth. Namely, FDI in the five industrial sectors that record the highest inflows of FDI do not have a significant impact on the economic growth of the country, so some of the industrial sectors also have a negative impact on economic growth.

The industrial sector vehicles and transport equipment is a sector that has the highest positive impact on economic growth compared to the other five, so if FDI in this sector increases by one unit then, according to the regression, it would cause economic growth of 0.03%, and if FDI in the accommodation and service sector increases by one unit, then it would have a negative effect on economic growth of 0.12%

5. CONCLUSION AND RECOMMENDATIONS

Based on the research, it can be concluded that FDI in the five industrial sectors that have the highest inflow of FDI do not have a significant impact on the economic growth of RNM, therefore hypotheses: 1.2, 1.3 and 1.4 are accepted, and hypotheses: 1.1 and 1.5 are rejected, consequently the general hypothesis for this research is rejected.

Although economic growth is not directly determined by FDI, according to research, it has a significant impact on improving the country's export performance and reducing unemployment, consequently, the absence of these variables in this research contributes to the rejection of the general hypothesis.

According to the results of the regression, it can be concluded that government policies should be aimed at attracting FDI from the sector of vehicles and other transport equipment and the sector of oil, chemicals, pharmaceuticals, tyres and plastic products, and most of the funds planned for support of FDI to be directed towards the development and support of the domestic economy and other factors that contribute to economic growth.

The Socialist Party of Albania and its rising Populist statecraft. A critique from a normative perspective

Florian ÇULLHAJ¹

¹Contact: florian.cullhaj@uet.edu.al

Abstract: The rise of socialist parties and populism is a complex and multifaceted phenomenon observed in many countries worldwide in recent years. While the two movements share some similarities, they also have significant differences. Socialist parties typically advocate for a more egalitarian society, where the government plays a more prominent role in ensuring wealth and resources are distributed fairly. This stance can include policies such as progressive taxation, universal healthcare, and publicly funded education. Socialists generally believe that capitalism is inherently exploitative and that government intervention is necessary to prevent the wealthy elite from accumulating too much power and wealth at the expense of the rest of society.

Populist movements, on the other hand, are often characterized by their opposition to established political and economic elites and their focus on appealing to the interests and concerns of ordinary people. Populists often claim to represent the society's "silent majority" or "forgotten" segments. They may use rhetoric that demonizes other groups seen as threats to the interests of the *real* citizens. Populists may also advocate for policies perceived as being in the interest of ordinary people, such as protectionist trade policies, tighter immigration controls, or increased social welfare spending.

In recent years, Albania has seen the rise of the Socialist Party (PS) and its populist gist. SP leader Edi Rama has served as Prime Minister since 2013. The SP has positioned itself as a center-left party that advocates for social welfare policies, increased public investment, and equal distribution of wealth. It has also focused on combating corruption and improving Albania's image on the international stage. However, Rama's political style is ultimately superficial, and he failed to address underlying problems in Albania's political and economic systems. Albania remains one of the poorest countries in Europe, with high unemployment, corruption, and inequality levels. In addition, Rama's populist goal was to gain support while failing to follow through on his promises. For example, his government has been criticized for not tackling corruption and organized crime and failing to make significant progress in education, healthcare, and social welfare. While Edi Rama's populist political style has successfully won the support of many Albanians, there are concerns that it may not be enough to address the country's long-term problems. Achieving lasting progress will likely require more sustained and substantive reforms in Albania's political and economic systems. Addressing these issues will be at the heart of this article.

Keywords: Albania, Socialist Party, Populism, Normative theories

Socialist Party's role in promoting the Left's principles after the change of the system

This section presents a synthetic analysis of the Albanian Left and the Socialist Party, respectively, as the most prominent representative of this spectrum. The analysis will focus on phenomena such as social equality or the state's role as two of the most characteristic elements of the Left. We emphasize that this is not a research paper with a historical character but an analysis classified in the realm of case studies within a normative political theory characterized by a profound idiosyncratic nature based on the political phenomenology of the Albanian Left during the transition years.

At the beginning of the 90s, the communist system in Albania, like in other countries in Eastern Europe, collapsed. What was inherited from the absolute dominance of the Communist Party formally collapsed as well? After the installation of pluralism, the political culture of the Albanians - since the coming to power of the Communist Party, which had built an absolute position of totalitarian control - the possibility of conceiving a new political culture and democratic political culture arose. In the first years, politics in Albania took on a strange configuration, a kind of crooked geometry, opposing everything on the Left and nothing on the Right. The latter, intoxicated by the success of the victory, became dominant in the political sphere and again undermined the fundamental principle of democracy, pluralism. (Çullhaj, 2017)

After the system changed, the Communist Party needed to redefine itself and be free from the historical burden of real socialism. However, not all the communists of that time identified with the Enverist-Stalinist direction of the nomenclature. As a result, the neo-communists or the new socialists identified much more naturally with the 'new' leader, Fatos Nano. They now lived in a pluralistic political system and had earned the right to continue, committing to fostering prosperity and democracy's quality. But now, under a different label, that of the Socialist Party. This perspective stands because a metamorphosis had happened within their life world. They felt 'something else', even concerning themselves. The Left's first government, under the leadership of the Socialist Party, extended from 1997 to 2005, lost the possibility of winning the Socialist

entitlement as the promoter of values such as equality and solidarity. However, the socialist etiquette in Albania within those years was unfortunately synonymous with irresponsibility and corruption, so much so that the opposition had the motto, governance with clean hands, as its battle horse in the 2005 elections.

So, in 1997 the euphemism of the liberal left was born. This classification is necessary because, as Bobbio says, one needs a measure to compare and determine the difference between the Left and the Right. After the infamous year of 1997, the benchmark political value was simple, extremism, which at the time leaned to the Right. In the 2005 elections, even if the Left came out with a ruined political balance, mainly due to rampant corruption at high levels of government, today, there are still socialist partisans that consider the former leader Fatos Nano as a socialist liberal. For those who understand a little about statecraft, it sounds like an oxymoron, like 'fried snowballs.' Albanian socialists are much more anti-statists, even though this definition sounds paradoxical. They have never governed to fulfill even one condition that fits within the framework of left-liberalism.

For most of these three decades, the Left was defined by the Socialist Party and several of its satellite parties, which, despite their mutual antipathies, accepted a common tradition dating back to the communist past. In the years of the Left's rule, critical voices within it publicly articulated that pursuing progressive policies with pure public interest was rare. Let alone concern for equal opportunities, added attention to the people who have less, being on the side of the worker and against capital to expand the state's role and reduce the market's role. These are characteristics that unify the Left and generally have a universal character. (<https://tvklan.al>)

The antipathies deepened to such an extent that in the middle of 2004, they encouraged Iliri Meta (former President of the Republic) to form a new party within the spectrum of the Left, namely, the Socialist Movement Party for Integration. With a political program belonging to the Left, the SMP governed in a coalition with the Democratic Party and the Socialist Party. However, even this party failed to follow and materialize the principles of the Left because, under the fever of triumphalism and preserving office power, it fell prey to abuses, suffering a substantial collapse in the last elections of April 25, 2021, compared to the results previous.

In 2011, its founder Ilir Meta was involved in a video scandal. Under the function of the Deputy Prime Minister, Meta appeared together with Dritan Prifti, former Minister of Energy. According to the latter on the whistleblower role, the conversation between them was about corrupt affairs. In the conversation came out the figures of seven percent, or 700 thousand euros. As far as it is understood, this amount was promised to the two interlocutors as a reward in exchange for granting the concession for a hydropower plant, a person named Gimi. After the video was released, Meta denied the allegations and called the video a montage. In the tense political climate, the video immediately sparked outrage, culminating on January 21 on the boulevard in front of the Prime Minister's Office, when opposition demonstrators, at that time the SP, attacked the Prime Minister's edifice. Soldiers of the Republic Guard killed four protesters. Ilir Meta survived this political and legal storm following his strategic retreat. Then the prosecutor asked for two years in prison, but he was declared innocent by the Supreme Court on the charge of active corruption. This decision divided public opinion in Albania.

Accordingly, in an interview for Deutsche Velle, the director of the daily "Tema", political analyst Mero Baze, thought that the decision of the Criminal College was unfortunately expected and, according to him, not because of the trust that public opinion has in justice, but because of the distrust that the public has for justice. "Honestly, what was unexpected from the Supreme Court's decision is the government's celebration of this new miscarriage of justice," he said. Meanwhile, the former director of the daily "Mapo", the political analyst Henri Çili, evaluated the decision of the Criminal College of the High Court in Tirana to acquit the former deputy prime minister and foreign minister Ilir Meta differently. According to Çili, the judicial process, based on video surveillance of the conversation between Meta and former Minister of Energy Dritan Prifti, had a political nature. It was a political event; it needed some other preconditions to turn into a legal circumstance. However, apart from these events within the spectrum of the Left, SP's political positioning concerning SMI after the general elections of 2013 was highly surprising. (<https://www.dw.com>)

After a zenith in the DP and the Right spectrum's first mandate and a nadir in the second, the Left proposed itself as the only Albanians' "liberator". Convinced of fulfilling the Electoral promises with a deep character of the Left values, inspired to a high degree by the ideas of the 'third way' (Giddens, 1998), the Albanians gave a convincing victory to the Socialist Party. Edi Rama invited Ilir Meta to the coalition, thus winning the 2013 parliamentary elections.

The Left did not recognize any *zenit* in its first mandate. After all, from the day Edi Rama signed the coalition with Ilir Meta in April 2013, events such as Gërdeci or January 21 were politically amnestied because today's partner was yesterday's accused. Socialists disagree with this agreement, albeit the SP and SMI marked it as a natural union of the Left's family. It was just a mathematical calculation conditioned by the electoral rules of the 2013 elections. In the subsequent elections of 2017, Rama blamed the failure to fulfill electoral promises - rightly, wrongly - on the "internal enemy" of the government, the LSI. After a mandate spent in coalition with Rama as prime minister, the LSI, according to him, had been a burden for the SP government.

Rama took the second mandate alone, as he requested, without 'anyone in the lap of power', but his government did not recognize moments of zenith this time. Eight years later, with a very controversial government balance sheet and unable to raise an alibi for the existence of 'internal or external enemies' that prevented him from governing, he prepared the electoral campaign for the third mandate, which he won alone with 76 seats in the Parliament.

A serious phenomenon appeared during the election process of April 25, 2021, which had to do with the 'system of patronage.' This phenomenon is worth analyzing because it has important implications regarding the SP and Rama's perception of the State, Democracy, and the Left; briefly about this electoral practice, which has existed in previous elections, but this time it took on exclusive proportions as never before in these thirty years of democracy.

According to the portal www.apsi.al, a data system was made available in the electoral offices of the SP, which raised substantial doubts about using the state data bank registered at the portal of electronic services for citizens and businesses named e-Albania. These data are set in the function of the party in power. Lapsi managed to secure this data bank, which included confidential information of 910,000 Tirana voters from the age of 19 to the age of 99. The document contained the personal data of each citizen, such as telephone numbers, identity card numbers, voting center numbers, workplace for most of the registered, and a description of political affiliation for each citizen of Tirana. This bank is practically the fruit of a monitoring work of citizens based on the data that citizens have entrusted to the state. In the document provided by Lapsi.al, which was approximately 234 Mb, the political affiliation of each was briefly described with Yes or No in a special column by the people who are part of the 'patronage' scheme.

According to Lapsi, the 'Patronage' are the members of the SP. They, through contacts, phone calls, or mutual acquaintances, create a rough idea of the political beliefs of each of the citizens. In past elections, the patronage system occurred, but the variation in the last election is that potential voters' data were voluntarily collected. In contrast, the data bank used by the Socialist Party contains very personal information of citizens, which was misused for the electoral campaign. The question that naturally arises here is, did the SP steal our data, and were they used for campaigning? The full answer comes from the whistleblowers of the scandal, namely Andi Bushati, one of the managers of the Lapsi portal. According to him, from the analysis of the lists with the data of 910 thousand citizens, the theft and misuse of personal data are flagrant, and here is why.

The article dated 13.04.2021 entitled, Patronage, Andi Bushati, among other things, analyzes that in those lists, there is an endless amount of information that only someone with access to state servers can have. However, according to him, the doubt is that since PD and LSI have been successively in power, why haven't they hijacked them? Alternatively, they have been bought. Of course, both of these versions are theoretically possible. However, according to Bushati, there is a problem because Patronage's name appears alongside the pirated data in those lists.

In hundreds of cases that Laspi has verified, he is an official, militant, or socialist activist. Their names are posted in neighborhoods or work centers. The fact that citizens' stolen data has been attached to the head of the local socialist's unit closes the alibi of who is using these lists. According to Bushati, another problem is their accuracy. He emphasizes that the SP propagandists, closely caught, have raised doubts that those documents are useless and that there are many inaccuracies, mentioning well-known public names whose affiliation is known. Still, they appear to be voting for someone else in the papers. "Yes, this is somewhat true. Even I (Andi Bushati) have competed in the names of my family members or relatives, whom I know to vote for the SP and whom the Patronage has included in the column of insecure". However, there is a problem here that needs to be clarified. Engineering theft, the one from above oriented, is accurate. The phone numbers, and the ID numbers, are all correct. So, when the government intervened, it was not wrong. There is some deviation where it is left to the ultimate grassroots militants. Mistakes are observed in the latter, either from ignorance or the vassal's meanness for some small benefit. However, this does not excuse the government, and even less serves as an alibi for the crime of stealing personal data for electoral purposes.

Andi Bushati's analysis of the phenomenon is entirely inherent. Let us imagine that this scandal would have happened in other countries, even those with insufficient political freedom, there would undoubtedly be a social reaction, and law enforcement institutions would face public pressure to bring to justice the persons responsible. In the case of Albania, in public opinion, the event passed without much noise. Also, the representatives of the diplomatic body or international organizations operating in the country were content with general statements about the phenomenon. With this approach, they still permanently prove that the stabilocracy continues to be the principle set through which they are guided in monitoring the Albanian political reality. (Primatarova, and Deimel, 2012; F. Çullhaj 2017)

While the justice system, namely the Prosecutor's Office and the Special Court, in an entirely paradoxical attitude to the event, requested the seizure of the documents of the Lapsi.al portal, classifying the latter not as a whistleblower but as a violator. However, after Lapsi's appeal to the Special Court of Appeal, the last annulled the first-instance decision to seize the servers. Meanwhile, the Strasbourg Court had ordered the Special Court not to implement the seizure decision.

The saga of "patronage" shows the high pollution that characterizes the Albanian land, where we expect the seed of the flower of democracy to grow. It indicates that the Albanian Left, and in this case, the SP, continues to contribute to creating the liberal principles of the State of law and equality between people, the two main pillars of this political ideology, according to Bobbio and Rawls. Through the phenomenon of Patronage, the actions of the SP are far from being more reasonable and in flagrant opposition to the principles of the State of Law, Democracy, and the Left.

Perhaps we lingered longer than was necessary on this event. Still, through its analysis, we thought a series of disturbing phenomena would be conveyed to the reader, which still characterizes Albanian politics and the Left as an integral part of it.

The Socialist Party and its political style

In the following, SP, as a Left government, which should have prioritized mitigating inequality (apart from major forces such as the November 26, 2019 earthquake and the SARS-COVID-19 pandemic), records as a governing balance a deepening of poverty based on international reports. (<https://a2news.com>) Not to mention the mass emigration of the educated, where according to INSTAT, in the last decade, 53% of those who fled had secondary and higher education. According to the survey data, of those who left, 54% of them had a secondary, vocational, or general education degree or a higher studies degree; nearly 14% of immigrants from 2011-2019 had higher education. From the data, it can be seen that among the persons who immigrated alone and not with their families, 24,749 had a higher education diploma and a doctorate. This number is higher because none of the emigrated family members live in our country. For this reason, INSTAT has not been able to find the exact profile of the economic status, age, and education of the emigrant families in total, which account for 50% of all emigrants who left during the period under analysis (<https://www.monitor.al>)

On the other hand, seen again from the perspective of a Left government, which should focus on strengthening the state apparatus, the Public Private Partnership remains a disturbing phenomenon for the SP's economic policies. Through PPPs, tens of millions of euros from Albanian taxes go to foreign investors, from tenders for concessions and incinerators to hospital services, which hit an essential part of the budget. (<https://www.monitor.al>) Let us stop for a moment on the PPP phenomenon that has characterized the politics of the SP in its two governing mandates to convey to the reader a point of view of the Albanian Left compared to the Rawlsian reasonable/more reasonable standard.

The Rawlsian reasonable/more reasonable standard is a benchmark for evaluating the acceptability of political proposals and policies within a liberal democratic society. It is based on the work of the political philosopher John Rawls, who argued that a just society is one in which all members can reasonably accept the principles of justice that govern it.

According to Rawls, a proposal or policy is considered reasonable if it is consistent with the basic principles of justice that all members of society recognize. These principles include equal fundamental rights and liberties for all, fair equality of opportunity, and the difference principle, which states that social and economic inequalities are only justifiable if they benefit the least advantaged members of society.

However, Rawls also recognized reasonable disagreements about what these principles require in specific contexts. As such, he proposed the idea of the more reasonable standard, which requires political proposals

and policies to be consistent with the most reasonable interpretation of the principles of justice available in a given context.

The more reasonable standard is essential for promoting democratic deliberation and decision-making, as it allows for diverse viewpoints and perspectives to be considered in the political process. It requires participants to engage in reasoned argumentation and to be open to changing their views based on new information or arguments.

Overall, the Rawlsian reasonable/more reasonable standard is a valuable framework for evaluating the acceptability of political proposals and policies within a liberal democratic society and for promoting democratic deliberation and decision-making

During the last ten years, the governments in Albania have acted through the application of secret agreements with businesses or, in other words, 'confidential'. According to BIRN (<https://www.monitor.al>), public authorities in Albania, including central government institutions and independent ones, have decided to keep 236 public procurement contracts secret. Of these 236 'confidential' contracts from 2008 to 2018, in the previous Right wing PD-LSI coalition, there were a total of 20 classified contracts. While during the 2013-2017 period of the Left-wing SP-LSI from 2018 onwards, there were 216 'confidential' contracts. The historical record is held by 2018 with 76 'confidential' contracts. These contracts are agreements concluded regarding liberalization, privatization, and de-regulation in the service sector. It should be clear to everyone that contracts of this type fundamentally interfere in the life of every citizen and bring negative consequences to the state budget, limiting competition between economic operators and bringing additional costs to taxpayers. The lack of public discussion and information on the content of these contracts is not a limitation of democracy but its final annulment, regardless of the motivations that may lie behind them. The secret talks regarding these contracts are in the hands of the government and some investors selected by it as the most 'suitable', who decide how Albania will have to be in the coming decades. Regardless of the content, this practice remains disturbing and equally disturbing because a Left government applies such a practice.

The reason for this secrecy is apparent. According to the Left, the people are 'immature' and can be erratic about the 'necessary' investments that the government determines. As a result, as immature as they are, they can organize violent demonstrations and vote for opposition parties that oppose secret contracts. In short, people can create annoying situations that would damage the good order of the services they enjoy from Public and Private Partnerships. Therefore, it is better to put everyone before the *fait accompli*, saying that the "financial impossibility of the state" requires us to act without wasting time to enjoy better service.

The other element of concern is PPPs. In his definition of the state, Hobbes envisioned it as a monster where each individual surrenders his liberties to live in security and peace. The act was voluntary and necessary to avoid an even greater evil, chaos, and violence against all. Today, Leviathan is no longer the State; the PPPs use the State to secure 'confidential' agreements, which not only expand their interests and profits but strengthen them even more, at the expense of the public interest. The problem is that no one has voluntarily surrendered any part of their freedom to this New Leviathan. The latter is neither predetermined in any governing program nor legitimized by any democratic means. It is imposed. Under these conditions, the decision-making of the SP can be read as anything else but only as more reasonable.

Following the analysis, two questions arise that require a more in-depth answer regarding the shape of the political system that our country has taken under a Left government. Namely, does Albania today meet the conditions to be classified as Post-democracy or Post-politics?

Albania today, Post-democracy or Post-politics?

Sociologist and political scientist Colin Crouch were widely praised for his 2003 book, *Post-democracy*. In this book, he presented the issue of the erosion of democracy by the extremism of financial Liberalism, a period in which few voices were still articulated about this danger. According to Crouch, in today's democracies, even if elections continue to take place and condition governments, the debate about them is a well-controlled spectacle. He was conducted by a group of professionals with experience in techniques and exercising persuasion on a limited number of issues selected by these groups. The mass of citizens plays a passive, receptive, and even apathetic role, simply reacting to the signals it receives. Apart from the spectacle of electoral warfare, politics is decided privately by the interplay between elected governments and elites representing almost exclusively economic interests. This is the model of what Crouch defines as post-democracy.

On the other hand, the Belgian researcher Chantal Mouffe (2018), in her book *On left populism*, prefers to call this political situation post-politics. Under the pretense of modernization imposed by globalization, the parties have accepted the dictates of financial capitalism and the limits imposed by the latter for intervention in state and redistributive policies. Consequently, the role of parliaments and institutions that allow citizens to influence political decision-making has been drastically reduced. Elections no longer offer opportunities to choose real alternatives through traditional parties. The only thing allowed by post-politics is a bipartisan alternation between center-right and center-left parties. Anyone who opposes the center's consensus and the dogma that there is no alternative to financial globalization is called an extremist or does not qualify as a populist.

In reasonable contemplation, these diagnoses are revealed more than ever in today's Albania. Financial interest groups in close cooperation with the political power already control everything in the country. In this period, the awareness of the political rights acquired over the years has been lost. Thanks to a permanent populist narrative orchestrated by the ruling propaganda, it has become possible for people to blame themselves for their socioeconomic conditions often. The result is that we are in a psychosocial state induced and spread by the government's propaganda which only aims to weaken the critical attitude of the citizens. In today's political conditions, it is imperative that this crucial feeling should be awakened through awareness and recognition of what belongs to us. Namely, post-democracy and post-politics tell us about the crisis of using democracy to get power and not for healing Liberalism. If we remember, the basis of Liberalism was and remains constitutional justice and separation of powers. This is because, in society, conflicting interests must be mediated in that specific place, such as Parliament, where the most reasonable one should be conceived.

So, the result is still the same in whichever position one puts the comma. Albania: post-democracy (,) not post-politics. The other alternative, Albania: post-democracy, not (,) post-politics. Albania fulfills both political conditions that the authors define as phenomena of current politics.

However, what is the solution? According to Mouffe, under a Gramscian perspective, "a new hegemony that allows the radicalization of democracy" must be created. Not by moving away from the liberal democratic system but by building a people and combining 'different struggles of resistance' into an 'equivalent relationship of differences'. In short, opposing post-democracy does not mean abandoning liberal principles but their further radicalization. Next, an important phenomenon for the Albanian Left is its approach to the principle of justice, on what basis it was formed, and how it was applied in reality.

CONCLUSION

In this article, we analyzed Rawls's most reasonable standard. We then applied it to the political style of the Albanian Left represented by the Socialist Party and the principles underlying its politics. After the analysis, it turned out that the Albanian Left is classified under the reasonable principle, i.e., *as fiat justitia ne perat mundus*, justice is applied without mediation. But not under the more reasonable Rawlsian principle for us, which is classified as deliberative justice mediated between persons of reasonable, based on the criterion of justice as fairness. Rawls qualifies justice as fairness as binding on us, not because 'it is true of an order of things antecedent and given to us,' but because it is congruent 'with the meaning of our deepest sense of ourselves and our aspirations'. And, in light of our history and traditions, it is 'the most reasonable for us'.

Under the same lens, we learned to answer the questions: Today, Albania is classified as post-democracy or post-politics. These diagnoses are revealed more than ever in today's Albania. In close cooperation with political power, financial interest groups control everything in the country. In this period, the awareness of the political rights acquired over the years has been lost. In today's political conditions, it is imperative that this critical feeling should be awakened through awareness and recognition of what belongs to us. Namely, post-democracy and post-politics tell us about the crisis of using democracy as an instrument to get power and not for healing liberalism. If we remember, the basis of liberal democracy was and remains constitutional justice and the separation of powers. This is because conflicting social interests must be mediated in that specific place, such as Parliament, where the most reasonable one should be conceived. Thus, Albania fulfills both political conditions that the authors define as phenomena of current politics.

The Changing Role of Empathy in the Complex System of Customer Value

Gábor REKETTYE¹

Abstract: This conceptual study aims to discuss the changing role of empathy in management and marketing literature and practice. At the end of the 20th century, the notion of empathy, borrowed from philosophy, was so popular that it became one of the fundamental concepts of marketing.

However, the rapid development of digitalization in the 21st century has resulted in a decline in its importance. Due to emerging new digital methods used by companies to communicate with their customers, empathy has been integrated into the complex system of customer experience and customer value.

Based on a comprehensive literature review, this study examines the role customer experience plays in creating better customer value. The paper creates the so-called value equation. Analysing the new norms caused by the pandemic crisis the study intends to determine which parts of this value equation were mostly touched by the pandemic. The global inflation which followed the pandemic – on the other hand – has influenced the other side of the value equation.

The analysis of the study concluded that due to the increased sensitivity of people in this pandemic and inflation times, empathy has gained importance again. So, it has become crucial for companies to find the proper balance between "high tech" and "high touch" in their communication and all interactions with both existing and potential customers.

Keywords: empathy, customer experience, customer value, pandemic, inflation

1. INTRODUCTION

At the end of the 20th century, the marketing literature was particularly focused on the use of the concept and practice of empathy borrowed from the discipline of psychology (McBane, 1995, Escales and Stern, 2003). This topic was so popular that empathic marketing became one of the important concepts in marketing at the turn of the century. One notable representative of this concept was M. Töröcsik, who advocated for empathic marketing in her book written at the turn of the millennium (Töröcsik, 1999).

Technological and environmental changes that have taken place over the past two decades have placed our knowledge of empathy in a different context. The aim of this study is to demonstrate how empathy has become integrated into the complex system of customer experience and customer value, and how it has regained importance due to the impact of the crisis caused by the pandemic.

2. THE IMPORTANCE OF EMPATHY IN MARKETING

Everyone agrees on the crucial role that empathy plays in marketing since empathy means the ability to understand and put oneself in the emotional state of another person one is interacting with. The most important participant in marketing is the customer, who comes into contact with various representatives of the selling organization during the customer's decision journey. During these encounters, it is important for the seller to approach the customer with maximum empathy, as otherwise, the company can quickly lose its customers (Ingwer, 2012, Brooks, 2016).

However, human relationships do not have an equal role in every aspect of the economy. The most important area for human-to-human (H2H) relationships is undoubtedly the field of services (Wieseke et al., 2012; Bore, L.L., 2019). In the case of physical products, it is also evident that the long-dominant "goods-dominant logic (G-DL)" is increasingly being replaced by service-dominant logic (S-DL), thus making human relationships even more important (Kotler et al., 2022).

However, not everyone has this empathic ability. Therefore, it is an important HR task to ensure that employees with adequate emotional intelligence (EQ) are placed in these positions to interact with customers (Goleman, 2006).

3. ENVIRONMENTAL CHANGES OF THE 21ST CENTURY

In the first two decades of the 21st century, numerous well-known changes occurred in the world economy that had a significant impact on marketing theory and practice. In a previous study, we identified six megatrends (Reketttye and Reketttye Jr., 2013). Of these, the most significant for the topic of this study is the technical progress known as the fourth industrial revolution, and within that, the rapid advancement and spread of digitalization.

During this period, the toolset of relationships between companies and customers was dominated by new methods resulting from technological development (Grewal et al. 2020, Hoffman, et al., 2022). The spread of the internet, the proliferation of social media, big data analytics, and more enabled innovative digital marketing solutions. The rapid proliferation of smartphones resulted in the expansion of mobile marketing.

This development affects nearly every aspect of marketing: research, information acquisition and utilization, the creation and communication of products and services that provide value to customers, customer relations, delivery methods, etc. It leads to changes in consumer behaviour, transforms decision-making mechanisms, and changes the customers' decision journey.

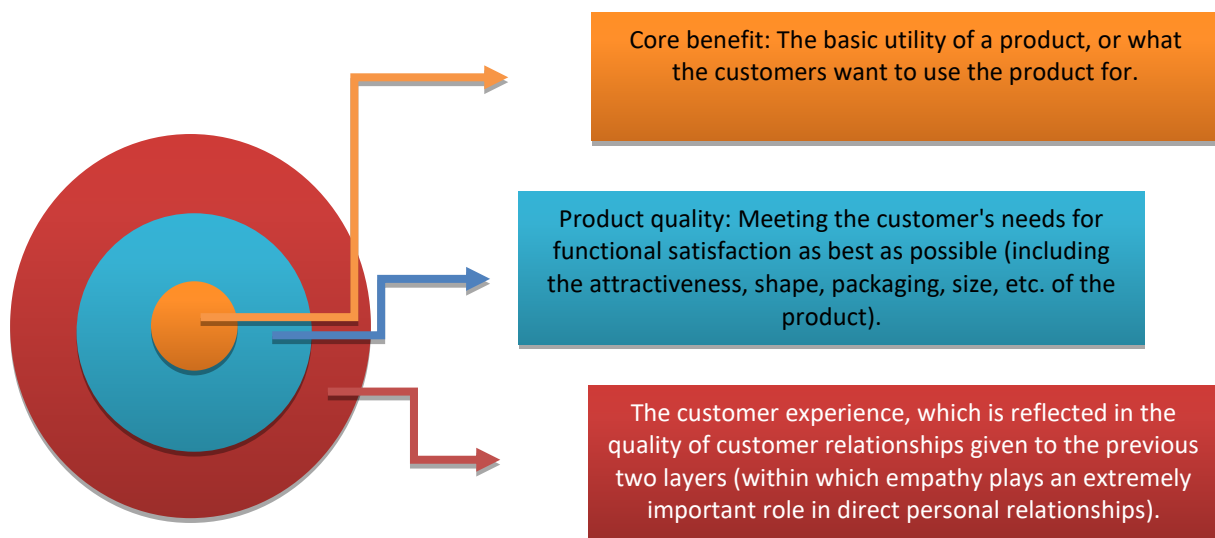

Research by Court et al. (2009) found that in today's digital world, the decision journey is very different from what we experienced in the past. For example, instead of a sequential process, the entire path to purchase can be described as a circular movement, starting with an initial list followed by an active evaluation phase, during which brands can be eliminated and new ones added. Then comes the closure, the purchase, followed by a post-purchase phase during which the consumer experiences the product, evaluates it, and, in a best-case scenario, enters the loyalty loop. Throughout each phase of the decision-making process, there are direct or indirect contacts between the company and the customer, touchpoints. However, typically only a minority of these touchpoints are personal, with the majority being digital, which has reduced the role of empathy.

4. CUSTOMER EXPERIENCE, WHICH HAS INTEGRATED EMPATHY

This means that empathy has been integrated into the extensive system of relationships between the company and customers, which is called customer experience (CX) in the literature, and which has been increasingly influenced by technological advances in recent years (Hoyer et al. 2020). The importance of customer experience is well proved by the survey of nearly 7000 consumers in 8 advanced countries made in 2023 by Marigold, which states that 86 % of the respondents favour brands that provide a consistent customer experience (published by MarketingCharts.com in January 2023). It is a rather complex task for the sellers to provide excellent customer experience (Leachman and Scheibenreif, 2023)

The position of the customer experience is well illustrated by the novel representation of the product value levels shown in Figure 1.

Figure 1. Levels of product value

Source: Reketttye, 2019, p. 81, slightly modified

But what is customer experience? It's not easy to define. According to Adam Richardson, the author of the first part of a series of articles on customer experience in the Harvard Business Review, experts have been struggling for years to define customer experience. Sometimes they talk about it as a digital experience or interaction, citing websites and smartphones, sometimes they refer to retail experiences, sometimes to customer service, and sometimes to how quickly something is resolved on a phone call with customer service. Richardson believes all of this is part of customer experience, but customer experience is more than just a snapshot of the customer and company or product relationship at a given moment. It's the accumulation of feelings in the customer that has been built up throughout their entire history of interacting with the brand or company (Richardson, 2010).

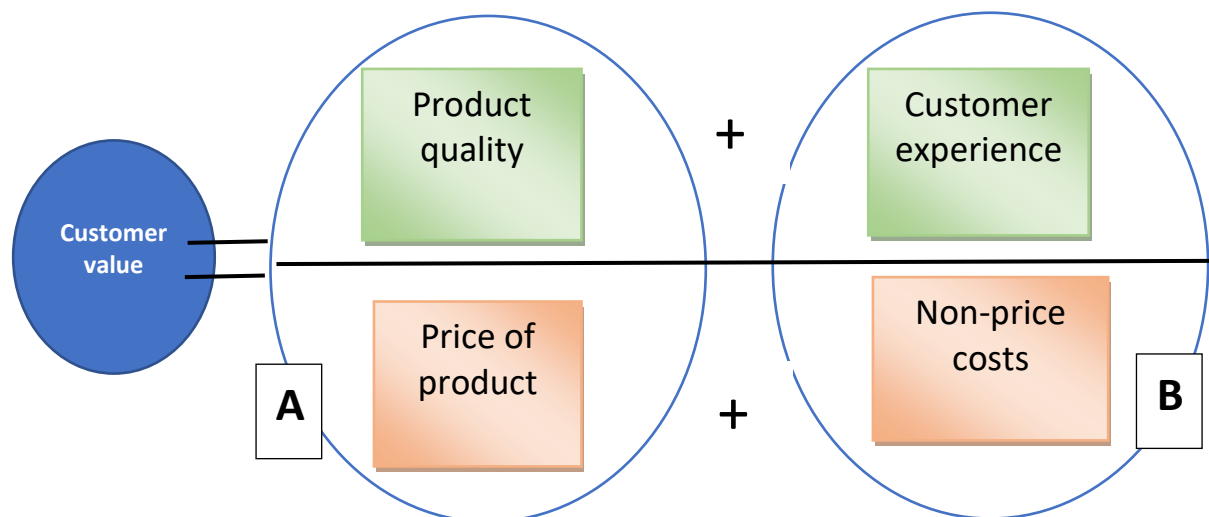

In the company-customer relationship system, there is of course a place for personal relationships as well. As we move from convenience products to shopping products to specialty products, the role of personal relationships and empathy increases. This is even more true in B2B markets, where personal relationships play a decisive role in procurement (supply).

5. THE EQUATION OF CUSTOMER VALUE

There is a wealth of literature on defining customer value, but there is not enough space in this study to present them all. Let's start with the simple principle that customers prefer a product when, in their perception, it is more valuable than the possible competing products. They feel the product is valuable when the benefits provided by the product (which can be functional and emotional or even social) exceed the costs required for the customer to acquire the product. The simple equation for customer value is therefore customer value equals benefits minus costs ($CV = B - C$). What the customer pays for is not just the price (cash, cards, interest, and costs incurred during use - such as fuel consumption and maintenance for cars), but also non-price items such as time, effort, energy, psychological and physical discomfort spent on searching, gathering information, purchasing, etc.

Starting from Figure 1, we can design the generalized model of customer value (Figure 2).

Figure 2 Generalized model of customer value

Source: Jackson and Fonvielle, 2021, modified.

If we break down the equation into two parts, we can conclude that the A-part of the equation (product quality and price) is more aimed at acquiring new customers, while the B-part (customer experiences and non-price costs) plays a greater role in retaining customers and increasing their loyalty.

6. CHANGES IN CUSTOMER VALUE DURING THE PANDEMIC AND INFLATION YEARS

The question arises as to what impact changes in consumer behaviour due to the pandemic had on customer value (Daniel et al., 2021). Our view is that despite the increase in demand for certain product categories and the decrease in demand for others, the value component labelled A in the equation remained stable. However, the pandemic significantly changed the value component labelled B in the equation.

Consumer expectations, particularly regarding the procurement of products and services, underwent significant changes. There were significant shifts in both the numerator and denominator of the equation. A good example of this is retail. Companies that could not meet the changed requirements and could not reduce the increased energy and psychological stress on customers were left behind in the competition. The isolation caused by the pandemic heightened people's sensitivity. Companies and brands that were authentic and inspired trust in people became popular again. Thus, an empathetic approach to customers once again played a greater role, to the extent that some authors wrote about empathy-driven marketing (see, for example, Pedersen, 2021!).

As we mentioned earlier, inflation has dominated the global economic landscape since the second half of 2021, particularly in 2022. This naturally affected the components of customer value. This time, the value component labelled A in the customer equation was most affected, particularly the price. Less affluent people are forced to constantly monitor price developments, sacrificing comfort for better prices, and often having to choose cheaper, lower-quality, or private-label brands instead of their usual brands. They may even reduce the quantity of goods they purchase or delay their purchases.

7. CONCLUSIONS

In summary, we can conclude that the role of empathy in marketing has increased again during the pandemic. In these turbulent times, companies need to pay close attention to maintaining a balance between "high tech" and "high touch" in their communication and interactions with customers. Following the emergence and business applications of artificial intelligence, further research is needed to determine what Liu-Thomkins and colleagues propose in their article (Liu-Thomkins, 2022): how empathic AI can be, and whether we can even talk about artificial empathy.

Taxes Promote or Hind Investment (Albanian Case)

Phd. Ingrid KONOMI¹

¹Lecturer, Faculty of Economics, University of Tirana, ingrid_konomi@yahoo.com

Abstract: The debate regarding the amount of taxes that taxpayers must pay to the state is becoming more and more important in recent years. This obligation to the state must be paid not only by individuals, families, but also by all businesses that exercise economic activity in the territory. .

Taxes are the main source of GDP (gross domestic product) and those that are most affected by taxes are investments.

The growth of investments is the main objective for the economic development of a country. But how does the taxation system affect the promotion or inhibition of investments.

To see how taxes affect the promotion or inhibition of investments for a certain period of time, we must take into account both the past - the current situation and the implications in the future. The stability of the fiscal system is a very important factor for new investment flows. This and many other factors help us understand how the business tax system works. Although there are also positive mechanisms for encouraging the creation and operation of businesses, we must introduce changes in the tax system.

In this paper, issues on the historical framework of the taxation system over the years have been studied and analyzed, factors affecting investments and E-TAXATION.

Then the situation is concretized within the Albanian market's study related to the topic. The aim is to underline the way that how the current Albanian tax system effects the raise of domestic and foreign investments.

Key Words: Tax, Taxation, Investments, E-taxation, Tax revenue, VAT, Profit tax.

Introduction

Fiscal policy is generally defined as the policy for the use of government revenue (taxes) and government spending to influence the market (economy).

In the process of formulating the fiscal policy, policy makers determine the objectives they intend to achieve and the instruments with which those objectives become feasible, necessarily adhering to the principles of fiscal management such as: a) transparency regarding the objectives, the implementation of the fiscal policy and publication of public accounts; b) stability of the fiscal policy making process; c) the efficiency of the impact of the fiscal policy on the economy; d) responsibility in the management of public finances; e) efficiency of fiscal policy modeling and implementation; f) justice (impartiality), including between generations. Fiscal policy objectives are related to the increase of general social welfare as the primary goal of a contemporary society. This well-being is ensured only in the conditions of an environment that defines economic, political and social stability. So, when we talk about fiscal policy objectives, we have in mind:

meeting public needs through a sound system of public financing; 2) realization of full employment; 3) increasing the rate of economic growth; 4) maintenance of price stability; 5) the stability of the balance of payments; 6) improvement of working conditions including improvement of the qualification structure of the labor force and technological progress; 7) stimulation of savings; 8) stimulation of investments; 9) increasing the competitiveness of local products and services; 10) increasing the quality of services in education and health.

The realization of these objectives depends on: the government's ability to coordinate them with fiscal instruments to influence the composition and level of aggregate demand; the accuracy of macroeconomic analyzes related to the trends of the main economic and financial indicators; regulation and institutional agreements for the coordination of macroeconomic policies.

Tax policy is a subset of fiscal policy that examines the revenue side of fiscal policy (ie the collection of revenue by a state).

Tax factors that hinder investments

Tax collection has rapidly become the main source of government revenue in most states. There are, of course, exceptions, such as states that impose royalties on the extraction of natural resources. Taxes are used to finance government spending, but often, government spending exceeds the amount of taxes collected. This is particularly prevalent when states attempt to maintain a countercyclical budget (ie in periods of economic downturns, government spending is increased despite a lack of tax revenue in an effort to stimulate the economy). However, the shortfall (deficit) between expenses and income must be settled. Governments therefore borrow money to finance additional spending (usually through the issuance of government bonds). Taxes, borrowing and spending make up the three points of the budget, the triangle of government financing. The balance between tax revenue and borrowing must be strictly monitored. The interest charged on money borrowed by governments must be covered equally by the tax revenue collected, and therefore erodes tax revenue. When borrowing becomes excessive, this can lead to a downward spiral in which tax revenue is completely absorbed by interest charges and the government cannot raise income tax by returning government spending to the distribution of public goods and services in mission impossible. Therefore, governments must maintain a delicate balance of tax revenue and loans to finance its expenses.

Examining only fiscal policy in the absence of other factors, governments tend to have an expansionary or contractionary fiscal policy.

Expansionary policies encourage increased government spending and/or

reduction of tax revenues. The intended impact of one of these choices is

stimulating the economy. Governments in such a cycle generally try to reduce unemployment and increase the productivity of the economy (leaving more income for reinvestment by taxpayers than taken out through taxation). However, the increase in spending, when accompanied by a decrease in tax revenues, will require balancing the budget/funding of

deficit through borrowings.

In contractionary policies, governments cut spending and/or raise taxes. Such actions have the effect of shrinking economic activity. Raising taxes takes away more of productively generated income, leaving less capital for expansion. Similarly, spending cuts can equally lead to cuts in public services (requiring more private investment for such services) and can increase unemployment, shrinking the economy.

The tax system can be called problematic in several aspects:

First of all, its instability brings problems in its recognition and in the refreshing from time to time on the part of investors. The stability of the fiscal policy is one of the most important indicators of the evaluation of the taxation system. A sustainable fiscal policy leads to increased investments and reduced public debt.

Second, the way of setting taxes on businesses, small, medium and large, the favoring of one form and the increase of the fiscal burden of another form of business.. What should be looked at carefully by the fiscal bodies is the categorization in the way clear forms of each business and equal treatment in setting the fiscal burden.

The Albanian tax law through years

What we defined in the paragraphs above was that the tax should be established by law to sanction its existence and to help the process of its administrative implementation. Albania is a country that, due to frequent changes in the political and economic order, does not offer a uniformity like other countries in the world in the tax system, specifically in the tax legislation. In Western countries, we find legal tax elements from the time of the French Revolution and later, while in Albania we see the first traces of tax legislation with the formation of the Albanian state in 1912. Before this year, Albania was subjected to the legislation of its invaders without having the opportunity to hear her voice. After 1912, we have 3 important periods for the tax system that are divided:

- the creation of the Albanian state and the governments after it 1912-1944;
- suspension of the tax system (1945-1990);
- the resumption of the modern tax system (1991- continued).

The creation of the Albanian state was faced, unlike others, with difficulties to change the financial system. Therefore, in this period we see that the legislation remains that of the Ottoman period with very minor changes. We see the first elements of essential legal changes in the period of the kingdom, where the Ottoman law undergoes changes adapting to the new economic and political order.

After the second world war and the creation of the new state, the tax system underwent the biggest change, turning into a violator of the main rights such as the right to property. Tax legislation was designed to destroy private property. The use of the progressive tax against the rich was aimed at their economic destruction by directing the provision of income in the budget not from the private sector but from the state. A legislation that did not find even the minimum similarity in any country of the world.

After the political changes of 1991, the tax legislation undergoes radical changes, thus bringing the modern tax system to Albania as in other countries of the world.

In the current situation, the legal sources for the functioning of the tax system are:

- The Constitution
- Ratified international agreements
- Laws
- Normative acts of the Council of Ministers
- Decisions of the Constitutional Court.

The above listing also respects the hierarchy of implementation of legal resources. The only exception is that the decisions of the Constitutional Court have the same hierarchy as the Laws.

Because of this chaotic situation, several times has been needed the intervention of foreign policy makers for helping the system being kept stable. So, with the support of the program of the International Monetary Fund (IMF), after the gradual orientation towards a market economy in the early 1990s, and the rapid approval of an important part of the economic indicators. Albania focused on maintaining financial stability, poverty reduction and the possibility of non-inflationary sustainable economic growth. Albania also aimed to achieve fiscal consolidation through the reduction of the budget deficit and public debt. As a result, public finances have constantly been at the center of radical reforms both in the expenditure side and in the tax collection system. The philosophy of these reforms was based on the idea of reducing the correct expenses (mainly personnel expenses, reducing subsidies through the privatization of state companies), expanding the tax base, simplifying and implementing a new tax system, promoting the tax incentive through the reduction of tax burden on business, and the reduction of informality and fiscal evasion.

In need for this, lately has been introduced the new system of **E-Taxation**. For the purpose of these conditions and rules, the services through the electronic tax system for taxpayers, which will be referred to as the "**e-tax**" service, are the services and functions that this system enables, which consists in providing the following services, but not limited to:

- a) Registration of the taxpayer as a user to have access to the system, hereinafter referred to as "e-user";
- b) Registration of the taxpayer for tax liability, referred to below as "e-registration"
- c) Declaration, compensation and necessary documents, referred to below as "e-filing".
- d) Tax liability payments, referred to below as "e-payment".

All rights to enter and use: e-tax", the taxpayer receives through the change of a personal computer, and after he has confirmed that he accepts and agrees with all the specifications contained in the Terms & Conditions of use system, as well as any of their doubts, made later by the tax administration.

There are many benefits and expected results from this system:

Taxes - Better collection of taxes at the country level, where the main item remains Value Added Tax. Referring to the results achieved in other countries that implement this system, increases of 10-15% have been recorded

in the collection of VAT, compared to the income from VAT, before the application of this system. Increases are also expected in other tax categories (eg Income Tax).

Reducing informality - by improving two main aspects - reporting more cash transactions and reducing hidden cashless transactions, with a better control of the fiscal system, informality in the Albanian economy will be reduced.

Increased efficiency in tax reporting – with more information collected from a taxpayer, the Tax Administration will be able to provide a better service to the taxpayer, such as pre-completion of VAT invoices with data already available of the taxpayer. This will speed up tax reporting and reduce errors in the process.

Improvement of tax control and field verification - using the fiscal system, risk-based tax control and inspection is possible, which will result in the direct identification of abusers, thus avoiding inspections in regular businesses.

Civic engagement - through the verification of the bills they pay, - whether they have been declared or not in the tax system, - the citizens themselves help and become part of the fight against informality and abuse of those who work in the dark. We also plan concrete rewards to motivate citizen involvement in this process.

Digitization of the economy - through improvements in the fiscal software program, the opportunity to increase the digitization of processes at the points of sale, especially for the SME market in the country, is expanded. This will lead to a less bureaucratic economy, with increased ease in the exchange of information between business and government and businesses with each other as well.

How taxes affect investments

If you look at the net Foreign Direct Investments, Albania has a decline from 2009 till now compared with the other countries of the Region. If we compare Albania with Serbia we will see a very big difference on FDI trend during these years. These two examples are clear proof that the effect of tax rates is not the primary influencer in attracting investments. The net FDI indicator shows us that if the tax rates are successfully harmonized with the increase in administration capacities and the strengthening of regulatory capacities and the reduction of corruption, an increasing effect of foreign investment flows into the country will result. This conclusion applies not only to Albania, Kosovo or Macedonia, but to each of the other Balkan countries.

However, the studies and surveys conducted show that it is possible for taxes to have an impact on FDI as well. Income, consumption and labor taxes affect the incentive to increase/decrease jobs. Thus, while labor supply may be inelastic in the short run, meaning that the effect falls on the labor force, if we look at it over the long run, the elasticity of labor supply should be higher. According to this logic, labor taxes and consumption taxes raise wage costs for employers. High wage costs (salaries and taxes) may have the disincentive effect on resident businesses to consider how to replace investment capital with employment, thus reducing their investment funds. On the other hand, an economy with high wage costs can have negative effects on investment funds.

A strong finding from the entire analysis is that not all tax rate changes can have an effect on economic growth, consumption or even foreign investment. Reforms that improve investment incentives, reduce budget support for sectors of the public economy, avoid financial collapses and the deepening of public debt have a clear and visible effect for all citizens regarding the long-term performance of the economy.

We find that, as a general rule, the impact of an increase in labor income tax rates on foreign direct investment flows is significantly negative, while the impact of an increase in consumption taxes is insignificant for investors. From our estimates on the impact of increasing tax rates on capital income and consumption, i.e. the real tax burden (which also controls the flow of labor income and the circulation of goods and services), it follows that high taxes encourage the departure of investments towards countries that have a similar economic environment, but with lower tax rates.

Governments that apply relatively high taxes on capital may encourage more outward investment and attract less inward international investment. Taxes and investments are in fair proportion for the Balkan countries, as they show that the state and the law are gradually getting stronger. This evidence adds further support to the idea that when reforming tax policy, there is good reason for governments to consider the effects of tax policy on their country's attractiveness to investment flows.

CONCLUSION

Although there are positive mechanisms to promote the creation and functioning of businesses, in Albania, changes must still be made in the system on businesses.

The presentation of a fiscal authority which, in order to achieve internal and international challenges, to make the fulfillment of the obligations of taxpayers can be achieved voluntarily by them and the role of the administration should be increased.

The choice of fiscal policy cannot be the same from models used in different countries, but based on specific conditions that characterize the country's economic situation.

Fiscal stability is one of the most important indicators of fiscal policy evaluation. A sustainable fiscal policy leads to an increase in investments and a reduction in public debt. In our case, the complexity of the tax legislation of our country has a negative effect on foreign investments, our tax legislation has not helped much in the growth of investments.

In different periods of time, it is noticed that we have fluctuations in the flow of investments in the country, this is due to taxation.

In order to help businesses in Albania, the Tax Administration has implemented the innovation of the electronic tax service.

The electronic payment system is a very positive factor for taxpayers. This system, by reducing the cost in time, in money, the fatigue of long queues to make payments and tax declarations, etc., promotes the possibility of increasing the number of investments in the country. In conclusion, the tax system in Albania cannot be said in an absolute way, but it does not encourage investors at the right level.

Abstract: In today's business environment, modern businesses, due to ever-increasing competition, experience significant pressures that often lead them to make hasty decisions, resulting in an increase in those cases that contain negative characteristics for the business and bring negative consequences and a significant deviation from their objectives.

The aim of this paper is to highlight the importance of corporate social responsibility in business management and decision making. Corporate Social Responsibility expresses a way of operating businesses according to ethical, social and environmental standards. It is addressed first to the internal environment and then to the external business environment. It operates on the basis of concepts such as the implementation of business responsibility, the development of trust with society and continuous cooperation with the company's internal and external partners.

This paper adopted the qualitative research method and in particular the literature review tool. The aim is to take a holistic approach and analysis of the topic under investigation. Through the exploration of the literature, the researchers wish to present the longitudinal views on CSR and formulate timely new and contemporary ideas. For this purpose, secondary publications on the subject, such as studies, articles, e-books, and texts from websites were selected.

The conclusions of the study are considered particularly important, as any utilization of them will contribute substantially to addressing the management weaknesses of enterprises, help them to face long-lasting problems and difficult situations, focus on any shortcomings in an efficient way, in order to be guided through safe processes to increase their productivity.

Keywords: Corporate Social Responsibility, corporate trust safe, business environment.

Introduction

The current era is characterized by prolonged phenomena of economic crisis and environmental burden, which leads companies to ensure their business development, aiming firstly at their economic well-being and secondly at the satisfaction of shareholders and ensuring the well-being of all stakeholders. Corporate Social Responsibility (CSR) of enterprises is a milestone in the free market economy, meeting both the needs of current generations without the risk of depriving future generations of meeting their needs. In recent years, many businesses are facing an ever-changing environment accompanied by a constant and increasing competition, bringing about many changes in the economy, technology and culture (Gilmore and Gilson, 2007; Fiksel, 2015; O'Brien, et al., 2019).

In their efforts to first survive and then grow, firms have to increase their efficiency and by investing in new technologies, research and innovation (Ferruzca - Navarro et al., 2013). Corporate social responsibility plays an essential role in this direction, as it enables many companies to make decisions and act in different ways allowing them to develop strategies and ways of thinking about specific issues and topics in the light of a different perspective. The aim of this paper is to highlight the importance of corporate social responsibility in business management and decision making. Corporate Social Responsibility expresses a way of operating businesses according to ethical, social and environmental standards. It is addressed first to the internal environment and then to the external business environment. It operates based on concepts such as the implementation of business responsibility, the development of trust with society and continuous cooperation with internal and external partners of the company (Aspridis, 2015).

Theoretical Approach

The approach and implementation of corporate social responsibility appears as a dynamic technique and as a tool that is oriented towards the teamwork of companies, so that those who take on the part of implementing

corporate social responsibility can develop and evolve operations in accordance with social and environmental standards. Corporate social responsibility expresses the voluntary commitment of enterprises to contribute to economic growth while improving the quality of life of employees and the local community. CSR is a concept that is increasingly associated with the image of business (Roberts et al, 2006; He and Li, 2011) and has emerged as an important consultation issue in the international business world (De los Salmones et al, 2005). It is a contemporary and topical academic field of study and research, due to its constant evolution and the new standards that are incorporated daily in CSR policies (Vachlioti, 2016). CSR expresses a firm's choice, which includes initiatives and activities with significant economic, social, environmental impacts (Du et al, 2007). All these impacts, have become an integral part of business in recent years (Kotler and Lee, 2005), as CSR affects the financial performance of a firm (Ioannou and Serafeim, 2010). The priority of CSR, is to link the company's strategy with sustainable development (Aspridis et al., 2014).

It is largely based on environmental and health and safety legislation at European and global level, highlighting the benefits and negatives of this practice through legislation and going even further by adopting the voluntary basis (Chiveralls et al., 2011).

Regarding voluntary environmental management, CSR, is associated with the adoption by the company of environmental and social actions in order to reduce the negative burden on the environment during its production operation. (Murillo & Lozano, 2006).

Methodology

The research adopted the qualitative method and used the methodological tool of literature review. The qualitative method is considered appropriate for small-scale research, where research hypotheses have not been adequately analysed by the scientific community (Adler et al., 2018).

This method allows and contributes to an in-depth analysis of the process(Bryman, 2008). In trying to understand and explain the specific issue, qualitative research allows us to understand and comprehend in depth and to a satisfactory degree the change over time (Babbie,2018). The methodological tool used in this paper is based on literature research, textual analysis and the study of secondary sources. It is based on a literature review of theoretical and conceptual approaches, textual analysis, empirical work and secondary sources applied to the topic. The methodology of the systematic literature review highlights that the evidence, is extracted through analysis of the data from the studies included in the review (Lueg, 2015).

It is noted that the literature review articles provide important information and different perspectives for a diverse set of researchers and users (Agarwal, 2012).

Furthermore, the literature review also highlights the deepening that has been carried out on the topic under study (Babbie, 2018; Saunders et al, 2014). In the following, suggestions will be made to enhance the application of CSR in the creation of responsible business policies.

Characteristics of CSR

Many authors adopt the view of Carroll, who assesses CSR as a component of four components, which reflect the types of responsibilities and different areas of activity of social relations. According to Carroll (1999), there are four types of responsibilities that can exist simultaneously in business and they are the following:

- economic,
- legal,
- ethical,
- philanthropic.

However, over the years, the first two aspects of responsibility usually predominate, followed by the other two. Each dimension allows for the possibility to be considered in relation to the other stakeholders of the firm, namely shareholders, employees, customers, and the local community (Gkagkaletsiou, 2020). Later, Freeman (1984), added the concept of stakeholders to the analysis for CSR.

A firm's stakeholders are the individuals, groups or organizations that can influence or be influenced by a firm that satisfactorily achieves its objectives. They can be positively influenced, for example, by employees who

gain employment and wages for their survival, but also by consumers who are given the opportunity to buy high quality products.

On the other hand, there is also the negative side of the influence, for example when employees are treated unfairly and unequally, or when consumers buy low-quality products. Stakeholders also have the possibility to influence the firm with their actions, for example when consumers buy one product or cause a trade blockade on another product (Gkagkaletsiou, 2020).

According to Porter & Kramer (2002), the characteristics of CSR in a firm are as follows:

- A company is considered to be implementing CSR when it adopts activities that are in line with the responsible operation of the company,
- CSR includes the responsibility of the enterprise in the activities it adopts to respect the environment,
- the lack of CSR in a company cannot help it to maintain its competitive advantage over time.

With regard to responsible leadership, it is linked to business decisions that take into account the expectations of shareholders in combination with the expectations of stakeholders. The head who exercises responsible leadership monitors and identifies risks in a timely manner and makes decisions on all risks, both short and long term, that may be associated with business activities (Gkagkaletsiou, 2020).

In terms of ethical leadership, it describes that leader who addresses a broader set of stakeholders with the aim of gaining acceptance of the business in a society and consolidating it by maintaining beneficial relationships with stakeholders.

In relation to sustainability, according to the triple bottom line approach (Elkington 1994), it expresses that businesses should be committed to issues of financial, social and environmental concern. Therefore, companies that express their responsibility in these areas, i.e. demonstrate their commitment to CSR, will be more resilient and sustainable in the long run. Therefore, they will be able to show long-term positive results in terms of their operational objectives (Gkagkaletsiou, 2020).

In line with the above, CSR also includes sustainable development, which is described as the set of practices that ensure that needs are met in the present without limiting future generations in meeting their own needs in the future. Many researchers understand CSR also from the perspective of citizenship. Citizenship describes the extent to which companies fulfil the financial, legal, ethical and additional responsibilities that may be imposed by stakeholders on a company. The above elements have many similarities with Carroll's concept of CSR. Their essential difference is that citizenship emphasises more the active management of these responsibilities than simply recording them in non-financial reports of companies. However, in the majority of cases where companies decide to adopt and implement CSR decisions and practices, both reflections may express the same characteristics (Gkagkaletsiou, 2020).

For a more complete illustration of CSR, the following Figure 1 follows.

(Source: personal creation)

Theory of the Pyramid of Business Responsibilities

According to Carroll (1999), there are four types of responsibilities that can exist simultaneously in companies and need to be taken seriously and they are the following:

- economic,
- legal,
- ethical,
- philanthropic,

but over the years, the first two aspects dominate, followed by the other two aspects (Carroll, 1999). Each dimension can be considered in relation to the different stakeholders of the firm, namely, shareholders, customers, employees and the local community (Carroll, 1999). Specifically, Carroll (2016) conceived the CSR model as a pyramid that includes the above aspects and is depicted as shown in Figure 2, as distinguished below.

Figure 2: Carroll's Pyramid of Corporate Responsibilities

Source : Haski-Leventhal, D., 2018

Observing figure 2 according to Carroll's pyramid, we first distinguish the financial obligations, where the partners and shareholders aim to increase profits from their investments by utilizing the employees they have chosen, who in turn, try to secure their rights, seeking a fairly paid job and finally, the customers, who are interested in the existence of a balance between the quality and the price of the product (Vachlioti, 2016). The response of companies to the needs of customers, through the provision of services and the supply of products of superior quality and reliability, ensures a solid foundation of lasting relationships and trust.

The relationship of the company with suppliers is expressed through actions that contribute to the transfer of knowledge and experience, with the adoption of criteria that constitute responsible business action for the selection of appropriate business relationships. This first component is the basis for the others, which are discussed immediately below, according to Carroll, who considers that the satisfaction of financial obligations is the most important for all companies (Vachlioti, 2016).

The legal obligations of businesses, which are important to follow and businesses to comply with the legislation in question, are then shown and through this practice the image of the business is more easily accepted by the consumer and the local community. Similarly, the society on its part expects the business to be consistent and fulfill its financial duties within the legal obligations as laws and regulations have been established under which businesses are required and expected to comply with them (Carroll, 2016). As a partial fulfilment of the so-called "social contract" between business and civil society, businesses are expected to continue to fulfil their economic missions, always within the framework of the law. Legal

responsibilities are thus depicted as the next layer of the pyramid to highlight their historical path and evolution, and how they co-exist with economic responsibilities (Carroll, 1999).

The moral obligation they assume is highlighted by the just and socially acceptable actions of the firm. No specific legislation is followed for this obligation, but it is usually a kind of "unwritten law" because they reflect the standards for a strong and constantly evolving business (Vachlioti, 2016).

Finally, philanthropic obligations consider the actions of firms related to charitable organisations, assistance to their fellow human beings, donations and support to local institutions, sponsorships in education, contributions to educational institutions, artistic activities and sports clubs (Vachlioti, 2016).

The pyramid of corporate responsibility has been criticized in terms of its interpretation and how it is used as a decision-making tool for business.

A frequent criticism of this theory focuses mainly on how it should be studied. If the stages of the pyramid are considered separately, companies can easily justify the fact that it is important to focus more on the bottom of the pyramid, i.e. the area of financial responsibility. On this basis, they could argue that they pursue CSR even if their activity has the sole objective of maximising the company's profits. According to Carroll, however, this way of assessing the pyramid is a wrong approach. The pyramid should not be examined in stages but as a whole. In particular, firms should make decisions by examining and approaching all stages of the pyramid holistically. However, each stage should have a different weight in decision making depending on its position in the pyramid (Gkagkaletsiou, 2020).

Another criticism of Carroll's pyramid concerns the creation of conflicting outcomes between responsibilities and the overlap that responsibilities may have. Based on this rationale, critical questions are raised such as for example:

(a) does the firm have to make socially or legally correct decisions?, (b) if these decisions reduce profits, in which case will it be less consistent in its financial responsibility? , (c) In which part of the pyramid might the firm place a decision that may affect more than one responsibility?

One answer to the above questions could be that the weighting criteria for each stage of the pyramid that a firm will decide on in its decision making process is what will highlight the degree to which the firm itself wishes to pursue regarding the implementation of CSR (Carroll, 1999).

There are also several criticisms of the shortcomings and inaccuracies that this pyramid may have. Cultural and environmental responsibility are not separate stages of the pyramid, so it may not be clear enough whether society expects companies to take initiatives on these essential issues. Several authors and researchers argue that there is a need to add additional stages to the CSR pyramid such as the Haski-Leventhal pyramid which has social and environmental responsibility in separate stages, while there is also the opposite view that these issues could be studied as sub-stages in the already existing Carroll's pyramid model (Gagaletsiou, 2020).

Later Zadek (2004) came up with a different pyramid for CSR and created five stages which are the following:
of the defense,

- compliance,
- command,
- strategy and
- the political stage.

Each of these stages presents a higher level of CSR and reflects a learning path.

Conclusions

In this paper, a systematic attempt was made to record the stages of CSR, based on the theory of the pyramid of business responsibilities, in order to understand the individual stages that companies implementing CSR must follow. The present study is considered important because it highlights the most important parameters that contribute to the implementation of CSR, as well as the obstacles that can be caused in the effort to implement CSR.

By examining the CSR issues in relation to the objective of this study, which is to highlight the importance of CSR in creating a safe business environment and with the help of the pyramid theory of business

responsibilities discussed in more detail above, it can be seen that, CSR is an important tool for creating a safe business environment because it contributes to the following:

- compliance with environmental legislation,
- reporting on environmental actions,
- reporting on social initiatives,
- reporting on their labour policies,
- improving the level of health and safety of workers.

It is necessary to implement the above policies in order for a company to:

- motivated to implement programmes to protect the environment and the local community,
- the effort to implement such initiatives by businesses will have positive effects on the relationship between businesses and local communities as,
- will undoubtedly contribute to improving the image of the business. This finding can be understood, if one considers how important part for the sustainability of the business is the improvement and consolidation of its reputation (Vachlioti, 2016).
- Establishing a firm's consistently good reputation in the wider society creates a fertile ground for producing more and more competitive products (Darnall et al., 2008).
- At the same time, social acceptance and trusting relationships with customers play a key role in improving business decision making.

At this point it is considered necessary to make proposals for a more complete implementation of CSR. It is therefore necessary to bring businesses into line with market needs and to adopt and introduce new technologies and innovations. Many argue that there may be obstacles and tensions in setting up such environmental and social programmes and actions. However, companies must be oriented and committed to their goal of embedding and continuously implementing CSR holistically throughout the company's supply chain and its relations with the local community.

It is important for companies to realise that further implementation of CSR will bring about:

- positive results in the lives of workers,
- further improving the image of enterprises,
- more environmentally friendly operation of enterprises
- a significant reduction in the cost of running the business,
- further improvement of the quality of the natural environment,
- compliance with the needs of the market,
- further compliance with environmental and social legislation,
- gaining a competitive advantage for the enterprise,
- new innovations that will bring about changes and
- redesign of environmental policies and actions.

The above proposals would be beneficial to be taken seriously also at the level of government policy making, as an initial basis for the redesign of environmental policies aiming at the full implementation of CSR in the whole business world (Vachlioti, 2016).

Corporate Social Responsibility and Triple Bottom Line In International Business: The Context Of Developing Countries

Ivana ŠTULEC¹

¹ University of Zagreb Croatia, Faculty of Economics and Business, istulec@efzg.hr, ORCID: 0000-0002-6646-505X

Abstract: As public increases its awareness of the global problems faced by the entire population, so does the necessity to introduce key changes in the business practices of companies. For several centuries, business conduct was oriented towards the sole realization of profit, without considering the ecological and social footprint they leave behind. Environmental pollution and questionable business ethics preceded the development of the concept of sustainable and socially responsible business. From a triple bottom line (3BL) perspective, corporate social responsibility (CSR) puts emphasis on social, economic and environmental initiatives. The problem of CSR implementation becomes more emphasized in international business context since more than one approach to business ethics can be applied, depending on the notion of superior ethical norms and business practices. The concept of social responsibility and 3BL becomes even more complex and challenging when considering emerging markets environment due to the lower economic development. The paper gives an overview of studies on CSR and 3BL in international business with special emphasis on developing countries. The value of the paper is reflected in synthesis of key knowledge on CSR in international business, providing discussion regarding the context of developing countries and proposing a mixed business ethics approach to conduct of responsible business in developing countries.

Keywords: corporate social responsibility (CSR), triple bottom line (3BL), business ethics, international business, developing countries.

1. INTRODUCTION

Social responsibility is not a new concept and has been the subject of many discussions for a long time. Unlike for many years, when the only goal companies had was to ensure successful and profitable operations, there has been an increase in concern about the impact companies have on society. The importance of quality and trust is growing as fundamental factors in deciding on the choice of certain companies and their products and services. In the past few decades, the public's concern about the ethics of business operations of organizations on a global level has become more and more frequent. Taught by the immoral examples of business practices from the past, companies are forced to adapt their business strategies to more sustainable and socially responsible goals.

The paper studies the topic of CSR in international business. Since there is no consensus in the academic literature on the definition of CSR, the paper first provides review of definitions and dimension classifications of CSR, linking thus the concept of CSR to 3BL that requires a business conduct that allows for economic, as well as environmental and social progress. The three dimensions of 3BL are often used as referential indicators in CSR studies in academic literature. The aim of the paper is to give insight into CSR studies in international business with emphasis on relativity of business ethics approach to CSR practices and activities in foreign market. The issue of business ethics approach to CSR in international business is even more pronounced when considering the context of developing countries due to their lower level of economic development. The paper provides a review of relevant literature and initiates a discussion on CRM practices in developing countries. Through the discussion following research question are addressed:

- What is responsible and sustainable business ethics approach to CRM practices in host countries that can be characterised as developing economy?
- Which actions in host (developing) countries should be taken in order to derive the maximum benefit of CSR practices conducted by international businesses based in developed countries, and who should be the main actors of these actions?

The paper is divided into six sections. After introductory section, a review of CSR definitions and dimensions is given. Third section outlines academic evidence of benefits of conducting socially responsible business. Fourth section provides a review of studies on CRM in international business with emphasis on business ethics approach, current topics and comparison of CSR practices in developed and developing countries. Fifth section initiates a discussion regarding the CSR practices in developing countries. Concluding section summarizes key theoretical knowledge and recommendations obtained through discussion.

2. LINKING CORPORATE SOCIAL RESPONSIBILITY TO TRIPLE BOTTOM LINE

The originator of the idea of socially responsible business is considered to be Bowen, who published the book “Social Responsibilities of the Businessman” in 1953, in which he promotes ideas significantly ahead of his time (Moura-Leite & Padgett, 2011). He points out that companies are vital centres of power and that their activities affect the lives of the society in different ways. He also claims that the social responsibility of business people refers to their obligation to develop business policies, make decisions or perform activities that are desirable in terms of the effect they have on society (Bowen, 1953). As an early criticism of this approach, Levitt (1958) presents a point of view in which he states that the business of the corporation is not social welfare, but exclusively profit making. Since its inception, the concept of socially responsible business has faced many criticism, mostly due to the wide range of interpretations of its definition.

There is a wide array of definitions of the CSR term in the literature. The definition of socially responsible behaviour ranges from compliance with the law (Mamic, 2005) to philanthropy (Amato & Amato, 2012). Delić (2020) outlines two distinguished approaches in the theory of socially responsible business, namely the classical approach and the socioeconomic approach. The fundamental assumption of the classical approach is the realization of benefits for shareholders, i.e. profit maximization, so this approach is also called the shareholder theory. One of the most prominent advocates of the classical approach is the Nobel laureate Milton Friedman who claimed that socially responsible business is an immoral idea at its core since it violates the rights of business owners. Friedman (1970) was extremely opposed to the idea that companies should direct their profits towards the realization of social goals, explaining that companies cannot act as moral representatives of shareholders. The socioeconomic approach to socially responsible business, i.e. the stakeholder theory, establishes key corporate responsibilities. Responsibility towards the community in which the company operates is only one, but very important, aspect of corporate responsibilities (Freeman & Dmytriiev, 2017). This approach dictates that companies must satisfy the interests of all their stakeholders, primarily shareholders, employees, customers, suppliers and the local community. However, the interests of shareholders should not be prioritised over the interests of other stakeholders. In contrast to the stakeholder theory, the concept of socially responsible business gives priority to one aspect of business compared to others, which is the company's orientation towards society as a whole, i.e. social orientation.

CSR dimensions are under ongoing discussion among researchers. A well-known approach to the concept of CSR was given by Carroll (1979, 1991) in the form of a four-tier pyramid which includes the fulfilment of economic, legal, ethical and philanthropic (discretionary) requirements that society places on companies. The economic responsibilities of a company include behaviour that maximizes share value, maintains strong competitive advantages, and responds to the demands and needs of society by producing goods and services that maximize profit. The legal framework includes various local, national and supranational laws by which companies must abide. The ethical responsibility of the company is reflected in business that takes into account the interests and expectations of the society. Charitable responsibility represents the highest level of CSR, which implies that companies play the role of initiators of philanthropy for the purpose of improving the community's standard of living. In their research, Garriga & Mele (2004) came to the conclusion that most of the CSR theories are based on four pillars: (1) achieving goals that generate long-term profits, (2) acting responsibly when using business power, (3) integrating societal needs and (4) contributing to the welfare of society by doing what is ethically right. Whereas, analysing many proposed definitions of CSR, Dahlsrud (2008) concluded that “the concept includes five dimensions: environmental, social, economic, stakeholders and voluntariness”. Moratis (2016) summarizes the CSR to nine dimensions: environment, social, stakeholder, societal obligation, quality of life, ethical conduct, law abiding, human rights and transparency. Vrdoljak Raguž & Hazdovac (2014) state that observing CSR as a business concept in which the company voluntarily tries to harmonize all elements of its business with the needs of society, it is possible to get answers to the questions what does the company produce, how does it produce, what resources does it use, how it buys, how it sells, how it affects the environment, how it hires, how it treats its employees, how it trains them for work, what the working conditions are like, how it invests in the social community and whether it respects human and labour rights.

The Organization of Economic Cooperation and Development (OECD, 2009) defines “a responsible business conduct as a positive contribution to economic, environmental and social progress”. According to Bansal (2005) all three dimensions should be implemented in an integrated manner to achieve sustainability. The term 3BL was first introduced by Elkington (1998). Later have Carter & Rogers (2008) extended Elkington's concept as to include economic, environmental and social dimensions. The authors redefined the concept of the triple

balance by explaining that the synergy of social, environmental and economic activities can help organizations to engage in activities that have a positive effect on the environment and society, but also result in economic benefits and a competitive advantage for the company in a long term.

3. BENEFITS OF CONDUCTING SOCIALLY RESPONSIBLE BUSINESS

The impact of CSR on economic performance has gained attention in the literature in the last few decades. The widely accepted paradigm that explains why companies engage in socially responsible activities is defined by stakeholder theory and it reasons CSR as a strategy to maximize long-term return on investment. The stakeholders control the resources of the company and managers in their pursuit of company success have to strategically address the wants of stakeholders. According to this perception, socially responsible firms will prioritize long-term relationships with stakeholders over short-term profit (Choi et al., 2013). CSR initiatives have a positive impact on the company's innovation through their positive impact on the company's cooperation (Mendes et al., 2021). When the company intensifies its CSR activities, more intensified network interactions follow. An underlying reasoning is that socially responsible firms acknowledge the importance of each stakeholder in acquisition of knowledge (Gras-Gil et al., 2016).

Chladek (2019) states that CSR initiatives can be utilized as an effective marketing tool in the company's attempt to position itself in the eyes of consumers, investors and regulators. CSR can improve corporate reputation and help organizations differentiate themselves from their competitors in order to increase sales and market share (Miles & Covin, 2000). Gardberg & Fombrun (2006) point out that investing in social initiatives can be just as important as investing in advertising or research and development. Servaes & Tamayo (2013) study shows that CSR and firm value are related but conditioned by customer awareness. Firms with high customer awareness show positive relationship between CSR and firm value, through the means of advertising expenditures. Firms with low customer awareness show the relation that is either negative or insignificant. On the other hand, the effect of customer awareness is reversed for firms that are faced with poor public image as corporate citizens. It is evident that CSR activities can add value to the firm but only under certain conditions.

Furthermore, CSR initiatives can improve the engagement and satisfaction of those employees who have strong personal beliefs that match those of the organization. A healthy work climate can lead to greater trust in the company, greater employee commitment, less absenteeism and employee turnover, and ultimately greater profitability and productivity (Sims & Keon, 1997).

4. CORPORATE SOCIAL RESPONSIBILITY IN INTERNATIONAL BUSINESS

4.1. Business ethics approach to corporate social responsibility in international business

The problem of business ethics in international business has only gained attention in scientific literature at the end of the 20th century preceded by ethically questionable events on international markets. Exploitation of international differences in the business context, relocation of production and services to countries with lower labour costs, use of child labour and many other issues arose from the operations of multinational companies on international markets. Significant differences in the conduct of multinational organizations in different markets are determined by diverse cultures, legal frameworks and economic standards of certain countries (Salehi et al., 2012). Many ethical issues in international business are rooted in the fact that political systems, legal system, economic development and culture differ substantially between nations. When transcending national borders, multinational companies need to be particularly responsive to these differences.

Hill (2013) outlines four straw men approaches to business ethics in international business that can be characterized as Friedman doctrine, cultural relativism, the righteous moralist and the naïve immoralist. Friedman doctrine is rooted in a belief that the only social responsibility of the company is to maximize profits while abiding the law. Cultural relativism is rooted in a belief that ethics are mere reflection of a culture and that accordingly, companies should adopt ethics of a host country. The righteous moralist approach states that ethical standards of a multinational company's home country are the appropriate ones to follow in foreign countries. This approach is typically associated with internationalization from developed to developing countries. A naïve immoralist approach allows managers of multinational companies to digress from ethical norms in a host country if competing firms from other countries are not following them as well. From international business perspective, it can be argued that what is ethical depends on the ones cultural perspective. By institutionalizing and developing the company's code of conduct, an attempt was made to

establish order on the international market. Despite the fact that some organizations refuse to adhere to these rules, international codes of ethics have ultimately contributed greatly to fairer market competition.

4.2. Current topics on corporate social responsibility in international business studies

Even though both international business and CSR are highly recognized study fields, the problem of CSR in international business still remains rather understudied. Paul & Parra (2021) analysed a sample of 1188 articles published from 2000 to 2018 in the Journal of International Business Studies and results show that only 35 CSR focused articles appeared. The review of Pisani et al. (2017) indicates a little attention being paid to CSR in international business as well. Kolk (2016) examined the inclusion of social responsibility issues in the international business literature over a 50-year period and identified three themes: the green environment; ethics, rights and responsibilities; and poverty and sustainable development. Griffith et al. (2008) identified following emerging themes: multinational company citizenship, ethical issues in international business, public policy issues and environmental issues. Buckley et al. (2017) identified the topic of understanding how multinational companies respond to greater pressures for social responsibility and sustainability in the global operations as a grand challenge. On the other hand, a considerably higher attention is paid to CSR themes in the international marketing literature (Eteokleous et al., 2016), studying the consumer side of the problem.

International markets are highly competitive in nature which calls for the development of cooperation agreements to which CSR practices have become a vital condition (Mendes et al., 2021). Research shows that socially responsible conduct of international business can benefit the company and facilitate internationalization to new markets. Deliç (2020) points out that in most cases, the implementation of socially responsible business practices increases the market value of the company and thus capital becomes increasingly available to companies on the international market. Voluntary socially responsible engagements improve the company's reputation, which ultimately enables easier access to new markets. For example, unlike companies that do not implement any CSR initiatives, companies with a good CSR reputation usually face lower level of resistance when expanding to new markets (Lougee & Wallace, 2008).

There is a growing awareness of the corporate social responsibility which calls for greater transparency in reporting. The response of many companies was to be more open in their reports when addressing social and environmental impacts of their activities. Currently, several global standards for CSR reporting exists, such as the Global Reporting Initiative and the UN Global Compact. Other emerging CSR reporting standards are the ISO 14000 standard on environmental management, Account Ability's AA1000 standard (based on John Elkington's 3BL) and Social Accountability International's SA8000 standard. The idea behind global reporting standards is to set universal values that can be applied to all businesses around the globe. Chen & Bouvain (2009) compared CSR reporting practices in selected countries (US, UK, Australia, and Germany) and conclude that Global Compact membership has an effect on CSR reporting only in areas related to the environment and workers, and that country of origin has an effect on the extent on CSR promotion. Authors argue that these country differences are related to idiosyncratic institutional arrangements in each country.

The geographical distribution of CSR in international business studies shows that authors from North America and Europe contributed majority of CSR articles. Somewhat smaller contribution was provided by authors from Asia, but mostly in co-authorships with North American or European authors (Paul & Parra, 2021). In their review, authors found no authors publishing on CSR provided by African, Middle Eastern or South American university affiliations. It can be argued that the topic of CSR in developing countries and emerging markets remains understudied.

4.3. Comparison of corporate social responsibility practices in developed and developing countries

Sharma (2019) conducted "a comparative assessment of CSR practices and trends in developed and developing countries through a study of all manners of existing literature". Similarities between CSR trends in developed and developing countries may be reduced to sentimental approach, support for political and social causes, preferences for CSR in educational and environmental sectors, publicity campaigns, alignment of CSR campaign with company's target consumer group and social media engagement. A summarized overview of CSR differences is presented in Table 1.

Table 1: Differences in CSR practices in developed and developing countries

KEY DIFFERENCE	DEVELOPING COUNTRIES SCENARIO	DEVELOPED COUNTRIES SCENARIO
Government intervention	Under strong influence.	Interference to a minimum.
Distribution of CSR funding	CSR funding directed toward public aid in line with government policy.	CSR campaigns aligned with brand values.
Frequency of CSR activities	Few and irregular.	Wider prevalence and scale.
Rationale behind CSR choices	Philanthropic efforts to rebuild deprived stratum of society.	Apolitical and designed in line with specific business ideals and profit considerations.
Media and public engagement	Mentioned as charity campaigns in media. User engagement and transparency is low.	Primary aim is to build consumer base. User engagement through media is high.
Government consumerism as CSR	Government agencies with the role of large - scale consumers enable CSR.	CSR exists as powerful marketing tool. CSR campaigns are utilized for building market share.

Source: Sharma (2019)

CSR in developed countries is viewed as an indispensable conduct of business. Faced with intense market competition, companies seek for new, yet trustworthy and sustainable ways to retain existing customers and attract new ones.

According to Sharma (2019), CSR in developed countries is mainly focused on environmental issues and improving standards of life and healthcare. On the other hand, CSR programs in developing countries exist with the aid of established international organizations. The CSR activities take several interchangeable forms in developing countries and are mostly aimed towards resolving local socioeconomic issues. The CSR campaigns in developing countries come in the form of charitable actions such as giveaways, rallies and drives, financial aid and employee volunteer hours.

According to Possenti (2012), obstacles to achieve full effect of CSR campaigns in developing countries can be attributed to time and resource costs or lack of established institutions to assist in the implementation of CSR activities.

5. DISCUSSION ON CORPORATE SOCIAL RESPONSIBILITY IN DEVELOPING COUNTRIES

Following Friedman doctrine, companies' only responsibility is to maximize profit while conducting business within rules of law (Friedman, 1970). Even though Friedman is not speaking of business ethics, but social responsibility of a company, the doctrine itself raises same questions when considering conducting business in international markets, especially emerging markets that differ substantially in law requirements, human rights protection, consumer rights protection, environmental standards etc. compared to developed and established home markets. Campbell (2006) argues that enterprises are more inclined to conduct a business in a socially responsible way when faced with strong state regulation, industrial self-regulation, non-governmental organizations (NGOs) and a normative institutional environment that encourages corporate social responsibility. Since norms and regulations in developing countries are not as stern as the ones in already developed countries, businesses internationalizing their production and operations to low- and middle-income countries are tempted to resort to cultural relativism and act as naïve immoralists. The dilemma that arises when considering CSR in developing countries and emerging markets is twofold.

First issue regards the business ethics approach that international businesses implement when expanding operations abroad. Referring to the classification provided by Hill (2013), the most ethical conduct would be to follow the righteous moralist approach. If CSR is a way of achieving sustainable development, its practices should be integrated through the entire global supply chain and not only in developed countries. However, applying to same standards and practices in the foreign (developing) country as in the home (developed) country might nullify the reason for investing and expanding in the foreign country thus depriving the local population of benefits associated with foreign trade and investment. On the other hand, a cultural relativism

approach could offer a country benchmark as to overcome righteous moralist approach shortcomings. Adhering to cultural relativism, businesses act ethically simply by abiding local laws, business practices and cultural norms, even when those differ substantially from the ones defined in home country. The major criticism of cultural relativism is that it perpetuates the corruption and bribery practices in low- and middle-income countries. Companies should not use cultural relativism as an argument for justifying behaviour that is based on dubious ethical grounds, even if the business conduct is within law and routinely accepted as a business practice in the host country. Meaning, a more ruminated and nuanced approach is needed, which leads to second issue of CSR in developing countries dilemma.

Second issue questions the actions of host (developing) countries that should be taken in order to derive the maximum benefit of CSR practices conducted by international businesses from developed countries, as well as who the main actors of these actions should be. The goal should be to remain (and improve with time) the level of foreign investment because of comparatively lower labour costs while achieving higher employment of domestic production capacities, higher preservation of its natural resources and non-renewables and higher legal protection of labour and consumer rights as a way toward the paramount goal of higher living standard for its citizens. Ward et al. (2007) propose the public sector actors as the bearers of directing and guiding CSR actions in low- and middle-income countries. Every business has its impacts on environment and society, both positive and negative. In developed countries, CSR actions and practices are vastly market-driven and market-oriented. The idea behind government interference in CSR practices in developing countries is to maximize favourable effects and minimize undesirable effect, and not rely on market forces to deliver desired results. Governments in low- and middle-income countries should take initiatives to ensure that CSR practices with impact in their countries are tailored to national economic and social interests. Practices framed in developed countries and transferred to businesses based in developing countries through international trade, investment and development assistance might deliver ineffective results and less than satisfactory benefits.

Ward et al. (2007) justify government involvement in CSR activities in developing countries with justification in the form of defensive and proactive arguments. The underlying argument behind defensive justification is a want to minimize possible adverse effects of CSR on local communities, environments and markets. For example, codes of conduct implemented through supply chain requirements and enforced through audits can provide positive opportunities for producers and suppliers based in developing countries, but they can also act as a barrier to market access if local businesses fail to abide them. Furthermore, the experience of global supply chains is that costs and benefits are often not equitably distributed along the chain, with costs being borne by the producers and the benefits are enjoyed by the retailer (Bass et al., 2002). Here is where approach of cultural relativism can be applied, but in a form of economic development relativism acting as a vessel of economic development while allowing for positive discrimination. The underlying argument behind proactive justification is a want to maximize the host market public benefits of CSR practices in economic, social and environmental segments. For example, in those countries whose export sectors are closely associated with social, health or environmental consumer concerns such as agriculture and textile, governments can facilitate market access for their producers by providing training, institutional framework and reducing (or subsidizing) cost of certification needed in those industries. Furthermore, governments should work to align business activities of foreign companies and public policy to achieve societal goals and promote and support socially desirable business practices by domestic enterprises as well.

Circling back to business ethic approach in international business and its effect on CSR practices, it can be argued that when considering internationalisation to developing countries a modified Friedman doctrine might be applied, combined with cultural relativism approach in order to allow for benefits of doing business in developing countries. The results of Flammer (2015) study provide academic support for this argument as the study discovers that CSR activities increase shareholder value and value gains are stronger in socially-conscious industries. Furthermore, results show that CSR programs improve operating performance. Complying with basic postulates of Friedman doctrine, companies can maximize their profit by engaging in CSR activities. Since the study was conducted on a sample of U.S. based companies, the results should be taken with caution when interpreted in the context of developing countries. Likewise, initial financial benefits of CSR activities tend to decrease over time.

However, a guidance and regulation of CSR practices and activities provided by national and local government should be in effect as to achieve desirable outcome. NGOs can and should find their role in aligning CSR activities with societal needs. Joining NGOs to CSR statement given by companies can add authority and trust (Lee, 2018) and thus can be used as a powerful tool. A third bearer of CSR profiling in developing countries, aside from government and NGOs, are consumers themselves. What is a common practice in developed

countries is yet to be established in developing economies. However, one should keep in mind that customers can act as a true market force only when given assembly of choice and purchasing power to make that choice. Until that milestone is achieved it is up to government and NGOs to steer CSR activities in developing countries.

6. CONCLUSION

In the past few decades, the public's concern about the ethics of business operations of organizations on a global level has become more and more prominent. Taught by the immoral examples of business practices from the past, companies are forced to adapt their business strategies to more sustainable and socially responsible goals. Two distinguished approaches in the theory of socially responsible business can be outlined, namely the classical approach (the shareholder theory) and the socioeconomic approach (the stakeholder theory). The widely accepted paradigm that explains why companies engage in socially responsible activities is defined by stakeholder theory and it reasons CSR as a strategy to maximize long-term return on investment. There is a large number of definitions of the CSR term in the literature. The definition of socially responsible behaviour ranges from compliance with the law to philanthropy. Many academic studies use the three dimensions of 3BL paradigm as referential indicators in CSR studies: economic, environmental and social progress. Handful of studies show that considerable economic benefits can be obtained through CRM activities. However, the problem of CSR in international business still remains rather understudied topic in academic literature.

Many ethical issues in international business are rooted in the fact that political systems, legal systems, economic development and culture differ substantially between nations. When transcending national borders, multinational companies need to be particularly responsive to these differences. According to Sharma (2019), CSR in developed countries is mainly related to environmental issues and improving standards of life and healthcare. On the other hand, CSR programs in developing countries can be characterized by their need to take the aid of established international organizations.

The problem of business ethics in international business has only gained attention in scientific literature at the end of the twentieth century preceded by ethically questionable events on international markets. The issue of business ethics approach to CSR in international business is even more pronounced when considering the context of developing countries due to their lower level of economic development. Hill (2013) outlines four straw men approaches to business ethics in international business that can be characterized as Friedman doctrine, cultural relativism, the righteous moralist and the naïve immoralist. Campbell (2006) argues that enterprises are more inclined to conduct a business in a socially responsible way when faced with strong state regulation, industrial self-regulation, non-governmental organizations (NGOs) and a normative institutional environment that encourages corporate social responsibility. Since norms and regulations in developing countries are not as stern as the ones in already developed countries, businesses internationalizing their production and operations to low- and middle-income countries are tempted to resort to cultural relativism and act as naïve immoralists. Based on the literature review, two research questions were defined and addressed through discussion on CSR in developing countries. First issue regards the business ethics approach that international businesses implement when expanding operations abroad. Second issue questions the actions of host (developing) countries that should be taken in order to derive the maximum benefit of CSR practices conducted by international businesses from developed countries, as well as who the main actors of these actions should be.

It can be argued that when considering internationalisation to developing countries a modified Friedman doctrine might be applied, combined with cultural relativism approach in order to allow for benefits of doing business in developing countries. However, a guidance and regulation of CSR practices and activities provided by national and local government should be in effect as to achieve desirable outcome. Public policy actors should set national development (economic and sustainable) strategies to provide clear signals to foreign investors. NGOs can and should find their role in aligning CSR activities with societal needs. A third bearer of CSR profiling in developing countries are consumers themselves. However, one should keep in mind that customers can act as a true market force only when given assembly of choice and purchasing power to make that choice.

The present paper is based on review of relevant research and review articles on topics related to CSR. The paper does not cite empirical data which can be considered its limitation. The value of the paper is reflected in the synthesis of key knowledge on CSR in international business, providing discussion regarding the context of developing countries and proposing a mixed business ethics approach to conduct of responsible business in

developing countries. Recommendation for future research is to assess and compare CSR activities of international businesses in home (developed) and host (developing) countries as to judge business ethics approach in international business.

The impact of COVID-19 on trends in funded pension funds

Prof.Ivanka DANEVA, PhD¹

¹New Bulgarian university – Sofia, Bulgaria

Abstract: Insurance in funded pension programs is a part of the non-banking financial sector. Practically, in many countries, in which the achievement of a balanced pension system in a dynamic environment is achieved through a sustainable pension policy based on an overall long-term strategy, an important place is devoted to funded pension schemes. The development of the latter is related to the business dynamics, labor and financial markets trends, which, since the beginning of 2020, have been strongly affected by the COVID-19 pandemic, led to low interest rates, an increase in unemployment, a contraction of production, and therefore to a decrease for a certain period of time (in the best scenario) of the number of "actively" insured persons, to the strengthening of the volatility of the financial markets with the outline of a clear negative return's tendency. It is obvious that Covid-19 crisis adds pressure to private and public pension systems. Hence it appears a rhetorical question regarding the need for funded insurance as one of the prerequisites for the adequacy and sustainability of the whole pension system.

In this regard, the article examines commonly accepted statistical indicators for the economic, social and financial significance of the funded pension programs during the years of the so-called pandemic COVID-19 by tracking changes in them. This analysis can be an important argument in support of the development of the pension market for the insurance model and the economy of a particular country.

Key words: funded pension scheme, PAYG system, population coverage, pension insurance market, social security contributions, penetration rate, replacement rate.

Introduction

The study of the pension markets dynamics covers a system of generally accepted indicators for which statistical data are published. Some of these indicators are considered in this article.

The change in **the volume of private pension assets** in the OECD (Organization for Economic Development and Cooperation) countries for the period 2019-2020 outlines an increase of 11%, with an absolute amount of more than USD 56 trillion (OECD, Pension Markets in Focus, 2022). Pension funds are the main means of financing private pension plans and constitute more than 90% of total assets in a number of countries such as Israel, Australia, Finland, Iceland, Mexico and Portugal¹. The statistics indicate that the nominal growth of pension assets for a total of 77 countries for which the OECD provides data is positive for both the period 2010-2020 and for the period 2019-2020, although it is lower for the second period. In the period 2019-2020 there are countries with a negative trend - Peru, Chile, Australia and Jamaica. The factors for the increase in assets can be of different nature: political and regulatory - government decisions to increase income due to the economic consequences of the pandemic, and therefore the income on which the insurance contributions to the mandatory funds are charged, the introduction of mandatory participation, other regulatory changes; economic - changes in tax, unemployment, financial markets etc. Each factor has a differentiated impact in each country.

The ratio of private pension assets to the size of a country's economy, measured by gross domestic product (GDP), or as it is also called the **penetration rate**, indicates the importance of pension funds for the economic development and serves to assess the recovery of pension assets after crisis periods. It outlines the possibilities for providing pensions for the participants in these funds, the population coverage, the maturity of the insurance market in a given country and the importance of pension funds in financial intermediation.

A large range of variation in this proportion is observed both in countries members of the OECD and in countries that are outside this organization. Only in seven countries - the Netherlands, Iceland, Switzerland, the United Kingdom, Denmark, Sweden and the USA pension assets exceed GDP i.e. the penetration rate is above 100%. The countries, in which this ratio is relatively low, are characterized either by a policy of weak development of funded pension schemes (France, Greece, Turkey, etc.) or by the fact that the pension markets in them are newly emerging and developing or the implemented policy is not stimulates them. In Central and Eastern Europe (CEE)

¹ Private pension assets in some OECD member countries include occupational and personal voluntary pension schemes, which are indicative of the dynamics of pension fund assets (over 62% of private pension assets are in pension funds), the remaining pension products and services in the pension insurance market are offered by banks, investment companies, life insurance companies (in the form of pension insurance contracts) or are in the form of pension reserves (author's note).

countries developing funded insurance over the last 20-25 years (except for those that practically changed their pension model), the proportion of pension assets/GDP is below 20%, which means that it can expect a faster increase ratio depending on the implemented policy and the degree of mandatory participation.

The relative share of pension fund assets for OECD countries remains high. This dynamic is a result of applying policy regarding the pension model structure and stimulation of **participation in funded schemes with defined contributions compared to pension insurance based on defined benefits**, as well as of macroeconomic factors.

For some countries, defined contribution are the only mechanism adopted for funded pension funds or are predominant. Defined benefit pension funds are voluntary in Canada, Ireland, Germany, New Zealand and the United Kingdom. Other countries combine the existence of both possible funding mechanisms for funded pensions.

Funded insurance based on defined contributions is a mechanism for financing privately managed pension funds in countries where private pensions complement and compensate for the future limitation of the PAYG system. In a number of countries such as Australia, Chile, Mexico, these pension plans are an important part of mandatory pension insurance, but in other countries they are both mandatory and voluntary. In the CEE countries pension reforms led to the introduction of funded pension funds based on defined contributions on a mandatory and voluntary principle in order to achieve sustainable pension income and stability of the insurance system by diversifying pension sources and creating personal motivation for participation in them. However, at the beginning of the previous decade Hungary and Poland apply policy related to the implementation of funded pension funds only on a voluntary basis.

The role of funded pension plans, especially those based on defined contributions, has grown significantly in recent decades due to factors whose relative importance has changed in the course of the each country development (Daneva, 2016, p.112-120). This trend does not change in 2019-2020. Financial and economic crises explain the "retreat" from defined benefit pensions with the problems that arise with the difficulties in maintaining the solvency at an adequate level and overcoming the deficit. In the general trend since 2011 of moderate growth in pension funds, mainly due to growth in contributions and to a lesser extent due to positive returns on investments, the faster development of defined contribution pension schemes stands out due to the closure of occupational defined benefit schemes by their sponsors to new entrants, and incentivizing workers to join plans in defined contribution schemes.

Public expenditure on pension insurance shows a general trend of growth both in the OECD countries as a whole and in the CEE countries with developing market economies. They, measured as a share of GDP, are growing faster in countries where penetration rates are increasing more slowly. In the context of a pandemic, the cost of public pensions has increased due to government policies to mitigate the impact of inflation on the real purchasing power of retirees. At the same time the retirement age has its objective and natural limit, which is related to the average life expectancy. Measures for strength the PAYG system include increasing retirement age and/or creating incentives for workers to work longer. However, the effective retirement age has declined, and this indicator is particularly important for solving a number of problems: the demographic problem - the aging of the population; taxes; insurance contributions; the balance of the cost-covering system etc.

The COVID-pandemic has changed this indicator for a number of countries, including Bulgaria in a negative direction. This narrows the scope for dampening the absolute and relative growth of public spending on pensions by raising the retirement age. In the complex of interconnected problems for the balance of the public expenditure covering system, it is extremely difficult to find an unambiguous solution that will lead to a positive change in the income replacement ratio, to limiting the burden on the state budget for additional financing of the public part of the pension system, etc.

In one third of the OECD member countries mandatory or quasi-mandatory pension system is a prerequisite both for higher **population coverage** as a whole and for achieving a replacement rate of around and above 60%, considered the minimum for European Union (EU).

Coverage is highest in countries with mandatory participation in private pension plans. For example in Australia, Chile, Estonia, Iceland, Israel, Sweden and Switzerland population coverage is around and above 70% of working age population, and in Bulgaria this percentage is equal to 100%. In all these countries, private pensions are compulsory, workers must join a pension plan. The low coverage of the population in individual countries with mandatory participation in funded pension schemes can be explained by the high relative share of the informal labor market. In the quasi-mandatory occupational pension systems in Denmark, Sweden and the Netherlands, coverage is around 60%. Dramatic changes in the mandatory participation in some countries

(Hungary, Poland, Slovakia and the Czech Republic) and changes in the rules of inclusion sharply lower population coverage with funded schemes. With regard to voluntary pension plans, participation in them during the 2019-2020 is relatively shrinking.

The outlined dynamics of funded pension schemes and the achievement of development goals also reflect the **pension funds performance**, measured by assets nominal **return** and especially by their net real return. In the decade following the financial markets recovery after the crisis of 2008, the variation of the pension funds return is clearly expressed, but in the majority of countries the annual nominal as well as the real return are positive, and for 2019 these values are more high compared to their level at the end of 2020. In 2020, only Japan, Poland and Australia have negative returns (both nominal and real), and the real return for 2020 of funded schemes in Australia is minus 1.1%, in the Czech Republic minus 1.2% and in Poland minus 4.4%.

Saving for retirement is a long-term process, covering an average of 35-40 years, and this requires the pension fund return be considered over the entire period of accumulation, not just during the unfavorable periods of its level. The achieved return on assets on the pension insurance market determines the asset/liability ratio in defined benefits plans, and the amount of accumulated funds on the individual account in defined contribution program, on the basis of which the pension is determined. Therefore, for insured persons, the assumed level of return on their pension assets for the entire accumulation period is essential, and this is a complex matter that is predicted at a given level of probability. A sufficiently long period of accrued contributions to the individual accounts of insured persons presupposes the achievement of an adequate pension in defined contribution funds. The calculated expected return can show the contribution of pension funds (on average) to a higher standard of living after retirement, only if the growth of real wages is lower than it.

According to the OECD classification, **an income replacement rate** is a ratio between the pensions of individuals (or a given population group) and (average) income for a given period of time. The total replacement rate includes all sources of pension and therefore funded pension schemes are the determinant in its structure. In the majority of countries where these pension program are implemented, the PAYG pension pillar also functions. This gives funded schemes a complementary role in terms of replacement rate. The problem then is what part of the total replacement ratio represents the role of supplementary funded pension funds and what is the extent to which the accumulated funds in the individual accounts of the current insured persons will be sufficient to achieve this goal. What proportion of the total replacement rate is “covered” by them is a key indicator of their relative importance for the sustainability and adequacy of a country's pension model. In principle, insured persons with lower incomes are relatively less affected by the investment risk in defined contribution pension schemes, because for them the pension from the public insurance forms a significant replacement coefficient, and on the other hand, the provision of a pension from the PAYG system is often associated with the application of a built-in automatic stabilizer and established social networks for old age.

The statistics indicate an increased participation of defined contribution funds compared to defined benefits pension schemes and a significant share of defined contribution pension schemes to the total weighted average pension income. On the other hand, when the pension coverage of funded programs is higher due to mandatory or quasi-mandatory rules, the total replacement ratio is affected to a relatively greater extent by the investment risk and the achieved return, taking into account the guarantees provided in the regulatory regimes. In voluntary pension schemes, the coverage risk is greater and therefore the impact of risk and return is more limited at the macro level, but on the other hand, the absence of a guaranteed return increases the impact of investment risk on the size of payments.

Data for the relative contribution of funded pension schemes to the total pension replacement rate by income level relative to the average (taken to be 1) in some OECD countries show that the lower the level of the PAYG system replacement rate, the larger the relative share in the total coefficient of pensions from private pension plans. The data indicate that for earners 50% above the median wage, the relative importance of income from funded funds is greater compared to that for middle and low-income workers. If the person receives only a pension from the PAYG system, then his replacement ratio will be significantly lower compared to using diversify sources of pension income. This particularly affect high-income population groups.

In 27 EU countries, the gross replacement rate from the PAYG system for those receiving half the average wage is 58.6, for those with average wages – it is 47.4, and for those with twice the average wage - it is 40. 6 (OECD: Pensions at a Glance 2021: OECD and G20 indicators, p. 159). For individuals entering the workforce, funded pensions will make up a significant portion of total pension payments in Australia, Chile, Mexico, the UK, etc. A significant place has also been assigned to them in some CEE countries, in which pension reforms started in the

1990s and which are based on defined contributions. Their substitutive and complementary role will manifest itself in the coming decades, and this is especially true for countries where participation in mandatory privately managed pension funds is due to automatic mechanisms for inclusion in them.

The comparison of the relative share of pension fund assets to GDP, on the one hand, with the gross replacement ratio, on the other, indicates the existence of a non-linear relationship between these indicators, expressed in the fact that the higher the share of assets to country GDP, the lower the gross replacement rate of the public system. Statistical data unequivocally show that in a number of countries that are members of the OECD, as well as in countries outside it, in the general "package" of pension income, the percentage distribution of the components of the pension system in the weighted average pension "wealth", an important place is occupied by private pensions programs, and mainly those based on defined contributions.

The development of privately managed pension funds in Bulgaria, illustrated by the change in the number of participants, the dynamics of assets and their proportion to GDP, and the performance indicators of the investment portfolios of the pension funds outlines the following trends:

- Permanent increase in the number of participants² in the additional pension funds - from 1,804,469 in 2002 to 4,900,034 at the end of 2022. Expressed in relative numbers, this growth compared to 2002 is significant and is due to the greatest extent to the increased number of members of universal pension funds and to a lesser extent to the number of persons insured in professional and voluntary pension funds (www.fsc.bg).

- Pension assets in Bulgaria outline a growth of nearly 11% in 2020 compared to 2019. In 2021, they continued their positive change, being nearly 13% more compared to their level in 2020. Due to the negative yield in the past year, the assets at the end of 2022 are over 1.7% lower their level at the end of 2021.

Penetration ratio changed from 13.1% in 2019 to 14.8% at the end of 2020 and remains almost at the same level in 2021. This indicator for Bulgaria in 2021 and 2022, especially in real terms, has limited opportunities for growth given the downward development of the financial markets in the last year and the state of business after Covid-19 crises. According to this indicator, the pension market in our country is in the group of so-called countries with "developing" markets. In the coming years, the relative changes in the size of pension assets and the size of GDP will be influenced by factors, some of which will have a positive impact on the growth of pension assets: the increase in the average salary; limiting the "gray" economy; retention of the negative movement of the yield from the investment of the assets and the gradual transition to positive values; the development of voluntary pension insurance. However, there are more factors that can have a restraining effect on the dynamics of pension assets:

- the exercise of the right of a so-called free choice and transfer funds to the public pension insurance from the supplementary pension funds;
- not increasing the percentage of the mandatory insurance contribution;
- inflation and interest rates;
- the possible increase in unemployment;
- problems of transferring contributions by insurers, etc.

Regardless of the possibility that pension assets will not grow at high rates in the short term, in the long term they will occupy an increasingly large relative share of GDP due to the development of supplementary mandatory pension insurance and the fact that funded pension funds are still in the accumulation phase.

- Bulgaria is among the countries with the weakest development of voluntary pension insurance, and the participation in them did not increase during the mentioned period.

- For Bulgaria, the nominal rate of return is 2.5%, and the real rate is 2.3% for 2020. Given the changes in the level of financial market indices around the world, it can be logically assumed that the statistical data for 2022 will outline negative trends both in comparison with 2019 and 2020. This is also shown by the statistical data on funded pension funds in Bulgaria (www.fsc.bg). The return of funded pension funds outlines a positive trend until 2021, when the average arithmetic profitability was 4.19%, 5.0%, and 6.39% for universal, occupational and voluntary funds, respectively. Published yield data for the period 31.12.2020-30.12.2022 on an annual basis, however, shows a negative yield, which testifies to the rather

² One insured person can participate in 4 pension funds. (author's note)

high levels of negative returns for the previous year. Fluctuations in the level of profitability are inevitable, just as the phases of the economic cycle and fluctuations in the financial markets are inevitable, but for the insured persons, the achieved profitability is significant for the entire period of insurance, not for separate periods.

- As in a number of other European countries, the pension system in Bulgaria must adapt to unfavorable demographic changes. The effect of demographic changes on the pension system is reflected in the significant increase in the age dependency ratio and the economic dependency ratio (respectively the proportion of pensioners/per 100 people of working age and number of pensioners per 100 people providing insurance) in the following decades. If children under the age of 14 are also added, then one can see how many dependents there are per 100 people of working age. Whichever indicator is analyzed however, the picture is not optimistic and suggests adequate measures. There is some potential for mitigating the impact of demographic changes on the pension system through parametric changes, some of which relate to ensuring a decent standard of living for the elderly by increasing compulsory social security contributions and stimulating supplementary voluntary pension insurance.

The statistical data and the periodically carried out analyzes of the adequacy and sustainability of pensions in the EU countries show unequivocally that Bulgaria is in a very unfavorable position compared to indicators for the member countries: coefficient of economic dependency; coefficient of age dependency; employment rate of workers aged 55 to 64; sustainability of the pension system, measured by changes in the share of gross pension expenditure relative to GDP; income replacement rate, which is below the EU minimum -60% and others. These conclusions are based on EU statistics and do not take into account the future impact of funded pension funds on the observed indicators.

The implemented policy of the so-called "democratic choice" between the PAYG and the funded system could have an insignificant and short-term beneficial effect on the public pension insurance, after which the deficit of the public pension will increase due to the granting of pensions to persons with low accumulations transferred individual account from funded pension fund and with high guaranteed minimum pensions, which, with the trend of an aging population, will increase the pressure on the State budget. A huge amount of funds will not be invested in the country's economy, including and in government securities with all the consequences arising therefrom. The need to maintain higher liquidity of pension assets, due to the uncertainty of the choice of the insured persons between the PAYG and the funded funds, as well as between the State Fund for Guaranteeing the Sustainability of the State Pension System and universal pension funds, as well as the risk from a "herd syndrome" with rumors of a financial crisis, will require the sale of assets and restructuring of portfolios, which in turn will lead to a number of adverse consequences for the capital market and a strong outflow of investors from it.

Conclusion

The outlined trends disclose that in the COVID-19 pandemic conditions, the profound processes of population aging and reduction of the income replacement ratio of the public part of the pension system have activated the policy in the OECD countries as a whole regarding the stabilization and stimulation of participation in funded pension programs, as a result of which these programs continue to develop dynamically and upwardly. This global trend shows the important role that funded pension plans have or will have in the aggregate replacement rate. For the developing pension insurance markets, including Bulgaria, this role will be evaluated with an increase in pension funds maturity. Reality: Funded pension programs have struggled with different crisis – Covid-19, financial markets downturns etc. over the past years and most are facing manageable challenges/risks.

The Factors That Influence Online Shopping In Albania

PhD. Jona MULLIRI¹

¹Department of Mathematics and Informatics, Faculty of Economy & Agribusiness, Agriculture University of Tirana, Albania, Email: jnulliri@ubt.edu.al

Abstract: In recent years, online shopping has grown steadily in Albania, through different channels like websites, online platforms, and social media which are offering a wide range of products and services. Online shopping involves the usage of secure websites and secure payment methods to protect personal and financial information.

The purpose of this paper is to study the factors that influence online shopping as well as the problems that this market segment has in our country. To accomplish the study goal, the data collected in three regions of Albania between January and April 2022 have been analyzed. From the results of the analysis, it was noticed that the main factors that have an impact on online shopping are the ability to use information technology, age, education, and gender.

The survey showed that 79.3% of consumers performing online purchases are in the age group of 19-29. The behavior of young consumers as well as the skills they have in ICT usage will affect the growth of the online market in the coming years. The data analysis showed that the favorite products of online shopping are clothes and the least favorite are the fruits and vegetables category. Education is also another factor that has an impact on the attitude of consumers toward online shopping.

The analysis has shown that the main reasons why consumers do not buy online are: they prefer to be in-store and have a closer look at the products, the service is better in-store, and lack of trust in online shopping. Furthermore, considering the analysis done for online purchases, cash on delivery is the most common form of payment for all product categories.

Keywords: *online shopping, ICT, platforms, secure payments*

1. Introduction

The recent years' development of information and communication technology has significantly affected the increase of volume, speed, accuracy, and cost of information, in addition to the decrease of cost and increase of efficiency of sources, as well as the overall business activity. During the pandemic situation, we noticed novel ways of commerce. The pandemic restrictions imposed a new way of living, and distribution channels faced the need for continuous adaption.

There are various studies that try to create the profile of an e-commerce customer, especially its demographic and psychologic aspect. Data shows that customers with higher income than traditional buyers and that are less averse to risk, more innovative and impulsive, prefer the online shops to be always open; those customers see that buying from home is relaxing, easy and time-saving (Ramus and Nielsen, 2005).

Tremendous development of technology and huge increase of internet usage are transforming the online retail. Online commerce is defined as the process of buying a service or good through the internet and the use of an application or website (Tahrini et al., 2021).

When compared to countries of EU, Albania is a latecomer in the online business. According to a 2021 survey (Lone et al., 2022), Albania occupies the penultimate position among 37 EU countries regarding usage of internet (73%) and buying of products and services online (38%).

Yet this value has increased significantly if we consider that according to World Bank Findex of 2017, only 7% of Albanians stated that they were buying online. Among various factors of this situation we could mention lack of internet access, delayed formalizing of online commerce, low volume of online bank transactions for utility services, etc. (World Bank, 2020).

According to World Bank, the COVID-19 situation drove the Albanian economy towards digitalization. In 2020, World Bank calculated that 20% of the surveyed companies had launched or increased their online business during the pandemic. 55% of the interviewed Albanians stated that they had intensified online shopping since the pandemic started.

Online commerce can be an opportunity for many Albanian companies to go international without big investments or opening of brick-and-mortar stores. It enables companies to explore new markets at low cost (World Bank, 2020).

2. Objectives and methodology

Main objective of this study is to identify the impact of information technology on online market, the determining factors when buying online barriers and reasons for not buying online. This objective will be implemented by:

- Evaluating the factors that affect online shopping
- Identifying and assessing the reasons and barriers of online shopping.

The implementation of this study is based on basic research methods, such as data mining and analyzing, and literature review on the topic. We drafted a questionnaire that we used to interview customers face to face. This information aimed to assess the approach and perception of customers for online shopping and the issues they have faced with technology in the process.

The survey was conducted in three regions, to reach all country and attain a better perspective. Regions were defined by three main variables: number of population, the Multidimensional Poverty Index (MPI), and geographical position. MPI is an indicator that measures poverty and is related to income/consumption (monetary aspect) and to non-monetary aspects such as education, health system, gender equality, etc. Based on data from INSTAT (2017-2018), Albanian national MPI is at a level of 0.003. Tirana, Shkodra, and Korca are the three regions included in the survey. Tirana and Shkodra have an MPI value that is very close to the national average, and at the same time they represent various regions. Korca is included as a region that belongs to the East-West axis and is also experiencing a noticeable economic change with the lowest value of MPI in 2020 (OPHI, 2020 MPI=0.00027).

This study focuses on online shopping in retail trade as it represents a considerable weight in the trade volume of our country. Retail products are structured around three main categories:

- Food, beverages, and tobacco in specialized and non-specialized stores
- Non-food products in specialized and non-specialized stores
- Retail sale of motor fuel in specialized stores

Based on data from INSTAT (2021), the weight of these categories on retail trade is respectively 28.8% for food, beverages, and tobacco, 42.5% for non-food products, and 28.3% for motor fuel. The same data shows that the number of small and medium-sized enterprises (SMEs) has quadrupled from 2016 to 2021.

3. Literature review

The COVID-19 pandemic in Europe caused many customers to reconsider their buying habits and even to acquire new ones (Sheth, 2020), and the extent to which customers would stick to a newly introduced model of consumption. Currently, internet commerce is one of the most dynamic types of commerce (Ramus and Nielsen, 2005). This kind of purchase is comfortable and flexible from the buyer's point of view. It offers the possibility to order within a day, regardless of the buyer's location. It provides more information to the buyer, be it reviews about the company, the product or the competition (Charlebois *et al.*, 2021).

Access to technology and internet has increased awareness of buyers about goods and services they can acquire. In addition to increased awareness about the products, we notice an increased awareness of customers about the country of the purchase (Barska and Wojciechowska-Solis, 2020).

The role of the customer is changing with the evolution of the market. Customer behavior is not just a matter of commerce, but also an interaction with non-for-profit organizations and government institutions. Customers play several roles while selecting, buying, and using goods, services, and experiences (Solomon, 2013).

A new kind of behavior has emerged in this era of digital information and communication, that affects many aspects of life, including the transactions of selling and buying. Today buying does not mean only contacting the seller in person to obtain the required products (Charlebois *et al.*, 2021).

Various studies deal with the profile of online customers, especially their demographic and psychological features. Data shows that customers with higher income than traditional buyers and are less averse to risk, more innovative and impulsive, prefer the online shops to be always open; those customers see that buying from home is relaxing, easy and timesaving (Ramus and Nielsen, 2005).

There is a trend to buy online, yet the information is scarce on the relation between initial acceptance and the behavior after the adoption. At the same time, websites and software of online commerce claim to have a

strong impact on the customer. Nevertheless, identifying the factors that encourage customers' trend to continue this behavior and the extent at which they do so, require further studies (Shang and Wu, 2017).

If retailers intend to present a new concept of retail shopping, such as an online shop, they have to make sure that this experience will be customer-oriented and smooth; one way would be by investing in a suitable design (Capgemini, 2017; Schogel and Lienhard, 2020).

When analyzing online commerce for the retailers, we need to consider how it meets customer needs and its feasibility. Generally, any retailer needs to grasp the model that offers the best customer experience from an organizational, market and technology point of view. These concepts are considered new business models (Hartmann, 2014).

When buying online, customers pay attention to the application used for pre-ordering and ordering; it needs to allow customer the possibility of inspecting the available products and purchase them at any time. This concept encourages customers to prefer this method of shopping. It has increased customer satisfaction, especially during the lockdown since many products were not available at local stores. On the other hand, retailers gather useful information via the application, that can be later used for specific purposes and to generate added value (Schogel and Lienhard, 2020).

Online shopping requires some investments in technology solutions and methods of organization. There is a connection between the size of a company and its retail activity in online channels. In the meantime, retailers have invented alternative ways of using technology to overcome these new challenges. Smart devices and online sales have enabled even the small companies to revisit their strategy and aim for a new competitive approach (Savastano *et al.*, 2019).

4. Results and discussions

Initially, our survey asked the customers whether they had ever bought online. 67.7% of respondents in Tirana, 63.4% of respondents in Korca, and 59.5% of respondents in Shkodra answered positively.

Table 1. Online shopping by county

Region	Did you make an online purchase?		Total
	No	Yes	
Korçë	No.	41	112
	%	36,6%	100,0%
Shkodër	No.	47	116
	%	40,5%	100,0%
Tiranë	No.	147	455
	%	32,3%	100,0%
Total	No.	235	683
	%	34,4%	100,0%

Source: Authors' calculation

There is little difference from region to region regarding the percentage of those that buy online, but the distinction becomes greater when asked about how long they have been buying online. 95% of customers in Tirana have been buying online since 3,6 to 4,2 years ago; customers in Shkodra declare an interval of 2,5 to 3,1 years.

The trend of online buying varies greatly with age groups. 79,3% of customers aged between 19 and 29 years old have purchased over the internet, while the values curb down as the age gets older. The below table demonstrates that only 32,8% of customers aged between 60 and 75 years old have placed on order online.

Table 2. Online shopping by age

Age group	Did you make an online purchase?		Total
	No	Yes	
19-29	No.	46	222
	%	20,7%	100,0%
30-44	No.	53	208

	%	25,5%	74,5%	100,0%
45-60	No.	97	98	195
	%	49,7%	50,3%	100,0%
60-75	No.	39	19	58
	%	67,2%	32,8%	100,0%
Total	No.	235	448	683
	%	34,4%	65,6%	100,0%

Source: Authors' calculation

The attitude of customers towards online buying depends also on their education. As shown in the below table (Table 18), 78,9 of customers with a higher education have purchased over the internet, while this percentage is clearly lower among those that lack a university diploma.

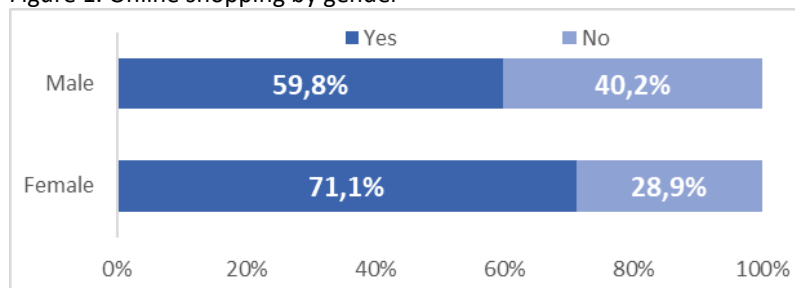

Table 3. Online shopping by education level

Education Level		Did you make an online purchase?		Total
		No	Yes	
Primary	No.	55	37	92
	%	59,8%	40,2%	100,0%
Postsecondary	No.	101	116	217
	%	46,5%	53,5%	100,0%
University level	No.	79	295	374
	%	21,1%	78,9%	100,0%
Total	No.	235	448	683
	%	34,4%	65,6%	100,0%

Source: Authors' calculation

71,7% of the women respondents say that they have bought online, as compared to only 59,8% of men respondents.

Figure 1. Online shopping by gender

Source: Authors' calculation

The questionnaire included a set of affirmations that helped us understand the reason why people did not buy online. Customers had to express the level of agreement with them in a scale like this:

1-strongly disagree; 2-disagree; 3-neither agree nor disagree; 4-agree; 5-strongly agree

Figure 2. Reasons for not buying online

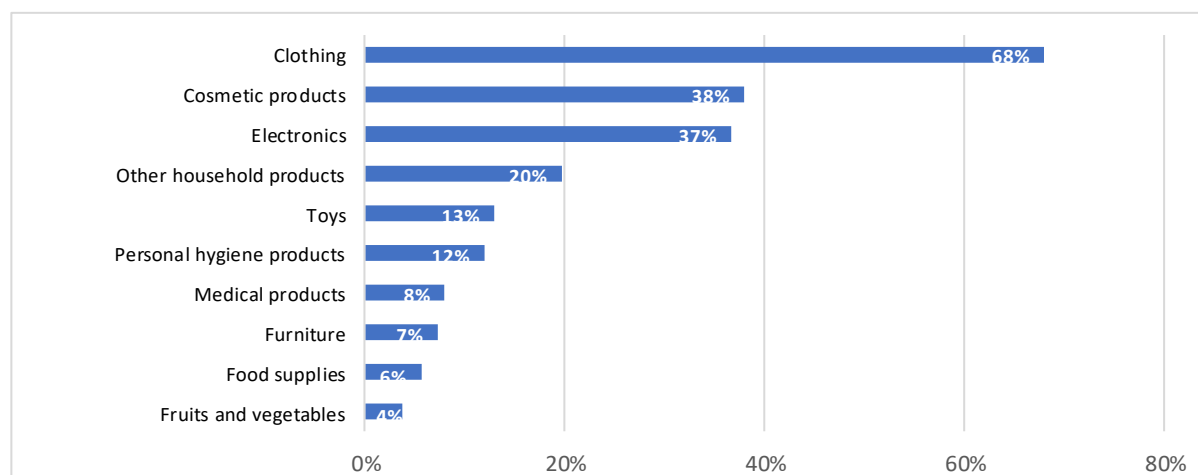

Source: Authors' calculation

As you can see in figure 2, customers do not buy online mainly because they prefer to see the products physically, customer service is better in brick-and-mortar stores, and they do not trust online transactions.

Packaged food was omitted from the set of data because customers referred overwhelmingly to fast food and to orders placed through their mobile phones.

Figure 3. Categories of products purchased online

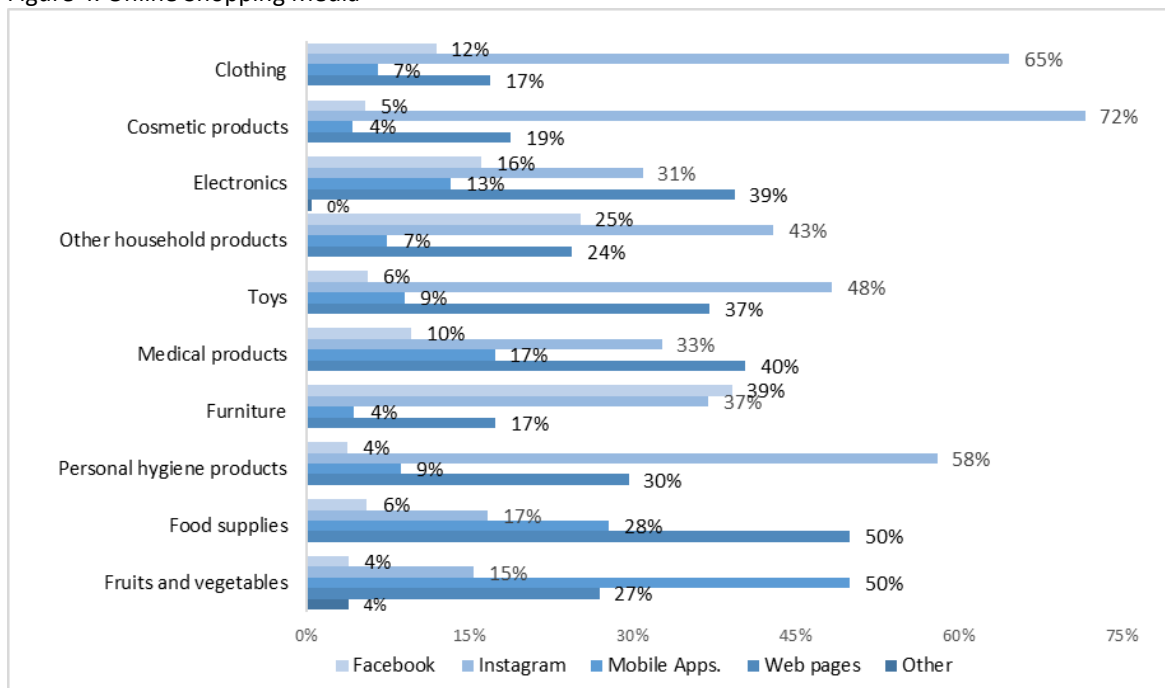

Source: Authors' calculation

Clothes were the item that customers mostly bought, followed by beauty products and electronic devices. On the other hand, only 6% of customers had ordered groceries and 4% had bought fruits or vegetables.

The most frequently used channels of online commerce differ from one category of products to the other. Clothes and beauty products are traded mainly over Instagram as confirmed by 60% of the respondents. Electronic devices, medical products and groceries are more frequently bought from various websites.

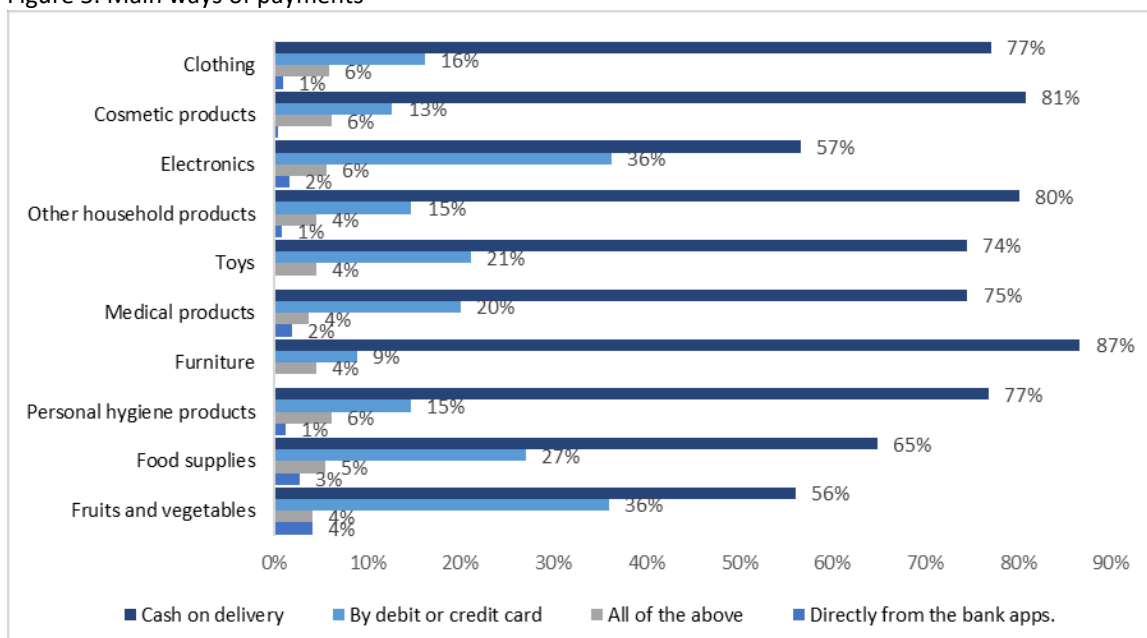

Figure 4. Online Shopping Media

Source: Authors' calculation

Another important aspect of online buying would be the payment method. World Bank ranks Albania as the country with the lowest number of adults that have a bank account, in the region. The main reason for this is a lack of funds (World Bank, 2020). Lack of trust and insufficient experience also encourage customers to prefer to pay in cash when they receive the product that they order online. According to the below figure (Fig. 18), paying in cash upon delivery is the most widespread method of payment for all categories of products.

Figure 5. Main ways of payments

Source: Authors' calculation

5. Conclusions

Online shopping is experiencing rapid growth and has already become a habit for many developed countries. Even in Albania, the online trade of clothing, cosmetic products or electronic devices is growing year by year (Shahu et al., 2022).

Online buying would need customers that are inclined to use the internet, so it seems that internet use among Albanian customers is increasing rapidly, especially in urban areas. This is confirmed by the study, since half of respondents state that they are regular users of internet, in contrast with 7,5% of the respondents that do not use internet. 65,6% of customers say that they have bought online, and this percentage is sufficiently high.

Time spent on the internet is an important indicator that demonstrates the willingness of customers to accept innovations. This amounts to 2,8 hours per day, exposing buyers to new buying models and various promotions. Young people navigate the web for approximately 3,7 hours each day.

Online buying differs greatly among age groups. For example, those aged 19-29 years old buy the most and the older people obviously buy less. We think this is mostly related to digital literacy and in the coming years, the behavior of younger customers will increase online transactions.

Women buy online 10% more than men. Our results show that this gap is mostly related to social traits of men, opting for physical contact with the products and a lack of trust in online purchases.

Method of payment has an important effect on the level of trust, convenience on customer's part and efficiency for the companies. As already stated by World Bank, Albanian adults have the lowest number of bank accounts in the region. The reasons for this may be many, but lack of funds is on the top of the list (World Bank, 2020). In addition, lack of trust and experience have encouraged customers to continue paying in cash upon receiving the products they have bought online.

A considerable number of customers say they are willing to buy online if they are sure of the quality, origin, freshness, and (positive reviews of the seller; all this is closely related to the age of customers. Their process of online buying seems to be difficult to absorb for customers, and they spend quite some time browsing through the products. Regarding the Albanian customers, the main benefit of online buying is home delivery.

Are Classic Organisational Theories Still Valid? – How and When to Use a Classic Theory in the World of Rapid Change

Judit PÓTÓ¹

¹ PhD-student, Faculty of Business and Economics, University of Pécs, Hungary, poto.judit@tkk.pte.hu

Abstract: Classic organisational theories provide a comprehensive analysis of a critical organisational problem and its solutions. With organisational growth models came the idea that in the process of internal organisational adaptation and problem-solving, the organisation generates new problems. Different solutions will therefore be effective to varying stages of growth, and what may have been the key to success in one situation may become a significant obstacle to progress at a later stage.

However, the answers to these specific organisational problems and classical organisational theories remain valid. This is even more important in today's fast-changing environment because of the shortened time a company spends in a growth phase. Thus, identifying a critical problem within the organisation and finding the right classical organisational theory response can significantly support the company's internal adaptation and further growth.

In this theoretical study, the summary of Greiner's model can be read, and then the critical evaluation of the classic organisational theories from the growth approach. In the end, we summarise the results in a figure, which can help not only the theoretical understanding but also support managers in organisations to find the best supporting tools for further organisational development.

Keywords: organisation theory, growth, structure, crisis, Greiner model.

1. INTRODUCTION

At the time of the emergence of management science, in the early 20th century, traditional companies were characterised by constant internalisation. Environmental change was slow, so adaptation at the organisational level was not expected - except for a radical innovation (e.g. mechanisation or continuous production), which in turn resulted in a significant change in the whole structure of the industry (Agarwal, 2007; Anderson and Tushman, 1990; Hargadon, 2001).

Today, however, the dynamic pace of change is present in all segments of the market environment. Markets and customer segments are changing, but the life cycle of technologies and products has also shortened (Christensen, 2015; Porter and Heppelmann, 2017). To make profits, a company must manage rapid product life cycles, even within a few years; respond to changes in the supply chain; form strategic alliances; and possibly acquire elements of the supply chain (McGrath, 2013; Simons and Dávila, 2002).

2. Organisational Theories and Growth

For a long time, organisational theories have suggested the underlying assumption that there is one single universal answer or one set of good practices in the life of organisations. From an economic history perspective, classical organisational theories also show what the most typical problems in the functioning of organisations were at the time. Still, the many criticisms associated with them can lead one to think that these theories have since been overtaken by management science. However, practice shows that Taylor's or Weber's models still have valuable and usable lessons, not to mention the growing industry of organisational development, or the philosophical perspectives of contingency theories, for example, which still help us better understand how organisations work.

Growth has not been explicit in classical organisation theory for a long time. This has changed with growth models. The main novelty in these theories is the idea that the solution to organisational phenomena and problems generates new problems (Greiner, 1998) - but the significance of the problem itself and the response in organisational theory has stayed the same. The following line of thought is based on the premise that different organisational theories can be interpreted at different stages of the corporate life cycle and provide relevant answers to the operational problems that arise there. This is all the more important as companies today have a much shorter time to adapt to a growth stage and successfully overcome the obstacles to internal organisational transformation. Thus, finding and applying the proper organisational theory response can be of much greater importance (and competitive advantage) than in the past.

The following line of thought aims to combine classical organisational theory with a growth model by assigning the most appropriate classical organisational theory to the different stages of growth. The growth model is presented first, followed by the organisation theories identified in the different stages.

3. Greiner's Growth Model

Greiner (1998) distinguishes five growth stages in his theory. The stages are characterised by a balanced development, consolidating building blocks, an ever-expanding set of proven solutions, established procedures and growth based on lessons learned. However, Greiner observes that once an organisation has progressed long enough in this consolidation phase, it is precisely as a consequence of success that problems begin to accumulate, which the structure in that phase can no longer handle because of the growth in size. The systemic characteristics that served the company's further development at the beginning of the phase became its obstacles at the end and triggered a crisis period. The company can successfully overcome this crisis by changing its internal structure to one better suited to its increased size and varied responsibilities.

The first phase is the *creativity* phase. During this period, founders focus on the original good idea, the product, the immediate core business and the market. The primary motivation is dedication. Communication is informal, tasks are shared, and feedback comes directly from the market. However, as the company grows, the two or three founders may be unable to cope with the rapidly increasing volume of operational tasks. It is necessary to recruit new staff, which in turn may not have a founding relationship with the core product or core business; who may not have a clear understanding of the (often unspoken) corporate mission; for whom the organisation is a workplace, not a life calling. This requires outlining a managerial position that can manage processes at the operational level, establish routines, assign tasks and hold people to account. However, the subordinates and the founders are only sometimes happy with this leader, as it reduces the autonomy of some (or all) of them. This is the *leadership crisis*.

Once the organisation has successfully managed the introduction of a managerial position, and it works well, it reaches the stage of *direction*: the functional division of labour and the functional experts that go with it. Performance measurement and various standards are developed; routine processes are described; increasingly efficient procedures are sought and recorded.

At the same time, the experts in each area (e.g. sales, production, marketing) increasingly feel that they understand their site much better than central management and that feedback from the market is not reflected in top-level decisions. They are uncomfortable with the highly centralised structure of central management and have a vested interest (constrained by market feedback) in taking as many decisions as possible in their own area. At the same time, central management is fighting for uniformity and against loss of control. This brings the organisation to a *crisis of autonomy*.

To solve this crisis, the organisation needs to give up centralised manual control and give more responsibility and autonomy to middle management levels. If this transformation can be successfully achieved, the company will start to grow rapidly. This growth will be driven primarily by a surge in the motivation of middle managers, who will be empowered to react quickly to the market, develop products autonomously or align the overall marketing strategy to specific market niches. This is the *delegation* stage. Top management retreats from operational tasks, communication from headquarters is rare, and the focus is more on representing strategic directions. Significant decisions are based on reports, and the various departments are increasingly autonomous.

At the same time, this in itself is a sign of the crisis to come. Autonomy is leading to fragmentation; departmental leaders are starting to go their own (and increasingly divergent) ways and individual interests can lead to serious resource struggles. Parallel functional units emerge, which no longer serve the whole company, but only a particular division, even to the detriment of other divisions. Sensing this, central management tries to bring the divisions under tighter control, but this no longer works as it used to – a *control crisis* occurs.

Successfully coping with this crisis requires reorganising the company: in the *coordination* phase, some functions are brought to the centre while others remain decentralised. Autonomous operations are still supported, but headquarters once again manage the mechanisms for strategic planning. The company's operational units are reorganised along strategic lines. New organisational units are emerging to strengthen horizontal cooperation and to support the development of company-wide coherence, a common culture and a shared sense of identity.

But it also means that the amount of controlled processes increases and that the new units make middle management feel more in control. Teams closer to the market feel too distrustful of the centre and too bureaucratised in the systems through which they can give feedback to the market. Innovation is lost among too many rules, and long service lines make middle managers struggle for improvement, unmotivated and ineffective. The system becomes inflexible, and companies need to respond faster to market signals – a crisis of bureaucracy (*red tape*).

To solve this, the company needs to move to a much more flexible, less formalised structure that can achieve flexible, spontaneous operation despite its huge size. In the *collaboration* phase, the organisation is increasingly moving towards group functioning; the basic unit is the group rather than the individual, drawing on the strengths of the heterogeneity of the workforce. Regulation is reviewed and minimised; hierarchy from outside is replaced by self-discipline. A matrix structure is often used to tailor responses to problems. A series of training sessions support managers in learning the right corporate culture and collaborative leadership. Grassroots initiatives and innovation are supported across the company.

The importance of Greiner's theory was the idea that there is no one-size-fits-all solution in the life of an organisation - and that the solution that benefits the organisation in a given situation can later become the biggest obstacle to progress. It is, therefore, necessary for management to look for new solutions from time to time that is better suited to the current situation to improve the company.

In the following, we will review the solutions offered by classical organisational theories to various organisational problems and then attempt to relate them to Greiner's model, thus showing how each early theory answers organisational imbalances that arise during growth.

4. CLASSIC THEORIES

4.1. Taylor and The Perfection of Production

Taylor aimed to remedy the production problems that arose during mass production by finding solutions to the issues of better work organisation. His name is associated, among other things, with the introduction of 'scientific experiments' into work; the search for the best processes or the reorganisation of productive work along the best techniques; or the separation of physical and mental work (Kieser, 1995; Taneja et al., 2011).

In the economic context in which Taylor developed his work, these principles were paramount. An essential feature of the society was the mass of immigrants to the United States from Europe, the majority of whom were unskilled (or non-specialised) and unfamiliar with the language. At the same time, industrial developments allowed the construction of increasingly complex machines. In this economic environment with an oversupply of labour (but with a specialised structure), it was logical to seek to make the best use of what was most readily available: human resources.

Thus, Taylor and his followers sought to break down the production process as much as possible into routinely performed steps to make the sequence of activities trainable and measurable. The critical principle was efficiency: to achieve this, Taylor sought to find the best possible process, the best possible (and best trained) workers, and the most balanced workload.

Taylor and his ideas have been and continue to be the subject of much criticism (Taneja et al., 2011) - but the principles he put forward are still valid in some areas. Indeed, as organisations grow, there comes the point when a sequence of actions (be it service or production) needs to be performed so often that the need arises to formulate how best to do it. The need to describe procedures, review activities and eliminate inefficiencies therefore arises. A further advantage is that the job becomes learnable, i.e. there is scope for staff expansion, thus relieving the burden on a more senior manager with more experience and a broader vision.

As work processes become more specialised and the managerial and subordinate layers are separated, Taylor's principles and thinking can therefore be used today – and at the level of production where a small organisation is starting to grow, where a routine task suddenly takes days or weeks to complete, taking time away from strategic issues. This is most pronounced at the beginning of the second stage of the Greiner model (Greiner, 1998).

4.2. Weber and the spread of bureaucracy

A vital feature of the bureaucratic theory associated with Weber's name is the principle of rationalisation and bureaucrats as the most professional response to institutional functioning. While organisational growth as a phenomenon is not explicitly discussed by Weber, many features of his theory can be seen as a response to the challenges of growth (Kieser, 1995; MacKinnon, 1988)

The most important is the process of rationalisation itself. Weber examines rationalisation as a historical process from several perspectives. On the one hand, at the level of worldviews, i.e. the fundamental values that emerge in the world, this (although a fascinating and thought-provoking area) is currently outside the line of thought.

On the other hand, Weber's typology of domination, according to which the validity of domination can derive from three sources: charisma, tradition and rationality, which Weber calls legal domination, is presented in connection with rationalisation. According to Weber, what makes a charismatic leader a leader is their personal characteristics - these leaders are followed because of their vision, example, energy, motivational capacity, and ability to transmit this vision or belief to others. Leaders of this type believe in their success, are decisive and care little about doubt or negative feedback (Kieser, 1995) – a description very similar to the competencies required to start a new business (i.e. they can be classified as the first stage of the Greiner model).

Weber sees the tribal system as an example of traditional forms of leadership in the same way as the feudal landlord system or the traditional functioning of churches (Kieser, 1995). An essential characteristic of these systems is that they are driven by a 'belief in the sanctity of tradition', i.e. the accepted principle that the rule, the model, and the way of operating (and not the person) is immutable.

It is worth noting, however, that in these systems, the leader is 'anointed' (crowned / ordained / consecrated / etc.) – i.e. a leader always remains a leader. This characteristic is common to the charismatic style of leadership (where the leader works with his whole personality). Still, a significant difference is that while the charismatic leader is followed (in Weber's words) "to the extent of his charisma", in the traditional system, even the leader's incapacity cannot eliminate his position. The stable point is not the person but the tradition, and the leader also functions as a symbol of the convention, i.e. his very existence is proof of the validity of the tradition – at all times.

Let's consider the state (tribe, church, large estates, etc.) as an organisation. This is also a weakness of the system: if the leader is incapable, there are some rather drastic solutions to replace him (such as murder, exile or war), but these (obviously) could not become a systemic solution to this problem even in the past.

Moreover, not only the selection of the leader but also the cooperation between the leader and subordinates and the system's operation are traditionally shrouded in tradition. This is an important feature, which can be seen as an essential self-defence mechanism of the organisation against over-dependence on individuals - but it also means that even a talented and capable leader can have severe limits to action in these systems.

Overall (given our historical knowledge), we cannot say that the traditional system has not been organisationally effective in the long run. The key to effectiveness lay in the interaction between the person of the leader and the system of operating traditions – inept or weak leaders could be 'retained' by the system of operating rules built around them (if they were effective); on the other hand, a capable leader could try to improve on the traditions. However, it is essential to see that the main characteristic of traditional systems was that a) they took a long-term view, and b) the aim was the survival of the system, not the individuals involved in running it.

Weber sees legitimacy as the third source of domination. Here, aspects of rationality are reflected in the choice of the leader (the leader is elected, not anointed, i.e. recallable) and in the written rules. Weber also advocated the spread of written forms at the level of institutions – he considered the writing of contracts, laws, protocols, and procedures as key. Equally important to him was the decoupling of the role of the manager from the person (in the bureaucratic bureaucracy, everyone has a role to play, and the personal competence of the manager is in principle irrelevant) and the equal treatment of all clients (Kieser, 1995).

These features show that the underlying organising principle is the desire for reliability and predictability to make the system independent of human experience (since if the procedure is written down, the craftsman who knows the design is useless). However, this has been made necessary by the increasing complexity of production processes and the increasing complexity of the expectations placed on the state – so that by now, both organisations and administrations have grown beyond the point where work processes can be operated

from memory and where the degree of complexity of systems is still transparent to the staff. It is therefore a very logical step to try to make processes learnable and replicable, and (in huge organisations) to clarify the decision-making powers and rules of the different work groups - in other words, to replace organisational memory (tradition) with written documents.

However, this system is not as different from traditional forms of governance as it might seem at first sight. Suppose we imagine a kingdom where the traditions are written down and can be interpreted in the same way by everyone and where the decision-making powers and competencies of the respective positions are precisely defined. In that case, we almost have Weber's system – we only need to have agreed (and written down) rules on how the leader is chosen and how he can be recalled or replaced.

That is why I think that, although the importance of the improvement that written (i.e. clear and referable) rules have made over the traditional ones cannot be overstated, the real achievement of the Weberian system was that it also clearly regulated by who and how the rules could be changed. This is a level for which there was no existing procedure, especially no established methodology, in the traditional system. In this way, the Weberian principles not only made the organisation independent of personal experience or leadership, and addressed not only the risk of exposure to organisational memory but also how it could evolve within a regulated framework. Thus, while the principles of Weberian rationalisation seem logical to apply to the Greiner stage of management of a growing organisation, the motive of regulation makes it more appropriate to the beginning of stage 4 (the coordination stage).

4.3. The human relations doctrine and organisational development

The Hawthorne Experiments process, led by Elton Mayo to investigate the factors contributing to productivity, is widely known. The main lessons of the experiments were the recognition of the importance of peer pressure or in-group norms and the noticeable impact of informal organisational groupings on performance. Since then, many critics have questioned the scientific soundness of the experiments (Franke and Kaul, 1978; Kieser, 1995). Nevertheless, this theory still provides essential insights: it draws attention to the people side of management, emphasises the importance of interpersonal competencies of lower-level management (i.e. those directly in contact with productive subordinates), and lays the foundations for various theories of organisational development. For this reason, this theory can be useful in the corporate growth stage when people who have no (or not necessarily intrinsic) motivation for the company's mission or core product first appear in the company – i.e. the direction stage.

However, organisational development schools have rejected the idea that there is a personality profile that makes someone fit or unfit to lead. It is also possible to empirically measure what makes employees happy or motivated. Instead, we should strive to enable subordinates and managers to identify their problems and create working conditions that are most effective for specific managers and subordinates in the interests of specific corporate goals – allowing the employees to develop themselves.

Within the theories of organisational development, three groups can be distinguished: those focusing on the individual (e.g. Lewin's theory of participation), those focusing on groups within the organisation (e.g. Schein's techniques) and those focusing on the organisational structure (Barlai and Csapó, 1997)

If we return to the growing organisation, the issue of motivation, attachment and identity of employees within the organisation is an issue that needs to be addressed continuously from stage 2 onwards. However, as the organisation becomes more complex, it becomes more and more vital to deal with individuals and groups. And theories that also consider organisational structure are significant in that they are the first set of theories (chronologically) to explicitly address the process of organisation formation as well as the issue of organisational formers, thus suggesting the premise that organisational structure changes over time.

4.4. Contingency theories

The theories in this category define the organisation different from the previous ones. In Barnard's theory, the organisation is a set of actions and, as such, is separate and separable from both its external environment and the people who work within it. According to Barnard, the organisation's purpose is its own survival, to which end it makes organisational decisions and to which end it develops expected forms of behaviour for its participants. To do this, it provides its participants with various incentives, which it aims to balance with the burdens on its participants (Gabor and Mahoney, 2010; Kieser, 1995)

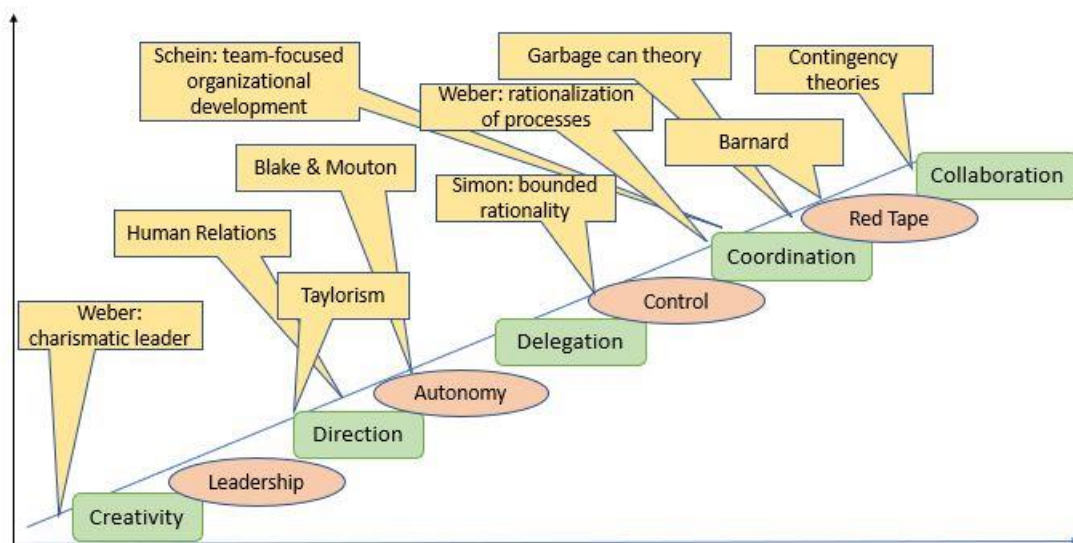

Another famous theory in the category is Herbert Simon's bounded rationality theory, which focuses primarily on individual decisions within the organisation. Simon argues that perfect rationality or perfect decision does not exist in practice – organisational leaders strive for a good decision rather than an optimal one. Among the reasons, he points to imperfect information, overly complex decision spaces and uncertainties about the future (Kieser, 1995).

These theories are, at first sight, difficult to classify from the perspective of a growing organisation since they can apply to any situation and any organisation. However, there is a stage in the growth of an organisation when the conditions outlined above become particularly relevant. The organisation's management perceives the problem outlined by Simon towards the end of stage 3 – the size of the organisation when, at the latest, it is faced with the situation being too complex to bring together all the decision factors and make ideal decisions. So managers try to find at least one "good enough" solution.

And the organisational characteristics described by Barnard become dominant in the coordination phase - at which point the degree of complexity and size of the organisation grows beyond the range of human reason so that the people in the company can rightly feel that they – and the way the organisation works – are pretty much precisely as Barnard describes (not coincidentally, since he was also basing his theory on large companies when he developed it) (Kieser, 1995).

Among the integrated approaches, it is also worth highlighting the garbage can model (Cohen et al., 1972): this is another system of thought that can be valid at any stage of organisations, but it is also, in my view, most relevant at the coordination stage. By then, the organisation has enough history to allow all sorts of ideas, stories, problems and solutions to 'float' in the free space; there are enough levels of decision-making to allow tasks and issues to bounce around uncoordinatedly among themselves; and the organisation is sufficiently opaque that, for example, functions that are routinely thrown around/run away are not noticed for a long time.

Figure 1: Phases of Greiner's growth model and the organisational theories

5. Summary

Greiner's theory of growth emphasises that there are no universal responses in the life of an organisation. There are periods of calm and crises, and what benefits the organisation at one stage may be the central element of a crisis later on. Therefore, from time to time, business leaders need to find different solutions to adapt the internal functioning of the organisation to its increased size and changing challenges.

However, once the growth phase has been identified, it is also worth considering descriptions from classical organisational theories. The theories may still be valid today for the specific operational problem that the organisation is facing - and the proposed solutions may still be as effective in the particular organisation at that stage as they were when the theory was first developed.

Abstract: This paper presents the expectations and perception of the quality of hospitality service in a particular hospitality facility that service users expect based on their perception. This is one of the standards based on which the quality of the hospitality service is evaluated.

The expectations and perception of the quality of the hospitality service for the guest, i.e. the user of the hospitality services, start from the impression gained before visiting the hospitality facility to the memories from the previous stay in the restaurant about the quality of the restaurant product in the facility itself. Guests expect and perceive the following types of quality: technical quality, functional quality and emotional quality. The hospitality or restaurant product is complex and represents the function of all tangible, material and immaterial services.

The quality of the restaurant services offered in hospitality establishments is their sustainable development, the one that brings prosperity, while respecting the acceptable capacity and the protection of resources.

In order to determine the expectations and the perception of the quality of the restaurant service, it is necessary to make an analysis through a scientific, methodological and planning approach.

This paper will present the results of the expectations and the perception of the quality of the restaurant service of the guests that was made with guests in the hospitality facilities from the eastern part of the Republic of North Macedonia.

The solutions were based on improving the quality of the restaurant service.

Keywords: expectations, perception, technical quality, functional quality, emotional quality

1. INTRODUCTION

For the guest who is the visitor of a catering facility, the quality of the services offered in it consists of several elements, starting from the impression acquired before the visit to the memories of the stay in the catering facility. Here we can list the following elements of the quality of services offered in a catering facility:

- a picture of the catering facility before arrival,
- pre-arrival information about catering facilities,
- attractions and attractiveness,
- infrastructure and environment,
- reservation,
- arrival (reception),
- communication during service and
- memories after leaving communication.

From the resident population's point of view, the quality of the services offered in a catering facility is their sustainable development, the one that brings prosperity, while respecting the affordable capacity and the protection of resources. Whether a catering facility chooses standardization according to already established standards or will build its own standard, image and brand, will be decided by the authority that manages the catering facility.

2. EXPECTATION AND PERCEPTION OF QUALITY

The variable expectation as a basis for subjective quality assessment mostly depends on the image of the business entity, oral presentation of friends or relatives, price and promotional activities. Expectations for a catering facility are based on the previous stay in the restaurant, conversation with friends, following

comments on social media, networks and other means of pre-arrival information¹. Guests expect and perceive the following types of quality:

- technical quality - quality of the material that is the basis for the realization of the services (space, technology, equipment, inventory, etc.);
- functional quality - service delivery process from the first contact with the restaurant (direct or indirect); and
- emotional quality - the feeling of being a guest in the restaurant. It represents an additional kind of quality that the guest unconsciously expects and can hardly appreciate, but he certainly feels it.

Perceived quality reflects the difference between expectations and the service provided. The restaurant product is complex and represents the function of all tangible and intangible services, and the way the guest perceives their quality depends on each individual segment in relation to their price. In other words, the guest always compares the perceived service with the price to a greater or lesser extent (depending on satisfaction).

Customers have different demands from each other. Different service personnel will provide the same service in different ways. This high degree of person-to-person interaction makes services heterogeneous. Services can be different every time guests use certain services, they are very dependent on people and their behavior.

A variety of catering services can help attract guests. Namely, it is important to take into account the quality of each individual item that can contribute to raising the quality level of the overall service, taking into account its price. Price is an important segment here, which in most cases plays the role of a scale. It is therefore important to establish a balance between the variety of services, the required quality and the price. The guest's perception of the value for money often varies depending on the guests' different sales channels. Practice has shown that guests who came through different sales channels can feel different quality of service. If we take into account that the price of the service is a numerator with which the valorization is obtained, then there is a justification that real differences exist, although the guest should not, as a rule, feel them.

There are four basic types of guests according to the price they pay:

1. The individual guest pays the highest price for the services, so the expectations of the individual guest are higher than other guests. Relative to group guests, these guests enjoy the most attention from caterers, so loyalty programs often focus only on individual guests, while group guests are neglected.
2. Group guests – pay a price that is higher than the price of the allotment allocation, but lower than the individual one. Caterers will agree that they pay the least attention to the guest in the group because they are part of a group attending a banquet, so caterers often have no knowledge of the individual needs and wants of the guests in the group. A group guest can one day be an individual guest, just as a group guest can be a loyal guest.
3. Guests using Alotman – these are guests who pay the lowest price to the hotel because they come through a travel agency as part of an offer. The guest of the allocation can be an individual or part of a group. Unlike other groups of guests, this type of guest is very carefree about the quality of service, because the quality of service is guaranteed by the agency. If there is a deviation in quality, the guest can request a certain return of the asset in accordance with the contract.
4. MICE (Meetings, conferencing, exhibitions) – the price for guests who regularly stay in the catering facility may be lower by a certain percentage of the full price.

3. QUALITY OF RESTAURANT PRODUCTS

The modern approach to the quality of restaurant products implies the need and obligation to define the quality of food and beverages based on objectively and accurately determined data. The quality of restaurant products includes all the parameters that will result in the satisfaction of the guests. One of the main reasons for going to catering establishments is the consumption of food and drinks, hence the need to define these

¹ Laškarin, M.: (2015) Menadžment zadovoljstva gosta u hotelijerstvu primjenom programa loyalty, doktorski rad, Fakultet za menadžment u turizmu i ugostiteljstvu, str. 224

terms. Food is a basic requirement for keeping organisms alive.² According to the origin, the food products that are consumed are divided into products of vegetable, animal and mineral origin.

Food products in their composition can contain and add various substances to improve certain properties or preserve quality. When analyzing the composition of food, quality parameters from technical-technological, microbiological, health-safe, nutritional and sensory aspects are included, both in the production process and during distribution and sale. These are factors that have a direct impact on food quality, while market and consumer factors have an indirect impact on food quality.

The food safety law defines the terms: food, food regulations, food operator, food for special nutritional use, rules for good production and good hygiene practice, official control, etc. The term food means any substance or product, in a processed, partially processed or unprocessed state, intended to be or expected to be consumed for human consumption. The term "food" includes drinks, chewing gum and all substances intentionally incorporated into food during its production, preparation or processing.³

The term food regulations implies law and by-laws that regulate food and food safety, they cover all stages of production, processing and distribution of food, as well as animal feed produced or intended for animals used for food production. A food operator is any natural or legal person who is responsible for ensuring the fulfillment of the conditions prescribed by the food regulations within the food business under his control.⁴

Food for special nutritional use is food that differs in its composition or specific production processes from food intended for normal consumption, is suitable for what is claimed as its nutritional purpose and is distributed in a way that indicates such suitability, meets the requirements of persons who have special nutritional needs due to their health status (metabolism, physiological condition, age and digestive problems).⁵

Rules for good production and good hygiene practice is a system of main work rules that must be ensured in the production and circulation of food, products and materials that come into contact with food and relate to personnel, facilities, equipment, materials, the condition of the materials that are introduced, the documentation, the hygiene maintenance, the production technology and the control systems, in order to minimize the risk of food contamination through production or other human activities.⁶ Food operators involved in any stage of production, processing and distribution of food after primary production and associated operations of primary production are obliged to fulfill the general and special hygiene requirements and regulations adopted on the basis of the food safety law.⁷

Quality of restaurant products can be perceived through the following components: gastronomic product, technical-technological aspect, functional aspect, microbiological aspect, health-safe aspect, nutritional and sensory aspect.

A gastronomic product is a specific type of food product that consists of several foods that are integrated into a finished product. This product aims to attract a larger number of consumers (guests) to the catering facility. Through the good specification of the gastronomic product, it is possible to get to know ethnic, social, cultural, national characteristics. From a territorial scope, the gastronomic product can be: urban and rural. Guided by the fact that food is considered part of the culture, the urban gastronomic product can be branded. Consuming this product requires visiting primary and secondary food producers, restaurants and locations where food is produced as the primary purpose of the visit. Through the rural gastronomic product, it is possible to get to know the national cuisine of a country better. National cuisine is best known through cultural heritage, traditions and customs. The quality of the gastronomic product is one of the key factors for assessing the quality of service received in the restaurant, and therefore some authors emphasize the importance of food quality.

⁷ <http://fva.gov.mk/mk/zakon-bezbednost-hrana-pravilnici-odluki#a-zakon> (accessed on 29.01.2021)

The technical-technological aspect of quality includes the properties of the products, the procedures in preparation, the norms and the way of serving the prepared food and drinks. This aspect of quality includes the equipment of the catering facility, that is, the possibility to prepare a certain quality product.

The functional aspect of quality is the process of the sale (delivery) of the product (meal) in the restaurant, welcoming the guest, seating and choosing a table, offering and choosing the products (active sale), serving, charging, sending the guests. Good functional quality can compensate for a meal that was completely up to the guests' expectations.

The microbiological aspect of food quality indicates whether food and beverages contain a greater number of total microorganisms than permitted and that there are no pathogenic and conditionally pathogenic organisms in the food that cause food spoilage, i.e. food poisoning.

In principle, all food products of animal origin are considered to be primarily contaminated. In addition to the primary contamination of animal products, in the process of their processing, that is, their handling, secondary contamination often occurs. Diseases that are transmitted through food actually occur after the ingestion of food that is contaminated with infectious or toxic agents into the human body. The causative agents of these diseases are infectious microorganisms, which in suitable conditions multiply in food or excrete toxins in it. In almost 90% of cases, these diseases are caused by bacteria, so we usually talk about bacterial alimentary infections and intoxications, but they can also be caused by other infectious agents (viruses, parasites). Reasons for the occurrence of diseases, which often occur in an epidemic form, arise as a result of failures in the technology of food preparation, distribution and storage.⁸

It is necessary to know the prescribed conditions very well in order to prevent the appearance and development of pathogenic microorganisms. Persons who prepare large quantities of food (restaurants, cafes, kitchens and similar facilities) should be health-educated and observe the basic principles of hygienic minimum when handling food (preparation, storage and distribution). They should also undergo special training on the method and procedures in the technology of food preparation and make regular sanitary and health examinations.⁹

The health and safety aspect of the quality of food products means the hygienic correctness of the products and the correctness of their composition in terms of energy, building and protective substances that have an impact on the biological value of the products.¹⁰ According to the Law on the Safety of Food and Products and Materials that Come in Contact with Food (Official gazette of RM no. 54/2002) the following food is considered unsafe food:¹¹

- food that has expired, or has damaged packaging that can adversely affect the quality of the food;
- food produced or sold deviating from food hygiene requirements and not in accordance with the rules of good production, good hygiene and good agricultural practice;
- food that misleads consumers;
- food that contains pathogenic microorganisms or pathogenic parasites, that is, their developmental forms and secretions or pests that can have a harmful effect on human health;
- food containing residues of pesticides and veterinary drugs that are not permitted or in quantities above the maximum permitted levels;
- food that contains toxic metals, non-metals, other chemical pollutants from the environment, as well as poisons and other substances in a concentration that can have a harmful effect on human health;
- food that contains pathogenic microorganisms or pathogenic parasites, that is, their developmental forms and secretions or pests that can have a harmful effect on human health;

¹⁰ Ristovska, G., Gjorgjev, D., Kendrovski, V., (2007) Food hygiene and environmental protection – Skopje: PHI Republic Institute for Health Care, 78 p. : illustration ; 21 cm,

¹¹ Ristovska, G., Gjorgjev, D., Kendrovski, V., (2007) Food hygiene and environmental protection – Skopje: PHI Republic Institute for Health Care, 78 p. : illustration ; 21 cm,

- food containing residues of pesticides and veterinary drugs that are not permitted or in quantities above the maximum permitted levels;
- food that contains toxic metals, non-metals, other chemical pollutants from the environment, as well as poisons and other substances in a concentration that can have a harmful effect on human health;

food that is not labeled or if the expiration date cannot be determined from the labeling;

- there is no data from the declaration of the package from which it is sold when it comes to food that is not in original packaging, that is, that is sold in a loose state (bulk);
- food of animal origin and not marked with safety marks in accordance with veterinary health regulations.

The main objective of food safety control is to provide a product that will not endanger human health in any way and to take appropriate legal measures in case of discovery of the deficiency. The measures that will be taken are aimed at determining whether the food is safe or not safe for consumption. If the product is unsafe for consumption, it is necessary to identify and eliminate the cause that led to the production of unsafe food. Employees in catering facilities, especially in the production and serving of food and beverages, are directly responsible for the health of their consumers - guests. Food safety and consumer health are best controlled by implementing the highest hygiene standards or the HACCP food safety control system.

The director of the Food and Veterinary Agency, in accordance with the Minister of Health, prescribes the special requirements for the safety of nutritional supplements, prescribes the way of labeling, additional mandatory information related to the peculiarities of nutritional supplements, the amount, form and type of vitamins and minerals. and certain other substances, after previously obtained consent from the Government of the Republic of North Macedonia. The food operator can produce and put on the market nutritional supplements that meet the special safety requirements only after a previously issued opinion on the product by the Agency. Any new product that falls under the category of nutritional supplements can be put on the market only after a previously issued opinion by the Agency, that it meets the special safety requirements. The Agency keeps a register of products that meet the special safety requirements as nutritional supplements.¹²

The nutritional aspect of quality refers to the composition of food. Food is composed of ingredients, chemical compounds that have a certain role in the functioning of the human body from which the body appropriates and uses food and fluids for normal functioning, growth and maintenance, as well as for maintaining the balance between health and disease. Some of these compounds are essential, they cannot be created in the body and must be taken in through food, these are the so-called essential ingredients (iron and calcium, vitamins and certain amino acids).

Sensory aspect of quality or product quality assessed by human senses is one of the most important when assessing the quality of a gastronomic product and usually precedes all other quality assessments. In order to be able to do sensory analysis, it is necessary to know: terminology, anatomy and physiology of human senses, sensory assessment techniques, assessment tasks and procedures.

Sensory quality is the overall sensory impression of a sample as assessed using the following sensory evaluation techniques:

- Visual technique - sense of sight,
- Olfactory technique - sense of smell,
- Gustatory or oral technique - sense of taste,
- Palpatory technique - sense of touch and
- Audio technique - sense of hearing.

Sensory analysis allows us to evaluate properties, such as appearance, texture, smell and taste, and to judge the product as sensory acceptable based on observations or to reject it due to the existence of uncharacteristicsensory properties. This is a very important aspect of product quality.

¹² <http://fva.gov.mk/mk/zakon-bezbednost-hrana-pravilnici-odluki#a> (accessed on 29.01.2021)

Figure no.3 Sensory analyses

Catering establishments should accept modern trends in food, in the process of its preparation and serving. They should take into account the ethical responsibility in the production of the food products and avoid the characteristics of the products that represent potential dangers and uncertainty for the guest-consumers.

4. SERVICE QUALITY GUARANTEE

In order to prove the quality of products and services and the responsibility in their work, businesses often include various guarantees for their products and services in their promotional activities. In this context, the guarantee represents a written contractual obligation of one of the contracting parties to the other that they bear the risk of business activity, that is, they will compensate the damage. According to consumer protection law, a "warranty" is any obligation of the trader or manufacturer ("the guarantor"), undertaken in relation to the consumer, in addition to the legal obligations relating to the guarantee of conformity, to reimburse the price paid, replace, repair, or service in any way the goods, when they do not conform to the specifications, or to any other non-conformity requirement, stated in the warranty declaration or in the relevant advertisement available at the time or before the conclusion of the contract.

Guests in hospitality facilities are only offered a guarantee for the protection of personal data in accordance with the Law on the Protection of Personal Data, while the guarantee for the services provided is usually not practiced. In manufacturing, it is normal to expect a certain guarantee (when buying almost all products). Although the guarantee is one of the key elements of promotional activities, it is rarely or almost never used proactively in tourism and hospitality, as a factor of safety and increase of pleasure. The guarantee of the quality of service in the hospitality industry (if any) is often last and is highlighted in the event of an emergency as a reaction in case of possible dissatisfaction. Quality assurance is rarely seen as an opportunity to draw attention to and reduce the risk between offered and perceived quality. The primary purpose of a hospitality warranty is to address a guest complaint or dissatisfaction, and to a much lesser extent to stimulate interest and sales of services to potential guests. However, if building trust is one of the main goals of the relationship with the guests, then the catering facility is expected to provide trust and take responsibility. In this case, the guarantee of service quality can be freely applied as part of the restaurant operation.

5. ANALYSIS AND RESEARCH ON RESTAURANT SERVICE QUALITY, EXPECTATION AND PERCEPTION

A research can be conducted in two ways, in order to obtain two types of data: quantitative and qualitative data. The difference between these two types of data is that quantitative ones refer to facts such as: answering the questions what, where, how much, how often and so on. These are usually objective (not personal) and controlled. While in qualitative answers the answers are more subjective and describe the thinking - the attitudes of the respondent. In order to achieve the goal of this research, certain questionnaires were made which are intended for guests in the catering facilities in the eastern part of the Republic of North Macedonia. The purpose of this research is to get insightful opinions and attitudes as end consumers of the catering product. Furthermore, the obtained results can be used to create short-term and long-term plans for future development of restaurant operations and at the same time will allow comparative analysis with the same or similar facilities in the destination and beyond, providing theoretical and practical applicability in restaurant operations. This research was conducted in several phases, as follows:

- Preparation of questionnaires on Google Drive platform for creating and piloting questionnaires (before conducting the survey, in order to anticipate the shortcomings in the questions asked, the questionnaires were sent to several guests, where based on their answers, they have undergone some changes in the formulation of the questions.
- Sending the questionnaires to the guests of the hospitality facilities.

- Analysis and interpretation of the obtained results The Google Drive platform is created to automatically summarize the results. After the answering process, it immediately displays the results graphically in a pie or chart and allows individual review of the answered questionnaires.
- Interpretation of the results of the survey questionnaires consists of theoretical description and graphic presentation of each question.

6. RESULTS AND DISCUSSION

In the following, an analysis of the obtained results is presented in order to compare the average values of the indicators according to which the analysis of the quality of the hospitality services provided in the hospitality facilities in the eastern part of the Republic of North Macedonia is carried out. The analysis will help in determining the indicators that will give the true picture of the current state of the quality of the hospitality service in the hospitality facilities in the eastern part of the Republic of North Macedonia, the weaknesses in quality management will be determined, by applying research methods in which the guests in hospitality establishments will be covered, which will enable the determination of the quality of the hospitality service in the hospitality establishments in the aforementioned region of the country.

All indicators are evaluated according to the Likert scale ranging from 1 to 5 where (1 - insufficient, 2 - satisfactory, 3 - good, 4 - very good and 5 - excellent). The sum of the obtained values for each indicator is divided by the number of indicators and an average score is obtained which will show what is the current evaluation of the implementation of the quality of the hospitality services provided in the hospitality facilities in the eastern part of the Republic of North Macedonia. At the same time, when interpreting the mean values of the quality of hospitality services, when quantifying the impact factor, the following scheme was applied: 1.00-1.80 (very low); 1.81-2.60 (low); 2.61-3.40 (medium); 3.41-4.20 (tall); and 4.21-5.00 (very high).

Table 1. Total value of indicators by guests

N.	Indicators	
1.	Appearance of restaurants, restaurant equipment, staff	4.5
2.	Ability of the restaurant to provide service reliably and accurately	4.3
3.	Willingness of the restaurant to help guests and provide prompt service	3.9
4.	The experience of the employees in the restaurants and their communication while serving	4.02
5.	Individualized attention that the restaurant gives to its guests	4.38
Average values		4.22

Note:

The impact factor is represented visually by color according to the following legend:

1.00-1.80 (very low)	1.81-2.60 (low)	2.61-3.40 (medium)	3.41-4.20 (tall)	4.21-5.00 (very high)
-------------------------	--------------------	--------------------	---------------------	--------------------------

Table 1 presents the ratings of the individual indicators according to which the quality of hospitality services is determined by the guests in the hospitality facilities that are the subject of analysis. This presentation enables comparison of the quality of hospitality services within the given indicators by the guests. The average rating of the indicators that determine the quality of hospitality services by the guests in the hospitality facilities is 4.22, which means very high quality. According to the respondents, the highest quality is the appearance of restaurants, restaurant equipment and staff, which have a score of 4.5. This is followed immediately by the individualized attention that the restaurant provides to its guests with a score of 4.38, the ability of the restaurant to reliably and accurately provide service with a score of 4.3, the experience of restaurant employees and their communication during service with a score of 4.02 and the lowest score of 3.9 has the restaurant's willingness to help guests and provide prompt service.

7. CONCLUSION

This indicates that the guests are dissatisfied with the willingness of the restaurant to help the guests in the choice of services, payment method, etc. and to provide prompt service in serving food and beverages to guests.

To achieve recognizable quality, catering facilities should, first of all, adopt development plans and establish a quality catering model, which will determine the way in which it is necessary to create and sell the catering product.

A catering facility is determined by its model and it does not compete with catering facilities with similar characteristics, but with catering facilities that have the same model. That is why it is extremely important to evaluate the model of the catering facility, as well as the way it works. The elements that need to be evaluated in the catering facility refer to:

- selection of target guests,
- attracting new guests,
- joint relationship of human resources and guests,
- organization, management and operation of a catering facility.

The purpose of the assessment is to determine the direction of development of a catering facility in the future, that is, a way to ensure its long-term sustainability.

Legal Form of Businesses of Small and Medium – Sized Enterprises in the Slovak Republic

Katarína BELANOVÁ¹

¹ Assoc.prof., PhD., University of Economics in Bratislava, e-mail: katarina.belanova@euba.sk, ORCID: 0000-0003-2634-9238

Abstract: One of the most important decisions that an entrepreneur makes before starting a business is choosing the legal form of his business. Currently, entrepreneurs have the option of choosing from many legal forms of business. A sole proprietorship is the most frequently used form of business for a natural person, while for a legal person it is a limited liability company. The aim of the article is to characterize the development and frequency of individual legal forms of small and medium – sized enterprises in the Slovak Republic through analysis. For this purpose, we used secondary data, specifically the data of the Statistical Office of the Slovak Republic. According to our findings, the structure of SMEs according to legal forms is characterized by a predominant share of natural persons (entrepreneurs, or self-employed persons). In 2020, after the previous increase, the number of active natural persons decreased. The decrease was mainly due to the lower number of sole - proprietors as the most important legal form within this group of SMEs. In the following years, the number of natural persons increased. On the other hand, the coronavirus crisis did not stop the growth of the number of small and medium-sized enterprises - legal persons in 2020. SMEs – legal persons experienced a slight decrease in numbers in 2021 and growth again in 2022. The sectoral structure of SMEs – legal persons is characterized by the most significant representation of the service sector. Natural persons are mostly active in the construction industry. From the point of view of the structure of SMEs by ownership, privately owned SMEs clearly dominate. The dominant position of men remains in the performance of business activity. Slovakia is characterized by a higher representation of entrepreneurs in younger age groups.

Keywords: Small and medium – sized enterprises, legal form, natural person, legal person.

1. INTRODUCTION

Already in the distant past, people were engaged in the production of material goods and the provision of services. Initially, this activity did not have a specific legal framework. The first form of business at the beginning of the 19th century was basically the business of individual persons. Gradually, with the developing of labor division and specialization, business activity developed and found new forms and improved (Sivák et al., 2015).

The currently valid legislation in the Slovak Republic allows:

- business of citizens (natural persons),
- doing business in various types of business companies,
- business within cooperatives,
- others.

An entrepreneur in the Slovak Republic can operate as a natural person or as a legal entity, which is a decisive criterion for choosing a legal form. The most frequent way of running a business as a natural person is a sole proprietor. Besides it there is also a natural person, who carries on trade activities according to other than the trade authorization, or a natural person who engages in agricultural production and is registered in the special register. Legal entities can do business in different forms. The basic legal form of business for legal entities is a business company.

It is obvious that entrepreneurs have the option of choosing from many legal forms of business. They choose the legal form of the company considering the nature of the products and services, as well as the requirements of the entrepreneur who establishes it and ensures its activity (Belanová, 2021a).

At the turn of the 1980s and 1990s, the establishment of businesses in the Slovak Republic represented a new activity after forty years. Until that time it was the responsibility of the state authorities. This was primarily related to the fact that in the conditions of the nationalization of the national economy, any manifestations of entrepreneurship were considered not only inappropriate, but even directly harmful. Legal business functions were therefore exclusively entrusted to the competence of the state. The economic reform in 1989 fundamentally changed the conditions for doing business. The first steps of the reform were aimed at this area,

i.e. to establish a concept considering the existence of different types and forms of ownership. Gradually, all forms of ownership were equalized (Belanová, 2021b).

Table 1 shows the number of selected legal forms in the Slovak Republic. The most used form of business for a natural person is a sole proprietorship, while for a legal person it is a limited liability company.

Table 1 Number of economic entities according to selected legal forms 2015 - 2022

Source: Author according to the data of the Statistical Office of the SR

The aim of the article is to characterize the development and frequency of individual legal forms of small and medium – sized enterprises (SMEs) in the Slovak Republic through analysis. SMEs represent the most numerous segment of the business sphere and contribute significantly to the country's economy. The dynamic development of small and medium-sized businesses is one of the basic prerequisites for the healthy economic development of the country (SBA, 2022). Currently, there are ongoing discussions about the need for changes in the basic characteristics of legal standards, so that they better correspond to the needs of businesses in practice (Financial Report, 2022).

Despite the topicality and importance of this issue, according to our knowledge, there have not yet been conducted many surveys on the legal forms of businesses of SMEs in the Slovak Republic. An exception is the publication by (Klučka et al., 2022), in which the authors evaluate the performance of SMEs until 2019. They also characterize and compare the development of small and medium-sized enterprises in Slovakia and Austria.

Knapková and Krešáková (2018) compare legal forms of business companies in Slovakia and Germany. Their analysis confirmed that there are significant differences in the features and types of business companies in Slovakia and Germany despite similarities of nomenclature.

According to our findings, the structure of SMEs according to legal forms is characterized by a predominant share of natural persons (entrepreneurs, or self-employed persons). In 2020, after the previous increase, the number of active natural persons decreased. The decrease was mainly due to the lower number of sole - proprietors as the most important legal form within this group of SMEs. In the following years, the number of natural persons increased. On the other hand, the coronavirus crisis did not stop the growth of the number of small and medium-sized enterprises - legal persons in 2020. SMEs – legal persons experienced a slight decrease in numbers in 2021 and growth again in 2022. The sectoral structure of SMEs – legal persons is characterized by the most significant representation of the service sector. Natural persons are mostly active in the construction industry. From the point of view of the structure of SMEs by ownership, privately owned SMEs clearly dominate. The dominant position of men remains in the performance of business activity. Slovakia is characterized by a higher representation of entrepreneurs in younger age groups.

2. DEFINITION AND BASIC CHARACTERISTICS OF SMEs

In Slovakia, a term enterprise is understood from the broad point of view, in accordance with the Commission Recommendation 2003/361/EC of 6 May 2003 as "any entity engaged in an economic activity, irrespective of its legal form". It is the economic activity that is the determining factor, not the legal form. In practice, this

means that the self-employed, family firms, partnerships and associations or any other entity that is regularly engaged in an economic activity may be considered as enterprises.

In the article, we apply the size categories of enterprises resulting from the recommendation of the European Commission no. 2003/361/EC of May 6, 2003 on the definition of micro, small and medium enterprises and Commission Regulation (EU) no. 651/2014 of Annex I.

Based on the above-mentioned documents, the following three criteria are considered when defining an SME:

- staff headcount,
- annual turnover,
- annual balance sheet amount.

The most important size criterion, which must always be met, is the criterion of employment or number of workers. However, the number of employee's criterion is supplemented by two other financial criteria, of which the company must meet at least one of them. When classifying a company as an SME, one of the following possible combinations of assessment is compared: (1) number of employees and annual turnover, or (2) number of employees and total annual balance sheet amount.

A change in the status of an enterprise as an SME, or a small enterprise or a micro-enterprise within the set of SMEs, occurs only after exceeding the size criteria in two consecutive accounting periods. Based on this definition, the group of small and medium-sized enterprises includes business entities that employ less than 250 people and whose annual turnover does not exceed 50 million Euros and/or the total annual balance sheet does not exceed 43 million Euros. Individual size categories of small and medium enterprises are determined according to the threshold values of the above criteria (Table 2).¹

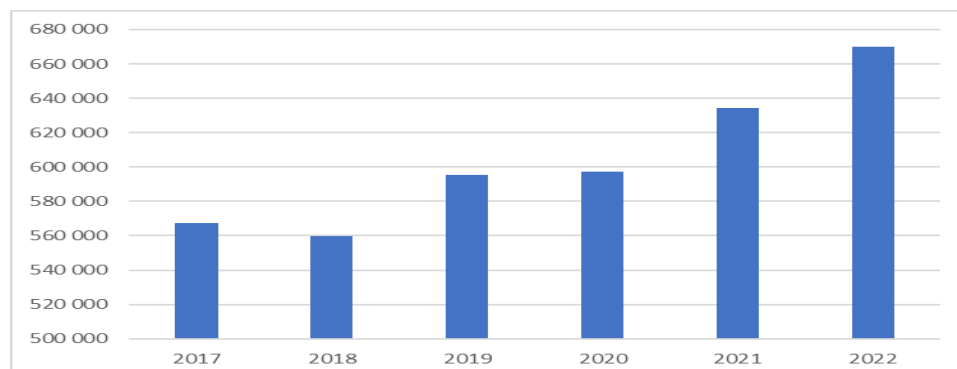

Table 2 Definition of SMEs

Company category	Staff headcount	turnover	And/or	Balance sheet total
Medium - sized	<250	≤€50m		≤€43m
Small	<50	≤€10m		≤€10m
micro	<10	≤€2m		≤€2m

Source: Author according to EU recommendation 2003/361

Basic quantitative indicators characterizing the state of the SME sector include their number. According to the data of the Statistical Office of the Slovak Republic, there was an increase in the number of small and medium-sized enterprises in 2022. The achieved growth was 5.7%. In absolute terms, the number of active SMEs was 670,161 (Figure 1). In a year-on-year comparison, the number of SMEs increased by 35,852 entities. From the point of view of the individual size categories of enterprises, the most dynamic increase in numbers occurred in the group of micro-enterprises with 0-9 employees, by 5.8% year-on-year. In the case of other size categories of SMEs, no significant changes were recorded.

Figure 1 Development of the number of SMEs

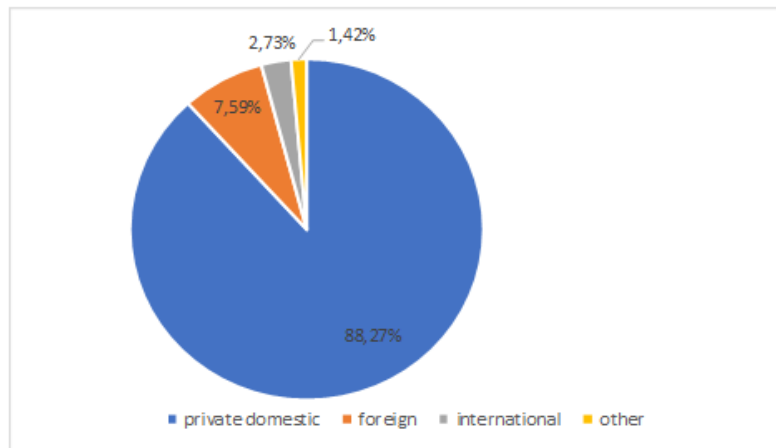

Source: Author according to data of the Statistical Office of the SR

¹ These ceilings apply to the figures for individual firms only. A firm that is part of a larger group may need to include staff headcount/turnover/balance sheet data from that group too.

The business sector in Slovakia has long been characterized by a high representation of micro-enterprises (SBA, 2022). Of the total number of active business entities in 2022, micro-enterprises accounted for up to 97.6%. Small (2.0%) and medium-sized enterprises (0.4%) have a significantly lower representation.

From the point of view of the structure of SMEs by ownership, privately owned SMEs clearly dominate (Figure 2).

Figure 2 Structure of SMEs according to the ownership

Source: Author according to data of the Statistical Office of the SR

In 2021, small and medium-sized enterprises achieved a 74.3% share of employment in the corporate economy. The share of SMEs in total employment in the SR economy was 59.0%. Despite the support measures taken to maintain employment, the average number of employed persons in the category of small and medium-sized enterprises (including natural persons – entrepreneurs) decreased year-on-year by 0.8% (by 10.9 thousand) to 1,390,000 employed persons. Employment in the SME sector declined for the second year in a row. Medium-sized enterprises had the biggest problem keeping their employees, whose employment decreased by 6.1% year-on-year. Microenterprises recorded a decrease in employment by 4.6%. The average number of persons employed by natural persons – entrepreneurs has hardly changed.

3. LEGAL FORMS OF SMEs

As mentioned in the introduction, both natural persons and legal entities are eligible to run businesses.

An individual can do business as:

- a sole - proprietor on the basis of a trade licence
- a person conducting business on the basis of an authorisation other than a trade licence, subject to special regulations
- a natural person engaging in family farming and registered pursuant to a special regulation, the so-called self-employed farmer.

It is also possible to do business as a legal entity, in particular, as:

- public trading company, limited partnership, limited liability company, joint-stock company and simple company for shares,
- cooperative
- a legal entity established under European Union law.

In the structure of SMEs according to legal forms, natural persons – entrepreneurs (60.3%) prevail despite the previous continuous decline (in the period 2010 – 2020) in their representation. Even though the number of SMEs – legal persons increased year-on-year (except for decline in 2021), their share in the total number of SMEs decreased to 39.7% in 2022 (Table 3).

Table 3 Development of the number of SMEs: natural persons and legal persons

	NPs	NPs/SMEs	LPs
2010	410 308	74.23%	142 417
2011	402 325	72.41%	153 283
2012	387 451	70.24%	164 157
2013	382 211	67.83%	181 290
2014	369 514	65.37%	195 727
2015	338 467	63.73%	192 596
2016	346 992	62.28%	210 130
2017	348 326	61.42%	218 805
2018	330 377	59.01%	229 464
2019	349 018	58.62%	246 353
2020	338 997	56.77%	258 174
2021	376 871	59.41%	257 438
2022	404 232	60.32%	265 929

Source: Author according to data of the Statistical Office of the SR

Analyzing the impact of the pandemic on the number of SMEs - entrepreneurs, we can conclude that in 2020, after the previous increase, the number of active natural persons decreased. The decrease was mainly due to the lower number of sole - proprietors as the most important legal form within this group of SMEs. Subsequently, the growth rate of the number of entrepreneurs doing business as natural persons reached 11.2% between 2020 and 2021. This is the most dynamic year-on-year growth since 1992. In absolute terms, the number of active natural persons – entrepreneurs increased year-on-year by 37,874 to the final 376,871. Behind the year-on-year growth of natural persons - entrepreneurs is the re-"revival" of sole proprietors who, with the help of appropriate legislation and set processes, including the electronicization of public administration, can respond to improved conditions relatively quickly and flexibly by suspending or reactivating business. Their number increased by 12.2% after the slump in 2020. The data thus confirm the significant sensitivity of entrepreneurs to deterioration, or improvement of the business environment due to the gradual introduction or relaxation of anti-pandemic measures.

On the other hand, the coronavirus crisis did not stop the growth of the number of small and medium-sized enterprises - legal persons in 2020. SMEs – legal persons experienced a slight decrease in numbers in 2021 and growth again in 2022.

In the group of SMEs doing business as natural persons - entrepreneurs, the dominant representation of sole proprietors has persisted for a long time. In 2022, they made up 93.3%, which in absolute terms amounts to 376 989. Persons conducting business on the basis of an authorisation other than a trade licence accounted for 5.8% (or 23,635 in absolute terms). Even in 2022, self-employed farmers were the least represented legal form with a share of less than 1.0% of the total number of natural persons – entrepreneurs in Slovakia. The absolute number of self – employed farmers reached 3,608.

Business on the basis of an authorisation other than a trade licence can be characterized as a specific field of business, because the performance of professional activities requires the fulfillment of educational requirements, the necessary experience, the passing of professional exams, and in some professions also membership in the chamber. This factor is also the reason for the lower representation of SMEs operating in this legal form of natural persons. The number of persons conducting business on the basis of an authorisation other than a trade licence is developing more positively in the long term. Since 2015, their number has increased by almost one third.

From the total number of natural persons – entrepreneurs, in 2022 the highest representation according to the number of employees was in the category of micro-entrepreneurs and in the category of small entrepreneurs. At the same time, the category of micro-entrepreneurs was dominantly represented in all the aforementioned legal forms within the framework of natural persons - entrepreneurs.

In the structure of natural persons - entrepreneurs by sector, four sectors make up an important part: construction, business services, trade and industry. The interest of natural persons - entrepreneurs in doing business in other sectors is significantly lower. The industry structure of sole proprietors copies the structure of all natural persons - entrepreneurs.

Among SMEs – legal entities, the business services sector is most represented, followed by trade, industry, transport, information and communication activities and construction. In 2022, the least number of SMEs - legal entities did business in agriculture and in the accommodation and catering industry.

From the point of view of individual legal forms of SMEs - legal entities, in 2022 limited liability companies were represented to the greatest extent in the number of 136,012. The second largest group was represented by joint stock companies. However, their number was compared to s.r.o. significantly lower, only 3,039.

As for the gender composition of entrepreneurs in the Slovak Republic, women in Slovakia account for more than half of the total population. Nevertheless, the dominant position of men remains in the performance of entrepreneurial activity. In an international comparison, Slovakia has long been ranked among countries with a below-average representation of women (Eurostat, 2023).

Differentiated results of the representation of women can be observed in individual legal forms of natural persons - entrepreneurs. Women are asserting themselves more prominently only among people running businesses in the form of person conducting business on the basis of an authorisation other than a trade licence.

The age structure expresses the division of natural persons - entrepreneurs according to age into multi-year groups. The highest representation of active natural persons - entrepreneurs in terms of age has long been in the 40- to 49-year-old category. The second most numerous group in terms of age were entrepreneurs in the age category of 30 to 39 years.

As part of the comparison of the age structure of Slovak entrepreneurs with EU countries, Slovakia is characterized by a higher representation of entrepreneurs in younger age groups (Eurostat, 2023).

Different natural, economic and social conditions in connection with historical contexts determine the conditions and development of business in individual regions of Slovakia. This also results in the uneven development of regions, including small and medium-sized businesses. In 2021, the largest number of SMEs doing business in the legal form of a natural person were located in the Prešovský, Žilina and Bratislava regions. In the case of SMEs doing business as legal entities - enterprises, the territory of the Bratislava Region was more attractive.

4. CONCLUSION

In a market economy, there is a large number of different types of enterprises, which differ from each other in various ways. One of the most important criteria for the division of enterprises is the division by legal form.

The legal form of business is the way in which the status of entrepreneurs is regulated by legislation. Decisions on the choice of legal form are made by the company not only during the founding phase, but also during changes to the organizational structure, personnel changes, or changes to legislation, especially tax legislation.

The choice of the legal form of the company is one of the most important decisions. In the long term, it will affect the way the company communicates with its surroundings, as well as issues of its internal organization.

An entrepreneur in the Slovak Republic can operate as a natural person or as a legal person, which is a decisive criterion for choosing a legal form. This basic classification of business entities is in accordance with the EC definition, according to which we understand business in a broad sense of the word, that is, it includes all business entities, including self-employed persons, family businesses that carry out craft or other activities, partnerships or associations carrying out regular economic activity.

According to our findings, the structure of SMEs according to legal forms is characterized by a predominant share of natural persons (entrepreneurs, or self-employed persons). In 2020, after the previous increase, the number of active natural persons decreased. The decrease was mainly due to the lower number of sole - proprietors as the most important legal form within this group of SMEs. In the following years, the number of natural persons increased. On the other hand, the coronavirus crisis did not stop the growth of the number of small and medium-sized enterprises - legal persons in 2020. SMEs – legal persons experienced a slight decrease in numbers in 2021 and growth again in 2022. The sectoral structure of SMEs – legal persons is characterized by the most significant representation of the service sector. Natural persons are mostly active in the construction industry. From the point of view of the structure of SMEs by ownership, privately owned SMEs clearly dominate. The dominant position of men remains in the performance of business activity. Slovakia is characterized by a higher representation of entrepreneurs in younger age groups.

Remote Work in the Context of COVID-19 Pandemic

Laura Diaconu (Maxim)¹

¹Professor, PhD., Department of Economics and International Relations, Faculty of Economics and Business Administration, “Alexandru Ioan Cuza” University of Iasi, Romania, e-mail: lauradiaconu_07@yahoo.com, ORCID: <https://orcid.org/0000-0001-5745-3850>

Abstract: There is no doubt that COVID-19 pandemic has long-term social, cultural and economic consequences. Despite countries' governmental efforts to stabilize economies and mitigate job losses, COVID-19 had a significant effect on the global labor market. The major change consisted in the fact that millions of employees across the world, including a large proportion of knowledge workers, transitioned to the remote work. In this context, both the academia and the business environment started to investigate the implications of the remote work on employees and also on companies. Some studies found positive results with respect to job satisfaction, job performance, organizational commitment or work-family conflict. Meanwhile, it was noticed that remote working has also some negative consequences, such as professional isolation, a reduced possibility of obtaining promotions, the breakdown of professional relationships and even an increase in family-work conflict. Since productivity represents one of the most critical points of interest of work, the present study intends to investigate if, in the context of the remote working, employees' productivity is related to social isolation and perceived overall job performance. In order to achieve our purpose, we conducted an online study on a sample of 291 Romanian workers, during the period June-July 2022. All of the respondents experienced the remote work during the pandemic, most of them for the first time. Based on our findings, we can underline several conclusions. First of all, self-perceived overall performance influenced both directly and indirectly the productivity of the remote workers. Moreover, we noticed that this relationship was mediated by work engagement of the employees. Secondly, as expected, we found a direct negative influence of social isolation on workers' perceptions of productivity and remote work satisfaction. This result underlines once again the importance of social relationships.

Keywords: remote work, COVID-19, social isolation, productivity, work engagement.

1. INTRODUCTION

The COVID-19 pandemic has changed peoples' life in unexpected ways. A major transformation consisted in the fact that millions of employees around the world transitioned, quite suddenly, to the remote work for the first time and without any preparation. Despite the digital revolution that amplified during the last decades, many companies and people confronted with difficulties in continuing the activity in the context of the lockdown. According to the statistics, in 2017 those who usually worked from home constituted only 5% of the employed workers in the EU states (Eurostat, 2018) and less than 3% in USA (GWA, 2017). Even though before pandemics working from home or remote work were only exceptions, it can be noticed that some changes took place during time in this direction. For example, in 2018, 70% of the companies surveyed by the Society for Human Resource Management allowed telecommuting from an ad-hoc to a full-time basis (SHRM, 2018). Meanwhile, around 75% of the Europeans had certain flexibility in their work in terms of schedule and location in 2016 (OECD, 2016).

The literature identified both advantages and disadvantages of working from home and of remote working (Allen, Golden and Shockley, 2015). Usually, adopting this flexible way of working requires a period of design, preparation and adaptation to allow organizations to effectively support employees' productivity and ensure them better work-life balance (Toscano and Zappalà, 2020a). Yet, while some studies have shown that remote work can reduce family-work conflict (Gajendran and Harrison, 2007), others mention that working from home can amplify it, thus nullifying the benefits of staying home (Allen, Golden and Shockley, 2015). There were also studies showing that employees who work remotely perceive their employers as supporters of employees' well-being (Danna and Landry, 2011). Providing remote work contracts may also be perceived by employees as reflecting a better fit between themselves and their job, which is an aspect of positive work role adjustment (Shockley and Allen, 2010).

In the context in which the COVID-19 outbreak has suddenly forced most organizations to adopt this way of working, the need to examine how working from home has affected the well-being and productivity of the employees with no prior remote work experience is imperative. Several studies explored some particular aspects of working in the context of COVID-19, such as job demands (Galanti et al., 2021) or job resources that influenced employees' productivity during the pandemic (Jamal et al., 2021). Other researches focused on the

time that employees had to spend in order to learn the new technologies to complete their work and to adjust to the repeated changes in the work procedures (Vaziri et al., 2020).

Since productivity represents one of the most critical points of interest of work, the present study intends to investigate if, in the context of the remote working, employees' productivity is related to social isolation and perceived overall job performance. In order to achieve our purpose, we conducted an online study on a sample of 291 Romanian workers, during the period June-July 2022. The next parts of the study are structured as following: a literature review that presents, from a theoretical point of view, the context of the remote work and, based on which, we developed the research hypotheses, the methodology used to achieve our purpose, the results and the conclusions.

2. LITERATURE REVIEW

Starting from March 2020, most of the countries all around the world implemented lock-down measures. In this context, millions of companies were forced to rethink the working methods of their employees, mainly to make the daily activities executable from home by using the current technological tools. Even though this shift to the remote work was facilitated by governments' legislation, it was perceived as a relatively fast and improvised change. In many cases, this substantial change in the way of working had many flows in implementation. Moreover, many employees were unfamiliar with the new working methods, some of them having no skills or even lacking the abilities to learn the new online tools.

Some studies investigating the consequence of the remote work on companies and employees mention certain possible benefits with respect to the job satisfaction, job performance, organizational commitment or work-family conflict (Toscano and Zappalà, 2020a). For instance, Boell et al. (2013) underline an increase in individual productivity and performance for those employees that worked remotely. This finding is also argued by those studies focused on the sectors that involve IT working tools. For example, researches conducted on call-centres' activity or IT companies. While the Chinese call centres' employees increased their productivity by 13% when they were allowed to work remotely (Bloom et al., 2015), the U.S. call centres' workers had productivity gains of up to 10% by working remotely (Emanuel and Harrington, 2020). A qualitative study conducted on IBM found that those employees who were arbitrarily assigned to switch to the remote work reported higher levels of productivity than those who remained in office (Hill et al., 1998). The same results were noticed in the case of an Italian consultancy company, where those employees who were allowed to work without constraints of location or time had higher productivity in terms of the number of the accomplished tasks (Angelici and Profeta, 2020).

A more comprehensive analysis that investigated 46 studies focused on the remote work, involving in total over 12,000 employees, presented the benefits of the remote work on both supervisor-rated performance and objectively measured job performance (Gajendran and Harrison, 2007). This meta-analysis also showed that the remote work has positive impacts on other important factors such as perceived autonomy, job satisfaction, turnover intent and work-related stress. Actually, one of the major reasons for which organizations implement remote work policies is that they increase productivity (Karnowski and White, 2002). Meanwhile, employees are keen to work remotely because they also believe that, in this way, they are more productive (Shockley and Allen, 2012).

Contrary to all these findings, other authors identified negative results of the remote working, such as professional isolation, a reduced possibility of obtaining promotions, the breakdown of professional relationships, as well as an increase in family-work conflict (Raišienė et al., 2020). Therefore, in the context of COVID-19, a big concern occurred because the pandemic generated anxiety, depression and stress, especially in the case of the people that were already suffering from poor health (Wang et al., 2020). Studies on the remote work in times of COVID-19 have also shown an increase in inequalities between groups of employees, some of them being more satisfied and others more dissatisfied with their work (Raišienė, 2020). This aspect may lead, on the long run, to an increase in wage inequality among employees (Bonacini, Gallo and Scicchitano, 2020). Thus, many companies worried that the employees that were forced to work remotely would be less productive either because they avoid their duties (Barrero et al., 2020) or because they might be distracted by other things in the absence of supervision (Larson et al., 2020).

Moreover, the isolation, already existing in conditions of normal teleworking (Mann and Holdsworth, 2003), should be even more investigated during the pandemic conditions, since some studies have shown a relationship between the loneliness during the COVID-19 (Xiao et al., 2020), the depression and the higher

levels of stress. The relationship between social isolation and job performance in a remote work environment has already been investigated. Golden, Veiga and Dino (2008) found that professional isolation had a negative impact on job performance of the employees. During the COVID-19 pandemic the social isolation has inevitably increased, generating higher levels of loneliness (Ellis, Dumas and Forbes, 2020). Toscano and Zappala (2020b) correlated the social isolation and stress generated by pandemic with the declining work satisfaction and performance.

Moving overnight a large part of the in-office work to the home work, with limited information on how to use software for continuing the activity, inevitably created some additional stress to employees (Taskin and Bridoux, 2010). Suboptimal knowledge about the usage of the technology was actually considered a source of technostress (Molino et al., 2020).

Another particularity of working from home during the pandemic is that employees have to share their workspace with other family members, including school-age children engaged in distance learning. Some studies underlined the fact that sharing the home space with others in order to work and study is often unsuitable, because this becomes a distracting environment (Xiao et al., 2021). For example, it was observed that the employees had to be responsible for preparing the meals for the whole family, for assisting the children to connect with their online classes or to do their homework (Xiao et al., 2021). All these aspects increased the family-work conflict, which negatively affected employees' job productivity and work engagement and increased their stress related to the completion of the remote work (Galanti et al., 2021). Some analysts suggested that the remote work performance is largely influenced by the quality of the work space (Raguseo, Gastaldi and Neirrotti, 2016), this depending on the possibility of separating the work space from the living space (Mello, 2007).

According to the theory on boundary management, it is important that the employees impose boundaries when developing their business activities (Chen et al., 2009). The COVID-19 pandemic context generated, for the first time, a completely new situation in which it was impossible to choose between integrating or keeping work and family domains separated. This fact resulted in a misalignment between preferences and the actual situation: the employees who were used to separate work and family issues now had to manage both of them simultaneously (Allen et al., 2021).

Considering all these theoretical aspects, we hypothesize the following:

Hypothesis 1 (H1): Self-perceived overall job performance is positively related to remote work productivity.

Hypothesis 2 (H2): Remote work engagement positively mediates the relationship between perceived overall job performance and productivity.

Hypothesis 3 (H3). Social isolation generated by the remote work is negatively related to the employees' productivity and work satisfaction.

3. RESEARCH METHODOLOGY

As mentioned before, the purpose of our study is to investigate if, in the context of the remote working, employees' productivity is related to social isolation and perceived overall job performance.

In order to achieve our purpose, we conducted an online study on a sample of 291 Romanian workers, during the period June-July 2022. The initial sample included 300 people, but 9 of them did not experience the remote work during the pandemic or did not fill the questionnaire completely. Therefore, all of the respondents from the final sample experienced the remote work during the pandemic. Most of the participants (68.4%) were experiencing the remote work for the first time, while only 9.3% of them had previous remote work experience for at least 2 months.

The participants mainly belonged to the 26–35 age group (54.3%), while 19.2% were in the 36–45 age category, 16.2% in the 46–55, 8.6% were under 25 and 1.7% were over 56. Looking at the gender structure of the sample, we noticed that women were the majority (67.4%). From the perspective of the type of sector in which they conducted the activity, most of the respondents worked in the tertiary sector (52.3%).

The questionnaire was sent through the email and included items about general aspects of employees' work and their experience with the remote work. In particular, we were interested to find out five issues: self-perceived work performance, remote work productivity, remote work engagement, perception of social isolation and remote job satisfaction.

All the items were assessed using a 5-point Likert scale, from 1 = “Strongly disagree” to 5 = “Strongly agree”.

Self-perceived job performance was measured using four items developed by Staples et al. (1999). Respondents were asked to evaluate their job performance in general, through items such as “I work efficiently”, without any reference to the pandemic.

Remote work productivity was measured using three items through which respondents had to assess their remote work efficiency: amount of work completed within deadlines, speed of response to problems and having initiative.

Remote work engagement was measured using the three items of the Ultra-Short Measure for Work Engagement (Schaufeli et al., 2019), adapted to the remote work situation.

Social isolation was assessed through four items developed by Golden, Veiga and Dino (2008), such as “I miss face-to-face contact with coworkers”.

Remote job satisfaction was measured through three items adapted from Lee and Brand (2005), particularized to the remote work during COVID-19.

4. RESULTS AND DISCUSSIONS

Before testing our hypotheses, we conducted correlations between the psychological issues considered in this research and the control variables: age, gender and experience with the remote work. Even though it was a weak correlation ($r = -0.21$, $p < 0.01$), age proved to be negatively related to the remote work satisfaction, meaning that the older the respondents were, the more satisfied proved to be with the work from home. This result is not surprising if we consider the fact that those that are younger are willing to socialize and to interact more with their peers, since only a smaller proportion of them has family, compared to those included in other age categories. Gender seems to have an important impact on the remote work productivity of the employees, being strongly and positively related ($r = 0.6$, $p < 0.05$). Thus, men are more productive than women when working remotely. While the experience with the remote work proved to be moderately and positively correlated to the remote work productivity ($r = 0.51$, $p < 0.04$), this experience was negatively related to the remote work satisfaction ($r = -0.18$, $p < 0.01$).

When testing the hypotheses, we noticed the positive association between the self-perceived job performance and the remote work productivity ($B = 0.43$; $p < .01$), which confirms the first hypothesis (*H1*): *Self-perceived overall job performance is positively related to remote work productivity*. Those respondents who strongly agreed with the fact that they were very efficient (23.3%) proved to be very productive. Meanwhile, those that did not appreciate themselves as being too efficient were less productive during pandemic (see Table 1). These results confirm the fact that people’s perceptions of their productivity tend to be related to the performance they have even in the contexts in which they face a major change, as it was the shift to the remote work generated by the pandemic. Except for the technical skills required by the online systems they had to use when working remotely, most of the abilities necessary for the job productivity were similar to the in-office work. Therefore, as mentioned by Bandura (1997) when explaining the concept of self-efficacy, our results confirm that people tend to maintain the same level of productivity even when facing new situations and challenges. This aspect may explain the positive correlation between the self-perceived job performance and the remote work productivity.

Table 1: The relationship between self-perceived job performance and remote work productivity

Self-perceived job performance		Remote work productivity
5-point Likert scale	Percentage of the respondents	
Strongly disagree	2.8%	Very unproductive
Disagree	9.3%	Unproductive
Neither agree nor disagree	25.4%	Neither productive nor unproductive
Agree	39.2%	Productive
Strongly agree	23.3%	Very productive

Meanwhile, our results show that the perception of being a high-performing employee was associated with the engagement toward the new way of working, which in turn proved to be related to the productivity in the new work arrangement. According to the statistics, there is also a positive association between remote work engagement and self-perceived job performance ($B = 0.28$; $p < 0.01$), on one hand, and remote work

productivity ($B = 0.25$; $p < 0.01$), on the other hand. This confirms the mediating effect of the remote work engagement in the relationship between self-perceived performance and remote work productivity, which allows us to accept the second hypothesis (H2): *Remote work engagement positively mediates the relationship between perceived overall job performance and productivity*. Our results are in line with the findings of other studies that revealed that work engagement predicts job performance (Bakker and Demerouti, 2017). Although our purpose was not to evaluate the overall work motivation, the findings underline that work motivation might lead to job performance, which, in turn, leads to remote work engagement and then to remote work productivity. The relationship between motivation and performance has largely been debated in the literature, Simbula and Guglielmi (2013) showing that there is a reciprocal effect between the two.

Our findings indicate that the respondents felt very acutely the forced isolation imposed by the COVID-19 restrictions. According to the results, a large majority (87.3%) agreed that they were missing the interaction with their colleagues (see Table 2), fact that proved to be related to a decreased job satisfaction. Meanwhile, most of the respondents (56.4%) considered that they would have been more productive if they would not have been forced to isolate themselves from the others (see Table 3).

Table 2: Respondents' perception of being away from coworkers

5-point Likert scale	"I miss face-to-face contact with coworkers"
Strongly disagree	0.35%
Disagree	0.75%
Neither agree nor disagree	2.7%
Agree	8.9%
Strongly agree	87.3%

Other studies also confirmed that social isolation is negatively related to the remote work satisfaction (Lee and Brand, 2005). This aspect underlines, once again, the importance of the social relationships. Since feeling away from colleagues increased the stress of working from home during the pandemic, it is understandable why the experience of loneliness is strongly related to a decreased work satisfaction and a lower perceived productivity.

Table 3: Respondents' perception of their productivity under social isolation conditions

5-point Likert scale	"I would have been more productive if I worked face-to-face with my coworkers"
Strongly disagree	3.4%
Disagree	6.2%
Neither agree nor disagree	15.8%
Agree	18.2%
Strongly agree	56.4%

In the organizational psychology there is a great debate regarding the relationship between perceived performance and job satisfaction (Judge et al., 2001). In our study, we investigated this link in the context of the social isolation imposed by the pandemic, which involved working remotely. Therefore, the respondents were forced to accept this new situation, characterized by constraints about when, where and how to work and reduced possibilities to optimize their activities. Meanwhile, since this new context was not something that they could have changed, it is explainable why the frustrations of not being able to cope with this situation and of working productively became a source of dissatisfaction in the context of the remote work.

Considering all these findings, we accept our third hypothesis (H3): *Social isolation generated by the remote work is negatively related to the employees' productivity and work satisfaction*.

4. CONCLUSIONS

In the present study we investigated if, in the context of the remote working, employees' productivity is related to social isolation and perceived overall job performance. Our first results suggest that men were more productive than women when working remotely and older respondents were more satisfied with the remote work.

When testing the hypotheses, we noticed the positive association between the self-perceived job performance and the remote work productivity, which means that those individuals that consider themselves to be very

efficient and to have high performance in their job, regardless of the working conditions, are productive even when working remotely.

Our results show that the perception of being a high-performing employee was associated with the engagement toward the new way of working. The remote work engagement was also related to the employees' productivity. This confirms the mediating effect of the remote work engagement in the relationship between self-perceived performance and remote work productivity.

The social isolation imposed by the COVID-19 restrictions proved to have a negative impact not only on the job satisfaction but also on the self-perceived productivity of the majority of the respondents. Most of them considered that they would have been more productive if they would not have been forced to isolate themselves from the others.

All these findings are in line with the results of the previous studies and contribute to the existent literature by improving the knowledge concerning the relationship between the self-perceived job performance, remote work engagement, the remote work productivity, job satisfaction and social isolation in the context of COVID-19 pandemic.

Abstract: The aim of the present study is to examine young Hungarian consumers' sustainable food consumption habits and their main motivational factors for purchasing local food products. The novelty of our study is that we examined young Hungarian consumers - aged 18-39 – by smaller age groups aiming to find significant differences between the age groups. The research was carried out in the form of a quantitative survey with a valid completion of 1756 respondents aged between 18-39. During sampling, we strove for an even distribution, the three age groups were equally represented. The results suggest that among the examined age groups, the factor „healthiness” stands out, which is more typical for the older respondents. The „joy of discovery” and „curiosity” are much more typical of younger consumers when purchasing local food products. The results could provide a sound basis for local producers to better reach young generations and to position local products more successfully. In addition, the results could support the design and implementation of programmes aimed at developing a national locavore culture.

Keywords: Sustainable Food Consumption, Local Food, Consumer preferences, Young Generations, Gen Z, Hungary.

1. INTRODUCTION

Global food trends consistently change the way how and what we eat (Rützler, 2021). According to Rützler's Food Report, the coming years are mainly driven by trends such as locally sourced and nutritious products, and products that protect the well-being of people and the planet. The latest consumer trends in sustainable food consumption include a growing interest in locally produced, authentic, safe, healthy and environmentally friendly food products. The main food trends are grouped to thematic clusters: sustainability, health, beyond food, glocal, daily life, quality and enjoyment (as can be seen in the Food Trend Map in Rützler, 2021). Consumers are increasingly conscious in terms of the ethical, environmental, social and health impacts of their food (Kovacs et al., 2021; Lendvai et al., 2021; Scozzafava, et al., 2022). There is an increased appreciation of environmental and social responsibility, as well as locally produced and organic food (Merlino et al., 2022).

As consumers focus on a sustainable quality of life, including healthy eating, they tend to buy products from the different forms of short food supply chains (Merlino et al., 2022), which can contribute to the sustainability of the agri-food system (Scozzafava, et al., 2022). According to Kovács et al. (2022), there are several positive effects of the increasing demand for local products. Buying local food products can boost the local economy, support local actors, and help to lead producers to environmentally and socially sustainable farming. Customers can acquire the products faster due to the decreased food miles, energy consumption, and environmental pollution. They can purchase fresher, healthier food, the duration of storage is shortened, moreover, trust is growing, which is one of the main cohesive forces in the relationship among consumers and producers. There is no need for artificial maturation, and less waste is generated since the use of packaging material is reduced, the distance food is trans-ported, and the need for storage is minimized. The results of the Hungary-focused re-search of Kovács et al. (2022) provide strong evidence that the most important features associated with local products are the following: freshness, high quality and nutrition-al value, reliable, safe, evoking domestic flavors, natural, healthy, environmentally friendly.

Tiganis et al. (2022) found several important attributes of local agricultural products: quality, the handmade process and support for women's cooperatives, however, quality was found to be the most important attribute that drives consumer preferences for local food products marketed by women's cooperatives. Garai-Fodor et al. (2022) examined the perception of Hungarian food by consumer segments according to food purchasing preferences based on primary research results. The authors identified potential consumer segments for domestic food products. According to their results, the segment called Conscious buyers of food products - the main consumer of Hungarian food products - buys such products because Hungarian food is safe and reliable. The Impulse Buyers and those Without Preferences can also be potential target groups for Hungarian food products.

Malota et al. (2018) examined the food purchasing and consumption preferences and eating habits of the Hungarian population. Their research identified six main groups that were named as follows: "active maximalists", "price-value seekers", "local specialty lovers", "everyday actives", "price sensitives", "comfortable maximalists".

- Eating is becoming more than just functional, it has become part of the lifestyle, it interacts with the everyday activities and values of consumers (Osztovcics et al., 2016). It is therefore no coincidence that the trend of "good food, good mood" is becoming an increasingly important guiding principle for the young generations, which is well confirmed by the following research results:
- Generation Z is attracted to restaurants that use organic, sustainable and locally sourced products in their menu (McSweeney, 2019).
- According to a white paper of the American Egg Board, health, convenience and social media all play an important role in the food choices of Generation Z (Campisi, 2020).
- Health awareness, a healthy lifestyle and environmental awareness are decisive for young people (Lago, et al. 2020).
- The demand for the healthiness of food is definite, e.g., in the rejection of additives such as artificial coloring, preservatives, etc. (Nábrádi et al., 2017).
- Gen Z typically prefers fresh and healthy foods. Sixty-five percent of this generation is likely to follow a "plant-forward" diet, and 79 tend to eat meatless food once or twice a week (Campisi, 2020).
- Health-consciousness and individualistic values are the most important for Gen Zers (Balsa-Budai & Szakály, 2018).
- Generation Z shows curiosity in their eating habits, as they strive to pay attention to the right ingredients as well as trying out new flavors (Manning, 2021).
- Around 57% of Generation Z conduct their own research before purchasing a product and making their purchase decision (Kulcsár & Grotte, 2018).
- A survey conducted among young people in Kaposvár (Hungary) identified the following as the main attitudes towards local products: 1. fresh; 2. evokes homely tastes, traditional; 3. safe, healthy; 4. trustworthy; 5. environmentally friendly (Sántosi & Böröndi-Fülöp, 2014).
- Local products can be associated with emotional factors among the younger generation, such as shopping nostalgia, fun, memories of good old times, or guilt for neglecting to buy local products (Sántosi & Böröndi-Fülöp, 2014).
- In a survey conducted in 2019 among students at the University of Debrecen, the factors affecting food consumption was examined on a sample of 500 participants. Local products received the lowest average value (3.09). Environmentally conscious students prefer local products more than health-conscious consumers (Bauerné & Szűcs, 2019).

Based on the trends determining the purchase motivations of local food products and previous international and domestic research results, in our empirical research three research questions are addressed:

- Where are local products placed in the order of preference of the examined product attributes?
- What are the main motivational and purchasing factors driving young people?
- Can similarities and differences between each age group be identified?

2. MATERIALS AND METHODS

The purpose of this Hungary-focused research was to examine the main motivational factors for purchasing local food products and young consumers' sustainable food consumption habits as well as to identify the differences in the preferences of young people by age group.

Kovács et al. (2022) conducted a multi-stage research process in February 2021 and a quantitative survey from May to July 2021 in the form of a self-administered online questionnaire and Computer-Assisted Personal Interviews (CAPIs) and person-al interviews. The survey aimed at identifying the motivational factors for

consumers in buying locally produced food. The survey looked at the product attributes, the motivational factors, and the demographics of the respondents in Hungary. The product feature preference order scale was based on previous research conducted by Kovacs et al., (2016), whereas the motivation scale was based on the former research conducted by Kovacs et al., 2022. Quota sampling for age and gender was used and the snowball sampling method. The answers of 1756 respondents were analyzed following the da-ta-cleaning procedure. In our current study, we focused on Gen Z and Gen Y (age group 18-39), who were further divided into 3 age groups and subjected to a deeper analysis. The distribution of respondents by age groups in the cleaned database are as follows: all the respondents were 18-39 years old and could make consumption-related decisions; 35% of them were 18-25 years old, 32% were 26-35 years old, and 33% were 36-39 years old. During sampling, we strove for an even distribution, the three age groups were nearly equally represented. Most of the respondents were females (61%), and 39% were males. About 53% of the respondents live in the capital city (Budapest) or in cities, and 47% live in towns or villages.

The limitation of this study is the demographics of the respondents: we exclusively examined the age group of 18-39 in Hungary. The other limitation is the non-representativeness of the sample due to the choice of the sampling method.

3. RESULTS AND DISCUSSION

First, we examined the attribute preference of food products and then the driving factors behind the choice of local products in three segments of young consumers. It is clear from Table 1. that for all three age groups, the following factors are important or particularly important: discounted food prices, convenient shopping, and fresh appearance of the products. In the case of the youngest age group examined (18-24-year old), it is clear that 75% of them finds reasonable price important or very important, whereas convenient availability was important or very important for 79.6%. For this age group, it is not preferred that the product is local; for almost one third (31.6%) of the respondents found this attribute rather important, and only 7.3% found it very important. The favorable price of food is important or particularly important for the younger age group (82.6%). The majority (70%) of those in the older (35-39) age group consider the traditional, local character of food products to be important or very important.

A similar rate (72.6%) was found for the older segment as well for the food product attribute "it should be a local product". In the two younger age groups, it is less preferred if the product is local; almost a third of the respondents considered this feature rather important, and only under 10% considered it very important. The two younger age groups (18-24 and 25-34) attach similar importance to the nutritional value, the environmentally friendly production practices, and the fact that the product is healthy. On the other hand, the older age group stands out for all three factors, as 81.0% consider nutritional value, 70.3% environmentally friendly production, and 85.7% found health as important or very important. The 25-34 and 35-39 age groups classified the consideration of animal welfare almost equally important: 56.4% of the age group 25-34 found it important or very important, while 57.4% of the age group 35-39 found it important or very important. The younger segment does not differ significantly (important and very important for 51.1%).

Source: Authors' own calculations, 2022

In our research, we studied the main driving forces behind the choice of local products in the three segments of young consumers, the results of which are shown in Table 2. It is clear that the most decisive driving force for the younger age group is the joy of discovery and experimentation (important and very important: 74.7%) and the curiosity to getting to know new flavours (important and very important: 77.2%). For the older age group, the main call words are the healthiness of the product (important and very important: 70.3%), nutritional value (important and very important: 75.0%), and tradition (important and very important: 74.3%). The quality of the product, its content, and trust in traditions stand out the most. It is worth mentioning that for the three factors mentioned above, almost 50% of the respondents from the young segment chose the response "Not at all" (see Table 2.).

Table 2. Drivers by age group (%)

Drivers	Responses	Age groups		
		18-24	25-34	35-39
It's a pleasure for me to try it.	Not at all	31.3	33.3	35.4

Likert scale: 1: not at all, 5: very much. N = 1756.

Source: Authors' own calculations, 2022.

Five key motivational factors influencing purchase intention were identified (quality attributes, experience and familiarity, emotional attributes, the setting, support for the local economy), which are connected to a range of self-interest and moral factors (Banerjee & Quinn, 2022).

Our results confirm and also supplement the findings of several international and domestic research, among which the following can be highlighted:

Table 3. Comparison of the findings of international and domestic research

International and domestic research	Authors' current (2022) research results
According to a white paper of the American Egg Board, health, convenience and social media all play an important role in the food choices of Gen Z (Campisi, 2020)	The healthiness of food products and the convenience of availability were rated as important or extremely important in all three young age groups. Healthiness is most important to the older age group (85.7%), while comfort is important to the younger segment (79.6%).
The demand for the healthiness of food is definite, e.g., in the rejection of additives such as artificial coloring, preservatives, etc. (Nábrádi, et al., 2017).	The nutritional values of food products are considered important or particularly important by all three young age groups, but mostly by the older group (81%).
Gen Z typically prefers fresh and healthy foods. Sixty-five percent of this generation is likely to follow a "plant-forward" diet, and 79 tend to eat meatless food once or twice a week (Campisi, 2020).	Freshness is important or particularly important for the majority of young people (18-24: 95.3%, 25-34: 94.7%, 35-39: 96.2%).
Gen Z shows curiosity in their eating habits, as they strive to pay attention to the right ingredients as well as trying out new flavors (Manning, 2021).	Especially for the younger age group, it is a pleasure to try local food products; 74.7% of the respondents rated it as important or very important.
Local products can be associated with emotional factors among the younger generation, such as shopping nostalgia, fun, memories of good old times, or guilt for neglecting to buy local products (Sántosi & Böröndi-Fülöp, 2014).	Curiosity to try new flavours is also a priority among young people, especially among the 18-24 age group; 77.2% rated it as important or very important.
In a survey conducted among students at the University of Debrecen, local products received the lowest average value (3.09) on a 5-point Likert-scale (Bauerné & Szűcs, 2019).	Local products were found to be important for the older age group, where 62.6% of the respondents considered this criterion important or very important.
Malota et al. (2018) identified six main groups that were named "active maximalists", "price-value seekers", "local specialty lovers", "everyday actives", "price sensitives", "comfortable maximalists".	In relation to the preferences of the investigated young groups regarding local products, certain characteristics reflected in the names of these groups can be easily identified.

CONCLUSION and RECOMMENDATIONS

The purpose of the current study was to examine the main motivational factors for purchasing local food products and young consumers' sustainable food consumption habits and to identify the differences in the preferences of young people by age group in Hungary. Young consumers - aged 18-39 – were studied grouped into three smaller age groups with the aim to find significant differences between the groups.

The following conclusions can be drawn from the present study:

Different young consumer segments typically have different preferences for local and traditional product attributes. The trend of "good food, good mood" is becoming increasingly important for the young generations. The various young consumer segments show both similarities and differences in terms of local product attributes. Similarity was observed in the case of the following factors: discounted food prices, convenient availability, fresh appearance and the consideration of animal welfare aspects.

Convenient availability of products was considered to be of utmost importance for the youngest surveyed age group (18-24 year olds). The importance of the traditional, local character of food products was highlighted mostly by the older (35-39) age group.

The two younger age groups (18-24 and 25-34) attach similar importance to nutritional value, environmentally friendly production process, and the fact that the product is healthy, however, the preference of the older age group stands out for all three factors in this regard.

The study has identified different driving forces in each age group. For the younger age group, the most decisive driving forces were the joy of discovery and experimentation and the curiosity to get to know new flavours. For the older age group, the main call words were healthiness, nutritional value, and tradition.

Our results could provide a sound basis and new ideas for further research, and for a more thorough exploration of the underlying factors. The findings could assist local producers to address and reach young consumers more effectively and to position the local food products more successfully. In addition, the results could support the design and implementation of programmes aimed at developing a national locavore culture.

Improving Service Quality and User Satisfaction in the Internet Environment

Marija JANKOVIĆ¹

¹Associate professor, Faculty of economics and business, University Mediterranean,
e- mail: marija.jankovic.mbs@gmail.com, ORCID:0000-0001-8598-072X

Abstract: The quality of service provision has become one of the main and key factors of survival in the market, in the conditions of intense competition and increasing demand for consumer growth. Today, service quality is viewed from the perspective of the consumer, that is, consumer expectations. By ensuring continuous and complete service quality, prerequisites are set for achieving consumer (service user) satisfaction, and in this sense, by providing the desired quality for consumers and their satisfaction, numerous competitive advantages are achieved. Satisfied consumers represent a long-term source of income for companies, both through the positive propaganda they carry out, thereby influencing new, potential consumers, and through repeated purchases over a longer period. This paper will analyze the impact of the use of digital technologies on the quality of the delivered service and consumer satisfaction. Empirical research was conducted in January 2023, when we examined the degree of consumer satisfaction with the quality of service delivered through digital channels, using a five-point Likert scale. The goal was to examine the impact of digital technologies on the degree of consumer satisfaction with the service used. The data was collected by an anonymous survey on a sample of 100 respondents. The research results proved the hypothesis that digital technologies have a significant impact on the level of consumer satisfaction. It has also been established that the use of technology lowers the costs of clients, offers flexibility in work and ease of transactions, simpler shopping "from the armchair", greater user information and better control over spending of personal funds. The value of scientific work is reflected in the verification of the confirmed hypothesis through research, which can represent the basis for better and more efficient work of companies, a proactive approach and help to improve the form of relational marketing.

Keywords: service, service quality, service user satisfaction, digital technology.

1. Introduction

In the modern world of business, the key to success in business is the use of digital tools and knowledge and the need for companies to keep up with the progress of technology. In order to move to digital business, companies must devise and define a good management approach, which is supported by sufficient knowledge, resources and capacity, in order to maximize the benefits of the digital age and digital technologies. Digital skills in business are becoming imperative. Most companies use digital communication tools to deliver their products and/or services to end users. This research aims to investigate customer satisfaction through their attitudes towards the use of digital models and service methods provided by digital technologies.

For the digital transformation of business, it is necessary to define a clear managerial approach with the provision of sufficient knowledge, resources and capacity to be balanced in the long term and to create a creative environment that will enable optimal use of all the advantages that digital technology brings with it. In order for companies to achieve higher profits and better and faster satisfaction of service users, they defined a strategy of digital transformations, as a central axis that integrates the entire flow of information coordination and delivery methods. Most companies use some of the digital communication tools to deliver products/services to end users, and this survey shows whether clients are satisfied with the ways and models of service delivery through digital technologies.

The aim of the research is to examine the impact of digital technologies on the degree of consumer satisfaction with the use of digital/online services. The research interprets the data obtained from 100 respondents/users of various services, through the use of closed questions, alternative answers and Likert scale. The research was conducted using empirical, statistical and comparative methods, along with correlation analyses.

The study showed that the majority of participants are members of the younger population between the ages of 18 and 25 who are largely interested in using digital technology. The research confirmed the opinion that the use of technology reduces the costs of clients, offers more flexible transactions, a simpler type of purchase "from the armchair", provides a greater degree of user information and better control of the spending of personal funds. The research also confirms the view that there is a high level of user satisfaction with digital offers in real time and a preference for shopping online, without physically visiting shops and stores.

2. Theoretical viewpoint about the internet technologies usage in business

The power of modern business lies in a proactive approach to the market and constant monitoring of changes and adaptation to them. The key to the survival of modern business is knowledge, especially digital knowledge, skills and competences, which ultimately aim at a more comprehensive service delivery. Businesses must be oriented towards target niches, which have seen that they have the freedom to dictate terms to companies and demand a personalized offer and digital interaction.

The quality of the service leads to greater consumer loyalty, through the number of repeated purchases and the spread of a positive message, usually through "mouth-to-mouth" marketing. The task of any marketing strategy is not only to satisfy the consumer, but to achieve a feeling of elation in the user through the emotional component of the brand. Some believe that customer satisfaction leads to perceived service quality, while others believe that service quality leads to customer satisfaction. The key to a successful business lies in the user experience. It was always like that, but not much attention was paid to it. It is necessary to study the wishes and requirements of the users and, accordingly, hire experts from those fields. As professionals, it is necessary to direct all employees in the company towards that goal, according to the company's mission and vision.

In today's digital world, the highest degree of satisfaction of target groups is reflected in: user-friendly digital platforms, which are easy and simple to use; up-to-date information, interesting contents that provide clear information and maintain attention in order to continue shopping; the speed of response to inquiries, the convenience of online shopping, and of course the security of personal data that users leave when ordering.

The strategic commitment of management to use a digital strategy is becoming imperative for today's business, striving for its full transformation. In addition to the fact that digital transformation represents an element of management style and long-term planning, it also represents a question of measuring the success of a company. "Therefore, the key to the survival of organizations competing in the Digital Era is evolving and adapting businesses and routines to the evolution of the business landscape, identifying challenges, and transforming them into opportunities for development and growth". (Schiuma, et al, 2021) The Internet has introduced complete innovations in business and communication. "The Internet has transformed marketing practice to a great extent, considering that the Internet and its services have become an inseparable part of everyday life, especially with the emergence of social media, the increasing use of mobile technologies and other digital platforms" (Chaffey, p. 55)

Digitization of business strongly determines a better CRM approach. "Internet marketing has become an important tool for enhancing customer satisfaction through better customer service, service quality, and customer relations management." (Kotler, et al, 2010) Digitization requires a complete transformation of work processes, including changes at all organizational levels. "Digital Transformation is crucial to embrace because the most relevant socio-economic and labor-market impacts are innovating the business models through the transformation of work, processes, services, products, and the paradigm of the whole economy". (Muro, et al, 2017)

In the domain of digitization, the role of digital marketing is important. The importance of digital marketing for business success lies in the fact that most businesses and consumers rely on Internet services, especially after the corona virus pandemic, so their presence on the Internet is almost inevitable. "Digital marketing is about building long-term relationships with customers by creating meaningful and engaging experiences that exceed their expectations and needs." Examined why the sharing economy has the potential to produce a long-term transformation in consumption behavior, followed by a consideration of how this change might affect companies' business models. (Kotler & Armstrong, 2010)

Digital innovations have also changed service markets to a great extent, especially financial services, affecting the structure of the market itself and the accompanying management policies, including financial regulation on the financial market. "Innovation has introduced competition and increased inclusion, particularly in emerging markets and developing economies". (Pazarbasioglu et al 2020; Frost et al 2021). The end consumer is in a position to demand, in addition to quality, a superior way of delivering the service itself. "To succeed in the digital age, companies must deliver superior customer value and satisfaction by mastering new digital technologies and tools." (Kotler&Keller, 2016) Also, some authors mention that "high industrial Internet of Things usage performance is beneficial for a firm, significantly enhancing divisional success". (Butschan, et al, 2019) Ultimately, the digitalization of business reduces the total costs of business operations and leads to rationalization of business. "The development of modern technological solutions has made it possible to reduce

the complexity of transactions in real time, as well as the integration of economic activity components that significantly reduce business costs." (Zamfir, 2014).

2.1 Methods and materials

The initial hypothesis reads: "There is a significant degree of influence of digital technologies on the quality of service delivered to clients". The established factors affecting the quality of the delivered service are: digital offer, use of technology in the service of efficient service delivery; satisfaction with online shopping; the use of chatbots, robots and artificial intelligence in providing the service; use of self-service channels and system self-checkout in service provision; online shopping security.

Based on the analysis of the conducted research, it will be concluded whether the hypothesis is confirmed. Empirical, statistical and comparative methods were used in the research and ordinal regression analysis, interpretation and analysis of the research results were performed. The research used the method of deduction and induction, and the sample included a population of 100 users of various services. The survey questionnaire included closed questions, questions with alternative answers and questions with a Likert scale.

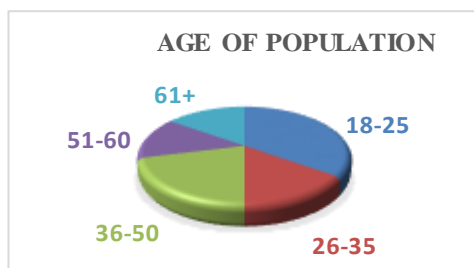

2.2 Findings and Discussion

According to the criteria of the age population, graph 1 and table 1 show that 35% of the respondents (most of them) are aged 18-25, i.e. 35 of them. Then, 15% of the respondents are between 26-35 years old, 21% between 36-50 years old, 14 % between 51-60 and 15% are over 61 years old. According to these data, we can conclude that all age groups of 18 and older are included in the sample. Also, we can conclude that all age groups are included in the sample. The largest share of respondents belongs to the younger generations, who are more interested in progress and the use of modern technologies.

Table 1: Frequency table - age of the respondents

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	18-25	35	35,0	35,0	35,0
	26-35	15	15,0	15,0	50,0
	36-50	21	21,0	21,0	71,0
	51-60	14	14,0	14,0	85,0
	61+	15	15,0	15,0	100,0
	Total	100	100,0	100,0	

Graph 1: Structure of the sample by age

Another empirical question is related to the level of satisfaction with the digital offer in real time. This question aimed to determine the opinion and attitude of the respondents about preferring a digital offer instead of going to a store. The largest number of respondents, 36 of them, or 36%, expressed the opinion that they fully agree with this statement and 29% of respondents agree with this statement (29 of them). A neutral attitude is held by 17% of respondents who are assumed to enjoy the same level of usefulness through the digital offer as well as by going to the store, while the rest do not agree, i.e. they prefer going to the store. (table 2)

We can conclude that the majority of respondents enjoy the same or higher level of satisfaction through a digital offer in real time, instead of going to a store.

Table 2: Frequency table - level of satisfaction with the digital offer in real time

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Completely disagree	7	7,0	7,0	7,0
	Do not agree	11	11,0	11,0	18,0
	Neutral	17	17,0	17,0	35,0
	Agree	29	29,0	29,0	64,0
	Strongly agree	36	36,0	36,0	100,0
	Total	100	100,0	100,0	

A five-point Likert scale is used to measure the respondents' hypothetical views on the influence of the factors in the first column on the quality of service delivery.

Table 3: Table of descriptive statistics - five-point Likert scale

	N	Minimum	Maximum	Mean	Std. Deviation
A digital offer in real time gives you the same or greater level of satisfaction than going to a store.	100	1	5	3,76	1,248
Technology makes it easier to provide services to users (personalized offer, rewards	100	1	5	3,60	1,279
Shopping from the armchair affects the increase of pleasure/satisfaction.	100	1	5	3,75	1,218
Robots, chatbots and artificial intelligence provide better services and information to users.	100	1	5	3,78	1,203
Self-service and self-checkout facilitate the purchase process and greater satisfaction with the service.	100	1	5	3,87	1,143
In today's world, there is rapid progress in technology, and weak and slow digital education	100	1	5	3,38	1,339
To what extent are you satisfied with the online shopping service?	100	1	5	3,76	1,264
Shopping online gives me confidence and security of use?	100	1	5	3,45	1,175
Valid N (listwise)	100				

In the first column of this table, the factors that determine the quality of the delivered service are ranked. All 100 respondents from the target sample answered each question. The arithmetic mean ranged from 3.60-3.80, which shows that the majority of respondents agree that the parameters taken as dependent variables in the research affect the quality of the delivered service.

The best-rated parameter is "Self-service and self-checkout facilitate the purchase process and greater satisfaction with the service" with a mean score of 3.87 and a standard deviation of 1.143, which indicates high agreement among respondents.

Table 4: Frequency table - Shopping from the armchair affects the increase of pleasure/satisfaction

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Completely disagree	5	5,0	5,0	5,0
	Do not agree	15	15,0	15,0	20,0
	Neutral	14	14,0	14,0	34,0
	Agree	32	32,0	32,0	66,0

Strongly agree	34	34,0	34,0	100,0
Total	100	100,0	100,0	

This claim is based on the hypothesis that shopping from home ("armchair shopping") increases the level of consumer satisfaction. 20% of respondents have a negative attitude, that is, disagree with this statement (15% do not agree, and 5% completely disagree) and 14% of respondents are neutral on this issue.

More than half of the respondents have a positive attitude with this statement. 32% of them - Agree and 34% - Strongly agree, share positive experiences with shopping from the armchair, i.e. they enjoy a high level of satisfaction/satisfaction with shopping from home.

Table 5: Frequency table - Robots, chatbots and artificial intelligence provide better services and information to users

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Completely disagree	4	4,0	4,0
	Do not agree	14	14,0	18,0
	Neutral	19	19,0	37,0
	Agree	26	26,0	63,0
	Strongly agree	37	37,0	100,0
	Total	100	100,0	

The majority of respondents have a positive attitude to the statement that robots, chatbots and artificial intelligence provide them with a better level of service and information to users (37% - strongly agree and 26% - agree). 19% of respondents have a neutral attitude, 14% of them disagree and 4% disagree completely.

Table 6: Frequency table - Self-service and self-checkout facilitate the purchase process and greater satisfaction with the service

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Completely disagree	4	4,0	4,0
	Do not agree	10	10,0	14,0
	Neutral	18	18,0	32,0
	Agree	31	31,0	63,0
	Strongly agree	37	37,0	100,0
	Total	100	100,0	

The majority of respondents have a positive opinion that self-service and self-checkout facilitate the shopping process and increase the level of consumer satisfaction (37% - strongly agree and 31% - agree). This part of respondents enjoys positive experiences when using self-checkout and self-service and achieves a higher level of satisfaction when using these services than waiting in lines.

Table 7: Frequency table - Today's world is dominated by the rapid progress of technology, while the education of digital skills, knowledge and competence is weak and slow.

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Completely disagree	7	7,0	7,0
	Do not agree	27	27,0	34,0
	Neutral	16	16,0	50,0
	Agree	21	21,0	71,0
	Strongly agree	29	29,0	100,0
	Total	100	100,0	

According to the data obtained from the survey, almost half of the respondents believe that the rapid progress of technology reigns, but it is accompanied by weak and slow education in the use of digital skills. Also, a larger

percentage of respondents disagree with this statement (27% disagree and 7% completely disagree) and 16% of respondents have a neutral attitude.

Table 8: Correlation 1

		3. Technology facilitates customer service (personalized offer, rewards)	
Spearman's rho	2. A digital offer in real time gives you the same or greater level of satisfaction than going to a store.	Correlation Coefficient	,239(*)
		Sig. (2-tailed)	,017
		N	100

* Correlation is significant at the 0.05 level (2-tailed).

** Correlation is significant at the 0.01 level (2-tailed).

Correlation analysis was conducted between two variables: "Technology makes it easier to provide services to customers (personalized offer, rewarding)" and "Digital offer in real time gives you the same or higher level of satisfaction than going to a store." Spearman's rho - correlation coefficient is 0.23 between these two variables and indicates a moderate positive correlation. The P-value (Sig 2-tailed) is 0.017 (less than 0.05), which tells us that the correlation is statistically significant at the 0.05 level (2-tailed). Given that the correlation coefficient is relatively low, it indicates that other factors may also influence customer satisfaction.

Table 8: Correlation 2

		4. Shopping from the armchair affects the increase of pleasure/satisfaction.	
Spearman's rho	2. A digital offer in real time gives you the same or greater level of satisfaction than going to a store.	Correlation Coefficient	,305(**)
		Sig. (2-tailed)	,002
		N	100

* Correlation is significant at the 0.05 level (2-tailed).

** Correlation is significant at the 0.01 level (2-tailed).

Correlation analysis was carried out between two variables: "Purchasing from the armchair affects the increase of pleasure/satisfaction" and "Digital offer in real time gives you the same or higher level of satisfaction than going to the store". The correlation coefficient is 0.305, which indicates a moderate positive correlation. The p-value is significant at the level of 0.01, which indicates that there is a statistically significant positive correlation between these two variables, i.e. that shopping from an armchair can contribute to increased satisfaction compared to physically going to a store/store.

3. Conclusion

Digitization of business requires a huge transformation of business, along with the definition of a clear strategy and organizational structure, which should ultimately be in the service of satisfying the needs of consumers. Digitized society has more and more digital knowledge, and therefore it is necessary for companies to act proactively in challenging markets, searching for new work models. Digitization enables the development of services that will attract new clients and at the same time retain existing ones, because digitization contributes to increasing work efficiency, optimizing marketing costs, expanding cooperation and ultimately creating new client bases. Digital business in the best possible way enables the personalization of the delivered product/service and greater standardization. 100 respondents participated in this research, who gave their opinion on the factors influencing the use of digital technologies on the quality of the delivered service. It was concluded that the factors: digital offer, use of technology in the service of efficient service delivery; satisfaction with online shopping; the use of chatbots, robots and artificial intelligence in providing the service; use of self-service channels and system self-checkout in service provision; Online shopping security greatly affects the quality of the delivered service. In the future, business models should be based on as much

digitization as possible, which companies can use in the service of creating larger customer bases, rational business, differentiating their offer and better knowing the habits and preferences of their consumers.

Abstract: The banking sector of Kosovo is one of the key promoters and contributors to the economic development of the country in general since the post-war period until today. With a stable and consolidated credit potential, commercial banks are the best guarantor of economic and financial development in Kosovo. It is indisputable that the banks in Kosovo have a high level of financial potential as well as advanced capacities they undoubtedly have a huge impact on economic and social development in general.

Over the years, human resources in the banking system have improved and developed, in terms of quality and number. The services of commercial banks have become more reliable, more efficient, more competitive, and the number of products they have launched on the market has increased. The management of the banks undoubtedly improved through the increase in revenues from commercial banks. As result of these developments, the economic situation in Kosovo has undoubtedly improved, at the same time the banking and financial system itself has evolved.

Despite the positive achievements in this field, commercial banks face continuous challenges, one of which is the large number of court cases not resolved by the courts. This fact is worrying and requires a quick and efficient solution. It also requires intensive commitment from justice institutions. As well as high interest rates for natural or legal persons who receive or use banking facilities in general.

It should be emphasized that the banking system in general and commercial banks in particular, especially in their beginnings, have faced various challenges such as: lack of adequate legislation, lack of human capacities, low level of financial education, political situation and lack of supporting infrastructure.

Thanks to continuous efforts and the drafting of appropriate legislation, the banker-commercial bank sector has successfully passed all these challenges and has already developed the necessary capacities to face the challenges of the next decade. As well as adapting to the growing dynamics in development of information technology leading to innovation in the field of digital finance services, the use of large volumes of data and the general adaptation to a competitive economic environment.

Therefore, the purpose of this research is to evaluate the credit potential of commercial banks in Kosovo and the impact it has on economic growth. To reach the most accurate conclusions of this research, the quantitative method will be used with the regression model taking into consideration dependent variable (GDP growth) and un dependent variables (the natural logarithm of all assets of the banking system. The ratio of all loans to all assets, the ratio of all placements and investments with total assets and CAR - the ratio of share capital to total assets. The data period includes the time interval from 2005-2021.

Keywords: Credit, economic growth, commercial banking, assets, capital.

1. INTRODUCTION

The development of the banking sector, supported by the Central Bank of Kosovo, has contributed positively to doing business and opening up various opportunities that serve directly and are not limited only to the clients of the banking sector. In the Republic of Kosovo, 11 commercial banks operate, offering the most diverse banking products in the market, but the most frequent are: deposits and loans. The result of the rapid development in the banking sector and the gaining of confidence in the work and continuous social emancipation of Kosovo, the number of credit requests has increased continuously, the number of deposits has increased and the problem loans have decreased drastically.

The implementation and continuous advancement of the regulatory infrastructure and the reflection of banks in general, has helped this very important sector to maintain market stability and increase citizens' confidence in the services provided by the banking sector in the country. Based on the the Kosovo banking system has evolved and shown continuous success, the banking industry has managed to apply international standardization frameworks, modernizing banking services, simultaneously offering attractive and innovative products and offering new opportunities to improve the banking environment, general business in the country and the promotion of competition.

Nowadays, taking into account the dynamics in which life takes place on a daily basis, people are constantly looking for faster, simpler and easier services, while the banking sector faces constant challenges such as: high competition, costs and regulations. Regardless of the challenges and difficulties that Kosovo has encountered over the years in this sector, we can say without a doubt that it has a developed, modern and stable banking sector, which offers the functions of a European banking system and as such has a key role in the growth of businesses and economic development. The main function of banks is to provide financial services to businesses and citizens, helping them to raise the necessary capital for development and ensuring economic and social stability.

Among other things, the banking sector in Kosovo has evolved by offering modern digital services, fast payment system, channeling financial resources starting from depositors to investment projects and offers a wide range of electronic services and financial products by including trade finance. Given the impact on economic development, the focus of commercial banks in Kosovo remains on small and medium enterprises. As a result, these enterprises promise sustainable economic development, promotion of innovation, promote sustainable industrialization and in any case affect growth and better conditions for employees.

According to (<https://www.bankassoc-kos.com>) 11 (eleven) commercial banks operate in Kosovo today and constitute 66.4 percent of the total assets of the financial sector. Their products and services include bank accounts, loans, domestic and international payments, bank guarantees, letters of credit, e-banking.

Of the 11 banks operating in the country, nine are foreign owned, while two other banks are locally owned. The country's banking sector is dominated by foreign capital the rest is made up of local citizens and businesses. The foreign capital visibly presented in the banks of the country sector is also an advantage and the potential available for the future support expected growth of the private sector in the country.

2. LITERATURE REVIEW

The banking sector in Kosovo consists of two levels of banks, the Central Bank of Kosovo as a first-level bank and a commercial bank as a second-level bank. The tasks of the Central Bank in fulfilling the objectives defined according to the law in force include (<https://bqk-kos.org>):

- Defining and implementing the policies of a stable financial system, including the supervision of a deposit insurance scheme, the performance of market operations, as well as the provision of emergency liquidity;
- Regulation, licensing, registration and supervision of financial institutions as further specified in this law or any other law;
- Promotion and supervision of safe, stable and efficient systems of payments, clearing and settlement of securities;
- Ensuring adequate supply of banknotes and coins in Kosovo;
- Maintaining and managing international reserves;
- Collection and publication of statistics;
- Contributes to achieving and maintaining the stability of local prices;
- Informing the Assembly of the Republic of Kosovo, the Government and the general public about its policies, duties and operations as further defined in this law;
- Acting as a banker, financial advisor and fiscal agent for the Government and any public body and public organization of Kosovo;
- Cooperation and participation in international councils and organizations regarding issues within its field of competence;
- The realization of any auxiliary activity arising from the exercise of its duties according to this law or any other law.

The Central Bank of Kosovo plays a very important role as a regulator for the business of banks in general, including loans, by determining the relevant procedures that regulate the loan-recipient and loan-giver relationship. The goal of every bank is to increase profit as much as possible. Since there are several banks in

Kosovo that headquartered are in a foreign country, it is worth noting that they do not apply the same policies and procedures (as in the country of origin), since such a thing depends on the country in which they operate.

It is evident that the banks have recently started to toughen the competition, so with some criteria or conditions, they challenge each other but always within the CBK rules.

In general, loans can be separated into:

- Short-term (duration up to 12 months)
- Medium-term (duration up to 60 months)
- Long-term (lasting more than 60 months)

It is known that one of the main banking activities is lending. In Kosovo, lending has shown a permanent growth trend, it is the sector where the banking system generates the largest revenues and compared to the countries of the region, problem loans show a lower performance. Interest rates in lending have been decreasing, except for the last year, when interest rates had a significant increase. Meanwhile, interest on deposits has dropped significantly.

Banking industry is a very important sector because the development of finance, and particularly the banking system, promotes economic growth (Lipunga, 2014). The development of the credit system has started to spread through mortgage loans, which is considered a successful development of commercial bank products. Due to the importance and function of the credit system in the economic development of the country, bank loans, even though they have high interest rates, have largely influenced the development of economic processes as well as the development of this system. With the development of the banking and credit system, the credit system has also developed (Hasanaj, Shala, & Qarkaxhija, 2017).

Problematic loans (bad loans) and non-performing loans occur when borrowers face various difficulties during their journey and in such cases they cannot fulfill the agreement or cannot pay the loan installment according to the agreement, respectively amortization plan. Such cases are classified as problematic loans, which are also known as bad loans.

For bankers, the various risks arising from the sale of loans are known in detail such as; liquidity risk, credit risk, operational risk, legal risk, reputational risk, etc. It is no coincidence that commercial banks are obliged to deposit certain funds in the CBK in the name of mandatory reserves. For loans issued, commercial banks pay certain commissions to the CBK. These it's called preventive measure so that the activity of the banking industry is not endangered.

However, the credit risk is one of the most specific risks and it is almost impossible to eliminate it, since the financial means are transferred to the client, so no matter how well that loan is secured, there is still a dose of risk and uncertainty, since the future in business cannot be projected with complete accuracy.

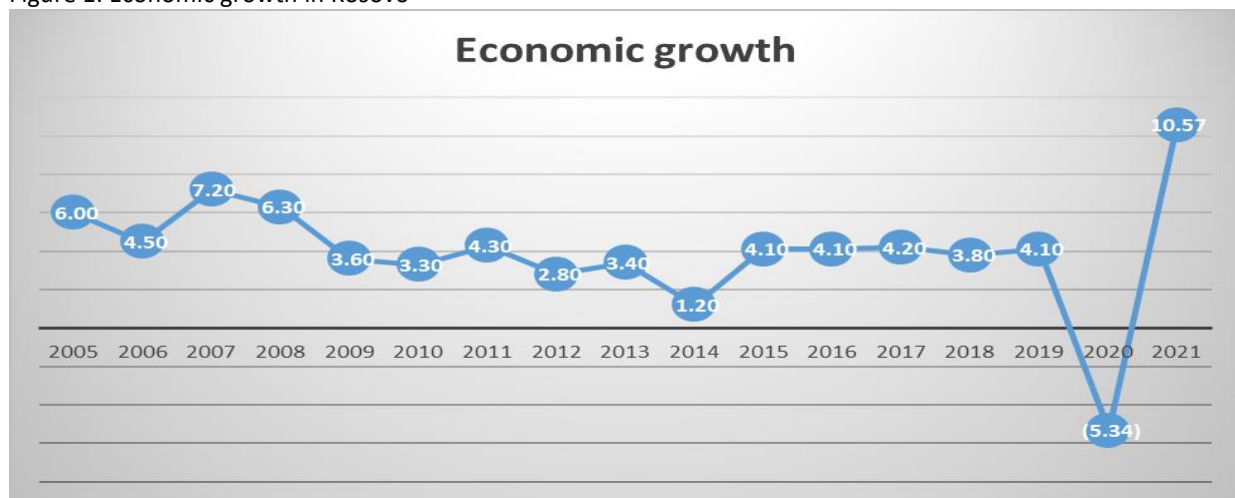

Table 1. The official data for the variables treated in the research

Period	GDP_G	T_Loans	T_Assets	Placemnt_Investment	T_Capital
2005	6.00	513.90	984.40	82.90	74.00
2006	4.50	636.60	1,161.20	99.40	103.30

Source: (World Bank and Central Bank of Kosovo, 2022)

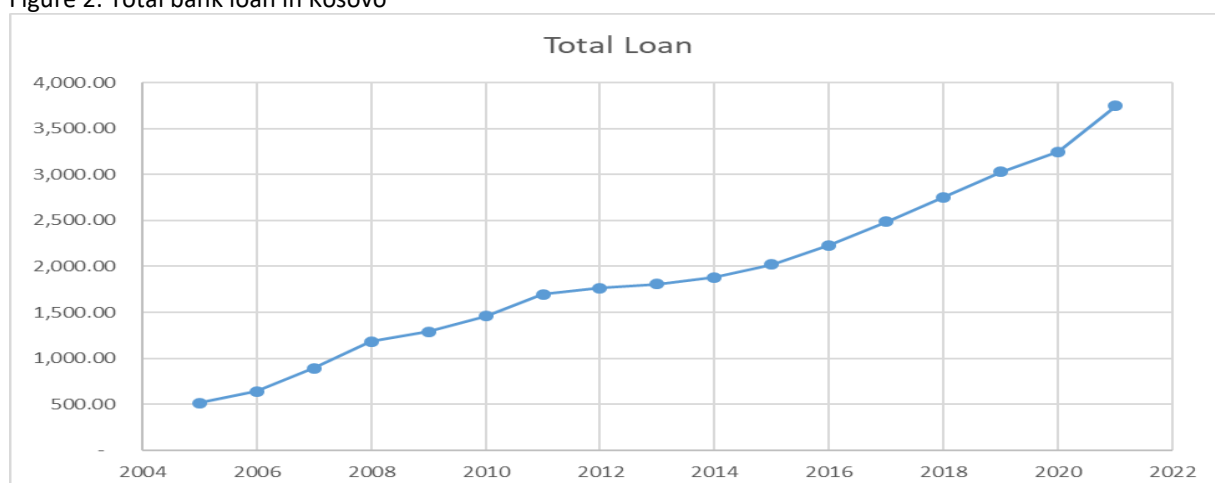

Figure 1: Economic growth in Kosovo

Source: (World Bank, 2022)

Based on the data presented in the graph, we see that Kosovo has had an increase in GDP continuously from 2005-2019, although for Kosovo to have a more stable economy, this increase should be higher. While there was a 5.34% decrease in 2020, this was a result of the pandemic and the measures taken to prevent the spread of the virus. This has reflected in the decline in economic activity, a significant decline in the export of services within the balance of payments, the decline in diaspora visits to Kosovo, the decline in investments, etc. Well, in 2021 we have an increase in GDP of 10.57%. Such an increase could also be due to the fact that in the previous year, respectively, during the time of the pandemic, economic activity almost stopped in all spheres, therefore, with the end of the pandemic, due to that pause, economic activity, respectively, investments increased, but in this growth, they also had affect remittances from abroad.

Figure 2: Total bank loan in Kosovo

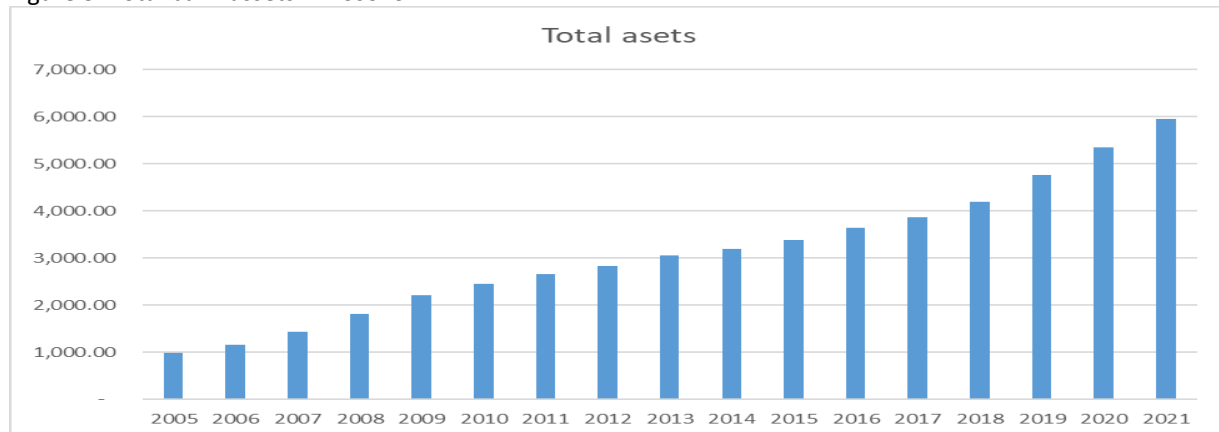

Source: (Central Bank of Kosovo, 2022)

The contribution of the banking sector in supporting the economy is also very important in terms of continuing lending, despite the increase in the level of risks faced by the banks, they still maintain high levels of liquidity and capital adequacy (CBK 2021).

The credit portfolio of the banking sector has continuously expanded, while the value of total loans from 513 million euros in 2005 has continued to increase and in 2021 has reached 3.75 billion euros, reached 3.25 billion euros.

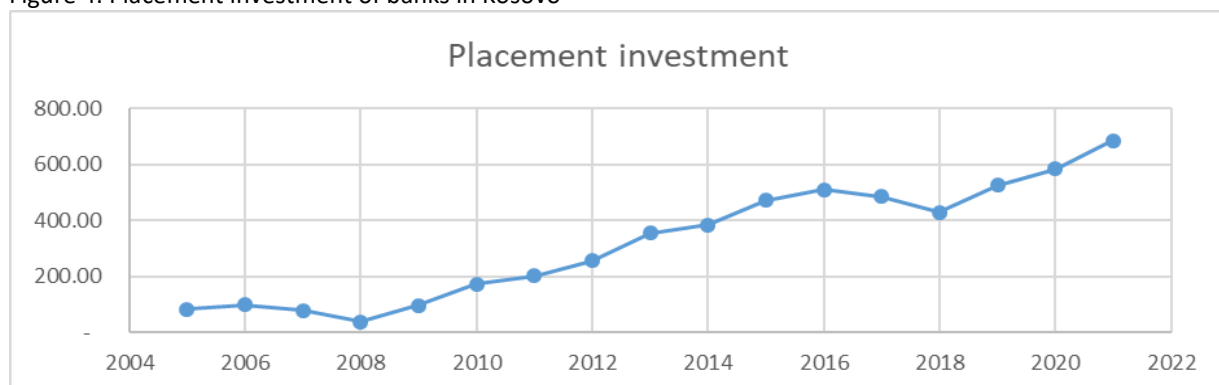

Figure 3: Total bank assets in Kosovo

Source: (Central Bank of Kosovo, 2022)

The assets of the banking sector have continuously increased, in this case we can make a comparison with the year 2005, in which case the value of the total assets was 984 million euros, while this value has continuously increased, where in 2021 it will reach a value of about 5.96 billion euros. However, the restrictive measures to prevent the spread of the Covid19 virus were among the main factors that dictated the performance of the sector's balance sheet items. As result of the uncertainties brought about by the restriction of economic activities, the assets of the banking sector recorded a slower growth compared to the previous year, which is attributed to the dynamics in the credit activity, as the item with the main contribution to the assets of the banking sector (Central Bank of Kosovo, 2021).

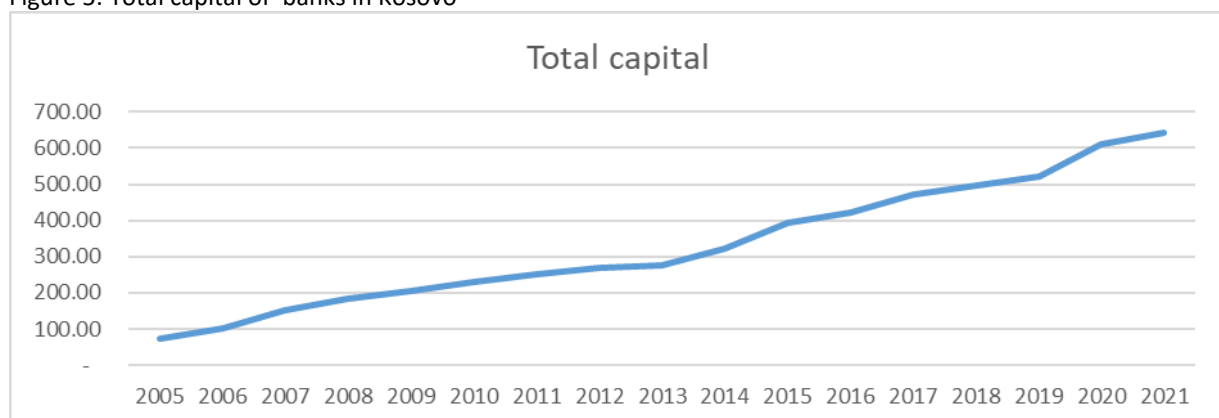

Figure 4: Placement investment of banks in Kosovo

Source: (Central Bank of Kosovo)

The position of securities has shown continuous growth even though their participation is small in 2005 their value was close to 83 million euros, while in 2021 the value has reached 685 million euros. Of course, such an increase is important, but the value and focus of investment in securities remains small.

Figure 5: Total capital of banks in Kosovo

Source: (Central Bank of Kosovo)

The own funds of the banking sector have been characterized by continuous growth if we take the period of 2005 as a comparison, the value of the total capital was 74 million euros, but this value has multiplied over the years due to the continuous growth, which in 2021 has reached the value 643 million euros.

3. DATA, METHODOLOGY AND RESULTS

In the framework of this research sources that include foreign and local literature, books, scientific journals were used. The main source of information is quantitative analysis through correlation with a dependent variable (GDP growth) and independent variables (the natural logarithm of all assets of the banking system, the ratio of all loans to all assets, the ratio of all placements and investments with total assets and CAR - the ratio of share capital to total assets. The data period includes the time interval from 2005-2021, from the official data of the Central Bank of Kosovo, and the World Bank. The processing of data or results is done with STAT.

Table 2: Descriptive statistic

Variable	Obs	Mean	Std. Dev.	Min	Max
GDP_G	17	4.017925	3.191789	-5.340275	10.745
Ln_TA	17	7.432794	.5543788	6.242029	8.229138
TL_TA	17	.6089968	.03631	.5220439	.6583443
TPI_TA	17	.0945815	.0332526	.0219543	.1403041
CAR	17	.1026532	.0126025	.0751727	.12166

Source: Author calculations

Based on the results generated by the statistical model used, the GDP growth rate has an average value of 4.02%, with a standard deviation of 3.19%, while its minimum value is -5.34% and the maximum is 10.74%. Meanwhile, the natural logarithm of all assets of the banking system has an average value of 7.44%, standard deviation 0.55%, while the minimum value is 6.24% and the maximum value is 8.23%. As for the other variable, the ratio of all loans to all assets has an average value of 0.61%, standard deviation 0.036%, with a minimum value of 0.52% and a maximum value of 0.66%. The ratio of all placements and investments to all assets according to the generated data has an average value of 0.94% with a standard deviation of 0.33%, while the minimum value is 0.22% and the maximum value is 0.14%.

As well as the last result CAR-share, capital ratio with total assets has an average of 0.10%, standard deviation 0.13%, while the minimum value is 0.75% and the maximum value is 0.12%.

Table 3: Correlation analysis

	GDP_G	Ln_TA	TL_TA	TPI_TA	CAR
GDP_G	1.0000				
Ln_TA	-0.2315	1.0000			
TL_TA	0.0934	0.6562	1.0000		
TPI_TA	-0.2069	0.5604	-0.0206	1.0000	
CAR	-0.1457	0.7481	0.6887	0.4853	1.0000

Source: Author calculations

Correlation analysis is used to analyze the relationship between the dependent variable of GDP and the independent variables. According to the results, it appears that there is a positive correlation with the TL/TA ratio and the natural logarithm of all assets, all securities placements and investments and capital adequacy have a negative relationship. While other variables have a negative correlation. While the rest of the relationships are reflected in detail in Table 3.

Table 4: Linear regression results

Source: Author calculations

Based on the results of the F-test, we suggest that all the variables used in the framework of the model have a value lower than 10, this indicates that the value of the F-test with probability (F 0.0030), at a confidence level of 99.9%. More to verify the stability of the model R-squared is 0.4380 or 43.8% of the dependent variables explains the growth of GDP. While the remaining part is explained by other variables that have not been addressed in the framework of this paper.

Of the treated variables, three have turned out to have a statistically significant impact, while one has turned out to be unimportant or non-significant.

Total assets have a positive impact on GDP growth with a 95% confidence level. This means that for every increase in the total assets of the banking sector, it affects the increase in GDP.

TL_TA has a positive impact with a 95% confidence level, which means that for every 1% increase in total loans in the banking sector, it affects 107.01 percentage points.

TPI_TA, in the econometric aspect, the result of this indicator is insignificant and as such is irrelevant for discussion.

While CAR has a negative impact on GDP growth, which means that any increase in the demand for capital has a negative impact on GDP.

The ratio of total credit to total assets has resulted in a significant positive impact on GDP growth, with a significance level of 95%, which means that for every increase in this ratio, we have an increase in GDP.

4. CONCLUSIONS

The difference between the interest rates for loans and deposits is considered a great advantage for the financial banking sector, since the small return on deposits has encouraged banks to save, while it has reduced the cost of lending and thus has increased opportunities for greater profits.

As for the CBK, in order to have lower interest rates in the credit market, they also agree with the assessment of commercial banks, that a general improvement of the business environment would definitely encourage new banks to enter the credit market. Kosovo, which would be more competitive and efficient.

Businesses must have detailed plans compiled in the case of loan requests, so that their projects are more convincing to the bank's management, because in this way the banks will have an easier decision-making process.

The use of efficient and appropriate crediting techniques for SMEs in the first period of credit use should be applied by commercial banks during this period, since this way of issuing loans is used very little.

The small return on deposits has discouraged potential savers, while it has increased the cost for borrowers (especially individuals and businesses), and thus reduced the opportunities for investment and economic growth, especially for our economy, where the opportunities for alternative sources of financing through the market capital are minimal.

Of the variables treated, it was noted that they had a statistically significant impact, the total assets that had a positive impact on GDP growth with a confidence level of 95%. This means that any increase in the total assets of the banking sector affects GDP growth. And the TL_TA ratio has a positive impact with a 95% confidence level, which means that for every 1% increase in total credit in the banking sector, it affects 107.01 percentage points. The ratio of total loans to total assets also had a significant positive impact resulted in a significant impact on GDP growth, with a significance level of 95%, which does not understand that for every increase in this ratio, we have an increase in GDP.

Whereas, CAR had a negative impact on GDP growth, which does not mean that any increase in demand for capital has a negative impact on GDP.

While from the analysis of the results of the TPI_TA report, in econometric terms, the result of this indicator is insignificant and as such is irrelevant for discussion.

Also, the continuous increase in bank loans should be carefully analyzed for its effect in the future, since in some periods we have an increase in bad loans. Although the credit potential of banks is increasing, this is justified by the high interest rates for loans, which, based on our study and the treated variables, appears to have a high impact on GDP growth.

Economy: The European Union's Instrument Of Influence In The Western Balkans

Milen Ivanov ZHELEV¹

¹Biographical reference

Abstract: The present abstract aims to reveal fragments of a scientific article concerning the European integration of the countries of the Western Balkans. The author focuses on the economic criteria of the EU as an instrument of influence, concerning the accession processes of 4 specific countries from the region: Albania, North Macedonia, Serbia and Montenegro. The text directs the reader's attention to the latest recommendations of Brussels for economic reforms from 2020 until the present day, emphasizing both the geostrategic priorities of the candidate member states. The fundamentals of this research will be based on the individual reports of the Economic Reform Programmes for 2021 and 2022 and in particular for each examined country. The research methods chosen by the PhD student are in parallel a content analysis of official documents of the European institutions, as well as a brief comparative analysis of case studies about each country under consideration. Finally, the author will try to summarize the impact of Brussels on the economies of Tirana, Skopje, Belgrade and Podgorica without giving biased assessments.

Key words: Economy, European Union, Western Balkans, Influence

1. Introduction

The economy is an essential part of the processes of enlargement of the European Union and the European integration of the countries of the Western Balkans. The creation of the largest single market in the world, including a free trade area, single customs policies, free movement of goods, services and citizens, as well as the single European currency, is considered an achievement of the EU. However, in order to be competitive with the major world powers, the European economy needs to expand its scope of action. Economic development, along with the rule of law, human rights, democratic institutions and reforms in public administration, are among the so-called. "first foundations" in the accession processes of new member states.

The refugee crisis from the war in Syria and the path of migrant flows through Southeast Europe catalyze the EU's attention on the inclusion of the Western Balkans region to European values and the *Acquis communautaire*, but also to the strict requirements of the union. It is precisely the gaps in the borders of each country in the region that present a risk not only to their own national security, but also to that of the entire union. In 2015, Commissioner Johanne Hahn openly stated: "The current refugee crisis shows how important close cooperation between the EU and the countries of South-Eastern Europe is. The EU enlargement process covering the Western Balkans and Turkey is a powerful tool for strengthening the rule of law and human rights in these countries. In addition, this process stimulates the building of a stronger economy and regional cooperation."¹

The scientific article aims to take a closer look at the economy as a lever of EU influence on the countries of the Western Balkans and in particular Albania, North Macedonia, Serbia and Montenegro. Croatia will not be part of the study due to the fact that it has already been accepted as a full member state, and since January 1, 2023 has adopted the euro as its official currency and joined the Schengen area in parallel. The other 2 countries in the region that will not be covered in this text are Bosnia and Herzegovina and Kosovo, as, despite their differences, at this stage they seem equally distant from EU accession processes with official candidate status².

When talking about leverage, this text tries to avoid any emotional or biased assessments about the role of the EU in the economies of the 4 countries studied. In the field of political analysis, the processes of economic interaction between the union and the countries can probably be defined as bilateral cooperation, from which both countries benefit at least financially. And if the extension of the EU's reach to new territories on the Old Continent is a classic example of the conscious use of "soft power"³, then for critics of the union, the economic

criteria for the accession of new member states to the EU is seen as a form of dependence and even subordination in the context of their acceptance into NATO, for example⁴.

The following article will try to examine the specific instruments through which the EU, on the one hand, supports the development of Albania, North Macedonia, Serbia and Montenegro, but on the other hand obliges them to take specific actions in the domestic political sphere. The official positions of the state institutions of the listed countries will be discussed in another text, this one will focus entirely on the specific guidelines of Brussels towards Tirana, Skopje, Belgrade and Podgorica. The methodology used will be an analysis of the content of official documents of the European institutions, as well as a brief comparative analysis of the practical cases of each individual country.

2. Economic tools for EU influence in the region

The individual reports of the Economic Reform Programs⁵ for each examined country will serve as the basis of the research. Before that, however, the text will make a brief retrospective of the already existing economic instruments of influence of the EU, which led to the creation of the programs in question. At first, it would be useful for the reader to distinguish between the ERP's of the Western Balkan countries and Turkey and the National Reform Programs and Stability or Convergence Programs⁶, which refer to current EU member states. The very presence of this remark is a sign of the proverbial bureaucracy of European institutions, which often blur their political responsibility with the action or inaction of numerous departments that function without the necessary information campaign and whose activities often remain, albeit unintentionally, unknown to European taxpayers. The role of the European Semester⁷, created in 2011 to coordinate the economic policies of the EU, remains as if hidden from the ordinary citizen. Although the countries of the Western Balkans are not full members of the union, the current geostrategic priorities of Brussels cannot but affect the direction of their development. An axiomatic example is the Recovery and Resilience Facility⁸, which arose as a consequence of the COVID-19 pandemic in the direction of the ecological and digital transition of the Union.

Created in 2021, it reports on its activity through publicly available reports on its implementation⁹, but some critics and/or Eurosceptics see lobbyist amendments in it to protect the interests of a specific country, business or entire shares of energy, for example¹⁰. Since the economic policy of the EU directly affects the countries of the Western Balkans, European officials prepare a detailed analysis every quarter in the region, with the reports scrutinizing the economic indicators of each country.¹¹ Currently, companies of EU origin are the largest

investor in the Western Balkans region, with foreign direct investments from there from 2013 to 2018, for example, exceeding 10 billion euros¹². Of course, the process is mutually beneficial, as the region offers a market of more than 18 million users, and the potential before it is far from being developed.

On October 6, 2020, at an extraordinary meeting of the Committee on Foreign Affairs of the European Parliament, the "Enlargement" package was adopted in Brussels, as well as a comprehensive Economic and investment plan for the Western Balkans¹³. Officially, the latter aims at the long-term economic recovery of the region, the support for ecological and digital transition and the promotion of regional integration and rapprochement with the European Union. This practically means that the recommendations for economic reforms and those in the sphere of the rule of law actually become mandatory for the candidate countries for EU membership. The Accession criteria (Copenhagen criteria), which represent practical conditions for entry into the EU, can be divided into 3:

- political criteria: stable institutions that are a guarantee of democracy, rule of law, human rights and respect and protection of minorities;
- economic criteria: functioning market economy and capacity to deal with competition and market forces;
- administrative and institutional capacity to implement the *acquis* of the EU and the capacity to assume the obligations arising from membership.¹⁴

Since 2015, the EC has introduced a new methodology for the processes of accepting new member states, with the EU's key values such as the rule of law, fundamental rights, the strengthening of democratic institutions, the reform of public administration, as well as economic development and competitiveness being at the fore.

And even if then the year 2025 scheduled for the admission of the countries of the Western Balkans to the EU 2025 seems unrealistic, today the great challenges facing the countries in the region remain relevant: resolving political conflicts as a first step for economic prosperity, poor governance, the development of connectivity and infrastructure, as well as the lack of an industrial base.¹⁵

And if in 2018 the European future of the countries of the region is considered secure after the approval of the EC Strategy "Reliable prospect for enlargement and strengthened commitment of the EU for the Western Balkans"¹⁶ from the summit in Sofia, then almost 5 years later, in the conditions of a post-health pandemic, a raging war in Ukraine and forecasts of a global recession in the foreseeable future¹⁷, the progress of the pre-accession processes appears to be little or nothing.

However, the EU does not seem to notice this, concentrating on its many progress indicators for the countries of the Western Balkans. Among them are 6 leading initiatives¹⁸ that group the negotiating chapters into thematic clusters:

- 1) Main topics
- 2) Internal market
- 3) Competitiveness and inclusive growth
- 4) Green agenda and sustainable connectivity
- 5) Resources, agriculture and cohesion
- 6) Foreign relations

Each of these 6 points will be considered as a whole, and not as part of each negotiating chapter, as was the case before. Each open cluster defines criteria for closing a negotiation chapter. And if the Economic and Investment Plan aims at long-term recovery through a green and digital transition¹⁹, then the implementation of reforms openly declares the goal of bringing the Western Balkans closer to the EU single market. The Economic and Investment Plan for the Western Balkans has 6 leading initiatives with 10 priorities contained in them:

Sustainable transport:

Flagship 1: Connecting East to West

Flagship 2: Connecting North to South

Flagship 3: Connecting the coastal regions

Clean energy:

Flagship 4: Renewable energy

Flagship 5 : Transition from coal

Flagship 6: Renovation wave

Environment & Climate:

Flagship 7 : Waste and Waste water management

Digital future:

Flagship 8: Digital infrastructure

Human capital:

Flagship 10: Youth Guarantee

Private sector:

Flagship 9: Investing the competitiveness of the private sector

The Commission plans to examine the costs, benefits and consequences of following the 10 key priorities in the context of the green and digital transition.²⁰ The amount of grants allocated for this purpose exceeds EUR 9 billion from the Instrument for Pre-Accession Assistance (IPA II) ²¹ for the period 2021 - 2027. It can be

concluded that the Economic and Investment Plan is not an alternative to the Enlargement Plan, the two programs are an integral part of the path of the Western Balkans towards EU acceptance.

3. Programs for economic reforms

The Economic Reform Programs (ERP's)²² are one of the key aspects of the current enlargement processes of the European Union, which is why every year since 2015 the economic and financial dialogue between the EU, on the one hand, and the Western Balkans and Turkey, on the other, adopts specific political guidelines for development. The long-term task of the required reforms is the achievement of macroeconomic stability, tax sustainability, long-term growth and competitiveness. For this purpose, Brussels prepares annual economic reports, prepared by the General Directorate "Economic and Financial Affairs"²³ of the EC, the purpose of which is the implementation of policies recommended by the EC, CE and EP. Although the reports have the status of unofficial documents, which do not at all costs represent the views of the European institutions, the EU accession processes of the countries of the Western Balkans and their European integration depend on them. Logically, Croatia does not appear in the documents, but it is curious that Turkey is involved there. The main difference, from a purely economic point of view, is the correctable level of inflation in the countries of the Western Balkans, while in Turkey there is a galloping rise in prices and, accordingly, inflation exceeding the permissible norms. The current work will focus on 4 countries: Albania, North Macedonia, Serbia, Montenegro. Without excluding each country's past and future development forecasts, the reports specifically considered in this text will be for 2 consecutive years: 2021²⁴ and 2022²⁵. The July 2021 report focuses on the negative effect of the COVID-19 pandemic on the economic growth of the countries under consideration. It is a sustainable recovery from the crisis in question that is the goal of structural reforms according to European recommendations. The emergency situation is a good occasion for the EU to demonstrate its so-called "soft power" through financial support to the poverty-stricken region of the Western Balkans.

The annual report identifies the following policies as at risk of challenges:

- Fiscal policy to serve to mitigate the crisis for an indefinite period of time.
- Short-term fiscal-structural reforms to strengthen debt sustainability in the medium term.
- Investigation and handling of the crisis in the financial sector.
- Optimization of the regulatory and institutional environment in order to remove obstacles to the private sector and competition.
- Combating the high share of the informal economy (gray sector).
- Inefficient use of energy sources.
- Lack of economic integration to realize the region's potential.
- Low activity regarding the integration of women in the labor market.
- Improving the social policy towards the poorest segments of the population.

- Increasing investment in human capital and education.

The June 2022 report found the level of implementation of the 2021 report's recommendations to have deteriorated across the board. This is partly related to the return to recommendations for more challenging reforms after the focus on short-term measures related to the COVID-19 pandemic in 2020. This time, the emphasis of the recommendations should not be the progress of the Western Balkan countries and Turkey, but the footprint of Russia's war against Ukraine on the countries' plans for economic reforms. However, there is a snag here: each individual country report was published on January 31, 2022, just days before the Russian invasion of Ukraine in February of that year. Although the annual report was published in June 2022, its recommendations and conclusions certainly lose a significant part of their validity during the 4 months of war in Ukraine, although it is included in the document in one way or another. When examining the processes of European integration, the proverbial clumsiness of the European administration and institutions should be seen not as bureaucratic negligence, but as a systemic problem bringing the union as a whole into disrepute. Meanwhile, a war of a similar scale on the Old Continent is an appropriate occasion for the EU to use the economic and financial dialogue as a tool for geopolitical influence in the form of sharing experience, discussing political strategies and jointly reaching consensus on priority reforms. In the programs for the countries of the Western Balkans, whose macro-fiscal forecasts are not adapted to the war, a large part of the proposed reforms remain relevant, which shows the multi-layered connectivity of both the accession processes of new member states and the ongoing military conflict. The EU is calling for greater responsibility on security issues, which include greater energy diversification and accelerating the green digital transition. The shock of the war in Ukraine has obvious consequences for the countries considered in the report, but they differ in each country's direct and indirect trade ties, their energy intensity, the rise in food price inflation and the role of tourism. And while the ERP forecasts for a downward trend in growth predate the outbreak of war, again they mostly expect a reduction in deficits for the Western Balkan countries in the period 2022-2024. The discourse in the 2022 report of the European institutions is based on medium-term ERP's submitted annually by all candidate and potential candidate countries. The goals are again competitiveness and long-term growth, and the instruments – a macroeconomic framework and one for tax policy, as well as a plan for structural reforms. And if structural reform priorities remain relevant to the EC's May 2022 economic projections, then growth forecasts are expected to be affected by economic collapse, the aftermath of war, possible future spread of the COVID-19 pandemic, supply chain disruptions, global inflationary pressures and the likely tightening of the financial market. The main challenges facing the region, according to the 2022 annual report, are:

- Fiscal policy mitigating the adverse impact of the COVID-19 pandemic and war.
- Budget shift towards growth, recovery policy through digital and green transition.
- Fiscal-structural reforms with a priority on strengthening medium-term debt sustainability.
- Survey and address rising inflation and the impact of adverse shocks on the financial sector.
- The so-called spill-over effect of the war in Ukraine, changing the horizon of risks to economies on several fronts.
- The lack of regional economic integration in the Western Balkans, which prevents the region from realizing its full potential.
- Low labor force participation, especially among women, young people, combined with other key problems in the labor market.
- Improving social spending towards the poorest segments of the population
- Increasing investment in human capital and education
- Universal coverage and equal access to basic health care for all.

The next few chapters will look at the 2021 and 2022 ERP annual reports for Albania, North Macedonia, Serbia and Montenegro, respectively.

4. Albania

4.1. 2021 ERP Report on Albania

According to the 2021 PIR report, Albania's economy shrank by less than originally projected. A recovery of up to 5% growth is expected in 2021-2023 thanks to private consumption, exports and investment. The goal is for capital expenditures to maintain a fiscal deficit above 6% of GDP in 2021 and in 2022 spending cuts to halve the deficit and gradually reduce the government debt ratio. Like all Western Balkan countries, Albania faces serious challenges. To achieve fiscal consolidation, the report recommends better debt management and increased revenue. Among the stated goals are optimization of public spending and improvement of the business climate. Although the number of tertiary graduates is increasing, the share of the elderly population without qualifications and the percentage of young people neither working, studying nor training remain high. Spending on social protection and health care is insufficient to reduce poverty and social exclusion. It is considered that the political guidelines indicated in the conclusions of the Economic and Financial Dialogue held in the country in May 2020 have been partially implemented. Analysis of the key challenges in the program remains incomplete.

Although some reform measures are in line with the priorities set by the EC, some problems have not been adequately resolved. The ERP for Albania estimates an economic contraction in 2020 of 4.4%, just half of what was previously forecast, while the latest data confirms an even lower contraction of 3.3%. The country's economy is projected to recover to average 5% growth between 2021 and 2023, driven by a broad-based recovery in private consumption, export and investment. These economic outlooks rely on optimistic forecasts for public investment, but may become subject to downside risks arising from the COVID-10 pandemic and the political cycle. Among the joint conclusions for Albania in the 2021 Annual Economic Report, the following policies are recommended:

1. Return to positive balance from 2023 subject to fiscal discipline.
2. Reduction of arrears under contracts, for example VAT, until 2022.
3. Maintaining a strong regulatory framework of the financial sector, including good credit risk management, transparent presentation of assets and adequate forecasting.
4. Improved business support services.
5. Development of a Plan to guarantee the realization of young people (up to 30 years of age).
6. Reassessment of the "Economic Assistance" instrument and encouragement of local authorities to apply for support from the Social Fund.

4.2. 2022 ERP Report on Albania

Despite the outbreak of war in Ukraine, Albania's economic recovery in 2021 is estimated to be better than expected. ERP reports show 8.7% growth of the economy in 2021 and reaching pre-crisis levels in most segments. Recovering exports, good results in tourism, high public investment and continued accommodation policy are helping the recovery process. Thus, the labor market is regaining almost all the positions lost during the COVID-19 pandemic. Steady growth and gradual fiscal consolidation through lower capital expenditure are projected in 2023. It is also recommended to create fiscal buffers as a measure against future economic shocks. Challenges continue to include the deteriorating business environment from structural weaknesses, the high proportion of low-skilled adults and young people not in work, education or training. Poverty and social exclusion remain high, spending on social protection and health care is still insufficient. However, the recommendations of the 2021 multilateral dialogue are considered partially implemented. It is also believed that the key challenges identified by the ERP correspond to those identified by the EC, but their analysis is incomplete.

The growth forecast in 2021 has been revised upwards to 8.7%. Between 2022 and 2024, economic growth is expected to average 4%, led by a broad-based recovery in household consumption, exports and private investment. Optimistic forecasts for net exports are considered the main downside risks, while the assumed high growth of private investment calls for structural reforms. Inflation is on an upward trend, but is not expected to exceed its target in the medium term. The deficit reduction trend, which was temporarily interrupted by the COVID-19 pandemic, is expected to resume. This year too, it is reported that Albania's vulnerability from its increasing external debt is mitigated by a solid foreign exchange (forex), and this time, in

addition to the concessional debt, the long-term one also plays a role. The financial sector continues to recover and portfolio quality as a measure of average performance is improving, but high use of foreign currencies remains a risk, ERP also noted. Among the joint conclusions for Albania in the 2022 Annual Economic Report, the following policies are recommended:

1. If necessary, use the free fiscal space from the 2022 budget to mitigate adverse shocks on vulnerable households and firms.
2. Optimization of public strategic investments. Increasing the share of spending on education, healthcare, social protection, research and development.
3. Analysis of price developments and readiness for monetary policy tightening. Transparent presentation of assets and adequate forecasting.
4. Improved business support services through access to finance and entrepreneurial know-how. Action plan against the gray sector.
5. Finalization and implementation of the Plan to guarantee the realization of young people (up to 30 years of age).
6. Finalize the evaluation of the mechanism for benefits from "Economic Assistance" and create a mechanism for their annual indexation. Increasing funds for the Social Fund.

5. North Macedonia

5.1. 2021 ERP Report on North Macedonia

According to the 2021 ERP Report, North Macedonia's accelerating economic growth has been brought to a screeching halt by the COVID-19 pandemic. The economic reform program for the country expects a recovery of economic activity from 2021 despite the defeats on public finances from 2020. Among the challenges facing North Macedonia is the lack of a transparent and targeted fiscal policy. There is a need for significant improvements in public investment management due to weak implementation of capital expenditure in the budget. Local companies suffer from low levels of productivity, their growth is slow. This is an obstacle to their competitiveness and integration in the global economy. The scale of the gray sector continues to be a hindrance to the business environment as it creates unfair competition from unregistered companies. The education system does not provide young people with enough skills and knowledge to actively participate in the labor market. The joint policies agreed upon by the Economic and Financial Dialogue of 19 May 2020 are considered to be partially implemented. However, growth of 4.6% is expected in the period 2021-2023.

The joint conclusions of the ERP for North Macedonia state briefly the following:

1. Targeted and temporary fiscal protection for vulnerable households and businesses affected by the COVID-19 pandemic. Gradual medium-term fiscal return to pre-pandemic GDP figures.
2. Adoption of a new law on public-private partnership and its effective implementation, including development of a register for the purpose.
3. Maintaining a sound regulatory framework in the financial sector.
4. Improving the transparency of commercial legislation. Continue the digitization of public services for business and citizens.
5. Implementation of a list of mapped parafiscal charges. Identification of those to be abolished, reformed or streamlined. Continue the digitization of public services for businesses and citizens.
6. Implementation of the Strategy for "brightening up" the gray economy and the Action Plan (2018-2020). Development and implementation of a new action plan for the period 2021-2022.
7. Development of a new formula for financing the Vocational Education and Training system and Higher Education with an emphasis on the functioning of regional VET centers. Improving access to an active social policy on the labor market.

5.2. 2022 PIR Report on North Macedonia

According to the ERP 2022 report, North Macedonia's economy is recovering in 2021, with growth, expected to gradually accelerate in capital spending, that has not improved mainly due to weaknesses in the public investment management. The unstable business environment in the country stifles the competitiveness of local companies, investment and the integration of the global supply chain. The ERP considers the Russian aggression against Ukraine as an occasion to urgently accelerate the transition to clean energy in North Macedonia and a means of increasing energy security. The education system in the country continues to fail to provide young people with key competencies such as skills and knowledge, through which they can actively participate in the labor market. However, the jointly agreed policies of the Economic and Financial Dialogue of 12 July 2021 are believed to be partially implemented. From the ERP, they expect increased growth dynamics, mainly driven by domestic consumption. Brussels' forecasts for North Macedonia are rather optimistic as the financial sector has remained stable in 2021. Key indicators such as capital adequacy ratio, liquidity and profitability are reported to be recovering from the shock of the COVID-19 pandemic. Borrower relief measures, in the form of moratoriums on household loans, have ended in 2020, and those for businesses in 2021. Although the number of restructured loans increased in the first half of 2021, Brussels also reported that this did not have a significant impact on the ratio of non-performing loans. The joint recommendations of the report on North Macedonia in 2022 are summarized as follows:

1. Where necessary, use available fiscal space from the 2022 budget to mitigate the potential impact of adverse shocks through targeted support for vulnerable households and firms. This includes understandable tax reform and legislative changes that contribute to increasing revenues by broadening the tax base and accelerating the digitization of the Revenue Agency.
2. The new law on public-private partnership to be submitted for a vote in the Parliament and to ensure its implementation, including by creating a fully functioning register of PPPs.
3. Preserving price stability in the medium term through careful assessment and analysis of price developments. Guaranteeing the independence of the national bank.
4. The already prepared list of mapped para-fiscal charges to be used for evaluation, optimization and rationalization at the central and local level. To continue digitization and improving the use of electronic portals for services. To adopt a comprehensive new strategy and action plan for the formalization of the gray economy for the period 2023-2025.
5. To increase the staffing and technical and engineering capacity of the "Energy" department in the Ministry of Economy and the Energy Agency. To adopt and implement energy efficiency legislation in line with the commitments of the Green Program for the Western Balkans.

An improvement in public finances is reported in the medium term. The country is recommended to stabilize the debt by limiting current expenditure. Gradual fiscal reforms in the medium term are indicated as a measure against downside risks to the economic recovery. Develop new legislation on vocational education and training with a focus on inclusion, labor market needs and a new methodology for VET funding. Continue efforts to strengthen access to an active social policy regarding the labor market, especially concerning the low-skilled unemployed and people in vulnerable situations.

6. Serbia

6.1. 2021 ERP Report on Serbia

Continue efforts to strengthen access to an active social policy regarding the labor market, especially concerning the low-skilled unemployed and people in vulnerable situations. The annual ERP Report on Serbia notes a relatively mild economic contraction in 2020, but predicts a strong recovery in 2021 and subsequent growth at pre-crisis rates. The country's economic results are among the most favorable in Europe. Among the factors for their success are the strong pre-crisis momentum, fiscal and monetary mitigation measures, the sectoral

structure of the economy with limited dependence on tourism, and the relatively low stringency of restrictive measures. The fiscal strategy assumes a strong improvement in the budget balance and a reduction in the debt-to-GDP ratio as early as 2021, which, however, is not publicly reported. A sound framework and reforms are recommended to anchor fiscal stability.

The report states that Serbia is making significant progress in reducing the regulatory and administrative burden on business, but the business environment needs to be further strengthened by reducing bureaucracy and improving the predictability of law enforcement. It is also reported that the country remains highly dependent on coal and lacks a coherent long-term strategy combining energy and climate goals. The transition from school to work is rated as significantly more difficult than the EU average and structural barriers remain to be overcome. Tangible fiscal and financial assistance has significantly mitigated the economic effects of the COVID-19 pandemic in 2020, while the specific policy recommendations set out in the May 2020 Economic and Financial Dialogue have been partially implemented.

The joint conclusions of the Economic Reform Program for Serbia are summarized as follows:

1. To provide vulnerable households and businesses with targeted and temporary fiscal support regarding the COVID-19 pandemic. In the event of a good economic recovery, plan for a gradual return to a deficit close to balance in the 2022 budget and the medium-term fiscal framework. Adopt a credible and binding system of fiscal rules to enter into force in 2022.
2. To reduce the shadow economy, increase VAT collection and improve the tax control process implemented by the new model of digital fiscalization and the transition to electronic invoicing, according to the 2021 schedule.
3. Maintaining a sound regulatory framework in the financial sector in accordance with the best international practices and those of the EU. Maintaining sound credit risk management, as well as transparently displaying asset quality and adequate provisioning.
4. Improving transparency when adopting and implementing non-legislation, specifically by ensuring timely consultations with business and social partners regarding new laws affecting their activities. Application of the principles of competition, equal treatment, non-discrimination and transparency in public procurement and state aid procedures in accordance with the acquis of the EU for all public investment projects.
5. Development of a long-term energy and climate strategy in accordance with the Green Program for the Western Balkans and international commitments. Increase investment in modernizing energy infrastructure and reducing carbon emissions. Use of renewable energy sources for energy efficiency. In view of the upcoming liberalization of the energy market, to activate the remaining reforms in the sector. This includes the energy company EPS, Serbiagas and providing third party access to the gas infrastructure.
6. To reduce poverty by improving the cash social assistance scheme for individuals and families with children and by significantly increasing the non-taxable wage base, close to or equal to the minimum wage. To facilitate the transition from school to work by increasing VET. To develop a Youth Guarantee Implementation Plan with all the relevant ministries, agencies and stakeholders.

6.2. 2022 ERP Report on Serbia

An important clarification about the annual 2022 Serbia report is that it was published on January 31, 2022, just days before the Russian invasion of Ukraine. That is why it is not taken into account in the economic recommendations for the country, although Serbia is particularly affected by the conflict due to its strategic ties with Russia. Without being able to predict the war and after a strong surge for Serbia in 2021, the ERP predicts even faster economic growth for the country in the period 2022-2024 than before the COVID-19 pandemic. A fiscal strategy with a gradual return to a budget close to balance in the medium term is envisaged. For fiscal sustainability, a sound framework supported by reforms is recommended. However, it is noted that Serbia remains highly dependent on coal. While work has begun to address this, no long-term strategy combining energy and climate goals has yet been developed. Like other countries in the region, the percentage of young people not working, studying or training remains high. The policy recommendations in the Economic and Financial Dialogue conclusions of last year's report are considered to have been partially implemented.

And while significant geopolitical events such as Russia's war against Ukraine cannot be ignored, the EPR presents a comprehensive look at economic risks prior to the impact of the conflict and includes a detailed alternative macroeconomic scenario. In the second half of 2021, consumer price inflation is on the rise, which is expected to continue until mid-2022 and then moderate in 2023 and 2024. The economy's current account deficit widened slightly in 2021 and the EPR forecasts it to expand slightly in 2022-2024. The net flow of foreign direct investment continues to play a central role in external sustainability and competitiveness. The financial

sector recorded additional growth in lending, while maintaining stable macroprudential indicators, the ERP report also said.

Here is a summary of the joint recommendations of the report concerning Serbia in 2022:

1. Where necessary, use the available fiscal space in the 2022 budget to mitigate the potential impact of adverse shocks through targeted support for vulnerable households and businesses. In the event of a sustained economic recovery, plan for a further gradual return to a deficit close to balance in the 2023 budget, as well as a medium-term fiscal framework.
2. In order to reduce the gray economy, to strengthen the collection of VAT and to improve the tax control process by introducing digital fiscalization and transition to electronic invoicing and implementing tax administration reform according to the EPR schedule for 2022.
3. To carefully assess and analyze price movements with a readiness to further tighten monetary policy if necessary to maintain price stability in the medium term. To maintain transparent and accurate reporting of asset quality and adequate provisioning. To promote the use of national currency, including by strengthening its long-term financing.
4. To improve transparency in the adoption and implementation of legislation, in particular by ensuring timely consultations with business and social partners on the laws affecting them. To apply the principles of competition, equal treatment through non-discrimination in public procurement procedures and state aid in accordance with the acquis of the EU for all public investment projects, regardless of the source of funding.
5. To continue the development and adoption of a national long-term energy and climate plan in accordance with the Green Program for the Western Balkans and international commitments. Further increase investments in energy infrastructure modernization and reduce carbon emissions with a view to accelerating the green transition. Implement financial and institutional measures to encourage the use of renewable energy sources and achieve energy efficiency. Liberalization of the energy market is also recommended. Regarding Gastrans, Serbia to ensure that its regulatory regime is fully compliant with EU legislation, all in line with the action plan developed following the recently launched Cluster 4 on Energy, Climate and Transport in the process of accession to the EU.
6. To reduce poverty by increasing the adequacy of FSA benefits for individuals and families with children and by significantly increasing the non-taxable wage base to near or equal to the minimum wage level for workers. Continue to facilitate the transition from school to work by strengthening additional VET, including dual VET, through revised curricula and the provision of infrastructure that enables the acquisition of practical skills. In collaboration with all relevant ministries, their agencies and stakeholders, to finalize the Youth Guarantee Implementation Plan, adopt and initiate its implementation.

7. Montenegro

7.1. 2021 EPR Report on Montenegro

Montenegro fails to submit its 2021-2023 Programme to the EC by the deadline at the end of January 2021. This only happens on April 1 of the same year, when the government accepts it. Preliminary macroeconomic and fiscal indicators have been modified in the final version, moreover, the EPR reports that there are no statistical tables that would allow the EC to make an objective assessments. However, the forecast for economic recovery is optimistic. In 2020, the country's real GDP fell by approximately 15.2% due to the restrictions in the context of COVID-19 and their impact on the tourism-dependent economy. As early as 2022, the economy is expected to return to its pre-crisis level, which, together with the completion of the first section of the Bar-Boljare highway, is expected to lead to growth. Among the challenges facing Montenegro are the consolidation of public finances, with the burden of public debt remaining the highest in the region. The country's fiscal management and the regulatory environment of local authorities vis-à-vis businesses must be further improved. Inflation is expected to remain low, but the deficit in the economy remains. Like other countries in the Western Balkans, the black economy is hindering Montenegro's development, and unfavorable labor market outcomes are undermining potential growth and improving living standards. Among the joint conclusions for Montenegro in the 2021 annual economic report, the following recommendations are briefly stated:

1. To provide targeted and temporary fiscal support to vulnerable households and businesses related to the COVID-19 pandemic. From 2022, the country's budget should provide for a gradual reduction in the ratio of the budget deficit and the government debt. The state administration should prepare a plan for the optimization of the public sector and the fight against the gray economy. The quality of public investment needs to be improved.
2. Adoption of changes to the Law on the Budget and Fiscal Responsibility with the aim of creating an independent body for fiscal supervision. Survey of all tax-exempt individuals and legal entities, including analysis of their economic and social impact. Reduction of public sector arrears and VAT refund deadlines.
3. Maintaining a strong regulatory framework of the financial sector. Good credit risk management. Transparent presentation of assets and liabilities. Adequate forecasting. Further reduction of institutional and legal obstacles to resolution of non-performing loans.
4. Identification of sources of inefficiency at the local administration level in business-related procedures and improvements to the institutional and regulatory environment, including infrastructure development. Conducting a constructive dialogue between authorities and business. Simplifying business taxation.
5. Prioritize the digitization of the public sector and the development of transactional e-government services to accelerate and strengthen economic recovery. Completion of a new action plan against the shadow economy. Finalize work on a new action plan to tackle the informal sector and start its implementation, including targeted preventive measures and incentives to legalize informal enterprises and workers. Ensuring structural cooperation between central and local authorities in the development and implementation of measures aimed at reducing the informal economy.
6. Creation of an interdepartmental working group for the development of a Plan to guarantee the realization of young people. Completing the road map for social protection reforms. Preparation of a road map with concrete measures for reforms in the practical and dual vocational training system to improve their impact on labor market outcomes.

7.2. 2022 EPR Report on Montenegro

The annual EPR report of Montenegro for 2022. predicts that the real GDP will fully recover to its pre-Covid-19 crisis level before 2022. and maintain steady growth thereafter. The fiscal strategy of the Economic Reform Program will seek stimulus in 2022, and consolidation based on spending cuts. The main challenges facing the country include the gradual elimination of fiscal support and, accordingly, the burden of public debt, as well as strengthening the long-term sustainability of public finances. This requires improvements in fiscal management and public investment management. It is recommended that the regulatory environment should become business friendly and the shadow economy should be reduced in size and scope. The report found that an unfavorable labor market creates obstacles to potential growth and improved living standards. However, Montenegro is considered to have partially fulfilled the political guidelines adopted at the 2021 Joint Economic and Financial Dialogue. Here is the summarized list of joint conclusions for Montenegro in the 2022 Annual Economic Report:

1. Strengthen fiscal sustainability by re-introducing originally planned revenue measures from the 2022 budget. Use any excess revenue to limit the 2022 deficit. Adopt a new medium-term fiscal strategy with the 2023 budget, including consolidation measures and targeting a primary surplus from 2024.
2. Implementation of the recommendations of the Public Investment Management Assessment (PIMA). Prioritizing key state infrastructure activities within the available fiscal space. Adoption of changes to the Budget and Fiscal Responsibility Law.
3. Evaluation and analysis of the price developments. Willingness to use the limited instruments in the chosen monetary framework in order to produce price stability. Accounting for the quality of assets and their adequate provision, including reducing data gaps in relation to the real estate sector.
4. Completing an analysis of the obstacles to business in the local administration and proposing improvements in the institutional and regulatory environment, as well as their implementation. Continue the implementation of digital services for micro, small and medium enterprises. E-governance and transactional e-services.

5. Completing of the study on the shadow economy and the short-term effects of the Europe Now programme. Analysis of the results and their inclusion in an action plan to deal with the gray economy, as well as its implementation.

6. Completion of the Youth Realization Plan, its adoption and implementation. Establish a clear schedule and financial planning for the implementation of the Roadmap for reforms in social assistance and social protection and child protection services in Montenegro. Continue reforms for an active social policy in the labor market, with an emphasis on relevant work qualifications, including work-based learning, and creating a mechanism for continuous professional growth.

8. Conclusion

In May 2022, the regular economic and financial dialogue between representatives of EU member states, the Western Balkans and Turkey, the European Commission and the European Central Bank will be held in Brussels. In addition to public health issues (a consequence of the COVID-19 pandemic), economic and social challenges, the participants of the forum stand behind a common position condemning Russian aggression in Ukraine. The parties in the dialogue express their readiness to mitigate the adverse effects of such negative phenomena on the economy, through fiscal and financial measures until a sustainable and independent recovery process is established. However, the purpose of the dialogue is far more prosaic: practical preparation of the countries of the Western Balkans and Turkey for their future participation in the European Semester, already mentioned in this text. For the record, it was reported that due to the January 31 ERP submission deadline, the effects of Russia's war against Ukraine were not taken into account. Paradoxically, Bosnia and Herzegovina even missed the deadline in question, causing frustration among participants and, like Kosovo, skepticism about the countries' imminent EU accession.

It is curious that the EC is asking the countries in the Western Balkans and Turkey for ERPs concerning the period 2022-2024, which probably lights a red light for the critical analyst that the previous one-year reports have not fulfilled their original concept. And if all the economic programs and recommendations are observed with constructive criticism and the progress of the countries in some areas has been taken into account, then the essential goal of the dialogue - the European integration of the countries of the region - remains with many question marks. Unpredictable phenomena such as the COVID-19 pandemic seem to show the lack of flexibility of the European institutions to adapt the pre-accession processes in the countries of the Western Balkans to them, and explosive geopolitical upheavals such as the war in Ukraine seem more likely to cause real changes in the enlargement of the EU and the spheres of influence than the official bureaucratic criteria for closing negotiation chapters. This, of course, does not necessarily lead to Eurosceptic sentiments among the population of the Balkans or to a bad development of the accession processes, but the future of the EU requires optimization of the European procedures for accepting new member states in view of the dynamic political situation.

³PhD., Vice-Dean for International Relations Faculty of Management and Business University of Presov, Slovakia, eva.benkova@unipo.sk

Abstract: It is established that digital transformation is a key factor for anti-crisis management of economic processes in anti-crisis management during war .

It is specified that the new era of upgrading anti-crisis management of the economy requires absolutely new digital approaches to ensure effective resolution of the crisis. The article considers the key aspects of digitization in the anti-crisis management of economic processes in anti-crisis management during war as well as modern challenges for Ukraine in the field of information security protection against external impacts. It structures the core risks of crisis in the economy and analyzes anti-crisis approaches to crisis management in conditions of war.

Keywords: digitalization, anti-crisis management, economy, crisis, risk, war.

Introduction

Lately, Ukraine has been in a perilous state, associated with a significant decrease in resource potential due to military operations in the territory throughout the country. However, in addition to immediate front of hostilities, the economic front is becoming no less important because providing defense and restoring the function of infrastructure facilities requires considerable funds. Therefore, the problem of improving the work of state structures and stabilizing the economic crisis is becoming essential.

Russian invasion of Ukraine led not only to a humanitarian catastrophe but also to global socio-economic upheavals of an unpredictable duration and scale. According to various estimates, the war on the territory of Ukraine caused more economic damage to Eastern Europe and parts of Asia than the coronavirus pandemic and it negatively affected the world economy.

Ukraine, which faced aggression from the Russian Federation, has enormous difficulties in combining four factors of economic growth - natural resources, labor resources, capital, and technology. Various institutional and socio-cultural barriers exacerbate these difficulties. The biggest challenge of recent times is purposeful destruction of infrastructure, which negatively affects socio-economic development of our country. Full-scale war as a social phenomenon is projected on the economic, social, political, humanitarian, military, and informational spheres.

During the war, the government is searching for practical management solutions for overcoming the crisis, which should be based on applying anti-crisis measures and advanced digital technologies.

Problem Statement

Digital transformation, from a macroeconomic point of view, will stimulate profound changes in the society and industry and it can increase labor productivity overall, contribute to the modernization of the industrial structure, and strengthen social welfare. It is essential to pay attention to the application of digitalization in anti-crisis management of the national economy, which will allow quick changes in the approaches to anti-crisis management.

This concept has already got its history. In 1991, Michael Scott Morton noted that "using digital technologies can trigger radical changes in the modes of production, operation, management and maintenance of enterprises" (Morton MS., 1990).

Digitization of anti-crisis management of the economy involves the development, implementation and testing of the latest protection systems and individual electronic modules in case of a crisis in the country. Digital support at all stages of anti-crisis management involves the introduction of modern IT solutions into the

information structure of the economy during anti-crisis measures (at all stages, especially at the stage of managing the processes of withdrawing the economy from the crisis state).

An essential aspect of digitization in crisis management during wartime is protecting personal data. Hackers carry out purposeful, organized attacks, which should be anticipated with proper preparation and realistic assessment of such a threat.

With the growing threat of cyberattacks, it is essential for the government agencies to ensure transition to new technologies such as collaboration software, in particular MS Teams/Office365",

The basis for digitization of crisis management is in its tasks, functions, and principles. The mission of anti-crisis control of the economy is the early application of specific methods and techniques to ensure smooth operation of the central state management structures and organizations. It is this set of procedures which allows provision of continuous activity based on external and internal risk management and crisis neutralization. Theoretically, the main task of digitalization in anti-crisis management of the economy is timely diagnosis of crisis phenomena and taking necessary anti-crisis measures to prevent and stabilize the internal and external environment of the country.

Therefore, in order to effectively counteract destructive actions of the enemy, it is necessary to protect digital information that ensures management of the economy and forms the basis for the country's development in the future.

Along with this, the need to identify crises characteristic of the economy emerges as a priority (Shabatura M, Tykholaz D., Bumba I., 2021).

Afterwards, digitization of anti-crisis management, carried out in wartime, and the outline of probable consequences of crises and possible ways of its optimization. Therefore, the principal risks of a crisis in the economy in war conditions are the following:

- 1) Economic risk of crisis - deterioration of financial stability (a dramatic change between the asset and liability of the country's balance sheet);
- 2) Risk of insolvency crisis: complete or partial impossibility of settling obligations due to an imbalance in time of positive and negative cash flows and significant reduction of cash receipts to budgets of all levels;
- 3) Inflationary risk: devaluation of the actual value the national currency has, rising levels of inflation caused by monetary and non-monetary reasons as a result of the war;
- 4) The risk of reduced profitability (lost profit): losses, damages, or lack of gain due to the failure to apply anti-crisis management, security measures, risk minimization, etc.;
- 5) Investment risk: loss of possible investors, failure to receive income from investments in enterprises located in the zones of military operations, annexation, and occupation;
- 6) Social risk: reduction in the possibilities of social payments and other financial rewards, impoverishment of the population in the country;
- 7) Property risk: loss of state property as a result of illegal possession, theft, or destruction;
- 8) Strategic risk: the impossibility of following the course of the program of strategic development of the national economy, its radical change;
- 9) Information risk: incurring losses as a result of decision-making under the conditions of incompleteness, unreliability, inaccuracy, untimeliness, inefficiency, distortion, or asymmetry of information;
- 10) Territorial risk: loss of communication with government institutions located in the captured territory.
- 11) Legal risk: economic losses from restrictions under martial law, while changes are made to regulatory and legal acts.

It follows from this that the topic of information security, in particular protection of databases, digital data, and specialized anti-crisis programs, for example, for crisis assessment with further analysis in the information system by separate modules (identification of the factors that caused the crisis, its assessment, risk management, other modules) continues to grow in importance.

Research Methods

In general, the analysis of trends in the development of digitalization revealed significant intersections with the topic of anti-crisis management. This made it possible to confirm the hypothesis that digitalization becomes an integral part of the sustainable and anti-crisis development of enterprises. In particular, the following may be noted:

- Digitalization invades into all spheres of socio-economic life, transforming the processes of interaction between subjects: the state and society, the state and business, society and business.
- Advanced technologies make significant adjustments to the company's business processes, to value creation processes at all stages and become a competitive advantage. This explains the existence of a measure of innovation costs in many sustainable development assessment methodologies.
- All developed governments try to use digital technologies as a tool to achieve sustainable development goals by investing in improved access to communications, digital skills and public services.
- The priority direction for the development of digitalization at present is cybersecurity, personal data protection and crisis management, which, on the one hand, is strategically important for the government as a barrier to cybercrime, and on the other hand, it is a necessary condition for the development of digitalization in other areas. Therefore, the availability of a cybersecurity system and data protection are part of sustainable development indices and characterize the quality of anti-crisis management of the company.

In addition to a systematic approach to the crisis, anti-crisis management of the economy under martial law conditions in the territory of Ukraine is supposed to possess competencies in digital communication, digital crisis management, data protection, cyber security, and anti-crisis communication (Antoniuk N., 2019).

The Russian Federation's large-scale war of aggression against Ukraine is causing severe disruptions to Internet connectivity, a pre-condition for the resilience and further development of the digital economy. Estimates show that since the start of the war, the quality of data transmission decreased on average by 13% over fixed Internet networks and by 26% over mobile networks. In addition, 12.2% of settlements do not have access to mobile communication and 3.1% have only partial access. Stations of mobile operators across the countries have been damaged; it is estimated that almost 11% are inactive – and this share is rising rapidly. Access to a stable, reliable high-speed broadband network is the key framework condition for the restoration and development of Ukraine's digital economy. Even before the war, only 26% of the population had at least a 4G mobile network coverage in 2020.

Ukraine has made significant progress in reducing the digital divide, with all oblasts increasing Internet access (by 289% on average over the last decade, 2010-2019). At the same time, progress has been uneven across territories. Kyiv City has the highest level of Internet access in the country (84% of households), followed by Dnipropetrovsk and Zakarpattia Oblasts (79% and 76% respectively). By contrast, the oblast with the lowest level of Internet access was Rivne, where only 49% of citizens had access to broadband services. These data show that there is still room for improvement in the rollout of Internet networks across Ukraine. In addition, the Russian Federation is actively trying to fragment Ukrainian digital space, for example by moving people in occupied areas to Russian networks (e.g. by distributing Russian SIM cards). This will isolate those populations from accessing factual information about the war and provide a new outlet for Russian propaganda. Ukraine's efforts in this area, including its use of donated Starlink dishes, are a good step toward ensuring Internet access and the free flow of information (Maletska, O., Bochko, O., Stasyuk, N., Kuziak, V., & Struk, N. (2020).

A solid system of administrative service provision integrating advanced electronic tools for service delivery was in place in Ukraine, but the war poses important challenges. The network of Administrative Service Centres (ASCs) across the country remained largely functional and operational in combination with the work on Diia. Both are based on well-developed catalogue of services that allowed the service delivery level (existing, modified or even the creation of new services) could be maintained. However, extensive attempts to destroy administrative data by Russian hackers; the decreased capacity of service providers due to the lack of employees (due to mobilisation or migration); and the difficulty in accessing digital services from abroad when displaced across borders are all serious issues.

Ukrainian's digital economy was growing fast before the war and the Ministry of Digital Transformation and the Ukrainian IT community have accelerated their efforts since the beginning of the war. In 2021, Ukrainian IT exports grew 36% year-on-year to total USD 6.8 billion, representing 10% of the country's total exports.

Meanwhile, the number of Ukrainians employed in the IT industry increased from 200,000 to 250,000 across start-ups, SMEs and large firms. In Q1 of 2022, the ITC sector provided export earnings of USD 2 billion (+28% on the previous year). The war has caused severe disruption to the sector, but the increased international attention can unlock important opportunities for future development.

The war has pushed the government to seek European Union membership and thus access to the EU Digital Single Market (DSM), including an alignment with international regulations and standards. On 28 February 2022, the European Council received Ukraine's application for EU membership and on 17 June the European Commission published its Opinion (European Commission (2022)), recommending that the Council accept Ukraine's candidacy. In the Opinion, there is a specific reference to the "particularly good results" achieved by Ukraine in the area of information society and media (within the "Competitiveness and inclusive growth" cluster), with a reference to the "in-depth sectoral reform and approximation to EU DSM acquis", in particular by adopting the laws on electronic communications and telecommunications regulator and enforcing them since the beginning of 2022 (Antoniuk N., 2022).

The move towards integration in the DSM means a progressive alignment with international regulations and standards on digital practices, which could bring important benefits in terms of reduction of cross-border barriers to digital trade and acceleration of Ukraine's digital economy. As a concrete example, in June 2022 the national regulatory authority of Ukraine responsible for electronic communications (NCEC) was authorised to participate in the Body of European Regulators for Electronic Communications (BEREC) and the BEREC Office, the agency that supports BEREC. In another example, Ukraine is the first country to use Article 14 eIDAS (mutual recognition and 3rd country). Ukraine submitted a request for mutual recognition of electronic trust services between Ukraine and the EU in 2019. As a result, the European Commission developed the mutual recognition agreement (MRA) Cook-book in 2021. The MRA process started already before the war.

Access to reliable public services remains fundamentally important during the conflict and, despite the challenges posed by the war, the Ukrainian government has relentlessly continued its effort to provide, expand and digitise its public services. The destruction of physical infrastructure and displacement of citizens makes it challenging for people to access in-person services through the existing network of Administrative Service Centres (CNAP). In this context, the flagship digital government initiative Diia, with its application and online platform that were launched in February 2020, has proven instrumental to responding to the needs of citizens and businesses dealing with the consequences of the conflict. Also, there is a gender-related digital divide to address, as in 2020 there were 58% of men and 49% of women using public digital services. Gender mainstreaming in government action can help identify the causes and develop solutions for this type of problem.

There is a critical need for portable and internationally interoperable digital identity solutions to ensure people can prove they are who they say they are, despite the loss of critical documentation or displacement across borders. The necessity of digital identity solutions has been brought into focus as a result of the conflict in Ukraine. Internally displaced people may have lost access to their physical documentation, while those who have sought refuge overseas urgently need their Ukrainian identities to be recognised in their host countries. A simplified digital ID can be obtained through the Diia app, which is recognised by local law enforcement and border guards of neighbouring countries. Similarly, workers living in the regions affected by the war can verify their eligibility for financial support and apply directly via the Diia app. The service delivery system has also evolved over the time, starting from almost no services available during the first days of invasion to the provision of all significant services (except 28 out of 2230) in three months after invasion when the system was adapted to the new risks (Lugova, M. S., Tsymbalyuk, I. O., & Pavlikha, N. V., 2022).

To face the crisis, Ukraine's National Recovery Council is working on developing an action plan on digitalisation with a focus on infrastructure, public services and digital economy. In terms of immediate measures, while the war continues, Ukraine needs to focus on trying to ensure that businesses and citizens can connect to the Internet, and on modernising its communications and public service infrastructure. The OECD's Recommendation on Broadband Connectivity, adopted in 2004 and revised in 2021, provides a reference for policy makers and regulatory authorities to unleash the full potential of connectivity for people, firms and the government. The following key recommendations can help Ukraine in the very short-term:

- As roads are rebuilt, Ukraine should consider laying fibre cables and connect more people even if operators may not be able to provide services for several years, including in rural areas. To this end, the regulator (NCCR) could also stimulate broadband providers to deploy more fibre deeper into the networks and gradually phase out xDSL (Digital Subscriber Line) technologies, as appropriate.

- To the extent that administrative burdens are still in place under the current state of emergency, Ukraine should reduce such burdens to help operators deploy networks more rapidly. It may also be possible to release additional spectrum on a temporary basis or approve temporary commercial spectrum transactions between providers that put unused spectrum into service.

To ensure the largest number of firms and public institutions are able to continue operations during the war, uptake of teleworking software and practices is very important. This practice can also support firms' productivity and develop new digital business models. But to achieve this goal, complementary investments in workers' skills and managerial practices are crucial and the government can help (e.g. grants for training, apprenticeship programmes for younger workers, cooperation with business associations/chambers of commerce).

Ukraine should focus on further enhancing its omni-channel approach and on supporting the resilience of the Government as a platform ecosystem, in order to ensure that citizens, including those displaced abroad, can access public services. Omni-channel strategies are critical for ensuring services can be accessed through any channel at any time but need to be complemented by efforts to provide face to face support to those who would otherwise be digitally excluded. This approach relies heavily on establishing models for Government as a Platform that secure access to the enabling resources and tools (including state information system and data centres where citizens' data are stored) that are critical in a crisis (OECD, 2020).

While Ukraine has performed admirably in maintaining much of these foundations, the conflict has highlighted the need to physically protect digital government infrastructure, achieve greater integration among government organisations and improvements to data governance. Despite the challenging circumstances, these efforts will require mobilising support from partnership with the GovTech community as well as equipping the public sector workforce with digital government user skills and incentivising public sector leaders to find ways to encourage innovation and support flexible working practices.

In the medium term (2023-25), multiple fiscal, regulatory and financial mechanisms could be put in place to support the development of the post-war digital economy. For firms, and in particular for small and medium enterprises (SMEs), finance and talent would be the two main resources needed to support the digital transition. For finance, the government of Ukraine has already introduced a tailor-made special tax regime for IT sector – which entered into force on 1 January 2022 and is known as Diia city tax regime. As this is a new preferential tax regime, it is still to be reviewed against the international standards, and in particular the criteria established in 1998 by the Forum on Harmful Tax Practices (FHTP) against harmful tax competition and revamped in 2015 with the Base Erosion and Profit Shifting (BEPS) Project, of which Ukraine is an Associate. Provided this tax regime is in line with the agreed international standards, it will allow a highly competitive and attractive tax regime for digital and innovative IT companies and employees working in such companies.

Any fiscal measures introduced or to be introduced by Ukraine that are in scope of the work conducted by the FHTP would need to be reviewed against the FHTP criteria and comply with them. Should any further fiscal measures be needed to stimulate investment and development of this sector, it should be analysed and considered how the existing tax incentives and special tax regimes support the development of the digital economy and whether additional fiscal measures would be needed or beneficial. For example it can be considered, whether this tailor-made tax regime should be replaced or supplemented by another measure, such as a tax credit for R&D expenditures as they have been found to be effective tools elsewhere. Any such fiscal measures should be accurately forecasted and the impact on public finance should be carefully managed, including by setting the budgetary limits for such measures, while taking into account the other features of the existing taxation framework for this sector. This could be complemented by reducing “red tape” for innovative start-ups to reduce their compliance and administrative costs, while representing a limited budgetary cost. A Credit Guarantee Fund active in the country could support the development of the digital economy for example by easing access to credit for innovative start-ups, or by financing capital R&D expenditures, or for “traditional” SMEs (outside the ITC sector) willing to invest in the uptake of digital tools. In its reconstruction effort the government could strengthen the “mainstreaming” of SME policies, ensuring that the SMEs are taken into account in the design, implementation and monitoring phases of new policies. Any effective transition to a more digitalised economy in Ukraine will be conditional also on SMEs' increased uptake of digital tools.

To support talent, the newly introduced “Diia city tax” regime with significantly reduced payroll taxes and social contributions should facilitate the return of the highly skilled R&D personnel from abroad. It may be considered whether any additional measures could further facilitate the stimulus for the “returning brains”. The government can also consider to implement preferential VISA regimes for high-skilled workers in strategic

industries. Specific subsidies to support high-quality training programmes could also support the uptake by firms, and especially SMEs, of emerging technologies, such as Artificial Intelligence/Machine Learning and Blockchain/Distributed Ledger Technologies. For the latter, a possible development of a public infrastructure or the integration in the European Blockchain Service Infrastructure (EBSI) could also be envisaged.

Ukraine has been working to address the tax challenges arising from the digitalisation of the economy through the OECD/G20 Inclusive Framework on BEPS (the Inclusive Framework). In October 2021, 137 of the Inclusive Framework's members reached political agreement on a "Two-Pillar Solution". Ukraine stands to benefit from Pillar One which will ensure a fairer distribution of profits and taxing rights among countries with respect to the largest MNEs (many being digital platforms) by reallocating taxing rights on more than USD 125 billion of profit to market jurisdictions each year.

Pillar One will also provide a method for streamlining the application of transfer-pricing rules taking into account the needs of low capacity countries. Pillar Two puts a floor on tax competition on corporate income tax through the introduction of a global minimum corporate tax at a rate of 15% that will ensure MNEs pay the minimum tax regardless of any tax planning to avoid tax or tax incentives available where they operate (the GloBE rules). In addition, a "subject to tax rule" will ensure that developing countries can protect their tax bases from certain base-eroding payments. The Inclusive Framework is working now to develop the rules and instruments to bring the Two-Pillar Solution into effect quickly. The model rules and commentary to implement the GloBE rules have already been agreed and countries around the world are moving to implement them.

Ukraine joined the political agreement in October and should continue to work within the Inclusive Framework for a swift implementation of the Two-Pillar Solution, both to support the stabilisation of the international tax architecture and because Ukraine stands to benefit. Specifically, as a large market jurisdiction, Ukraine should derive significant revenues from the reallocation of taxing rights under Pillar One. As the implementation of GloBE rules around the world is already happening, analysing the impact of the GloBE rules in the context of Ukraine's existing incentives or any new tax measures being introduced to attract investment should also be a priority, since any revenue foregone may be taxed by other countries.

In the longer term (2026-2032), Ukraine could focus on building a sound data infrastructure for the measurement of the digital economy to support evidence-based policies. Ukraine could consider integrating into the European Statistical System (ESS), which aims to provide comparable indicators to support evidence-based policies. Ukraine's integration to the ESS would facilitate the inclusion of its data in various OECD databases, including the Going Digital Toolkit which aims to help countries assess their state of digital development and formulate policies in response, the OECD Broadband Portal, or the OECD AI Policy Observatory, or the AI-Diffuse database, that collects comparable cross-country firm-based data on the adoption of AI and other digital technologies and their impact on productivity growth. Expanding the established macro-economic statistical output to include the recently developed Digital Supply-Use tables (Digital SUT) framework would provide evidence of any success in the take up of digitalisation in the Ukrainian economy. The Digital SUT framework was explicitly mentioned in the G20 Roadmap toward a Common Framework for Measuring the Digital Economy, as a means to improve the visibility of the digital transformation occurring in respective economies.

Findings

Digital transformation of anti-crisis management is manifested in the change of the level and quality of critical processes in the economy, i.e., at all stages of anti-crisis management of state institutions and organizations that actively use and implement digital resources and technologies to create an uninterrupted cycle of work of institutions critical to the functioning of the state. This will make it possible to make timely management decisions and respond to modern challenges.

However, despite the apparent advantages of digitalization in the anti-crisis management of the economy, implementation of specific digital tools in the activity requires time and significant capital investments, being a change of established views. This can cause resistance to changes and non-acceptance of innovations by the citizens of the country.

Conclusion

New models of data and technology management enable rapid response to emerging challenges and challenges of the twenty-first century, which is certainly a factor of success in terms of country competitiveness.

Hence, digitalization of anti-crisis management in the economy requires a well-balanced approach and thorough support at all stages of crisis management, new network competencies, as well as a holistic, systemic understanding of the content and core aspects of digital transformation in state processes.

Competencies of Graduates from Educational Institutions in the Republic of Moldova: An Entrepreneurial Perspective*

Novac ALEXANDRA¹

¹PhD, research associate professor, National Institute for Economic Research, Republic of Moldova,
alecsandra_novac@yahoo.com, ORCID: 0000-0002-4158-4917

Abstract: The article aims to identify the level of competence of graduates from educational institutions in the Republic of Moldova, based on a survey of entrepreneurs. The research employs a mixed approach, utilizing both primary and secondary data, including an analysis of statistical data and international rankings, as well as the results of a survey of 204 entrepreneurs from 25 districts of the Republic of Moldova, which was carried out and implemented with the participation of the author in 2022. The findings reveal the need for sustained efforts to improve the functioning of the education and vocational training system, as evidenced by the low scores for workforce skills and competence of graduates' indicators, as well as the opinion of entrepreneurs who evaluated the graduates' competencies negatively. The study also reveals a significant decrease in the number of students enrolled in science and technology, which could have negative repercussions on the quality of human capital, leading to a shortage of qualified personnel.

Key words: entrepreneurship, human capital, competence of graduate, education, Republic of Moldova

JEL codes: L26, L53, K29

INTRODUCTION

In recent years, the Republic of Moldova has taken significant steps to enhance the quality of education. These steps include reforming the educational system, developing the curriculum, and improving teacher training. For instance, actions have been taken to promote entrepreneurship as a key competence in primary, secondary, and vocational education, although they are still included in specific disciplines or optional courses. Additionally, continuous efforts have been made to promote entrepreneurial skills of students in post-secondary vocational education. Measures have been taken, largely funded by donors, to promote digital competencies within SMEs (OECD, 2020). However, there are significant challenges in how the public education system can respond to the competency requirements of businesses:

- Discrepancies between university curriculum and labor market needs: for example, about 43% of university graduates who are employed experience a mismatch between their level of education and their job position (World Bank Group, 2019). Companies consider the curriculum to be outdated and irrelevant for occupational profiles.
- Insufficient resources: due to budgetary constraints and limited resources, schools do not always have access to modern technology and teaching resources, which can affect the quality of education and the preparedness of students for current job positions.
- Brain drain: the Republic of Moldova faces a brain drain, where well-prepared young people leave the country in search of better career opportunities. This trend can significantly affect the economic development of the country and exacerbate the problems faced by the public education system.

BACKGROUND: BRIEF DATA ON THE ISSUE OF GRADUATES' COMPETENCIES OF EDUCATIONAL INSTITUTIONS IN THE REPUBLIC OF MOLDOVA

Despite high education expenditures as a percentage of GDP in the Republic of Moldova (6.1% of GDP in 2021), representing one of the highest percentages allocated to the education system in Europe, the performance of the educational system remains low, as confirmed by certain indicators of human capital quality. For example, according to the Global Competitiveness Report, the indicators characterizing workforce skills have accumulated a relatively low score, occupying positions that demonstrate the need for a sustained effort to improve the functioning of the education and vocational training system. Therefore, we can observe that

* The article is part of the research funded by the project: "Multidimensional assessment and development of the entrepreneurial ecosystem at national and regional level to boost the SME sector in the Republic of Moldova" (20.80009.0807.38), 2020-2023.

Moldova ranked 106th in the indicator of graduate competency in 2019, with a score of 3.6 out of 7.0, marking a slight improvement in ranking compared to 2018 (9 positions up).

Furthermore, the indicators of the Global Innovation Index also indicate a negative trend in the sub-pillars of Education and Tertiary Education, which in the period of 2017-2021, worsened the rankings by 32 and 12 positions, respectively. Regarding the quality of education, 40% of Moldovan pupils lack basic cognitive skills. Although the results of Moldovan pupils' learning, as measured by the Program for International Student Assessment (PISA), have improved since 2009, 50% of 15-year-old pupils still lack basic math skills, about 46% lack reading skills, and 42% lack science skills. The PISA results for science reveal a gap equivalent to about 1.5 years of study in rural and urban areas (World Bank Group, 2019). According to the PISA assessment results for reading, math, and science, the Republic of Moldova ranks 51st, with 424.4 points, remaining far from the standards of the Organization for Economic Cooperation and Development countries.

A significant deterioration was marked by the indicator Graduates in Science and Engineering, % of total graduates, which dropped 16 positions between 2017 and 2021. Moreover, a decline in the rankings was also observed in the Gross Enrollment Ratio in Tertiary Education, %, ranking 75th in 2021 (a decline of 12 positions compared to 2017).

An important indicator of the quality of human capital is the level of education. Higher education plays a significant role in educating a future skilled workforce, including for business activity. In recent years, enrollment in higher education in Moldova has been declining. Currently, around 59,000 students are enrolled in universities. In just five years, the student population in universities has decreased by around 28%.

Figure 1. Number of students in educational institutions at the national level, 2015/16-2020/21, 2015/16=100%

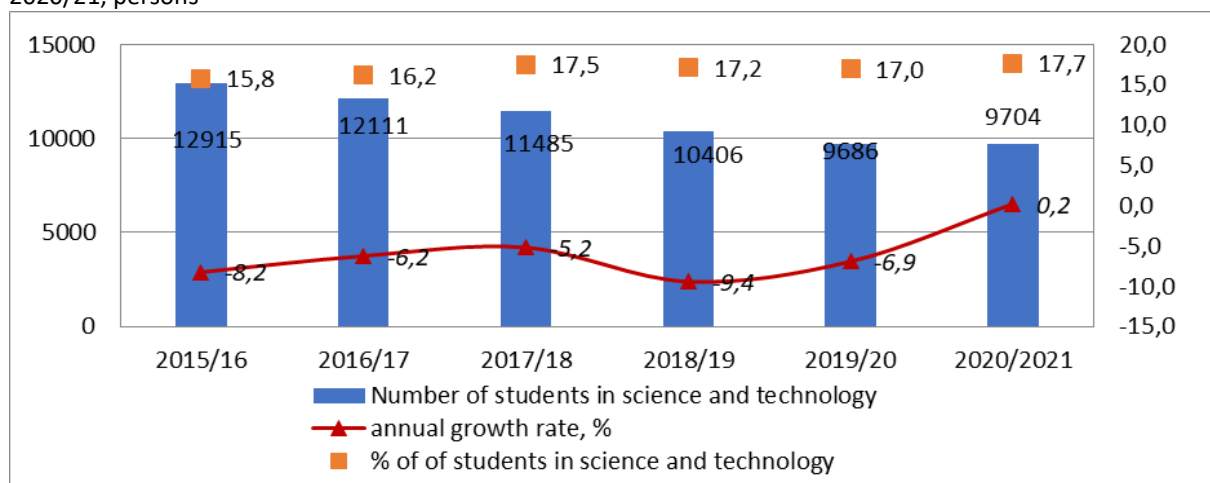

Source: The authors' calculations based on the data provided by the National Bureau of Statistics

In particular, the development of competitive and innovative businesses depends largely on the number of people studying in the fields of science and technology, as well as post-university education. Currently, approximately 70% of higher education students are enrolled in social sciences, business, and law. The demand for exact sciences is very low, while the need for specialists in these fields is higher. The number of students in higher education institutions studying science and technology¹ has significantly decreased over the years (by 25% from 2015/2016 to 2020/21). The number of students pursuing doctoral studies has also decreased (-6.3% from 2015-2019). Even fewer students are pursuing doctoral studies in engineering and technology (only 5.6% in 2019), indicating a significant negative trend in recent years (-21.4% from 2015-2019) (Educația în Republica Moldova 2020). Thus, the scientific literacy of the population is low, and the situation is even worse among young people, which necessitates measures to attract them to research and development activities, especially in the fields of exact sciences and technology.

The decrease in the number of students studying science and technology has negative repercussions on the quality of human capital, leading to a shortage of qualified personnel such as engineers, technologists, and programmers, which represents a serious obstacle to innovation and technology absorption.

Figure 2. The evolution of the number of students in the field of science and technology in the period 2015/16-2020/21, persons

Source: elaborated by the authors based on data from the National Bureau of Statistics

¹ Starting from the academic year 2017/18, a new Nomenclature of Fields of Vocational Training and Specializations is applied in higher education.

During the period of 2014/15-2016/17, the authors' calculations included the following fields: Exact Sciences, Engineering and Engineering Activities, Manufacturing and Processing Technologies, Chemical Technology and Biotechnology, Natural Sciences and Environmental Protection, Architecture and Construction.

During the period of 2017/18-2019/20, the authors' calculations included the following fields: Chemical, Biological, Physical Sciences, Mathematics and Statistics, Information and Communication Technologies, Engineering and Engineering Activities, Manufacturing and Processing Technologies, Architecture and Construction, Environmental Sciences.

Given the challenges faced by the education and vocational training system, the low performance of the educational system, as confirmed by some indicators of workforce quality, there is still a need to evaluate the effectiveness of made efforts from the perspective of the labor market, particularly entrepreneurs who employ graduates of educational institutions. The paper aims to identify the level of competence of graduates from educational institutions in the Republic of Moldova, from the perspective of the entrepreneurs.

DATA SOURCES AND METHODS

The data for research in this article were obtained in the framework of the research project "Multidimensional assessment and development of the entrepreneurial ecosystem at national and regional level in order to boost the SME sector in the Republic of Moldova" (20.80009.0807.38), developed within the National Institute of Economic Research of Moldova with the active participation of the author.

The primary data for the assessment of the graduates' competence of educational institutions were obtained using the survey method. A total of 204 entrepreneurs from Republic of Moldova were interviewed in a survey in 2022. The structure of the sample matches the structure of the overall enterprises sector in terms of the main characteristics of the selection. The results obtained were generalized and processed using the SPSS Statistical Analysis Program. The questionnaire used closed-ended questions, which allowed the respondent to choose an answer from a certain number of options. To answer the questions, the 5-point Likert scale variation was used, which includes five possible points for evaluating graduates' skills: 1 = "minimum level"; 2 = "relatively low"; 3 = "neutral"; 4 = "relatively high"; 5 = "maximum".

RESULTS AND DISCUSSIONS

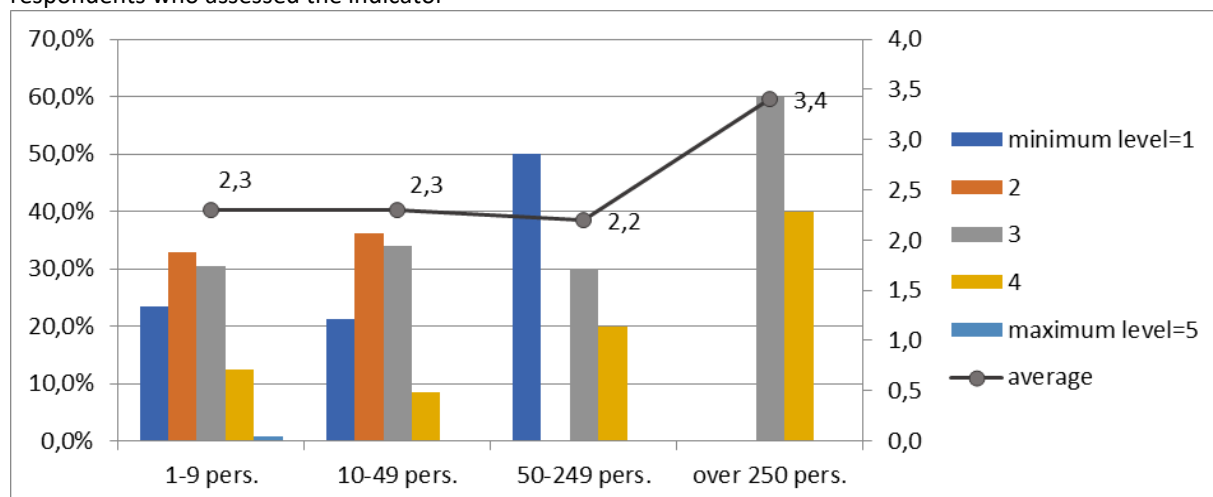

Overall, entrepreneurs rated the competence of graduates from educational institutions negatively (54.7% of respondents indicated the minimum score of 1 or 2; average=2.35). While for some entrepreneurs the level of graduates' competence represents a challenge for business development, some groups of enterprises evaluated this indicator as neutral.

The evaluation of the level of graduates' competence from educational institutions according to *the size of the enterprise* revealed the following:

- For micro-enterprises (1-9 persons), the highest percentage of respondents evaluated the competencies of graduates from educational institutions mostly negatively (56.3% of respondents indicated a minimum score of 1 or 2; average=2.3). The average score of 2.3 indicates that for micro-enterprises, the graduates' level of expertise is relatively minimal.
- A similar situation is evident in the evaluation given by small enterprises (10-49 persons), where over half of the respondents evaluated the graduates competencies as being at a minimum and relatively low level (57.4% of respondents indicated a minimum score of 1 or 2; average=2.3). The mean score of 2.3 indicates a similar average evaluation as for micro-enterprises.
- For medium-sized enterprises (50-249 persons), the highest percentage of respondents evaluated the graduates competencies as being at a minimum level (50.0% of respondents indicated a minimum score of 1). The mean score of 2.2 indicates a slightly lower average evaluation than the other two categories of enterprises.
- A more positive situation is evident in the evaluation provided by large enterprises (250 or more persons), where the highest percentage of respondents evaluated the graduates competencies as being at a high level (40.0% of respondents indicated a score of 4), followed by a neutral level (60.0% of respondents). The mean score of 3.4 indicates a higher evaluation than the other three categories of enterprises.

Thus, the evaluation of the competencies of graduates from educational institutions by entrepreneurs based on the Likert scale varies depending on the size of the enterprise, with larger enterprises providing a higher evaluation than small and medium-sized enterprises.

Figure 3. Assessment of the "graduates' competences of educational institutions" by size of enterprise, % of respondents who assessed the indicator

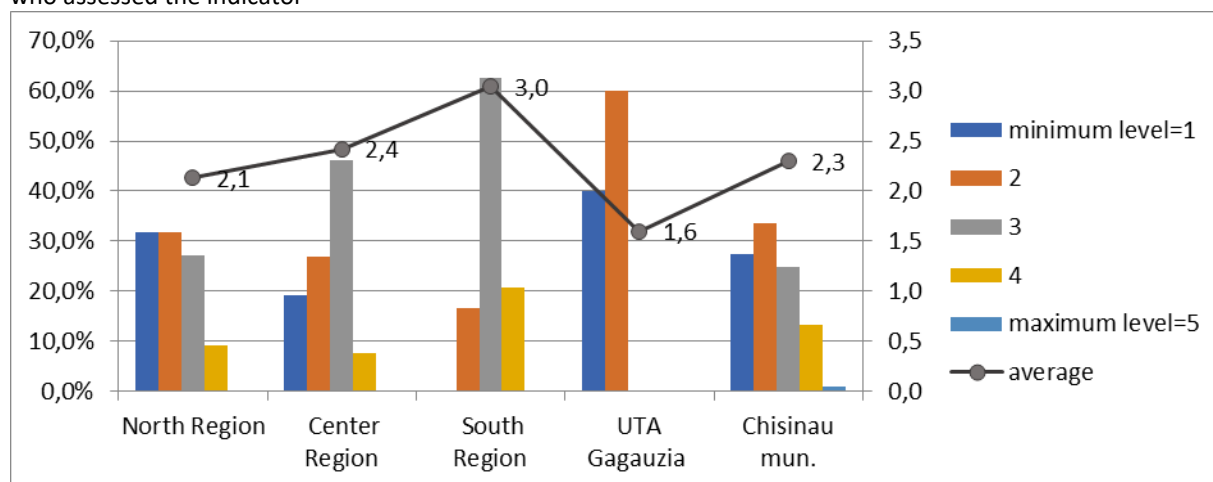

Source: developed by the author based on the results of the entrepreneurs' survey

In terms of regional evaluation of the graduates' competences from educational institutions, the following observations can be made:

- The evaluation of graduates' competences is relatively similar for the Northern region and the municipality of Chisinau, where over 60% of respondents consider the level of graduates' competences to be at a minimum or relatively low level (average=2.1 and 2.3, respectively).
- For the Central region, the evaluation is rather neutral, with over 46% of respondents evaluating graduates' competences as neutral (average =2.4).
- In the Southern region, the evaluation of graduates' competences is the most positive compared to other regions, with over 80% of respondents evaluating competences as neutral or high (average=3.0).
- UTA Gagauzia stands out with a negative evaluation of graduates' competences, with all respondents evaluating it at a minimum level (100% of respondents indicated a score of 1 or 2, average=1.6).

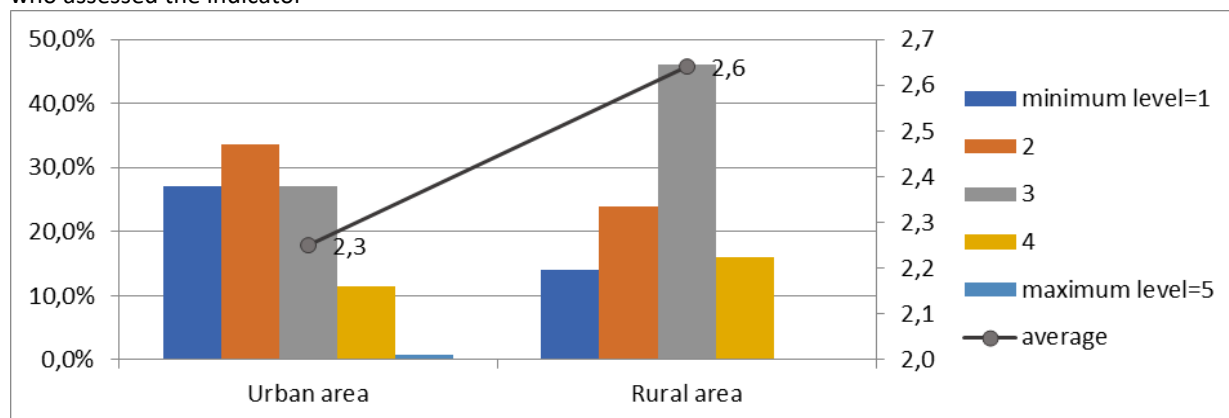

Figure 4. Assessment of the "graduates' competences of educational institutions" by region, % of respondents who assessed the indicator

Source: developed by the author based on the results of the entrepreneurs' survey

It is worth noting the significant discrepancies by place of residence. Enterprises located in rural areas have evaluated this indicator slightly higher (average=2.6) than enterprises located in urban areas (average=2.3) (respectively, 38% versus 60.7% of respondents who have evaluated the level of graduates' competences negatively, indicating a minimum score of 1 and 2). Thus, the evaluation of the level of graduates' competences given by entrepreneurs in rural areas is closer to neutral compared to that of entrepreneurs in urban areas, for whom the level of graduates' competences is low.

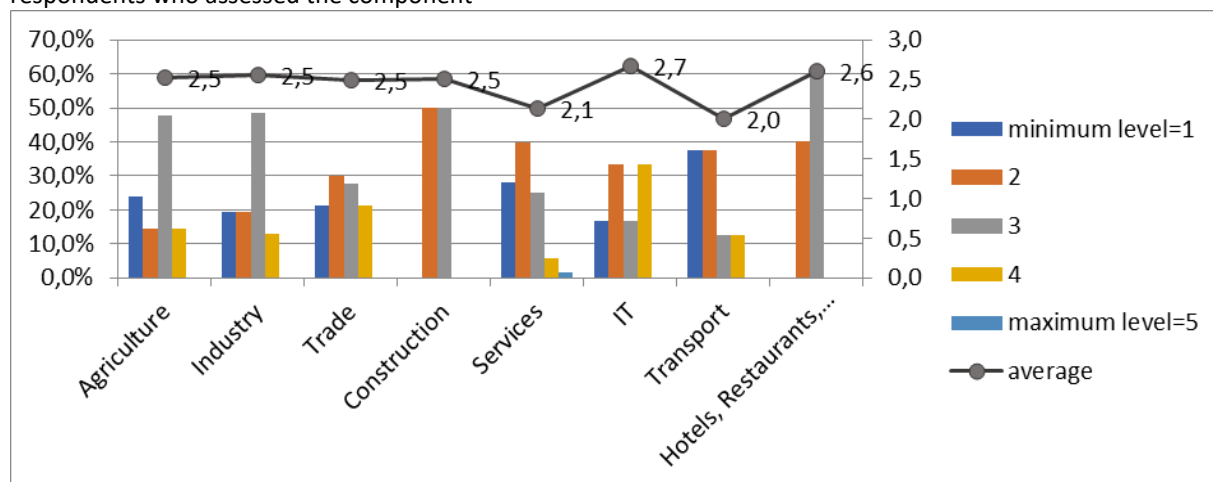

Figure 5. Assessment of the "graduates' competences of educational institutions" by area, % of respondents who assessed the indicator

Source: developed by the author based on the results of the entrepreneurs' survey

In terms of types of industries, it can be noted that entrepreneurs in the fields of Agriculture, Industry, Trade, and Construction have evaluated the level of graduates' competencies at a relatively minimal to neutral level (average=2.5), indicating that there is room for improvement in graduates' level of expertise in these areas. It is noteworthy that about 50% of respondents from businesses in the Trade and Construction sectors evaluated the graduates' competencies at a minimal level (51% of respondents indicated the minimum score of 1 or 2), compared to entrepreneurs in the agricultural and industrial sectors (38% of respondents evaluated this indicator negatively with a minimum score of 1 or 2), the relative majority of whom consider the level of graduates' competencies to be mostly neutral. Entrepreneurs in the IT and Hotels, Restaurants industries evaluated the level of graduates' competencies slightly more positively, indicating an overall neutral level of graduates' competencies (average=2.7 and 2.6, respectively), suggesting that graduates have some expertise in these fields. Graduates' competencies were evaluated most negatively by entrepreneurs in the Services and Transportation sectors. The respondents gave this indicator a minimal rating, with 67.6% and 75% of them indicating the minimum score of 1 or 2. On average, the rating for Services and Transportation sectors was 2.1 and 2.0 respectively, indicating a low level of graduates' expertise in these fields.

CONCLUSIONS

Human capital, including young people with a high level of skills, is an essential resource in creating and developing viable, innovative, and competitive businesses. In the context of a continuously changing economy, companies need to be able to quickly respond to new market trends and demands, and for this, they need graduates who have acquired the necessary skills during their studies. Therefore, the development and promotion of relevant and updated educational programs that prepare graduates with the necessary skills are essential to ensure the success and sustainability of businesses.

The analysis of indicators of the human capital quality from international rankings ("Global Competitiveness Index", "Global Innovation Index"), official statistical data, and the results of the survey of entrepreneurs, who largely evaluated the level of graduates' skills from educational institutions negatively, revealed that sustained efforts are needed to improve the way the education and vocational training system operates. Additionally, there is a need for greater emphasis on science and technology in higher education, given the decreasing number of students enrolled in these fields, which leads to a shortage of qualified personnel such as engineers, technologists, programmers, which represents a serious obstacle to the absorption of innovation and technology.

Abstract: It has long been understood how crucial social entrepreneurship (SE) is in order to maximize societal benefit. The present study aims to investigate the factors that impact on students' intentions to launch a new venture after completing their studies focusing on social entrepreneurship. A systematic literature review on 503 documents was implemented with a final sample of 47 documents on Social Entrepreneurial Intention and its determinants which were published between 2014 and 2022. The findings give a comprehensive picture of the key topics and recurring trends in Social Entrepreneurial Intention (SEI) research. This study examined SEI documents from the Scopus database which were further analyzed with the content analysis technique to identify the categories and themes to which each item belongs. The results showed that there is a growing research interest on the field although it is mainly focused on developing countries. The most discussed determinants were the personality factors as well as the entrepreneurship education programs which were found to significantly influence students' sustainable entrepreneurial intention. In addition, there were other factors such as gender, students' work experiences, education, and social environment that were found to affect individuals' intention to become social entrepreneurs.

Keywords: Entrepreneurship Education Programs, Social Support, Social Entrepreneurial Intention, Social Entrepreneurship, Systematic Literature review.

1. INTRODUCTION

Social entrepreneurship (SE) refers to sustainable ventures that combine commercial principles with a vision for social impact (Wolk, 2008). These businesses use commercial principles to support their activities as they work toward the core organizational purpose of creating social benefit. Organizations placed in the social entrepreneurship zone may be organized as profit-making entities, non-profit enterprises, and some forms of social and government agency services, and they do not include groups that engage only in social activism and organizations that provide social services (Ahmad & Bajwa, 2023). Social entrepreneurship is often demonstrated by success around the world in various fields (education, culture, health, finance, etc.) and different types of crises such as economic or social, underline the need for social entrepreneurs around the world (Al-Qudah, Al-Okaily & Alqudah, 2022; Storr et al., 2022). In addition to transforming existing markets, social entrepreneurship also creates new markets and marketplaces, initiatives such as fair trade and microfinance. Focusing on and actively addressing social issues, social entrepreneurs have been continuously bringing about a significant societal transformation (Zeyen et al., 2013). According to Tiwari et al. (2018), despite the fact that SE is advantageous for the welfare and growth of economies, the current rate of social entrepreneurial growth is quite moderate. This situation raises a crucial question for academics and policymakers on how can the rate of SE development be accelerated and reinforced. So, it is critical to comprehend the underlying factors that influence a person's thought process in order to encourage and assist social entrepreneurs (Tiwari et al. 2017; Hsu & Wang, 2019). Research confirms that it is important for academics and policymakers to recognize the factors that influence people's intentions to start social businesses (Social Entrepreneurship Intentions-SEI) (Hockerts, 2017). Previous research on entrepreneurial intention has mostly concentrated on one or more of the following five perspectives: theoretical aspects, individual-related variables, entrepreneurial education, situational factors, and intention-behavior connection (Linán & Fayolle, 2015; Ip et al., 2017).

The research question that arises is: *"Which factors influence students' intention to be social entrepreneurs?"*. The aim of the present systematic literature review is to provide sufficient data on the factors that affect students' social entrepreneurial intention. The structure of the study is organized as follows: The next section describes the theoretical context. Then, the authors describe the research methodology as well as the sample selection and data collection before analyzing the results. Finally, the researchers conclude with a discussion of results, theoretical and practical implications, limitations, and suggestions for further research on the field.

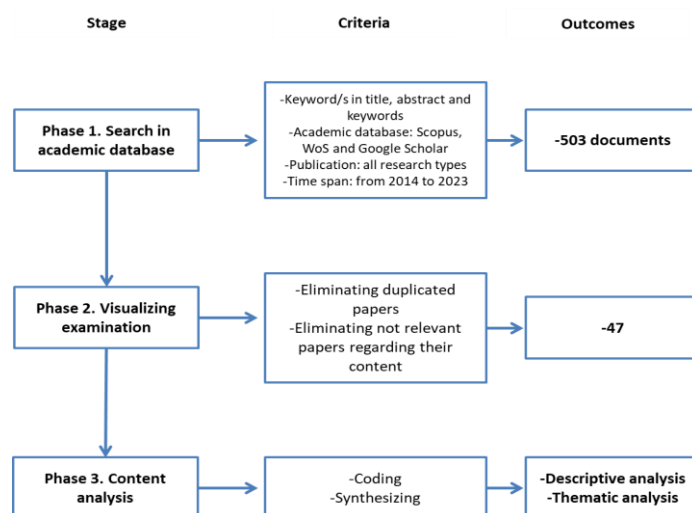

2. THEORETICAL DEVELOPMENT

According to Crudu (2019) the role of entrepreneurship in the socioeconomic growth has been extensively explored, mainly in the post-Schumpeter era. The success of the newly founded ventures is enhanced by many factors such as social norms, personal characteristics, and education with entrepreneurship education programs (EEPs), which also raise people's desire to become self-employed (Bischoff et al., 2018; Xanthopoulou & Sahinidis, 2022; Sahinidis, Polychronopoulos, & Kallivokas, 2019). Social entrepreneurship is often confused and wrongly identified with concepts such as corporate social responsibility or NGOs. However, it is a form of entrepreneurship that includes elements such as profitability, innovation and creativity, but aiming to solve social issues (Wry & York, 2017). According to Zahra et al. (2009), social entrepreneurship refers to the pursuit of chances to increase social wealth through the development of new businesses or the creative management of already-existing organizations. Social entrepreneurship is generally understood to be a process that begins with the formulation of social ideas, recognizing possibilities and solutions for sustainable social development," despite the fact that there are numerous explanations and descriptions. The major objective of social entrepreneurship is to create social value or to address social issues through creative solutions; in fact, this is the key distinction between social enterprises and other types of business (Muñoz & Kimmitt, 2019; Zahra et al., 2008; Alvord, Brown & Letts, 2004). The core focus of social or environmental goals, rather than profit maximization or other strategic factors, is shared by all definitions of social entrepreneurship. Innovation is a further distinguishing feature. Innovation can be sought through brand-new organizational structures and procedures, fresh goods and services, or fresh approaches to societal problems. These many innovation paradigms are often combined in social entrepreneurship projects. Finally, social entrepreneurs diffuse their socially innovative models through performance-driven and market-oriented actions, scaling their initiatives to other contexts through partnerships, in order to achieve broader and more sustainable outcomes (Kimakwa, Gonzalez & Kaynak, 2023). Several academics have investigated entrepreneurial intention (EI) of individuals and its determinants (Lu & Wang, 2018). According to the theory of planned behavior introduced by Azjen (1991), a person's intention is a reliable indicator of their future path of action and refers to the future orientation toward launching a new business and becoming an entrepreneur. Social Entrepreneurial Intention (SEI) describes the psychological behavior of an individual that motivates someone to start a social company through learning, coming up with ideas, and carrying out the social business plan (Mair et al., 2006). A person's belief and ambition to start a new social entrepreneurship initiative can be seen as his/her SEI (Tran & Von Korflesch, 2016). According to Mair et al. (2006), SEI illustrates people's psychological behavior that drives them to seek out new knowledge, innovative business models and ideas to engage in social entrepreneurship.

3. METHODOLOGY

The analysis of a topic can be carried out based on three main methodologies, qualitative, quantitative and mixed methodology (Timans, Wouters & Heilbron, 2019). The purpose of this research is to study some main factors that, according to the literature, can influence the entrepreneurial intention of individuals for a social entrepreneurial action. Based on this purpose, the research question that arises is "*Which factors influence students' intention to be social entrepreneurs?*" The systematic literature review was used as it was considered to be the most appropriate method for answering the above mentioned research question. Social entrepreneurial intention studies have shown a gradual growth, as an emerging topic of entrepreneurship study. For this study, the authors have carried out a systematic review of the literature in order to examine SEI research and its most studied determinants. This comprehensive evaluation of the literature aims in knowledge synthesis and identifies areas for further research (Xia et al., 2018). After the initial search in Google Scholar, WoS and Scopus database platforms, the researchers chose the Scopus platform, due to its wider coverage of documents (Liñán & Rueda-Cantuche, 2011; Dolhey, 2019; Bazan et al., 2020). The three steps presented in Figure 1 describe the review process, adapted from Tan et al.(2020).

Figure 1. Three stages for systematic literature review (Tan et al.,2020).

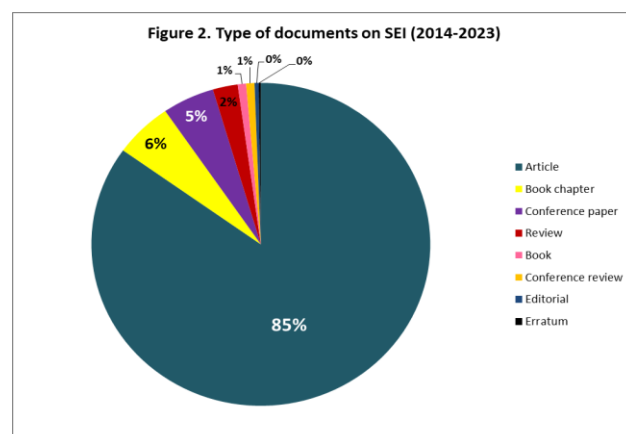

Stage 1. Search in academic database: The basis for choosing high-quality articles for a literature review is thought to be quality journals (Wallace & Wray 2021; Xia et al. 2018). Scopus data set was chosen as a result because of its extensive journal coverage. In a chosen database, the terms "social," "determinants," "entrepreneurship," and "intention" were searched in the title/abstract/keyword field. As a result, 503 documents in total were discovered in the Scopus database.

Stage 2. Visualizing examination: The titles, abstracts and keywords of 503 documents were carefully read to eliminate duplicate and unrelated research. The final sample that was retained for the content analysis was a total of 47 most relevant articles that were focusing on social entrepreneurial intention and mainly on its determinants.

Stage 3. Content analysis: Content analysis was used for the analysis of 47 articles, since this method has the potential to the main areas of the study topic. Content analysis consists of two steps: descriptive and thematic (Tan et al., 2020). The descriptive analysis examines the fundamental data of the chosen documents, including yearly changes in the quantity of research produced and distribution of the chosen publications by region. The authors separately divided the documents into categories for the thematic analysis stage.

4. RESULTS

The query returned 503 publications that met the search criteria, of which 427 documents were articles, 28 documents were book chapters, 25 documents appeared in conference proceedings, 12 were included in reviews, 4 in books, 4 documents in conference reviews, 2 of them in editorials and 1 document was found in Erratum (Figure 2).

Category 1. Social environment (9 documents)

Studies in this category analyze the main social support (SS) measures which refer to the level of necessary assistance that a person can expect from their environment or society (Hockerts, 2017) and it has been found as an important determinant of social entrepreneurial intention. Social support can take many forms, including help from family, friends, the government, and social networks (Elali & Al-Yacoub, 2016). Family members can play a crucial role for an entrepreneur in creating a strong network and connecting with the neighborhood, which would be necessary for the entrepreneur to engage in social activities (Anderson et al. 2005). Following an entrepreneurial mentality, SS is seen as being crucial as a means for an individual to achieve a predetermined social objective (Hockerts, 2017). Family support and social network connections have been demonstrated to have a substantial impact on university students' decision to pursue a social entrepreneurial career in previous research (Yurtkoru et al. 2014). Perceived social support and students' SEI have been shown to strongly and favorably correlate in prior studies (such as Hockerts, 2017; Jadmiko, 2021; Tuan & Pham, 2022; Lee & Oh, 2017; Usman et al., 2022; Solórzano-García et al., 2022).

Category 2. Prior work experience (10 documents)

Other significant and influential factors of SEI are individuals' prior work experience (PE) which was found in ten documents. Family members are more likely to start their own businesses if they have prior entrepreneurial experience and are actively involved in the family firm (Zhang et al., 2014). Findings of many studies (such as Xanthopoulou & Sahinidis, 2022; Bae et al., 2014; Lacap et al., 2018; Fayolle & Gailly, 2015; Stephan & Drencheva, 2017; Peng et al., 2019; Shumate et al., 2014) showed that prior experience influences pro-social behavior and attitudes, including participating in social recycling programs (Vining & Ebreo, 1989). Knowledge and expose on societal issues is probably going to have an impact on SEI (Hockerts, 2017).

Category 3. Entrepreneurship education (15 documents)

This category includes the largest number of articles that study the impact of entrepreneurship education in forming SEI. The importance of education and its components (such as the courses, the impact of teaching methods and educators' personality) is considered by a large number of studies as an important predictor of entrepreneurial intention (Tsaknis et al., 2022; Bae et al., 2014; Astiana et al., 2022; Haddoud et al., 2022; Lv et al., 2021). According to Vodă and Florea (2019), educational initiatives are likely to cause EI. For instance, the entrepreneurial educational program (EEP) has served as a systematic method for providing students with the necessary degree of entrepreneurship knowledge. Cho (1998) wrote that EPPs should support EI since entrepreneurship-related knowledge and ability boost individual motivation to launch a new business. The role of educational institutions in fostering the growth of social entrepreneurship in society is crucial (Lacap et al., 2018). The entrepreneurship education programs (EPPs) increase people's intention to become entrepreneurs and contribute to the success of the new venture created (Bischoff et al., 2018; Xanthopoulou & Sahinidis, 2022; Sahinidis et al., 2019; Neneh, 2020). Generally, EPPs can create entrepreneurial mindsets and culture among students and help them to improve their career choices towards entrepreneurship (Jardim, et al., 2021), highlighting the entrepreneurial path as a career option (Silangen, 2016; Ahmed et al., 2020; AKHTER, HOSSAIN & ASHEQ, 2020; Kefis & Xanthopoulou, 2015). In recent years there has been an increased discussion of promoting social entrepreneurship careers and the search for more sustainable economic ecosystems. Globally, numerous universities, including Babson College, Harvard Business School, Yale School of Management, and others, have acknowledged the significance of social entrepreneurship (Mars & Garrison, 2009). Entrepreneurship education programs aim to develop students' empathy for social or economic challenges and equip them to recognize entrepreneurial activities that concurrently offer answers to a number of social issues in addition to discovering business opportunities (Hockerts, 2017). As they take classes in social responsibility and corporate social responsibility, university students' enthusiasm and favorable attitudes toward a professional social enterprise may grow as they gain empathy for the injustice and social inequity that today's institutional systems cause. Hence, entrepreneurship education can be beneficial in encouraging students to start a social enterprise (Bazan et al. 2020).

Category 4. Personality factors (13 documents)

Personality characteristics may alter how businesspeople perceive risk when making decisions (Mahfud et al., 2020). Entrepreneurs have been found to score better on measures of self-efficacy, risk tolerance, internal locus of control, proactive personality, and need for achievement than non-entrepreneurs. According to the literature, an individual's personality traits are very important in determining whether or not they would start a business. Self-confidence is a crucial personal quality that boosts achievement because it makes people

happier, makes them more persuasive and has a positive influence on others, and inspires people to take action and accomplish their objectives (Ozaralli & Rivenburgh, 2016). The 13 documents on "personality factors" outline the distinctive personality traits of social entrepreneurs and potential social entrepreneurs. For instance, Preethi and Priyadarshini (2018) used the Big 5 model, which includes extraversion, openness to experience, neuroticism, conscientiousness, and agreeableness, to measure five SEI dimensions: social vision, financial returns, social networking, innovation, and sustainability. Wu et al. (2018), in contrast, evaluated the five personality traits from the Big 5 model. Then, specific personality traits that have been connected to SEI have been researched, including propensity for taking risks and creativity (Politis et al., 2016; Chipeta & Surujlal, 2017) emotional intelligence and self-efficacy (Tiwari, Bhat & Tikoria, 2017) and moral judgment competence (Bacq & Alt, 2018).

5. CONCLUSIONS AND SUGGESTIONS

One of the government's strategic objectives is to encourage entrepreneurship because it boosts economic growth and lowers unemployment and poverty (Shkabatur, Bar-El, & Schwartz, 2022). An unsolvable issue continues to be the surge in unemployment brought on by the global economic crises, population growth, and a lack of open positions. In addition, the emergence of crises such as the environmental, the pandemic, etc. highlight even more the need to promote and develop social entrepreneurship (Storr et al., 2022). The development of social entrepreneurship can be a solution for increasing global economic production and reducing social problems, through the development of innovative businesses. Based on the 47 documents gathered from Scopus database, the authors observe that SEI research began to receive a great academic attention in 2017 and has grown rapidly in the following years. With the advent of numerous papers and publications advancing knowledge on this subject and laying the groundwork for future research, SE research has so far experienced an increasing trend. The areas of emerging nations (mostly Asian) make up the majority of the locations that contribute to SEI research. This study applies content analysis to review SEI research with four categories identified as Category 1. Social environment (social capital, human capital, support from institutions, social support, social norms), Category 2. Prior work experience (employment, career, income etc), Category 3. Entrepreneurship education (universities, academic entrepreneurship, students, university students, social sciences), Category 4. Personality factors (self-efficacy, opportunity recognition, empathy, sense of trust, TPB, etc). Entrepreneurship education and personal traits/characteristics were the most examined determinants of SEI. Regarding the impact of entrepreneurship education on students' social entrepreneurial intention, literature and research showed that entrepreneurial education and courses related with entrepreneurship had a significant effect on individuals' social entrepreneurial intention. The impact of education on students' entrepreneurial intention is under question for some researchers, for example Nabi et al. (2018) found that entrepreneurship education had a negative impact on college students' entrepreneurship intention, however, the majority of studies confirm a positive relationship between entrepreneurship education and social entrepreneurial intention (Chang, Wannamakok & Kao, 2022; Solórzano-García et al., 2022). Then, for many scholars, personal traits and PBC are the most important factors in shaping social entrepreneurial intention as social entrepreneurs or future social entrepreneurs are people who frequently show high levels of emotional intelligence and empathy for the problems of others. These characteristics enable people to recognize the social issues they want to address and to feel strongly enough about them to act to address them. There are several limitations that should be mentioned. First of all, the data came from a single database, thus future research could use a variety of databases such as WoS and Google Scholar, when more published articles become available. Generally, the systematic literature review as a technique has advantages and disadvantages. One of the advantages of this systematic technique is that it enables the search and synthesis of the existing literature to answer the research objectives. The review of the literature has, however, been constrained by the key phrases and key terms employed to locate the required material. Because of this, the authors acknowledge that the synthesis might have left out some trustworthy sources. Future research should go beyond personality factors to look at the influence of socioeconomic circumstances and demography on people's tendency to engage in social entrepreneurship (Sengupta et al., 2018). However, there is currently a lack of empirical research on the importance of prior knowledge in this process as well as how entrepreneurs recognize and seize chances in the face of complex macro and micro contextual circumstances.

Abstract: The current practice of tourism development in the Saranda area has proven that the schemes used for tourism planning and management have not produced the desired effects for improving the quality of life of the residents, moreover, in certain aspects, tourist development has brought and damage the resources of development in the future. The adaptation of the legal framework towards sustainable development policies and the strengthening of the competencies and institutional capacities of the local government is creating the right ground to enable the participation of residents in the development process. Achieving sustainable growth also requires the mobilization of human resources, making the process more participatory and inclusive.

This study aims to examine the assessment of the community for tourism development, as one of the most important industries on which the growth of its well-being is based. The reasoning focuses on the sociological tradition of social exchange that is guided by the premise that individual feelings can be important elements that influence the social response of people and the supportive or non-supportive attitude of the community toward the development of tourism. Based on this reasoning, we will try to find answers to the following questions: 1) How do the residents in the study area evaluate the development of tourism in their area? 2) Are the residents interested in the process of planning and developing tourism in their area? 3) How do residents evaluate sustainable development strategies?

Material and Methods: In this study, we used the individual qualitative technique of interviewing individuals and it is assumed that this technique creates the possibility to obtain more accurate and deeper information. Data collection will be done through structured questionnaires, thus providing primary data. Through the interview, we aim to highlight the attitudes and perceptions of the participants involved in the sample for their assessment of sustainable tourism development strategies. Descriptive statistics were used in this study to measure residents' evaluation of sustainable tourism development strategies. The inhabitants of Saranda are the target population that possesses the desired information to answer the research questions.

Conclusions: Through this study, we got to know the community's perception of tourism development and how residents evaluate the issue of participation in planning and development in their area. Also, community assessment of sustainable development strategies was examined.

Keywords: Sustainable tourism, community, development.

JEL Classification: A13, D83, Q56

1. INTRODUCTION

Based on the fact that tourism development presents itself as the most important driving force for economic development in the study area, planning should consider the combination of development options with the strategy to be followed; the main actors that will be involved in the development of tourism, and the possibilities for the participation of the community as an actor in the development processes. The current practice of tourism development in the Saranda area has proven that the schemes used for tourism planning and management have not produced the desired effects for improving the quality of life of the residents, moreover, in certain aspects, tourist development has brought and damage the resources of development in the future. The adaptation of the legal framework towards sustainable development policies and the strengthening of the competencies and institutional capacities of the local government is creating the right ground to enable the participation of residents in the development process. Achieving sustainable growth also requires the mobilization of human resources, making the process more participatory and comprehensive. National Strategy for the Sustainable Development of Tourism 2015-2022, emphasizes the importance of implementing sustainable tourism development policies and strategies. This study aims to examine the support of the community in the area of Saranda area for sustainable tourism, as one of the most important industries on which the growth of its well-being is based. The reasoning focuses on the sociological tradition of social exchange that is guided by the premise that individual feelings can be important elements that influence the social response of people and the supportive or non-supportive attitude of the community toward the development of tourism. Based on this reasoning, we will try to find answers to the following questions: 1)

How do the residents of Saranda evaluate the development of tourism in their area? 2) Are the residents of Saranda interested in the process of planning and developing tourism in their area? 3) Does the community support the development of sustainable tourism in the study area? *The objectives of the study aim to test empirically:* 1) to know the assessment of residents for the tourism development, 2) to evidence how much residents know the development plans and how they think about participating in this process, and 3) to evidence the support of the residents for sustainable tourism development strategies in their area. Based on the research questions, objectives, and theoretical bases to explain the issues raised, the following hypothesis of the study is defined: Residents do not support the development of sustainable tourism in their area.

Methodology: In this study, we will use the individual qualitative technique of interviewing individuals and it is assumed that this technique creates the possibility to obtain more accurate and deeper information. Data collection will be done through structured questionnaires, thus providing primary data. Through the interview, we aim to highlight the attitudes and perceptions of the participants involved in the election for their support for sustainable tourism development strategies. The inhabitants of Saranda are the target population that possesses the desired information to answer the research questions.

In conclusion, the fact that the community in Saranda strongly supports sustainable tourism development strategies is evidenced in this study. We show that the panorama of the development of the tourism industry in this area and its problems are clear for the residents who express that they are worried about the situation and the community finds the solution in sustainable tourism policies and strategies.

2. LITERATURE REVIEW

Why study the perception and support of residents? Residents are part of the tourist activity and can contribute to the (un)success of the tourist experience lived in a destination. Residents' attitudes and behaviors towards visitors influence their decision to return (or not) to the destination. Residents are one of the tourism actors most affected, in their daily lives, by tourism development. To successfully develop a sustainable destination, it is necessary to involve the community in the planning, management, and monitoring of tourism activity. According to Cole, 2006, and Wall, 1997, the goals sought by the community and sustainable tourism efforts are similar, economic, social, and environmental for present and future generations.

Some believe that the sustainable development of tourism is at the very core of the notion of "community-based tourism". Also, it is important that the planning approach is captured by the dominant values that exist in the community and to the extent that these values are incorporated into the vision for the future (Simpson, 2001). Indeed, a locality's economy, sociocultural characteristics and physical resources are essential parts of the community and its inhabitants. However, these characteristics serve only as background to local life and reveal little about the motives and ability of residents to act together. The community, due to long-term cooperation with natural resources, has its own expertise, contributing according to the nature of the problem. Citizens, for example, have important areas of expertise including knowledge about local conditions and the environment, related to their way of life, and possess information about how similar problems have been solved before where they live or where they have traveled. Community-based tourism development is also positive in the fact that it avoids conflicts between different actors involved in tourism and implements the policy of coordination and this helps to create synergy by sharing knowledge, thoughts and skills among all community members (Kibicho, 2008). Community-based tourism is associated with increased awareness of environmental and social responsibilities as well as the sustainability of tourism. Also, policies based on the strict implementation of top-down centralized decision-making for the protection of natural resources have not been successful. From an economic and environmental perspective, if local people are not involved in the entire development process, there is a high chance that the resources on which tourism is based will be destroyed and the investment lost (Brandon, 1996). From a moral perspective, it is argued that management by local people coupled with decentralized decision-making is preferable and may be more accountable and sustainable in the long term. According to many researchers, community-based tourism can be a remedy for many of the general ills of the industry fueled by mass tourism. Solutions to the negative impacts of tourism are found in the common interest of the local community, tourism businesses, and tourists to preserve the natural assets and social heritage of the tourist destination. The definition of sustainable development was formed by the Brundtland Commission in 1987, and this definition has been widely used even within tourism (Zyzak, 2015). Sustainable tourism has been identified as one of the key issues of the UN resolution *The Future We Want*. The concept of sustainable tourism is present in the 2030 Agenda for Sustainable Development which emphasizes that tourism has the potential to contribute to all seventeen goals, either directly or

indirectly (WTO, 2017). For further, UNWTO and the United Nations Development Programme (UNDP) outline that “[t]ourism’s role in achieving the 17 Sustainable Development Goals ... can be significantly strengthened when sustainable development becomes a shared responsibility and moves to the core of policies and business decision-making within the tourism sector” (WTO, 2017). The term "Sustainable Tourism" is generally used in the tourism industry, the field of environment, and community development. The characteristics of sustainable development focus on minimizing the misuse of natural resources. According to the definition of the World Tourism Organization, sustainable tourism must ensure the optimal use of natural resources which constitute a key element in the development of tourism, preserve essential ecological processes and help protect natural heritage and biodiversity; to respect the socio-cultural authenticity of the host communities, preserve the cultural heritage of life and traditional values and contribute to understanding and tolerance between different cultures; to ensure in practice long-term economic operations and socio-economic benefits for all interest groups fairly distributed, including employment and opportunities to benefit from income and social services for the host community by improving its livelihood; ensure a high level of tourist satisfaction by providing a meaningful experience for tourists; raise their awareness of sustainability issues and promote sustainable tourism practices. Sustainable tourism development requires the participation of all interest groups and strong leadership to ensure broad participation and consensus building. According to the World Tourism Organization, many strategies have been promoted to achieve this, such as: attracting market segments that give more to tourism; improvement of services that increase the length of stay of tourists; improving the quality of tourism and diversifying the tourist product to increase visitor spending; expansion of the parties that benefit from tourism in the tourist destination; improving the infrastructure and increasing the planned profit; encouraging the participation of residents in decision-making for the development of tourism; expanding educational opportunities for the public in terms of nature protection; reducing the seasonality of tourism; skills development and training; protection of tourist resources and improvement of special qualities of the landscape; establishing standards for tourist services; development of programs for the protection and safety of tourists and the community; promoting responsibility for the protection of the environment and resources on which the development of tourism is based. Nowadays, it is important to clarify whether the residents in the study area support sustainable development strategies.

3.METHODOLOGY AND DATA

3.1 Research Method

Based on the literature review and the research objectives, we have formulated questions for the study as follows: 1) How do the residents of Saranda evaluate the development of tourism in their area? 2) Are the residents of Saranda interested in the process of planning and developing tourism in their area? 3) Does the community support the development of sustainable tourism in the study area?

The objectives of the study aim to test empirically: 1) to know the assessment of residents for the tourism development, 2) to evidence how much residents know the development plans and how they think about participating in this process, and 3) to evidence the support of the residents for sustainable tourism development strategies in their area.

Qualitative methods are used to study what people will say about their meanings and interpretations, and specifically in this study, we will use the individual qualitative technique of interviewing individuals. The individual qualitative technique is concerned with researching people's motivations and attitudes and is superior to other methods because it is flexible, practical, and easy to organize. It is assumed that they create the possibility to get more accurate and deeper information. Residents of Saranda are the target population that possesses the desired information to answer the research objectives. The selection method is based on the concept of random selection, it is a probabilistic selection that gives each element of the population an equal probability of being part of the selection and will be carried out through a mechanical process, so the elements presented in the sample will be chosen at random. Random sampling complies with the law of statistical regularity, according to which, if on average a selected sample is probabilistic, then this sample will have the same characteristics as the target population to which it belongs and is considered the best technique to select a representative sample. It has superiority over other methods because the obtained sample is safe in terms of probability since we can calculate the estimation errors and the significance of the obtained results, also, this method carries the possibility of generalization from statistical transitions, therefore it guarantees representativeness and generalization of the results. The choice must be optimal and therefore in determining its size we have taken into account the requirements of efficiency, representation, reliability, and flexibility.

The size of the choice depends on the desired precision for the generalization of the search results which is usually 0.05 and the acceptable confidence level for estimation is 0.95. Data collection will be done through structured questionnaires, thus providing primary data. Through the interview, we aim to highlight the attitudes and perceptions of the participants involved in the election to find out how they value the development of tourism in their area and support or not sustainable tourism development strategies. This method gives the respondent enough time to give well-thought-out answers independent of the subjective judgments of the interviewer, there are several opportunities to reach the respondents and create the opportunity to cope with a large volume of choices, so that the results may be more reliable. The use of the interview is based on the assumption that the viewpoints of the participants in the survey are clear, and that these viewpoints or their opinions are important and influence the provision of qualitative data appropriate for this research. This study employed the Linkert scale as a measurement scale for measuring residents' attitudes about their environment and used individual qualitative techniques for the data collection on the motivations and attitudes of the residents and it distributed 450 questionnaires. The data collected using the survey is analyzed using SPSS. Finally, the results prove the objectives that are presented.

3.2 Research Design

On the basis of the literature, the theoretical framework of this study consists of the measurement and analysis of two factors: the assessment of residents for the development of tourism and the support of the residents for sustainable tourism development strategies in their area. To achieve the development of sustainable tourism, many strategies have been promoted according to the World Tourism Organization, and based on them the measurement of residents' support for sustainable tourism development strategies will be done through the Likert scale with five levels of agreement for the questions (instruments) as in Table 1. This measurement scale consists of 10 sustainable tourism development strategies expressing strategies for the sustainable use of resources that support this development.

Table 1. The measuring scale of support from residents of sustainable tourism development strategies

No.	Sustainable tourism development strategies	
1	Improvement of services that increase the length of stay of tourists.	T ₁
2	Improving the quality of tourism and diversification of tourism products to increase visitor spending.	T ₂
3	Expansion of the parties that benefit from tourism.	T ₃
4	Improving infrastructure to achieve the increasement of the planned profit.	T ₄
5	Encourage the participation of citizens in decision-making for the development of tourism.	T ₅
6	Reducing the seasonality of tourism.	T ₆
7	Developing skills and training.	T ₇
8	Protection of tourism resources and improving the special qualities of the landscape.	T ₈
9	Establishment of standards for tourism services.	T ₉
10	Increase responsibility for protecting the environment and resources which it supports the development of tourism.	T ₁₀

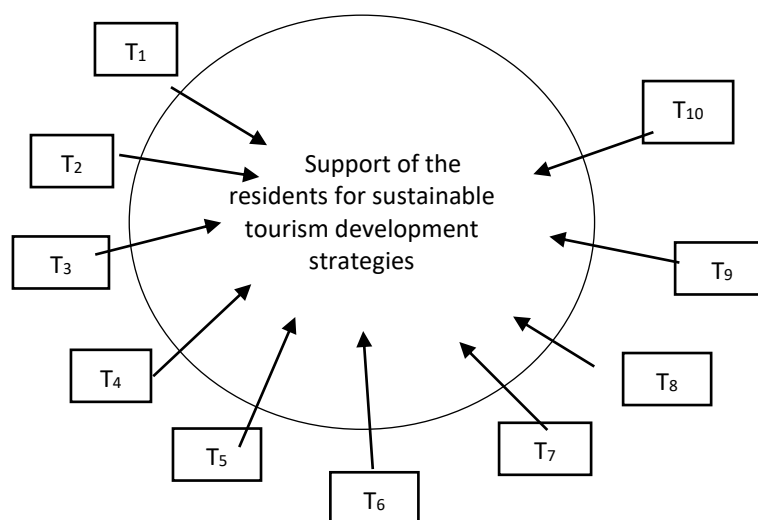

The mesaurment scale : 1 = Very unfavorable, 2 = Unfavorable, 3 = Neutral, 4 = favorable5=very favorable

Source: Author's design

The Likert scale is clearly more expressive for analysis, it respects the principles of calculating the mean that requires the use of interval scales, it is considered a technique with good reliability, good validity, very fast, and very simple. The mark on this scale indicates a degree of acceptance or rejection of the submission given in it. To ensure the validity and reliability of the questionnaire, this research consulted the mature scales in foreign references in the process of operational definition and measurement of the variables like motivations and attitudes of the people. For their measurement, the Likert scale was used. Note on this scale indicates a degree of acceptance or rejection of the submission given in it. In this research, a survey is conducted to get the data required for the study.

The preliminary questionnaire was examined carefully and critically by specialists in the field, and revisions are made according to the feedback. Through the process of specialists examining case interviews and pre-test, the final questionnaire includes ten items for measuring the support of the residents for sustainable tourism development strategies as shown in Figure 1, with a 5-point Likert scale (1 = very unfavorable, 5 = very favorable,).

Figure 1. Evaluation path diagram of support of the residents for sustainable tourism development strategies

Source: Author's design

4. RESULTS

4.1 Socio-demographic characteristics of the sample

Table 2 summarises the profile of respondents. The results indicate that 24.5% of respondents are 18-30 years old, 42.4% are 31-50 years old and 33% are 51 and more years old. Respondents were from all categories of age, gender, education level, and employment status.

Table 2. Profile of respondents

No.	Age	%	Gender	%
1	18-30 years old	24.5	M	46.7
2	31-40 years old	16.9	F	53.3
3	41-50 years old	25.5		
4	51 – 65 years old	28.5		
5	Over 65 years old	4.5		

Source: Authors' calculations through SPSS software

4.2 Results of the assessment of residents for the development of tourism

Tourism is the main direction of the economy in the study area and community participation in its development is very important. To understand how to estimate the actual development of the area, data were received from the questionnaire concerning the answer to the question "How do you assess the development of tourism in your area?" The results of the data according to their evaluation are presented in Table 1. The data shows that 45% of respondents assess the development of tourism in their area to be chaotic and harmful and only 11% of them think that it is appropriate development.

Table 3. Frequency of the residents' responses to the question:

No.	How do you assess the development of tourism in your area?	Frequency	Percentage
1	Chaotic development	165	42
2	Appropriate development	42	11
3	Harmful development	13	3

4	Development that serves the community	176	44
---	---------------------------------------	-----	----

Source: Authors' calculations through SPSS software

The question: Are the residents of Saranda interested in the process of planning and developing tourism in their area?

To clarify this, the analysis of the data shows (Table 4) that 93% of the residents interviewed say that the development of tourism in Sarande needs the participation of the residents in the planning process and 84.4 % say that they would like to give their opinion on this process (Table 5).

Table 4. Frequency of residents' responses to the question:

No.	<i>The development of tourism in Sarande needs the participation of residents in the planning process.</i>	Frequency	Percentage
1	I Strongly disagree	3	0.8
2	I disagree	4	1
3	I neither agree nor disagree	21	5.2
4	I agree	137	35
5	I Strongly agree	226	58

Source: Authors' calculations through SPSS software

Table 5. Frequency of residents' responses to the question:

No.	<i>I would like to give my opinion on the development of tourism, but I am not given the opportunity and I do not know how to help in the planning of tourism in my city.</i>	Frequency	Percentage
1	I Strongly disagree	17	4.3
2	I disagree	24	6
3	I neither agree nor disagree	21	5.3
4	I agree	115	29.4
5	I Strongly agree	217	55

4.3 Results of Measurement of Support for sustainable tourism development strategies

Descriptive statistics for the evaluation of the development strategies of sustainable tourism are presented in Table 6. This measurement scale consists of 10 sustainable tourism development strategies expressing strategies for the sustainable use of resources that support this development.

Residents were asked to indicate how favorable or unfavorable Saranda consider these strategies according to the Likert scale which is composed of 5 assessment levels, from `` Strongly unfavorable `` to `` very favorable ``.

As shown in Table 6, all strategies have a high average score from 3.98 to 4.55 and this means that people assess strategies for sustainable development of tourism in their area very favorably.

Table 6. Descriptive analysis of the residents' support for sustainable tourism development strategies

No.	Sustainable tourism development strategies	M (Mean)	S (Standard Deviation)
1	Improvement of services that increase the length of stay of tourists.	4.28	0.906
2	Improving the quality of tourism and diversification of tourism products to increase visitor spending.	4.23	0.875
3	Expansion of the parties that benefit from tourism.	3.98	0.999
4	Improving infrastructure to achieve the increasement of the planned profit.	4.43	0.846
5	Encourage the participation of citizens in decision-making for the development of tourism.	4.16	1.002
6	Reducing the seasonality of tourism.	4.55	0.734
7	Developing skills and training.	4.46	0.798
8	Protection of tourism resources and improving the special qualities of the landscape.	4.44	0.960
9	Establishment of standards for tourism services.	4.42	0.882
10	Increase responsibility for protecting the environment and resources which it supports the development of tourism.	4.45	0.918

The mesaurment scale : 1 = Very unfavorable, 2 = Unfavorable, 3 = Neutral, 4 = favorable5=very favorable

Source: Data processing by SPSS

4.4 The reliability of the measurement scale

Reliability is essential in any measurement scale and shows the homogeneity of the instruments that comprise it. The reliability of this scale was explained by Cronbach's Alfa (Cronbach, 1951). Cronbach's alpha is a useful statistic for assessing the internal consistency of a questionnaire. Cronbach Alpha is a measure of the correlation between observed scores and true scores.

Cronbach Alpha determines the internal consistency or average correlation of instruments in a measurement scale to assess its reliability.

It is recommended that if the measurement scale has a Cronbach's alpha coefficient greater than 0.70 it is acceptable as a scale with an internal consistency that serves further analysis. A coefficient of Cronbach's alpha less than 0.70 means that the reliability is less. Initially, to examine the reliability of the measurement scale, Cronbach's alpha coefficient was calculated in SPSS and the data are presented in Table 7.

Table 7. Reliability of measurement variables (Cronbach's Alpha)

The measurement scale	The number of indicators	Cronbach's Alpha (a)
1. Support for sustainable tourism strategies	10	0.894

Source: Authors' calculations through SPSS software

As can be seen from the presented data in the Table above, Cronbach's Alpha = 0.894 > 0.7 and we conclude that the measurement scale for supporting sustainable tourism development strategies is reliable and suitable for further data analysis.

5. CONCLUSIONS

The tourism development of Saranda, as mass urban tourism, is part of an increasingly saturated tourist market where competition from neighboring countries is constantly increasing. Under these conditions, sustainability is a fundamental issue in successful tourism planning and management. The practice so far has proven that the schemes used for the planning and management of tourism in the study area have not produced the desired effects for improving the quality of life of the residents and moreover, in certain aspects, the tourist

development has brought damage to future development resources. The analysis of the data of this study shows that the community in Saranda strongly supports sustainable tourism development strategies. The reasoning is that they seek to find the solution to the problems and concerns related to the development of tourism, in the implementation of strategies for the development of sustainable tourism. So, the picture of the development of the tourist industry in this area is so visible and the problem is so clear for the residents that they express that they are worried about the situation and the community finds the solution in sustainable tourism policies and strategies. Achieving sustainable growth requires not only the mobilization of physical and financial resources for the implementation of development policies and strategies but also the mobilization of human resources by participating in this development and making the process more participatory and inclusive. Given the fact that tourism development presents itself as the most important driving force for economic development in the study area, planning should consider the combination of development options with the strategy to be followed; the main actors that will be involved in the development of tourism, and the possibilities for the participation of the community as an actor in the development processes. The participation of local residents in the tourism planning and management process is necessary to stimulate a sustainable social structure that can change poverty, unemployment of women, and dependence on the income of immigrants. Importantly, the results of this study can help tourism planners and policymakers to understand the irreplaceable role that residents play as tourism actors and what strategies they prefer to successfully plan and develop tourism in their settlement of theirs. The fact that tourist destinations contain in themselves the economic, social, environmental, and cultural dimensions of an area, makes the systematic analysis very necessary and important, and this study can contribute to the integration of the role of the community as an added value for the growth of the performance of the tourism industry. The detailed examination of the issues raised in this study can provide information regarding the assessment of the reduction of the seasonality of tourism, the training of tourism employees, the protection of the special qualities of the natural landscape, etc. assessed as important strategies for sustainable tourism, so that tourists can spend more time in this tourist destination and tourism income can increase without harming tourism resources. These strategies can enable tourist destinations to achieve a maximum correlation with the demands of tourists to meet their wants and needs. These results can help local and central institutions to gather the right information and plan the tourism development strategies they prefer. Residents asked to participate in the planning for tourism development, to give their opinions and many years of experience in this direction, and in the future, other studies can investigate the ways and means to make possible the institutional organization of the community in the function of his professional involvement in decision-making for tourism planning and management in the Saranda area. This study helps in evaluating the attitudes of the residents of the study area. In addition to making a practical contribution to the planning and development of sustainable development strategies in the research region, the findings of the study help us better understand the community's attitude and appreciation for participation in the planning and development process.

This study has its own limitations derived from the scope and limits of the research, selected indicators and variables, the lack of tourists' opinions, and the limited analysis of factors that influence the planning and implementation of sustainable tourism policies and strategies. First, only one variable was examined, while there are other variables that affect the development of sustainable tourism and should be the object of further studies, such as the perception of the impacts of tourism by residents, etc. In addition, this study only considered personal attributes that refer to factors within the person and did not consider situational attributes which are factors within the environment that are external to the person that may influence residents' attitudes toward policies and strategies development of sustainable tourism. The collected data are only for the residents of the city of Saranda. This study, geographically limited, may produce results and conclusions on residents' support of sustainable tourism in this study area. Residents in other areas may have different perceptions, attitudes, and behaviors regarding tourism development. This study is also somewhat limited in terms of time frame. These limitations should be considered by other studies in the future.

Reasons For Some Attempts To Assess The Digitalisation Of The Banking System

Assistant Professor, Petar PETKOV, PhD¹

¹University of Agribusiness and Rural Development, Faculty of Economics and Management, Department of Economics and Finance, ppetkov@uad.bg

Abstract: At the beginning of the article, the concept of digital investment and financial space is introduced, which is a fundamentally different institutional environment compared to the existing pre-digital monetary system. The institutional qualities of this space are defined.

Further, the article offers a vision of the possible appearance of the emerging digital financial system, discusses the models of its digitalisation and the models of its state regulation, as well as possible options for the digital currency.

The concluding part formulates a point of view on the principles and approaches of the regulators to the problems that arise in the digitalization of the monetary system and the formation of a new digital finance and investment space.

Keywords: digitalisation, banking system, regulation, financial space, digital currencies.

Relevance of the research. The digitalisation of the monetary system is carried out very dynamically, changing not only its organisational and technical, but also its institutional characteristics. This gives rise to the solution of many new problems: both for the actors (the commercial banks) and for the regulatory bodies, which are faced with fundamentally new tasks.

The article is **focused on** the digitalisation of the banking system.

The subject of the study is the organisational and technical methodology for evaluating the formation of a new digital financial space.

The purpose of the research is to make proposals for improving the regulation of monetary systems.

The research tasks of the article are to systematically examine and evaluate the institutional and regulatory aspects of digitalisation, the process of establishing, measuring and achieving the institutional characteristics of the digital monetary system, to make a classification of digitalisation models and to indicate the main trends in its regulation.

When choosing the **research methods** of the study, methods of systematisation, classification, analysis and synthesis were used. The main models of regulation of monetary systems are also classified. The influence of digital transformation models on the change in the regulatory environment is analysed, which implies a change both in the approaches to regulating the activity of financial service providers and in the role of the regulators themselves.

The research results show that the digitalisation of monetary systems is characterized by significant changes not only in the organizational and technological aspects, but also in institutional and regulatory ones. They affect both the functioning characteristics of the entities of the monetary system, the methods of carrying out operations, and the role and tasks of the financial regulators themselves. It is indicated that the institutional development of the monetary system in the long term is characterized by the formation of a new digital investment and financial space, which is expressed in a change in the structure of transaction costs, the formation of new institutional qualities of a monetary system, as well as in the emergence of new types of risks, the transformation of existing ones and the emergence of new players, which is due to the active introduction of digital financial technologies.

The scientific novelty is in identifying and systematising the main institutional aspects of the development of digital currencies, determining the digital image of the financial and credit sector of the economy. As a result, the main measures aimed at managing the process of digitisation of monetary systems have been formulated.

The practical significance of the study consists of some proposals that can be used by regulators in the development of measures for the development of the financial market and the digitalization of the monetary system.

Introduction

There are many works of scholars Lawrence (2004: pp. 116–144), Mullahy (2015: pp.71–100), Scott (2017: pp. 984–1004) dedicated to various aspects of digitisation, including institutional, as well as new issues and challenges faced by regulators. They obtain important results regarding the impact of the digitisation process on the institutional structure of the monetary system, the transition to the use of digital technologies, the emergence of new players in the financial market and the resulting new problems for regulators, as well as issues related to the introduction of digital currencies and the likely change in monetary policy instruments related thereto.

At the same time, topics related to the principles and methodology of regulation of the emerging new digital monetary system, the specific content of which should take into account the characteristics of the digitization models that exist in a given country, have not been sufficiently studied. This predetermined the purpose and tasks of the present article. They consist in examining the institutional and regulatory aspects of digitalisation and, on this basis, revealing the institutional characteristics of the digital money system, classifying the models of digitalization and identifying the main trends in the development of the regulation of digital money systems.

Currently, the monetary systems of all countries around the world are transforming due to the introduction and spread of digital technologies, systems and tools. Therefore, it is appropriate to consider the institutional and regulatory aspects of the development of the monetary system in the context of its digitalization. Structural changes affect all levels: technological, organizational and institutional.

The first includes the technical and technological basis for the organization of economic activity and the interaction of subjects. The organizational level includes a set of rules for interaction, coordination and management of economic processes that have a local character, they operate within certain structures or sets of economic entities. Institutions are also primarily rules, but they are not local, but apply to all subjects of a given economy.

The study of various institutional problems related to the digitalisation of both the economy in general and the monetary system, in particular, is actively being conducted. A significant part of them is devoted to the problems of the impact of the digitization process on the existing institutional structure.

In particular, in Mbama (2018: 230-255) it is proven that the digitalisation of the financial system leads to the emergence of new institutional players in the financial sector and changes the structure of transaction costs. A very detailed and interesting study of the impact of digitization processes on the institutional structure of the economy and its various areas, including money circulation, was made by Cusumano (2002, 51-58). Cusumano assesses the degree of influence of various digital technologies (blockchain, digital platforms, artificial intelligence, etc.) on the institutional structure, proposes a methodology for analyzing and evaluating this influence, and concludes that digitization has an overall positive impact on the institutional structure of the economy, including the possibility to remove "institutional traps", although it shows the existence of several serious unexplored problems in this area. Cusumano also points to a significant reduction in the structure of transaction costs associated with digitisation and the accompanying change in the institutional structure of the financial sector.

Another part of the research focuses on the institutional qualities of the new economic systems themselves, based on digital technologies. Levesque (1996, 12-20) and Jamal (2002, 146-160), in particular, explore the institutional properties of network systems and propose their periodisation of the stages of formation of the digital economy. Levesque and Jamal introduce the concepts of "digital institution" and "institutional regulatory environment of the digital ecosystem". "Digital institution" means the regulatory tools of the digital ecosystem, and "the regulatory environment" is a system of regulatory procedures that determine the decision-making process and the creation of new products in the digital ecosystem.

Unlike these approaches, this article is not devoted to the study of the impact of digitalisation on the existing institutional structure and its transformation (the first approach), rather than on the institutional properties of local digital systems (the second), it tries to define fundamentally new qualities of the digital money system compared to the pre-digital one, for which the concept of a new digital financial and investment space is introduced. Its formation is a long-term process. But even today, the regulators are facing new challenges related to both the formation of this space and the accompanying reformatting of the banking sector, as well as its new institutional qualities, described in the first part of the article.

Approaches to the new tasks of regulators in the context of digitalization are also the focus of attention of many scientists and research centres, but the economic literature lacks a systematic approach to regulating the process of digitalisation of monetary systems. In particular, Mason (2008, pp. 207-224) emphasises the importance of the development of digital technologies in the financial sector and examines the legal regulation of digital financial technologies. In this regard, the need to systematise research and approaches to regulating the digitalisation of the financial sector is updated.

The need to develop coordinated regulatory measures for both traditional banks and new categories of financial intermediaries is indicated by experts from the Bank for International Settlements. The expert Glover (2015: 161-179) of the consulting company KPMG stress that the regulation of digitisation in the field of financial services has been one of the key tasks for the financial sectors for several years. However, the main and not fully resolved task for monetary authorities is the question of defining and choosing a regulatory model in the context of digitalisation. In this article, we seek to substantiate the point of view in favour of the functional model.

It is necessary to form a new digital financial and investment space. The digitalisation of the monetary and financial system is manifested in the fact that a digital financial and investment space (hereinafter referred to as CFIF) is being formed in the world, which creates completely new opportunities for making payment, credit and deposit, investment and other financial transactions. This space is global by nature and, at least in organisational and technical terms, knows no national boundaries. Business models and schemes for organizing interaction between customers and banking institutions are changing significantly. Traditional financial market actors, such as lenders and borrowers, under the conditions of CFIF, can now enter into direct interaction, bypassing intermediate links.

The formation of a new digital space is, of course, not limited to the monetary system, but also covers the entire economy, including trade, industry, other industries and sectors. Moreover, these segments will be integrated. This trend is already evident today, for example, in the fact that large trading companies are entering the financial services market. In this article, the core concept is to explore the financial segment of the emerging new economic digital space, in which economic interaction between economic entities and the exchange of services, assets and information in digital form takes place.

The formation of the CFIF implies significant transformations of the monetary system at three levels: technological, organisational and institutional. These levels are closely related to each other, and most studies of the processes of digitisation of the economy and the financial system refer to issues that include a certain combination of these levels and aspects. A significant part of them relates to the organizational and technological level, including new opportunities, advantages and threats related to the introduction and diffusion of new digital technologies, systems and tools, such as blockchain, digital money and tokens, etc.

It is necessary to focus on the institutional aspects of the digitalisation of the financial system, which are primarily manifested in a change in the structure of transaction costs, although it is clear that it is impossible to talk about them, leaving aside the digital technologies themselves.

The most important institutional properties of the digital investment and financial space, which radically distinguish it from the traditional, pre-digital monetary system, include a significant reduction of many types of transaction costs related to the verification and control of the fulfilment of contractual obligations, identification and management of credit and operational risk, exchange of information, cash and financial assets, the establishment of communications.

In addition, the monetary system becomes "smart" and able to process a huge amount of information, which also gives it new institutional properties, and the introduction and distribution of the digital currency of central banks (hereinafter referred to as CBDC¹) should make it more transparent. Although, contrary to a fairly common view, the main point is that this alone will not lead to significant progress in the fight against such phenomena as the shadow economy and money laundering. Especially since cryptocurrencies, which represent a private alternative to official money, are likely to continue to exist and their use will expand. Central bank digital currency will once again provide the general public with direct access to public money. Deposits and other digital currencies will be convertible into it. This would immediately restore interchangeability between payment instruments and keep their relative prices fixed. Therefore, the digital currency of central banks can

¹ Central Bank Digital Currency - it is usually defined as a digital obligation of a central bank that is widely available to the general public. Like existing forms of money, it allows the general public to make digital payments. As a liability, it is the safest digital asset, with no associated credit or liquidity risk.

be essential to maintain the uniformity of money in a digital economy. Thus, in this convertibility system, any inefficiency arising from information asymmetry in an economy with imperfectly substitutable currencies will be eliminated. Furthermore, and perhaps more importantly, the elimination of imperfectly substitutable currencies would lead to a single unit of account, which is critical to maintaining central bank monetary authority.

An attempt is made here to give a generalized and at the same time concentrated formulation of the institutional properties of the emerging TFIP, although we understand that the provisions that will be formulated below, although based on an analysis of observed real trends and take into account the objective technical characteristics of the new digital systems and technologies being introduced are still somewhat hypothetical.

The classic banking system has been established primarily since the exchange of financial assets is always associated with the risk of contractual default. This applies not only to credit but also to payment transactions. Their implementation required a reliable intermediary who knew how to manage the risks. The classic "pre-digital" bank acts as such an intermediary. In the context of the digitalisation of the economy and the monetary system, the situation is changing. One of the main advantages of the digital investment and financial space is its much higher agreement compared to the traditional monetary system. By this property, we mean broad possibilities for ensuring clear verification and control over the fulfilment of contractual obligations, as well as a guarantee of excluding changes in the initial conditions and information, which are primarily provided through the use of distributed ledger technology in connection with smart contracts.

They allow you to automate and objectify the conducted operations for the exchange of money or other assets, eliminating the possibility of influencing the terms of the transaction of any of the parties after the conclusion of the contract. Such systems can indeed lead to some disintermediation of banking activities in payment and credit transactions, as they make it unnecessary to involve a trusted intermediary (ie a traditional bank) to complete the transaction.

It is quite possible that in the future, payments based on such systems will replace bank letters of credit and other traditional paper transactions, and also facilitate the provision of financing for commercial and perhaps investment projects. However, the need for an intermediate consultant and organiser will not disappear completely. The point is that banks will remain, but in a slightly different capacity - as centres for offering various services and institutional units with the most diverse and systematic knowledge in the field of finance.

Mobile technologies, open API², and internet banking give CIPF the quality of openness. These technologies significantly reduce the costs of establishing contact and obtaining information and necessary services from a bank or other financial institution, as well as the exchange and interaction of banking and commercial enterprises themselves.

In addition, thanks to open APIs and cloud technologies, firstly, it applies not only to payments, but also to other banking services, and, secondly, it applies not only to non-professionals but also to corporate customers. The latter get the opportunity to integrate the financial instruments and banking products they need into their business processes. This is reflected in the concept of BaaS (Bank-as-a-Service). Following it, banking services (credit, deposit, payment) can be outsourced to an external user and are automatically included in the business process.

Openness as an institutional property of the digital investment and financial space also means that any entity, both natural and legal, can simultaneously be a client of not one, but several (basically unlimited) banks and integrate their finances (personal or company) with banking services. Moreover, the transaction costs associated with establishing such relationships are close to zero, which seems incredible in the context of a traditional, pre-digital banking system.

The digital investment and financial space has the property of continuous communication, which means that financial and credit organisations can maintain continuous communication with customers and anticipate their needs.

Digitalisation leads to changes in the structure of both the banks themselves and the financial sector as a whole. Despite the trend towards some dismediation of the banking system, banks will still survive in the digital economy. Their role as intermediaries guaranteeing payment and credit-deposit transactions will decrease, but will not be reduced to zero.

² application programming interface

This is due to the fact that:

- uncertainty and classic banking risks will never be completely eliminated;
- the need for traditional banking operations, deposits, and lending takes time.

Of course, the banks of the future will undergo a significant transformation both technologically, organizationally and institutionally. Riivari (2005, pp. 11–20) offers an interesting variant of the model of the digitised bank of the future: the back office (based on cloud technologies, and big data) provides services, the middle office processes transactions, and the front office (mobile applications) provides direct communication with the client. In addition, such a bank perfectly well fits into CFIP.

In the industrial age, the bank fully owned all three levels (back-, middle- and front-office), they were its internal divisions. Now they become open and separated from it. Relationships nurtured in the front office are now evolving on mobile. The automatically configurable software used for each operation allows anyone to offer their own code through APIs and improve back-office and front-office interaction, and these APIs and applications themselves are populated with data that is stored in the cloud and extracted using machine learning and artificial intelligence.

Even though Riivari (2005, pp. 11–20) contrasts the future digital bank with the bank of the industrial age, it can be said that there is a kind of industrialization of banking in the digital age. Vast amounts of data stored in the cloud and automatically configurable software form the manufacturing backbone of this "smart" financial industry, which can serve individual clients based on standard algorithms, information and software.

The digital investment and financial space is open not only to potential customers but also to new non-banking companies developing and offering traditional banking services. In the conditions of the pre-digital financial system, it would be impossible to imagine that any large non-financial commercial company or group of enthusiasts - specialists in a certain narrow field (programmers) would suddenly start developing and offering financial products. Currently, large non-financial companies and specialist groups are doing this and pushing traditional banks, but they are unlikely to replace the latter.

Big technologies build financial services into their ecosystems, and developers specialise in developing and delivering specialised financial services. Not a single group of them is a structure with diverse and systematic knowledge in the field of finance, and although some of them can offer almost all banking services to their clients, they still do this not completely independently, but through cooperation with banking and financial institutions.

Along with new unique opportunities to organise the interaction of subjects, with the formation of CFIP, new threats and risks appear. Traditional banking institutions must take into account the cyber risk that was absent in the past. They face competition from non-banking institutions which have entered the financial markets and are forced not only to modernise their organizational and technical base but also to fundamentally change their business models.

Regulators must have effective methods and instruments for assessing, monitoring and forecasting systemic risk (in the classic banking system its order is less significant), make decisions to regulate (or not regulate) new para bank structures and pursue certain financial innovation policies. In addition, the issues of protecting consumer rights and increasing the financial participation of the population are updated, the provision of which must be balanced with the achievement of other goals of the regulators' activity.

Both global and regional financial markets have seen increasing competitive pressure on traditional banks from non-financial, mainly technology and telecommunications companies. Such companies provide a wide range of payment services, lending and insurance services, and some of them can provide the full range of actual banking operations.

The response of the banks to changing working conditions is adapting business models and formats for providing financial services, and expanding interaction with non-banking organizations in various forms, such as markets, cross-selling, super applications, ecosystems, etc. forms of partnerships. In such an interaction, banks can play the role of both an owner and a participant.

The formation of ecosystems and other forms of partnership is not the only trend, but considering global best practices, it appears to be the most robust and likely to spread. The positive effects are expressed in the technology of business processes and expansion of the customer base.

In addition to these, however, such activities are associated with a number of risks, including operational (cyber) risks, the risk to the protection of consumer rights and the safety of customer data, a reduction in the profitability of traditional banks and the value of their brands, and the emergence of new systemic important institutions whose activity exceeds the boundaries of traditional banking and can be characterised as cross-industry.

In world practice, approaches have not yet been formed to regulate the forms of partnership interaction, whose activities are mainly coordinated by three main aspects: financial, antimonopoly, and product. According to experts in international practice, the institutional specificity of the country and the structure of its financial market play a decisive role in the formation of the model of digital transformation.

As a result, the regulatory environment in which traditional banks and new financial service providers operate is also changing. This requires appropriate actions by financial regulators in the form of effective solutions to ensure, on the one hand, the sustainable functioning of financial institutions, and on the other hand, to stimulate the development of innovation and ensure the protection of the interests of users of financial services.

As the digital transformation of the financial sector leads to an expansion of the types of financial service providers, an appropriate adaptation is required in terms of the regulatory perimeter. In other words, financial regulators must develop approaches to regulate the activities of non-traditional financial service providers (including large technology, and telecommunications companies).

In the context of transformational changes in the regulation of monetary systems, the role of the financial regulators themselves is also changing. In this way, the international consulting company Deloitte identified two roles of financial regulators in the context of managing the process of digital transformation of monetary systems, which were not relevant in the conditions of the traditional, pre-digital economy and financial system:

- A coordinating role aimed at promoting the active development of innovation and increased competition. The main characteristics of the coordinator are regulatory flexibility and regulatory ecosystem. An important clarification, in this case, is the banks' willingness and ability to effectively manage risks related to financial technologies.
- A deterrent role which consists of responding to emerging challenges and eliminating gaps and inconsistencies in regulatory requirements. In this case, regulation aimed at limiting the level of risks taken may reduce the depth and scope of innovation in the monetary system.

Regulatory mechanisms should also take into account the challenges faced by traditional banks to maintain their sound functioning and as a result, ensure financial stability.

As stated by Shahrokhi (2008, pp. 365-398), the regulatory practice of each country is based on the institutional characteristics of the financial market and the level of its development, the characteristics of the economy itself and the legal system. This is indicated in Table 1.

Table 1. Approaches to financial regulation of monetary and credit systems

APPROACH to financial regulation	BRIEF DESCRIPTION of the approach	COUNTRIES, in which the approach is applied
institutional	it is applied based on the legal status of the financial institution, regardless of the functions performed	Hong Kong, China
functional	it is applied based on the functions performed regardless of the legal status of a financial institution	Italy, France, Brazil, Spain
hybrid	it is implemented by one regulator (mega-regulator)	UK, Germany, Canada, Japan, Singapore, Switzerland

Source: author's tablic interpretation

In this regard, in worldwide practice, there is no unified approach to building a system for regulating monetary systems. For example, in Hong Kong, China, an institutional model of regulation is used, which involves the development of measures based on the legal (institutional) status of a financial intermediary (e.g. bank, non-bank financial institution, etc.) and its licensing powers.

In countries such as Italy, France, Brazil and Spain, a functional model is used, in which the type of activity (payment services, lending, etc.) is regulated, not the legal status.

Currently, the so-called integrated model, which assumes the presence of a single regulatory body – a mega-regulator, is increasingly being introduced. The specified model is applied even in Germany, Japan, Canada, Singapore and Switzerland.

In countries that are global financial centres, such as the United Kingdom, the United States, Finland, New Zealand, South Africa, the Netherlands, and Australia, the TwinPeaks model is applied. This model involves the application of regulation by two or more authorities whose powers are divided based on regulatory objectives, such as ensuring financial stability and supervising financial market participants.

A transformation of financial regulation is currently underway by adjusting the model used. Specifically, an increasing number of countries are moving from an institutional model to a functional or hybrid model or a combination of their elements.

At the level of approaches to the regulation of monetary systems, regulation is distinguished based on rule-based principles. Such an approach, in our opinion, limits the possibility of introducing financial innovations and increases the costs (time, financial and others) of compliance with the requirements of the regulators.

Principles-based regulation implies a general description of business approaches, where the regulator does not assess the application of prescriptive rules, but determines compliance with regulatory rules, regardless of the approach used.

Principles-based regulation requires supervised entities to have an effective system of corporate governance, as it applies the "comply or explain" principle. The characteristic features of this approach are regulatory flexibility and high adaptability to innovation. Principles-based regulation is most developed in countries such as the United Kingdom, Singapore, Mumbai, Iceland, the Netherlands, and Switzerland.

Another trend in improving regulation is related to the application of the principle of proportionality. According to Ndubisi (2007, pp. 222-236), "proportional regulation helps increase the stability of small banks and their business models".

The practice of applying proportional regulation varies widely across countries. Each of them applies its own approach to developing criteria for classifying banks and distinguishing regulatory norms using the principle of proportionality. The analysis of foreign practice allows us to conclude that proportional regulation is required above all by the most complex regulatory requirements.

Criteria for splitting claims, taking into account the principle of proportionality, may include, among other things, the volume of total assets, the scale of international activity and the level of risks assumed.

Along with the change in the nature of financial regulation, digital transformation updates the evolution of money, which is expressed in the emergence of digital forms of money. Central bank digital currencies are the most striking phenomenon in the field of digital financial technology. With their introduction, not only the nature of the transmission mechanism of monetary policy, and its instruments, but also the role of banks in servicing the payment process can be significantly changed. Taking into account the above, as well as taking into account the identified global trends in the development of regulation, the following aspects will be of greatest importance to national regulators when developing measures aimed at managing the process of digitization of monetary systems.

The functional model involves the use of regulatory approaches based on the economic nature of operations and functions rather than the legal status of legal entities (in the case of an institutional model).

In our opinion, the prerequisites for the transformation of the used model to ensure the effective development of the monetary system are the active development of the activities of non-bank service providers and the wide use of digital and financial technologies, which is expressed in a change of the institutional characteristics of the monetary system.

To systematise the requirements for the elements of the payment system, new categories of financial intermediaries providing payment services should be included in the regulatory perimeter.

Greater use of proportional regulation is needed, which is a ranking of regulatory requirements based on the scale of the financial institution, the level of risks assumed and other factors. Thus, banks classified as systemically important are subject to additional prudential requirements, in particular regarding compliance with regulatory capital adequacy ratios, considering the systemically important buffer, as well as regarding the

establishment of a remuneration committee. This approach implies a shift from directive rules for conducting banking activities to setting standards for market behaviour.

The best option right now is a combination of the two approaches – principles-based and rules-based – with active interaction between the financial regulator and the regulated financial institutions. This is due to the fact that the implementation of a purely principled approach cannot be considered an exclusive possibility at the current stage of the development of the monetary system, since the current system is based on rules and its effective change takes time.

Ensuring a smooth and gradual implementation of the principled approach requires a high degree of interaction between the regulator and supervised institutions, as well as the development of new mechanisms for interaction between the regulator and financial market participants.

There is a need to develop approaches to regulate the activities of non-bank financial providers of financial services. The need for their development is due to the fact that the use of forms of partner interaction (ecosystems, markets, etc.) leads to structural changes in the financial sector and therefore leads to the emergence of new types of risks for monetary systems.

In this regard, appropriate regulation is needed to ensure a balance between achieving the objectives of central banks' activities and stimulating innovation. To date, the worldwide practice has not yet developed a unified approach to regulating such activities. At the same time, as a rule, the key aspects concern the product, antimonopoly and financial regulations for the implementation of such activities.

It is necessary to explore the possibilities of introducing the digital currencies of central banks into monetary circulation as a form of the national monetary unit alongside the available and non-available money. The Relevance of this work is due to the need to solve a number of problems, the most important of which are: strengthening cashless payments, increasing the speed, convenience and security of their implementation, and stimulating the introduction of innovative financial instruments. The main meaning is that the implementation of the measures proposed by the authors will contribute to the formation of effective regulation of monetary systems in the context of digital transformation. This, in turn, will lead to an increase in the efficiency of the activities of the participants in the national financial markets, an increase in the predictability of the regulatory environment and competition in the financial market.

Thus, the digitalisation of monetary systems, due to the widespread introduction of digital technologies, systems and tools, manifests itself in transformational changes in two key aspects: institutional and regulatory. In this way, the process affects the organisational and technical infrastructure, and also leads to the emergence of fundamentally new instruments and methods of conducting operations.

The institutional aspects of the digitalisation of the financial system are manifested in the first place, in changing the structure of transaction costs related to the verification and control of the fulfilment of contractual obligations, the identification and management of credit and operational risk, the exchange of information, cash and financial assets, the establishment of communications. This is expressed in the formation of a digital investment and financial space with such distinctive characteristics as openness, contractual ability, and continuity of communication.

The regulatory aspect is a consequence of the transformation of the institutional characteristics of monetary systems. Increasing competitive pressure on traditional banks, blurring the boundaries between financial market segments, reducing the marginality of banking business and adjusting the business models of banks are new challenges for financial regulators that require the development of non-standard approaches to process management. of the digital transformation of monetary systems.

To ensure the effectiveness of regulation, taking into account the trends in the institutional transformation of monetary systems, in our opinion, the most relevant issues are the development of elements of a functional model of regulation, the wider use of proportional regulation, the introduction of regulation based on principles, developing approaches for regulating the activity of non-bank financial intermediaries, as well as exploring the possibilities of using digital currencies of central banks.

As a result of the study, the authors systematised two main aspects of digitisation: institutional and regulatory, revealing the main institutional characteristics of the digital monetary system, such as contractual ability, openness and continuous communication. These characteristics distinguish the digital monetary system from the traditional one and are the result of the formation of a digital financial and investment space in the context of the development of digital technologies. CFIF manifests itself through a number of significant

transformations: a change in the structure of transaction costs, the formation of new institutional characteristics of the monetary system, the emergence of new, previously unknown and less significant types of risks, the emergence of new participants in the monetary systems and transformation of the activities of the traditional participants.

The regulatory aspect depends on the institutional aspect. As part of their review, the authors identified digitisation models that are widespread in international practice, characterised the phenomenon of digital currencies of central banks and considered the key trends in the improvement of financial regulation, based on which measures were proposed to improve it.

The conclusions regarding the institutional aspects of digitisation are global and are generally applicable to the financial systems of all countries. The economic logic behind platforms is that they can develop and optimize connections between different activities. Platforms are uniquely suited to this role because they can leverage the key input to these activities: data. Data recorded and shared on a platform can be used to make recommendations to users, build reputation systems, or effectively connect users to each other, among other possibilities. The use of data generates both economies of scale and economies of scope.

Platform cohesion is fostered by an activity that dominates all others. Payment is a natural candidate for such activity on many platforms. All other activities on the platform are dependent on payment and all data is generated by payment. Therefore, payment functionality is critical to the value and growth of the platform. Users must accept the platform's payment protocols to access all the services it offers.

Service providers and app developers depend on a stable payment system to ensure the continued viability of their products. Social groups benefit from a value transfer system within the platform that connects their members.

Most importantly, payment networks have unparalleled access to data. The benefits of a database come not only from its size but also from its diversity: it is much more valuable to know the habits of a million random individuals than to know the habits of a million individuals from the same city. Therefore, a large payment-based platform that aggregates a wide range of activities is an ideal data collection tool. Given that payment is used in essentially all economic activities, no other, more specialized platform could hope to rival a payment platform's ability to gather information about economic behaviour.

An economy centred around digital platforms will be structured differently than the current system. The organisation of the financial system and the distribution of data ownership will change. The nature of platforms can also change the competitive landscape in the economy. Although they create platforms that were previously impossible connections, they may be prone to monopolies or fragmented markets, so the question of interoperability between platforms takes on new importance.

The central place of payments and data in social and trading platforms could lead to an inversion of the current industrial organisation of financial activities. In many modern economies, payment services are offered as an extension of the intermediation activities of banks. The motive for the creation of payment instruments is the demand for funds by banks.

A more radical departure from the system is where big digital money backs their currencies with deposits in big banks, but users hold digital currency exclusively. This type of environment is similar in spirit to the current one where consumers hold deposits backed by reserves but do not hold reserves directly. However, the implications for data ownership are quite different. If users hold digital currency exclusively, then digital currency issuers act as information oligopolists. Banks cannot monitor transaction data without purchasing it.

In fact, digital currency issuers may find it more efficient to set up banks as subsidiaries to avoid giving up their data. In this case, the primary purpose and value derived from transaction data would not be more efficient delivery of credit, but rather monitoring consumer tastes and trends. The privacy and efficiency considerations that policymakers would need to weigh would be much different in this type of environment, and perhaps regulations limiting the types of data that can be collected would be necessary.

CONCLUSION

The prospect of digitisation creates the possibility that a synthetic digital currency backed by various official currencies can be internationalized. In recent decades, increasing international linkages have created a shortage of safe assets and large cross-border monetary policy effects around the world through the global

financial cycle. A synthetic international currency linked to several different units of account could play a role in addressing the lack of safe assets, as the value of debt denominated in multiple official currencies would fluctuate with the value of the synthetic currency. However, no single official currency would be completely safe, meaning that issuers of debt denominated in the synthetic currency could take on currency risk if their assets were denominated in the local currency.

Abstract: This paper aims to check a significant relationship between gross domestic product, capital stock, labor force, export, natural resource, FDI inflows, and FDI outflows. This paper examines the long-run and causal relationship issues between economic growth, capital stock, labor force, and other key macroeconomic indicators in Bangladesh and Türkiye using a first-order difference regression testing approach of cointegration. This study has undertaken time series analysis and carried out several econometric tests using World Bank and IMF datasets data to justify the association between economic growth and major macroeconomic variables of the two developing economies. From the analysis, in Bangladesh increase in capital stock leads to a boost in economic growth by 3.11%, and higher natural resource rent lowers the GDP growth by 0.19%. In the case of Türkiye, capital stock contributes to economic growth by 0.90%, and life expectancy increases the GDP output by 0.95%. For the policy to be effective in fostering bettered profitable growth, it must be geared toward improving the forenamed macroeconomic variables.

Keywords: GDP, Labor Force, Export, Natural Resources, FDI Inflow, FDI Outflow

INTRODUCTION

Growth is regularly viewed as the end of all monetary activities. So the perception of the determinants of growth is no longer solely necessary from the coverage viewpoint; however, additionally is a crucial aspect of macro-management. It is decided by the economic system's interior and exterior macro variables, such as capital stock, labor force, export, natural resource, FDI inflows, and FDI outflows.

One of the driving issues studied among developing countries for a decade is how macroeconomic indicators contribute to economic growth differently. Previous works have tried to show comparative analysis based on continents, geopolitical unions, or neighboring states. The objective of this paper is to explore Bangladesh and Türkiye, which neither belongs to any of these criteria. But they are both defined as emerging economies by International Monetary Fund (IMF) and have significantly improved GDP growth for decades. Many macroeconomics variables like- capital stock formation, labor intensity, export, technology, resource foreign direct investments (inflow and outflow) are key determinants to answer the questions of how this continuous growth in their economies is happening.

It has generally been realized that production and its input components, capital and labor, play a vital role in the economy and environment. Also, the causal relationship between these components and economic growth is essential for environmental and energy policies. In the literature, the causal relationship between input factors of production and economic growth has been investigated in several studies. These studies have focused on two different countries, periods, and variables and used different econometric methodologies. However, there is no consensus on the empirical results of these studies, which show different causality directions. On the other hand, the kind of causal relationship is vital for the policy implications.

This article intends to contrast and analyze the parallels and discrepancies between these two countries. The economic ties between Türkiye and Bangladesh reflect a clear yet uneven picture. The volume of yearly bilateral trade between Türkiye and Bangladesh has expanded to approximately \$1 billion over the previous decade. Commercial ties between the two nations have strengthened over the past decade. The Turkish Institute of Statistics reports that bilateral trade reached \$858 million in 2018. As the Turkish carpet industry relies heavily on Bangladeshi jute, the textile industry contributes significantly to bilateral trade.

Bangladesh has an exceptional economic and poverty reduction record. Its economy has had some of the world's fastest growth over the past decade, supported by a demographic dividend, ready-made solid garment (RMG) exports, and stable macroeconomic conditions.

LITERATURE REVIEW

The Neoclassical model of Solow (1956) and Swan (1956) believed that, in the long run, that technological growth and population are the primary determinant of economic growth. They believe that government can affect the populace growth rate, saving prices, and incentive to invest in human and physical funding through its different fiscal, monetary, and exchange rate policies. These policies can change the equilibrium aspect ratio or affect the transition route of a constant economic growth rate.

Chirwa & Odhiambo (2016) performed a qualitative narrative appraisal of the prevailing empirical literature on the critical macroeconomic determinants of economic growth in developing and developed nations. The observation unearthed that the determinants of economic growth are exclusive while this difference is used. It exhibits that the important macroeconomic determinants of economic growth in developing nations encompass foreign aid, foreign direct investment, fiscal policy, investment, trade, human capital development, demographics, monetary policy, natural resources, reforms, and geographic-regional-political-financial factors. In developed nations, the observation exhibits that the important macroeconomic determinants related to economic growth are physical capital, fiscal policy, human capital, trade, demographics, monetary policy, and financial and technological factors.

Upreti (2015) indicated that elements affect economic growth in developing countries. It uses cross-country statistics for seventy-six countries from 2010, 2005, 2000, and 1995. Excessive exports, plentiful natural resources, longer life expectancy, and better investment rates effectively affect the growth in line with the per capita gross home product in growing countries. Many studies wish to be completed to differentiate the reasons for growth in developing countries because the scope of present studies is limited because of a loss of reliable statistics.

The endogenous model of growth by Barro (1990), Lucas (1990), and King & Rebelo (1990) assume that physical and human capital affect the financial increase; however, fiscal coverage variables like distortionary taxation and productive expenditure affect the output stage and its regular growth rate. According to the Neoclassical increase model, the influence of fiscal policy on consistent economic growth is transient and now not everlasting.

According to Aigbokhan (1995), economic growth amplifies in the increase in the average rate of output produced per person, generally measured on a per annum basis. It is additionally the rate of change of the countrywide production or profits in a given period. Economic growth refers solely to the monetary volume of goods and offerings produced. The monetary volume growth can be both positive and negative. A negative increase can be inferred that the economy is shrinking, characterized by financial recession and depression.

Ullah & Rauf (2013) cited that at the time increase in real GDP, it will boost the average output, and we referred to it as financial growth. Financial growth is helpful to extend the incomes of the society, assist the country in conveying unemployment at a low level, and additionally useful in the delivery of public offerings.

Using time series analysis, Biswas & Saha (2014) estimated a country's economic development's short-run and long-run macroeconomic determinants. The Johansen and Juselius multivariate cointegration take a look at, and the vector error correction (VEC) model is used to analyze the annual data from 1980-81 to 2010-11. The empirical findings verify a secure long-run relationship between India's GDP and its determinants. The result suggested that capital formation, employment, export, FDI, and money supply significantly impact India's economic growth as inflation and fiscal deficit have decreased the growth effect. In the short run, GDP is substantially influenced by the aid of the country's gross domestic capital formation. The error correction time period is terrible and significant. Further generalized variance decomposition assures the prudent impacts of export and capital formation on GDP in India.

Ismaila & Imoughele (2015) examined the macroeconomic determinants of economic growth in Nigeria measured with the aid of (RGDP), using time series records taken from CBN from 1986 to 2012. Augmented Dickey-Fuller (ADF) check used to be used for the unit root test, and Johansen's cointegration check used to be additionally performed to set up brief and lengthy run relationships between growth and its macroeconomic determinants. The ordinary Least Square statistical method was used to show the effects exhibited that gross constant capital formation, FDI, and government authorities' expenditure are the principal determinants of Nigeria's financial growth. Inflation has a poor impact on funding and Nigeria's financial increase. There was a desire to put stringent coverage in the vicinity to minimize strikes in Nigeria's labor zone to decorate their overall performance to the country's financial system.

Kim & Heo (2017) indicated that economic development in South Korea or Taiwan had acquired considerable scholarly attention. Those are a couple regarding the near profitable instances of monetary improvement since the 1960s. They hold a lot of similarities, but differences additionally exist. Thus, we revisited pecuniary improvement among South Korea and then Taiwan according to to draw classes for vile developing international locations through evaluating similarities or differences concerning the pair economies' brilliant success. They showed no development model up to every country's expectations and desired work. Stabil countries can also research besides the attainment cases but need in imitation of regulate the improvement model following their political and financial conditions. South Korea and Taiwan hold enjoyed a fast economic improvement in view that the 1960s. They hold many similarities; however, variations additionally exist. Thus, in this paper, we revisited the monetary improvement of South Korea and Taiwan after examining similarities and differences.

Evaluating similarities or differences among pecuniary improvement in South Korea and Taiwan affords four essential lessons for other developing countries. First, government intervention might also be beneficial when an economic system develops. The government was important in pecuniary development in South Korea and Taiwan. Second, enchantment about human capital through education is imperative because of financial development. As discussed earlier, South Korea and Taiwan invested heavily in education. Third, as noble economists argue, a career does assist economic growth. South Korea and Taiwan are massive examples of how much he promoted their economies via export-oriented industrialization and trade merchandising policies. Finally, so is no development of mannequins so much intention job of each country. Countries may additionally study out of the godsend cases; however, they want to alter the improvement mannequin following their political or financial conditions. As described, the economic improvement models concerning South Korea and Taiwan have deep similarities but many variations.

Muthalib (2017) observed in the province of Southeast Sulawesi aimed at discovering overseas and analyzing: (1) The dosage financial make bigger about cities than regencies between Southeast Sulawesi, (2) improvement gaps between cities in the province, (3) the context between pecuniary boom yet development gaps within some metropolis or the other. A shared technique was once used to determine the tribune about monetary growth. Williamson index was employed to find outdoors the flooring concerning improvement gap among regencies and cities. A coefficient contextual connection was once used to pick the relationship within degree concerning monetary increase and enchantment gap of overseas cities. Results of the discover outdoors exhibit that: (1) The monetary growth among the cities then regencies inside the region of Southeast Sulawesi upstairs the length about 2010-2015 used to be as soon as within 6.68% or 12.04% care of the year. This figure old, after upstairs our countrywide economic growth, used following remained under 6% each year over the same period, (2) improvement gaps within some locations, yet the extraordinary in Southeast Sulawesi have been entirely slim yet rather the same amongst the cities or regencies, (3) the pecuniary growth had a positive, inclined endeavor together with the enchantment gaps, meaning so much the higher the economic growth, the wider the gap. Since that is empirically colorful that the enchantment gaps within certain areas tend a stand equal, the economic increase in Southeast Sulawesi needs following kept humane or prioritized in order following speed up the development in the province.

Gilliard (2004) is evident up to expectation; these twain flourishing nations had deep similarities. The aid of monarchs dominates both international locations, both are rising countries, and both bears win deep adversities. However, today we locate these two international locations are at all extraordinary in their involvement in the global community and among their native economic development. This delivery note is a learning concerning similarities or variations in the development of Thailand then Morocco, which has evolved into the contemporary monetary status. Thailand or Morocco. Both nations are poor, bear limited natural resources, or are Monarchies. However, Thailand seems much more advanced in its platform regarding pecuniary improvement yet extra worried about international careers than Morocco. The reason concerning the demand bill is in imitation of exploring these couple international locations in higher element to determine the dosage about similarities or differences, which supplied a criticism regarding factors contributing to the imitation of pecuniary development over negative and growing countries. This pleasure is accompanied by short records concerning every country, evaluation of the government/political systems, financial trends, and enterprise climate.

Căuțișanu & Hatmanu (2019) divided monetary determinants into two classes based on the impact on economic growth: endogenous and exogenous. This estimated economic growth against two kinds of determinants for Romania and Central and Eastern European nations using records for 1995-2017 to compare the two cases. For Romania, we used time series-specific techniques (e.g., stationarity checking the usage of

the Augmented Dickey-Fuller test, OLS model). In the case of Central and Eastern European countries, they employed strategies precise for panel data (e.g., estimation of the OLS universal model, constant results model, random results model, and possible generalized least squares model). The effects showed that in Romania, in the studied period, solely the exogenous determinants (e.g., excessive science exports) had a sizable effect on financial growth. At the same time, Central and Eastern European countries had been influenced by utilizing each determinant (e.g., existence expectancy, foreign direct investments). In the case of Romania, foreign direct funding did now not characterize a giant determinant for the financial boom from 1995-2017 due to a slower transition from a communist regime to a market economy.

An interesting query in comparative monetary development is why Türkiye fell behind South Korea despite having higher improvement possibilities in 1960. The existing literature presents some illuminating narratives of the most plausible reasons, but only a few papers have recognized the microeconomic foundations of the relative underperformance of the Turkish economy. Attar (2018) constructed and analyzed two-sector catching-up models to find contrasts between Türkiye and South Korea. The results, which followed from data-based calibrations, indicated that with appreciation to preliminary conditions and values of structural parameters, both economies have blessings and disadvantages. The most substantial contrast, however, is the huge difference in how successfully the two international locations undertake frontier technologies. While the South Korean economic system operated with an efficiency stage very shut to its upper bound of 100%, Türkiye is located at the other quit of the spectrum with an efficiency stage of less than 1%. Counterfactual experiments tested the dominant role of this effectivity parameter in opposition to initial stipulations and other structural parameters. An extended analysis indicated that human capital variations could partly explain the giant distinction in efficiency levels.

METHODOLOGY

Variables and Model Description

Economic growth (Y) used in the study was the growth rate of GDP per capita, which was considered a dependent variable. The index for this variable in the model was" GROWTH." It indicated the change in per capita GDP from one time to the coming time. For illustration, the GDP per capita growth for 2020 was the rate of change of GDP per capita from 2019 to 2020. As countries can witness both negative and positive growth at different ages, this rate could be moreover negative or positive. An advanced growth rate was considered desirable.

This paper analyzes the long-run equilibrium relationship between GDP and its fundamental macroeconomic determinants through the cointegration technique. The variables used as fundamentals include: the log of gross domestic product (GDP) as a proxy for economic growth, the log of gross domestic capital stock (L_tot_cap_stock) taken as a proxy for physical capital; the log of total labor force taken as a proxy for labor (LLM); the log of export (EX) of goods and services; the log of foreign direct investment inflow (FDI) as an important foreign inflow

$$Y_t = \beta_0 + \beta_1 X_{1t} + \beta_2 X_{2t} + \beta_3 X_{3t} + \beta_4 X_{4t} + \beta_5 X_{5t} + \beta_6 X_{6t} + \beta_7 X_{7t} + \varepsilon_t \quad (1)$$

Where, Y_t represents GDP per Capita, β_0 represents constant or intercept term, X_1 represents Total Capital stock, X_2 represents Labor force, X_3 represents Total Export, X_4 represents Technological export, X_5 represents Resource, X_6 represents Foreign direct inflow, X_7 represents Foreign direct outflow, t represents deterministic trend, ε_t represents the stochastic error term, and the β_s are the coefficients to be estimated.

Table 1: Details of The Variables Used

Sign of the Variable	Variable	Name	Description	Source	Aim of using the variable	Expected Sign
GDP	Growth (Dependent Variable)	GDP per capita	\$	WB	Gross domestic product is a proxy for economic development and a significant indicator of human development and capital formation	
Tot_cap_stock	Total Capital Stock (Independent Variable)	(Total)	\$	IMF	A significant part of economic growth during the 1990s was due to capital accumulation	+

Sign of the Variable	Variable	Name	Description	Source	Aim of using the variable	Expected Sign
Lf	Total Labor Force (Independent Variable)	(Total)	N	WB	A wide range of labor force promotes economic growth in labor-intensive economies	+
Exp	Export (Independent Variable)	(Total)	\$	WB	An increase in export volume contributes to the overall economic progress	+
Tech_exp	Technological Export	(Total)	\$	WB	Technological export of a country boosts economic growth more rapidly as it incurs opportunity costs.	+
Resc	RESOURCE (Independent Variable)	Total natural resources rents (% of GDP)	\$	WB	More resource in a country means that development will come a lot easier to that country than for one where there isn't an important natural resource available.	-
Fdinf	FDI (inflows) (Independent Variable)	Foreign direct investment, net inflows	\$	WB	FDI contributes to profitable growth by adding capital inflow, employment creation, export increase, and technology transfer.	+
Fdout	FDI (outflows) (Independent Variable)	Foreign direct investment, net outflows	\$	WB	Empirical findings show that the FDI outflow for developed countries has a greater impact on profitable growth	+

Theoretical Framework and Model Specification

Method of Data Analysis

The estimation techniques for investigating the model are in three stages: First, the Time series is stationary when the mean $E(x_t)$ of the time series (x_t) does not depend on t , and the variance, $E[x_t - E(x_t)]^2$, does not vary systematically with time. A stationary process means that the mean, variance, and autocorrelation structure do not change over time. Stationary data depends on whether it has a unit root. Non-stationary data has stochastic or random trends, and as such, they are non-deterministic. Therefore, when the unit root is present, it implies that the time series data are non-stationary. The unit root test is the standard approach to investigate the stationary of time series data. The Augmented Dickey-Fuller (ADF) test proposed by Dickey and Fuller (1981) is the most commonly used. This step establishes whether a particular time series data is stationary or non-stationary. If it is non – stationary, it must be differenced once or twice. To carry out this test, we test the null hypothesis of a difference stationary against the alternative hypothesis of a trend stationary (Enoma & Isedu, 2011).

Secondly, the variables are tested for cointegration to find their convergence. Variables that fail to converge in the long run may be hazardous to policymaking. The theory of cointegration pioneered by Engle and Granger (1987) addresses this issue of integrating short-run dynamics with long-run equilibrium. The cointegration test hypothesis is stated as,

H_0 : no cointegrating equation

H_A : rejecting the null hypothesis (H_0) as trace and max statistics > 5% critical level

Thirdly, we estimate the model to evaluate the performance of the monetary policy on non-oil export. The estimation is carried out by using the ordinary least squares (OLS) technique, which is regarded as the best linear unbiased estimator (BLUE) that can be used in evaluating models of this nature (Gujarati 2002). The estimation, however, presupposes that the variables possess desirable empirical properties of stationary and convergence (cointegration). However, if these desirable properties are not achieved, we use the Error Correction specification to estimate the equation before using the ordinary least square technique.

Empirical Results and Interpretation

Unit root test: We have applied the ADF test to determine whether the series have stationarity. But it was non-stationary and took the first difference to make it stationary

Augmented dickey fuller (ADF) test results: The unit root test in Table 2 shows that gross domestic product, total capital stock, total labor force, foreign direct investment, export, technological export, and natural resource are stationary at first difference 1(1) since the ADF value of each of the variables at the first difference is greater than the McKinnon 5% critical values.

Table 2. ADF tests for Bangladesh and Türkiye

Bangladesh

Variable	ADF calculated value in Level	ADF calculated value at 1st Difference	McKinnon 5% Critical value	Order of Integration

Johansen Cointegration Test

The result of the Johansen cointegration test is shown in Table 3 below. The result shows that six cointegrating equations exist at a 5% significance level because the likelihood ratio exceeds critical values at 5%. This result shows a long-run relationship between economic growth and all the explanatory variables. The result indicates that in the long run, the dependent variables can be efficiently anticipated using the specified independent variables, and thus, an error correction model can be estimated. I(0) implies that the variable has a significant value without making stationary by taking first order difference I(1) for others.

Table 3. Johansen Cointegration Test

Trend: Constant

Series: GDP, Total capital stock, labor force, life expectancy, FDI inflow, FDI outflow, export

rank	Eigen Value	Likelihood Ratio	5 Percent Critical Value	Statistic
0		-2158.2485	94.15	100.3184

Presentation of Regression Result

The regression Table 4 explores the dependent variable log-transformed GDP and its first difference with other covariates- capital stock, labor force, export, life expectancies, natural resource, and foreign direct investments. We presented the result for Bangladesh and Türkiye in a separate table. We have taken the logarithm of each variable to describe their coefficient in percentage units.

Table 4. Regression Results

Bangladesh				
Regressed, D[log (GDP)]	Coefficient	Standard error	T-stat	Probability
Regressors

Source: Author's Compilation, 2023

The regression result in Table 4 shows a significant positive relationship between gross capital stock and economic growth. One percent increase in gross capital stock, ceteris paribus, will lead to about 3.11 percent and 0.90 percent increase in Bangladesh and Türkiye's economic growth, respectively. This result supports that increasing investment size enhances productivity which has a spillover effect on economic performance. Among other factors we have considered, natural resource rent has a significant negative association with GDP in Bangladesh, and export has a significant positive link with GDP in the case of Türkiye. A 1% increase in natural resource rent tends to decrease the GDP growth by 0.19%, and a percent increase in export volume in Türkiye leads to 0.95% higher economic growth. The total labor force has an insignificant relationship with economic growth in both economies, suggesting that its contribution to economic output is low due to the ongoing strike of workers.

Comparison of growth and growth-related variable

The following graph exhibits the trend of GDP growth, capital stock, labor force, and other key macro factors over the years for both countries.

Figure 1: Trend for both Bangladesh and Türkiye

Source: WDI, World Bank (2023)

It can be explored that Türkiye's export growth (about 30% in 2020) is higher than that of Bangladesh. Foreign direct investment inflow has risen for both countries, while its outflow has shown a steady-state pattern for Türkiye, but for Bangladesh, it rose for years. The total capital stock for Türkiye showed volatility in the late '80s, which started to improve in the early '90s, while it diminished over there years for Bangladesh. For both countries, labor force growth has exhibited a flat curve (since 1990).

CONCLUSION

This study investigates the relationship among renewable energy consumption, capital, labor, and economic growth in Bangladesh and Türkiye for the period of 1990–2010 using the OLS cointegration method. As mentioned above, it extends the current literature on the causal relationship between production inputs and economic growth. No study has investigated this relationship in the literature in both countries comparatively. How is economic growth significantly influenced by capital stock, labor force, export, technology, resource, foreign direct investment inflows, and foreign direct investment outflows? This study assumed a positive and significant linkage between a country's total capital stock and labor force with economic growth. We found the hypothesis true for the capital stock. However, it can not be stated that an increase in the labor force will contribute to the economic growth of these developing economies. Other determinants like- foreign direct investments, life expectancies, and technological exports are found to be insignificant covariates in regression analysis with GDP growth.

Most of the empirical results suggest feedback or growth hypothesis for developed countries. Still, this study suggests a conservation hypothesis for the relationship between capital-labor and other macro variables with economic growth in two emerging economies.

Findings from this article will suggest that an increase in capital stock and export volume will improve Türkiye's economic growth. In contrast, Bangladesh's economy will be benefitted if it accumulates more capital stock and lowers the natural resource rent.

ORCID: 0000-0003-3603-3130

Özet: Bu çalışmanın amacı Mali'deki üreticilerin sürdürülebilir tarıma ilişkin algı düzeylerinin belirlenmesi ve sürdürülebilir tarım algı düzeyini etkileyen faktörleri ortaya koymaktır. Bu amaçla Mali'nin Sikasso bölgesi, Klela ilçesinde basit tesadüfi örneklemeyle seçilen 110 üreticiyle yüz yüze anket çalışması yapılmıştır. Sürdürülebilir tarıma ilişkin algı düzeyini belirlemek için 19 maddelik bir ölçekten yararlanılmıştır. Üreticiler, ölçekteki ifadelerin her birini 5'li likert ölçeği ile değerlendirmiştir. Belirlenen algı düzeylerini etkileyen sosyo-ekonomik faktörlerin belirlenmesinde çoklu regresyon analizi (stepwise) kullanılmıştır.

Analize göre çalışma kapsamındaki üreticilerin sürdürülebilir tarım algısı çok düşük olanların oranı %12,7 (algı ortalaması=56,81), düşük olanların oranı %38,2 (algı ortalaması=70,33), orta düzeyde algı düzeyi olanların oranı %31,8 (algı ortalaması=81), ve yüksek algıya sahip olanların oranının %17,3 (algı ortalaması=89,15) olduğu belirlenmiştir. Ancak araştırma kapsamındaki üreticilerin %50,96'sı ortalama algı düzeyinden daha düşük bir algı düzeyine sahiptir. Regresyon analizi ile ailede tarımla uğraşan birey sayısının ve haftalık tarlada çalışma gününün üreticilerin sürdürülebilir tarım algısını negatif yönde etkilediği, tarlada günlük çalışma saati ve ailede birey sayısının ise pozitif yönde etkilediği belirlenmiştir. Ayrıca ki-kare testi sonuçlarına göre, üreticilerin sürdürülebilir tarımla ilgili yararlandıkları bilgi kaynakları ile üreticilerin sürdürülebilir algı düzeyi arasında istatistiksel olarak anlamlı ilişki olduğu ortaya konmuştur. Bu çalışmanın sonuçlarına göre, üreticilerin tarım algısının yükseltilmesi ve bu algının da tutum ve davranışa dönüşmesi için etkili yayım çalışmaları önerilmektedir.

Anahtar Kelimeler: Sürdürülebilir Tarım Uygulamaları, Çiftçi algısı, MALİ

Malian Farmers' Perception Of Sustainable Agriculture: The Case Of Klela District Producers In The Sikasso

Abstract: The objective of this study is to determine the perceived level of farmers in Mali regarding sustainable agriculture and the factors affecting the perception level of sustainable agriculture. For this purpose, a face-to-face survey was conducted with 110 farmers selected by simple random sampling in the Klela district, Sikasso region of Mali. A 19-item scale was used to determine the level of perception of sustainable agriculture. Farmers rated each of the statements on a 5-point Likert scale. Multiple regression analysis (stepwise) was used to determine the socioeconomic factors affecting the perception levels.

According to the analysis, the percentage of farmers in the study with the lowest sustainable agricultural perception is 12.7% (mean perception = 56.81), the percentage of farmers having a low perception is 38.2% (mean perception = 70.33), the proportion of those with medium levels of perception is 31.8% (mean perception = 81), and the proportion of those with high perception is 17.3% (mean perception = 89.15). However, 50.96% of the farmers within the scope of the research have a perception level lower than the average perception level. Regression analysis revealed that the number of people engaged in agriculture within the family and the number of working days per week on the farms affected the farmers' perception of sustainable agriculture negatively, while the number of working hours per day in the farms and the household size affected the perception positively. In addition, according to the results of the chi-square test, there is a statistically significant relationship between the information sources that farmers utilize about sustainable agriculture and the level of sustainable perception of farmers. According to the results of this study, effective extension activities are recommended to increase farmers' perception of agriculture and to transform this perception into attitudes and behaviors.

Key Words: Sustainable agriculture, farmer's perception, MALI.

1. GİRİŞ

Mali, Sahel bölgesinde bulunan ve nüfusun büyük bir bölümü tarım uğraşan bir ülkedir. Tarım sektörü, Batı Afrika Ülkeleri Topluluğunun ulusal ekonomilerini, istihdamını, kırsal hane gelirlerini, ticaret dengesi ve nüfusun gıda güvenliğini belirleyici bir yere sahiptir. Ekonomik olarak tarım, bölgesel gayri safi yurtiçi hasılanın yaklaşık

%41'ini oluşturmaktadır (Coulibaly,2021:1). Mali ekonomisi tarım ve ormancılık faaliyetlerinin ağırlıklı olduğu bir ülkedir. Bu sektörler, hane halkları ve özellikle Mali devleti için ana gelir kaynağıdır. Tarımsal faaliyetler Mali işgücünün yaklaşık %80'ine istihdam sağlamakta ve GSYİH'nın %38'sini oluşturmaktadır (World Bank, 2029:9).

Mali'de uygulanan tarımsal politikalar ile tarım sektörünün ülke ekonomisine katkısının artırılması hedeflenmektedir. Son yıllarda tarım politikası öncelikleri, hububat (pirinç) üretiminin artırılması ve devletin pamuk sektörünün yönetiminden çekilmesine odaklanmaktadır. Bu politikanın amacı, Mali gıda güvenliğini güçlendirmek, üreticilere daha iyi gelir sağlamak, tahıl ihracatını artırarak dış ticaret dengesini iyileştirmektir. Tarıma ayrılan devlet bütçesinin dörtte biri pirinçle ilgili sulama projeleri ve girdi sübvansiyonlarıdır (FIDA,2020:1). Mali, Maputo taahhüdüne uygun olarak son on yılda kamu kaynaklarının en az %14'ünü tarıma ayıran Afrika ülkelerinden biridir. Fakat 2012 politik krizi büyük ölçüde Mali ekonomisinin önceliklerini etkilemiştir. 2012'den itibaren Mali'nin Ulusal harcamaları öncelikle savunmaya yönlendirilmektedir. Sürdürülebilir tarım açısından, Mali hükümeti 14 Aralık 2005'te Tarımsal Yönlendirme Yasasını kabul etmiştir. Bu yasa, Mali'nin uzun vadeli tarımsal kalkınma politikasını belirlemekte ve yönetmektedir. Her şeyden önce, yasa doğal kaynakların sürdürülebilir yönetimini desteklemektedir. Arazi geliştirme stratejisi, ülkedeki hava koşullarının neden olduğu kuraklıkla bağlantılı kısıtlamaları içermektedir. Benzer şekilde, entegre sürdürülebilir su kaynakları yönetimi politikasıyla tutarlı olan su kontrol politikası, tarımsal kalkınma stratejisinin çok önemli bir unsurudur. Tarımsal Yönlendirme Yasasının hükümlerine rağmen, sürdürülebilir tarım politikasının fiilen uygulanması çok kısıtlıdır. İyi tarım uygulamaları sadece gelişmiş ülkelere ihraç edilen mangoların üretiminde uygulanmaktadır.

Ancak, kuraklık, çölleşme, iklim değişikliği ve diğer faktörler gibi çevresel tehditler, Mali'deki tarım faaliyetlerini olumsuz etkilemektedir. Bu tehditlere karşı Mali hükümeti ve yerel sivil toplum örgütleri, sürdürülebilir tarım yöntemleri kullanarak ülkenin tarım sektörünü korumak için çalışmaktadır. Sürdürülebilir tarım hem çevresel hem de ekonomik açıdan sürdürülebilir bir tarım sistemidir. Bu yöntemler, toprağın verimliliğini artırmak, doğal kaynakları korumak ve üreticilerin gelirini artırmak için tasarlanmıştır. Sürdürülebilir tarım yöntemleri, toprağın verimliliğini artırarak üretkenliği artırabilir ve toprağı erozyondan koruyarak çölleşmeyi önleyebilir. Ayrıca, sürdürülebilir tarım yöntemleri, üreticilerin gelirini artırarak ülkenin ekonomisine katkıda bulunabilir. Mali hükümeti ve yerel sivil toplum örgütleri, sürdürülebilir tarım yöntemlerini teşvik ederek, ülkenin tarım sektörünün geleceğini korumaya devam etmektedir.

Günümüzde giderek artan nüfus ve gıda ihtiyacı, tarım sektörünün önemini daha da arttırmaktadır. Ancak, sürdürülebilir tarım uygulamaları olmadan, tarım faaliyetleri çevreyi ve doğal kaynakları olumsuz etkileyebilir (FAO,2019:10). Bu nedenle, Mali gibi gelişmekte olan ülkelerde, tarımın sürdürülebilirliği büyük önem taşımaktadır. Bu uygulamalar arasında, daha verimli sulama yöntemleri, toprak koruma teknikleri, çevre dostu tarım ilaçları kullanımı ve tarım ürünlerinin ticareti için daha adil sistemlerin oluşturulması yer almaktadır.

OECD'ye göre, tarımsal faaliyetler doğrudan %17 oranında sera gazı emisyonlarının oluşumuna katkıda bulunmaktadır. Çevre uzmanlarına göre, tarımsal kaynaklı başlıca sera gazı emisyonları, toprak, gübre ve otçul idrarından gelen nitrojen dioksit (N₂O) emisyonları ve geviş getiren hayvanlar ve pirinç tarlalarından gelen metan emisyonlarıdır. Mali, Batı Afrika'da büyük bir tarım üreticisi olarak daha sağlıklı bir çevre için tarım politikalarının merkezinde çevre konusunun olması önem arz etmektedir.

Gıda ve Tarım Örgütü (FAO), Mali'nin kırsal alanlarında gıda güvenliği açısından iklim değişikliğine dayanıklılığın tarımsal üretime entegre edilmesi başlıklı projesiyle iklim değişikliği konusunda farkındalık yaratmaya çalışmaktadır (Diallo and Salam, 2009:15). Rapora göre bu proje, iklim değişikliği karşısında üreticilerin bilgi ve teknik kapasitelerinin güçlendirilmesine önemli katkılarda bulunmuştur. Çevresel, sosyal ve ekonomik nedenlerle, iklim değişikliğinin zorlukları ile baş edebilmek için sürdürülebilir tarımın benimsenmesi önerilmektedir. Üreticiler tarafından toprağın aşırı işlenmemesi, pestisit ve kimyasal gübrelerin azaltılması yoluyla tarımın sürdürülebilirliğini artırmak mümkün görülmektedir (Adesida et al., 2021:1).

Küreselleşme ve sağlık krizleri ile birlikte ürünlerin sağlık kalitesi tüketicilerin önemli bir sorunu haline gelmiştir. Bu amaçla tüm dünya ülkeleri tarafından kabul görmüş ve GLOBALGAP adını alan standartlar geliştirilmiştir (Ersoy et al., 2017:133). Yeni küresel standartlar göz önüne alındığında, Mali'deki üreticilerin uluslararası pazarlardaki payını artırmak için sürdürülebilir tarım uygulamaları önem arz etmektedir.

Ayrıca Afrika ülkelerinde üreticiler, tedarikçiler ve tarımsal kalkınma aktörleri pestisitlerin çevre üzerindeki etkileri hakkında yeterli bilgi sahibi değillerdir (Le Bars et al., 2020:8). Üreticiler tarafından bilinçsiz bir şekilde kullanılmakta olan gübreler de pestisit gibi toprağın biyolojik çeşitliliği üzerinde olumsuz etkiler yaratmaktadır.

Üretimini beş yılda (2014-2018) ikiye katlamak için Mali hükümeti, kimyasal gübre sübvansiyonlarını artırmıştır. Pestisit kullanımı zararlılardan veya hastalıklardan kaynaklanan kayıpları azaltmak suretiyle verim artışı sağlar (Le Bars et al., 2020:2). Ancak bu tarımsal girdilerin kullanılması verim artışını mümkün kılarsa da tarımsal girdilerin yoğun kullanımı ile biyolojik çeşitliliğin bozulması arasındaki bağlantılar nedeniyle doğaya saygılı tarımsal üretim yöntemlerinin kullanılması çok önemlidir. Gelişmekte olan ülkelerdeki durum ise daha ciddidir. Çünkü üreticiler gelişmiş ülkelerde yasaklanmış pestisitleri kullanmaktadır. Kamu otoriteleri de insanlara ve çevreye zararlı pestisitleri yasaklamak için gereken önlemleri almakta yetersiz kalmaktadırlar (Mamane, 2017: 159). Moldova’da yapılan araştırmalara göre, tarım politikalarının yönlendirilmesine, çevresel etkilere fazla endişe duyulmadan tarımsal üretimin artırılmasının hâkim olduğu görülmektedir. Bu çoğu gelişmekte olan ülke ve özellikle Mali için de geçerlidir. 2021 yılında Adesida et yaptığı çalışmasına göre, yoğun toprak işleme dahil olmak üzere girdi sübvansiyonlarının kullanımı ile birlikte kimyasal girdilerin kapsamlı bir şekilde uygulanması, Moldova’da toprakların ciddi şekilde bozulmasına ve erozyona uğramasına neden olmuştur (Adesida et al., 2021:1).

Bu sorunlar, sürdürülebilir tarımsal sistemler yaklaşımıyla ele alınabilir. Yapılan araştırmalara göre sürdürülebilir tarım, üreticilerin üretimini ve gelirini de artırmasına yardımcı olabilmektedir. Eryılmaz ark. tarafından 2018 yılında yapılan önceki çalışmalara göre iyi tarım uygulamaları, üreticilerin brüt marjının artmasına olanak sağlamaktadır (Eryılmaz ve ark. 2018: 123) Bu nedenle Mali üreticilerinin sürdürülebilir tarım uygulamalarını benimsemelerine yönelik politikaların uygulanması önemlidir. Sürdürülebilir tarım bir yandan üreticilerin gelirlerini artırması açısından ekonomik yönü, nüfusa sağlıklı gıda sağladığı için sosyal yönü ve bir yandan da gelecek nesillere daha iyi bir dünya bırakmaya olanak verdiği için çevresel yönüyle çok boyutludur. İklim değişikliğiyle mücadele, çoğu maliyetli ve büyük yatırımlar gerektiren derin sosyal, ekonomik ve teknolojik değişiklikler gerektirecektir. Bu nedenle iklim ve kalkınma konularını birleştirmek zorunlu olup sürdürülebilir tarıma dönüşüm gerekmektedir.

Mali’de tarımsal girdilere yönelik sübvansiyon politikası ile üreticiler daha fazla kimyasal gübre ve zirai ilaç kullanma eğilimindedir. Bu nedenle üreticilerin sürdürülebilir tarıma yönelik algılarının bilinmesi önemlidir. Bu çalışma Mali’nin tarımsal üretim merkezi olan Sikasso bölgesinde gerçekleştirilmiştir. Sikasso bölgesi, tarımsal üretim açısından Mali’nin en zengin bölgesi olup gıda fazlası ülke geneline dağılmıştır (Delarus, et al., 2009: 4). Tarım Bakanlığı’nın raporuna göre Sikasso bölgelerinde üreticilerin gübre kullanım oranı diğer bölgelere göre %71 oranı ile daha yüksektir. Bu yüksek orandaki gübre kullanımı mısır, pamuk gibi mahsullerin üretimi ve ayrıca pazara yönelik bahçe ürünleri ile bağlantılıdır.

Birçok ülke tarım politikalarının sürdürülebilirlik üzerindeki etkisini dikkate almadan, tarımsal verimliliği artırmayı amaçlayan tarım politikaları ile gıda güvenliğini sağlamaya çalışmaktadır. Bu çalışmanın genel amacı, Mali’deki üreticilerin sürdürülebilir tarıma ilişkin algı düzeyinin karakterize edilmesi ve üreticilerin algısını etkileyen faktörleri belirlemektir. Bu ana amaca bağlı olarak, üreticilerin sürdürülebilir tarıma ilişkin algılarını etkileyen sosyo-ekonomik faktörlerin belirlenmesi, üreticilerin tarım algısı üzerinde tarımsal bilgi kaynaklarının etkisi, tarımsal girdi sübvansiyon politikası ile üreticilerin sürdürülebilir tarıma yönelik algıları arasındaki ilişkinin ortaya konması ve Mali tarımında sürdürülebilirliğin sağlanması için uygun politikaların önerilmesidir.

2. MATERYAL VE YÖNTEM

2.1. Materyal

Bu araştırmanın birincil veri kaynağını Sikasso bölgesinde Klela ilçesindeki üreticilerle, yüz yüze görüşme ile amaca uygun hazırlanan anket formu kullanılarak elde edilen veriler oluşturmaktadır. Ankette iki bölüm vardır. Birinci bölümde üreticilerin sosyo-ekonomik özellikleri ile ilgi genel bilgileri, ikinci bölümde ise üreticilerin sürdürülebilir tarım algısını değerlendirmek için tasarlanmış 19 maddelik(items) bir ölçek yer almaktadır.

Bu çalışmada en yoğun üretim bölgesi olması nedeniyle Sikasso bölgesi Klela ilçesi araştırma alanı olarak seçilmiştir. Bu bölge mısırın ve pamuğun yoğun olarak üretilmesinin yanı sıra girdi kullanımının yoğun olduğu üretim alanıdır. Bölge tarım müdürlüğü verilerine göre Klela ilçesinde Lutana ve Dougoumoussou olmak üzere iki köy bulunmakta olup Lutana köyünde üretici sayısı 100, Dougoumoussou köyünde ise 84 üretici bulunmaktadır (IER,2020:120).

Örnek hacmin belirlenmesinde oransal örnek hacmi yöntemi kullanılmıştır. Oransal örneklem yöntemine göre, N büyüklüğündeki sonlu bir ana kitle için belli bir özelliği taşıyanların bilinen veya tahmin edilen oranına (p) göre örnek hacmi formülü aşağıda belirtilmiştir.

Örnek hacmin belirlenmesinde;

Formülü kullanılmıştır.

Formülde;

n= Örnek hacmi

N= Araştırma kapsamına giren köylerde üretici sayısı

p= 0.5 (maksimum örnek büyüklüğü için), Sürdürülebilir tarım farkındalığı olan üreticilerin tahmini oranı

σ^2_{px} = Oranın Varyansı (%90 güven aralığı, 0,05 hata payı için $1,645 * \sigma p = 0,05$ eşitliğinden;

$\sigma p = 0,03039$).

Örnek hacmi %90 güven aralığı ve %5 hata payına göre 110 olarak hesaplanmıştır. Her bir ilçede görüşülecek üretici sayısı ilçelerin toplam üretici sayısı içindeki oranı dikkate alınarak saptanmıştır (Tablo 1).

Tablo 1: Köylere göre örneğe giren üretici sayısı.

Köyler	Üretici sayısı	%	Örneğe giren sayısı
Dougoumouso	84	46,00	51
Lutana	100	54,00	59
Toplam	184	100.00	110

Anket yapılmadan önce üretici listesini güncellemek için köylere gidilmiştir ve iki köyün geleneksel şefine anketin amacı hakkında bir açıklama yapılmıştır. Çiftlik yöneticileri listesi aracılığıyla basit tesadüfi örnekleme mümkün olmuştur. Bu çalışmanın anketlerinin gerçekleştirilmesinde Mali Kırsal Ekonomi Enstitüsü uzmanlarından destek alınmıştır. Araştırmada kullanılan birincil verilerin elde edildiği anket çalışması 2022 Şubat ve Mart ayında gerçekleştirilmiştir. Elde edilen veriler bir önceki dönem üretim dönemine aittir.

Veri kaybını en aza indirmek için anketler tabletler aracılığıyla ve uluslararası kuruluşların araştırmaları sırasında sıklıkla kullandıkları KoBoCollect adlı bir uygulamadan yararlanılarak gerçekleştirilmiştir.

İkincil veri kaynağı olarak ise; World bank, Food And Agriculture Organization (FAO), Organisation for Economic Co-operation and Development (OECD), European Statistics, U.S. Department of Agriculture, İnsatMali ile, konu ile ilgili daha önce yayınlanmış, kongre bildirileri, makaleler, kitaplar ve raporlardan yararlanılmıştır.

2.2. Yöntem

2.2.1. Sürdürülebilirlik endeksinin belirlenmesi

Üreticilerin sürdürülebilir tarım indeksini geliştirmek için çalışmada üreticilerin sürdürülebilir tarım algıları ile ilgili daha önceki çalışmalarda kullanılan 19 maddelik bir ölçekten yararlanılmıştır (Adeola and Adetunbi, 2015: 90) (Hayran, 2018:75). Üreticilerden her bir maddeyi 5'li Likert ölçeğine göre (1 = kesinlikle katılmıyorum, 2 = biraz katılıyorum, 3 = Orta derecede katılıyorum(kararsız), 4 = Önemli Ölçüde katılıyorum ve 5 = Kesinlikle katılıyorum) değerlendirmesi istenmiştir. Üreticiler her soruya maksimum 5 puan verebilir. Eğer bir üretici her soruya 5 puan verirse ($19 * 5 = 95$), o üreticinin sürdürülebilir tarım algısının çok yüksek olduğu anlamına gelmektedir. Öte yandan, bir üretici her soruya minimum 1 puan verirse yani ($1 * 19 = 19$) o üreticinin sürdürülebilir tarım algısının düşük olduğu kabul edilmektedir. Bu nedenle araştırmada çiftçinin sürdürülebilirlik algısı 19 ile 95 arasında herhangi bir değer almıştır.

Çiftçi algı endeksini hesaplamak için aşağıdaki formülden yararlanılmıştır (Md.Hossain and al,2018: 19).

$$\text{ÇSTAE} = \sum_{i=1}^{19} \sum_{j=1}^5 M_i N_j \quad (1)$$

Burada ÇSTAE = Çiftçi Sürdürülebilir Tarım uygulamaları Algı Endeksini ifade eder. M_i = k. çiftçinin sürdürülebilir tarım uygulaması veya sürdürülebilirlik beyanı hakkındaki görüşüdür. Çiftçi uygulama veya beyandan haberdar olduğunda, her bir sürdürülebilir tarım uygulamasına veya sürdürülebilirlik beyanına 1, aksi takdirde 0 değeri atanır. N_j = k. çiftçinin 5 puanlık bir Likert ölçeğine (çok düşük, düşük, orta, yüksek ve çok yüksek) dayalı belirli bir sürdürülebilir tarım uygulaması veya ifadesi hakkındaki farkındalık düzeyidir.

Literatürde genellikle üreticilerin sürdürülebilir tarım konularında düşük, orta veya yüksek düzeyde algıya sahip oldukları bulunmuştur. Böylece üreticilerin sınıflandırılması, Sadati and al., (2010) Hayran ve ark. (2018) Md Alias (2019) gibi araştırmacılar tarafından izlenen sürdürülebilir tarım algı düzeylerine göre yapılmıştır. (sadati and al., 2010:432; Md Alias and al., 2019 :47).

p = çok düşük: $\min \leq p < (\text{ortalama} - \text{standart sapma})$,

q = düşük: $(\text{ortalama} - \text{standart sapma}) \leq q < \text{ortalama}$, (2)

r = orta: $\text{ortalama} \leq r < (\text{ortalama} + \text{standart sapma})$,

s = yüksek: $(\text{ortalama} + \text{standart sapma}) \leq s \leq \text{maks.}$

Bu aralıklar kullanılarak üreticilerin sürdürülebilir tarım algısı çok düşük, düşük, orta ve yüksek olmak üzere dört seviyeye ayrılmıştır (Md. Alias, and al., 2019:47).

Anket güvenilirliğinde Cronbach's alpha, bileşik puanın güvenilirliğini veya Anket iç tutarlılığını tahmin etmek için Cronbach's alpha, testi uygulanmıştır (Kayacan ve Demirbaş,2022:48).

Analiz sonucunda elde edilen Cronbach Alpha değeri 0,846 olarak hesaplanmıştır. Bu değer $0,80 \leq \alpha \leq 1$ arasında olduğundan kullanılan ölçek yüksek derecede güvenli bulunmuştur.

2.2.3. Analiz yöntemleri

Anketten elde edilen veriler Statistical Package for the Social Sciences 23 (SPSS versiyon 23) programı kullanılarak analiz edilmiştir. Bu araştırmada üreticilerin sosyo-ekonomik durumu (yaş, cinsiyet, gelir.) tanımlayıcı istatistikler (ortalama hesaplama, frekans, yüzdelik vb.) kullanılarak belirlenmiştir. Araştırmadaki her değişken için normal dağılım gösterip göstermediği Kolmogorov-Smirnov testi edilmiştir. Normal dağılım göstermediği için üreticilerin girdi sübvansiyonlarını kullanma durumu ve sürdürülebilir tarım algısı arasında bir ilişki olup olmadığını ortaya koymak için Mann-Whitney testi uygulanmıştır. Üreticilerin sürdürülebilir tarım algı düzeyleri ile yararlanılan tarımsal bilgi kaynakları arasında bir ilişki olup olmadığını belirlemek amacıyla da Ki-kare testinden yararlanılmıştır. Seçilen sosyo-ekonomik özelliklerin üreticilerin sürdürülebilir tarım algılarını ne ölçüde etkilediğini belirlemek için çoklu regresyon modeli analizi gerçekleştirilmiştir.

2.2.4. Regresyon modeli

Üreticilerin sürdürülebilir tarım algısını etkileyen faktörleri belirlemek için daha önce gerçekleştirilen araştırmaların çoğunda olduğu gibi çoklu regresyon modeli kullanılmış ve üreticilerin sürdürülebilir tarım algısını açıklamak için modele sürdürülebilir tarım ile ilgili literatür sentezlenerek belirlenen toplam 17 açıklayıcı değişken dahil edilmiştir (Tablo 4).

Tablo 4: Regresyon modelinde kullanılan değişkenlerin açıklaması.

Değişkenlerin adı	Değişken tanımı ve ölçü birimi	Veri türü
1. Bağımlı değişken Endeks	Sürdürülebilir tarım skoru (Mn=19; Mak=95; Standart Sapma=10,38; Ortalama=75,64)	Sürekli değişken (İndeks)
2. Bağımsız değişkenler	-	-
2.1 Sosyo-ekonomik özellikler	-	-
Eğitim süresi	Okuldaki yıl sayısı (yıl)	Sürekli değişken
Ailedeki birey sayısı	Hanedeki (kişi)	Sürekli değişken
Ailede tarımla uğraşan birey sayısı	Ailede tarımla uğraşan birey sayısı(kişi)	Sürekli değişken
İşlemede daimî birey sayısı	(Kişi)	Sürekli değişken
Günde tarlada çalışma saati	(Saat)	Sürekli değişken
Haftada tarlada çalışma günü sayısı	(Gün)	Sürekli değişken
Deneyim	(Yıl)	Sürekli değişken
Kooperatif üyesi olma durumu	0) hayır, 1) evet	İkili değişken
Tarımsal yayım hizmetinden yararlanma durumu	0) hayır, 1) evet	İkili değişken
Ürün türü	1)Pamuk 2) Tahıl 3)Hayvancılık 4) Pamuk ve hayvancılık 5) Tahıl ve	Polychotomous değişken

	hayvancılık 6) Pamuk ve Tahıl 7) Tahıl, Pamuk ve Hayvancılık	
Toplam arazi genişliği	Hektar	Sürekli değişken
Toplam işlenen arazi genişliği	Hektar	Sürekli değişken
Toplam parsel sayısı	Sayı	Sürekli değişken
İşletmenin hayvan varlığı	0) hayır, 1) evet	İkili değişken
İşletmenin Geliri	FCFA	Sürekli değişken
Tarım dışı geliri varlığı	0) hayır, 1) evet	İkili değişken
İşletmenin Tarımsal Alet Ekipman Varlığı	0) hayır, 1) evet	İkili değişken

Çalışmada regresyon modelinde değişken ekleme ve eleme yöntemi (stepwise selection) kullanmıştır. Bu modelde her değişken modele sırayla eklenir ve model değerlendirilir. Eğer eklenen değişken modele katkı sağlıyorsa bu değişken modelde kalır. Ancak modeldeki diğer değişkenlerin tümü, modele katkı yapıp yapmadıklarını değerlendirmek için yeniden test edilir. Eğer önemli derecede katkı sağlamıyorsa modelden çıkarılır. Böylece en az sayıda değişken yardımıyla model açıklanmış olur.

3. BULGULAR

3.1. Araştırma Kapsamına Giren Üreticilerin Sosyo-Demografik Özellikleri

Kléla ilçesindeki incelenen işletmelerin yöneticilerinin %86,4'ü erkek, %13,6'sı kadındır. Eğitim durumlarına bakıldığında yöneticilerin %54,5'inin okur yazar olmadığı ancak %45,5'inin okuma yazma bildiği belirlenmiştir. Eğitim yılı ortalamasının çok düşük olduğu görülmektedir (0,88) (Tablo 5). Raporlara ve araştırmalara göre, Mali'deki tarım, üreticilerin düşük eğitim seviyesi ile karakterize edilmekte ve tarımsal hane yöneticilerinin sadece yaklaşık %12'si örgün okula devam etmektedir. İncelenen üreticilerin yaş ortalaması 47,4, tarımsal deneyim ortalamasının 26,7 yıl olduğu belirlenmiştir.

Tablo 5: Sosyo-ekonomik durumu (n=110).

	Frekans(n)	%	Ortalama	St. Sapma	Min.	Mak
Yaş			47,41	11,89	25	83
Deneyim			26,7	10,40	10	60
Kadın	15	13,60				
Erkek	95	86,40				
Bekar	1	0,90				
Evli	109	99,00				
Eğitim yıl			0,88	0,70	0	3
Okuma yazma yok	60	54,50				
Okuma yazma var	50	45,50				

Kléla üreticilerinin yaş gruplarına göre dağılımına bakıldığında 41-56 yaş grubu %43,60 oranı ile ilk sırada yer almaktadır (Tablo 6). Bu yaş grubunu %33,60 oranı ile 25-40 yaş arası üreticiler takip etmektedir. Genç üreticilerin çoğunlukta olması Mali tarımının güçlü yönü olarak ifade edilebilir.

Tablo 6: Yaş kategorileri (n=110).

Yaş kategorileri	Frekans	%
25-40	37	33,60
41-56	48	43,60
57-70	21	19,10
71-85	4	3,60
Toplam	110	100.00

3.2. Araştırma Kapsamında İncelenen Klela Üreticilerinin Özellikleri

3.2.1. Tarımsal işletmelerin büyüklüğü

Bu çalışmanın sonuçlarına göre Klela ilçesindeki işletmelerin sahip olduğu tarım alanı, ortalama 30 hektar olduğu tespit edilmiştir. Klela'da üreticiler tarafından işletilen toplam alan ise ortalama 14 hektardır, Sikasso bölgesi, Mali'nin tarım bölgesi olup bu alanda mono kültür yaygın değildir. Üreticiler genellikle pamuğu diğer geçimlik ürünlerle birlikte üretmektedir. İşletmelerde minimum 1 ve maksimum 3 olmak üzere ortalama 1,72 parsel mevcuttur. Tablo 6'de işletmelerdeki arazi varlığına ilişkin bilgiler verilmiştir.

Tablo 6: İşletme büyüklüğü (n=110)

	Min.	Mak	Ortalama	St.Sapma
Toplam Arazi(hektar)	1	75	30,23	16,34
Toplam işlenen alan(hektar)	1	60	14,18	15,27
Toplam parsel sayısı	1	3	1,72	0,81

3.2.2. İncelenen işletmelerde tarımsal faaliyetler

3.2.2.1. Üretim deseni

Sikasso bölgesinin, Mali'nin tarımsal potansiyeli en yüksek bölgelerinden biri olması ve bölgede tahıl ve pamuğun tarımsal üretimin temelini oluşturması nedeniyle araştırma kapsamındaki üreticilerin de %57'sinin pamuk ve tahıl ürettiği belirlenmiştir (Tablo 7). Mali'de tarımsal üretim, üreticilerin tek ürün üretiminin risklerini çeşitlendirmesine, emeği verimli kullanmasına ve ürünlere değer katmasına olanak sağlayan karma tarım sistemleri ile gerçekleşmektedir.

İklim değişikliği, nüfus baskısı, kentleşme, su kıtlığı, diyet değişikliği, gıda fiyatlarındaki dalgalanmalar, sürdürülebilir tarım hedefine ulaşmak için ürün çeşitliliğine olanak veren tarım sistemlerine ihtiyaç duyulduğunu göstermektedir. Aynı parsel üzerinde mahsulün yoğunlaştırılması çevre üzerinde uzun vadeli olumsuz bir etkiye sahiptir ve bu üretim sistemi sürdürülebilir tarımın hedeflerini tehlikeye sokmaktadır.

Tablo 7: İncelenen işletmelerde tarımsal faaliyet türü (n=110).

Üretim türü	Frekans	%
Tahıl ve hayvancılık	1	1,00
Pamuk ve Tahıl	63	57,00
Tahıl, Pamuk ve Hayvancılık	46	42,00

3.2.2.2. Üreticilerin tarım alet ekipman kullanım durumu

Çalışma alanındaki üreticilerin tarım alet ekipman kullanımına ilişkin analizlere göre üreticilerin %70'inin tarım alet ekipmanı kullandığı belirlenmiştir (Tablo 8). Tarım arazilerinin işlenmesi için üreticilerin farklı tarım alet ve ekipmanlarına ihtiyaç duyulmaktadır. İşletmelerde tarım alet ekipmanlarını kullanan üreticilerin %40'nın makinenin kendilerine ait olup olmadığını belirtmeden işletmelerinde traktör kullandığı belirlenmiştir. Araştırma kapsamındaki üreticilerinin %97'si sırt pompası, %89 aksama makinesi, %90 pulluk ve %77 tohum ekme ekipmanı kullanmaktadır. Ancak sırt pompası ve tohum ekme ekipmanları ve pulluk bilinen modern tarım makinaları değildir.

Tablo 8: İncelenen üreticilerin tarım alet ekipman kullanım durumu (n=77).

Tarım alet ekipman kullanımı	Evet	%	Hayır	%
Tarım makineleri kullanımı durumu	77	70,00	33	30,00
Traktör	31	40,00	36	60,00
Tohum ekim ekipmanı	60	77,00	17	23,00
Sırt pompası	75	97,00	1	3,00
Pulluk	70	90,00	7	10,00
Karasaban	69	89,00	8	11,00

3.2.2.3. İncelenen işletmelerde hayvancılık faaliyeti

Hayvancılık Mali'nin tarımsal gayri safi yurtiçi hasılasına %20 ile %25 oranında katkı sağlayan ana ekonomik faaliyetlerinden biridir (Diawara et al., 2017:2). Tablo 9'de incelenen işletmelerde gerçekleştirilen hayvancılık faaliyetlerini göstermektedir. Sonuçlara göre üreticilerin çoğunluğunun (%43) küçükbaş ve kanatlı yetiştirdiği anlaşılmaktadır. İncelenen işletmelerde büyükbaş üretimi et veya süt üretimi için değil, tarımsal üretimde çeki gücü amacıyla üretilmektedir. Bu durum Mali'de tarımının modern üretim yöntemlerinin kullanılmadığının önemli bir göstergesidir.

Tablo 9: İncelen işletmelerde hayvansal üretim durumu (n=47).

Hayvancılık türü	Frekans	%
Büyükbaş	6	13,00
Büyükbaş +küçükbaş	7	15,00
Küçükbaş +kanatlı	20	43,00
Büyükbaş + kanatlı	10	21,00
Büyükbaş+küçükbaş+kanatlı	4	8,00

3.2.2.4. İncelenen işletmelerde işgücü kullanım durumu

Çoğu Afrika ülkesinde olduğu gibi, aile yapısı geniş ailedir. Klela 'da aralarında kan bağı olmayıp aynı evde yaşayan kişiler de aile ferdi sayılmakta ve tarımsal işgücüne katılmaktadır. İncelenen işletmelerde aile birey sayısı ortalaması 30,72'dir (Tablo 10). Mali tarım sektörünün en büyük sorunlardan biri tarımın mekanizasyonu ve modernizasyonudur. Bağımsızlıktan bu yana tarım işletmelerinde yoğun işgücü ile tarım yapılmaktadır. Bu nedenle işletmede tarımla uğraşan birey sayısı çok fazladır Tablo 10'da ailede tarımla uğraşan birey sayısı ortalaması 13,65 kişi bulup, ailede maksimum 52 ve minimum 2 kişi tarımla uğraşmaktadır.

İncelenen işletmelerde işletme yöneticisinin bir günde tarlada çalıştığı ortalama saat 8,55 saat olarak belirlenmiştir. Üreticilerin bir hafta içinde çalıştıkları gün sayısı ortalama 5,21 gündür. İncelenen işletmelerde daimî işçi çalıştıranların oranı ise %10'dur (Tablo 10).

Tablo 10: İşgücü sayısı ve çalışma süresi(gün-hafta) (n=110).

	Min	Mak	Ortalama	St. Sapma
Ailede birey sayısı	5	98	30,72	18,70
Ailede tarımla uğraşan birey sayısı	2	52	13,65	10,35
Çiftlikte bir günde çalışılan saat	1	14	8,55	3,11
Çiftlikte bir haftada çalışılan gün sayısı	1	7	5,21	1,18
İşletmede daimî işçi birey sayısı	1	3	1,33	0,65

3.2.2.5. İncelenen işletmelerde tarımsal gelir durumu

Üreticilerin gelir düzeyi, bir ülkenin tarımsal gelişmişlik düzeyinin bir göstergesidir. Aynı zamanda sürdürülebilir tarımın boyutlardan biri de ekonomik boyuttur. Mali Tarım Bakanlığı'nın 2019 yılı raporuna göre Mali'deki yoksulluk seviyesi yüksektir, kırsal alanlarda yoksulluk oranının %53,1 oranında olduğu tahmin edilmektedir. Kırsalda tarımsal haneler için yoksulluk oranının daha yüksek olduğu belirtilmektedir (Bosc and al.,2008:3). Mali'de hanelerin %74'ünün ana gelir kaynağının tarım olduğu göz önüne alınırsa durum daha da endişe verici hale gelmektedir.

İncelenen işletmelerin 2021 yılı itibarıyla ortalama geliri yıllık 980.254,54 FCFA (1461,56 ABD doları) olarak hesaplanmıştır (Tablo 11). İşletmeler tarımsal gelirlerine göre gruplara ayrıldığında 50000-300000 FCFA arasında tarımsal geliri olan işletmelerin oranı %39,1'dir. 1010000-5000000 FCFA arasında tarımsal geliri olan işletmelerin oranının ise %31,8 olduğu belirlenmiştir. Araştırma kapsamındaki üreticilerin sadece %1'inin 5010000-10000000 FCFA arasında tarımsal gelire sahip olduğu saptanmıştır (Tablo 12). Sürdürülebilir tarımın benimsenmesi, bitkisel ve hayvansal üretimde verimliliğin, çiftlik gelirlerinin ve hane gelirlerinin artmasına ve sonuçta kırsal alanlarda yoksulluğun azalmasına yol açacaktır.

Tablo 11: İncelen üreticilerin 2021 yılında tarımsal geliri (Fcfa*) (n=110).

Min	Mak	Ortalama	St. Sapma
50000	9560000	980254,54	1198811

*1 Dolar = 670,69 FCFA, 2021

Tablo 12: İncelenen işletmelerin tarımsal gelir düzeyi (Fcfa*) (n=110).

Gelir Grupları	Frekans	%
50000-300000	43	39,10
301000-600000	9	8,22
601000-1000000	22	20,00
1010000-5000000	35	31,85
5010000-10000000	1	0,90

3.3. Araştırma Kapsamında İncelenen Üreticilerin Sürdürülebilir Tarım Algısı

3.3.1. İncelenen üreticilerin algı kategorisi

Çalışma kapsamında 110 üreticinin algı puan toplamlarının Maksimum değeri 95 olup minimum değeri 19 olarak belirlenmiştir. Ortalama puanı 75.64 iken standart sapma ise 10.38 bulunmuştur. Bu hesaplama, üreticileri 4 gruba ayırmayı mümkün kılmıştır. Sürdürülebilir tarım algısı çok düşük (p), düşük (q), orta (r) ve yüksek (s) olan üreticiler belirlenmiştir.

Tablo 13'te üreticilerin sürdürülebilir tarıma yönelik algılarının kategorize edilmesinden sonra araştırma kapsamındaki üreticilerin %12'sinin sürdürülebilir tarım algısının çok düşük olduğu belirlenmiştir (algı ortalaması=56,85). Analiz sonuçlarına göre, üreticilerin %38,2'si (algı ortalaması=70,33) düşük bir sürdürülebilir tarım algısına, %31,8'i (algı ortalaması=81) orta düzeyde bir algıya ve üreticilerin sadece %17'si (algı ortalaması =89,15) yüksek bir sürdürülebilir tarım algısına sahip olduğu görülmektedir.

Tablo 13: Sürdürülebilir tarım algısı kategorisi (n=110).

Kategoriler	Puan toplamı	Frekans	Algı ortalaması	%
(p)	Çok düşük: $\min \leq p < (\text{ortalama} - \text{standart sapma})$,	14	56,85	12,72
(q)	Düşük: $(\text{ortalama} - \text{standart sapma}) \leq q < \text{ortalama}$	42	70,33	38,24
(r)	Orta: $\text{ortalama} \leq r < (\text{ortalama} + \text{standart sapma})$,	35	81,00	31,84
(s)	Yüksek: $(\text{ortalama} + \text{standart sapma}) \leq s \leq \text{maks}$	19	89,15	17,30
Toplam		110	-	100

q =Çok Düşük, p =Düşük, r= Orta, s = Yüksek.

İncelenen üreticilerin sürdürülebilir tarıma ilişkin algı düzeyi sonuçları Vietnam'da yapılan bir araştırma sonucu (Van Thanh and al.,2015:962) karşılaştırıldığında üreticilerin sürdürülebilirlik algısı düzeylerinde (düşük ve orta) benzerlik görülmektedir.

3.3.2. Yaş gruplarına göre üreticilerin algı düzeyleri

Üreticilerin yaşları ile sürdürülebilir tarım algı düzeyleri birlikte incelendiğinde, 41-56 yaş aralığındaki üreticilerin sürdürülebilir tarım algısının en yüksek oranda (%54,55) olduğu görülmektedir. Sürdürülebilir tarım algısı çok düşük olan üreticilerin ise ağırlıklı olarak 25-40 yaş grup aralığında olduğu (%50,00) belirlenmiştir. Orta düzeyde sürdürülebilir tarım algısı olan üreticilerin ise en yüksek oranda (%53,13) 41-56 yaş aralığında olduğu görülmektedir (Tablo 14). Bulgulardan sürdürülebilir tarıma ilişkin politikalar oluşturulurken yaş gruplarının dikkate alınmasının önemli olduğu anlaşılmaktadır.

Tablo 14: Yaş kategorileri ve üreticilerin algı düzeyi gruplarına göre dağılımı (n=110).

Algı kategorileri	Yaş kategorileri								Toplam
	25-40	%	41-56	%	57-70	%	71-85	%	
P	7	50,00	5	35,71	2	14,29	0	0,00	14
Q	15	35,71	14	33,33	9	21,43	4	9,52	42
R	8	25,00	17	53,13	7	21,88	0	0,00	32
S	7	31,82	12	54,55	3	13,64	0	0,00	22
Toplam	37	-	48	-	21	-	4	-	110

q =Çok Düşük, p =Düşük, r= Orta, s = Yüksek.

3.3.3. Üreticilerin sürdürülebilir tarım ile ilgili bilgi kaynakları ve sürdürülebilir tarım algısı ilişkisi

Üreticilerin tarımla ilgili bilgileri nereden aldıklarını bilmek, izlenecek politikalar açısından önemlidir. Tarım, son yıllarda özellikle teknoloji açısından birçok değişikliğe uğramıştır. Günümüzde bilgi kaynakları tarım sektörünün dönüşümü açısından son derece önemlidir. Sürdürülebilir tarım, ekolojik tarım, hava durumu bilgisi gibi çok farklı amaçlar için birden fazla tarımsal bilgi kaynağı kullanılabilir. Gelişmekte olan ülkelerde, özellikle üreticilerin eğitim seviyesinin düşük olduğu ülkelerde tarım sektöründe inovasyon sağlamak için kullanılacak tarımsal bilgi kanalları oldukça önemlidir.

Mali son on yılda yeni bilgi ve iletişim teknolojilerinin kapsama alanında olağanüstü bir gelişme kaydetmiştir. Bu gelişme tarım sektöründe ağırlıklı olarak kırsal alanlarda yoksullukla mücadelede önemli bir avantajdır. Mali'de altyapı geliştirme sorunları (yol, elektrik) olmasına rağmen, üretici ülkenin geri kalanı ile iletişim için telefon ve radyo kullanabilmektedir.

Tablo 15'te üreticilerin sürdürülebilir tarım konusunu öğrendiği bilgi kaynakları verilmektedir. Yeni bilgi ve iletişim teknolojileri ile birlikte, üreticilerin yaklaşık %32,8'i çalışma alanında sürdürülebilir tarım hakkında bilgiyi TV ve radyodan almaktadır (Tablo 15). Üreticilerin %20,9'u sürdürülebilir tarım ile ilgili bilgiyi kooperatiflerden ve %19,1'i tarımsal yayımcılardan öğrendiğini belirtmişlerdir. Dikkat çekici olan bir bulgu da üreticilerin sürdürülebilir tarım ile ilgili bilgiyi tanımlanan bilgi kanallardan başka kanallardan (arkadaşlar, komşu vb.) duyduğunu belirten üreticilerin (%24,5) varlığıdır.

Tablo 15: Üreticilerin sürdürülebilir tarımı öğrendiği bilgi kaynakları (n=110).

Kanallar	Frekans	%
BİT	36	32,00
Kooperatif	23	20,90
Yayımcılar	21	19,17
Araştırmacılar	3	2,73
Arkadaşları, komşuları ve diğer üreticiler	27	24,50
Toplam	110	100

Çalışmanın amaçlarından biri olan üreticilerin sürdürülebilir algı düzeyi ile bilgi kaynakları arasında ilişkiye yönelik bulgular tablo 16'da verilmiştir. Bilgi kaynakları ile üreticilerin sürdürülebilir algı düzeyi arasında bir ilişkinin olup olmadığını belirlemek için sürdürülebilir tarım ile ilgili bilgi kaynakları formel tarımsal bilgi kaynakları (TV, radyo, yayımcılar.) ve formel olmayan kaynaklar (komşular, akrabalar.) olarak iki gruba ayrılmıştır. Ki-kare testinin sonuçlarına göre üreticilerin sürdürülebilir tarım düzeyi ile sürdürülebilir tarımsa bilgi kanalları arasında anlamlı bir ilişki olduğu %5 önem seviyesinde kabul edilmiştir. Analiz sonuçlarına göre sürdürülebilir tarım algı düzeyi düşük olan üreticilerin daha çok formel olmayan kaynaklardan yararlandığı anlaşılmaktadır.

Hayran'ın yaptığı çalışmanın sonucuna göre de üreticilerin yayımcılar ve araştırmacılarla iletişimde olması üreticilerin sürdürülebilir tarım algılarını etkileyen önemli bir faktör olarak belirlenmiştir (Hayran ve ark., 2018:76).

Tablo 16: Üreticilerin algı düzeyinin bilgi kaynaklarına göre dağılımı (n=110).

Bilgi Kaynakları	Algı Kategorisi		Toplam	%	Ki-kare
	(q +p)	(r +s)			
Formel kaynaklar	33	50	83	75,45	
Formel olmayan kaynaklar	22	5	27	24,54	0,00
Toplam	55	55	110	100	

sig. p değeri < 0.05 anlamlılık göstermektedir ; q =Çok Düşük, p =Düşük, r= Orta, s = Yüksek.

3.4. Sürdürülebilir Tarım Uygulamalarına İlişkin Üretici Algıları Önem Düzeyi

Daha önceki çalışmalarda, araştırmacılar algıyı ölçmeye yönelik göstergelere verilen likert puanlarını aşağıda belirtildiği gibi 5 kategoride sınıflandırmışlardır (Hayran ve ark., 2018;71).

Önemi yok (ÖY) = 1.00 – 1.49,

Düşük düzeyde önemli (DÖ)= 1.50 – 2.49,

Orta derecede önemli (ODÖ) = 2,50 – 3,49,

Yüksek derecede önemli (YÖ) = 3.50 – 4.49,

Çok yüksek derecede önemli= (ÇYÖ) = 4,50 – 5,00.

Tablo 17’de çalışmada üreticilerin seçilen sürdürülebilir tarım algısını ölçmeye yönelik ölçek ifadelerinin (19 adet) her birine verdiği önem düzeyleri gösterilmektedir. Bu çalışma kapsamında kullanılan 19 ifadeye üreticilerin verdikleri 5’li likert puan ortalamalarının analizine göre en yüksek ortalamaya sahip ifade "ürün rotasyonu toprak verimliliğini artırır ve toprak erozyonunu azaltır"(Ortalama =4,18 ve St Sapma= 1,024) ifadesidir. Ürün rotasyonu üreticiler tarafından sürdürülebilir tarımın önemli bir göstergesi olarak görülmektedir. Araştırmalara göre, ürün rotasyonu iyi planlandığında toprak verimliliğini artırmaktadır. İkinci sırada “sürdürülebilir tarım, kirliliği ve doğal kaynakların yok edilmesini önler”(Ortalama=4,14 ve St Sapma=0,96) ifadesi gelmektedir. En düşük ortalamayı alan ifade ise, “çevre kirliliği zirai kimyasallardan kaynaklanır” ifadesidir (Ortalama=3,54 ve St Sapma=1,08). Ayrıca “gübre kullanımı ve kimyasalların etkileri” ile ilgili ifadelerin alt sıralarda yer alması bu konularda çiftçi algısının düşük olduğunu göstermektedir. Bu sonuç, Mamy Soumare'nin Mali'deki kimyasal gübrelerin etkisine ilişkin araştırmasını doğrulamaktadır. Bu çalışmada üreticilerin kimyasal gübrelerin etkilerini bilmedikleri ortaya konulmuştur (Mamane,2015:203).

Tablo 17: Sürdürülebilir tarım algısına ilişkin ölçek ifadelerine katılım düzeyi.

	Üreticilerin katılın düzeyi* (%)					Ortal ama	St. sap.
	1	2	3	4	5		
Ürün rotasyonu toprak verimliliğini artırır ve toprak erozyonunu azaltır.	1,44	1,30	6,25	40,51	50,50	4,18	1,02
Sürdürülebilir tarım, doğal kaynakların kirlenmesini ve yok edilmesini önler	3,60	4,50	3,60	47,30	40,90	4,17	0,96
Arazi parçalanması önlenmeli ve tarım arazileri tek varise bırakılmalıdır.	1,80	6,40	11,80	33,60	46,40	4,16	0,99
Yerel bilgi sürdürülebilir tarım için uygundur.	2,70	3,60	14,50	33,60	46,40	4,15	0,98
Minimum toprak işleme, erozyonu ve toprak bozulmasını azaltabilir.	1,80	5,50	13,60	41,80	37,30	4,07	0,94
İyi toprak hazırlığı ve ekimi yabancı otları sınırlar ve yüksek verim elde edilir.	1,80	9,10	10,90	37,30	40,90	4,06	1,02
Entegre haşere yönetimi ile ilgili uygulamalar pestisit ihtiyacını azaltır.	1,80	6,40	13,60	36,40	41,80	4,10	0,98
Kısa vadeli kayıplara neden olsa bile doğal kaynakların korunması gerekir.	2,70	8,20	4,20	38,20	42,70	4,10	1,04
Örtü bitkisi ekimi toprak verimliliğini artırır ve erozyonu azaltır.	1,80	10,00	10,90	41,80	35,50	3,99	1,01
Sürdürülebilir tarım, uzun vadede kârları artırabilir ve üretim risklerini azaltabilir.	3,60	8,20	9,10	40,90	38,20	3,97	1,00
Organik gübre ve malç uygulanması toprak verimini artırabilir ve toprak nemini korur.	2,70	5,50	16,40	42,70	32,70	3,97	0,98
Sözleşmeli çiftçilik, ürün fiyatlarının ve çiftçilik gelirinin istikrarını korur.	3,60	4,50	16,40	41,80	33,60	3,97	1,00

Üreticiler gelişmekte olan ülkelerde doğal kaynakların koruyucusudur. Tarım sektörü çevresel bozulma ve iklim değişikliğinin etkileriyle mücadelede kilit bir rol oynayabilir. Arazi yönetiminin iyileştirilmesi ve tarımsal uygulamaların uyarlanması, çevre üzerindeki baskının hafifletilmesine ve sera gazı emisyonlarının sınırlandırılmasına yardımcı olabilir. Sürdürülebilir tarım sistemleri, mahsulün dayanıklılığını artırabilir, ayrıca üretimi çeşitlendirebilir ve çevresel bozulmayı engelleyebilir. Batı Afrika'da üreticilerin ve özellikle Mali'deki üreticilerin çevresel algısı çevrenin kalitesini bozan veya iyileştiren davranışların belirlenmesi açısından önemlidir. Kullanılan ölçeğin 19 ifadesine yönelik düşünceler üreticilerin çevre sorunlarıyla ilgilendiğini göstermektedir.

3.5. Üreticilerin Sürdürülebilir Tarım Algısını Etkileyen Faktörler

Üreticilerin sürdürülebilir tarım algısını etkileyen faktörleri incelemek için çoklu regresyon analizi yapılmıştır. Modelde stepwise analizi seçilmiştir. Modele toplam 17 bağımsız değişken dahil edilmiştir, ancak model yalnızca 5 değişkeni anlamlı kabul etmiştir. Artıkların normalliğini, artıkların homocedastitesini, eş doğrusallığını, ANOVA ve modelin kararlılığını (Cook, Leverage) doğrulamak için ön hipotez testleri yapılmıştır. Hipotez sonuçlarına göre çoklu regresyon modelini uygulamak için koşulların uygun olduğu belirlenmiştir.

Tablo 18'de değişkenler arasındaki ilişki düzeyi $R=0,90$ ve düzeltilmiş determinasyon katsayısı $R^2=0,80$ 'tır. Bu sonuca göre üreticilerin sürdürülebilir tarım algısı değişkenindeki toplam değişimin %80'ni bağımsız değişkenler (tarlada toplam çalışma saati, çalışma günleri, ailede tarımla uğraşan birey sayısı, ailede birey sayısı, üretim çeşidi) tarafından açıklandığını göstermektedir. Durbin-Watson değeri (1,5-2,5) geçmemiştir. F testinin (ANOVA) önem düzeyinin 0,05'ten küçük olması ($0,00<0,05$) regresyon modelinin anlamlı olduğunu ortaya koymaktadır. Model için yapılan duyarlılık testleri modelin geçerliliğini ve değişkenler arasında oto korelasyonun olmadığını ortaya koymuştur.

Sonuçlar incelendiğinde, üreticilerin haftada toplam çalışma günü değişkeni ile araştırma kapsamındaki üreticilerin sürdürülebilir tarıma ilişkin algıları arasında negatif ilişki olduğu görülmektedir ($\beta = -0.0637$ ve anlamlılık katsayısı $\text{sig}=0.0,37$). Ayrıca ailede tarımla uğraşan birey sayısı ile üreticilerin algısı negatif yönde etkilenmektedir ($\beta = -0.550$ ile ve anlamlılık katsayısı $\text{sig}=0.03$). Diğer değişkenler tablo 18'de gösterildiği gibi üreticilerin sürdürülebilir tarım algısını olumlu yönde etkilemektedir. Çalışma koşulları, ailede birey sayısı, ailede tarımla uğraşan sayısı, haftalık çalışma günlerinin sayısı ve bir günde çalışma saatleri sürdürülebilir tarımın sosyal boyutunun birer parçasıdır. Çalışma alanındaki üreticilere göre çiftlikte çalışan aile bireylerinin sayısının artması sürdürülebilir tarım algısını olumsuz etkileyen bir faktördür. Bu sonuç sürdürülebilir tarım ilkesiyle uyumludur. Eğer tüm aile üyeleri işletmede çalışıyorsa, bu ailenin ekonomik faaliyetinin çeşitliliğine izin vermez. Sürdürülebilir tarımın amaçlarından biri, üreticiler için ekonomik gelir kaynaklarının çeşitliliğidir. Ek gelir kaynaklarına sahip olduğunda sürdürülebilir tarım ile ilgili koşulları uygulaması daha mümkün hale gelmektedir. Mali'de yasal çalışma süresi günde 8 saattir, ancak bu çalışmada günlük çalışma saat ortalaması 8,5 olarak hesaplanmıştır. Analiz sonuçlarına göre bu değişken üreticilerin algısını olumlu yönde etkilemektedir. İşletmelerin üreticilerin kendilerine ait olması nedeniyle kendi işletmelerinde gün içinde daha fazla çalışma istekliliğinde olduğu ifade edilebilir. Zira üreticiler bu şekilde hafta içinde boş gün yaratabilmekte ve bu günlerde ek gelir elde etme imkânı ya da dinlenme günü yaratabilmektedirler. Nitekim Regresyon analizi sonuçlarına göre haftalık çalışma gün sayısı arttıkça üreticilerin algısı olumsuz yönde etkilenmektedir. Bu sonuç, üreticilerin haftada daha fazla gün çalışmaktansa tarımsal işlemlerinde gün içinde daha fazla saat çalışmayı tercih etmeleri ile açıklanmaktadır. Bu dinlenme günleri diğer tarım dışı faaliyetlere ayrılabilir. Bu bulgu sürdürülebilir tarımın hedeflerinden birini, yani üreticilerin çalışma koşullarına karşılık gelmektedir.

Tatlidil ve ark. (2009) Kahramanmaraş'ta (Türkiye) üreticilerin sürdürülebilir tarım algısı üzerine yaptığı araştırmada tarımsal üretim faaliyet çeşidi üreticilerin sürdürülebilir tarım algısını etkileyen bir faktör olarak belirlenmiştir (Tatlidil ve ark. 2009: 1102). Bu değişken, bu çalışmada da üreticilerin sürdürülebilir tarıma yönelik algısını pozitif etkileyen bir faktör olarak modele girmiştir. Tarımsal faaliyet çeşidi sürdürülebilir tarımın ekonomik boyutudur. Örneğin, tarımın hayvancılıkla entegrasyonu, üreticilerin organik gübrelerle ücretsiz sahip olmalarını sağlamaktadır. Pamuğun hububat ile entegrasyonu, üreticilerin gıdaya sahip olmalarını mümkün kılmaktadır.

Tablo 18: Üreticilerin sürdürülebilir tarım algısını etkileyen çoklu regresyon tahminleri (n=110).

Model	B	Bêta	t	Sig.
(Sabit)	3,25	0,68	4,75	,000*
Tarlada toplam çalışma saati/gün	0,55	0,62	0,18	,008*
Tarlada toplam çalışma günü/hafta	-0,253	-0,63	-3,12	0,037*
Ailede birey sayısı	0,008	0,04	2,07	0,05**
Ailede tarımla uğraşan birey sayısı	-0,16	-0,55	-2,327	0,03**
Üretim faaliyeti	0,15	0,48	2,126	0,05**

R²= 0,80; F= 3,94; Durban Watson testi= 2,35, sig. p değeri < 0,01* ; 0,05** ve 0,10*** anlamlılık göstermektedir.

Üreticilerin eğitim düzeyi, yeni bir teknolojinin benimsenmesini desteklediği için tarımsal araştırmalarda her zaman belirleyici bir faktör olmuştur (McBride and El-Osta, 2002: 185; Bouréma et al., 2021:46; Adégbola and Adékambi, 2011: 48) Modern teknolojilerin tarımda uygulanmasına yönelik bir başka çalışmada üreticilerin tecrübesi belirleyici bir faktör olarak tanımlanmaktadır (Bouréma et al., 2021: 46). Ayrıca Nijerya'da Adeola and Adetunbi (2015)'nin üreticilerin sürdürülebilir tarım algısı üzerine yaptığı çalışmalarda, yaş, eğitim düzeyi ve deneyim gibi faktörlerin üreticilerin algılarını etkilediği belirlenmiştir (Adeola et al., 2015: 91). Allahyari et al. (2008) tarafından İran'da öğretim elemanlarının sürdürülebilir tarım algısı üzerine yapılan çalışmada, yaş, eğitim düzeyi ve deneyim, ankete katılan örneklemin algısını etkileyen bir faktör olmadığı belirlenmiştir (Allahyari, et al., 2008:102). Bu çalışmada kullanılan stepwise regresyon modeli ile üreticilerin yaşı, deneyimi ve eğitim düzeyi değişkenlerinin modelde anlamlı bir etkisinin olmaması nedeniyle çıkmış olması genel olarak üreticilerin eğitim düzeyinin düşük olması ve çoğunluğunun genç çiftçi olması ile de ilişkili olduğu düşünülmektedir.

3.6. Tarımsal Girdi Sübvansiyonlarından Yararlanma Durumu ile Üreticilerin Sürdürülebilir Tarıma Yönelik Algıları Arasındaki İlişki

Dünyanın 2007-2008 yıllarında yaşadığı gıda krizinden sonra Batı Afrika ülkeleri, ekili hektar başına gübre kullanımını 8 kg'dan 50 kg'a çıkarma kararı almıştır (Samake et al, 2007: 147 ; Kone et al., 2019:1). Bu amaçla tarımsal verim ile gıda ve beslenme güvenliğini artırmak için tarımsal girdilere sübvansiyon politikası uygulanmaktadır. Bu çabalara rağmen, tarımsal verimliliğin ve gübre kullanımının hala çok düşük olduğu görülmektedir. Bu sübvansiyon programlarının çeşitli yönleri (üreticilerin hedeflenmesi, sözleşmelerin tahsisinde şeffaflık, özel sektör katılımı vb.), gübre sübvansiyon politikasının performansını açıklamaktadır. Mali'de gübre sübvansiyonları, tarım sektörü harcamalarının artan bir payını oluşturmaktadır. 2007 küresel gıda ve beslenme krizinden sonra, tarımsal gübrelerin sübvansiyonuna ayrılan bütçe kaynakları, 2009-2017 yılları arasında yaklaşık 11 milyar FCFA 'dan yaklaşık 40 milyar FCFA'ya önemli ölçüde artmıştır. Ancak bu sübvansiyon beklenen sonuçları vermemektedir (Koné et al., 2019: 2).

Tarımsal girdi sübvansiyonundan yararlanan ve yararlanmayan üreticilerin sürdürülebilir tarım algısı arasındaki ilişkiyi dikkate alan çalışmalar nadirdir. Bu çalışmada girdi sübvansiyonundan yararlananlar ile yararlanmayan üreticilerin sürdürülebilir tarım algısı arasında fark olup olmadığı amaçlanmıştır. Ancak bu çalışma kapsamındaki üreticilerin %98,18'i (108) gübre sübvansiyonundan yararlandığı görüldüğünden karşılaştırma yapılamamıştır. Ayrıca çalışma kapsamındaki üreticilerin %76,40'ı pestisit sübvansiyonundan yararlanmaktadır. Unutulmamalıdır ki, tarımsal girdi sübvansiyonları, Mali Devleti'nin üreticilerin kapasitesini güçlendirmek ve Mali'nin tarımsal üretimini ve verimliliğini desteklemek için kullandığı bir tarım politikası aracıdır. Tablo 19'da görüldüğü gibi pestisit sübvansiyonundan yararlanan ve yararlanmayan üreticilerin sürdürülebilirlik algısı ise beklenenin aksine pestisit sübvansiyonundan yararlanan üreticilerin sürdürülebilirlik algısının daha yüksek olduğu görülmektedir. Bu sonuç üreticilerin sürdürülebilir tarım algılarının sürdürülebilir tarım uygulamalarına henüz dönüşmediği anlamına gelmektedir. Pestisit sübvansiyonundan yararlanan ve yararlanmayan üreticilerin algıları arasındaki fark istatistiksel olarak anlamlıdır. Bağımsız örneklem Mann Whitney U testinin sonuçları %5 önem seviyesinde anlamlı bulunmuştur. Bu da üreticilerin sürdürülebilirlik algısı yüksek olsa bile devlet tarafından pestisit sübvansiyonları verilmeye devam ettiği sürece üreticilerin sübvansiyonlardan yararlanma eğiliminde olduğunu göstermektedir.

Tablo 19: Pestisit sübvansiyonundan yararlanma durumu(n=110)

Üreticilerin girdi sübvansiyon durumu	Frekans	%	Algı ortalaması	Z	Sig
Yararlanan üreticiler (0)	84	76,40	76,61	-2,16	0,03**
Yararlanmayan üreticiler (1)	26	23,60	72,50		

Sig= 0,01* 0,05** ve 0,10*** anlamlılık göstermektedir.

4. SONUÇ VE ÖNERİLER

4.1. Sonuçlar

Bu araştırmada, Sikasso bölgesindeki üreticilerin sürdürülebilir tarım algı düzeyi ve algıyı etkileyen faktörler incelenmiştir. Oransal örneklem hacmi yöntemi ile 110 örneklem büyüklüğü belirlenmiş olup, basit tesadüfi örneklem yöntemi ile seçilen üreticilerden amaca uygun hazırlanmış anket aracılığıyla yüz yüze görüşme yoluyla veriler elde edilmiştir.

İncelenen işletmelerde görüşülen üreticilerin %86,4'ü erkek, %13,6'sı kadındır. Mali'de genelde erkekler kadınlardan daha çok tarlada çalışmaktadırlar. Üreticilerin çoğunun okur yazar olmadığı belirlenmiştir. Bu durum Mali'deki kırsal kesimde yaygın olarak gözlemlenen bir durumdur. Dolayısıyla devletin üreticilere yönelik eğitim düzeyinin yükseltilmesi konusunda politikalar geliştirmesi önem taşımaktadır. Araştırma alanında üreticilerin çoğunluğunu 24-40 (%33) ve 41-56 (%43) yaş aralığındaki gençler oluşturmaktadır. Bu durum, Mali'de tarım için büyük bir potansiyeli işaret etmektedir. Araştırma bulgularına göre 41-56 yaş grubu, çalışma alanında sürdürülebilir tarım algısı yüksek olan yaş grubudur. En düşük sürdürülebilir tarım algısı olan üreticiler ise 25-40 yaş aralığında bulunmaktadır. Bu bulgulara göre tarımsal sürdürülebilirlik için Mali devletinin genç üreticilere yönelik sürdürülebilir tarım konusunda program, eğitim ve projeler geliştirmesinin gerekli olduğu görülmektedir.

Araştırma alanında üreticilerin ortalama tarımsal geliri 980.254 CFA olarak belirlenmiştir. Üreticilerin %39'unun 50000-300000 CFA düşük gelir grubunda olduğu belirlenmiştir.

Klela ilçesinde aile birey sayısının ortalama 30,7 kişi olduğu tespit edilmiştir. Ailede tarımla uğraşan kişi sayısı ortalaması 13 kişidir. Tarlada günde ortalama çalışma saati 8,5 olup hafta içinde çalışılan gün sayısı 5,2 gün ve daimî işçi sayısı ortalamasının 1,33 kişi olduğu belirlenmiştir. Klela ilçesinde üreticilerin %70'inin daha çok mekanik olmayan alet ekipman kullandığı belirlenmiştir.

Araştırma kapsamında incelenen üreticilerin %57'si pamuk ve tahıl %42'si tahıl, pamuk ve hayvancılık faaliyetinde bulunmaktadır. İncelenen işletmelerde ana hayvancılık faaliyetinin küçükbaş ve kanatlı yetiştiriciliği olduğu belirlenmiştir. Çalışma kapsamındaki üreticilerin %75,45'i sürdürülebilir tarımı formel kaynaklardan, %24'54'ünün ise formel olmayan kaynaklardan (arkadaş, komşu vb) duyduğu belirlenmiştir. Analiz sonuçlarına göre üreticilerin sürdürülebilir tarım algı düzeyi ile üreticilerin sürdürülebilir tarımsal bilgi edinme kanalları arasında bir ilişki olduğu belirlenmiştir. Bu bulgu özellikle araştırma alanında etkin olan bilgi iletişim kanallarında (TV, radyo vb) sürdürülebilir tarım konusunda programlar hazırlamasının önemli olduğunu göstermektedir.

Araştırma kapsamındaki üreticilerin sürdürülebilir tarım algı ortalaması 75,64 olarak belirlenmiştir. Ancak araştırma kapsamındaki üreticilerin %50,96'sı ortalamanın altında düşük algı düzeyine sahiptir. Üreticilerin sürdürülebilir tarım algısının artırılmasına yönelik kırsal alanlarda sürdürülebilir tarıma ilişkin yayım çalışmaları önemlidir.

Çalışma kapsamındaki üreticilerin algısını etkileyen faktörlerin belirlenmesi amacıyla yapılan regresyon modeli sonuçlarına göre, ailede tarımla uğraşan birey sayısı üreticilerin sürdürülebilir tarım algısını negatif yönde etkilenmektedir. Başka bir deyişle ailede tarımla uğraşan birey sayısı artırdığında üreticilerin sürdürülebilir tarım algısı düşmektedir. Klela ilçesindeki üreticilerin algı düzeyini olumsuz etkileyen diğer bir faktör haftalık tarlada çalışma günüdür. Analiz sonuçlarına göre Klela ilçesinde, üreticilerin sürdürülebilir tarım algısını pozitif yönde etkileyen faktörler ise tarlada günlük çalışma saati ve ailede birey sayısıdır.

Analizler üreticilerin %98'18'inin gübre sübvansiyonundan ve %76,36'sının ise pestisit sübvansiyonundan yararlandığını göstermiştir. Üreticilerin sürdürülebilir tarım algısı yüksek olsa bile kimyasal girdi kullandığı anlaşılmaktadır. Bu çalışmada elde edilen bulgular ile sosyo-ekonomik faktörlerin üreticilerin sürdürülebilir tarım algılarını önemli ölçüde etkilediği ve üreticilerin sürdürülebilir tarım algı düzeyiyle tarımsal bilgi kaynakları arasında anlamlı bir ilişki olduğu hipotezleri doğrulanmıştır.

4.2. Öneriler

Bu çalışmanın alan bulgularından ve önceki araştırma sonuçlarından hareketle, sürdürülebilir tarımsal üretimin yaygınlaştırılması amacıyla politika yapıcılar ve ilgili paydaşlar için çeşitli öneriler geliştirilmiştir.

Hükümet müdahalesi, gelişmekte olan ülkelerdeki üreticilerin desteklenmesinde her zaman kilit bir faktör olmuştur. Devletin tarım sektörüne müdahalesine karşı bir ekonomik akım olsa bile, yakın tarihte Mali tarım politikaları, tarımsal girdi sübvansiyonu ve pirinç üretiminin yoğun olduğu Nijer bölgesinin kalkınmasıyla ilgili politikalar ile karakterize edilebilir. Son yıllarda öncelikli olarak uygulanan bu iki program, üreticilerin gelir düzeyi, yoksulluk ve açlıkla mücadelesinde maalesef önemli bir değişiklik yaratmamıştır. Üreticilerin ve gelecek nesillerin refahı için Mali tarım politikalarının gözden geçirilmesi ve sürdürülebilir tarıma öncelik verilmesi önemlidir.

Bu çalışmanın sonuçlarına göre, üreticilerin tarım algısının yükseltilmesi ve bu algının da tutum ve davranışa dönüşmesi için etkili yayım çalışmalarına ihtiyaç olduğu düşünülmektedir. Nitekim bilgi iletişim kanallarının (TV, radyo vb.) üreticilerin sürdürülebilir tarıma yönelik algı düzeyi üzerinde önemli bir etkiye sahip olduğu görülmüştür. Araştırma alanında üreticiler tarlada çalıştıkları zaman radyo dinleme eğiliminde olmaları nedeniyle sürdürülebilir tarımla ilgili programların tercihen sabah, öğlen ve akşam yayınlanması önerilmektedir.

Bir tarımsal üretim sisteminden diğerine geçmek kolay değildir. Kamu yetkililerinin, bilim adamları ve üreticilerin katılımını sağlayan bir geçiş dönemi olmalıdır. Sürdürülebilir tarımsal üretime geçişin sağlanabilmesi için, ekosistemleri, insan kültürünü ve yerel tarım sistemlerinin taleplerini anlayan tarım uzmanlarına ihtiyaç vardır. Bu amaçla Mali bilim insanlarının uluslararası alanda eğitilmesi ve desteklenmesi için kamu araştırma ve geliştirme yatırımlarının artırılması önerilmektedir. Sürdürülebilir tarım politikaları, Mali'nin ekonomik kalkınmasına katkıda bulunabilir ve aynı zamanda çevresel sürdürülebilirliği de sağlayabilir.

Mali hükümeti sürdürülebilir tarım uygulamaları için bir teşvik politikası uygulamalıdır. Teşvikler doğaya saygılı uygulamaları benimseyen üreticilere yapılan prim ödemeleri şeklinde olabilir. Ancak sadece sürdürülebilir tarım yapan üreticilere yapılan prim ödemelerinin etkisi sınırlı olacaktır. Bu nedenle ekosisteme saygı duymayan üreticileri de ikna edecek önlemler alınmalıdır. Hükümetin üreticilerle yakın bir ortaklığı olmalıdır, çünkü gıda üretim sisteminin merkezinde üreticiler vardır.

Mali hükümeti, üreticiler tarafından sürdürülebilir tarım uygulamalarının daha fazla benimsenmesini hedefliyorsa, aşağıdan yukarıya yaklaşımlarla ilgili projeler oluşturmalıdır. Bu yaklaşım, üreticileri projelerin gerçek sahipleri haline getirecek ve daha ilgili olacaklardır. Aksi takdirde, böyle bir iş birliği olmadan sürdürülebilir tarımın benimsenmesi gerçekleşmeyecektir. Ya da benimsenme çok yavaş olacak ve bu da Mali'de sürdürülebilir tarımsal üretime geçişi geciktirecektir. Ayrıca, yerel yönetimler ve sivil toplum örgütleri de tarım sektörünü desteklemeli ve yönlendirmelidir.

Sürdürülebilir Kalkınma Hedefleri herkes için daha iyi ve daha sürdürülebilir bir geleceğe ulaşmak için bir yol haritası sunmaktadır. Yoksulluk, eşitsizlik, iklim, çevresel bozulma, refah, barış ve adaletle ilgili olanlar da dahil olmak üzere dünyanın karşı karşıya olduğu küresel zorluklara yanıt vermektedir. Ayrıca politika tasarımı, bireysel işletmelerin kapasitelerinin ve beklentilerinin hesaba katılması, üreticilerin tarım politikaları oluşturulurken merkezde yer alması uygulanan politikaların başarısını artıracaktır.

Mali hükümeti, doğrudan yabancı yatırımı çekecek siyasi istikrar sağlayacak uygun makroekonomik politikalar tasarlamalıdır. Mali, kırsal kesimde yol, pazar gibi altyapı yatırımlarına hız vermelidir. Birincil sektörden (tarım) işgücünü diğer sektörlerle aktarılmasını sağlayacak tarım dışı istihdam yaratmalıdır. Bu, sosyal ve ekonomik sürdürülebilirlik için önemli bir faktördür.

Mali'de sürdürülebilir tarım uygulamalarının yaygınlaştırılması için Mali'deki çeşitli zorluklar da bulunmaktadır. Bu zorluklar arasında, eğitim eksikliği, yetersiz finansman, teknolojik yetersizlikler, kurumsal kapasite eksikliği ve toprak kullanımı konusundaki anlaşmazlıklar yer almaktadır. Mali'de üreticilerin eğitim seviyeleri düşük olduğundan eğitimin artırılmasına yönelik tedbirler oldukça önemlidir. Sürekli tarımsal mesleki eğitim, kamu personeli ve özellikle üreticiler için bu eğitim faaliyetleri önceliklendirilmelidir. Aksi takdirde yeni teknolojilerin benimsenmesinde ve uygulanmasında zorluklar yaşanacaktır. Mali'deki tarım sektörü, geleneksel yöntemlerle çalışmaktadır ve modern tarım teknolojileri kullanımı çok sınırlıdır. Mali hükümeti, tarımı modernize etmek için teknolojik yenilikleri teşvik etmeli, üreticilere bu teknolojileri kullanma konusunda eğitim vermelidir.

Organik tarımı toprağın ve bitki sağlığının korunması için gerekli olan doğal çevresel koşulların sağlanmasını gerektiren bir tarım sistemi olması nedeniyle Mali hükümetinin organik tarımı desteklemesi önemlidir. Mali hükümeti, organik tarımı desteklemek için üreticilere ve işletmelere yardım sağlamalıdır. Çiftlik hayvanları,

Mali'deki birçok çiftlikte önemli bir gelir kaynağıdır. Ancak, sürdürülebilir bir tarım sistemi için hayvan gübresinin geri dönüştürülmesi, hayvanların aşırı otlatılmasının önlenmesi ve hayvan sağlığına ilişkin standartların uygulanması da önemlidir.

Mali hükümetinin küçük üreticilere destek sağlaması çiftliklerin verimliliğini artırmada ve sürdürülebilir tarım uygulamalarının yaygınlaştırılmasında önemli rol oynayacaktır. Bu destek, uygun ödemeli özel destek programları, kredi garantileri, ticari kredi programları, küçük ölçekli üreticilere yönelik teçhizat, eğitim ve danışmanlık hizmetleri olarak verilebilir. Çevresel kaynakların korunması ve toprağın verimliliğinin artırılması için tarımsal çevre iyileştirme yatırımları da önerilmektedir. Örneğin, toprak erozyonu önlemek için sulama sistemleri gibi çevre dostu yatırımlar yapılabilir veya toprağın işlenmesi ve gübre kullanımını azaltmak için teknolojiler geliştirilebilir. Mali'nin büyük bir çoğunluğu Sahra Çölü'nde yer aldığından, tarımın sürdürülebilirliği için su yönetimi hayati önem taşımaktadır. Mali hükümeti, tarım sektöründe su yönetimi konusunda çalışmalar yapabilir ve tarım sulama sistemlerinin geliştirilmesi için kaynaklar sağlayabilir. Bunun yanı sıra, tarımsal sulama için yağmurlama sulama ve damlama sulama sistemleri gibi suyu daha verimli kullanan teknolojilerin yaygınlaştırılması da önemlidir. Mali'de sürdürülebilir tarım için yerel tohumların kullanım politikası olmalıdır. Mali'de yerel tohumlar genellikle modern tohumlara göre daha dirençli ve verimlidir. Sürdürülebilir tarım politikaları kapsamında yerel tohumların kullanımı teşvik edilmeli ve korunmalıdır. Mali'de monokültür tarım yerine polikültür tarımın teşvik edilmesi toprak verimliliğinin artırılması ve tarım faaliyetlerinin risklerinin azaltılması açısından önemlidir.

Sonuç olarak, sürdürülebilir tarım uygulamaları Mali'deki tarım sektörünün sürdürülebilirliğini artırmakta ve Mali ekonomisine katkı sağlamaktadır. Ancak, Mali hükümeti ve uluslararası toplumun, sürdürülebilir tarım uygulamalarının yaygınlaştırılması için daha fazla çaba göstermesi gerekmektedir.

Bu çalışma, Mali Sikasso bölgesinde üreticilerin sürdürülebilir tarım konusundaki algı düzeyleri üzerine odaklanmıştır. Sonraki çalışmalarda Sikasso bölgesindeki üreticilerin sürdürülebilir tarımı benimseme durumu ve sürdürülebilir tarım uygulamalarında ortaya çıkan sorunlara odaklanılması önerilmektedir. Bu çalışmalar Mali hükümeti için sürdürülebilir tarım konusunda iyi yapılandırılmış bir tarım politikası planlamasına olanak sağlayacaktır.

Consequences Of Climate Changes For Economic Development

Prof. Tsvetan ILIEV, PhD¹

¹University of Agribusiness and Rural Development, Plovdiv, Bulgaria

Abstract: The research focus of the present article is climate change and its impact on some basis aspects of economic development. The aim is to highlight the effects of new climate phenomena at the global, regional and sectoral level. Moreover, our aim is to identify both the predominantly negative aspects of the impact of climate change at the indicated levels, as well as some positive processes.

Climate change requires representatives of the scientific community to find a new paradigm to explain what is happening and to outline ways to overcome the negative consequences, for such we accept the “green” economy and the cyclic economy. In recent decades, they have penetrated deeply into socio-economic scientific discussions. The world must accept change as a given and strive to prevent those changes that are a result of human activity.

Key words: green economy, climate change, economic development

JEL: O13, Q51, Q54

1. Introduction

Since the middle of the 20th century, numerous problems of a global nature have arisen. They pose a number of threats to the existence of humanity. According to the UN Millennium Ecosystem Assessment report published in 2005, during the second half of the 20th century humans changed ecosystems worldwide to an extent unprecedented in time. At the same time, about 60 percent of the world’s ecosystem services have already reduced their efficiency significantly or are used irrationally (UNEP Year Book, 2014). For a very long period of time, human needs have been satisfied through production structures, created and perfected on the basis of ever-increasing exploitation of natural resources and release of ever-increasing volumes of carbon emissions. The significant growth of the population and, on this basis, the increasing anthropogenic load on the natural factor mean that today the depletion of natural resources and the pollution of the environment are more and more acutely felt. All this brings to the forefront of the modern global agenda the question of developing a new paradigm of the development of the world economy.

2. From sustainable development to a green economy

In the last few decades, a lot of economic concepts have been formed to achieve economic development and prosperity. What they have in common is the need to maintain a sustainable development trajectory. The term “sustainable development” was first proposed in 1987 in the report “Our Common Future” of the United Nations Commission on Environment and Development. In 1992, the concept of sustainable development gained international importance and approval at a conference under the auspices of the United Nations held in Rio de Janeiro. There, a consensus was reached regarding its following definition: development in which the needs of present generations are met without compromising the ability of future generations to meet their own needs.

In order to follow the trajectory of sustainable development on a global scale, all countries have to direct their efforts in the direction of transformation from traditional economy of material resources to a new type of “green” economy. If the traditional economy relies on the extensive use of ever-increasing amounts of natural resources, the “green” economy is of an intensive type and implies increasing use, development and implementation of environmentally friendly technologies to create material goods.

In the end, such an approach introduced and publicized a similar model of economic development – the cyclic economy. It significantly minimizes the waste of natural resources and reduce harmful emissions.

The establishment of “green” economy model brings to the fore the need for fundamentally new organizational and technological requirements not only for the purpose of protecting the environment, but also for the functioning of many industries, changing the working conditions in them.

The idea of “green” economy was formulated more specifically by UNEP in 2008 with the aim of accelerating the recovery of the world economy from the financial crisis by investing in environmentally friendly production

(UNEP 2008 annual report). Within the framework of UNEP initiatives, the report “Global Green New Deal” (Global Green New Deal, 2009) was developed containing the recommendations of the experts for the guidelines for the development of the “green” economy continues to be developed by the UN and a number of other international organizations – World Bank, OECD, G-7, G-20, EU, etc.

To date, the views on the essence of the “green” economy are united around the definition: an economy oriented towards increasing to level of well-being of the population, guaranteeing social justice and achieving growth in conditions of continuous reduction of the risk of deterioration and destruction of natural ecosystems, on the basis of increasing resource sustainability of the world economy.

In its scope, the concept of the “green” economy includes the three pillars that are at the foundation of the paradigm of sustainable development – economic growth, social development and environmental protection. Although environmental protection occupies prominent positions in the concept of the “green” economy, it is not its only characteristic. The creation of conditions for achieving lasting economic growth and sustainable social development is of high importance. Ensuring social justice and equal access to the fruits of growth for all members of the human community is an important condition for maintaining the stability of the development of the economy as a whole.

The conclusions of a number of studies of the problems related to the development of the “green” economy are united around the understanding that climate change caused by human activity is the main prerequisite for taking measures to accelerate the “greening” of the world economy (Karim, S., C. J. Bah, 2022; Kell, G. and all, 2011)

3. Human activity and climate change

Climate changes that have occurred in recent decades are also one of the main reasons for the development of the concept of sustainable development (Momchilov, 2021). One of the most commonly used definitions of “climate” is: the long-term summation of atmospheric element (and their variations) that, over short periods of time, represents the weather. These elements are solar radiation, temperature, humidity, precipitation atmospheric pressure and wind (Britannica, 2020). The definition’s emphasis is on the long period of astronomical time that distinguishes climate from weather. Earth’s climate has changed many times, the likely causes of this being cycles of solar radiation, volcanic activity on Earth, changes in ocean currents, etc. The last great ice age ended about 11 500 years ago, followed by the first known agricultural settlements in Mesopotamia and the lands of present-day Lebanon, Palestine, Israel and Iraq. There is also evidence of climate change over the past 2500 years, with altering periods of warmer and cooler climates. They are named and dated as follows: Roman Warm Period – from the middle of the 3rd century BC to the beginning of the 5th century AD; Medieval warm period – from the middle of the 10th century to the second half of the 13th century; Little Ice Age – after the middle of the 16th century almost until the end of the 19th century.

The industrial development of mankind since the end of the 19th century and the associated release of large amounts of greenhouse gases has resulted in gradual increase in the average temperature and accompanying changes in the global climate. The concentration of carbon dioxide in the atmosphere rises from about 280 ppm (parts pro million) during the industrial age to about 420 ppm in 2021, reaching its highest levels in 14 million years. The geological history of the earth also knows periods with a significantly higher concentration of CO₂ in the atmosphere. According to Mulhern (2020), the highest known concentration levels of 3000 ppm – 9000 ppm were reached 450 million years ago during the Ordovician period, resulting in average temperatures about 10 degrees above today’s. According to the reasons why these concentrations did not lead to a total ecological catastrophe are rooted in the fact that the Sun was colder then and the Earth’s orbital cycles were different. Human activities are responsible for an increase in temperatures of about 1 degree Celsius compared to the pre-industrial era, with the current rate of temperature increase being about 0.2 degrees Celsius per decade, leading to unprecedented anthropogenic climate change (NASA, 2021). In the future, rising temperatures will affect the climate in the following directions:

- prolonged drought and heat waves;
- permanent changes in the rainfall pattern;
- increase in the strength and the intensity of hurricanes;
- increase in the level of the world ocean – between 0.3 and 2.5 meters by 2100;

- permanently reducing the volume of the ice mass in the Arctic;
- maintaining climate change trends this century beyond.

Climate and climate change have always had a strong impact on human activity. Historical climatology is a branch of science that studies changes in climate and their impact on the human civilization. The roots of historical climatology can be traced to works of Aristotle, Titus Lucretius and Pliny the Elder (Downing, T., A. Olsthoorn, R.S.J. Tol, 1999). More recently, the availability of accurate paleoclimate data has given impetus to various studies that investigate the correlation between certain climatic and social events. Using high-resolution paleoclimate data, McIntosh (2020) concludes that there is a strong correlation between climate and the frequency of warfare, on the one hand, and human population changes in pre-industrial history, on the other. A reason for this interrelationship could be sought in the negative effect that climate changes (in the recent past mainly cold weather) have had on agriculture and the ability to feed the population.

In climate change, the possibilities for adaptation are related to migration, cultural and technological changes, innovation, trade, peaceful redistribution of resources or war. In pre-industrial societies due to the lack of appropriate institutions, as well as the lack of readiness for rapid social change, peaceful adaptation options often failed to work and therefore war was the result of climate change. The war, in turn, contributed to a decrease in the human population, which increased the per capita production of agricultural produce, resulting in a decrease in the prices of this produce, which again led to an increase in the human population. The importance of the historical approach in the analysis of humanity's adaptation to climate change is also emphasized by Le Treut, H., R. Somerville, U. Cubasch, Y. Ding, C. Mouritzen, A. Mokssit, T. Peterson, M. Prather (2017).

Many authors in the field of political economy examine the policies and the legislation of various countries that address climate change. A study conducted in 2015 identified around 500 climate change related legislation in leading economies (Steves and Teytelboym, 2013). The authors establish to what extent various factors, such as political orientation, degree of democracy of the society, existing legislation, etc. influence the adoption of new legislation related to climate change. Furthermore, they analyze why some countries have effective policies against climate change and others do not. For this purpose, they are developing a special CLIMI (Climate laws, institutions and measure index), which is an attempt to measure the political response of an individual country against the risk of climate change. The index includes variables grouped into four key policy areas:

- ✓ international cooperation;
- ✓ national climate framework covering legislation, targets and institutional commitment;
- ✓ sectoral fiscal and regulatory measures and objectives;
- ✓ cross-sectoral fiscal or regulatory measures, such as the presence of a carbon tax or carbon trading schemes.

4. Climate change and economic development

The topic of the impact of climate change on the global economy has become increasingly popular in recent years. Many researchers and organizations are making attempts to predict the effects of the influence by developing different climate scenarios and using specific methods. One of the commonly used is the consensus method, where a number of experts are interviewed and give their predictions about the effect, and then the mean and median of their predictions are sought. Another method used is enumeration. It first identifies the expected material effects of climate change such as changes in rainfall and land productivity, global sea level rise, and then values each of these material effects. A third group of methods are statistical. They directly assess welfare impacts using observed variations in prices and costs to distinguish the effect of climate.

One of the first attempts to predict the effect of climate change on the world economy was by the Nobel laureate in economics, William Nordhaus. In his article "Expert opinion on climate change" he interviews climate change scientists, economists and scientists in the field of social and natural sciences and notes the great difference in their opinions. Based on their assessments, it considers different scenarios for the development of the climate. For the scenario in which the temperature of the planet rises by 3 degrees by 2090, the median expectation of a decline in global GDP is 1.9 percent and the mean value of these expectations is 3.6 percent (Nordhaus, 2009).

In scientific circles, Nordhaus is also known for the application of the so-called DICE (Dynamic Integrated Model of Climate and the Economy) model. It is the first dynamic model covering carbon emissions and their concentrations, projected climate change and emissions damage and control. It is a constrained, non-linear, dynamic optimization model with an infinite horizon and enables the development of different climate change scenarios. For example, for the scenarios where the Earth's temperature rises by 3 degrees the expected drop in global GDP is 1.3% (Radetzki, 1995).

A study conducted in 2005-2006 compared the costs of reducing greenhouse gas emissions with the costs that would be caused by these emissions at a regional and global level. The data show that in a scenario with temperature increase by 2.5 degrees, global GDP would decrease by 1.4% (Grubb, 2006).

To assess the damage of climate change on agriculture, the authors of a 2008 study used cost functions and included the uncertainty factor in their analysis. The results show that if the global temperature rises by 2.5 degrees, the drop in GDP in agriculture would be 1.9 percent. (Quiroga S., A. Iglesias, 2008)

The famous Global Impact Model is also a practical contribution to clarifying the impact of climate change. It was developed by A. Dinar, R. Mendelsohn and L. Williams. Applying it, the authors forecast the impact of climate change on the economies of individual countries. In their calculations, they assumed a temperature increase of 2 degrees by 2060 and looked at possible changes in climate and precipitation in 184 countries. Their conclusion is that the net effect for the world as a whole would be drop in GDP of around 0.3%. (Mendelsohn, R., Dinar, A., L. Williams, 2006)

To analyze the expected effects of climate change, some researchers use the production function known from neoclassical economic theory, adding the state of the environment as an additional parameter to it (Stern, 2007). Practical application of this function with real data shows that GDP is dependent on the state of the environment. Moreover, it concludes that the benefits of prompt action by humanity to reduce carbon emissions far outweigh the costs that would have to be incurred in such prompt action were not taken. If such actions are not taken, GDP will decline by at least 5% per year. If riskier circumstances are taken into account in the production function, the reduction can reach up to 20%. At the same time, the cost that would be incurred if humanity tried to drastically reduce carbon emissions is about 1% of GDP per year. In order to reduce carbon dioxide emissions, it is possible to implement measures in the following directions:

- ❖ reducing the demand for goods and services related to the intensive generation of emissions;
- ❖ improving energy efficiency by obtaining the same results with fewer input raw materials;
- ❖ moving to technologies that produce fewer emissions and reduce the carbon intensity of production;
- ❖ reducing emissions from non-fossil fuels, especially land use, agriculture and incidental emissions.

Other researchers have more moderate expectations for the economic impact of climate change (Bosello and all, 2012). In their research, they concluded that global GDP would decrease by about 0.5% if the world's average temperature by 2050 increased by 1.92 degrees Celsius compared to the pre-industrial era. This conclusion was reached through the application of a recursive-dynamic calculation model of the general equilibrium.

The relationship of the effects of climate change on life satisfaction is interesting. It is derived from data on climate change in 79 countries (Maddison and Rehdanz, 2011). The unit of measure "degree-months" is used to establish climate changes in the observed countries. It reports cumulative monthly deviations from a base temperature of 18.3 degrees Celsius. As a result, it was concluded that in countries with high "degree-months" life satisfaction is significantly lower.

In a 2021 New York University survey of 738 leading climate change experts, economic damage from climate change will reach \$1.7 trillion annually by 2025 and \$30 trillion annually by 2050 (Rogatnykh, E., M. Serdun, 2022).

Regardless of the methodology used, the predicted results for the global economy of the cited studies are negative. Based on the methods and models discussed above for assessing the economic impact of climate change, the following more significant conclusions can be drawn:

- mitigation policies should be introduced as soon as possible;

- the most effective policies are those that equalize the additional or marginal costs of reducing emissions – from a market perspective, this means that carbon prices should be equalized in every sector and in every country;
- effective policies must find the highest degree of application – the maximum number of countries and sectors must be involved as soon as possible;
- an effective policy is one that increases its impact over time – on the one hand to give people time to adjust to high carbon prices, and on the other – to further reduce carbon emissions.

Even without taking into account the model used and the outcome for the global economy, all studies conclude that the damage from climate change will not be evenly distributed among different regions of the world. For example, the data indicate that the most serious economic damage will be suffered by countries of Africa, South Asia and Latin America, while for the countries of Europe and North America they could have a positive effect (Tol, 2011). Moreover, OECD economies would add about \$69 billion to their GDP, while non-OECD countries would lose about \$348 billion (Mendelsohn, R. Dinar, A., L. Williams, 2006).

Results from other studies indicate that developing countries will suffer more economic negatives from climate change in the future than developed countries (Stern, 2017). This is due to their geographical location, low incomes of the population, causing reduced opportunities to implement adaptive measures and greater dependence on climatically sensitive sectors of the national economy such as agriculture. More specifically, it is predicted that the greatest negative consequences will have for the countries of Sub-Saharan Africa and South Asia. At the same time, unlike developing countries, some developed countries located in the Northern Hemisphere could gain economic benefits from climate change, but only if the temperature increase is limited to within 2 degrees Celsius compared to the pre-industrial era. With an increase of 3 or more degrees, there is no region in the world that will benefit. Based on the research and the predictions made, the conclusion is reached that the economic effects for territorially larger countries will be heterogeneous, and the socially weak strata in developed countries will bear the effects of the changes more heavily.

Uneven impact of climate change is reported not only at the level of regions of the world, but also in different economic sectors. The most negatively affected sectors are expected to be: *agriculture, fishing industry, insurance business, banking sector, capital markets, tourism and infrastructure*.

Production in the branches of the agricultural economic sector is directly dependent on temperature, sunshine and precipitation. Expectations for the future trends of climate change are related to permanent drought, which will have a negative effect on the amount of production. At the same time, the release of more carbon emissions is directly related to an increase in the acidity of the world's oceans. This, in turn, negatively affects its biodiversity.

Climate change will increasingly trigger natural disasters in the future. They, in turn, lead to losses from material and non-material damage to both the population and businesses. Ultimately, this will have a negative effect on the activity of insurance companies, which will increasingly have to pay compensation. According to data from companies in the insurance industry, the number of catastrophic disasters has increased significantly, and in the US alone from the period 2019-2021 losses have increased from 52 to 145 billion dollars. At the same time, the benefits paid by the insurance companies have grown from 26 to 85 billion dollars (Munich Re, 2021).

The banking sector is also not immune to climate change. Big banks have heavily lent to sectors that are under the potential impact of climate change. Turning these loans into non-performing ones would have a significant negative effect on the financial performance of the banking sector.

The negative impact of climate change on the sectors above also causes changes in the capital markets. They are associated with lower share prices of companies affected by climate change. In turn, this would have a negative effect on the return on investment of industrial investors.

They can identify numerous reasons why tourism will be one of the sectors affected by climate change in the future. According to calculations by the organization Sustainable Travel International, tourism contributes to about 8% of the world's carbon dioxide emissions. In this sense, climatic conditions are one of the main factors predetermining the need for changes in the tourism industry. A number of studies point to the potential problems that will arise in the coastal zones of many regions of the world as a result of rising global ocean levels (Amelung, S., Viner, D., 2007). In addition, the rise in the level of the world ocean and the accompanying flooding of coastal areas would also have a serious negative effect on the infrastructure – the urban

environment, extra-urban transport facilities, communication infrastructure, industrial sites, etc. (Momchilov, 2021)

In line with the above, it can be reasonably assumed that climate changes contribute to the formation of a number of globalized economic trends. Such as, for example, a decrease in productivity at work. According to a report by the International Labor Organization an increase in global temperature of 1.5 degrees Celsius would result in a loss of 2.2% to 3.8% of working hours worldwide in 2030. This is the equivalent of 80-130 million working hours in full-time positions. The report further states that temperatures above 24-26 °C are associated with reduced labor productivity. Within a moderate intensity of work at 33-34 °C, the worker loses 50 percent of his working capacity. (World Employment and Social Outlook: trends, 2019)

At the same time, climate change would have a positive impact on some sectors of the economy such as construction, renewable energy, healthcare and the development and application of clean technologies.

The rise of the world oceans will require the construction of structures protecting the coasts from flooding in the future, as well as the strengthening and maintenance of existing infrastructure in many places around the world. This would create new jobs in technology development, design and construction businesses.

As the energy sector is one of the largest sources of carbon dioxide emissions, the installation of renewable energy facilities has experienced a rapid development in the recent years. In this regard, we can realistically assume that the development of this industry will continue in the future.

In recent years, medical studies have often come to the conclusion that climate changes are a prerequisite for expanding the spread of various diseases. These are malaria, West Nile fever and monkey pox in humans or stem rust in wheat. Their varieties are found in regions that in previous years were considered atypical for their distribution. These circumstances create prerequisites and a need for the development and improvement of the health sector worldwide. The COVID-19 pandemic is a practical confirmation in this direction.

In view of what has been said so far, any type of technological solutions that would reduce greenhouse gas emissions will have serious economic success in the future. Such are hydrogen fuel cells, facilities for capturing and storing carbon dioxide, etc.

5. Conclusion

Climate change is one of the most serious threats to the medium- and long-term development of the world economy. From research examining their regional economic impact, the conclusion and accompanying moral paradox emerges that developing countries, which contribute less to climate change, should suffer more severe economic consequences than developed countries. At the same time, for the advanced industrial countries, whose development has largely caused these changes, the economic consequences would be less negative or even in some cases positive. Climate change is undoubtedly a global problem that does not leave regions, countries and sectors unaffected. That is why it requires a global response. However, the accumulated experience in this area shows the difficulty of finding a solution at the international level, since the mentioned paradox divides developed and developing countries on the key question: who should bear the economic burden of the changes and to what extent? Determining the extent to which developed countries should bear this burden is one of the most difficult points in the negotiations to sign agreements related to climate and environmental protection. Another such moment is the temptation on the part of a certain country to adopt the free rider position by deciding not to burden its economy with measures related to climate protection. Moreover, it leaves other countries to do so and at the same time benefits from the measures taken by others. The little progress on climate change internationally is also related to the fact that change is a relatively long-term process that does not correspond to the short-term interests of governments.

Analysis Of The Financial Statements Of WVP Fund Management AD Skopje

Valbon Mehmedi M.Sc.¹ Igor Zdravkoski PhD²

¹University " St. Kliment Ohridski" - Bitola, Republic of North Macedonia, boni.mehmedi@uklo.edu.mk

²University " St. Kliment Ohridski " - Bitola, Faculty of Economics – Prilep, Republic of North Macedonia, igor.zdravkoski@uklo.edu.mk

Abstract: This research will analyze the financial performance of WVP Fund Management AD Skopje in the three years 2019-2022, through the processing of data from the balance sheet and the income statement. The data is quantitative, while the data collection methods used are documentation and literature study which were analyzed using some of the financial indicators, namely the ratios of the return on invested capital, profitability, liquidity, and solvency ratios.

The research results show that WVP Fund Management has a good ability to return on invested assets or capital because the ratios of the return on assets and the ratio of return on capital are high and above the average in the industry (compared to the industry in the USA) which implies that the management is efficient in using the resources it has, to ensure profit. Profitability indicators are at a high level, which means that with each sale of the company, the net profit is high, which indicates successful operation.

Liquidity indicators are at a high level, which implies that the company can repay current liabilities with liquid assets, mainly cash, and securities.

The indicators of solvency are at a low level, which indicates that the company has an excellent ability to pay, that is, the total assets are financed by debt with a very small percentage, while the rest of the assets are financed by the principal, i.e. the share capital.

Keywords: Liquidity, Profitability, Capital, Assets.

INTRODUCTION

Surely the management of the company is important for efficient and effective operation in the market where it participates, either for a company that extends within a smaller region-state or for a company that is expanded in a larger region and trades in goods and services in different states. To maintain the company's market position, but also for the overall development, there is no doubt that the investor and the management are interested in analyzing the company's situation, especially the financial one so that they can come to an appropriate conclusion for future actions. From an investor's perspective, forecasting refers to what financial statement analysis means, while from a management perspective, financial statement analysis is useful to help predict future conditions and more importantly, as a starting point for planning actions that will enhance the future performance of the enterprise (Brigham & Davis, 2010). According to Xhafa (2014), people in different positions in the company analyze different aspects of the company's workflow. A credit analyst uses historical company data to predict a company's difficulty in generating sufficient liquidity for its creditors, including debt repayment. An investor tries to estimate the future earnings streams of a company so that he can estimate the value of the securities he will buy or sell. An investment analyst asks questions such as: What is the company's performance history and what are the trends for the future? What risk does the existing capital structure contain? What are the expected rates of return based on the company's current conditions and future projections? From the point of view of management, the analysis of financial statements is related to all the questions asked by debtors and creditors, because these groups of users need to be satisfied when the company succeeds in securing the necessary capital. Financial reports provide an analysis of the current state of the company and help in the development of policies and strategies for the future. However, it should be noted that management is also responsible for the preparation of financial statements. In terms of management opportunities, the analyst must be careful to influence the outcome of financial statement reporting to make it more attractive to creditors, investors, and other users.

1. LITERATURE REVIEW

In the literature, many authors researched and explained the types of financial analysis, the coefficients, and the meaning of the coefficients, as well as giving directions and instructions for further management actions to improve the performance of various companies, which were the subject of analysis.

Thus, Zdravkoski (2007) divides the analysis of financial statements into the following groups:

- qualitative and quantitative analysis,
- static and dynamic analysis,
- full and partial analysis,
- internal and external analysis, etc.

While for applied analysis it can be said that financial statements exploited, mainly for internal purposes, in market and ownership relations of operations represent a basic information base on which decision-making should be processed not only by internal but also by external individual users, organizations, and institutions. Financial statements are diagnostic instruments in the assessment of financing, investment, and operational activities, and also means of evaluating management and business decisions (Nedev & Markoski, 1995 cited in Zdravkoski, 2007). For auditors, the control tools also include analytical procedures such as:

1. Horizontal analysis (or trend analysis) - comparative analysis of a specific reporting indicator for several periods and identification of trends in changes in financial results;
2. Vertical analysis - analysis of the relationship of the selected indicator for reporting with other indicators within a certain reporting period and identification of the structure of assets, income, expenses, and liabilities of an organization;
3. Comparative analysis - analysis of aggregate indicators for specific indicators within the organization and also analysis of the indicators of an individual company in comparison with similar data of competitors;
4. Factor analysis – the study of the impact of one factor on the company's performance using stochastic and deterministic methods (Leonov et al. 2020).

According to (Sima Dohčević, 1975, as cited in Trajkoski, 2002) the subject of financial analysis consists of the following:

- the analysis of liquidity in a broader and narrower sense to establish a dynamic balance of the relation inflow (receipt) and outflow (payment) of monetary funds;
- the analysis of the relations between the economic categories on which liquidity depends, such as the financial result, income, and expenses, to establish a dynamic balance between these three categories (income, expenses, financial result);
- analysis of the relationships between business tasks and funds, that is, between funds and sources to establish a dynamic balance of the relationship between business tasks - required funds - appropriate sources;
- analysis of the relations between the financial policy and other policies within the business policy of the enterprise.

Financial performance is a complete assessment of a company's overall condition in categories such as assets, liabilities, capital, expenses, revenues, and overall profitability. It is measured through various business-related formulas that allow users to calculate accurate details of a company's potential effectiveness. It presents a picture of its economic "health" and the work its management is doing - providing insight into the future: whether operations and profits are on track to grow and also the performance of the company's shares. Measuring financial performance is important because the financial and economic activities of companies are exposed to adverse, both internal and external factors. As a consequence of the action of these factors, we can mention: liquidity problems, cost growth, drop in profitability, over-indebtedness, and others (Milojević et al., 2021). For the needs of the management, the existence of some kind of analysis is indisputable, which will show us the real state of the company's financial situation in quantified data, and from the analysis of those movements, we can refer to future procedures for improving the efficiency of operations. That is what the coefficients (indicators) of the financial analysis serve for, which we will present and analyze for the company that is the subject of our analysis.

2.1 Return on invested capital ratios

The rate of return on assets (ROA) and the rate of return on equity (ROE) are two indicators that measure the overall efficiency of a company in directing its total investment in assets or in generating income for shareholders.

The rate of return on assets (ROA) - shows the level of profit on investments in total assets.

$$\text{Return on assets (ROA)} = \frac{\text{Net profit}}{\text{Total assets}}$$

The rate of return on equity (ROE) - measures the average return on equity, that is, the contribution to shareholders' wealth. A high return on equity often reflects a firm's embrace of strong investment opportunities and effective cost management.

$$\text{Return on equity (ROE)} = \frac{\text{Net profit}}{\text{Total equity}}$$

2.2 Profitability ratios

Profitability is the net result of many policies and decisions. In this section, we will explain the following indicators: Net profit margin and earnings per share.

Net profit margin - measures the profitability of operating activity after taking into account all expenses and income, including interest, taxes, and non-operating items. We show it through the following formula:

$$\text{Net profit margin} = \frac{\text{Net profit}}{\text{Sales}}$$

Earnings per share - represents the accounting ratio of net profit to the number of ordinary shares. The yield should be as high as possible and close to the industry average.

$$\text{Earnings per share} = \frac{\text{Net profit}}{\text{Number of shares}}$$

2.3 Liquidity ratios

A liquid asset is traded in an active market and can be converted into cash at the current market price, while liquidity ratios (indicators) provide an answer to the question: Will the company be able to repay its debts during the year? Two liquidity ratios are commonly used in the literature: the current liquidity ratio and the quick ratio test.

The current ratio is used to measure short-term solvency, that is, the company's ability to meet debt requirements when they are due.

Short-term liabilities are used as a divisor of the ratio because they represent the most urgent debts, which require repayment within a year or an operating cycle. As a formula we can express it as below:

$$\text{Current ratio} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

Current assets include cash, securities traded on the market, accounts receivable, reserves, deposits, and more. Current liabilities consist of short-term loans payable, accounts payable income tax payable, etc.

Quick Ratio Test is calculated for assessing the liquidity of the enterprise cash mass, which is a relationship between current assets that can be converted quickly to cash plus account receivable and current liabilities. Mathematically we can express it:

$$\text{Quick ratio} = \frac{\text{Cash} + \text{Cash equivalent} + \text{securities} + \text{Account receivable}}{\text{Account payable}}$$

2.4 Solvency ratios

Solvency ratios measure the degree of financing of the company with debt. The amount and share of debt in the company's capital structure are very important for the financial analyst due to the close link between the relationship and the rate of yield. Debt use increases the risk as the debt is accompanied by a fixed obligation in the form of interest costs and repayment of the principal. In this attachment we will analyze the following indicators:

Liabilities to assets ratio- represents the percentage of the assets of the company covered with debt. Excessive debt means high risk for investors. Expressed with the following formula:

$$\text{Liabilities to assets ratio} = \frac{\text{Total liabilities}}{\text{Total assets}}$$

Debt to equity ratio- expresses the percentage of debt to its capital and indicates whether the company has a large amount of debt in the capital structure. High debt means that the company must pay a large amount for interest and the amount of debt principal. Expressed with the following formula:

$$\text{Debt to equity ratio} = \frac{\text{Total liabilities}}{\text{Shareholder's equity}}$$

3. METHODOLOGY

Data is taken over from the financial reports of the WVP Fund Management AD Skopje.

With these data, we will be able to quantify the course and progress of the financial situation of the enterprise, as well as to take into account the future for a more successful business of the enterprise. Data is secondary, expressed in denars, taken from the balance sheet and the income statement of the WVP Fund Management AD Skopje in the three years 2019-2022. Below are analyzed the most important indicators of the financial situation of the enterprise and also through comparative analysis we will see the trend of the financial situation.

Table 1. Balance sheet- WVP Fund Management AD Skopje

Earning per share	84.15	129.34	82.36

4. RESULTS AND DISCUSSIONS

4.1 Return on invested capital ratios

	2019	2020	2021
Return on assets (ROA)	0.28	0.33	0.45
Return on equity (ROE)	0.29	0.34	0.48

Figure 1. The trend of return on invested capital ratios

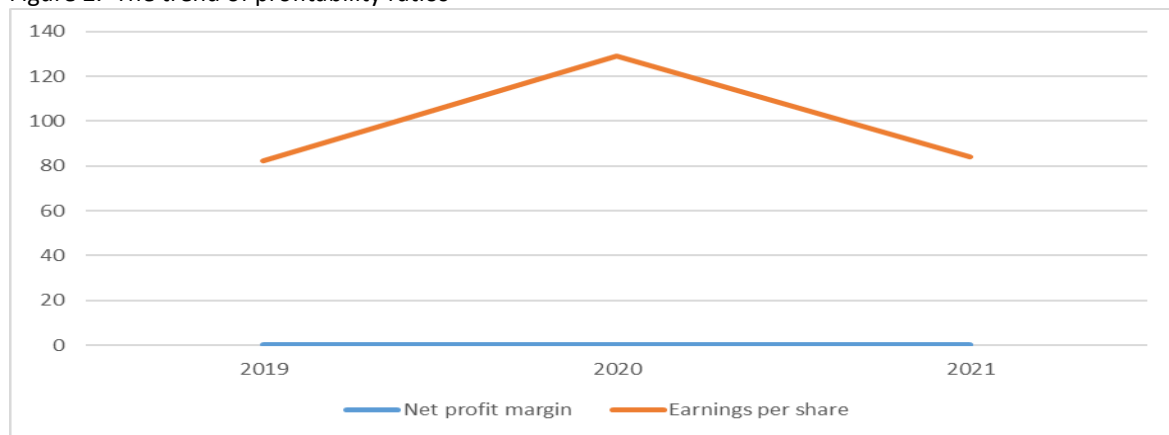

The rate of return on assets (ROA) shows how many denars of net profit are realized from one denar of investments or assets. It gives a picture of whether the management is efficient in using the resources at its disposal to ensure profit. In our analysis for 2021, the rate of return on assets is 0.45, which means that from one denar of assets, on average 0.45 denars of profit were realized for the company, which is in a good direction, taking into account the industry averages. In the absence of data on the industry average in R.N.M., we compare this ratio with the industry average in the US, where the average is 0.1, which means that the company is above the industry average and makes a good net profit. Using the horizontal analysis, we can conclude that this ratio is increasing compared to 2019 by 60.71% mainly as a result of the increase in net profit on total assets for the three years.

The rate of return on equity (ROE) measures the average return on equity, that is, the contribution to shareholder wealth. A high return on equity often reflects a firm's embrace of strong investment opportunities and effective cost management. In our case, the rate of return is 0.48, which means that from one denar of shareholder's capital, on average, 0.48 denars of profit were realized for the company. In the absence of data on the industry average in RSM, we compare this ratio with the industry average in the US, where the average is 0.17, which means that the company is above the industry average and makes an excellent net profit.

4.2 Profitability ratios

	2019	2020	2021
Net profit margin	0.27	0.29	0.41
Earnings per share	82.36	129.34	84.15

Figure 2. The trend of profitability ratios

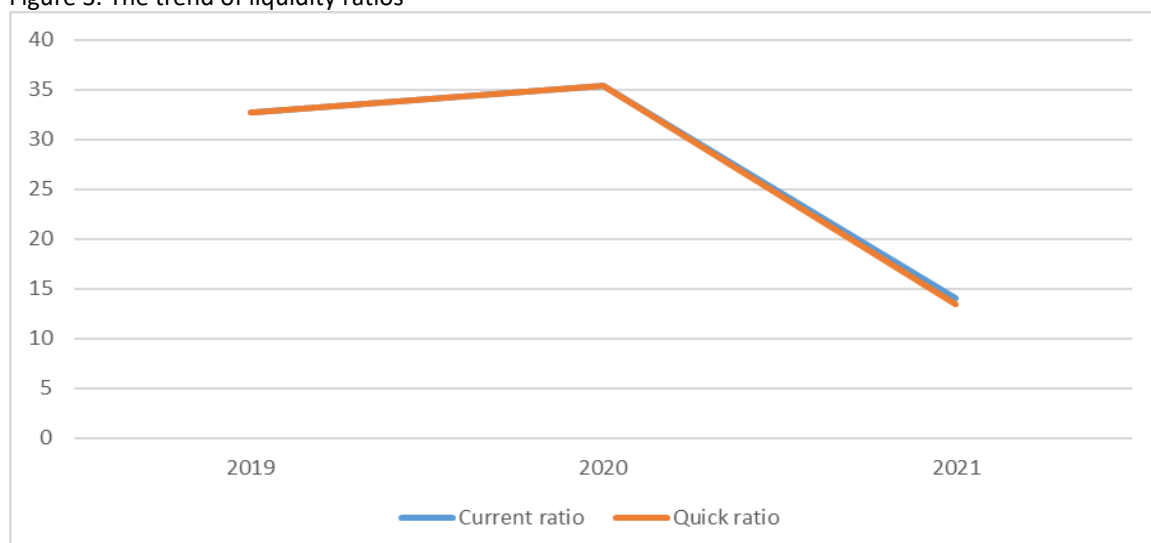

Net profit margin is a measure of the profitability of a firm's sales after all expenses and income taxes are taken into account. It shows us the net income for one denar of sales. For WVP Fund Management AD Skopje for 2021, approximately 0.41 denars from every denar of sales revenue represents profit after taxation. This means that the profitability of the company is at a high level, i.e. of every revenue 41% is a profit for the company. Due to the lack of data on the weighted average of ratios by the industry for companies in R.N.M., we cannot compare whether our company is below/above the industry average. With the horizontal analysis, we can conclude that this ratio is increasing compared to 2019 by 51.85% mainly as a result of the increase in net profit on sales revenue for the three years.

Earnings per share are calculated as the ratio of earnings attributable to equity holders to the weighted average number of shares outstanding. In this period, we have fluctuations in earnings with a downward trend in 2021, which is mainly due to the increased number of shares in circulation.

4.3 Liquidity ratios

	2019	2020	2021
Current ratio	32.77	35.45	14.03
Quick ratio test	32.73	35.42	13.46

Figure 3. The trend of liquidity ratios

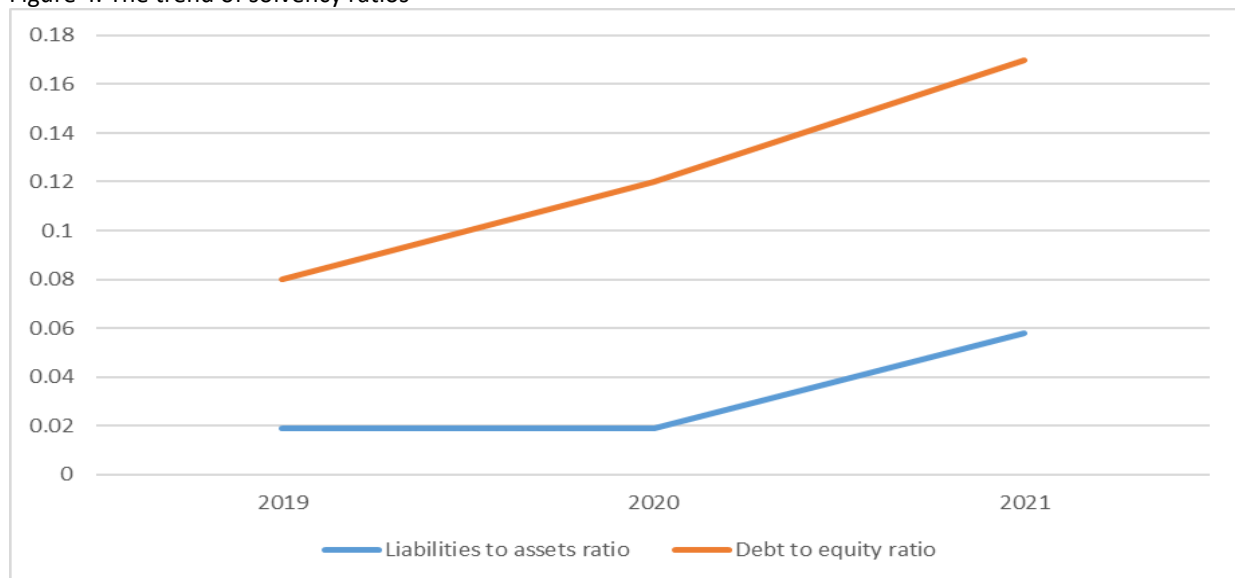

The current liquidity ratio, which is calculated as the ratio between current assets and current liabilities, shows us the company's ability to repay its outstanding debts over the course of a year. As a rule, a high ratio tells us better liquidity, but a too high ratio can show us a weakness in management because the company has a lot of money tied up in non-productive assets, such as excess cash or securities traded on the stock market. In our case, the ratios are high and so the company is liquid to carry out its daily activities. The current liquidity ratio for 2021 shows us that the total current liabilities that are due for payment in 2021 are 14.03 times lower than the total current assets, which indicates high liquidity.

The quick ratio serves as an addition to the current ratio in the analysis of liquidity. This ratio is the same as the current ratio except that it excludes inventory—probably the least liquid part of current assets—from the numerator. The ratio concentrates primarily on the most liquid current assets - cash, securities, and short-term receivables - relative to current liabilities. Thus, this ratio provides a more accurate measure of liquidity than the current ratio. With the horizontal analysis, we can conclude that this ratio decreased compared to 2019 by 58.87% mainly as a result of the increase in current liabilities over liquid assets for the three years.

4.4 Solvency ratios

	2019	2020	2021
Liabilities to assets ratio	0.019	0.019	0.058
Debt to equity ratio	0.08	0.12	0.17

Figure 4. The trend of solvency ratios

The total liabilities to assets ratio highlights the relative importance of a firm's debt financing by showing the percentage of the firm's assets that are supported by debt financing. In short, the higher the ratio of debt to total assets, the higher the financial risk; the lower this ratio, the lower the financial risk. In our case, we see that WVP Fund Management AD Skopje has an excellent ability to pay, that is, the percentage of assets supported by debt financing is very small. Namely, analyzing 2021, the ratio indicator has a value of 0.058 converted into a percentage is 5.8%. This means that only 5.8% of the total assets are financed by debt, while the remaining 94.2% are financed by equity. Analyzing in a time frame, i.e. doing a horizontal analysis, we can conclude that this ratio is increasing compared to 2019, that is, we have an increase in this coefficient by twice as much mainly as a result of the increase in current liabilities for the three years.

A debt-to-equity ratio highlights the importance of a firm's debt financing by showing the percentage of a firm's equity capital that is backed by debt financing. In our result for 2021, the coefficient in the value of 0.17 (17%) tells us that creditors provide 17 denars of financing for every 100 denars provided by shareholders. The lower the ratio, the higher the level of financing of the firm provided by shareholders rather than creditors. Implementing the horizontal analysis, we can conclude that this coefficient is increasing compared to 2019, that is, we have an increase in this coefficient by 112.5% mainly as a result of the increase in current liabilities over the share capital.

5. CONCLUSION

Considering the results of our research on the financial performance of the company WVP Fund Management AD Skopje, using the most appropriate indicators (ratios) for determining the actual- financial situation, we can conclude that:

- The company has a good efficiency for managing its assets in the best possible way, determined through high ratios on return of assets and capital
- The company has excellent profitability, that is, a large percentage of sales are generated for income after tax (net profit). The company should continue this upward trend to maximize profits in the future.
- Although we see a downward trend in liquidity, the company is liquid enough to ensure the payments of the delivered debts on the one hand, and the other hand, it should be taken into account that too much liquidity is not in favor of the company, due to free cash flows and excess cash that the company has.
- The company's ability to pay is also considered good and solid. This must be maintained by the company to be able to conclude that the company can pay its obligations regardless of whether they are short-term or long-term.

Analyzing the above, taking into account that the company is one of the few companies in this market since the market for investments and asset management in R.N.M is not at a high level, the company is in good progress with managing and the overall operation as a financial institution. As an overall recommendation, we can mention that only by educating the population through various methods for proper investment of the free financial resources of individuals and legal entities, we can achieve an increase in income from investments and contribute to the development of this kind of market.

Abstract: In the Greek public administration, MITOS, as a name, was attributed to the National Register of Administrative Procedures, which as a result of the interdisciplinary intervention in the administrative reality of Greece, on the one hand through the legislative initiative that consolidates and creates the starting point of the implementation of the regulatory action of the public administration, on the other hand based on the effort to reveal through digital governance a tendency of modern administrative science to approach the administrative phenomenon in terms of recording all the administrative procedures of the public sector and ultimately in the proposal for a redesign based on the use of good practices for the optimal provision of services to the citizen and businesses.

Through the methodology of evaluation research we shall highlighting the deficient effort of the public administration system on the one hand in terms of the late design and implementation of the National Register of Administrative Procedures but on the other hand the impetus it is going to give to the effort of partial or total restructuring of the Greek public sector with emphasis on the redesign of its structures, procedures and functions.

1. Introduction

The present research paper did not arise at an unsuspected time.

Almost a decade after the economic crisis, which tested the national economies and societies of both Europe and the opposite side of the Atlantic, as well as four years after the emergence of the pandemic through the Covid-19 virus, which brought the public system of administration and self-government to a standstill, the scientific community, especially administrative scientists, they are called upon to be heteronormative in relation to the pathogenesis and stylized problems of everyday life of citizens, businesses and even the operation of the public sector.

Ineffective public administration systems, which have not demonstrated the immediate capacity to respond to emerging developments, as not being sufficient to capture or more specifically manage administrative practicalities.

However, at the same time, in recent years, timidly and mainly at the level of legislative intervention, an attempt has been made to restructure the general functioning of the public sector, through the application of loan administrative methods, techniques and standards, with the aim and objective, first and foremost, of instilling a new culture of administration on public affairs but, as a deeper concept and end, the restructuring of the public bureaucracy into more effective and efficient public organizations, which make up public administration and local government.

In today's shifting world, the social environment in which the various systems of administration are applied, in which citizens - businesses - administrative functioning of the public sector interact, must be accompanied by a multitude of reforming public policies with the strategic aim of holistically addressing and overcoming the public bureaucracy and its pathogens.

Moreover, the underestimation of inefficient public sector structures and services make it more than ever to formulate a strategic plan on public sector restructuring with a focus on the level of structures, processes and functions, through the implementation of the process of redesigning business processes and operations.

The purpose and objective of this research paper is to highlight the reforming administrative policy that must be applied as a more general redesign administrative culture and mentality in the direction of operation of the public sector, which is to serve the final recipient, that is, the citizen of each country.

In this direction, we believe that contributes the National Register of Administrative Procedures named "MITOS".

2. The theory of Reengineering in combination with digital governance: the creation of the national register of administrative processes "MITOS".

The business process reengineering (BPR) methodology first emerged in the early 1990s and has since prevailed as one of the most popular methods of radical changes in the operation of businesses.

The initial approach to the methodology took place in 1990 with relatively published articles by Davenport & Short and Hammer, while the foundations for the BPR were laid in 1993 by Hammer and Champy. According to them, the BPR is defined as "the fundamental overhaul and radical redesign of business processes with the aim of achieving dramatic-spectacular-rapid improvements in critical success factors for a business such as cost, quality, service, and speed"(Hammer, M., Champy, J. A. : 1993) .

Another definition that has been given refers to the methodology as "a methodical approach that uses information technology to radically correct business processes and thereby achieves key business goals"(Al – Mashari, M., Zairi, M. : 2000) .

Davenport and Short (1990) have described the BPR as "the analysis and planning of workflow and processes within and between enterprises," while Talwar R. (1993) explains the BPR as "the ability to review, restructure, and streamline business structures, process, methods of labor management systems, and external relationships through which we create and deliver value." Another approach describes the BPR as "the use of scientific methods, models and tools to achieve a radical restructuring of a business that results in significant performance improvements" (Mayer, R., Benjamin, P., Caraway, 12 B., Painter, M. : 1995) .

Stages of Business Process Reengineering by Authors

Source: personal creation

Nevertheless, according to professor Kefis the Business Process Reengineering (BPR) includes changes in the structures and procedures of public enterprises and organizations (Kefis: 2021).

All human, organizational and technological dimensions that characterize a public undertaking they can be changed through the process of reorganization (BPR).

The technology Information plays an important role in the reorganization, since with the office automation it provides:

- allows the public service (undertaking or organization) to carry out procedures in different locations,
- enables adaptation to production processes,
- enables citizens to be served more quickly,
- contributes to faster transactions without the use of paper,
- more generally, the BPR makes changes to the way business processes are executed so that makes them more efficient.

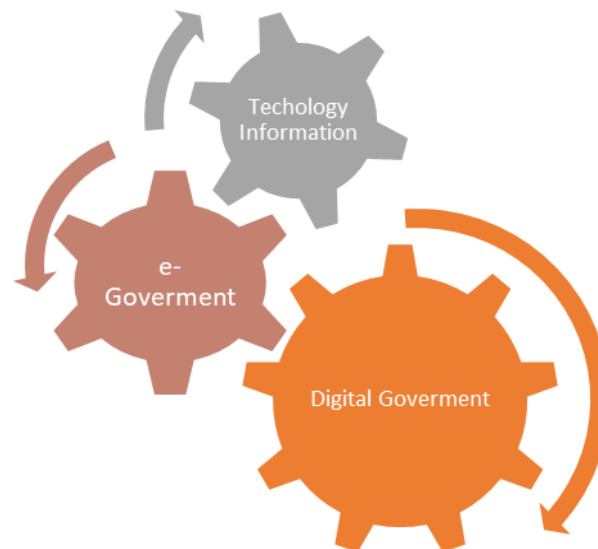

Source: personal creation

However, office automations were not enough to eliminate private or public bureaucracy and to manage the functions of the state and public administration at the level of automated or digital management and governance.

Both in the academic field of administration, law and computer science questions were raised regarding the overall operation, quality and requital of the services provided to citizens, businesses, through administrative procedures. Without, of course, implying that transactions between public services and bodies should not be subject to a regime of criticism and redesign or re-engineering, since it is through them that all the results obtained are inferred.

Synergistic Digital Progress

3. The National Register of Administrative Procedures "Mitos" as a public policy of the single framework for the continuous upgrading of the administrative procedures of the Public Sector and the reduction of bureaucracy for the benefit of all.

The Greek public administration in terms of re-engineering and simplifying administrative procedures has measured positive steps. In recent years, in the context of digitization of the functions of the state and the administrative arm through which it imposes its decisive will, the public digital policy of administrative procedures was developed and implemented, consisting of two strategic additions. One concerns the continuous and holistic policy in four cases and the other concerns the three pillars that essentially frame and form the single framework of the national procedures policy which are the national register of administrative procedures - MITOS, the national programme for the simplification of procedures and the observatory on bureaucracy.

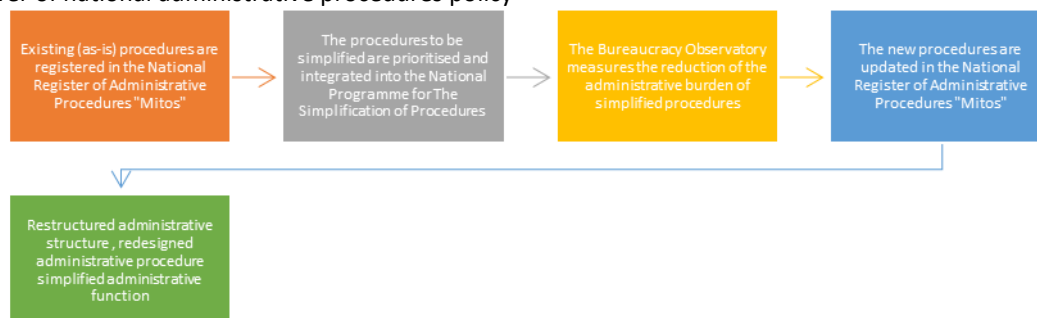

Three pillars of the National Administrative Policy

Source: personal creation

In addition, an integral part of the digital policy that carries essential elements of public policy to contribute to the restructuring of the public sector, is the continuous and holistic policy with four areas of action that cover the entire range of processes of restructuring of the public sector.

Turnover of national administrative procedures policy

Source : personal creation

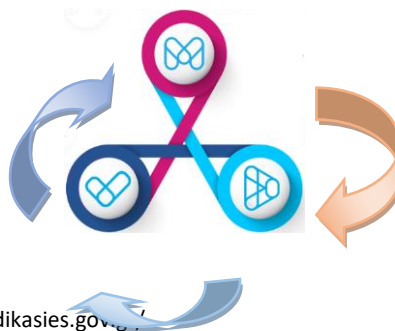

Greece, for the first time, acquires a coherent public policy that enables it to record-standardize, evaluate and improve administrative procedures that either aim at its internal organization and operation, or at the provision of public services to citizens and businesses.

To date, efforts to improve administrative procedures have only been made on an ad hoc basis with no continuity and no long-term horizon. In order to address this pathogenesis, the Ministry of Digital Governance created the National Policy of Administrative Procedures (N.P.A.P.), in order to constitute a coherent public policy aiming at the overall administrative transformation of the State and the Greek Public Administration.

The National Administrative Procedures Policy is based on three new tools-pillars that interdependent and interact with each other: **(1)** the National Register of Administrative Procedures (EID)-Mitos, which aims to record, record and standardize all administrative procedures of the State, **(2)** the National Programme for Simplification of Procedures (N.Pr.S.P), which is a mechanism for redesigning and simplifying administrative procedures on the basis of a common methodology and a of a uniform and understandable way of presenting simplification actions to the public, and **(3)** the Bureaucracy Observatory, which is a mechanism for documenting the results of the N.P.A.P. and measuring administrative burdens for the continuous evaluation and assessment of bureaucracy in Greece.

The interaction of the tools-pillars of N.P.A.P. is the key to its successful implementation. This is because the elaboration of a central simplification program requires both a reliable mechanism for measuring the administrative burden of each procedure and the verification of simplification with ex post measurements, as well as a new digital platform that will be the common place of contact of the citizen with the State, in which the prescribed steps for each procedure will be recorded separately, in a way that is understandable, up-to-date and public.

4. CONCLUSION

Bureaucracy obviously causes administrative burdens on citizens and businesses, intra-administrative burdens on the Public Administration that is called upon to correct the wrongs, delays in serving the citizen, irritation and inconvenience. In addition, it reinforces the subjective perception of the citizen that the state is problematic, with procedures that afflict and with laws that are not applied. Even in cases where a procedure or provision of public service is effectively and qualitatively regulated by the Central Administration, the problematic way of its implementation by the services that apply the legislation can cancel out any positive results.

This problematic situation is addressed by the National Register of Administrative Procedures-Mitos, which aims to record and standardize all the administrative procedures of the Greek State in a single repository. This recording and standardization is done, in this context, with modern technological tools. Moreover, in recent years, the use of new technologies to better inform citizens and upgrade the provision of public services has been the crucial opportunity to improve valid and timely information in a context of mutual trust between the state and the citizen. It is characteristic that previous actions of homogenization of information with the use of standard forms, such as the integration of administrative procedures in the Citizen Service Centers (KEP), were practical proof that the clarity and the uniform way of capturing the procedures lead to an increase in the degree of satisfaction of citizens, businesses and administrative employees. This is because the standardization of procedures reduces ambiguity and legal uncertainty and at the same time, homogenizes the way the Administration operates during the processing of procedures.

The aim of the NRAP - MITOS, as a tool that records and depicts the current state of a public administrative procedure "THE PROCEDURE AS IT IS" (AS-IS), is to provide citizens and civil servants with all the necessary information applicable to administrative procedures, competent services, applicable legislation as well as processing time. More specifically, the NRAP- MITOS:

- records, captures and standardizes the existing administrative procedures of public services and bodies, and at least the following elements: accurate, official titles of existing administrative procedures, legislative framework, competent services, supporting documents, processing time, flow diagram, time estimate and costs of fees or other fees,
- incorporates a mechanism for constantly updating the procedures, in order to support the legislator's goal which is: "the continuous maintenance of the National Register of Greek Public Administration Procedures and its continuous and exclusive updating with the simplification changes",
- supports the simplification of procedures through the National Programme for Simplification of Procedures (N.Pr.S.P) as well as their evaluation in terms of the impact they have on administrative burdens,
- Integrates a citizen reporting platform.

Abstract: The Paulian or revocatory action is one of the great institutions of the Roman-Germanic system of law, with a millenary existence, a veritable legal colossus, the Paulian action has remained a living institution with a particular practical use.

The Paulian action is governed by Article 895 of the Civil Code and is the legal action whereby the creditor seeks a declaration that legal acts concluded by the debtor to the detriment of his interests, such as legal acts by which the debtor creates or increases his insolvency, has unenforceable. Thus, the Paulian action enables creditors to be protected if the debtor diminishes the assets that may be subject to seizure in order to avoid payment of his debts. It is exercised by the creditor against the third-party acquirer of the disputed asset, its purpose being in national legal systems to restore to the debtor's assets an asset which has been fraudulently disposed of. In this perspective, a paulian action is an action which allows a creditor to obtain the unenforceability against him of an act of disposition of assets made by a debtor in order to fraudulently reduce those assets. The conditions for a Paulian action are, according to the doctrine, the following: the contested act must have caused the creditor damage, the existence of fraud on the part of the debtor; the creditor must have a claim that is certain and, in principle, prior to the contested act; the complicity in fraud of the third party with whom the debtor has contracted, if the contested act is for consideration. the creditor must have a claim that is certain and, in principle, prior to the contested act; the complicity in fraud of the third party with whom the debtor has contracted, if the contested act is for consideration. the creditor must have a claim that is certain and, in principle, prior to the contested act; the complicity in fraud of the third party with whom the debtor has contracted, if the contested act is for consideration.

In this respect, the paulian action can play a role in company law in order to ensure the protection of a company's creditors, in particular in the presence of company restructurings.

Keywords: Paulian action (revocation), debtor, creditor, fraud, patrimony, assets, dispute.

INTRODUCTION

Paul's action gives him the right to prevent the debtor from harming him through fraudulent acts, that is, through acts concluded with third parties directed precisely against the interests of creditors, their purpose being to prevent the payment of claims to the latter.

Therefore, the Pauline action is that action by which the creditor requests revocation or judicial annulment of acts concluded by the debtor in fraud of his rights (Costin, 1980). That is why it is also called a revocation action. In the same way, he defines the Paulian action and legal practice, showing that it consists of the legal means "through which the creditor can act against the legal acts made in fraud of his rights by the debtor .." and which ".. derives from the general right of pledge with regard to the latter's patrimonial property, placed at the disposal of the creditor in order to realize his claim, through forced execution" (Costin, 1980).

At the basis of the revocation action is a psychological element, namely, the tendency of the debtor in difficulty to enter into legal acts with third parties either to harm the creditors or to have, possibly, a profit in the future. From a legal point of view, it is considered that the basis of this action is the principle of good faith performance of obligations (para. 1 art. 9 and para. 2 art. 572 CC of the Republic of Moldova), as well as the right of general pledge that they have unsecured creditors on the debtor's patrimony. Also, considering that fraudulent acts are a civil offense against creditors, the debtor is required to repair the damage thus caused.

In the doctrine, it is also noted that the Pauline action is directed against the third party with whom the debtor concluded the fraudulent act. In this situation, there are certain legal grounds for the liability of the third party, namely, if he was in bad faith - that is, complicit in the fraud - he will be obliged to repair the damage thus caused, and if he was in good faith and had something to gain due to of the act concluded with the debtor, will be held according to the principle of unjust enrichment.

The Paulian action is a personal action, even if it is directed against an act regarding the alienation of real estate rights and aims, in essence, like the oblique action, to return some assets to the debtor's patrimony to allow the creditor to enforce enforcement on those assets as well.

In the same way, it is considered to be, in one opinion, an action for damages, because it aims to indemnify the creditor for the fraud attempted by the debtor and has the effect of revoking the fraudulent act until the competition of the respective claim. In another opinion, it is seen as an action in the unenforceability of the act concluded by the debtor.

In the light of these considerations, we could mention that the Pauline action differs essentially from the oblique action. The oblique action is exercised in the name of the debtor, and the Paulian action is exercised by the creditor in his own name. It follows from this that the creditor who exercised one of these actions without result can then exercise the other. Also, in the Paulian action, the defendant cannot oppose the exceptions that he could have opposed to the debtor, because the creditor exercises it in his own person.

The field of application of the Pauline action

In principle, through the Paulian action, the annulment of any legal act, for onerous or free title, through which the debtor reduced the general pledge of creditors, such as: alienation of goods, assignment of rights, creation of a mortgage, remission of debts, etc. . through the Paulian action, court decisions that remained final can be challenged, by which the debtor would have allowed himself to be bound by some fraudulent agreements concluded with his opponent (Alexandrescu, 1898). Thus, specialized literature and judicial practice admit the possibility of revoking a judicial transaction through the Pauline action. Thus, through a transaction that produces constitutive or translational effects of rights, the debtor's patrimony may be reduced and his creditors may be prejudiced.

Likewise, the creditors of an heir may request the revocation of the deed of renunciation of inheritance, as well as the deed of acceptance of an insolvent succession, made in fraud of their rights. Conversely, the acts by which the debtor refuses to enrich himself cannot be revoked, such as the non-acceptance of a donation.

The following documents cannot be revoked through the Pauline action:

- ✓ Acts regarding non-patrimonial personal rights;
- ✓ Acts regarding patrimonial rights that involve a personal, subjective assessment of the debtor;
- ✓ Acts relating to untraceable patrimonial rights. However, the revocation action is admissible against legal acts that concern untraceable patrimonial rights when they were concluded by the debtor with the intention of defrauding the interests of creditors. This is the case of a maintenance contract through which the debtor assumes an excessive obligation that clearly exceeds the needs of the beneficiary; the debtor's obligation may be reduced, through Paulian action, within the normal limits of the maintenance needs of the third party, thereby protecting the interests of the creditor;
- ✓ The acts by which the debtor incurs new debts, because the reduction of the patrimony does not take place ex nunc, but only creates the risk of eventual insolvency, when those debts will become due. In case a guarantee was constituted, the doctrine showed that it can be attacked through the Pauline action only if it was constituted independently of the main obligation and after it. In the same category, the cases of legal options between rights or acts, options established by law, are studied, because creditors cannot invoke their prejudice due to the fact that the debtor has chosen a disadvantageous solution. Finally, it is considered that the payment of a debt cannot be challenged through the revocation action, because this cancels a passive element of the debtor's patrimony, even if the payment made reduces the asset to be divided among the other creditors. The solution is justified by the fact that the payment of a receivable is a necessary act. Of course, the payment made fraudulently, fictitiously, in order to damage the other creditors could be attacked through the Paulian action.

The conditions for exercising the Pauline action

In order for the Pauline action to be admissible, the following conditions must be met:

➤ **The debt of the one exercising the Paulian action must be certain, enforceable and liquidate.** Also, in principle, the Pauline action can only be brought by creditors prior to the deed whose revocation is requested, due to the fact that at the time of its conclusion, the subsequent creditor did not have a general lien on the debtor's patrimony; a previous act of the debtor, in general, cannot be prejudicial or fraudulent towards creditors subsequent to its conclusion. From this rule it is admitted that there is also an exception in the situation when the debtor has previously perfected with the proven intention of depriving the future creditors

of the guarantees that they, without knowing the conclusion of the respective act, had in mind when they decided to contract with the debtor (Hamagiu, Georgean, 1928). In this regard,

Proof of the previous character of the debtor's claim compared to the moment of the conclusion of the act whose revocation is requested can be made by any means of proof. He need not have, for this purpose, the definite date. In relation to the fraudulent act, the respective creditor has the quality of a third party proper. For him, that act has the value of a legal fact.

Related to this condition, there are discussions in the specialized literature about whether or not the creditor must have an enforceable title to exercise the Pauline action. Some authors consider that it is not necessary for the debtor to have an enforceable title, because the Paulian action is not an act of execution, but of revocation of a fraudulent act (Stătescu, Bîrsan, 2008). Others appreciate that, on the contrary, this condition is necessary for the reason that the creditor, who did not resort to the foreclosure procedure, will not be able to prove the debtor's insolvency (Costin1989). We consider that the Paulian action is a subsidiary action, which means that it is admissible only after establishing the debtor's insolvency. Or, for this purpose, the creditor is obliged, in advance, to start the enforcement procedure against the debtor and only being unable to realize his claim will he be able to prove that the respective act is prejudicial to him. Therefore, practical needs require that the right to claim be ascertained through an enforceable title.

In relation to the enforceable character of the claims, the doctrine discussed to what extent the claims with a term and those affected by a suspensive condition can give the creditor the basis for a revocation action. In an opinion, in both cases the action must be refused. In another opinion, in the case of the suspensive condition, the creditor's right being uncertain, the granting of the Pauline action would not be justified; in the case of a term claim, the action could be exercised because the creditor in such a situation has an asserted right, but it is necessary that the debtor's insolvency can be established without the execution of his assets, taking into account that in the case of a term claim, the creditor cannot proceed for execution until the deadline has been met.

➤ **That deed was concluded in fraud of the creditor's rights**, i.e. to have caused him damage. The damage consists in the fact that, through that act, the debtor caused his insolvency or aggravated his existing insolvency (eventu damni). Proof of the debtor's insolvency must be provided by the creditor. Thus, as I stated, the Paulian action has a subsidiary character, in the sense that the creditor will be able to exercise it only after, following the debtor, it is established that he is insolvent. In this way, the Paulian action is admissible only after the creditor has resorted, without result, to the other legal means provided by law to obtain the realization of the claim. When the creditor does not prove the state of insolvency, the third parties, in the Paulian action, can invoke the exception of the benefit of discussion (Hamagiu, Georgean, 1928).

The creditor does not have to prove the debtor's solvency when the latter is in a state of bankruptcy or notorious insolvency. The solution is the same also in the hypothesis where the debtor is solvent but the pursuit of his assets presents too many or great difficulties, being litigious, located in another country or due to physical and moral wear and tear they could not be valued through forced sale (Hamagiu, Georgean , 1928).

Finally, we also show that the insolvency of the debtor must be a direct and exclusive consequence of the contested act; therefore, the Pauline action is inadmissible if the insolvency was caused by a fortuitous event subsequent to the conclusion of that act, even if that fortuitous act would not have been sufficient to produce this consequence in the debtor's patrimony.

➤ **Fraud of the debtor**. (Cîrcei, 1985) The notion of debtor fraud is controversial. In a first opinion, by fraud is understood the fact that the debtor realized, simply knew that by the act that concludes it, he causes or aggravates his insolvency. In another interpretation, it was considered that fraud is synonymous with the debtor's intention or intent. And finally, in an intermediate conception, it is appreciated that between the intention to harm the creditor and the simple knowledge of insolvency, there are differences only of degree and not of essence, because the knowledge of the harm by the debtor also implies the intention to harm.

We consider real the opinion according to which for the existence of fraud (consilium fraudis) it is sufficient for the debtor to have known that by concluding the act he is causing or aggravating his insolvency, causing damage to his creditors. The debtor's fraud does not involve contractual malice, i.e. fraud committed with the intention of prejudicing the creditor, but only the debtor's awareness of the result of his act, i.e. causing or increasing his insolvency, even if prejudicing the creditors was not the immediate purpose of his conduct.

In the doctrine, the question of the criteria according to which it can be established whether or not the act was fraudulent was raised. In an opinion, the comparative moral value of the assets that determined the commission of the respective act is taken into account. In another opinion, it is sufficient for the debtor to know that acting in a certain way will harm his creditors. For Josserand (Josserand, 1953), for example, if it turns out that the debtor knew the result of the act, it can be assumed that he wanted to harm his creditors, and this regardless of whether the act is onerous or free.

➤ **Complicity of the third party acquirer in the debtor's fraud.** This condition is only necessary if the creditor requests the revocation of a deed concluded by his debtor with a third party. The complicity of the third party consists in the proof of the fact that he realized that by that act the creditors of the debtor are prejudiced, due to the insolvency of the latter. The Pauline action is directed against the third party beneficiary who, in the process, has the capacity of defendant. In the case of documents with onerous title, it is necessary to establish the bad faith of the third party, his participation in the fraud, in the sense of his knowledge of the prejudice to the creditor through those documents.

In the case of documents with a free title, the condition of complicity of the third party is not necessary. By revoking the deed, the third party beneficiary has nothing to lose, since he has not paid an equivalent. Thus, between the interest of the injured creditor and the interest of the third party, consisting in the defense of a patrimonial advantage with which he was enriched, for reasons of equity, protection is granted to the creditor. However, following the admission of the Pauline action, the third party beneficiary with a free title will be able to be pursued only up to the competition of the value with which he was enriched (Hamagiu, N.Georgean, 1928).

We should not be ignorant of the fact that sometimes the third party acquirer alienates, in the meantime, the asset that was transferred to another person. In such a hypothesis, the sub-acquirer will have the same legal treatment as its author. In relation to this, a court ruled: "as far as the subacquirers are concerned, the same rule applies to them as to the acquirers. Consequently, the deed will be annulled if they acquired for free, regardless of their good or bad faith, or if, acquiring for a fee, they were in bad faith, that is, they knew the fraud committed by the alienator". We mention that, regardless of the situations in which the subacquirer finds himself, if the act concluded by the first acquirer with the debtor is an act against which the Pauline action is not admissible, it will also be inadmissible against the subacquirer (Hamagiu, Rosetti-Bălănescu, 2008).

The effects of the Pauline action

The Pauline action has, mainly, the effect of causing the revocation of the fraudulent deed which, thus, will no longer be opposable to the creditor and he will be able to pursue the asset that was the object of that deed. If the Paulian action is admitted by the court, the challenged legal act can be revoked. The effects of admitting the Pauline action must be analyzed in relation to the third party acquirer, the debtor and the other creditors of the debtor (Costin, 1980).

- *In relation to the third party acquirer, the legal act is revoked.* Its effect will be limited to repairing the damage suffered by the creditor. The third party will be able to offer the creditor the amount necessary to settle his claims, thus keeping the respective asset. The revocation takes place only within the limits necessary to realize the right of claim of the claimant creditor. This explains the fact that if the damage is lower than the value of the object of that contract, "the third party has the right to keep the property acquired, offering the creditor payment of the debt. On the other hand, if the third party acquired the good free of charge, he has the obligation to return it." (Costin, 1980)
- *In relation to the debtor, the revoked act continues to exist and produce its effect in its relations with the contracting third party.* The revocation of the act operates exclusively in the relations between the creditor and the third party. The thing returns to the debtor's patrimony only through a fiction grafted on the relations between the creditor and the third party acquirer. Consequently, what exceeds the creditor's payment needs definitively belongs to the third party. Also, the third party acquirer with onerous title will be able to turn against the debtor through a recourse action to obtain what he paid the creditor.
- *In relation to the debtor's other creditors, the admission of Paul's action does not produce any effect.* The revocation of the contested act benefits only the creditor or creditors who brought the action. Therefore, the Pauline action has an individual character. This is explained by the fact that the person who brought the action exercises his own and individual right. The plaintiff does not present either the debtor or the other creditors of the debtor.

The legal nature of the Pauline action

There is no doubt that the Pauline action is a personal action. The creditor who exercises it does not invoke a right of the debtor over the good object of the contested legal act, but a right of his own; this right has a personal character, because the law does not grant the creditors, based on the general pledge, a real right over the debtor's assets. In this sense, we can see a model of Pauline action in Appendix 1.

As I have shown, the admission of the Pauline action has the effect of revocation or total or, as the case may be, partial annulment of the act concluded by the debtor with the third party. Some authors have stated that it is an action to cancel a legal act (Popescu, Anca, 1997). Others have appreciated that it is an action in the unenforceability of the legal act concluded by the debtor in fraud of the interests of his creditors (Stătescu, Bîrsan, 2008). And finally, it was also said that we are in the presence of an action to repair the damage caused to the creditor (Hamagiu, Georgean, 1928).

We share the point of view according to which the Pauline action is an action in reparation. Its legal basis vis-à-vis the debtor consists, on the one hand, in the general pledge right of the creditor, and on the other hand, in the idea that the debtor has committed, through the concluded act, an illegal act against the creditor, causing him a damage that must be repaired. Compared to the third person who concluded the fraudulent act with the debtor, the legal basis of the Pauline action differs, as it is with the onerous title or with the free title. When the deed is for onerous title, the revocation can only be ordered if the third party acquirer is in bad faith. Being in bad faith, the Paulian action is based on the principle of tortious civil liability. If the legal act is free of charge, the Pauline action is based on the principle that no one is allowed to enrich himself unjustly at the expense of another and will result in the revocation of the act, regardless of whether the third party is in good or bad faith. Therefore, both in one case and in the other, the Pauline action is intended to ensure the reparation of the damage caused to the creditor. Revoking the act is not an end in itself. It is the appropriate legal means of reparation of the damage caused to the creditor by concluding the act of fraud by the debtor with the third party acquirer. Revoking the act is not an end in itself. It is the appropriate legal means of reparation of the damage caused to the creditor by concluding the act of fraud by the debtor with the third party acquirer. Revoking the act is not an end in itself. It is the appropriate legal means of reparation of the damage caused to the creditor by concluding the act of fraud by the debtor with the third party acquirer.

Conclusions

The Paulian action is one, among many other legal means, that the creditor can resort to in order to correct the debtor's improper conduct, when the latter, through his fraudulent actions, compromises the possibility of satisfying the creditor's claim from the assets of the debtor's estate.

The Paulian action offers a great support to the pursuing creditors to return in their favor the goods taken out of the debtor's assets through fraud. The researched problem is of particular importance, given the fact that it concerns the insurance and security of relations between the creditor and the debtor. This problem has not only a legal-moral importance but also for economic development. Economic progress would be impossible without the insurance of creditors' claim rights, not by chance, as I mentioned above, since commercial relations appeared, the legislator has been concerned with granting insurance to creditors.

In the specialized literature, the thesis is presented, that the Pauline action gives creditors a right of guarantee under certain circumstances, which aims to make unenforceable a fraudulent legal act of the debtor vis-à-vis his creditors. This ground that underpins the Pauline action, derives from the principle that the entire patrimony of the debtor, legal or natural person, forms the common general pledge of all creditors of this debtor.

Abstract: Derivative action is a means of guaranteeing the execution of obligations placed by the legislator at the disposal of the creditor who has a certain and enforceable claim, through which he can exercise the rights and actions of his debtor in the event that the latter neglects or refuses to do so. It may happen that a debtor does not exercise his rights towards his own debtor or otherwise omits to defend his rights and legitimate interests, due to absence, negligence, disinterest, due to a feared or imminent insolvency, or even because he intends to harm his creditors by not performing his obligations. In contractual relations, the creditor and the debtor could stipulate a right of the creditor to obtain information from the debtor regarding the evolution of the exercise of its rights vis-à-vis third parties if the debtor begins to commit non-performance of the contract towards the creditor. Therefore, when the debtor neglects to exercise an action that belongs to him, the creditor can exercise that power of attorney with or without filing an action in court, indirectly, obliquely, on behalf of his debtor. It is certain that the object of the derivative action is limited to patrimonial rights and actions (given the fact that it is a measure by which the common guarantee of creditors is desired) and which are not closely related to the person of the debtor. Thus, the creditor will not be able to exercise, for example, the action to abolish or reduce the maintenance pension, the divorce action, the action to annul the marriage, etc. Thus, in this work, comparative elements between the jurisdictions that regulate the institution of derivative action are proposed for research. Also, the similarities that we noticed during the research of the given theme are also analyzed. These proposals were interspersed with the objective of the given paper – better understanding of the subject by paying special attention to the comparison procedure, as we consider this method of effective research.

Keywords: comparative analysis, oblique/derivative action, civil law, national and international level, obligations, subrogation.

INTRODUCTORY NOTIONS

The oblique action represents a means of protecting the rights of the creditor, being a mechanism for recovering claims, following the non-execution or improper execution of the contracted obligations. The origin of oblique action is obscure. In Rome there was a collective civil bankruptcy procedure, called *venditio bonorum*; a representative of the creditors acted on behalf of all and exercised the actions of the bankrupt. The bankruptcy estate was sold in its entirety to the same acquirer. The acquirer of the estate was considered the successor in rights of the bankrupt and had all his rights and actions.

In the specialized literature, the oblique action is defined as "the right of the creditor (oblique creditor) to exercise, in court or without its competition, the subjective rights of his debtor, who refuses or omits to exercise them to the detriment of the first, against by a third party (oblique debtor)" (Baies, 2015). Another important definition would be that given by the modernized Civil Code of the Republic of Moldova, published in 2019 in which. In accordance with art. 892 para. (1), the oblique action represents "the action of the creditor whose claim is certain, liquid and enforceable, in the name of his debtor and independently of his will, exercises his rights and actions in the event that the debtor, to the detriment of the creditor, refuses or omits to exercise".

If we were to generalize all the definitions listed above and propose one of our own, we can state that the oblique action is the civil action through which the creditor can exercise the rights and actions of the debtor or, when he refuses or neglects to exercise them. As a relevant example, we still propose solving a case, because we consider it effective to understand a subject by introducing the practical element in any subject addressed:

Example 1: We have three joint-stock companies: A, B and C. If the joint-stock company A has to recover an amount of money from the joint-stock company B, which in turn has to recover a debt from the joint-stock company C, firm A will be able to address firm C through the oblique action.

The doctrine assimilates it as a measure to preserve the debtor's patrimony and to prevent his eventual insolvency, thus ensuring and maintaining the chances of creditors to realize their claims. We can claim that

the role of the oblique action was born from the need "to reconcile two opposing legitimate interests: the interest of the debtor to manage his own affairs and the interest of the creditor to be protected against the inertia of his debtor" (Stătescu, 2008), and the field of application follows from the definition of the indirect action, the creditors being able to exercise through the indirect action all the debtor's patrimonial rights and actions, the civil status actions of the person being excluded, these being personal actions.

The Civil Code of Lithuania defines the indirect action in art. 6.68 para. (1) as the right of the creditor who has a certain and enforceable claim to exercise the rights of the debtor by filing a lawsuit on behalf of the debtor in case he hesitates to exercise these rights on its own or refuses to do so at the expense of the creditor's rights.

According to the doctrinaires C.Stătescu and C.Bârsan, the oblique action is that legal means by which the creditor exercises the rights and actions of his debtor, when he refuses or neglects to exercise them (Stătescu, 2000).

APPLICATION CRITERIA AND CONDITIONS

The law empowers a creditor to intervene in the legal sphere of his debtor only upon the meeting of certain conditions regarding the creditor and his claim as well as those regarding the debtor's situation and the subjective right exercised obliquely. The Romanian Civil Code provides that, in order to be able to file an oblique action, the following conditions must be met: conditions vis-à-vis the inactive debtor, conditions vis-à-vis the indirect creditor's claim.

1. Conditions relating to the creditor

a) Creditor status – Art. 892 paragraph (1) of the Civil Code of the Republic of Moldova grants legal power of attorney only to the creditor of the holder of the subjective right exercised obliquely. And vice versa, a co-owner cannot exercise, in this simple capacity, the rights of another co-owner over the same property; there is no creditor-debtor relationship between the co-owners.

b) The characteristics of the creditor's claim acting obliquely – The text of art. 892 paragraph (1) imposes the requirement of a certain, liquid and enforceable claim of the creditor acting obliquely.

– The *certainty of the claim* is expressed by the fact that it exists: no doubt or no objection can be attributed to it. Conversely, an uncertain receivable would be, for example, one affected by the condition. However, it is not necessary for the indirect creditor to hold an enforceable title that would confirm his claim with certainty, especially since the indirect action is not a measure to enforce the indirect creditor's claim, but only a "prelude to an enforcement measure "

– *Liquidity* of the claim signifies the idea that its amount (extent) is determined precisely. For example, in the case of the obligation to pay compensation for the damage suffered by the creditor, the amount must be determined definitively by the court, because otherwise it would not be possible to enforce the obligation.

– *Payability* implies that the debt is already due, the term for its execution has expired. Accordingly, the claim in question cannot be affected by any term.

If the relatedness requirements are met, the cross-action could be examined in a lawsuit with the creditor's action against the dormant debtor. Finally, the additions introduced to the Civil Code of the Republic of Moldova from March 1, 2019 promote the tendency to expand the area of protection granted by the oblique action: art. 731 par.(3) gives the pledge creditor a specific oblique action to defend the asset pledged by third parties. It protects the interest in kind of the pledge creditor both as the holder of the secured claim and as the holder of the real right of pledge; Art. 195 gives the partner, who is not a creditor of the company, an oblique action in repairing the damage caused to the company. This is what better protects the company and the other partners, because the damage will not be repaired to the partner who acts obliquely, but to the inert company itself.

c) Absence of the proportionality test – the size of the claim is irrelevant – the question arose whether the creditor's legal power of attorney is limited to the value of his own claim or whether he can claim the entire debt from the third party, even if it exceeds his claim.

Example 2: The creditor owes \$50,000 and the third-party debtor owes \$80,000. The oblique creditor can advance the oblique action only in relation to the amount of \$50 thousand if we start from the principle that it is not an action without interest, because the creditor's interest only extends up to \$50 thousand. This

reasoning, however, is not accurate. The debtor has, or could have, several creditors who will enter into competition with the one of them who exercises the oblique action. The latter therefore has the interest to determine the return to the heritage of as many assets as possible. But this is not an obligation, he can choose to act obliquely only within the limits of his own claim.

French jurisprudence also rejects the argument that the creditor's claim or the subjective right exercised have a reduced value (Civil Code of France).

2. Conditions towards the inactive debtor

The debtor can be any subject of law, even the state (Law Conseil D'etat 20 Oct. 2000). In order to justify the creditor's oblique action, the debtor must be inactive, i.e. not initiate the action that he can initiate ("the debtor refuses or omits to exercise them" — art. 892 paragraph (1) of the Civil Code of the Republic Moldova). The mere fact that the debtor has granted powers to an agent to exercise the subjective right does not remove his inertia if the agent fails to fulfill his mandate. The inertia of the principal equals the inertia of the principal himself.

After the creditor has started the action, the debtor can take it over, thus the debtor becomes its owner; the creditor can stay in the process, alongside the debtor, to protect his own interests.

Example 3: A is a manufacturer and has a contract with B (importer), who in turn has a contract with C (distributor). If B fails to enforce the contract with A, this renders C's action against B for forced delivery of the goods under the distribution contract impossible to succeed. Thus, C will be able to enforce the contract between A and B to bring the goods into B's estate and possession, and pursue them.

DEFINING ELEMENTS OF OBLIQUE ACTION

1. The indirect creditor has the right to claim the realization of a subjective right that does not belong to him;
2. The realized subjective right, real or debt, enjoys legal actions;
3. The debtor refuses or omits to exercise the subjective right in question;
4. That passivity damages the obligee.

The conditions for exercising the oblique action are deduced from art. 892 of the Civil Code of the Republic of Moldova, according to which:

1. The claim must be certain, liquid and enforceable;
2. The creditor acts on behalf of his debtor and independently of his will;
3. The debtor, to the detriment of the creditor, refuses or omits to perform his obligations;
4. The claim must still be liquid and payable at the latest at the time of the examination of the action;
5. The oblique action cannot be the subject of extrajudicial enforcement, that is, this action can only exist through action in the court of law.

According to art. 1560 para. (1) of the Civil Code of Romania by virtue of the oblique action, "the creditor whose claim is disputed and enforceable can exercise the debtor's rights and actions when they, to the detriment of the creditor, refuse or neglect to exercise them".

APPLICATION DOMAIN

All the debtor's rights and actions can be exercised by his creditors, except for strictly personal ones, but the existence of a general limit must be noted, in the sense that, in this way, creditors can only exercise the debtor's patrimonial rights and actions. The debtor's extra-patrimonial rights and actions cannot be exercised through indirect action, such as: the right to name, the right to a pseudonym, the right to honor, etc. The doctrine emphasized the fact that only the rights already born or entered into the debtor's patrimony can be exercised by the creditors, obliquely; they cannot substitute him in order to create new rights or to modify existing rights in his patrimony (Crețu, 2006).

By way of oblique action:

- can exercise the rights and patrimonial actions of the debtor;

– cannot exercise non-patrimonial rights and actions, such as:

1. parental rights;
2. the divorce action;
3. action to annul the marriage;
4. revocation of a donation for ingratitude, etc.

– the debtor can exercise rights against third parties, susceptible to legal action, such as:

1. the right to claim an asset owned by the debtor;
2. the right to demand payment of a claim belonging to the debtor;
3. the right to request the return of an unpaid payment.

– can exercise debtor's rights that are susceptible to extrajudicial exercise, such as:

1. measures to preserve some rights in the heritage;
2. providing evidence;
3. fulfillment of some publicity formalities (registration in the electronic archive of movable real guarantees, tabulation of a right in the land register);
4. fulfillment of information formalities on the debtor's account;
5. exercising the oblique action times
6. taking some insurance measures.

EXCEPTIONS – EXCLUSIVELY PERSONAL PROPERTY RIGHTS AND ACTIONS

-The scope of the indirect action is only in the scope of the debtor's patrimonial rights and actions; extra-patrimonial rights and actions are foreign to the general pledge of creditors and are therefore not liable to be exercised obliquely. As we know, it is not allowed for the creditor to replace the debtor in the administration of his patrimony. As a result, the debtor is the only one in a position to conclude acts of administration and acts of disposition regarding his assets and rights. Two more are added to these limits:

– The patrimonial rights and actions that are strictly related to the person of the debtor cannot be exercised indirectly by his creditors. This limitation of the right to apply the oblique action is expressly provided in the Civil Code of the Republic of Moldova, where it is ordered that the rights and actions of the debtor can be exercised "except for those that are exclusively personal". It is about those rights and actions, which are closely related to the person of the debtor and the exercise of which is left by law to his free discretion for "personal moral and family considerations".

– Intangible patrimonial rights – creditors cannot exercise or realize, obliquely, the patrimonial rights of the debtor that are imperceptible, such as: the right to housing, the right to use, the right to receive a scholarship, the right to own property for personal use and household items needed by the debtor and his family, as well as objects of religious worship if there are not more of the same kind, etc.

EFFECTS OF OBLIQUE ACTION

The oblique action does not deprive the debtor at any stage of the independent exercise of the action or, as the case may be, of concluding a transaction contract. In particular, it is interested in its procedural quality and the effects of the final judgment against the inactive debtor.

The indirect creditor assumes the capacity of representative of the inert debtor. The court must subpoena the inactive debtor in the process because the process decides on his rights and assets. Although an express text is missing in the matter of examination of oblique actions, the citation of the debtor is required based on art. 6 ECtHR (right to a fair trial). In practice, this requirement is satisfied whenever the oblique action is examined in connection with the action of the oblique creditor against the inactive debtor for the satisfaction of his endangered debt".

1. The effects towards the creditor who exercises the oblique action – The creditor indirectly exercises the rights of his debtor; he does not exercise a right of his own. Therefore, the effects of the oblique action are produced in the debtor's patrimony and in the general pledge of the creditors. This means that the result obtained benefits all the creditors of the negligent debtor and not only the one who exercised the action.

2. Effects of the indirect action against the third party defendant – The third party can invoke, for example, the compensation of his debt against a claim he has against the plaintiff's debtor, even if that claim arose after the introduction of the indirect action. Also, the third party can oppose the transaction with the debtor after this date. The defendant can only object to the creditor the exceptions that can be objected to the debtor; he does not have the right to rely, in defense, on the exceptions born from his relations with the creditor; such exceptions may be opposed to the creditor only when he acts in his own name to realize a right of his own against the defendant.

3. The effects of the oblique action against the passive debtor – The problem that arises in connection with the effects of the oblique action against the passive debtor is that of knowing whether or not the court decision by which the case is resolved is opposable to the debtor; in other words, this judgment has or does not have res judicata authority against the debtor. The answer depends on whether or not the debtor was subpoenaed. If he was brought into the case, the final and irrevocable judgment has, without a doubt, authority over him, being opposable to him. In the second situation, when the debtor has not been brought into the case or process, opinions are divided. Some argue that the judgment rendered has equal authority over the debtor. According to other authors, the debtor who was not brought into the case must be considered a third party to the decision issued by the court, which will not be against him.

4. The effects towards the other creditors and the passive debtor – The issue that needs to be resolved is whether or not the judgment pronounced in the settlement of an oblique action promoted by a creditor is opposable to the other creditors of the same debtor. In order to formulate a thorough answer, we must distinguish between the situation in which the action was admitted and that in which it was rejected. If the court's decision is to admit the oblique action, it benefits all the debtor's creditors, even if they did not intervene in the process. In the situation where the decision is rejected, i.e. unfavorable to the creditors, the opinions are different. In an opinion, it is appreciated that it is opposable to the other creditors by their debtor who, as a rule, participates in the process. In the second opinion, it is stated that the solution depends exclusively on the circumstance of whether the debtor was included in the case. In the hypothesis in which it was introduced in the case and the court's decision is to reject it, it will have working power, judged both against the debtor and in relation to all creditors and; on the contrary, if the debtor has not been brought into the case, the judgment rejecting the oblique action, by virtue of the principle of relativity of the res judicata, will not be opposable neither to the debtor nor to his other creditors, with the exception of the plaintiff creditor (http://jurisprudenta.csj.md/search_col_civil.php?id=56151).

LEGAL NATURE OF OBLIQUE ACTION

The discussion of the legal nature of the oblique action in French, Italian and Romanian law, and the refusal, in these systems, to assimilate it to a legal representation, consists in the rule that the creditor introduces the oblique action in his own name and not in the name of the inert debtor. However, a good part of the doctrine claims that, in essence, the mechanism consists of an "objective representation" (Didier, 2001). Jean Carbonnier wrote that "the creditor represents his debtor and that the oblique action is not an action of his own that would belong personally to the creditor" (Carbonnier, 2000). The law on the modernization of the Civil Code of the Republic of Moldova diminished this debate, specifying, in art. 892 paragraph (4), that the indirect creditor is a legal representative of the inert debtor, but under the conditions and limits provided by art. 892-894, and not all-encompassing as a parent or guardian.

The doctrinal debate is fueled by a confusion: some authors analyze the effects of the oblique action on the part of the inert debtor, for whom the exercise of his right has a transformative effect, it changes the composition of his patrimony, instead of a debt, he will, as a result, own an asset or money obtained from the third party under the claim; other authors move the analysis of the oblique action to the side of the oblique creditor and have only to note that his claim is not capitalized in this way, but only paves the way for a successful capitalization in the future (Brenner, 1999).

The specification is not only of theoretical importance, but also of procedural importance, because it explains why the third party cannot object to the creditor with exceptions regarding his claim against the inactive

debtor, apart from the absence of the necessary conditions to act obliquely (legitimization relationship). The third party can only raise the exceptions specific to its relationship with the inert debtor (own creditor), such as the lateness exception regarding the subjective right exercised obliquely, but it cannot raise the exceptions specific to the relationship between the indirect creditor and the inert debtor. These latter exceptions are to be discussed in a possible trial between the oblique creditor and the inert debtor. Therefore, by its nature the oblique action is less than a measure to enforce the debt of the oblique creditor, but more than a measure to secure the debt of the oblique creditor. It is prior to execution (https://animus.md/adnotari/892/#_ftn5), an act that prepares the ground for it.

And the Italian doctrine recognizes the complex nature of oblique action, protecting several contradictory interests simultaneously (Cesare , 2020), and its purpose is to acquire useful, economically advantageous results in the debtor's patrimony; it grants a power of legal substitution in its own interest; this power integrates a potestative right, namely a substitute potestative right (Cesare , 2020).

CONCLUSIONS

In conclusion, we consider that in the context of the accession to the market economy for most of the signatory states to the European Convention on Human Rights, the oblique action represents an additional and effective guarantee of the protection of creditors' rights, which allows the removal of uncertainty and the reduction of hesitations of individuals and legal entities, in in general, as well as economic agents, in particular, regarding the inclusion in the legal relations that have as their material object the unsecured debt. Considering the evolving character of the European Convention, the introduction of the oblique action is an imperative, necessary for adapting to the existing reality in the socioeconomic order of the High Contracting Parties. In this sense, we believe that the most effective way would be to indicate the need for the respective amendment of the legislative framework by means of general measures.

Also, only the rights actually existing in the debtor's patrimony are susceptible of exercise by oblique action by his creditors. Therefore, the debtor is exclusively able to conclude acts of disposition and acts of administration regarding his assets and rights. It can be said that the scope of the oblique action is circumscribed to the sphere of patrimonial rights that are part of the category of real rights or debt rights. Potestative patrimonial rights (consist in the power that their owner has to intervene, through his unilateral will, in legal situations in which the interests of other persons are also present, who have the obligation to obey) cannot be exercised obliquely by creditors of the holders of these rights. And this all the more so as the power rights have, most often, a personal character, their exercise being in the exclusive power of the debtor.

Abstract: The penalty clause is an important mechanism in civil contracts to protect the rights and interests of the contracting parties if one of them fails to fulfil its obligations. In the Republic of Moldova, this provision is regulated by the Civil Code, which sets out the conditions and limits under which a penalty clause may be included in civil contracts.

When a contract is concluded, it is uncertain whether one partner or the other will fulfil their contractual obligations properly. Sometimes a contracting party may not be able to perform its obligations, sometimes it may, in bad faith, try to delay performance as long as possible. For diligent creditors, the legislator has regulated several ways in which it is possible to guarantee the performance of obligations. By guaranteeing obligations, we mean all the legal means, i.e. the rights and actions recognised directly by law or arising from the agreement of the parties to the obligation, the exercise of which ensures the enforcement of the claim.

A penalty clause is a contractual provision whereby the parties assess the loss in advance, stipulating that the debtor must pay the creditor a sum of money or other property in the event of non-performance of the obligation.

The purpose of this article is to analyse the regulations on the penalty clause in the Civil Code of the Republic of Moldova, to highlight its importance in civil contracts and to examine the conditions under which it can be applied, as well as its limitations and legal effects.

It will go on to provide details on the concept of a penalty clause, how it can be included in contracts, its limitations and legal effects in the Republic of Moldova, as well as examples of situations in which the penalty clause can be used to protect the interests of the contracting parties.

Keywords: creditor, debtor, penalty clause, civil contracts, non-performance, legal effects.

INTRODUCTION

In fact, the penalty clause represents an advantage for the creditor, avoiding the judicial assessment of damages, the creditor not being obliged to prove the existence and extent of the damage or even to receive the penalties without any damage suffered. In order to obtain payment of the penalty clause, he only has to prove the fact of non-performance, improper or late performance (Pop, 2015).

The penalty clause is a contractual provision whereby the parties agree to bear certain consequences in the event of failure to comply with the obligations assumed by the contract. This clause is intended to discourage the parties from breaching the provisions of the contract by giving them a financial or other incentive to comply with their commitments.

In Moldovan civil law, a penalty clause is a form of contractual liability that can be included in a contract, and its purpose is to protect the interests of the parties to the contract and to encourage the performance of contractual obligations. The penalty clause can be included in any type of civil contract, such as sale-purchase contracts, rental contracts or service contracts.

If one of the parties fails to comply with its contractual obligations, the penalty clause can be activated and a range of sanctions, such as the payment of damages or the enforced performance of contractual obligations, can be imposed on the offending party.

It is important to note that the amount of the penalty clause must be proportionate to the value of the contractual obligation in order to avoid excessive penalties which may be considered abusive. The penalty clause must also be formulated in a clear and precise manner so as to avoid any room for interpretation or confusion.

BASIC CONTENT

The Civil Code of the Republic of Moldova defines the penalty clause in Art. 947 para. 1, providing: The penalty clause is a contractual provision by which the parties evaluate the damage in advance, stipulating that the debtor, in case of non-performance of the obligation, shall remit to the creditor a sum of money or other property (penalty). It follows from the legal text that the object of the obligation whose non-performance triggers the application of the penalty clause may be any obligation to give, to do or not to do.

Dimitrie Alexandresco defines a penalty clause as an ancillary agreement whereby the parties determine in advance the equivalent of the damage suffered by the creditor as a result of non-performance, late performance or improper performance of the obligation by the debtor. [Dimitrie Alexandresco]

The accessory nature of the penalty clause is explained by the dependence of the penalty clause on the obligation arising from the main contract. The penalty clause in isolation will be non-existent; it cannot be imagined outside a contractual context, outside a pre-existing obligatory relationship. The penalty clause is - as has been argued in French doctrine - "a contract within a contract", according to Professor G. Paisant, or "a unilateral accessory and conditional contract, distinct from the contract containing the debtor's main undertaking" [G. Paisant], according to D. Mazeaud, and the authority of the principle of *accessorium sequitur principale* must therefore be recognised. [D. Mazeaud] It should be emphasised that the phrase "contract within a contract" must not be misleading. The penalty clause may indeed be stipulated in the main contract, just as there is nothing to prevent its insertion in a separate document. From a formal point of view, the penalty clause is not subject to any particular solemnity.

The penalty clause has the following legal characteristics:

- it is an ancillary agreement;
- it has practical value because it fixes in advance the amount of damages;
- it is binding between the parties, like any contract;
- it is payable only when all the conditions for the award of damages are met.

Being of a contractual nature, the penalty clause is intended to determine in advance the amount of the damage to be suffered by the creditor, so that the court is not called upon to determine it itself by its own assessment, but only to establish whether or not performance has been effected in accordance with the terms of the contract. This means that the court cannot require the creditor of the obligation, who invokes the penalty clause, to prove the damage suffered.

In practice, the courts have held that "the penalties stipulated by the parties in the loan agreement have the character of a penalty clause, established for late performance of the obligation to repay the sum borrowed.

According to Article 948 of the Civil Code of the Republic of Moldova, the form of the penalty clause is drawn up in authentic form if the law requires authentic form for the legal act to which the clause applies. In other cases, the penalty clause shall be drawn up in writing, under penalty of absolute nullity.

The form of the penalty clause may be freely agreed between the parties, subject to compliance with the legal provisions on the conditions of validity of contracts and contractual clauses. The penalty clause must be clear and precise so that it can be applied without difficulty and is not open to interpretation.

For a penalty clause to be valid, it must fulfil the following conditions:

- it must be set out in writing;
- it must be proportionate to the seriousness of the breach of the obligation;
- it must be provided for in the contract or in the contract supplement.

If the penalty clause is considered unfair or disproportionate, it can be challenged in court. In such cases, the court may decide to reduce the amount of the penalty clause or to annul it in its entirety.

The right to claim other damages is provided for in Article 949 of the Civil Code of the Republic of Moldova and consists in the possibility for the injured party to claim, in addition to the amount provided for in the penalty clause, other damages if the damage suffered exceeds the amount provided for in the penalty clause or if the penalty clause is considered ineffective.

Thus, if one party fails to fulfil its contractual obligations, the other party may claim the amount provided for in the penalty clause in addition to any other damages or expenses incurred. Such other damages may be

awarded according to the actual loss suffered and may include legal costs or financial losses suffered as a result of the non-performance of contractual obligations.

In the Civil Code of the Republic of Moldova, Art. 949, the right to claim other damages is stipulated:

(1) If the penalty is stipulated for the case when the debtor does not perform the obligation, the creditor may demand both the performance of the obligation and the payment of the penalty. Both the performance of the obligation and the payment of the penalty may not be demanded if the penalty has been stipulated by way of compensation in lieu of performance and not merely as a means of guaranteeing the performance of the obligation.

(2) The creditor has the right to claim compensation for the loss not covered by the penalty (inclusive penalty clause). In cases provided for by law or contract, the creditor may claim either damages or a penalty (alternative penalty clause), may claim compensation for the loss over and above the penalty (punitive penalty clause) or may claim only a penalty (exclusive penalty clause).

(3) If the creditor has received the performance, he may only demand payment of the penalty if he has expressly reserved this right when receiving the performance.

The penalty clause in the case of an indivisible obligation refers to the situation where several persons are obliged to perform an obligation jointly and severally. In this situation, the penalty clause may be provided for in the contract to ensure performance of indivisible obligations and to compensate for any damage caused by non-performance.

Thus, if one of the persons bound fails to perform the indivisible obligation, the other persons may claim payment of the amount provided for by the penalty clause, in addition to other damages or expenses incurred. It is important to note that in the case of indivisible obligations, each of the debtors is liable for the whole obligation and not just part of it. It is also important to bear in mind that the penalty clause may be considered invalid in the case of indivisible obligations in certain situations. If the penalty clause is considered excessive or unjustified, the court may decide to reduce it or remove it completely from the contract.

In conclusion, the penalty clause in the case of indivisible obligations can be an effective way of ensuring performance and compensating for any damage caused by non-performance.

According to the Civil Code of the Republic of Moldova, art. 950, the penalty clause in case of indivisible obligation implies: "If an indivisible obligation is guaranteed by a penalty clause and its non-performance is due to the fault of a debtor, the penalty may be demanded either in full from the guilty debtor or from each co-debtor for his part. In the latter case, each co-debtor has a right of action against the one who caused the penalty to accrue."

In the case of divisible obligations, the penalty clause may be provided for in the contract to ensure performance of the obligations and to compensate for any damage caused by non-performance. A divisible obligation is an obligation that can be divided into several parts or fractions so that it can be performed in part or in full by the debtor.

Thus, if the debtor fails to perform the divisible obligation, the creditor may claim payment of the amount provided for in the penalty clause, in addition to any other damages or costs incurred. It is important to note that the amount fixed by the penalty clause must be proportionate to the damage caused and not excessive.

It is important to bear in mind that, in the case of divisible obligations, the debtor may be required to perform part or all of his obligation. Thus, if the debtor has fulfilled only part of his obligation, the creditor may require payment of the penalty clause according to the amount of the unfulfilled obligation.

According to the Annotated Civil Code art. 951 the penalty clause in case of divisible obligation is:

(1) If a divisible obligation is secured by a penalty clause, the penalty is also divisible and accrues only against the co-debtor who has not performed the obligation and only for the part of the obligation to which he is bound.

(2) Paragraph (1) shall not apply to joint and several obligations. Nor shall they apply if the penalty clause was stipulated to prevent partial payment and one of the co-debtors has prevented full performance of the obligation. In this case, the co-debtor is liable for the entire penalty and the others for their share of the obligation. In the latter case, each co-debtor has a right of action against the one who caused the penalty to accrue.

According to Article 952 of the Civil Code, a statutory penalty clause is a contractual clause that sets a sum of money that the parties must pay if one of them breaches the terms of the contract. This amount is called a penalty and is designed to discourage breach of contract.

Under Romanian law, the statutory penalty clause is regulated by the Civil Code and can be included in contracts under the following conditions:

- the penalty clause must be proportionate to the value of the main obligation set out in the contract;
- the penalty clause must be expressly mentioned in the contract;
- the penalty clause cannot be used to compensate for actual damages suffered by the injured party.

If the penalty clause is found to be unlawful or unfair, it can be annulled or reduced by the court.

The statutory penalty clause states that "The penalty established by law cannot be excluded or reduced in advance by agreement of the parties."

Article 953, Reduction of Penalty in the Civil Code of the Republic of Moldova outlines that:

(1) In exceptional cases, taking into account all the circumstances, the court may order, at the request of the debtor, a disproportionately high reduction of the penalty. In reducing the penalty, account shall be taken not only of the pecuniary interests but also of other interests of the creditor protected by law.

(2) A reduction of the penalty shall not be allowed where the penalty has been extinguished by voluntary enforcement.

(3) No reduction of the penalty for late performance of the pecuniary obligation shall be allowed if the rate of the penalty is equal to or lower than the statutory rate applicable under Article 942.

(4) Any clause derogating from the provisions of this Article to the detriment of the debtor shall be null and void.

If a penalty clause is considered unlawful or unfair, the court may decide to cancel it or reduce the penalty to a more reasonable amount.

According to the Romanian Civil Code, the court may reduce the penalty in the following cases:

- if the amount of the penalty is excessive or disproportionate to the damage suffered by the injured party;
- if the party who breached the contract tried to remedy the breach before being sued;
- whether the breaching party had reasonable grounds for the breach;
- whether the penalty was paid in part or in full by the party in breach of contract.

It is important to note that the reduction of the penalty does not mean that the breaching party will no longer have to pay any penalty. It will have to pay a smaller amount, proportionate to the amount of the principal obligation under the contract.

Functions of the penalty clause. In contractual relations, the parties have the possibility, either in the contract or by a separate agreement made after the conclusion of the contract but before the damage occurs, to determine the amount of damages due by the debtor as a result of non-performance of the contractual obligations. At the same time, if a penalty clause is inserted in contracts, the injured party is spared lengthy, costly and uncertain legal proceedings. This avoids a lawsuit between the contracting parties to determine the compensation due for the damage caused to the creditor by the non-performance of contractual obligations.

The creditor benefiting from the penalty clause is relieved of the obligation to prove the damage suffered as a result of the wilful non-performance of the principal obligation. This clause gives the creditor the choice between enforcement in kind of the principal obligation and enforcement of the penalty clause. The option is at the creditor's discretion and not at the debtor's discretion. The parties are therefore relieved of any evidence as to the existence and extent of the damage and, by implication, the amount of damages owed by the debtor. The creditor only has to prove the fact of non-performance, defective performance or late performance of the contractual obligation assumed by the debtor.

The functions of the penalty clause have been discussed in the literature and in practice. There is no uniform view as to their number. However, we agree with the view that the main functions of the penalty clause are as follows: the function of guaranteeing the debtor's performance; the function of mobilising the debtor to perform his contractual obligations; the function of sanctioning; the function of remedying.

The function of guaranteeing the performance of obligations by the debtor. This function, although not regulated by law, arises from the practical reasons why this type of clause is inserted in contracts. The insertion of a penalty clause makes it a legal means of putting pressure on the debtor.

The guarantee function of the penalty clause is based on the idea that, by stipulating it in the contract, the creditor is in fact seeking performance of the principal obligation. The purpose of the penalty clause remains only subsidiary. The term 'security' must be understood in the broadest sense, including all legal means available to the creditor to enforce the debtor's obligations. Thus, the creditor, by stipulating the penalty clause, has the guarantee that he will receive what is due to him from his debtor.

The penalty clause is one of the so-called "security interests in rem", the purpose of which is to induce one of the parties to perform in kind, properly and on time a particular obligation for which that security has been stipulated; in this case the penalty clause has been stipulated. At the same time, it should be made clear that this is not a guarantee in the strict sense of the term, which is of such a nature as to break the rule of equality of creditors.

The stipulation of the penalty clause ensures compliance with the obligations assumed in the contracts, encouraging the debtor to perform them properly and in good faith. This "warning" puts material and moral pressure on the debtor to avoid the application of the penalty clause. The guarantee function is effective only to the extent that the amount of the penalty is appropriately set at an amount at least equal to the damages the debtor would be obliged to pay in the absence of the penalty clause. [Florin Luduşan]

The debtor's mobilisation function in the performance of contractual obligations. By its drastic nature, the penalty clause is a means of mobilising the debtor to correct contractual conduct, in order not to expose himself to the negative consequences arising from the implementation of this clause. The penalty clause becomes mobilising for the debtor when, in the event of non-performance of the obligations at the time or in the place agreed, the creditor requires the debtor to perform both the principal obligation and the penalties. This function of the penalty clause is particularly evident where the amount of the penalty is greater than the amount of the damage caused to the creditor by the non-performance, improper performance or late performance of the obligation to which the debtor has agreed. The function of mobilising the debtor in the performance of contractual obligations or the incentive function of the penalty clause may take the form of progressive penalties for late performance. [Florin Luduşan]

The sanctioning function of the penalty clause. The penalty clause penalises the unlawful non-performance of obligations by the debtor. Thus, the penalty clause is a private contractual penalty. According to this function, the penalty clause is due irrespective of the existence and extent of the damage caused to the creditor. The penalty clause fulfils a punitive function in particular where the amount of the penalty is greater than the amount of the damages, as it is possible that the damage is not present, in which case the payment of the penalty serves to punish the mere fact of non-performance of the obligation and appears as a real civil fine - from a means of prevention it becomes a means of repression, a sanction. The debtor is obliged to pay the sum of money or the value of the assets specified in the clause, even when this is greater than the value of the damage actually suffered by the creditor. [Florin Luduşan]

The compensatory, valuation and reparation function. The reparatory function (also called the compensatory function) is the most important function according to most legal doctrine in our country. The purpose of the penalty clause is to make good the damage suffered by the creditor as a result of the debtor's non-performance, defective performance or late performance of the contractual obligations. [Florin Luduşan]

Legal characteristics of the penalty clause. From the legal provisions, we can deduce the following defining legal characteristics of the penalty clause:

a) it is a contractual clause;

The penalty clause is a contractual clause contained in the contract between the parties or separate from it. Obviously, the law cannot lay down penalty clauses. It can, however, lay down legal penalties applicable in the event of non-performance of obligations expressly specified in the law. The statutory penalty limits the freedom of the parties to fix the size of the penalty, so that the penalty set by law cannot be excluded or reduced in advance by agreement of the parties, but can be increased by a penalty clause.

b) is accessory;

Since it applies in the event of non-performance of a contractual obligation, the penalty clause is ancillary to the contract from which the obligation arises. According to the principle of ancillarity, the penalty clause will follow the legal situation of the contract in which it is contained (principal accessory). Nullity, assignment or extinction of the contract will have the same legal consequence for the penalty clause. Not vice versa. The nullity of the penalty clause will not entail the nullity of the contract in which it is contained.

As regards the accessory nature of the penalty clause, it should be noted that there is an independence between the agreement in which it was stipulated and the possible invalidity of the penalty clause, but also a dependence of the penalty clause on the validity of the main agreement. This is also confirmed by Art. 1540 para. (1) of the Romanian Civil Code, which states that "The invalidity of the main obligation entails the invalidity of the penalty clause. The nullity of the penalty clause does not entail the nullity of the main obligation". By way of exception, the extinction of obligations by termination or rescission does not lead to the extinction of the effects of the penalty clause provided for non-performance.

c) is solemn;

The penalty clause must be in writing, and this requirement is imposed by the law *ad validitatem* even if the secured contract is also valid in oral form. If the penalty clause guarantees a contract for which the law requires authentic form, then the penalty clause, in the light of its ancillary nature, must also be in authentic form.

The solemnity of the penalty clause is required primarily in order to capture the debtor's clearly expressed willingness to assume payment of the penalty, which may sometimes be higher than the actual loss. Secondly, the written form provides certainty as to what the actual size of the penalty is and for which specific assumptions the penalty will be paid.

We can therefore conclude that the interpretation of a penalty clause will be governed by the principle of transparency, in the sense that its text must be clearly formulated and penalties will be imposed only for the assumptions specified in the clause and will not be extended to the types of non-performance not specified in it.

Operation of the penalty clause. As regards the operation of the penalty clause, it becomes enforceable when the conditions of the debtor's contractual liability are fulfilled.

The question of the possibility of combining penalties with performance in kind was addressed by the legislator in Article 1539 of the Romanian Civil Code. According to this article "The creditor may not demand both the performance in kind of the principal obligation and the payment of the penalty, unless the penalty has been stipulated for failure to perform the obligations at the time or place fixed. In the latter case, the creditor may claim both performance of the principal obligation and the penalty unless he waives this right or accepts, without reservation, performance of the obligation".

The following solutions follow from the aforementioned Article:

1. The penalty clause may not be aggregated with performance in kind or with compensatory damages where it has been provided for non-performance;
2. The penalty clause may be cumulated with enforcement in kind when it was provided for non-performance of obligations;
3. Where the clause was provided for non-performance, it may not be aggregated with compensatory damages, but may be aggregated with default damages if there is also delay in performance.

The final issue to be considered in the context of the penalty clause is its operation. There are two special cases of operation of the penalty clause. In the case of a principal obligation which is indivisible but not joint and several, if non-performance is due to the fault of one of the debtors, the creditor is entitled to claim the entire penalty from the debtor responsible for non-performance or to claim partial payment of the penalty from each debtor indivisible, but only for its part. If the principal obligation is divisible, then the penalty is also divisible and will be borne by the co-debtor guilty of non-performance and only in respect of his share. In the case of an indivisible obligation, the penalty may be claimed from the entirety of the culpable debtor, who has a right of recourse against the other debtors.

By way of exception, the rule of severability of the penalty clause in the case of a divisible principal obligation does not apply where the function of the penalty clause was precisely to prevent partial payment and one of

the debtors has prevented performance of the obligation in full. In this situation, the entire penalty may be claimed from the culpable debtor.

CONCLUSION

The penalty clause is a contractual provision whereby the parties agree that in the event of non-performance of contractual obligations, the party in breach of the contract shall pay a sum of money by way of penalty. This amount does not represent the actual damages suffered by the party who has suffered the loss, but is a fixed amount, provided for in advance by the parties, which is intended to discourage breach of contract.

There are different views on the usefulness of the penalty clause in contracts. On the one hand, some argue that the penalty clause can be useful in situations where it is difficult to determine the actual damages suffered by the injured party and can be a means of deterring breach of contract. On the other hand, others consider that the penalty clause may be excessive and may be an unjustified sanction which can be used by one party to intimidate or put pressure on the other party.

It is important to note that the penalty clause is only legal if it is explicitly stated in the contract and is proportionate to the damage suffered. Otherwise, it can be considered unfair and can be annulled by the court.

In conclusion, the penalty clause may be useful in certain situations, but it must be used with caution and must be proportionate to the damage suffered. It is important to set out the contractual provisions clearly and avoid any ambiguity or uncertainty that could lead to misinterpretation.

Abstract: In the civil circuit, sometimes there is a need to transmit the right of claim from the content of a legal report. For example, a person is the holder of a claim whose enforceability is affected by a suspensive term, that is, the claim is to be honored at a certain time. However, this creditor wants to capitalize on his claim before the deadline, and finds a person (natural or legal) who is ready to wait for the deadline to be fulfilled. The creditor sells his claim to this person. In this way, he makes a transfer (assignment) of the claim.

Therefore, debt assignment is a legal transaction by which the creditor (assignor) transfers its rights and obligations on a debt to a third party (assignee), in exchange for a sum of money or other benefits. The assignee becomes the debtor's new creditor and has the right to collect payment of the debt according to the terms and conditions originally established between the debtor and the original creditor. If the claim is assigned without the debtor's consent, the debtor may refuse to pay the new creditor and challenge the validity of the assignment. It follows that it is important that the transaction is carried out in accordance with the applicable laws and regulations in this regard.

Thus, the assignment of debt, admitted in Roman law, at first by indirect means, and later also by direct means, perfected in the medieval environment, became, in the modern environment, an autonomous means of common law, through which they can transfer debt rights based on an agreement between the old creditor (assignor) and the one who replaces him (assignee).

Keywords: assignment of debt, right, obligation, creditor, debtor, third party, transferor, transferee, transfer, debt, patrimony.

INTRODUCTION

Sometimes companies fail to collect on time the receivables they have from debtors. They are forced to use an instrument called the assignment of debt so as not to affect the performance of the business.

Classically, the content of the binding legal relationship that is established between the debtor and the creditor consists of two correlative components: the creditor's right to claim from the debtor the performance he owes and the debtor's duty to perform that performance. Therefore, the debtor's right of claim is the asset element and the debt belonging to the debtor is the passive element.

These legal operations, through which the transmission on a particular basis of the elements of the obligational legal relationship - the claim and the debt - takes place, are legislated in the civil law of the Republic of Moldova through the institutions of assignment of claim and takeover of debt. The Civil Code of the Republic of Moldova regulates these institutions in Chapter III of Title I of Book Three.

BASIC CONTENT

Historical origin of the assignment of a claim

The assignment of a claim has its origins in Roman private law, being one of the many ingenuities of Roman jurisprudence. Initially, Roman law did not allow that in a *vinculum iuris* it was between another creditor. The transmission of a claim between vineyards was, in theory, inadmissible because the obligational relationship, both from an active point of view (creditor's right) and from a passive point of view (the debtor's performance), was strictly personal in nature. The debtor's performance was inextricably linked to the person of the creditor in receipt of the benefit, just as the creditor's right was inextricably linked to the person of the debtor to whom he was entitled to claim the benefit, so that no change of person could be made. Just as the demands of life have claimed such a replacement, the Roman juriconsults, without denying traditional principles and without openly acknowledging the institution of assignment of claims, resorted to the application of already existing

institutions in order to practically achieve the result of the assignment. Initially, one of these institutions was novation.

The ineffectiveness of the novation served as a basis for resorting to another process, called *procuratio in rem verso*, which was the basis for the gradual evolution of the institution of the assignment of the claim. Thus, the assigning creditor empowered by mandate a third party (assignee) with the right to summon the debtor to court and thus to collect his claim, while being relieved of the obligation to return to him everything he had collected from the debtor. The procurator, acting on his own account but on behalf of the assignor, was qualified as procurator in rem suam. As plaintiff, the name of the assignor appeared, but the collection of the debt was made in favor of the procurator. This procedure is not a genuine assignment, since the assignor remained to be the holder of the claim until the moment of conviction of the debtor, after which the assignee acquired an independent right.

The legislation of the imperial era managed to eliminate this shortcoming, thus beginning to take shape the assignment of the claim as an autonomous institution, due to the introduction of the *actio utilis suo nomine*, which gives the assignee the autonomous right to demand from the debtor the payment of the claim, and the establishment of the obligation to inform the debtor about the assignment that took place excluded the possibility for the debtor to make the payment of the assignor. After these legislative innovations, the assignee the interest and could verify against the debtor the same right of claim on the basis of the assignment report, which departed from the mandate and assumed the configuration of a new institution: the assignment of a claim.

Definition

Assignment of a claim is the contract by which the creditor transmits his right of claim, for consideration or free of charge, to another person. The law provides that a transferable and sessile claim may be assigned by the holder (assignor) to a third party (assignee) on the basis of a contract, according to art. 823, para. (1) Civil Code. This operation involves three persons: the creditor transmitting the claim, called the assignor; the acquirer of the claim, called the assignee; the debtor of the assigned claim, called the assigned debtor. The parties to the assignment contract are the assignor and the assignee, the assigned debtor being a third party to the assignment contract.

Conditions of assignment of a claim

Being a contract, the assignment of a claim must meet all the conditions for the validity of contracts.

Any transferable and despicable claim may be the subject of assignment, without distinction being made between pecuniary claims and claims of a different nature and regardless of their source (act or legal fact). Assignment is possible in the case of pure and simple claims, but also in the case of claims affected by modalities, current or future claims, although opinions on the possibility of submitting future claims are contrasting. Most of the times, pecuniary claims are assigned, affected by suspensive terms (Baieş, 2015).

There are claims that cannot be assigned because they are declared inaccessible by law, given the close connection of the claim with the person of the creditor. Thus, the law prohibits the assignment of:

1. Claims relating to the collection of maintenance, compensation for damage to the life and health of the person, and other rights relating to the person of the creditor, for example, the claim for compensation for non-material damage.
2. The right of pre-emption when buying a share of the common property. When such a prohibition was introduced, the legislature started from the fact that the preferential right to purchase a share of the common property on the shares relates only to the co-owners. If the assignment of the right of pre-emption to the purchase of a share-share is admitted, the rights of the co-owners will be neglected (Cantacuzino, 1998).
3. Claims by agricultural enterprises to the state according to art. 14 para. (3) from Law no. 392 of May 13, 1999 regarding the restructuring of agricultural enterprises in the process of privatization. In court practice, cases are known when the assignment contract has been declared void on the ground of non-compliance with these provisions (6).

The provisions of art. 823 para. (4) of the Civil Code of the Republic of Moldova is without prejudice to the possibilities of the parties to declare inaccessible certain claims, in whole or in part, which is called conventional inaccessibility. Such clauses are valid if justified on a legal, serious and legitimate interest, which may be patrimonial or moral.

In the literature, it is mentioned that the question of determining the credibility or inaccessible character of a particular right cannot be solved by a formula of principle. Thus, in order to determine the assignability of a right, it is necessary to analyse its nature and features, the purpose of the grant, the conditions of the grant, the conditions of its exercise, its analogy with other rights the assignment of which is expressly permitted or prohibited.

The cause of the assignment of the claim is the objective pursued at the conclusion of the civil legal act, the interest which the parties pursue. The cause must exist, be real, licit and moral.

The assignment of a claim must not affect the rights of the debtor, nor can it make his obligation more onerous, according to art. 823, para. (2) Civil Code R.M., because, it does not affect the being of the obligation.

As the debtor is not a party to the contract, his consent is not binding. The law provides that the holder of a claim may transmit it, without the debtor's consent, to a third party, if this does not contravene the essence of the obligation, the agreement between the parties or the law.

Regarding the formal conditions, the law provides that the assignment of the claim must be concluded in the form required for the legal act on the basis of which the assigned claim arose, according to art. 824 Civil Code R.M.

Content of the contract for the assignment of a claim

The assignment contract is an agreement of will between the assignor and the assignee. The contract shall be deemed to have been concluded when the parties have agreed on all the essential clauses, in accordance with Art. 1027, para. (1) of the Civil Code of the Republic of Moldova in the form required for the legal act on the basis of which the assigned claim was born. Essential are the clauses established as such by law, which arise from the nature of the contract or on which, at the request of one of the parties, an agreement must be made. All these clauses form the content of the contract. The Civil Code of the Republic of Moldova does not expressly provide for the essential clauses of the assignment contract.

In the specialized literature it is mentioned that one of them refers to the object of the contract for the assignment of the claim. The object of the contract for assignment of the claim is the right of claim, which must be determined and individualized, which is achieved by determining the following components:

- a) the object of the claim;
- b) the active subject (the creditor); c) the passive subject (the debtor);
- (d) the content of the claim (the actions which the debtor is obliged to commit relating to the subject-matter of the performance) and
- e) the grounds for the appearance of the claim.

If the contract gives rise to several claims equivalent in size but different in legal status, it is necessary to indicate the specifics of the claim. For example, if under the contract there is a claim for the payment of an amount by way of rent and another for compensating for the damage caused to the leased asset in the same size, as well as for the payment of the redemption price of the leased asset, the amount of which is also the same, then in the contract of assignment of the receivable it is to be indicated which particular claim constitutes the object of the assignment.

The contract may contain several claims of legal quality, but with different terms of exercise. For example, the contract for the supply of goods in several equal lots may provide that the supplier acquires several claims to receive payments in equal amounts for each individual lot. By assigning one or several claims, but not all, resulting from this contract, the supplier is obliged, at the request of the new creditor, to individualize the object by indicating the term of the claim and/or the term of exercising the right, which will be another condition. of the assignment contract.

The individualization of the claim is, therefore, an essential condition of the contract of assignment, being in the immediate interest of the assignee, not of the assignor. The latter conveys the right of claim, regardless of its exact and complete description. The transferee, however, acquires the right of claim which, subsequently, he must exercise, therefore he must explain to the debtor and the court what kind of claim he has acquired. If, due to carelessness, incompetence or other reasons, the assignee did not insist on the individualization of the claim as the object of the assignment, there are no grounds to impose other persons, especially the assignor, to take care of the claim acquired by the assignee. It follows that, in the event of a dispute between the assignor

and the assignee regarding the fact which claim or which part of it was the subject of the assignment, the information provided by the assignor must be presumed to be true. It is the transferee's burden to overturn this presumption, proving the opposite.

The individualization of the object in an assignment contract can have different degrees of accuracy. In practice, there are situations when the object of the assignment contract is formulated as "all claims arising or which may arise from the credit agreement concluded between A and B". This formulation only reproduces the information about the parties of the obligation report, the content of which is formed by the unknown claims and the basis for their appearance (the credit contract). The additional information can be determined from the credit contract, actually from the assignment contract, indicating who exactly participates as the assignee and which set of creditor's rights are transferred to the assignee.

Another condition of the debt assignment contract refers to the content of the contract. Often the reference is made using the formula: The assignor transmits, and the assignee receives the claim. Sometimes the formula is used: "The transferor sells and the transferee buys" or the transferor transfers and the transferee receive someone's debts to the transferor according to the contract, or the transferor transfers to the transferee and the transferee receives from the transferor.

It is in the interest of the assignee to indicate, in the contract of assignment of the claim, the condition regarding the term and manner of delivery by the assignor of the documents establishing the existence and validity of the claim, the encumbrance. In the absence of these documents, the assignee cannot exercise the acquired right. It is important to include it in the category of documents to be submitted and documents that deny the possibility of invoking objections by the debtor.

A condition of the debt assignment is that it does not affect the debtor's rights nor make his obligation more onerous, according to para. 2 art. 823 of the Civil Code of the Republic of Moldova. Since it is difficult to foresee what objections, resulting from his relations with the transferor, the assigned debtor can raise against the transferee, it is equally difficult to determine what documents the transferor must transmit to the transferee. That is why it would be rational to include in the contract of assignment a clause obliging the assignor to grant the assignee, upon request, any help in combating the objections of the assigned debtor, including presenting the necessary documents. The transferor, who does not fulfill this obligation, may be obliged by contract to compensate the transferee for the damages caused in this way.

The transferor, for his part, is entitled to insist on the introduction of a clause in the contract according to which the transferee is obliged to bear the negative consequences alone, if he does not involve him in the lawsuit filed in relation to the objections of the transferred debtor.

It also presents the condition regarding the moment of the transfer of the assigned right according to the assignment contract. Since the claim, object of the assignment, is not a thing, art. 510 of the Civil Code cannot be applied, which establishes the principle of the tradition of the work as the moment of transfer of the ownership right. If an analogy were to be made, one would naturally have to answer the question: what does the transmission of the right mean and which external manifestations are to be qualified as transmission? Thus, at the conclusion of the assignment contract, the external manifestation is achieved by the agreement of the parties. Therefore, the task of the parties to the assignment contract is to link the transfer of the right of claim to the moment of signing the contract or the passage of a few days from the moment of payment of the value of the assigned claim. In the absence of an express provision regarding this moment, it is to be considered that the right of claim has passed at the moment of concluding the assignment contract. This position finds its foundation in art. 1027 and 1047 of the Civil Code according to which the contract is considered concluded if the parties have reached an agreement regarding its essential clauses in the form required by law or established by the parties.

Effects of debt assignment

The main effect of the debt assignment contract is the transmission of the debt right by the assignor to the assignee. Ways of transferring the claim can be with onerous title or free of charge, the assignment thus also producing the specific effects of the legal operations by which it is carried out: sale-purchase, exchange, donation, etc.

The effects produced by the assignment of debt must be viewed from two aspects: between the parties (A) and towards third parties (B).

A. Between the parties, the rule is that the assignment of the debt, right from the moment of the agreement of will, transfers to the assignee the debt itself, all the rights that the assignor had against the assigned debtor. The assignee replaces the assignor in all rights arising from the debt. The claim remains unchanged, both in terms of its nature and volume. According to the law, the debt rights are transferred to the assignee as they exist at the time of transfer (Art. 827, paragraph (1) CC of the Republic of Moldova). The only element of the obligation that changes is the creditor.

With the assignment of the claim, the guarantees and other accessory rights pass to the assignee, according to art. 827, para. (2) CC of R.M.

It should be noted that the assignee becomes a creditor for the nominal value of the claim, regardless of the price paid to the assignor, if the assignment was made for consideration. But, at the same time, he cannot acquire more rights with the transferring creditor, by virtue of the rule *nemo plus iuris ad alium transferre potest quam ipse habet* (no one can transfer to another more rights than he himself has). As a result, the debtor is entitled to object to the assignee all the exceptions that he was able to object to the assignor until the moment of communication of the assignment, for example: nullity, payment, prescription, resolution.

One of the important effects of debt assignment is the guarantee obligation. Thus, the law stipulates that the assignor guarantees that the clauses of the contract or other legal act from which the claim arises will not be modified without the consent of the assignee, unless the modification is provided for in the assignment contract or is made in good faith and in such way that the transferee would not reasonably have objections, according to art. 828, para. (4) Civil Code of R.M.

The rules stated above do not apply in the case of the assignment of the claim resulting from a promissory note, in which case the assignor is also responsible for the execution of the obligation by the debtor. For example, in the case of assignment of the promissory note by promissory note, the holder of the promissory note, in case of non-payment, can also exercise the right of action against the assignor (guarantor), according to art. 38 of the Bill of Exchange Law no. 1527/1993 // Official Gazette of the Republic of Moldova, no. 10, 1993).

The difference between the assignment of debt and the guaranty of a promissory note consists in the non-guarantee of the performance of the obligation by the transferor (apart from the express counter stipulation) and the guarantee of the performance of the obligations by the guarantor. Thus, according to art. 1785 para. (2) of the Civil Code of the Republic of Moldova, "the guarantor is responsible for the payment of the check, except for the persons to whom the check was sent by draft after the guarantor prohibited a new draft".

Within the relations between the two parties of the assignment contract - the assignor and the assignee - certain duties are imposed. Thus, according to art. 823 para. (3) of the Civil Code of the Republic of Moldova, the transferor is obliged to deliver to the transferee the documents related to the claim and to provide him with the information necessary to realize it.

B. To third parties. In the matter of debt assignment, third parties are all persons who did not take part in the assignment contract and are not universal successors or with universal title of the contracting parties, but for whom the execution of the assignment is of interest. They are considered to be third parties in this matter: the assigned debtor, the subsequent and successive assignees of the same claims and the assignor's creditors (Baies, 2015).

Certain formalities must be met for the assignment of debt to third parties to be enforceable. Thus, with respect to third parties, the assignment produces effects only from the moment of notification or presentation of a document regarding the assignment to the assigned debtor. By notifying the debt assignment, the debtor is informed of the identity of the new creditor and the essential clauses of the assignment contract. Until the moment when the aforementioned notification or document reaches the debtor, he is considered bound only to the assignor, being able to ignore the assignment contract, with all the consequences arising from this fact. Thus, the assignee can be opposed to the services performed by the debtor, after the assignment, for the assignor, as well as any legal act concluded after the assignment between the debtor and the assignor regarding the transferred claim, if the debtor was not aware of it at the time of the performance or the drawing up of the act, of the existence of the assignment, according to art. 831 CC of R.M.

If the assignor performed the assignment, the assigned debtor can defend himself before the assignee by invoking the receipt that confirms the execution of the obligation, even if it is dated after the assignment, but before the notification. Under the same conditions, the assigned debtor can oppose to the assignee the

compensation that he also opposes to the assignor. If, until the notification, the debt remission (debt forgiveness) operates, and the assigning creditor nevertheless assigns the claim, the assigning debtor can oppose the assignment to the debt forgiveness (Pop, 1996).

After completing the notification formalities, the assigned debtor becomes the assignee's debtor, being obliged to make payments only to him. By notifying the debt assignment, the debtor is informed of the identity of the new creditor and the essential clauses of the assignment contract.

The notice of assignment can only be withdrawn with the consent of the designated new creditor. In order for the debt assignment to produce effects vis-à-vis third parties, the actions must be taken by the parties to the assignment contract, either the assignor or the assignee. As a rule, the assignee has several interests in notifying the assigned debtor. After the notification date, the assigned debtor can oppose to the assignee all the exceptions that he was able to oppose to the assignor until the moment of communication of the assignment (art. 829 Civil Code), such as: nullity, payment, prescription, resolution.

The law does not establish any notification period. The time of notification of the assigned debtor remains at the assignee's discretion. It is still useful for the assignee to give notice of the assignment as long as third parties have not acquired any rights to the claim. The notification, as a rule, is made at the debtor's residence. If there are several joint debtors, each one must be notified, since he is only a pro parte debtor. If there are several joint creditors, it is considered that it would be more appropriate to notify each debtor separately.

The notification must not be a reproduction of the contract of assignment, but must contain its essential data, information that will enable the assigned debtor to form a correct idea about the quality of the new creditor.

The notification formality is a means of establishing a legal relationship between the assigned debtor and the assignee to whom the assigned creditor has transferred his right. Thus, the assigned debtor no longer has any obligation towards the assigning creditor, becoming a debtor of the assigned creditor. The notification is a formality that is carried out only in the person of the assigned debtor, with the aim of making him a passive subject in the transmission between the assignor and the assignee.

It is possible for an assignor to assign his claim to several assignees. In this case, a conflict arises between subsequent and successive assignees of the same assigned claims. The law provides that if a claim is assigned by the same owner several times, the creditor of the obligation is the assignee whose assignment is notified first to the debtor, according to art. 832, para. (1) CC of R.M. The first assignee will be established according to the *qui prior tempore potior iure* rule. This means that, among several assignees, the one who first notifies the debtor or presents him with a document regarding the assignment will have priority.

In connection with the assignment of debt, the following clarifications are required:

- the rules regarding the assignment of the claim are applied accordingly in the case of the assignment of other rights;
- The provisions of this section are applied in the appropriate manner if a claim is submitted based on the law, a court decision or a decision of the public authority.

Effects of the assignment of receivables vis-à-vis the assignor's unsecured creditors

Until the publicity formalities are fulfilled, the assignor's creditors are considered third parties to the assignment between their debtor, who is the assignor, and the assignee. The assignment is not against them and they can pursue the assignor's claim against the assigned debtor, which is part of their general pledge. Unsecured creditors are interested in the assignment of debt, especially when it is free of charge. After making the assignment public, the respective right of claim comes out of the transferor's patrimony, diminishing their general pledge and causing damage to the unsecured creditors. When the debt assignment becomes objectionable to them, they can request its revocation through the revocation action, also known as the Paulian action, if their interests have been defrauded (Pop, 1996).

Importance of debt assignment

Debt assignment has practical utility both for the creditor (assignor) and for a third party acquirer (assignee). The assignment of debt with onerous title gives the creditor, in the event of suspension of the execution of the debt and his need for financial means, the possibility to assign the debt against its value or to pay it to his own creditor.

The transferee, in turn, has some advantages, since he can acquire at a price lower than its nominal value, especially in the case where the claim is doubtful.

In practice, recourse is made to the assignment of receivables with onerous title when the execution of the receivable is affected by a suspensive term and cannot be requested before the expiration of this term, and the creditor, who needs liquidity, can assign it, immediately collecting its value or paying it to his creditor.

Distinguishing the assignment of debt from other legal operations of transformation or transmission of obligations

Assignment of debt is similar to subrogation and assumption of debt in that they are legal operations of transmission of obligations, which do not affect the obligation, but transmit it as it was born and as it exists in the patrimony of the original subjects of the legal relationship.

Assignment of debt, like subrogation, changes the active element of the obligation relationship. However, they differ in that, in the case of subrogation, the initiative belongs to a third party who pays the creditor and is subrogated in his rights against the debtor. In the case of debt assignment, the initiative to transfer the right belongs to the assigning creditor, who transfers to the assignee, for a fee or free of charge, a claim against a third party.

The assignment of debt differs from the assumption of debt, because it transfers the active element - the right to claim, and the assumption of debt transmits the passive element of the obligation relationship - the debt.

Assignment of debt differs from novation in that it is a transmission, and novation, a transformation of the obligation. As a result of the novation, the original obligation is extinguished and replaced by a new obligation.

Both institutions, assignment of debt and assignment of contract, have the effect of a transfer, but they differ substantially. The assignment of debt transfers a debt right, and the assignment of the contract, a contractual position, namely a set of rights and obligations belonging to a party in the contract. For example, in the case of assignment of the lease by the lessee, the test acquires the rights and obligations arising from the lease agreement. Lease assignment can only take place with the consent of the other contracting party, the lessor.

The assignment of debt can take place in any obligation relationship born from the contract, unilateral legal act or legal fact, and the assignment of the contract is only possible in the case of synallagmatic contracts.

CONCLUSION

The assignment of debt has the following legal characteristics: it involves three participants: the creditor who transfers the debt, called the assignor; the acquirer of the claim, called assignee; the debtor of the assigned debt, called the assigned debtor; it is achieved by concluding a debt assignment contract between the transferor and the transferee, which produces legal effects on a third party, the assigned debtor; the essential function of the assignment consists in the transmission of a claim from the assignor to the assignee, definitively and irrevocably; (Pop, 2006) the claim is transferred as found in the transferor's patrimony, preserving its nature and characteristics; it can be both paid and free. If it is for a fee, it represents sale-purchase, exchange, life annuity, payment, and if it is free of charge, it represents a donation contract (Baiaș, 2014).

Currently, there is insufficient legal certainty as to which national law applies when determining who owns a claim after it has been assigned cross-border, as the substantive rules of many states governing the third-party effects of assignments claims are divergent.

Adopting uniform conflict of law rules will remove the legal risks and potential systemic consequences of cross-border debt transactions, enabling cross-border investment, access to cheaper credit and deeper market integration. This will help to increase legal certainty across the EU.

Some Conceptual Aspects of Stabilisation Trends In The Framework of Eu Fiscal Regulation

Vesela ANGELOVA¹

¹Assistant Professor, PhD student, University of Agribusiness and Rural Development, Faculty of Economics and Management, Department of „Economics and Finance“, vangelova@uard.bg

Abstract: The institutional framework in the Economic and Monetary Union is characterized by the presence of a common centralised monetary policy, which is determined at a supranational level by the European Central Bank, and economic and budgetary policy, which is within the competencies of the member states, characterized by a low degree of regulation. In the context of a deteriorating economic situation, many of the Member States violated the fiscal discipline prescribed in the Stability and Growth Pact to support the faster recovery of their economies, leading to the emergence of a debt and fiscal crisis in most countries. Crises handling is related to the strengthening of supranational regulations in the field of fiscal policy.

Keywords: fiscal system, institutional arrangement, fiscal discipline, centralised regulation

Introduction

The specificity of the economic situation of the member states of the Eurozone is that they are part of the Economic and Monetary Union of the EU (and therefore transfer the right to implement monetary policy to a supranational body - the European Central Bank (ECB), retaining another instrument for macroeconomic regulation - fiscal policy). This is one of the fundamental contradictions of the economic and monetary union in the EU (apart from the financial market disparity).

The performance of monetary regulation functions at the level of the entire monetary union means that member countries cannot set the base rate (i.e. from a macroeconomic point of view, they are small open economies, since the interest rate inside the economy depends on the interest rate outside it), as well as the fact that in these countries a fixed exchange rate of the national currency has been established.

Under these conditions, the conduct of fiscal policy under the influence of supranational fiscal regulation has some specific features that must be taken into account in the analysis. At the same time, it should be noted that the focus of this work is aimed mainly at national economies, therefore the specifics of the functioning of the monetary union itself, as well as the theoretical aspects of its work, should be perceived as external factors concerning the subject of research. Thus, theoretically, the single currency will act as a fixed exchange rate of the national currency, and the supranational requirements to stabilise national budgets as an external shock requiring certain actions from the national authorities.

It should be noted that countries outside the Eurozone are not always completely independent in the conduct of monetary and exchange rate policy. In this way, the countries participating in the exchange rate mechanism fix the rates of their national currencies against the euro in a certain corridor. At the same time, countries that do not participate in this mechanism still have a flexible exchange rate and therefore have a wider range of macroeconomic policy tools at their disposal than the members of the euro area. Therefore, their fiscal policy is influenced by fiscal regulation, which will be slightly different from that of the Eurozone.

In connection with the above, it is advisable, on the one hand, to leave aside the factors related to the presence of a monetary union, decision-making mechanisms, etc., and on the other hand, to compare the functioning of national economies.

However, it makes sense to pay some attention to the monetary union and some basic theoretical aspects of its functioning, since, according to the author, the existence of fiscal regulation in the EU is due to the need to maintain the normal functioning of the monetary union. Let us consider the specifics of the situation of open economies in the conditions of a single currency (fixed exchange rates).

The broadest theoretical layer of work on this issue is the theory of optimal currency zones, whose creators and classics can be considered Kenen (1969, pp. 59-77) and Grubel (1970: pp. 318-324), monetary union, as well as identifying factors that contribute and do not contribute to its introduction. The main problem faced by the countries that form a monetary union is the asymmetric shocks that can occur in the different member

countries. The emergence of shocks is because a flexible exchange rate is one of the automatic stabilizers of the economy (along with taxes), and with the introduction of a single currency, countries give up one of the key tools for responding to endogenous or exogenous impacts.

In the case of symmetric shocks, the single currency can act as a built-in stabiliser for the entire union, but asymmetric shocks require a national rather than a centralised response to avoid the emergence of pro-cyclical factors. For example, a union-wide increase in the key interest rate can have a positive impact on a country with relatively fast-rising inflation and seriously harm an economy with low inflation and, for example, high unemployment. Precisely due to the fact that the exchange rate has the properties of an automatic stabiliser, a monetary union should be considered, which eliminates this stabiliser at the national level as one of the factors influencing the country's economy.

The second built-in stabiliser, theoretically able to influence the effect of cyclical shocks, is taxes (in a broad sense, fiscal policy can be considered an automatic stabilizer), revenues from which (at a constant rate) increase during the years of a cyclical upswing (restriction of the likelihood of the economy overheating) and decreasing during years of economic recession (creating a reverse effect). However, in a monetary union, the role of fiscal policy may be somewhat transformed.

On the whole, according to Kenen (1969, pp. 59-77), the main idea of the theory of optimal currency areas is that for some countries the introduction of a single currency can be more profitable than the functioning of national currencies in the implementation of trade relations. It may be most optimal if these countries have open economies and a high share of intra-regional trade. As already mentioned, the benefits are reduced if the shocks to which the group is subjected are asymmetric. In the absence of an automatic stabilizer in the form of a flexible exchange rate, instruments such as wage and price flexibility, labour and capital mobility can moderate the impact of these shocks.

Some researchers like Hein (2005, pp. 7-33), also add to these mechanisms the diversification of production, the unification of tax systems, the integration of financial markets and the convergence of inflation. According to Hein (2005, pp. 7-33), the traditional direction of analysis in the theory can be considered to be the study of the conditions necessary for the creation of a monetary union. Alternative approaches within the theory are to compare the benefits and costs of preparing for a country to enter a currency union. In general, the studies of Hein, focusing on the benefits of moving to a single currency are called first-generation theories.

At the same time, this approach does not pay much attention to fiscal policy, which suggests that it remains the only instrument for macroeconomic stabilisation in a monetary union member state, or is transferred in whole or in part to the supranational level. In addition, countries can coordinate their fiscal policies to avoid the negative impact of unilateral actions on the functioning of the whole union.

The second-generation theory deals with risk sharing in a currency union. The relevance of this problem is explained by the fact that the member countries of the union are still subject to the influence of asymmetric shocks. Lane (2006, pp. 47-66) argues that the impact of asymmetric shocks diminishes with financial market integration. As long as deep integration fails, fiscal policy will remain the mechanism for absorbing asymmetric shocks at the national level.

At the same time, Sato (2006, pp. 1671-1689) proposes that fiscal relations within a monetary union be organised, based on the principles of fiscal federalism. In this way, the problem of a point crisis of demand in the conditions of a monetary union (i.e., in the absence of opportunities for additional issuance of the national currency) can be solved not at the expense of the national budget (after all, the increase in taxes for the financing of rising costs may worsen the situation), but by creating mechanisms for redistributing budgetary resources from other countries of the monetary union. It can be said that there is a certain shift in theory towards the analysis of the need to introduce elements of fiscal federalism in the monetary union to coordinate national fiscal and monetary policies.

In our case, what is of interest is not coordination at the pan-European level and not a "bottom-up" movement to transfer part of the powers of supranational authorities in the fiscal sphere, but the exercise of supranational influence on national tax and budget systems.

Practically does not deal with this issue, focusing on the problems of the whole union and the optimal organisation of relations within its framework, and since the focus of this work has shifted to national problems, it seems logical to consider the impact of fiscal regulation of the EU on national economies using traditional macroeconomic analysis tools.

Thus, the analysis of the impact of fiscal regulation in the member states of the euro area should be carried out within the framework of the theoretical views of fiscal policy in an open economy with a fixed exchange rate and countries outside the euro area, based on the model of fiscal policy in an open floating exchange rate economy.

Moreover, fiscal policy in a monetary union can only be effective in the short term. It follows that if one of the key elements of the impact of fiscal regulation is forced budget consolidation, then its consequences must also be analysed in the short term. This conclusion is due to the fact that, in the conditions of the modern "new" neoclassical synthesis, conditional Keynesian and non-Keynesian (classical) approaches today are unanimous regarding the consequences of any discretionary fiscal policy in the medium and long term. The main differences are observed in the short term.

In macroeconomics, the "short run" is traditionally understood as a period during which prices remain unchanged. For Keynesians, with their set of "rigidities" (price and wage rigidities), the short term can last long enough to cause possible significant GDP losses from fiscal consolidation. In the present study, it is this factor that can explain the choice of the theoretical basis for analysing the impact of supranational fiscal regulation on the assumption that there are Keynesian and non-Keynesian effects of fiscal consolidation. The consequences of these types can be seen in the short term.

In the longer term, according to the provisions of the "new" neoclassical synthesis, fiscal contraction in the EU will in some way lead to stabilisation of the main components of the fiscal system (deficit reduction, reduction of public debt, restoration of confidence, i.e. a kind of "new equilibrium"). But the question is what price must be paid to this or that economy for achieving this equilibrium.

It can be argued that the fiscal regulation of the EU, on the one hand, is aimed at avoiding the occurrence of significant imbalances in the fiscal sphere of the member states, and on the other hand, the occurrence of such imbalances leads to the need for correction in accordance with supranational requirements. Such an adjustment is essentially a stabilisation measure, which means that it may lead to Keynesian or non-Keynesian effects in the short run.

It appears that the fiscal sphere can be considered the quintessence of state involvement in the economy. Therefore, it is currently proving to be one of the barriers to the spread of supranational levers for managing the economy in an ever-increasing number of areas of economic life. It is widely known that the fiscal component of the Economic and Monetary Union is the least "supra-nationalised", and the issue of further deepening fiscal integration is one of the most painful for nation states.

Based on the interaction of monetary, fiscal and foreign economic policy as parts of macroeconomic policy, it is important to note that while monetary policy in the Eurozone is conducted by the supranational ECB and implemented by national central banks, foreign economic policy in many aspects also falls under supranational control (single customs tariff, exchange rate policy), fiscal policy remains in the hands of national governments (albeit with elements of supranational control).

It can be assumed that the national fiscal system and the national fiscal policy are serious barriers to integration processes, after overcoming them, economic integration will take on a radically different (perhaps even quasi-state) form, and the "renationalisation" of the fiscal sphere (i.e. reversing) will be practically impossible. This is probably the reason why such a synthetic structure, which can be called fiscal regulation, appeared in the EU.

The concept of fiscal regulation is rarely used in scientific literature, which is explained by its maximum ambiguity and heterogeneity of proposed definitions. In some cases, it is used as a synonym for "tax regulation", and sometimes - as a designation of a change in the expenditures and revenues of the consolidated budget to influence macroeconomic parameters. The latter definition of Stanisic (2013, pp. 63-74), makes this concept related to the concept of "fiscal policy".

The term "regulation" in general is often used as a synonym for the term "policy" (in combination with "taxes", and "budget"), which is not always justified. With regard to integration associations, this concept is practically not used, which, in our opinion, contributes to the legitimacy of its use to highlight the fundamentally important elements of the Economic and Monetary Union, which were rarely considered as a separate phenomenon before.

It is about the practice of supervision by the European Commission and the Council of the EU on the compliance by the member countries of the Economic and Monetary Union (as well as the countries outside the Eurozone) of the agreed criteria (budgetary restrictions), in particular concerning the thresholds for the budget deficit and the level of public debt. The emergence and the need to comply with these criteria are necessary for the optimal functioning of the monetary union in the EU. After all, if a country has an extremely high deficit or debt, it threatens the stability of the entire system.

The overall concept of regulation applies to this practice since for countries whose currency is the euro, such supervision turns first into supranational recommendations and then into requirements to fulfill obligations under the threat of sanctions. In this case, one can talk about some form of forced consolidation of the national budget, based on the requirements of supranational authorities. Thus, among the components of fiscal regulation in the EU, one can highlight the development and establishment of threshold criteria (budgetary rules) by supranational bodies, supervision and control over their compliance, as well as a mechanism for enforcement in case of deviation from goals.

Since we talk not only about budgetary but about fiscal policy, the framework of fiscal regulation can include the same mechanism for determining threshold criteria by supranational authorities exercising control, supervision and law enforcement directly related to taxes (for example, the minimum of 15% of the EU for the value-added tax rate - VAT). We can consider that the elements of tax harmonisation in the EU are also a component of the overall fiscal regulation, understood as a supranational impact on the national fiscal policy.

At the current stage, however, this tax component is rather weakly expressed and does not have a significant impact on the economies of the member countries. Nevertheless, the potential expansion of supranational tax regulations can affect the structure and efficiency of budget revenues, thereby affecting the effectiveness of fiscal policy, which justifies the inclusion of a tax component in the concept of fiscal regulation.

It seems that when analysing the issues at hand, the problems of the EU general budget can be considered as a whole, since it does not have classical redistributive functions and is not designed to reduce or share macroeconomic risks across countries, being a single entity. Fiscal regulation is about supranational control over individual countries, not pan-European issues. An example is the European Fiscal Council, which is supposed to deal with pan-European issues, but in practice has nothing to do with the Common Budget, but controls the budget systems of the national states.

In some studies - Pasimeni (2014, pp. 173-204) - the term "regulation of national financial and budgetary systems" can be found, which, as a rule, includes all aspects of regulation carried out by international organizations (such as the IMF) and supranational bodies in integration associations. Such unification, in our opinion, is not quite correct, since the regulation in the integration associations affects the question of the economic sovereignty of the nation-states and is carried out systematically; while regulation, such as that done in conditional IMF loans, is less concerned with economic sovereignty.

Such a distinction is extremely important for the economic analysis of the processes taking place in the EU member states since it is currently impossible to analyze the economy of a country that is part of the EU and the Eurozone without taking into account a supranational component.

Fiscal regulation can have quite a serious impact on national economic policy and on the economy as a whole. For example, the implementation of a restrictive fiscal policy caused by the need to comply with supranational requirements to reduce the government budget deficit may not correspond to the current phase of the business cycle.

This is a rather topical issue since the question of the correctness of the implementation of the discretionary fiscal policy or the reliance on automatic stabilisers of the economy remains debatable. At the same time, it is important to consider that the supranational component may lead to a pro-cyclical fiscal policy in some Eurozone countries.

The concept of fiscal regulation is closely related to the concept of fiscal (budgetary) rules. Besides, in a number of works, these two concepts are identified. Budgetary rules mean the establishment of quantitative criteria, the exceeding of which should theoretically lead to a correction in the budget course. It is often understood as "a rule or set of rules that introduce discretion in decision-making about the management of public finances within a specified long-term framework." Mongelli (2005, pp. 607-635).

It seems that it is still necessary to distinguish between the concepts of budgetary rules and fiscal regulation. This is due to the fact that the existence of budgetary rules in itself does not always directly affect the implementation of stabilisation measures by the government. That is, the very fact of their existence does not mean that when the deficit thresholds (public debt or other indicators) are violated, the state proceeds to adjust the budget (consolidation). Given that the focus of this paper is on the supranational impact on national fiscal systems, the mere existence of fiscal rules is not enough.

In addition, the term "fiscal rules" is also used in national fiscal systems. For example, in the Netherlands, there are fiscal rules for local budgets, non-compliance with which threatens sanctions. In our opinion, there is an objective difference between the fiscal union that exists in a federal state (USA, Canada, Germany) and the synthetic construction of fiscal regulation that arose in the EU. In fact, according to conventional postulates, the key elements of the fiscal union of a federal state, which arises naturally (along with a monetary union) in a national (federal) state, are fiscal rules, instruments for anti-crisis regulation, intergovernmental transfers and the existence of a common budget. The point is that the nation-state has a large-scale redistribution mechanism that can be used, for example, to help territorial units with troubled finances.

At the same time, no large-scale redistribution system has been developed in the EU. The EU budget is still mainly used as an instrument of agricultural and regional policy, and to support countries experiencing problems with public finances, separate structures have been created (we are primarily talking about the European Stabilization Mechanism) which provide financial assistance at a recoverable cost.

Therefore, we can talk about the absence in the EU of the principle of financial solidarity between territories with different levels of development, which does not correspond to the main components of a full-fledged fiscal union. In addition, according to Matthes (2009, pp. 114-128), the presence of little redistribution between territorial units in the EU budget is intended for a long-term perspective, which makes it difficult to urgently provide even potential financial assistance in the event of a crisis.

The analysis of the theoretical foundations of a full-fledged fiscal union of a federal state and the actual structure of the current Economic and Monetary Union in the fiscal sphere is presented in the table. As can be seen in Table 1, the Economic and Monetary Union contains far fewer key elements than full-fledged fiscal unions, which justifies considering fiscal regulation in an integration union as a separate phenomenon, distinct from a fiscal union.

Table 1. Comparison of Fiscal Union within a Federal State and Elements of Fiscal Union within Economic and Monetary Union

Indicators	Federal State Fiscal Union	Economic and Monetary Union
Number of levels	centre – region – local	supranational - national
distribution of interbudgetary powers	Principle of fiscal federalism	Not applicable
Mechanism of distribution and redistribution	30-50% of GDP reallocated through the consolidated budget	National level
The role of the central budget	Concentrates and distributes most of the resources	about 1% of the GDP of all member countries
Fiscal rules	Sub-national rules of any kind (borrowing limits, spending ceilings, deficits, etc.)	General rules for entire nation states (deficit, public debt)
Social security system	Mostly at the federal level	Not applicable
Anti-crisis regulation	Mostly at the federal level	Not applicable
Providing financial assistance to lower-level entities	A strict "no bailout" rule (USA, Canada) or the possibility of a "bailout" (Germany, Brazil)	The "no bailout" principle and the refusal of monetarization
supervision and control	Accountability of subnational units	supervision of the national fiscal policy and the possibility of providing financial assistance based on international agreements

Source: author's interpretation of key concepts

The combination of fiscal rules and this mechanism, together with the monitoring system, form the concept of fiscal regulation, which is slightly different from the concept of fiscal union and is typical of federal states with a developed system of redistribution. The latter element is absent in the system of fiscal regulation that has

developed in the EU. Finally, the concept of fiscal adjustment means carrying out any consolidation without taking into account its specifics.

The countries continue to meet key convergence criteria after joining the euro area and is the institutional basis for fiscal regulation in the EU. The adoption of such a document is a logical continuation of the basic postulates of the theory. The purpose of adopting the Pact is to ensure the optimal functioning of the monetary union and minimize the possibility of discretionary policy by the member countries.

A separate issue that requires some theoretical understanding remains the problem of the relationship of the proposed concept of fiscal regulation with the conventional concepts characterising the management methods in the EU. This question is particularly important when applied to the dichotomy of supranational and national economic governance.

Thus, the concept of "regulation" applied at the national level may have a slightly different interpretation when it comes to decision-making methods in the field of economic governance at the supranational level.

The specified aspects of fiscal regulation (tax harmonization and control over national budgets) are more often considered by the authors as extended coordination (within regulatory governance). Thus, the establishment of quantitative criteria and the existence of a certain system of measures to implement these criteria regarding economic decision-making methods in the EU are rarely considered direct regulation.

At the same time, at the national level, bringing the budget into line with supranational budget criteria can already be considered direct regulation, as it includes standard instruments of economic policy: taxes, budget expenditures, etc. This problem is superimposed on the already mentioned lack of a single generally accepted classification of management practices in the EU.

The discussion on management methods in the EU has not yet led to the creation of a single and generally accepted classification. Although the different classifications have a similar core (for example, the presence of a division of intergovernmental management methods), it is still difficult to find a comprehensive classification that fits all.

Table 2 shows that the main feature of fiscal policy is national macroeconomic regulation, and fiscal rules are only nominal criteria for the implementation of which some mechanism of "coercion" is required.

Table 2. Characteristics of fiscal elements

FISCAL ELEMENTS	DEFINITION	AIM	SUBJECT	SCOPE	EXAMPLES
policy	a tool for conducting macroeconomic policy with the help of the state budget	macroeconomic regulation	national governments	overall economy	privatization, tax cuts, increased education spending
regulation	the practice of supranational supervision, control and application by national governments of certain quantitative criteria in the fiscal sphere	optimal functioning of the entire currency union, eliminating risks for the common market	supranational bodies	national budget	excessive budget deficit procedure in the EU
rules	quantitative criteria in the fiscal sphere, which are a signal of an excessive imbalance in the fiscal policy	avoiding the risk of overheating public finances and rapid accumulation of public debt	national, supranational bodies	budget at a certain level, less often budgets at all levels	Maastricht criteria for public debt, budget deficit
unions	system of relations within the so-called fiscal federalism between budgets at different levels, the system of inter-budgetary relations, supervision and control	separation powers, optimal redistribution	governments at different levels	budgets at all levels, inter-budgetary relation	The USA, Canada, Germany

correction	a targeted policy aimed at preventing the accumulation of public debt and creating a balanced budget	moving toward a balanced budget to prevent backlogs public debt	national government	budgets at all levels	budget consolidation
------------	--	---	---------------------	-----------------------	----------------------

Source: author's interpretation of key concepts

In work of Lehwald (2013, pp. 655-684) shows that this potential conflict of concepts is omitted and the term "regulation" is used directly to describe supranational influence. However, examining this issue may reveal additional features of the synthetic nature of fiscal regulation in the EU.

The division proposed by Lehwald can be considered a conventional and even classic typology of economic governance methods in the EU. Among the management methods, the researcher singles out the community method, the regulation method, the distribution method, the policy coordination, as well as the intensive trans-governmental method. Moreover, the work is built on the dichotomous differentiation of the communitarian (i.e. devolution of the right to make day-to-day decisions at the right level) method. Community and trans-governmental (as an alternative and at least "supra-national") methods are two opposite options for the interaction of players within the union. More interesting for the issues addressed in this study is the allocation method, mainly covering the allocation of resources within certain EU policies (historically, the Common Agricultural Policy can be considered the first).

At the same time, the various components of fiscal regulation probably contain the method of coordination (since according to countries coordinate their macroeconomic policies). But coordination is usually understood as an open method of coordination that does not require mandatory norms and rules. Based on this, such a practice, which in this study is proposed to be called fiscal regulation, does not fully fall into any management method of this classification

In Hall's (2014, pp. 885-908) interpretation, depending on the level of decision-making, the nature of this decision and the type of relationship between the decision-makers and the "governed", the following methods can be distinguished: intergovernmental, community, intensive trans-governmental, regulation, distribution, coordination, executor.

At the same time, regulation refers to the creation of common rules at the supranational level as well as to the harmonisation of national rules. Fiscal regulation is not specifically addressed directly, but it can be assumed that in this scheme issues of tax harmonisation and control over national budgets will be described by the term "coordination".

Dufrénot (2014, pp. 186-197) posits that regulation at both the national and supranational levels is the creation of rules that govern behaviour. It seems that this statement (as well as the presented classification in general) is based on a fundamental contradiction between the management method as such and the decision-making method.

However close these concepts may seem, it must be accepted that there is a certain difference between them. But since the purpose of this work is not a detailed examination of this topic, it only makes sense to argue that in the classification, the supranational impact on national fiscal systems in any form is rather coordination and manifests itself in the establishment of fiscal norms. Dufrénot identifies six methods of managing the EU economy: rigid supranational (refers to a single monetary policy in the euro area), common method of regulating the national market, coordination of budgetary policies of member states, supranational budgetary method, horizontal coordination of economic policies, vertical employment policy coordination and other forms of open coordination.

Among these methods, it is worth emphasising the regulation method, which includes the adoption of legislative acts and the activity of the EU Court, which can impose sanctions on member states, as well as the budgetary method (formation of the general budget of the EU and the use of funds for regional policy). At the same time, in those aspects of the interaction between the supranational and the national level, in this work called fiscal regulation (Stability and Growth Pact, control of national budgets and the Fiscal Pact) refers to strict coordination. It should be noted that the Stability and Growth Pact, as a manifestation of fiscal regulation, is in the vast majority of cases seen as one of the aspects of the macroeconomic policy coordination method at the supranational level, even by those researchers who are not engaged in comprehensive classifications and typologies, and specifically this problem.

At the same time, many postulate that there is some scope for deepening cooperation in the area of fiscal supervision, which theoretically means greater integration and a possible transition to more efficient and direct methods of governance.

Overall, several interesting observations can be made from the presented classifications. The national level (that is, the economic policy of the nation-state) and the supranational arena, on the one hand, oppose each other, and on the other hand, they are in a certain interaction. This opposition is most pronounced precisely in the area of the Economic and Monetary Union, where monetary policy is strictly managed by the ECB at the supranational level, and in the fiscal sphere, there is a certain degree of coordination with the preservation of the main powers at the national level.

This problem of the relationship between the supranational and the national level of government is posed in the work of Masini (2014, pp. 1015-1038), however, does not provide a fundamental answer to the depth and nature of this contradiction, postulating only the difference between the dominant monetarist approach at the supranational level and the continued Keynesian objectives of national governments.

Skorepa (2013, pp. 129-151) describe this complex system of interaction between the supranational and national levels using the pendulum metaphor. The pendulum swings between two extremes: the national political (in our case, economic) arena, along with national interests, and the supranational agenda, which is also related to the global interests of the entire union. Therefore, when analyzing fiscal regulation in the EU, the national component should dominate, and the supranational impact should be considered as an external factor.

In this study Degiannakis (2016, pp. 551-563) the opposite situation is observed: issues of fiscal interaction are considered collectively, and the main issue is not the degree of impact of the union on national economies, but the necessary level of coordination of national economies for the well-being of the entire union. Thus, the majority of works are normative by nature.

In other words, the researchers raise the question of how national governments should behave so that nothing threatens the functioning of the monetary union. At the same time, the general conclusion is the lack of coordination of monetary and fiscal policy in the EU.

Secondly, it can be argued that the leading researchers distinguish between the budgetary method (i.e. the problems of the formation and spending of the EU budget) and the issues related to the control of national budgets.

Thirdly, it is necessary to pay attention again to the differences in interests at the supranational and national levels. The adoption of certain norms at the Union level within the strict coordination method at the national level has a slightly different character. Thus, the requirement to reduce the budget deficit to the target level requires the government to take certain measures related to the classical instruments of economic management.

At the same time, a complex system of interaction between the supranational and national levels is superimposed on the complex synthetic nature of fiscal regulation as such. Thus, if the concept of fiscal regulation also includes existing (and most importantly, potential) tax harmonisation, then the fragmented nature of the supranational impact will become even more apparent.

The EU bureaucracy considers the three components of such a hypothetical comprehensive fiscal regulation (budgetary control, harmonization of indirect taxation and coordination of direct taxation) as separate (and even conditionally independent from each other) spheres of economic activity of member states. Neither in EU legislation, in the institutional structure, nor in the way of decision-making are these components combined. Even in the EC, tax and budgetary matters are divided between two departments: Taxation and Customs Union, as well as Economic and Financial Affairs.

Indeed, from the point of view of EU legislation, the first component (budgetary control) is dominated by regulations, quantitative criteria and sanctions, and the main actors are the Commission and the Council of the EU, and the authority of the Commission has grown significantly in recent years (which in particularity is proven by the reversed majority procedure in the Council of the EU).

The management method in this component is strict coordination of the actions of the member countries. Regarding the way of decision-making, one can also speak of a significant influence of the Commission. The decision on the need to propose the imposition of sanctions in it is taken collectively, but Chupp (2016, pp.

535-548) draws attention to the special role of the Commissioner for Economic and Monetary Affairs. In the Council of the EU, in this case, the reversed majority procedure is used, where 55% of the members of the Council must vote.

The second component (indirect taxation) is dominated by directives, which means that the degree of rigidity of legislation is somewhat reduced. Quantitative criteria no longer play such a significant role (except for minimum VAT rates and several minimum rates for taxation of excise goods). Sanctions are not provided as a separate instrument, but in case of non-fulfilment by the member states of their obligations, the EU Court is included as part of the enforcement procedure.

Additional decisions on further harmonization of indirect taxation are taken not within the framework of the usual legislative procedure (with the full participation of the Commission as initiator, as well as the Council of the EU and the European Parliament as legislative bodies), but by an absolute majority of the Council of the EU.

In the third component (direct taxation), the "softness" of the norms compared to the first two components is maximum. The Commission's recommendations and opinions and individual proposals play a key role here. A key and practically the only player is the Commission, which proposes initiatives that cannot yet attract national governments.

Thus, just as from a functional point of view (budgetary control is necessary for the functioning of the Economic and Monetary Union), the harmonization of indirect taxation is necessary for the normal functioning of the customs union and the single market, so the coordination of direct taxation is necessary for solving certain practical issues (such as avoiding double taxation and simplifying regulation). From a legislative and institutional point of view, these components in the EU do not represent a whole.

At the same time, for the national economy, these three areas represent an inseparable whole, as they ensure the integrity of the budget process as such. Changes in budget revenues can affect expenditures, and vice versa, a change in the structure of national taxation in favour of indirect or direct taxes can also lead to certain changes in both revenue and expenditure budget positions.

Thus, from the point of view of the national economy of an individual EU member state (or another integration union), it would be logical to consider any external influence on each of the components of the budget process as a whole. But at the supranational level in the EU, this integrity does not exist either in the degree of obligation, in the scope, or the decision-making process. On the contrary, both at the legislative level (in both primary and secondary EU legislation) and in terms of existing control and enforcement procedures, there is an unequivocal division of the supranational impact on national fiscal systems into three areas. And it is precisely in this that the synthetic nature of this influence is manifested.

On the one hand, the fiscal sphere formally remains within the competencies of the member states, which does not allow the adoption of a large number of binding supranational regulations, on the other hand, the normal functioning of the Economic and Monetary Union is no longer possible without synchronisation of the business cycles of the member states, one of the elements of which can be the one-way functioning of national budget systems.

Based on this contradiction, any practice of supranational regulation in the fiscal sphere had to be built hierarchically: from the areas most necessary for the functioning of the Economic and Monetary Union to the areas where compromise was possible. This is what happened in the EU: maximum integration was achieved in the area of budgetary control, and then downward regulation shifted to direct taxation, which is still perceived almost exclusively as a national competence (although here too there are obvious changes).

The system of regulation (supervision, adjustment) of national budget rates by EU supranational bodies can be divided into three components: control over national budgets, harmonisation of indirect taxation and coordination of direct taxation. Strictly speaking, from the point of view of the EU decision-making process, none of these elements is regulation.

Control over national budgets is carried out as hard coordination, while harmonisation of indirect taxes and coordination of direct taxation is more of an open method of coordination. From the point of view of the institutional structure of the EU, as well as the way of decision-making in the union, such a definition is quite fair.

However, from the point of view of economic theory, all three elements can be presented as tools for regulating the national economy (less often "economic management"). To a greater extent, this understanding is appropriate for the elements of EU budgetary control (which is also the most institutionalised).

From the point of view of the aforementioned institutional structure of any procedures within the framework of budgetary control, the Commission and the Council are not involved in the regulation of the economy. It seems that Member States have simply put up barriers that should not be crossed. However, the enumeration of barriers should by no means be limited, as Loureiro (2012, pp. 28-64) rightly points out, the activities of supranational bodies in this area are increasingly moving from rule-making (defining barriers and rules of the game) to creating specific solutions on each specific case. Indeed, on a case-by-case basis, a specific decision is made for a specific country and specific remedial measures are recommended (and sometimes imposed, given the impending threat of sanctions).

While keeping the budget within certain limits, quantitative criteria can also be considered as regulation regarding the functioning of the national economy. The European Commission, for example, should initiate proceedings if a country reaches an excessive budget deficit following established EU norms. The Commission also develops a specific set of measures to improve the situation without being bound by any institutional, legal, economic or other restrictions or norms (the EU does not have a list of actions that the Commission has the right to recommend).

In this way, the Commission, in case of detection of violations, involves itself in the regulation of national public finances. Its recommendations are then fully automatically accepted or rejected by a qualified majority in the Council. Within these frameworks, the EC in principle has the right to adjust the national budget plans. Thus, we are no longer talking about law-making (not about setting rules), but simply about the adoption by the Council of the EU of decisions on individual issues, as they differ in time, and content and are limited in nature. This is the second aspect of the synthetic nature of fiscal regulation: as hard (or soft) coordination in terms of the method of supranational management and decision-making, the supranational impact is regulation in terms of impact on the national economy.

Therefore, there will be different forms (based on the separation of budgetary control, harmonization of indirect taxation and coordination of direct taxation), but the degree of rigidity, obligation and formalization of these forms may change (for example, towards strengthening supranational legislation in the field of direct taxation), which essentially does not change the nature of the impact of the amended norms on the national economy.

Such an influence will also have the nature of regulating economic activity. In this regard, it is advisable to combine various aspects of the supranational influence on the fiscal sphere of the nation-states within one concept - fiscal regulation. Based on these considerations, from the point of view of economic theory, the supranational impact on the fiscal sphere is very similar to the practice of economic regulation implemented by national governments.

Determinants of International Trade: Empirical Evidence from the Western Balkans

Visar MALAJ¹

¹ Associate professor at the University of Tirana, Department of Economics & CERGE-EI Foundation Teaching Fellow, visarmalaj@feut.edu.al, ORCID: 0000-0002-3439-2642

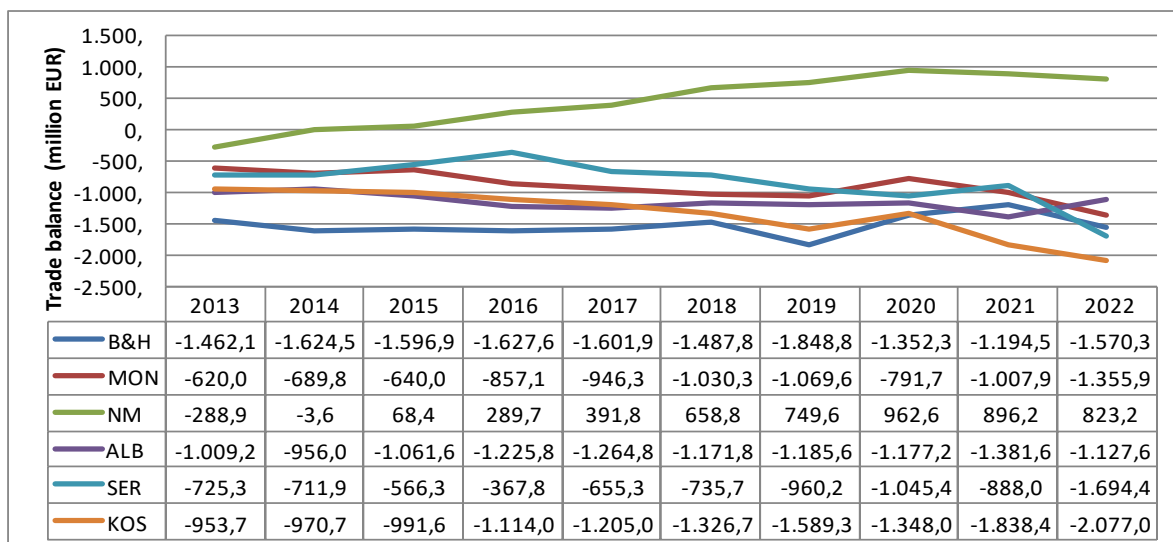

Abstract: This paper investigates the determinants of international trade between the six Western Balkan countries and some of the most important trade partners. A panel data econometric model is used to analyze bilateral trade with nineteen European countries during the period 2010-2020. We consider two possible response variables: export of a Western Balkan country in a given trade partner, and the sum of imports and exports between a Western Balkan country and the corresponding trade partner. Findings show that international trade is adversely affected by bilateral distance between partners. On the other hand, trade is stimulated by GDPs, total populations, geographical contiguity and free trade agreements.

Keywords: International trade, regression, Western Balkans.

1. INTRODUCTION

The Western Balkan (WB) region includes six countries: Albania, Montenegro, Kosovo, North Macedonia, Bosnia and Herzegovina and Serbia. WB countries have a very clear EU integration perspective, which was initially recognized during the “Feira European Council” in June 2000, reconfirmed by the Thessaloniki European Council in 2003, and by the Sofia European Council in 2018. Currently, all WB countries have Stabilization and Association Agreements (SAA) with the European Union (EU). More specifically, Albania applied for EU membership in April 2009 and obtained the candidate status in June 2014. In July 2022, the EU held its first intergovernmental conference with Albania.¹ Montenegro declared its independence from Serbia in 2006, whereas in 2008, the country applied for EU membership. In June 2012, the EU started the accession negotiations with Montenegro. North Macedonia applied for EU membership in March 2004, and in 2005, the country obtained the candidate status. In July 2022, EU held the Intergovernmental Conference on accession negotiations with North Macedonia. Bosnia and Herzegovina applied for EU membership in 2016. The European Council granted the candidate status to the country in December 2022. Serbia formally applied for EU membership in 2009, and in March 2012 the country was granted the candidate status. In January 2014, EU held its first intergovernmental conference with Serbia.² In 2008, the European Council acknowledged Kosovo's declaration of independence, underlining that Kosovo is a sui generis case. The EU plays a crucial role in the reconstruction and the economic development of the country.

Figure 1: Trade balance with the European Union (in million EURO).

WB countries have signed different bilateral and multilateral trade agreements with EU and extra-EU partners. More specifically, the EU has set up a system of diagonal cumulation of origin with the WB countries and Turkey. This system has further developed regional trade as well as offered additional opportunities for economic operators. Furthermore, in 2020, the EU extended its trade preferences to the WBs for five years, until December 2025. This decision has stimulated exports from WB countries to the EU, particularly for farmers with smaller holdings.³ Figure 1 shows the trade balance of each WB country with the European Union.

2. Literature review

A relatively high number of authors have theoretically and empirically analyzed the determinants of bilateral trade flows for developing and developed economies. Wang, Wei and Liu (2010) study the main factors of bilateral trade flows among OECD countries. The authors include R&D and FDI as explanatory variables, estimate unit root tests and consider endogeneity. Empirical results show that domestic R&D stock, levels and similarities of market size, and inward FDI stock are positively related to bilateral trade; whereas, the distance between trade partners has a negative effect. Felipe and Kumar (2012) estimate a gravity model to examine the relation among bilateral trade flows and trade facilitation. Empirical results show that there have been important gains in trade as a result of trade facilitation in Central Asian countries. The highest increase in total trade derives from improvement in infrastructure, followed by logistics and efficiency of customs. Rahman and Dutta (2012) formulate some generalized gravity models to investigate the bilateral trade of Bangladesh. The findings indicate that trade is positively related to the size of economies and openness of trading countries. Exports are positively related to income, partner countries' total imports and openness; and negatively related to partner countries' income and domestic inflation. Imports are positively related to income and degree of openness of partner countries; and negatively related to partner countries' inflation.

Panda, Sethi and Kumaran (2016) investigate bilateral trade flows between China and India. The authors formulate a gravity model on a panel dataset for the two countries. They consider several independent variables such as distance, gross domestic product, contiguity, common language and common colonizer. Findings are consistent with the initial expectations. Narayan and Nguyen (2016) show that the influence of trade gravity variables depends on trading partners. More specifically, trade with rich countries is more sensitive to economic size, distance, openness of trading partners, and exchange rate, than trade with low income countries. According to the authors, trade policy should consider the level of development, maintenance of close economic ties, and the influence of the ASEAN, APEC, and the WTO on trade flows. Nguyen and Vo (2017) analyze the determinants of bilateral trade for ASEAN+3 countries. The authors employ a sample of bilateral trade and economics characteristics. Results show that output asymmetry among countries positively explains bilateral trade. The findings also suggest that comparative advantage by differentiating the export product structure promotes international trade. Hassan Khayat (2019) investigates GCC's trade patterns based on a gravity approach. The model is estimated for six developed trade partners, over the period from 2001 to 2012. The respective findings confirm the statistical significance of GDP per capita, populations and trade barriers. Guan and Ping Sheong (2020) investigate the factors affecting Sino-African trade through a gravity model. Empirical results confirm the statistical significance of trade agreements and economic recessions. According to the authors, the structure of African product exported to China should be stimulated and trade agreements should be reinforced.

3. Empirical results

We propose a gravity-type equation for WB international trade flows, considering several explanators. The proposed equation includes basic variables such as the economic sizes, estimated by the respective GDPs; and bilateral distance, which approximates trade costs. We consider other relevant independent variables, such as the sum of trade partners populations; and two dummies, related to the existence of a common border between trade partners, and to the respective free trade agreements. We estimate the following econometric model, where all variables, except for the dummies, are expressed in natural logarithm:

$$\begin{aligned} trade_odt = & \alpha_1 + \alpha_2(inc_ot) + \alpha_3(inc_dt) + \alpha_4(dist_od) + \alpha_5(pop_odt) \\ & + \alpha_6(BORDER_od) + \alpha_7(FTA_od) + \varepsilon_odt \end{aligned} \quad (1)$$

³ <https://policy.trade.ec.europa.eu/eu-trade-relationships-country-and-region/countries-and-regions/western-balkans/>.

Table 1 shows the definitions and the corresponding expected signs for each of the considered variables. We consider two response variables: export of a Western Balkan country in a given trade partner, and the sum of imports and exports between a Western Balkan country and the corresponding trade partner.

Table 1: Variables definition and expected sign.

Variable	Definiton	Expected sign
trade_odt	Trade flow (imports and exports) between a WB country (o) and a partner (d) at year t	Dependent variable
exp_odt	Exports between a WB country and a partner	Dependent variable
gdp_ot	GDP in a WB country	+
gdp_dt	GDP in a partner country	+
dist_od	Bilateral distance	-
pop_odt	Sum of populations	+
BORDER_od	Dummy variable equal to one if countries share a common border	+
FTA_od	Dummy variable equal to one if countries have signed a free trade agreement	+

Source: Own representation.

Our sample includes annual trade flows between each WB country and the some of the most important partners. We have considered nineteen European trade partners, during the period from 2010 to 2020. GDPs and total populations were sourced from the World Bank, whereas the bilateral distances between trade partners were collected from CEPII GeoDist database (Mayer, T. and Zignago, S., 2011). Eurostat, United Nations (Comtrade) and CEPII (CHELEM-INT) were our most important sources of bilateral trade flows. A limited number of missing observations were sourced from the respective national statistics offices and ministries. Table 2 reports some relevant descriptive statistics for the considered variables.

Table 2: Descriptive statistics

Variable	Exp	Flow	gdp_o	gdp_d	Dist	pop_sum	BORDER	FTA
MIN	11,59	15,11	22,13	22,96	5,05	14,82	0,00	0,00
MAX	21,67	22,31	24,56	29,93	8,95	21,04	1,00	1,00
Mean	19,09	20,12	23,49	27,89	7,13	18,37	0,13	0,75
Median	17,67	19,16	23,17	26,79	6,66	16,61	0,00	1,00
Variance	39,41	40,96	46,58	56,55	14,60	38,86	0,12	0,20
Std.Deviation	19,70	20,48	23,29	28,27	7,30	19,43	0,34	0,43
Asymmetry	3,00	2,49	1,35	2,62	3,43	4,23	2,31	-1,12
Kurtosis	10,77	7,10	0,56	8,19	12,39	17,10	3,19	-0,94

Source: Own representation.

Table 3 shows a summary of the results of the estimated models, obtained by the R software. We have considered two different dependent variables: exports and trade flows. We have applied a typical estimation technique for panel data models, the random effect estimator, which is based on the assumption that the variation between country-pairs is not systematic and uncorrelated with the independent variables. In this case, we can determine the effect of time-invariant parameters. The empirical results show that the considered independent variables are statistically significant in all the cases. The observed R-squared varies from 43,1% (trade flows equation) to 69,1% (exports equation). Coefficients magnitude and sign are similar to past studies (e.g. Felipe and Kumar, 2012; Rahman and Dutta, 2012; Martin and Pham, 2020; Natale, Borrello and Motova, 2015; Narayan and Nguyen, 2016; Hassan Khayat, 2019).

Table 3: Estimation results

Independent variable	model I (exports)	model II (trade flows)	model I (exports)	model II (trade flows)
gdp_ot	1,556***	0,993***	1,427***	0,958***
gdp_dt	0,581***	0,416***	0,517***	0,312***
dist_od	-3,072***	-2,057***	-2,49***	-1,573***
pop_odt			0,574***	0,648***
BORDER_od			0,838***	0,729***
FTA_od			1,466***	0,310***

Adjusted R2	0,503	0,431	0,691	0,628
N	1254	1254	1254	1254

Source: Own representation.

4. CONCLUSION

The main objective of this research was to analyze some of the most relevant determinants of bilateral trade between the six WB countries and the most important trade partners. A panel data econometric model was used to investigate international trade with nineteen European countries over the period from 2010 to 2020. Findings showed that trade is adversely affected by bilateral distance between partners. On the other hand, trade is stimulated by the respective GDPs, total populations, geographical contiguity and free trade agreements. Future research should be directed towards the application of different estimation techniques, inclusion of other relevant independent variables and additional trade partners.

The Effect of COVID-19 on the Convergence of the Jordanian Economy towards a Competitive Economy

Wisam A. SAMARAH¹

¹Assistant Director, Business and Economic Research Center, Al-Quds Open University, Palestine,
wsamarah@qou.edu

Abstract: The purpose of this paper is to look at the policies implemented to prevent the spread of COVID-19 on the convergence of the Jordanian economy to a competitive economy. Intuition, observations, and literature were used to investigate the effect of the policies to combat COVID-19.

Our investigation indicated that the policies implemented to protect its citizens from COVID-19 were effective. In addition, these policies had aided in either contributing positively or preventing the deterioration – maintaining their current status – of the 3rd, 4th, and 5th pillar of the Global Competitive Index.

Keywords: Competitive Economy, COVID-19, Jordanian Economy, Recission.

1. Introduction

1.1 The Jordanian Economy and a Competitive Economy

Jordan's population had reached 9.9 million in 2019. It produces 0.07 percent of the world's GDP is generated from the Jordanian economy, with a GDP per capita of 4,278.3 USD. The Jordanian economy averaged an annual growth rate in the GDP of 2.2 percent for the period from 2009 to 2019. Its economy was able to attract an average of 4.3 percent of GDP inflows in Foreign Direct Investments for the period from 2014 to 2019 (Schwab, 2019, p. 310).

Jordan was ranked 73/140 in 2018 edition of the Global Competitive Index, and slightly improved in 2019 as it upgraded to 70/141. In 2019, The Jordanian Gross Domestic Product (Purchasing Power Parity) in billions of dollars was estimated to be 83, and was ranked 83rd. (Schwab, 2019, p. 329).

The Global Competitive Index (GCI) 4.0 is made up of 12 pillars and they are as follows:

1. Institutions
2. Infrastructure
3. ICT adaption
 - a. Mobile-cellular telephone subscriptions per 100 population
 - b. Mobile-broadband subscription per 100 population
 - c. Fixed broadband internet subscriptions per 100 population
 - d. Fiber internet subscriptions per 100 population
 - e. Internet users' percentage of adult population
4. Macroeconomic stability
 - a. Inflation rate in percentages
 - b. Debt dynamics
5. Health
 - a. Healthy life expectancy in years
6. Skills
7. Product market
8. Labor market
9. Financial system
10. Market size
 - a. Gross Domestic Product (Purchasing Power Parity) in billions of dollars.
 - b. Imports of goods and services as a percent of the GDP.
11. Business dynamism
12. Innovation capability

The purpose of this paper is to look at the policies implemented to prevent the spread of COVID-19 on the convergence of the Jordanian economy to a competitive economy. The objective of a competitive economy is to utilize a countries' resources in the most efficient way.

1.2. Covid 19 and the Jordanian Economy

On March 2nd 2020, the Jordanian government announced its first COVID-19 case, when a person had travelled to Italy. The government initially had quarantined the coronavirus cases in five-star hotel located in the Dead Sea (Singh, 2020). Due to the huge socio-economic impact that COVID-19 had on the world, it was important to implement strict and hard measures to protect its citizens against the spread of the virus. On March 17 2020, the Jordanian government temporarily closed down airports, sea ports, and land borders, on March 21st the government instituted a full-scale lock down, where churches, government offices, schools, public transportation, entertainment centers, mosques, and universities were all fully closed. On March 25th limited movements on foot were allowed and people were no longer permitted to use their cars with strict evening lockdowns. Finally, in early May, the government had eased restrictions gradually with placing safety standards such as masks and social distancing. The idea was to act quickly and decisively placing the human well-being as a priority over the economic losses (Kebede, Stave, Kattaa, & Prokoo, 2020, p.12).

Thus, since the beginning of the pandemic, the Jordanian government had urged its citizens to stay at home and not leave except for emergencies. In order to enforce these policies, it called for the Jordanian military whom in turn were spread and present on the streets. The government had also decided to close down the private sector with the exception of the health sector, prohibited the gatherings that exceed 10 people, and prohibited movements between the different municipalities (Media Arabia, 2020).

In addition, it stopped the printing of newspapers (while maintaining a digital version), and stopped mass public transportation. Nonetheless, pharmacies, grocery stores and bakeries remained open.

The tourism sector was hardly hit. The closure of Queen Alia International Airport in Amman was a major blow to the tourism industry. This closure had prohibited hosting of tourist groups from counties such as South Korea, Italy, and Iran. All air travel was cancelled with the exception of shipping to and from the Kingdom since the 17th of March 2020 (Media Arabia, 2020).

The restaurant business was also hardly hit. Meanwhile, other sectors of the Jordanian economy had improved such as e-learning, distance learning, and lectures broadcasting for both primary and secondary education. The medical sector had also seen an increase in demand for its products especially pharmacies, medical equipment, all kinds of sanitizers and its related products. After the Jordanian government had eased its restrictions and allowed for food delivery from restaurants and other stores there was an increase in delivery services (Media Arabia, 2020).

In order to aid the economy, the Jordanian government created two funds. The first is managed by the government and received donations from different entities and individuals. The second fund was called "Himmet Watan" translates to the nation's efforts and is managed by business leaders and receives donations from the private sector (Kebede, Stave, Kattaa, & Prokoo, 2020, p.12).

The Central Bank of Jordan (CBJ) had also joined the government efforts to stimulate the economy and reduce economic losses to both business and workers. To aid the Small and Medium sized Enterprises (SMEs) that are facing the risk of closure; the CBJ established a soft loan and a low interest loan fund with the Jordan Loan Guarantee Corporation acting as the guarantor for the firms that receives loans. To protect the workers, firms that received these loans were prohibited from laying off any of its employees during the duration of the loan (Kebede, Stave, Kattaa, & Prokoo, 2020, p.12).

On March 3rd of 2020, the CBJ decreased the interest rate from 4 percent to 3.5 percent. On the 16th of March it further reduced interest rates from 3.5 percent to 2.5 percent. It also gave permission for the banks to reschedule loans especially for the hard-hit sectors, till the end of 2020 at no extra cost. Finally, the CBJ reduced the Required Reserve Ratio (RRR) from 7 percent to 5 percent, thus increasing the money supply – releasing an additional liquidity into the economy – by around JD550 million which is equivalent to around USD775 million (Kebede, Stave, Kattaa, & Prokoo, 2020, p.12).

The Jordanian government had also announced that it will postpone the collection of sales taxes till they sell all their goods rather than at the time of signing the contract for all food supply and health sector firms. In

addition, it allowed the payment of only 30 percent of their customs fees and postponing the remaining 70 percent for all the firms listed in the golden and silver Jordan Customs Department (Kebede, Stave, Kattaa, & Prokoo, 2020, p.12).

The Jordanian government had announced a number of Defence Orders to support enterprises, jobs, and workers. On March 17 of 2020, the Prime Minister (PM) Omar Razzaz activated the National Defence Law following a Royal Decree. This law allows him to make legal decisions without referring to the parliament during the duration of the crisis (Kebede, Stave, Kattaa, & Prokoo, 2020, p.13).

Defence Order No. 1 was activated on March 19 of 2020, replacing some of the provisions suspended from the Social Security Law. This order granted the Social Security Corporation (SSC) authority to

1. Enterprises to suspend payments for old age for a period of 3 month starting from March 1st 2020 without temporarily terminating the converge for death, maternity, occupational health, and unemployment.
2. Enterprises to pay social security installments till the end of 2023 without any interest or penalties of any kind.
3. 50 percent of the maternity income fund of 2020 is used to support the needy such as compensations for daily workers and the elderly.

The Jordanian government had also aided the most vulnerable households with emergency cash payment and relief aid through the formation of a social protection team headed by the Minister of Social Development. This team included membership from the National Aid Fund (NAF), national civil society organizations, and SSC (Kebede, Stave, Kattaa, & Prokoo, 2020, p.14).

On April 8th 2020, the PM issued Defence Order No. 6. This order aimed at securing the private sector employment and wages reducing the impact of COVID-19 measures on both the employers and employees, and aid in a quick economic recovery. This was achieved by laying-out the rights and responsibilities of both the employers and employees, and guided the process of the gradual openness of the economy and the return to the normal status (Kebede, Stave, Kattaa, & Prokoo, 2020, p.14).

This order stated that the first two weeks of the total lockdown – the period from March 18th to 31st – all workers are entitled to their full salaries and no deductions from their annual leaves. In addition, workers who performed any type of overtime work during the period from March 1st to 31st are entitled to full overtime pay as normal (Kebede, Stave, Kattaa, & Prokoo, 2020, p.14).

Firms that resumed operations on April 1st 2020 – with permission from the Jordanian government – are expected to abide by the Standard Operating Procedures outlined by the Ministry of Labor. Employees are entitled to their full salaries. Nonetheless, employers can negotiate a reduction of their salaries for up to 30 percent. Meanwhile, firms that were prohibited by the government to resume operations were obligated to pay 50 percent of the employees' salaries given that they do not fall below the standard minimum wage of JD 220 that is equivalent to USD 310 (Kebede, Stave, Kattaa, & Prokoo, 2020, p.14).

Migrant workers employed by the industrial sector receive a monthly payment of JD 220. In addition, factories are allowed to pay 50 percent of migrant worker's salaries given they do not fall below the minimum wage only with the approval of the Ministry of Labor. Nevertheless, firms heavily affected are able to apply for permission from the government not to pay their migrant workers. However, accommodations and food should be provided and the suspension period will not be deducted from duration of the work visa which is three years (Kebede, Stave, Kattaa, & Prokoo, 2020, p.14).

Defence Order No.9, was issued by the PM on April 17th of 2020. It targeted the protection of businesses, daily wage workers, and freelancers. It was also designed to aid the private sector in fulfilling its obligations outlined in Defence Order No. 6. This is achieved by the creation of a number of programs, where the first program is called "Tadamin" which translate to solidarity. This program supports firms "whose activities were completely or partially disrupted and whose workers are covered by provisions of the Social Security Law" (Kebede, Stave, Kattaa, & Prokoo, 2020, p.15). Under this program "the SSC will allocate 50 per cent of deducted wages of SSC-insured workers (for amounts ranging between JD 165 and JD 500). The establishments/ employer, prior to disbursement, will pay the SSC 20 per cent of the deductible wages of SSC-insured workers, with a maximum of JD 250" (15). Three other programs were included in this order (Kebede, Stave, Kattaa, & Prokoo, 2020, p.15).

Nonetheless, the Jordanian government's response to COVID-19 aided in the push towards a digital economy, where online sales had increased – especially online groceries during the quarantine (Bitar, 2020). Businesses

had started to explore opportunities online. Universities all over the world – including Jordan – started taking advantages of applications such as Zoom to conduct conferences and international meetings.

Let's take a closer look at what a digital economy means. The world had experienced an agricultural and industrial revolutions; however, the recent decades had marked the beginning of an informational revolution. This in turn, had brought curtailed improvements in productivity, caused vital changes in productive relations and created new activities, products and services. This revolution had paved the way for more and more individuals, companies and countries to shift their focus to digital economy. This is due to its benefits that include the high speed of transactions, low costs and international coverage (Guo, Ding, & Lanshina, 2017, p. 170).

The concept of digital economy was introduced by Don Tarpscott – a Canadian Business executive and strategist in 1995. Today digital economy is characterized by technologies such as fixed broadband access, mobile broadband smart phones and their apps, interactive websites, social networks, sharing platforms, cloud computing and the internet. These technologies expand human productivity due to the fact that these technologies permeate the world's economy. Thus these technologies are increasingly being used in the different aspects of human life such as retail (e.g. e-commerce), education (e.g. massive availability of online courses), health (e.g. electronic records and personalized medicine), and social interactions and personal relationships (e.g. social networks) (United Nations, 2018).

The movement towards digital economy – applying the digital and technological skills – is forecasted to cause the world economy an increase of \$2 trillion in economic output by the year 2020 (Guo, Ding, & Lanshina, 2017, p. 170). The digital economy will stimulate innovation, generate efficiencies, and improve the level of services. It contributes to enhance productivity, growth, job creation, and increases the rate of achieving sustainable development goals.

Nonetheless, as a country moves towards a digital economy, there are important challenges that manifests. Policy makers have to deal with issues related to privacy, security, consumer policy, competition, jobs, and skills.

To better understand any economy, we need to look at the supply and demand side for that economy. So, let us start by looking at the main components of the supply side of the digital economy. When looking at the supply side the following three main aspects are considered:

1. The Information and Communication Technology (ICT) sector.
 - a. Scope and Value added.
 - b. Employment in the ICT Sector.
 - c. Trade in the ICT sector.
 2. Recent Status of the ICT Infrastructure.
 3. Digital Innovation: Research and Development expenditure and Investment.
 4. New Business Models: Digital Driven Innovation and Sharing Economy.
- Now let us look at the key aspects of the demand side for the digital economy. The demand side deals with the users of digital technologies. , They are as follows:

1. Internet used by household and individuals.
2. ICT use by business.
3. Digital transformation of government services.
4. Skills for the digital economy.

Clearly, a digital economy is different from a competitive economy. However, the transformation to a digital economy would contribute positively to the competitiveness of an economy Therefore, this paper will examine the effect of COVID-19 policies implemented on the path of convergence of the Jordanian economy towards a competitive economy.

The Jordanian economy estimated loss from COVID-19 was 1.5 percent of the GDP of 2019 GDP for the first nine month. The GDP was 44 USD billion in 2019. So, the loss from COVID-19 is around 660 USD million. Meanwhile, the tourist sector had the most losses with an 18 percent of GDP and of total employment in 2019 (World Bank,2021).

The importance of this paper lies in the fact that it is an assessment of the different policies implemented by the Jordanian in response to COVID-19. In addition, natural disaster are occurring more often these days. So, it is important for an economy to with stand these disaster. This is why this paper aims to demonstrate how

certain policies can minimize the negative effect of a natural disaster and sometimes gain benefit from these event. Thus, governments can play a vital role in minimizing the losses of a certain catastrophe.

2. Literature review

Covid-19 had impacted the Arab countries economies, as it did with the rest of the world. Mehdi, Gheraia, Abdelli, Sekrafi, & Diaw (2022) examined the impact of COVID-19 on the economy of Arab countries, focusing on financial markets in terms of financial fragility. In addition, the paper studied commercial services, monetary system and banking sector. The paper concluded with a number of recommendations for both the short term and long term. In the short term, these recommendations will aid the Arab economies to overcome the crisis safely. Meanwhile, these measures will make the Arab economies more resilient in the long term. The most important policies that should be adapted by Arab central bank are providing financial incentives and adapting an expansionary monetary policy.

Now, we will assert the literature that covers the impact of COVID-19 on Jordan.

Alqutob, Al Nsour, Tarawneh, Ajlouni, Khader, Aqel, Obeidat (2020). Had discussed the different strategies that Jordanian government had implemented in order to prevent the spread of COVID-19. They also came up with different scenarios of how the spread of the virus will occur. The paper had discussed how it was necessary to contain the virus and at the same time keep the economic, social and the financial activities going. A number of recommendations were given to contain the virus and support the health system in Jordan. The most important one was to increase the intensive care unit and the respirators.

In this paper we look at the effect of COVID-19 on the Global Competitiveness Index pillars for Jordan. We will also examine the effect of imports on the economic growth in Jordan in the context of a competitive economy.

Al-Tammemi, (2020). Presented an overview of the battle against COVID- 19 in Jordan and discussed how collaboration had occurred in crisis management. The paper had also discussed the economic impact of COVID-19 on Jordan and how a generous fund was created to aid the Jordanian society, the article had concluded that the Jordanian government response was promising and indicated the importance of the collaborative efforts.

Abu-Mater, Alsufy and Afifa, (2020). Examined the effects of the coronavirus (COVID-19) on the economic climate contained in Jordan. The paper concluded that there's an economic impact across the nation. Nevertheless, it's realized that the constant lockdown is actually a threat to the overall performance of companies. The paper also looked at the causes that matter to decision makers in government institutions, and administrators in Jordan respond to it.

This paper will use intuition and observations to analyze the effect of policies that were implemented by the Jordanian government – both social and economic – in order to converge the Jordanian economy to a competitive economy.

3. CONCLUSION

The policies implemented by the Jordanian government to protect its citizens from COVID-19 had proved to be effective in terms of health. On July 8th of 2020, the total number of cases in Jordan was 1169 with 10 people deceased. Comparing the Jordanian mortality rate to that of neighboring countries: the Palestinian territories had 21 deceased, Lebanon had 36 deceased, and Israel had 343 deceased – the Jordanian numbers were evidently quite low. Thus, these policies had aided in maintaining the 5th pillar of the Global Competitive Index in its current status and prevented deterioration in the life expectancy.

Unfortunately, after the removal of these policies and the gradual openness of the Jordanian economy, the situation deteriorated substantially. Nonetheless, due to the continuation of the spread of the COVID-19, the Jordanian government was able to find a suitable balance in order to maintain the Jordanian economic activity and the health of the Jordanian citizens. The Jordanian government had continued to demonstrate its ability in controlling the spread of the COVID-19 and the preservation of the health of the Jordanian economy. Due to the mutation of the virus, it is apparent that a push towards a digital economy would be one of the solutions in order to safeguard the wellbeing of the Jordanian citizens. This will contribute positively to the push of the Jordanian economy towards a competitive economy.

The effect of these policies on the 4th pillar includes an expected reduction in the inflation rate. As the Jordanian economy was partially shut down as the lockdown was in place, the unemployment increased and

people's purchasing power had decreased. From the Phillips curve, we know that there is an inverse relationship between inflation and unemployment. Thus, the rise in unemployment will result in a decrease in the inflation rate. The Arab countries had suffered from a rising unemployment and inflation rates (Samarah, 2017). Thus, a decrease in the inflation rate is considered a positive indicator for Jordan.

The CBJ response of lowering both the RRR and interest rate is an attempt to stimulate an increase in borrowing for investment and increase money supply in order to stimulate spending. The restriction of movement had decreased the demand on gas, i.e. lowering the imports of oil. The decreasing demand for oil during the period from March to June of 2020 is expected to have made some minor positive effects on debt dynamics. Thus, aiding in the debt dynamics of the Jordanian economy.

We conclude that the policies implemented to stop the spread of COVID-19 by the Jordanian government had contributed positively or prevented the deterioration – maintained their current status – to some of the pillars of the Global Competitive Index, i.e. prevented the diversion of the path of the Jordanian economy in its convergence towards a competitive economy. This was achieved through the increase in the use of online transactions, the maintained life expectancy at its current status, the expected reduction in inflation, and the decrease for the demand for oil. Online transactions had increased as people were prevented to move around and in the time of quarantine which extended from March till June. This had also paved the way for the Jordanian economy to move closer to a digital economy.

In addition, the continuation of the closure of the airport had a positive impact on domestic tourism. As the period of the quarantine was over – given the continuation of the closure of the airport – Jordanians were forced to explore their own country's tourist sites. This had resulted in some compensation for the tourist industry in return for the loss of foreign tourists (Bitar, 2020). So, the 3rd, 4th, and 5th pillars of the 12 pillars of the Global Competitiveness Index were affected in a positive manner. The Jordanian government's actions had demonstrated that Jordan's leadership did place the safety of its citizens over the economy.

²Associate Professor, Agricultural University of Tirana, Department of Economics and Rural Development Policies, itabaku@ubt.edu.al

Abstract: It is not difficult to hear the word 'bio' among Albanians, who try to consume as many natural products as possible, but who are not really sure of their origin. It should be borne in mind that bio, i.e. natural, does not mean organic. They are two different things. The standards applied in agriculture, especially the *eco and organic standards*, are a set of rules and specifications, which determine the exact conditions for the production, processing, transport, certification and control of agricultural products. A product is not organic just because you bought it from a farmer who tries to assure you that it was grown in his backyard and is "fresh".

Specifics on the location of the farm or garden, the land where these products were grown, what was used to fertilize the land, is this land contaminated with waste or similar and in what "way these products were transported to the point of sale" are extremely important in determining what is truly organic. The warm weather and favorable climate make Albania an ideal source of organic production, adding to this a fertile soil.

In order to compete decently in an international market, where the purchasing power is informed and oriented towards quality, Albanian farmers will have to take appropriate measures to meet expectations and requirements, by certifying their products. Certification has several criteria that must be met. A new trend is developing among Albanians, the "love" for *organic and natural*. The concept of what products are truly organic and what is natural is still foggy.

The number of operators in the process or certified as organic in Albania is increasing year after year, while 1/4 of the production goes for export. Indeed, organic products are more expensive than other products in supermarkets, however, the cost of producing these products is also obviously higher, but it should be taken into consideration how healthy these products are. It is important that a new culture of consumption of these products is being created and I think that this trend is giving signals that it will expand more in the future.

Keywords: *organic, natyral, bio, product, consumer preferences, food security, market.*

1. Introduction

Albania has comparative advantages for biological agricultural production, as well as for the conventional one, such as early vegetables, fruits, olive and its oil, grapes and wine, forest fruits, aromatic and medicinal plants, etc. This includes a very large potential for livestock products. The main problem is the challenge of certified organic production of many of these products, with the exception of aromatic-medicinal plants and forest fruits. Agriculture in Albania is the sector with the lowest productivity and wages, even though it accounts for about 20% of the total Gross Domestic Product, but organic agriculture can be a segment that brings higher profits than intensive agriculture. Although organic farming is in its early stages, it has seen rapid growth in recent years.

The lands in Albania have tremendous potential to offer the best natural products and within food safety standards. Today, more than ever, Albania has an urgent need to educate and bring to the market new generations of technicians, who will be prepared to bring the appropriate knowledge to the organic agriculture sector. This should also happen with the opening of professional courses on food products, food safety, teaching organic development techniques, which has tremendous potential to be developed in the country. Through education, young technicians will appear on the market, who will be able to use the opportunities that this sector provides.

How much opportunity does an old farmer have to acquire new knowledge, to be open to technological changes? Very little. Then more work should be done on the creation of professional schools in this direction, which promises to develop further in Albania. Albanian consumers are becoming more and more sensitive to the issue of food. Scandals related to food or illegal agricultural practices encourage more and more consumers to look for organic products. Experts advise that manufacturers should use these opportunities to be present in the market with organic products that replace conventional products with chemical pollution.

Experts say that globally, the growth of the organic sector is largely driven by consumer demand in high-income countries that favor organic production for a variety of reasons, including perceived health and environmental benefits, perceived improvement in quality and taste. of food, access to fresh produce and helping small-scale producers, communities and local markets. According to them, recent food safety concerns in some countries and some consumers concerns about genetic modification in agriculture have also contributed to increased demand for organic produce. According to him, organic agriculture can be seen as the concern of a social movement that represents an alternative to mainstream agriculture.

2. Literature Review for Organic and Conventional Food

Interest in organically produced food is increasing throughout the world in response to concerns about conventional agricultural practices, food safety and human health concerns (e.g., Gregory, 2000; Grossman, 1972; Schifferstein and Oude Ophuis, 1998), animal welfare considerations (e.g., Harper and Makatouni, 2002; Hughes, 1995) and concern about the environment (e.g., Grunert and Juhl, 1995; Tregear et al., 1994; Wandel and Bugge, 1997; Wilkins, and Hillers, 1994). These concerns, along with observed organic consumer behaviour has led, in part, to emergence of various groups of organic consumers, namely environmentalists, food phobics, healthy eaters, humanists, welfare enthusiasts, and hedonists (Davies et. al., 1995) (Table 1).

The interest in organic agriculture has prompted numerous studies comparing aspects of organic and conventionally-produced foods. Stakeholder interest has also prompted a need to not only determine the extent to which there is a scientific basis for claims in support of organic products, but also to consolidate and evaluate the numerous empirical studies and findings. Bourn and Prescott (2002), for example, provided an excellent review of several studies comparing selected biophysical and related quality attributes of organic and conventionally produced foods. Woese et al. (1997) evaluated selected studies based on the physico-chemical quality attributes for various food groups, including cereals and cereal products, potatoes, vegetables and vegetable products, wines, beers, bread, dairy products, meat and eggs, fruits, and nuts and oil seeds.

The future of organic agriculture will, to a large extent, depend on consumer demand. Thus, a consumer-oriented approach to understanding organic agriculture is important not only in its own right, but also in terms of response to shifting market dynamics. From a marketing perspective, it is important to understand our (human) conception of consumer decision-making regarding organically produced foods, and how consumption can be promoted. Product development and marketing strategies are also affected by consumer beliefs, attitudes and responses. This could vary depending on the region of the world. Thus, a clear understanding of consumer attitudes and the motivations underlying actions in responding to organically grown products is important. This review is concerned with our (human) conception of consumer decision-making for organically produced foods, based on a microeconomic perspective. In this regard, this review compliments and extends the work of Woese et al. (1997) and Bourn and Prescott (2002). We have consolidated and compared numerous empirical analyses on consumer preferences for, and attitude towards, organic food relative to conventionally grown products.

The literature review emphasizes important organic consumer demand and marketing issues, including: (i) the implications of an economic definition of organically grown food for consumer demand; (ii) attributes that shoppers consider most when comparing organic with conventionally grown products; (iii) level and characteristics of consumer knowledge and awareness about organic food; (iv) assessment methods and characteristics of organic consumer attitudes and preferences; (v) size of organic price premium and characteristics of consumers' willingness-to-pay for organic products; and (vi) profile of organic consumers. Such a comparison across studies, and for various countries, is not only important in its own right, but also provides a better understanding of the economic and noneconomic variables to include in organic consumer demand modeling and estimation. An economic perspective of organic products as economic goods precedes a comparison of selected consumer decision-making dimensions of organic products.

3. What is Organic?

According to the World Health Organization (WHO), organic foods are traditionally and perfectly produced, without the use of chemical products or undergoing genetic modifications. For most people, these products respect the environment and are more natural when consumed. While organic food is the one that takes care of the environment, but respects the natural genetic process of species, their reproductive cycles and

biodiversity. It is more difficult to find biological products than organic products, since their production is more beautiful, which will take in the final price.

The name "**organic**" product refers to those food production products and/or the processing of all is characterized by the absence of chemical fertilizers, chemical products for plant protection, synthetic hormones and artificial coloring. Organic products can be considered as differentiated products when compared to common conventional products as they really possess other characteristics when compared to their counterparts conventional (Sashi and Stern, 1995).

4. Comparison of Organic and Conventionally Produced Food

Although the attributes associated with organic foods may be difficult to identify by visual inspection alone, most consumers purchase organic products because of a perception that these products have unique (and in some cases superior) attributes compared to conventional ones grown alternatives (Vindigni et. al, 2002). On the other hand, a major reason why some consumers do not purchase organic foods is linked to a perception that such foods are not better than their conventionally produced alternatives (Jolly et al., 1989). There is, thus, a continuing debate about whether organically produced products are superior to and/or different from conventionally produced alternatives and, if so, in terms of what characteristics.

Several studies have assessed whether there are differences between organic and conventional foods from the perspective of both the producer (or supply-side) and the consumer (or demand-side). Supply-side evaluations have generally focused on yield, producer price, and profitability comparisons. In contrast, demand-side studies have investigated the differences in terms of biophysical and chemical (e.g., nutritional, sensory, and food safety) characteristics, as well as consumer preferences and retail prices.

Organic products compete with *conventional alternatives* in the market. Although many organic products command a higher price compared to their conventional alternatives, some consumers continue to substitute organic for conventional products. This and other related observations led Lancaster (1966) to argue that the traditional theory of consumer demand is inadequate in explaining why consumers will buy, for example, organic products instead of conventional-grown alternatives.

The traditional theory is silent about the intrinsic characteristics of a commodity. Neither does it provide insight on how product quality variations affect consumer perceptions and decision-making behaviour. It also provides limited explanation of how demand changes when one or more of the characteristics of a good change or how a new good introduced into the market fits into the preference pattern of consumers over existing goods (Lancaster, 1966; Lancaster, 1971; Lancaster, 1991). Intrinsic characteristics are what differentiate organic products from their conventionally-produced alternatives. According to Lancaster (1971), the omission of information about the inherent characteristics of consumer goods in traditional consumer theory renders the theory incapable of handling some important aspects of consumer demand in today's world.

5. Current situation for organic products in Albania

Is there bio in Albania? It is a question that is being asked by everyone, in the midst of the food security crisis.

According to official data from the Ministry of Agriculture and Rural Development, in 2020, organic production reached 2118 tons in total, with a 69% increase compared to 2019, also the number of farms that received the organic producer certificate reached 200 last year, from 40 in 2018. Considering the small size of the farms and the long process of converting farms from conventional to organic in Albania, the expectations on the size of the certified farms are similar, thus fragmented. The minimum area of agricultural land, converted to organic or in the process of conversion, is 1.88 dunym, while the maximum is 73 dunym.

Currently, the most common organic products in our country are medicinal plants that grow wild in nature, such as sage, blueberries, mountain tea, oregano, etc. Meanwhile, honey, mushrooms, vegetables in greenhouses and the agricultural sector has started to be oriented towards organic production. A new method that kills pests without pesticides has started to be experimented in the greenhouses of Lushnja.

In fact, today, after 20 years have passed since the beginnings of the movement for organic agriculture in Albania, organic production occupies a very small percentage of the agricultural land surface. Here I mean only agricultural and livestock products, not including aromatic and medicinal plants and forest fruits which are considered a separate sector. It is the latter that increase the areas and volumes of biological products in

national statistics. So, the sector has not managed to mature. Albania has organic products, where organic products are also considered products that are produced with few agricultural inputs, but according to the provisions of the Albanian law on biological products. We can say this with conviction for most products, which are also subjected to analysis for residues, confirming not only the certificate that accompanies them, but also the integrity of the certifying body.

The main problem is the challenge of certified organic production of many of these products, with the exception of aromatic-medicinal plants and forest fruits. There are very few certified organic producers of vegetables and fruits. Similar are the challenges of livestock farms to realize a closed cycle of production, without being conditional on receiving food used for livestock from outside the farm. Other product categories, mainly aromatic and medicinal plants, are mainly export-oriented because domestic demand is very low.

These organic producers cannot create a sustainable offer and consequently have difficulties to realize contracts with supermarket chains. This is the main reason that the local market is limited to only a few shops, or specialized markets. For this reason, the price of these products is high and consequently makes their spread even more limited. All this sends negative signals to those farmers who plan to convert to organic production.

Despite the current state of organic production, Albania has very good production capacities, especially in regions far from intensive production. This requires support for organic producers or those who want to convert to organic production. This support should also include the transfer of knowledge, as a prerequisite for successful biological production.

The Mediterranean climate favors the spread of many diseases and pests, which require high professionalism to be kept under control without chemical intervention or biopesticides. This also applies to soil fertility management and the use of bio-fertilizers.

6. The policies used by the government to encourage the development of organic agriculture

The government is trying to formulate policies to promote the development of organic agriculture. Organic agriculture in Albania has experienced limited growth in the last decade, with a limited registry of organic farmers. Interest in the organic sector, however, extends beyond such limited growth and market. Organic farming is promoted based on the multiple benefits it offers; healthier food, improvement of the agricultural environment and a contribution to the rural economy.

There is a growing consensus that it certainly offers some environmental benefits over and above conventional agriculture. For example, in nutritional terms, while there is some evidence that *"the organic diet mainly reduces the amount of toxic chemical exposure, always avoids GMOs, reduces the amount of additives and food colors"*, and increases the amount of vitamins, antioxidants and acids beneficial fatty acids, others have argued that *"in the expert view, current scientific evidence does not show that organic food is safer or more nutritious than conventionally produced food"*.

Various government policies for organic agriculture can promote employment in rural areas and contribute to rural development, for example, through the provision of environmental services that support rural tourism.

Given the broad implications of these claims, it is not surprising that organic farming is sometimes presented as a panacea for the problems facing the food and agriculture sector.

Nor is it surprising that it stimulates as much vociferous 'anti-organic' feeling as sees in organic a rejection of the agricultural science that has led to such remarkable increases in yields and productivity over fifty years. the last.

Mentioning the development that this agriculture can have in the local economy, only recently, researchers have turned their attention to the role of organic agriculture in the rural economy and in particular, the potential for organic agriculture to contribute to rural development.

According to experts, any policy measure that aims to promote the development of organic agriculture will also promote the sustainable development of rural Albania.

7. The impact of organic agriculture on economic development

It is often argued that organic farming can promote employment in rural areas and that it can contribute to rural development, for example, by providing environmental services that support rural tourism. Given the

broad implications of these claims, it is not surprising that organic farming is sometimes presented as a panacea for the problems facing the food and agriculture sector. Nor is it surprising that it stimulates as much vociferous 'anti-organic' feeling as sees in organic a rejection of the agricultural science that has led to such remarkable increases in yields and productivity over fifty years. the last.

Parallel to the growth and interest in the organic sector, 'local food' has taken on greater economic, environmental and symbolic importance. Much of this has to do with reducing environmental costs, but also the desire to increase local economic multipliers and contribute to (re)connecting farmers and consumers. Although organic produce is not necessarily 'local', there is a close connection between local food and organic food.

The combination of a greater level of consumption of domestic organic products would lead to significant savings, accompanying the *reduction of environmental externalities*.

Contrary to the situation in Europe, so far in Albania, there is no research on organic agricultural policies and on the implications of the latest development in rural areas. Considering the experience in the EU, it can be argued that policy measures will promote the development of organic agriculture.

8. Advantages and Problems for organic products

Advantages

The Ministry of Agriculture and Rural Development has declared organic agriculture a priority sector, promoting in this way the integration of the Albanian organic agriculture sector in the international community of Organic Agriculture, as well as national and international networking. In Albania, there are suitable climatic conditions for the production of organic products during the early and winter seasons. Current agricultural and livestock systems mainly rely on low levels of inputs (non-intensive systems).

As for trade, Albania's strategic geographical position is an advantage, while the increase in consumer incomes in Albania represents an opportunity for the domestic market. Organic agriculture in Albania continues to be in its initial stages of development, as it faces several challenges. Despite progress in organic farming legislation, there are still gaps in terms of compliance with EU legislation on organic farming (or the Common Agricultural Policy).

Problems

From the point of view of supply, experts say, the problems of the biological sector are those of conventional production, but sharper. Among the elements that are reducing the development of the sector are the small areas of farms, which have difficulties to orientate themselves in the market.

Most farmers have high production costs, which discourages them from engaging in agricultural production. Organic producers get lower yields because the inputs they use are not as efficient as the chemical fertilizers and pesticides used by conventional producers. If most conventional farmers can sell their produce in bulk to a collection point, for the organic farmer there is no collection point, so he must prepare and market the product for the retail point, increasing costs. Added to these structural factors is the farmers' limited experience in both biological production cultivation technologies, as well as managerial and commercial knowledge.

On the other hand, the capacities of the agricultural advisory service are insufficient to deal with the work of the standards for this body. The lack of cooperation in Albania between Albanian producers in the marketing of organic products in Albania. Budget support for agriculture in Albania continues to be quite low, but for organic agriculture, it is almost non-existent.

Since 2008, the Ministry of Agriculture and Rural Development offers for certificates of products of products of products, received intended for the production of products of products, but still the number of beneficiaries among farmers remains very low, the increase of subsidy products from direct scheme. of beneficiaries continues to be low, compared to the potential.

9. Consumer Behavior and Consumer Perception for organic product

Against the higher costs of organic products, there is a lack of a consumer willing to pay more precisely to cover the additional costs of organic producers. Experts say that potential buyers of organic products, who have the purchasing power to eat organic food regularly, are a small segment of society. According to them, within this

segment, only a small part have the awareness or education as consumers to appreciate organic products, mainly immigrants returning to Albania or graduates abroad, who have consumed these products in the country where they lived or studied. Another category of potential consumers are tourists.

Since in recent years there has been an upward trend in the tourism sector, tourists themselves are very interested in eating organic food and trying local food, so agritourism in Albania is developing. This sector still has a lot to give, if three basic conditions are met: controlled origin, certified products and prepared farmers.

Albanian consumers are becoming more sensitive to the issue of food. According to him, scandals related to food or unauthorized agricultural practices encourage more and more consumers to look for organic products. Experts advise that manufacturers should use these opportunities to be present in the market with organic products that replace conventional products with chemical pollution.

Although the organic sector is still relatively small, the demand for organic food is growing worldwide. The characterization of consumers' perception and attitudes towards organic food is important to enable the development of marketing policies aimed at attracting conventional consumers to this sector. Consumer behavior studies should be conducted specifically for different regions and countries as perceptions and attitudes vary around the world.

Most people who consume organic products confuse these with home and locally produced foods, showing the potential of growing the organic sector by providing such consumers with the right information.

Most consumers (including conventional consumers) have a good opinion of organic food and consider it better for health, better quality than conventional food and avoids pesticide residues. However, the price continues to be a barrier to the consumption of organic products. Most consumers stated that they would consume more organic food if the price was favorable for their budget.

10. Recommendation

Soils have tremendous potential to provide the best natural products and within food safety standards. This highlights and emphasizes the urgent need to educate and bring to the market new generations of technicians who will be prepared to bring the appropriate knowledge to the organic farming sector.

This should be accompanied by the opening of professional courses on food products, food safety, learning organic development techniques, which has tremendous potential to be developed in the country. Through education, young technicians will appear on the market, who will be able to use the opportunities that this sector provides.

This would be a good incentive for all young people who choose to leave Albania. This country is running out of young people who could make a lot of changes. *How much opportunity does an old farmer have to acquire new knowledge, to be open to technological changes?* Very little. Then more work should be done on the creation of professional schools in this direction, which promises to develop further in Albania.

The experts emphasize that in Albania, more professional training should be carried out for the young people of this sector, as well as general knowledge not only about food safety, but also about business to prepare for the market.

Experts are more optimistic about the agricultural sector, where there is a great potential for economic development, but above all it is worth emphasizing that farmers should be better oriented to "produce indigenously", with high quality, to improve food safety. Experts also point out that organic producers also have a significant additional cost, that of certification.

According to experts, any policy measure that aims to promote the development of organic agriculture will also promote the sustainable development of rural Albania.

The basis for building a secure future for the organic products sector is education: consumer education and the education of young farmers.

Kariyer Uyum Yetenekleri ile Kariyer Stresi Arasındaki İlişkilerin Belirlenmesine Yönelik Bir Araştırma

Dr. Öğr. Üyesi Adviye Aslı Denizli Polat¹

¹Marmara Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu, Yönetim ve Organizasyon Bölümü,
asli.denizli@marmara.edu.tr, ORCID: 0000-0002-5342-8049

Özet: Bu araştırmanın amacı, kariyer uyum yetenekleri ile kariyer stresi arasındaki ilişkilerin irdelenmesidir. Bu kapsamda, İstanbul'da öğrenim gören 106 ön lisans öğrencisinden anket aracılığıyla veri toplanmıştır. Araştırmadan elde edilen verilerin incelenmesinde korelasyon ve regresyon analizlerinden yararlanılmıştır. Korelasyon analizi sonucunda, kariyer uyum yetenekleri ile kariyer stresi arasında negatif yönlü anlamlı bir ilişki olduğu belirlenmiştir. Kariyer uyum yeteneklerinin alt boyutları açısından bakıldığında; kariyer stresi ile tüm boyutlar arasında yine negatif yönlü anlamlı bir ilişki olduğu saptanmıştır. Regresyon analizinden elde edilen bulgular, kariyer uyum yeteneklerinin kariyer stresi üzerinde negatif yönlü anlamlı bir etkiye sahip olduğunu göstermektedir. Kariyer uyum yeteneklerinin alt boyutlarından ise kontrol, güven ve merak boyutlarının kariyer stresini negatif yönde etkilediği ancak kaygı boyutunda böylesi bir etkinin gözlenmediği belirlenmiştir. Araştırmada ulaşılan bulgular, kariyer uyum yeteneklerinin geliştirilmesinin kariyer stresini azaltma yönünde katkı sağlayabileceğini işaret etmektedir.

Anahtar Kelimeler: Kariyer, Kariyer Uyum Yetenekleri, Kariyer Stresi

A Research on the Determination of the Relationships between Career Adaptability and Career Stress

Abstract: The purpose of this study is to examine the relationship between career adaptabilities and career stress. In this context, data were gathered through questionnaires from 106 associate degree students in Istanbul. In the analysis of the data obtained in the study, correlation and regression analyses were used. In the correlation analysis, a negative correlation was found between career adaptability and career stress. In terms of the sub-dimensions of career adaptability, a significant negative correlation was found between career stress and all dimensions. Findings from the regression analysis show that career adaptability has a negative and significant effect on career stress. It was determined that the sub-dimensions of career adaptability, control, confidence and curiosity, affect career stress negatively, but such an effect was not observed in the concern dimension. The findings obtained in the research indicate that the development of career adaptation abilities can contribute to reducing career stress.

Keywords: Career, Career Adaptability, Career Stress

1. GİRİŞ

Kariyer, bireyin çalışma yaşamı boyunca yaptığı işlerden oluşmakta ve bu süreçte izlenmesi gereken bir dizi “faaliyet yolu” olarak tanımlanmaktadır (Özgen ve Yalçın, 2010: 187). Kariyerin en yaygın bilinen anlamıyla bireylerin tercih ettikleri işte daha fazla maddi kazanım, statü, prestij, güç ve sorumluluk kazanmak üzere ilerlemesini ifade ettiği belirtilmektedir (Ivancevich, 2010: 435).

Kariyerin bir gelişim sürecini içerdiği ve belirli bir zaman aralığında bir kere seçilen bir olgu olmaktan öte, farklı aşamalar içeren ve zamanla değişim gösteren bir olgu olarak incelenmesi gerektiği savunulmaktadır. Bu aşamaların ise yetişkin gelişimi ile yakından ilintili olduğu ifade edilmektedir (Erdoğan, 2003: 20). Gelişim psikolojisi de kariyerin, dinamik ve zamanla olgunluğa ulaşan bir süreç olduğunu belirtmektedir (Inkson ve Amudson, 2002: 103). Bireyin okuldaki mezun olması, işe girmesi ve işinde deneyim kazanarak sorumluluk üstlenmesi, örgüt içerisinde veya örgütler arasında hareketliliği de kapsayan bu süreç emeklilikle noktalanmaktadır.

İş yaşamının çalkantılı ve belirsizliklerle dolu olması, kariyer kavramının doğasında bir takım değişiklikler meydana getirmiştir. Geleneksel kariyer yaklaşımlarının yerini bıraktığı güncel kariyer yaklaşımlarında, kariyer yönetimi ve gelişimine ilişkin sorumluluğun organizasyondan çok bireye yüklenir hale geldiği görülmektedir (Pang vd., 2008: 1383). Günümüzün rekabetçi iş dünyasında bireylerin, kendi kariyerlerinin yönlendiricisi ve mimarı olmaları söz konusudur (Waters vd., 2014: 405). Güncel kariyer yaklaşımlarının bu bakış açısı; kariyer öz yönetimi, yaşam boyu öğrenme, psikolojik kariyer başarısı ve organizasyonlar arasında kariyer hareketliliği ile istihdam edilebilirliğin sürdürülmesine odaklanan esnek ve uyumlu bir çerçeve sunmaktadır (Clarke, 2009: 8-

9). Konuya bu çerçeveden yaklaşıldığında genç bireylerin okul yaşamından iş yaşamına geçişleri ve sonrasındaki kariyer ilerlemelerinin kilit unsuru olarak kariyer uyum yetenekleri işaret edilmektedir (Kanten, 2012: 201).

Savickas'a göre (1997: 254) kariyer uyum yeteneği, bireylerin öngörülen görevlerine ilişkin iş rollerine hazır biçimde katılmalarını, öngörülemez değişimlere karşı ise bilgi, beceri ve donanım açısından hazırlık yapmalarını ifade etmektedir.

Bireylerin kariyer uyum yetenekleri kaygı, kontrol, merak ve güven boyutları çerçevesinde ele alınmakta (Savickas ve Porfeli, 2012: 663):

- Kaygı; bireylerin yeteneklerinin bilincinde olarak mesleki geleceklerine ilişkin plan yapmaları ve hazırlanmaları
- Kontrol; bireylerin mesleki gelecekleri açısından şimdiden karar verebilme ve kendilerini buna göre yönlendirebilmeleri
- Merak; bireyin çevresini kariyerine dair bakış açısıyla araştırma ve analiz etme eğilimi
- Güven; bireylerin kariyer gelişimlerinde karşılarına çıkabilecek sorunları çözebilme ve bunların üstesinden gelebilme noktalarında kendilerini yeterli görmeleri anlamını taşımaktadır.

İlgili yazında kariyer uyum yeteneklerinin bireylerin yeni iş sorumlulukları üstlenmeye hazırlıklı olmaları, gelecekteki değişikliklerle baş edebilme hatta bunları fırsata çevirme yönelimini ve bunların yanı sıra ön görülemeyen durumlar karşısında kariyer planında ortaya çıkabilecek değişimleri yönetme kapasitesini vurguladığı belirtilmektedir (Rottinghaus vd., 2005:11). Bu bilgiler çerçevesinde, bireyin kariyer planına hakim biçimde üstleneceği görevlere hazırlıklı olması, iş fırsatlarını takip etmesi ve gerektiğinde iş değişikliği yapabilme yolundaki yeterliliklerini içeren kariyer uyum yeteneklerinin, bireyin kariyer çizgisini belirlemesi ve geliştirmesi sürecinden kaynaklanan stresi ifade eden kariyer stresi ile ilişkili olduğu düşünülmektedir (Jung, 2020: 2). İlgili yazında konuyu ele alan araştırmaların henüz sınırlı düzeyde olması nedeniyle bu çalışmada, bireylerin kariyer uyum yetenekleri ile kariyer stresi arasındaki ilişkilere amprik olarak ışık tutulması amaçlanmıştır.

2. ARAŞTIRMANIN METODOLOJİSİ

2.1. Araştırmanın Ana Kütlesi ve Örneklemi

Araştırmanın ana kütlesini İstanbul'da bir devlet üniversitesinde sosyal bilimler alanında öğrenim gören ön lisans öğrencileri oluşturmaktadır. Araştırmada zaman ve maliyet kısıtları sebebiyle kolayda örnekleme yönteminden yararlanılmıştır. Araştırma kapsamında 106 öğrenciden derlenen veriler değerlendirmeye alınarak analiz edilmiştir.

Araştırmaya katılan öğrencilerin demografik özellikler açısından dağılımlarına bakıldığında:

- %63,2'sinin (67) kız , %36,8'inin (39) erkek olduğu,
- %32,1'inin (34) birinci sınıf, %67,9'unun (72) ikinci sınıf öğrencisi oldukları,
- %31,1'inin (33) yönetim ve organizasyon, %29,2'sinin (31) pazarlama ve %39,6'sının (42) muhasebe ve vergi uygulamaları bölümünde okudukları,
- Katılımcıların yaş ortalamasının 20,48 olduğu görülmüştür.

2.2. Araştırmanın Varsayımları ve Kısıtları

Araştırmada tesadüfi örnekleme yönteminden yararlanılmaması nedeniyle araştırmacının kolayda örnekleme yöntemine başvurarak ulaşabildiği katılımcılardan derlenen verilerin değerlendirmeye alınması araştırmanın başlıca kısıtını oluşturmaktadır. Bu bağlamda ulaşılan bulgular, örnekleme özgü olup ana kütleyle genellenebilmesi mümkün değildir.

Araştırmaya katılanların, anket formunda yer alan ifadeleri doğru bir biçimde anladıkları ve ifadelere gerçeğe uygun biçimde yanıt verdikleri varsayılmıştır.

2.3. Araştırmada Kullanılan İstatistiksel Yöntemler

Araştırma kapsamında derlenen verilerin analizi, SPSS 24.0 paket programı aracılığıyla gerçekleştirilmiştir. Araştırmada kullanılan ölçeklerin güvenilirliğini sınamak için Cronbach Alfa katsayıları hesaplanmıştır. Kariyer uyum yetenekleri ve alt boyutları ile kariyer stresi arasındaki ilişkilerin belirlenmesi amacıyla korelasyon analizi gerçekleştirilmiştir. Kariyer uyum yetenekleri ve alt boyutlarının, kariyer stresi üzerinde anlamlı bir etkiye sahip olup olmadığının test edilmesi için ise regresyon analizinden yararlanılmıştır.

2.4. Araştırmanın Veri Toplama Yöntemi ve Aracı

Araştırmada veri toplama yöntemi olarak anket tekniğinden yararlanılmıştır. Araştırmada kullanılan anket formu üç bölümden oluşmaktadır. Anket formunun ilk bölümünde Savickas ve Profeli (2012) tarafından geliştirilen, Türkçe uyarlaması ise Kanten (2012) tarafından gerçekleştirilen Kariyer Uyum Yetenekleri Ölçeği bulunmaktadır. Anket formunun ikinci bölümünde Choi vd. (2011) tarafından geliştirilen, Türkçe uyarlaması ise Özden ve Sertel-Berk (2017) tarafından yapılan Kariyer Stresi Ölçeği yer almaktadır. Anket formunun son bölümünde ise örneklem grubunun demografik özelliklerini belirlemeye yönelik sorulara yer verilmiştir.

Kariyer Uyum Yetenekleri ölçeği, 24 maddeden oluşmakta olup kontrol (6 madde), merak (6 madde), kaygı (6 madde) ve güven (6 madde) boyutları olmak üzere 4 boyut içermektedir. Ölçekte yer alan ifadeler, “Kesinlikle Katılmıyorum” dan “Kesinlikle Katılıyorum” seçeneklerine uzanan beşli skala ile değerlendirilmektedir. Bu araştırmada elde edilen veriler üzerinden yapılan hesaplamada Kariyer Uyum Yetenekleri ölçeğinin Cronbach Alfa katsayısı, 933 olarak belirlenmiştir.

Kariyer Stresi ölçeğinde 20 madde yer almaktadır. Katılımcıların ölçekte yer alan ifadelerle ilişkin yanıtları, “Hiç Katılmıyorum” ile “Tamamen Katılıyorum” seçenekleri arasında değişen beşli skalayla değerlendirilmektedir. Bu araştırmanın verileri üzerinden gerçekleştirilen hesaplamada Kariyer Stresi ölçeğinin Cronbach Alfa katsayısı ,920 olarak saptanmıştır.

Ölçekte yer alan tüm ifadelerin varyanslarının, genel ölçek toplam varyansına oranlanması ile belirlenen Cronbach Alfa katsayılarına bakıldığında, araştırmada yararlanılan ölçeklerin güvenilir oldukları anlaşılmaktadır (Kurtuluş, 2010: 180).

3. BULGULAR

3.1. Korelasyon Analizine İlişkin Bulgular

Kariyer uyum yetenekleri ve alt boyutları ile kariyer stresi arasındaki ilişkileri belirlemek üzere korelasyon analizi gerçekleştirilmiştir. Analiz sonucunda ulaşılan bulgular, 0,01 anlamlılık düzeyinde anlamlı çıkan Pearson korelasyon katsayıları işaretlenerek Tablo 1’de sunulmuştur.

Tablo 1: Araştırmanın Değişkenleri Arasındaki Korelasyonlar

	KS	KUY	KAY	KON	MER	GÜV
Kariyer Stresi	1					
Kariyer Uyum Yetenekleri	-,777**	1				
Kaygı	-,554**	,786**	1			
Kontrol	-,705**	,865**	,496**	1		
Merak	-,679**	,878**	,590**	,714**	1	
Güven	-,696**	,874**	,636**	,690**	,665**	1

**p<0,01 (Korelasyon 0,01 anlamlılık düzeyinde istatistiki olarak anlamlıdır.)

Korelasyon analizi sonuçlarına göre katılımcıların kariyer uyum yetenekleri ile kariyer stresleri arasında anlamlı bir ilişki olduğu saptanmıştır (p:0,000<0,01). Korelasyon katsayısının yorumlanması, her ne kadar tam sayı değerleri haricinde güç olsa da; 0-0,3 arasındaki değerlerin zayıf, 0,3-0,7 arasındaki değerlerin orta, 0,7-1 arasındaki değerlerin ise güçlü bir ilişkiyi gösterdiği kabul görmektedir (Gürbüz ve Şahin, 2017: 260). Bu çerçevede kariyer uyum yetenekleri ile kariyer stresi arasında negatif yönlü güçlü bir ilişki olduğu anlaşılmaktadır. Kariyer uyum yeteneklerinin alt boyutları açısından bakıldığında; kaygı boyutu ile kariyer stresi arasında negatif yönlü orta düzeyde bir ilişki olduğu görülmektedir (p:0,000<0,01). Kontrol boyu ile kariyer

stresi arasındaki ilişkinin ise negatif yönlü ve güçlü bir ilişki olduğu anlaşılmaktadır ($p:0,000<0,01$). Merak ve güven boyutlarıyla kariyer stresi arasındaki ilişkilerin ise yine negatif yönlü olduğu ve orta derecede hatta güçlüye yakın bir ilişkiyi işaret ettiği anlaşılmaktadır ($p:0,000<0,01$).

3.2. Regresyon Analizine İlişkin Bulgular

Kariyer uyum yeteneklerinin kariyer stresi üzerindeki etkisini sınamak üzere tekli regresyon analizi gerçekleştirilerek elde edilen bulgular Tablo 2-3 ve 4'te sunulmuştur.

Tablo 2: Kariyer Uyum Yeteneklerinin Kariyer Stresine Etkisine İlişkin Model Özeti

Model	R	R ²	Düzeltilmiş R ²	Std. Hata
1	,777 ^a	,603	,599	,36227

a. Açıklayıcı: (Sabit): Kariyer Uyum Yetenekleri

Kariyer stresini, kariyer uyum yetenekleriyle açıklamaya çalışan modelin özetine ilişkin Tablo 2'de görüldüğü üzere; kariyer uyum yetenekleri, kariyer stresindeki değişimin (R²) %60,3'ünü açıklamaktadır.

Tablo 3: Kariyer Uyum Yeteneklerinin Kariyer Stresine Etkisine İlişkin ANOVA^a Tablosu

Model	Kareler Toplamı	Serbestlik Derecesi	Ortalama Kare	F	İstatistiksel Anlamlılık
Regresyon	20,752	1	20,752	158,128	,000 ^b
Hata	13,648	104	,131		
Toplam	34,400	105			

a. Bağımlı Değişken: Kariyer Stresi

b. Açıklayıcı: (Sabit): Kariyer Uyum Yetenekleri

Tablo 3' e göre kariyer stresini kariyer uyum yetenekleriyle açıklayan regresyon modelinin, anlamlı olduğu ($F=158,128$; $p=0,000<0,05$) görülmektedir.

Tablo 4: Kariyer Uyum Yeteneklerinin Kariyer Stresine Etkisine İlişkin Katsayılar^a

Model	Standardize Edilmemiş Katsayılar	Standardize Edilmiş Katsayılar	t	İstatistiksel Anlamlılık
1	B	Std. Hata		
	5,374	0,261	20,596	,000
	-0,786	0,062	-0,777	,000

a. Bağımlı Değişken: Kariyer Stresi

Tablo 4'teki sonuçlara göre kariyer uyum yeteneklerindeki 1 birimlik artış, kariyer stresi üzerinde -0,786 birimlik bir değişim ortaya çıkarmaktadır.

Gerçekleştirilen tekli regresyon analizi bulguları doğrultusunda, kariyer uyum yeteneklerinin kariyer stresi üzerinde negatif yönlü anlamlı bir etkiye sahip olduğu belirlenmiştir.

Kariyer uyum yeteneklerini oluşturan kaygı, kontrol, merak ve güven boyutlarının kariyer stresi üzerindeki etkisini test etmek için çoklu regresyon analizi gerçekleştirilmiş ve ulaşılan bulgular Tablo 5-6 ve 7'de sunulmuştur.

Tablo 5: Kariyer Uyum Yetenekleri Boyutlarının Kariyer Stresine Etkisine İlişkin Model Özeti

Model	R	R ²	Düzeltilmiş R ²	Std. Hata
1	,783 ^a	,613	,598	,36309

a. Açıklayıcı: (Sabit): Kaygı, Kontrol, Merak, Güven

Model özeti tablosunda (Tablo 5) görüldüğü üzere; kariyer uyum yeteneklerini oluşturan kaygı, kontrol, güven ve merak boyutları kariyer stresindeki değişimin %61,3'ünü açıklayabilmektedir.

Tablo 6: Kariyer Uyum Yetenekleri Boyutlarının Kariyer Stresine Etkisine İlişkin ANOVA^a Tablosu

Model	Kareler Toplamı	Serbestlik Derecesi	Ortalama Kare	F	İstatistiksel Anlamlılık
Regresyon	21,085	4	5,271	39,984	,000 ^b
Hata	13,315	101	,132		
Toplam	34,401	105			

a. Bağımlı Değişken: Kariyer Stresi

b. Açıklayıcı: (Sabit): Kaygı, Kontrol, Merak, Güven

Tablo 6'daki sonuçlara göre kariyer stresini kariyer uyum yeteneklerinin boyutlarıyla açıklayan regresyon modelinin, anlamlı olduğu ($F=39,984$; $p=0,000<0,05$) görülmektedir.

Tablo 7: Kariyer Uyum Yetenekleri Boyutlarının Kariyer Stresine Etkisine İlişkin Katsayılar^a

Model	Standardize Edilmemiş Katsayılar		Standardize Edilmiş Katsayılar	t	İstatistiksel Anlamlılık	Doğrusal Bağlantı İstatistikleri	
1	B	Std. Hata	Beta			Tolerans	VIF
Sabit	5,309	,272		19,487	,000		
Kaygı	-,090	,079	-,096	-1,143	,256	,545	1,836
Kontrol	-,246	,076	-,314	-3,233	,002	,407	2,460
Merak	-,180	,082	-,215	-2,199	,030	,400	2,499
Güven	-,251	,090	-,276	-2,799	,006	,395	2,534

a. Bağımlı Değişken: Kariyer Stresi

Tablo 7'deki sonuçlar incelendiğinde; kaygı boyutunun kariyer stresini açıklamada anlamlı bir katkısının olmadığı görülmektedir ($t=-1,143$; $p=0,256>0,05$). Kariyer stresini açıklamada kontrol ($t=-3,233$; $p=0,002<0,05$), merak ($t=-2,199$; $p=0,030<0,05$) ve güven ($t=-2,799$; $p=0,006<0,05$) boyutlarının ise anlamlı bir katkısının olduğu anlaşılmaktadır. Beta değerlerine bakıldığında kontrol boyutunun kariyer stresini açıklamada görece olarak en açıklayıcı boyut olduğunu söylemek mümkündür (Kalaycı, 2010: 269). Çoklu regresyon analizinde; bağımsız değişkenler arasında, çoklu doğrusal bağlantı probleminin olmaması gerekmektedir. Bir değişkene ilişkin VIF değerinin 1'e yakın olması, bu değişkenin diğer bağımsız değişkenlerle doğrusal ilişkisinin olmadığını işaret etmekte, 10'un üzerindeki VIF değerleri ise, ciddi çoklu doğrusal bağlantı durumunun göstergesi olarak kabul görmektedir (Orhunbilge, 2002: 240-242). Bu açıklamalar çerçevesinde, çoklu regresyon analizine dahil edilen bağımsız değişkenler arasında çoklu doğrusal bağlantı probleminin olmadığı ifade edilebilir.

Gerçekleştirilen çoklu regresyon analizi sonucunda; kontrol, güven ve merak boyutlarının kariyer stresi üzerinde negatif yönlü anlamlı bir etkiye sahip olduğu ancak kaygı boyutunda böylesi bir etkinin saptanmadığı görülmüştür.

4. SONUÇ

Araştırmada elde edilen bulgular, kariyer uyum yetenekleri ile kariyer stresi arasında negatif yönlü bir ilişki olduğunu göstermektedir. Regresyon analizi sonuçları da kariyer uyum yetenekleri ve alt boyutlarından kontrol, güven ve merak boyutlarının, kariyer stresi üzerinde negatif bir etki sergilediğini ortaya koymaktadır.

Ulaşılan bu bulgular, kariyer uyum yeteneklerinin geliştirilmesinin kariyer stresini azaltma yönünde katkı sağlayabileceğini işaret etmektedir. Konuya bu çerçeveden yaklaşıldığında üniversite öğrencilerine yönelik kariyer danışmanlığı ve eğitim programlarının önemi ortaya çıkmaktadır. Günümüzün belirsizliklerle dolu, rekabetçi ve çalkantılı çalışma ortamında bireyin kendi kariyerine ve istihdam edilebilirliğine ilişkin artan sorumluluğu da göz önünde bulundurulduğunda, bu durum mezuniyete hazırlanan öğrenciler ve yeni mezunlar üzerinde kariyerlerine ilişkin önemli bir baskı yaratarak stres kaynağı oluşturmaktadır. Bu nedenle üniversitelerde düzenlenecek kariyer danışmanlığı ve eğitim programları, gönüllü mezunların öğrencilere mentorluk etmesinin sağlanması, sektör temsilcilerinin katıldığı kariyer günlerinin ve panellerin düzenlenmesi gibi uygulamalar yoluyla bireylerin kariyer uyum yeteneklerinin geliştirilmesinin desteklenmesi bunun yanı sıra kariyer streslerinin azaltılması sağlanabilecektir. İlgili yazındaki öğrencilere yönelik özelleştirilmiş kariyer eğitim programlarının, öğrencilerin kariyer stresini azaltırken kariyer kararlılıkları ile kariyer kimliklerini geliştirdiğine dair bulgular bu görüşü destekler niteliktedir (Jung, 2020: 2). Kariyer eğitim programlarının kariyer gelişimine etkisinin incelendiği farklı bir araştırmada da kariyer eğitim programlarının öğrencilerin kariyer stresini azaltıcı, kariyer öz-yeterlilikleri ve kariyer uyum yeteneklerini artırıcı yönde etkiye sahip olduğu belirlenmiştir (Park and Lee, 2015: 304).

Araştırma ön lisans düzeyinde öğrenim gören sınırlı bir örneklem grubu üzerinde yürütüldüğünden ilerideki araştırmalarda farklı öğrenim düzeylerinden daha büyük örneklerle çalışılmasının yararlı olabileceği düşünülmektedir. Bunun yanı sıra kariyer stresi ve kariyer uyum yetenekleriyle ilişkili olabileceği düşünülen algılanan kariyer engelleri ve kariyer geleceği algısı gibi değişkenlerin araştırmalar aracılığıyla incelenmesinin konunun aydınlatılmasına katkı sağlaması beklenmektedir.

İş Yapma Kolaylığı Açısından Türkiye ve Balkan Ülkelerinin Karşılaştırılmalı Analizi

Doç. Dr. Ali KONAK¹

Öğr. Sercan MADENOĞLU²

¹Karabük Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, alikonak@karabuk.edu.tr, 0000-0003-1804-8339:

²Karabük Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, sercan.madenoglu@hmb.gov.tr, 0009-0002-8090-5290:

Özet: Küresel ölçekte değerlendirildiğinde günümüzde bazı ülkelerin diğer ülkelere kıyasla daha gelişmiş olduğu gözlenmektedir. Ülkeler arasındaki bu gelişmişlik farklarının pek çok nedeninin bulunduğu söylemek mümkündür. Bu nedenlerden biri de gelişim gösteren ülkelerin özellikle sanayi sektörüne yönelik olmak üzere iş yapma kolaylığına sahip olmasıdır. Bu bağlamda bir ülkenin iş yapma kolaylığına sahip olması, o ülkeye, ekonomik kalkınmanın sağlanması açısından çok büyük avantajlar sağlamaktadır. Ülke ekonomileri açısından bu denli önemli olan iş yapma kolaylığının derecesi bir endeks yardımıyla tespit edilebilmektedir. İş yapma kolaylığı endeksi adı verilen endeks ile bir ülkede iş yapmak için ihtiyaç duyulan yasal düzenlemeler ve düzenleyici reformlar değerlendirilmektedir. Ayrıca bu endeks ile yatırımcıların bir ülkede iş yaparken karşılaşılabilecekleri zorluklar ortaya konulmakta ve bu sayede o ülkede iş yapma ortamının iyileştirilmesi için ne gibi adımlar atması gerektiği konusunda tespitlerde bulunmaktadır. Türkiye ve seçilmiş Balkan ülkelerine yönelik olmak üzere iş yapma kolaylıklarına ilişkin bilgiler vermek ve eksiklik bulunan yönlerin iyileştirilmesine yönelik farkındalık oluşturulmak amacıyla hazırlanmış olan çalışmada Dünya Bankasından elde edilen 2006-2020 dönemine ait yıllık veriler karşılaştırmalı olarak analiz edilmiştir. Yapılan inceleme ve analiz neticesinde 2006-2020 döneminde gerek Türkiye’de gerekse de Balkan ülkelerinde iş yapmayı kolaylaştırmaya yönelik pek çok düzenleme ve reformun yapıldığı görülmektedir. Yapılmış olan bu düzenleme ve reformlar sayesinde iş yapma kolaylığı açısından Türkiye’de ve Balkan ülkelerinde önemli ilerlemelerin kaydedilmiştir. Türkiye’de iş yapma kolaylığı açısından en çok sorun yaşanan konuların, iflas sorunlarının çözülmesi, iş kurma sürecinde karşılaşılan prosedürlerin çokluğu ve iş kurmanın zorluğu, inşaat sürecinde karşılaşılan ruhsat alma izinlerinin zorluğu, sınır ötesi ticarete karşılaşılan sorunlar ve elektrik maliyetlerinin yüksekliğine ilişkin konular olduğu tespit edilmiştir. Genel olarak Balkan ülkelerinde ise iş yapma kolaylığına ilişkin olarak yatırımcıların en çok karşılaştığı sorunların, Türkiye’deki sorunlara benzer nitelikte olmak üzere iş kurma, inşaat izinleri, elektrik temini, kredi alımı ve vergi konularında ortaya çıktığı tespit edilmiştir.

Anahtar Kelimeler: İş Yapma, Dünya Bankası, Balkan Ülkeleri, Reform, Yasal Düzenlemeler

Comparative Analysis of Türkiye and Balkan Countries in terms of Ease of Doing Business

Abstract: When evaluated on a global scale, it can be observed that some countries are more developed than others. There are many reasons for these differences in development between countries. One reason is that developing countries, particularly those in the industrial sector, have an advantage in terms of the ease of doing business. In this context, the ease of doing business in a country provides significant advantages for achieving economic development. The degree of ease of doing business, which is so important for a country's economy, can be measured by an index. The Ease of Doing Business Index assesses the legal regulations and regulatory reforms required to do business in a country. It also identifies the difficulties that investors may face when doing business in a country, and provides recommendations for improving the business environment in that country. A study has been prepared for Turkey and selected Balkan countries to provide information on the ease of doing business and to raise awareness of areas in need of improvement. Comparative annual data from the World Bank for the period 2006-2020 was analysed. As a result of the research and analysis, it can be seen that many regulations and reforms have been made to facilitate doing business in both Turkey and the Balkan countries during the period 2006-2020. Thanks to these regulations and reforms, significant progress has been made in Turkey and the Balkan countries in terms of the ease of doing business. The most problematic issues in terms of ease of doing business in Turkey were found to be the resolution of bankruptcy problems, the multiplicity of procedures encountered in the process of starting a business and the difficulty of starting a business, the difficulty of obtaining licences during the construction process, the problems encountered in cross-border trade and the high cost of electricity. In general, the most common measures of the ease of doing business in the Balkan countries, similar to those in Turkey, are starting a business, construction permits, electricity supply, obtaining credit and taxes.

Key Words: Doing Business, World Bank, Balkan Countries, Reform, Legal Regulations.

1. GİRİŞ

İş yapma kolaylığı endeksi, Dünya Bankası tarafından her yıl yayımlanarak ülkelerin iş yapma ortamlarının kolaylığı ve bu ortamları iyileştirmek için alınabilecek önlemlerin belirlenmesi amacını taşır. Endeks, 190 farklı

ülkenin iş yapma ortamlarının çeşitli yönlerini ölçen kategoriler özelinde inceler ve karşılaştırır. Endeks, bir ülkenin iş yapma kolaylığı düzeyini ölçerken, o ülkedeki yasal düzenlemeler, vergi politikaları, işletme kuralları, elektrik ve su gibi temel hizmetlerin erişilebilirliği, borç tahsilatı ve sözleşme yürütme gibi faktörleri de göz önüne almaktadır.

İş yapma kolaylığı endeksinin yayınlanması sayesinde, ülkeler kendi iş yapma ortamlarını iyileştirmek için neler yapabileceklerini daha net bir şekilde görebilirler. Bu, yatırımcıların da karar vermesine yardımcı olabilir. Bir yatırımcı herhangi bir ülkede işletme açmayı veya yatırım yapmayı düşünüyorsa, o ülkenin iş yapma kolaylığı endeksine bakarak endeks değeri yüksek olan ülkeyi tercih eder ve bu, o yatırımcıya iş yapma kolaylığı sağlar. Bu nedenle, yatırımcılar, endeks sayesinde farklı ülkelerin iş yapma kolaylığı düzeylerini karşılaştırabilir ve yatırım yapacakları ülkeyi seçebilirler. Ülkelerin iş yapma ortamlarının iyileştirilmesinde ve yatırımcıların potansiyel yatırım fırsatlarını değerlendirmesinde son derece önem arz eden endeksin, her yıl yayımlanması sayesinde, ülkeler de kendi iş yapma ortamlarında iyileştirme yapma ve bu sayede yabancı yatırımcıların ülkeye yatırım yapmalarını sağlama fırsatına sahip olabilmektedirler. Ülkelere yönelik yatırımlar açısından bu denli önemli olan endeks ve raporlara ilişkin olarak Dünya Bankası tarafından, 2021 yılında yapılmış olan bir açıklama ile 2018 ve 2020 yıllarında yayımlanan raporlarda tespit edilen veri düzensizliklerinin incelenip yeni bir metodoloji oluşturulana kadar raporların yayınlanmasının durdurulduğu duyurulmuştur (*World Bank Group to Discontinue Doing Business Report*, 2021).

İş yapma kolaylığı endeksi, bir ülkede yeni bir işletme açma, kayıt olma, vergi ödeme ve diğer işlemleri yapma sürecinin kolaylığına dayanan bir endekstir. Endeksin geçmişi 2003 yılına kadar uzanır. İlk kez yayımlandığında, endeks sadece 5 göstergeye dayanmakta iken zamanla endeksin kapsamı genişletilerek günümüzde 10 adet kategorize edilmiş 1 adet de genel gösterge olmak üzere toplamda 11 göstergeye dayandırılmış ve iş yapma kolaylığına ilişkin birçok faktörü ölçer hale getirilmiştir. Endeksin hesaplanmasında kullanılan en önemli kriterlere, İş Kurma, Elektrik temini ve maliyetleri, Gayrimenkul, Kredi ve Sınır Ticareti örnek olarak gösterilebilir. İş Yapma Kolaylığı Endeksi hesaplanırken, her kriterin ağırlığı belirli bir formül kullanılarak hesaplanmaktadır. Bu formüller, her kriterin önem derecesini yansıtacak şekilde belirlenmekte ve her kriterin altında bulunan alt kriterler de belirli bir ağırlıklandırma faktörü ile çarpılarak hesaplanmaktadır. Endeks, 2020 yılına kadar her yıl yeniden hesaplanmış ve ülkelerin iş yapma kolaylığı seviyeleri karşılaştırılmıştır. İş yapma kolaylığı endeksi yüksek olan ülkeler, yatırımcılar için iş yapmak adına daha elverişli koşullara sahip olarak kabul edilmektedir. Endekse göre Dünya genelindeki en başarılı ülkeler arasında Singapur, Yeni Zelanda, Danimarka, Güney Kore ve Hong Kong yer almakta iken Somali, Libya, Eritre, Venezuela ve Yemen gibi ülkeler ise en başarısız ülkeler olarak görülmektedir. Dolayısıyla iş yapma kolaylığı endeksinde yer alan en başarılı ülkeler, işletmeler için uygun bir iş ortamı sunarken, en başarısız ülkelerde iş yapmak oldukça zor ve riskli olabilmektedir.

Türkiye açısından iş yapma kolaylığı endeksine bakacak olursak son yıllarda önemli gelişmeler kaydedildiği görülmektedir. Türkiye'nin 2006 yılındaki sıralaması 84 iken, bu sıralama 2020 yılında 33'e yükselmiştir. Bu gelişme, Türkiye'nin iş yapma ortamının iyileştirilmesi için yapılan reformların sonuçlarını yansıtmaktadır. Türkiye'nin iş yapma kolaylığı endeksi sıralamasının yanı sıra, diğer ülkelerle karşılaştırmalı analizinin yapılması da önemlidir. Bu sebeple Türkiye'nin iş yapma kolaylığı endeksi sıralaması, seçilmiş Balkan ülkeleri ile karşılaştırılacak ve ülkelerin iş yapma kolaylığı endeksi sıralamasının iyileştirilmesi, ekonomik büyümesinin ve iş yapma ortamının iyileştirilmesine yönelik, hukuki ve yapısal düzenlemelerin neler olabileceği ülkeler özelinde ortaya koyulacaktır.

2. TÜRKİYE ve SEÇİLMİŞ BALKAN ÜLKELERİNİN ENDEKS SIRALAMALARI AÇISINDAN DEĞERLENDİRİLMESİ

Türkiye ve Balkan ülkeleri arasındaki iş ilişkileri son yıllarda oldukça artmıştır. Bu artışta iş yapma kolaylığı endeksi sıralamalarının da etkisi büyüktür. Bu kapsamda, Türkiye ve seçilmiş Balkan ülkeleri arasında iş yapma kolaylığı endeksi sıralamaları açısından bir değerlendirme yapılmıştır. Yapılan değerlendirme sonucunda Tablo 1'de yer alan 2006-2020 yıllarındaki sıralamalara bir bütün olarak bakıldığında Türkiye'nin, seçilen Balkan ülkeleri karşısında incelenen dönemin başlarında geri sıralarda olduğu, ancak son yıllarda Türkiye'nin, iş yapma kolaylığı endeksi sıralamasında önemli bir ilerleme kaydettiği görülmektedir. Özellikle 2020 yılı verilerine bakıldığında zaman seçilen ülkeler içerisinde Kuzey Makedonya'nın 17. sıra ile birinci Türkiye'nin ise 33. sıra ile ikinci sırada yer almaktadır.

İş Yapma Kolaylığı Endeksi Sıralamalarına göre Kuzey Makedonya'dan sonra Balkan ülkeleri arasında Slovenya, Sırbistan, Hırvatistan, Karadağ ve Romanya'nın öne çıkan diğer ülkeler olduğunu söylemek mümkündür. Sonuç

olarak, Türkiye ve Balkan ülkeleri arasında endeks sıralamaları açısından farklılıklar görülmekle birlikte, bu ülkeler arasındaki iş ilişkileri de her geçen gün artmaktadır.

Tablo 1: 2006-2020 Yılları Arasında Türkiye ve Seçilmiş Balkan Ülkelerinin İş Yapma Kolaylığı Endeksi Sıralamaları

Yıl / Ülke	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Türkiye	84	91	60	63	60	73	71	71	69	55	55	69	60	43	33
Arnavutluk	115	120	135	89	81	77	82	85	90	68	97	58	65	63	82
Bosna Hersek	91	95	117	119	110	127	125	126	131	107	79	81	86	89	90

*Dünya Bankası tarafından ilgili yıllarda çalışmaya dahil edilmemiştir

Kaynak: (The World Bank, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a, 2016b, 2018, 2019, 2020a).

Endeks sıralamaları oluşturulurken bir ülkenin şirket kuruluş prosedürleri, vergi politikaları, istihdam oranları, lisans alma süreci, yatırımcıların korunması, ülkeler arası ticaret, vergi ödeme ve bir işletmeyi kapatma gibi işlemlerin süre ve maliyetlerinin yanı sıra ülkelerdeki işletmelere yönelik olarak yapılan düzenlemelerin zaman içindeki değişiminin de değerlendirilmesi göz önünde bulundurulur (Kangal vd., 2018: 24; Koç vd., 2017: 18-19; Yardımcıoğlu, 2014: 283).

Dünya Bankası tarafından yayımlanan raporda ülkelerin genel sıralamaları dışında 10 farklı kategoride yapılan sıralamalara da yer verilmektedir. Tablo 2’de 2020 yılında yayımlanan rapora göre Balkan Ülkeleri ve Türkiye özelindeki sıralamalara yer verilmiştir. Ancak bu sıralamaların neyi ifade ettiğini anlayabilmemiz açısından öncelikle ilgili kategorilerin neleri araştırma konusu ettiğine kısaca değinmek gerekmektedir.

- ✓ **İş Kurma;** Bir ülkede bulunan yerli veya yabancı yatırımcıların ilgili ülkede iş kurabilmeleri için uymak zorunda oldukları çeşitli prosedürleri, katlanmaları gereken maliyetleri ve bazı zorunlu kılınan alt limitler sebebiyle uygulanan asgari sermaye tutarlarını incelemektedir.
- ✓ **İnşaat İzinleri;** Bir inşaata başlama ve tamamlama süreci, prosedürü, maliyetleri ile gerekli lisans ve izinlerin alınması, kamu hizmeti bağlantılarının yapılması, güvenlik ve kontrol mekanizmalarının gücü ölçülmektedir.
- ✓ **Elektrik;** Firmaların elektrik bağlantısı elde edebilmeleri için uyması gereken prosedürler, beklemesi gereken zaman ve elektriğin firmaya maliyeti ölçülmektedir. Ayrıca elektrik tarifelerinin şeffaflığı da inceleme kapsamına girmektedir.
- ✓ **Tapulaştırma;** Bir mülkün tescili için gerekli prosedür, zaman ve maliyetin incelenmesine ilaveten ekonomilerdeki arazi yönetim sisteminin ölçülmesini konu edinmektedir. Ayrıca ülkenin coğrafyası ve mülkiyet haklarına erişim kolaylığı da araştırmaya dahil edilen diğer konuları teşkil etmektedir.
- ✓ **Kredi Alımı;** Firmaların bankacılık, faiz oranları vb. gibi sistemler ve ekonomik göstergelere göre finansmana erişiminin kolaylığını ve zorluğunu ölçmektedir.
- ✓ **Azınlık Yatırımcılarını Koruma;** Azınlık hissedarlarının şirketteki varlıklarının, direktörler tarafından kişisel çıkarları için kötüye kullanılmasına karşı koruma sistemlerini, risklerini azaltan faktörleri, güvencelerini ve firmaların şeffaflığı ölçülmektedir.
- ✓ **Vergiler;** Orta ölçekli bir şirketin yıl içinde ödemesi gereken vergi, zorunlu katkı payları, devletlerin vergi tahsil dönemlerini ve vergi ödemede prosedürlerin kolaylığını ölçmektedir.
- ✓ **Sınır Ötesi Ticaret;** İhracat ve ithalatta lojistik süreçler, zaman maliyetleri, sevkiyatlarda aranan belgeler ve nakliye kolaylığı gibi faktörler ölçülmüştür.
- ✓ **Sözleşmelerin Uygulanması;** Ticari bir anlaşmazlığın yerel mahkemelerde çözümü için harcanan zaman ve her bir ülkenin mahkeme sistemindeki kalite ve verimlilik incelenmiştir.
- ✓ **İflasın Çözülmesi;** Yerel tüzel nitelikteki kişileri içeren iflas işlemlerinin süresini, maliyetini ve sonucunu incelemektedir. Yeniden yapılanma, tasfiye veya icra işlemlerinin prosedürleri araştırılmıştır.

Tablo 2: 2020 Yılı İş Yapma Kolaylığı Endeksine Göre Kategoriler Özelinde Ülkelerin Sıralamaları

Kategori / Ülke	Genel Sıralama	İş Kurma	İnşaat İzinleri	Elektrik	Tapulaştırma	Kredi Alımı	Azınlık Yatırımcılarını koruma	Vergiler	Sınır Ötesi Ticaret	Sözleşmelerin Uygulanması	İflasın Çözülmesi
Türkiye	33	77	53	41	27	37	21	26	44	24	120
Arnavutluk	82	53	166	107	98	48	111	123	25	120	39

Kaynak: (The World Bank, 2020a)

Tablo 2’de 2020 yılı iş yapma kolaylığı endeksi kategorilerine göre ülkelerin sıralaması verilmiştir. Tablo 2’de yer alan kategorilerin Dünya Bankası tarafından hangi projeksiyonda ele alındığı göz önünde bulundurulduğunda Türkiye; kredi alımı, elektrik ve sınır ötesi ticaret kategorilerinde orta seviye bir performans sergilediği görülmektedir. İflasın çözülmesi, İnşaat izinleri ve iş kurma kategorilerinde zayıf bir performans göstermiş ancak azınlık yatırımcılarını koruma, vergiler, sözleşmelerin uygulanması ve tapulaştırma kategorilerinde ise orta seviyenin üzerinde bir performans sergilemiştir.

Diğer ülkelerin performansları da kategorilere göre değişiklik göstermektedir. Bosna Hersek ve Arnavutluk inşaat izinleri kategorisinde en zayıf performansı sergilerken, Hırvatistan, Romanya ve Slovenya sınır ötesi ticaret kategorisinde en yüksek performansı sergilemiştir. Genel olarak, Kuzey Makedonya, Türkiye, Slovenya ve Sırbistan ülkeleri en yüksek performansı sergilemişlerdir.

3. BALKAN ÜLKELERİNİN PROFİLLERİ İLE GENEL ve EKONOMİK YAPILARI

Balkanlar, Avrupa’nın güneydoğusunda yer alan bir bölge olmakla birlikte tarihi, kültürü ve coğrafyası açısından oldukça zengindir. Bölgede, Arnavutluk, Bosna-Hersek, Bulgaristan, Hırvatistan, Karadağ, Kuzey Makedonya, Romanya, Sırbistan ve Yunanistan gibi ülkeler bulunmaktadır. Bölgedeki ülkeler, geçmişte birçok savaş ve çatışmaya sahne olmuşlardır. Ancak günümüzde, bu ülkelerin birçoğu, siyasi istikrar ve ekonomik büyüme açısından önemli gelişmeler kaydetmişlerdir. Ayrıca, balkan ülkelerinde, turizm, tarım, enerji, ulaşım ve ticaret gibi birçok sektörde de yatırımcılara önemli fırsatlar sunulmaktadır. Çalışmamızın bu kısmında Balkan ülkelerinin bölgede yatırımcılara sağladığı fırsatlar ve zorluklar üzerinde durulacaktır.

3.1. Kuzey Makedonya

Kuzey Makedonya, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye’nin de bulunduğu ülkeler içerisinde birinci sırada, Dünya genel sıralamasında ise 17. sırada yer almaktadır (The World Bank, 2020a). Kuzey Makedonya, yabancı yatırımcıları ülkeye çekmek ve özel sektöre ağırlık vermek için çaba gösteren küçük ve açık bir ekonomidir. 2019-2021 döneminde toplam doğrudan yabancı yatırım miktarı 1 milyar dolar olan Kuzey Makedonya, 2021 yılında 7 milyar dolarlık toplam yabancı sermaye stoku ile dünyada 133. Sırada yer almıştır. Hollanda, Avusturya ve Slovenya ülkeye yapılan yatırımlarda ilk üç sırayı paylaşmakta olup, Türk yatırımları diğer ülkelere oranla düşük düzeylerde kalmaktadır (United Nations, 2022). Makedonya ekonomisi, sanayi üretimi ve düşük faiz oranları sayesinde büyümektedir, ancak yatırım ortamı henüz istenen seviyede değildir. Serbest Ticaret Bölgeleri, Makedonya’ya yabancı yatırımlar çekmek için oluşturulmuştur. Serbest ticaret bölgelerindeki araziler uygun fiyatlarla ve leasing adı verilen uzun dönemli kiralama imkanı ile yatırımcılara sunulmakta, ayrıca yatırımcılar inşaat izinleri konusunda ödenmesi gereken harçlardan bu bölgelerde muaf tutulmaktadır (T.C. Ticaret Bakanlığı, 2022k: 12). Serbest bölgelerdeki uygulamalar sayesinde ülkedeki ekonomik ve teknolojik gelişimin hızlandığı görülmektedir (Nuroğlu ve Nuroğlu, 2016: 39). Makedonya ekonomisi, 2008 küresel krizi öncesinde bütçe dengelerini korumuş ve hatta bütçe fazlası elde ederek diğer bölge ülkelerine göre krizden daha az etkilenmiştir. Bunun nedeni, uluslararası finans kuruluşlarının Makedonya finans piyasasında işlem yapmaması olarak gösterilebilir. Makedonya hükümeti, 2010 yılında krizle mücadele de dördüncü paketini açıklayarak mali prosedürlerin hızlandırılması, kamu arazilerinin satışı, KOBİ'lere kredi

erişiminde kolaylık sağlanması ve tarımsal istihdamın artırılması gibi yatırımcılara kolaylık sağlayacak uygulamaları yürütmeye koymuştur (Akyol, 2017: 75). Kuzey Makedonya'da yabancıların yasalara uygun olarak mal edinme, kazançlarını serbestçe yurt dışına çıkarma ve ülke vatandaşlarına aynı şekilde şirket kurabilme hakkı garanti altına alınmıştır (T.C. Ticaret Bakanlığı, 2022j: 29). İş yapma kolaylığı açısından Kuzey Makedonya'nın iş yapma endeksine göre en iyi olduğu alan azınlıktaki yatırımcıların korunması iken, firmaların elektrik bağlantısı elde edebilmek için uymaları gereken prosedürlerin çokluğu ve elektriğin firmaya maliyetinin yüksekliği, iş yapma kolaylığının önündeki en önemli engeli teşkil etmektedir. Kuzey Makedonya'da iş yapma kolaylığının artırılabilmesi için şirket kuruluş prosedürleri daha da basitleştirilerek yatırımcıların şirket kurmaları kolaylaştırılmalı, ayrıca vergi muafiyeti veya düşük faizli kredi imkanları sağlamak suretiyle yabancı yatırımcılara yönelik teşvikler artırılmalı, iş yapma kolaylığı endeksine yönelik raporlar ve analizler düzenli olarak takip edilerek, bu endeksi olumlu yönde etkileyecek olan unsurlara yönelik düzenleme ve girişimler artırılmalı, elektronik beyan ve ödeme sistemlerinin kullanımı daha da yaygınlaştırılmalı, işletme maliyetlerinin düşürülmesi için vergi oranları ve diğer maliyetler azaltılmalı, işletmeler, eğitim, danışmanlık ve finansal konularda desteklenmeli ve bu sayede işletmelerin rekabet gücü artırılarak iş yapma kolaylığı sağlanmalıdır. Buna ilaveten yabancı yatırımcılar için bir danışmanlık hizmeti oluşturulmak suretiyle, yabancıların ülkeye yönelik iş yapma kolaylığı hakkında daha fazla bilgi edinmelerine ve yatırımlarını daha verimli bir şekilde yönetebilmelerine olanak sağlanmalıdır.

3.2. Türkiye

Türkiye, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkelerinin bulunduğu ülke grubu içinde 2. sırada, Dünya genel sıralamasında ise 33. sırada yer almaktadır (The World Bank, 2020a). Türkiye'nin ihracatı, 2008 yılındaki küresel kriz sonrası alınan önlemler sayesinde artış göstererek 2011 yılında Cumhuriyet tarihindeki en yüksek seviyesine ulaşmıştır. Türkiye, toplam ihracatının %42,4'ünü AB ülkelerine yapmaktadır (Orkunoğlu Şahin, 2022: 87). Küresel pandemi döneminde, dünya çapında yaşanan tedarik zinciri sorunları, ithalata bağlı olan sektörlerde üretimin durmasına veya azalmasına neden olmuştur. Bu sorunlar, Türkiye'nin ithalatında da etkisini göstermiştir. Türkiye, özellikle Çin, Rusya, Almanya, ABD, İtalya ve Hindistan'dan yoğun bir şekilde ithalat yapmaktadır (Orkunoğlu Şahin, 2022: 91-92). Bu ithalatların başlıcalarını teknolojik ve elektronik ürünler, enerji, hammadde ve silah sanayi ürünleri, atıştırmalık gıdalar, mineral yakıtlar, kazanlar ve makineler, demir-çelik, elektrikli makineler ve cihazlar, ses ve görüntü kayıt cihazları, plastikler ve motorlu kara taşıtları oluşturmaktadır (Orkunoğlu Şahin, 2022: 92). Türk ekonomisindeki sorunlar, son yıllarda yaşanan küresel krizlerin yanı sıra, yapısal sorunlardan da kaynaklanmaktadır. Üretim olanaklarının zayıflaması, istihdamın azalması, tasarrufların düşmesi ve gelir dağılımındaki adaletsizlikler, Türk ekonomisinin temel sorunlarını teşkil etmektedir. Özellikle son 15 yılda yaşanan toplumsal ve ekonomik olaylar, ülkenin borç stokunu hızla arttırmış ve büyüme oranları düşüş göstermiştir. Bu durum, özel kesim ve hane halklarının satın alma güçlerinin düşmesine, tüketimin azalmasına ve işsizlik oranlarının artmasına neden olmuştur. Bunun yanı sıra, yüksek enflasyon oranları, cari açıklar, ödemeler dengesi sorunları, düşük tasarruf oranları, fiyat değişimleri ve geleceğe yönelik belirsizlikler, Türk ekonomisinin diğer önemli sorunlarını teşkil etmektedir (Cinel, 2019: 61; Orkunoğlu Şahin, 2022: 97). Yabancı yatırımcılar, ülkenin riskine göre yatırım yapmaktadır. Türkiye, cari açığı ve döviz kuru dalgalanmaları nedeniyle kırılgan bir ekonomiye sahiptir (Uras, 2014). Üretim için gerekli koşulların sağlanamaması, ithal ikamesinin geliştirilememesi ve ülkenin ithalata devam etmesi, ekonomik sorunların en önemli nedenlerini oluşturmaktadır (Cinel, 2019: 58; Orhangazi, 2019: 123). Türkiye'de şirket kuruluşu oldukça basit bir süreçtir. Ancak, kuruluş işlemlerinin doğru bir şekilde tamamlanması ve ilgili belgelerin düzenlenmesi son derece önemlidir. Türkiye 2006 yılında iş yapma kolaylığı endeksinde 84. sırada yer alırken yapmış olduğu reformlar ve bu reformlar sonucunda yatırımcılara sağlamış olduğu kolaylıklar sayesinde 2020 yılında 33. sıraya kadar yükselebilmektedir (The World Bank, 2006, 2020a). Tablo 1'de Türkiye'nin yıllara göre sergilemiş olduğu performansa bakıldığında iş yapma kolaylığı açısından en önemli gelişmenin 2019 yılında yaşandığı görülmektedir. Türkiye, 2019 yılında iş yapma kolaylığı açısından bir önceki yıla kıyasla 17 basamak birden yükselerek 43. sırada yer almış, 2020 yılında ise 33. sıraya yükselmiştir (The Word Bank, 2019; The World Bank, 2018, 2020a). Araştırmaya konu olan diğer yıllarda ülke sıralamasının aşağı ve yukarı yönlü olarak dar bantlarda değiştiği görülmektedir. İncelenen dönem itibarıyla Türkiye'nin gerçekleştirmiş olduğu reformları, ödenmiş sermaye gerekliliklerinin ortadan kaldırılarak işletme kurmanın kolaylaştırılması ve noter tasdik ücretlerini kaldırarak iş kurmanın daha az maliyetli hale getirilmesi, inşaat ruhsatlarıyla ilgili işlemlerin kolaylaştırılması, mülk kaydının daha ucuz hale getirilmesi ve bu kaydın hızlandırılması, vergi ödemenin kolaylaştırılması, ihracat ve ithalat için harcanan zamanın ve maliyetin azaltılması, çıkarılan yeni bir ticaret yasası ile yatırımcı korumalarının güçlendirilmesi, performans ölçüm raporları yayınlamak suretiyle sözleşmelerin uygulanmasının kolaylaştırılması, iflas çözümünün kolaylaştırılması, elektrik temininin kolaylaştırılması ve özel bir kredi bürosu

kurularak kredi bilgilerine erişimim iyileştirilmesi şeklinde sıralamak mümkündür (The World Bank, 2006, 2007, 2008, 2010, 2011, 2012, 2013, 2014, 2016a, 2016b, 2018, 2019, 2020e, 2020a). Türkiye, yapılmış olan bu düzenleme ve reformlar sayesinde iş yapma kolaylığı açısından önemli ilerlemeler kaydetmiştir. Tablo 2'deki sınıflandırmalar incelendiğinde 2020 yılı itibarıyla iş yapma kolaylığı açısından Türkiye'nin azınlıktaki yatırımcıları koruma noktasında son derece başarılı olduğu, buna karşın iflasın çözülmesi konularında çok fazla ilerleme kaydedemeyerek başarısız olduğu anlaşılmaktadır. Yapılmış olan reform ve düzenlemelere ilaveten, Türkiye'nin iş yapma kolaylığı açısından daha iyi bir konuma gelmesi ve daha üst sıralara çıkabilmesi için vergi sistemi detaylı bir şekilde düzenlenmeli ve vergi oranları rekabetçi hale getirilmeli, işletme kuruluş prosedürleri daha da basitleştirilmeli, ülkenin kırılgan ekonomisine yönelik önlemler alınmalı, yabancı yatırımcılara Türkiye'de yatırım yapabilmeleri için istikrarlı bir ortam sağlanmalı, ayrıca yerli yatırımcılara üretim yapabilmeleri için gerekli finansal teşvikler verilmeli ve ithal ikamesi politikalar benimsenerek dışa bağımlılık azaltılmalıdır. Bu reformlar, Türkiye'nin ekonomik büyümesine katkıda bulunacak ve iş yapma kolaylığını artıracaktır.

3.3. Slovenya

Slovenya, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin içerisinde bulunduğu ülke grubunda 3. sırada, dünya genel sıralamasında ise 37. sırada yer almaktadır (The World Bank, 2020a). Slovenya'nın sanayi sektörü oldukça gelişmiş bir durumdadır ve bu kapsam dahilinde özellikle otomotiv ve ilaç sanayii sektörlerinde Almanya ve İtalya ile güçlü bir ticari iş ilişkisi içerisinde (T.C. Ticaret Bakanlığı, 2022p: 6). 2022 yılı itibarıyla Slovenya, dünya ekonomisinde 87. sırada yer almıştır (T.C. Ticaret Bakanlığı, 2022p: 7). Avrupa Birliği dış ticaret ve gümrük politikalarını uygulayan Slovenya'nın, AB'ne üye ülkeler ile arasındaki ticaret, malların serbest dolaşımına dayanmaktadır. AB üyesi olmayan ülkelere ithal edilen ürünler için de Avrupa Birliği'nin ortak gümrük tarifeleri uygulanmaktadır (T.C. Ticaret Bakanlığı, 2022o: 3). Slovenya, yüksek üretim hacmi ve kaliteli iş gücü piyasası ile Avrupa'nın en yüksek standartlarına sahip ülkelere biridir. Ülkenin GSYİH'sının yüzde 60'tan fazlası ihracattan oluşmaktadır ve AB üyeliği Sloven ekonomisine net bir şekilde katkıda bulunmuştur. Slovenya, AB gümrük birliği çerçevesinde dış ticaretini yürütmekte ve ihracatının büyük bir kısmını Almanya, İtalya, Hırvatistan ve Avusturya'ya yapmaktadır (Şaban, 2015: 89). Slovenya'nın son 15 yılda ülke çapında iş yapma kolaylığını artırmaya yönelik birtakım düzenlemelere gittiği görülmektedir. Bu düzenlemelerin başında da alınacak çeşitli tedbirlerle ülkedeki yatırımcıların korunması ve vergi oranlarının düşürülerek şirketler için vergi ödemenin daha az maliyetli hale getirilmesi yer almaktadır (The World Bank, 2007). Ayrıca ülkede iş kurmak için gerekli prosedürlerin sayısı ve süresi azaltılmak suretiyle iş kurma süreci kolaylaştırılmıştır (The World Bank, 2008). Buna ilave olarak tapu siciline kayıtların daha düzenli ve hızlı bir şekilde yapılabilmesi için çalışma ortamına daha fazla bilgisayar dahil edilerek mülk kaydındaki gecikmeler %75 oranında azaltılmış, gümrük beyannamesi formlarının çevrimiçi olarak sunulmasına olanak sağlanmış ve böylece sınır ötesi ticaret hızlandırılmış, iflas süreçleri yapılan reformlar ile basitleştirilerek süreçte karşılaşılan sorunların çözümleri kolaylaştırılmış ve krediye ulaşma noktasında gerek tüketiciler gerekse de ticari borçlular hakkındaki bilgiye erişim olanakları artırılmıştır (The World Bank, 2009, 2012, 2013, 2016a, 2017, 2019, 2020a). Genel olarak ülkede yapılan reformlar sayesinde iş yapma kolaylığı endeks sıralamasında 2006 yılında 56. sırada olan Slovenya'nın 2020 yılında 37. sıraya yükseldiği görülmektedir. Bu sıralama Slovenya'nın incelenen dönem itibarıyla iş yapılabilirlik açısından önemli bir yol kat ettiğini gözler önüne sermektedir. Tablo 2'de yer alan iş yapma kolaylığı endeks sıralamasına göre Slovenya'nın 2020 yılında iş yapma kolaylığı açısından en iyi olduğu alanın sınır ötesi ticari faaliyetler, en başarısız olduğu alanın ise inşaat izinleri ve kredi alımına yönelik uygulamalar olduğu anlaşılmaktadır. Slovenya özelinde iş yapma kolaylığını artırmak amacıyla dış ticarete karşılaşılan sorunların azaltılması ve ihracatın artırılması için yeni pazarlara odaklanılması, yabancı yatırımcıların ülkeye çekilmesi için yatırım ortamının daha da iyileştirilmesi, vergi politikalarının gözden geçirilmesi ve yabancı yatırımcıların iş yapma kolaylığına yönelik tedbirlerin alınması büyük bir önem arz etmektedir. Ayrıca işgücü piyasasında nitelikli elemanların yetiştirilmesine yönelik yatırımların artırılmasına, özellikle küçük ve orta ölçekli işletmelerin finansmana erişimlerinin kolaylaştırılmasına ve kredi imkanlarının artırılmasına yönelik önlemlerin alınması Slovenya'nın iş yapma kolaylığı endeksinde daha üst sıralara yükselmesini katkıda bulunabilecektir.

3.4. Sırbistan

Sırbistan, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin içerisinde bulunduğu grupta 4. sırada, dünya genel sıralamasında ise 44. sırada yer almaktadır (The World Bank, 2020a). Sırbistan doğal enerji kaynakları bakımından zengin bir ülkedir ve bu kapsam dahilinde madenler, Sırbistan endüstrisi ve ekonomisinin temel taşı oluşturmaktadır. Ülkede petrol, doğalgaz, kömür, demir, bakır, çinko, antimon, krom, altın, gümüş, magnezyum, pirit, kireç, mermer ve tuz çıkarılmaktadır (T.C. Ticaret Bakanlığı, 2022n: 5). Sırbistan

sahip olduğu özellikler itibariyle yabancı yatırımcılar için son derece çekici bir ülke konumundadır. Ülkenin Avrupa'ya açılan konumu, büyük bir pazara sahip olması, düşük işgücü maliyetleri ve vergiler, teşvik paketleri gibi avantajlar yabancı yatırımcıları cezbetmektedir. Ülkeye yatırım yapan yabancı yatırımcılara, özellikle imalat sektörlerinde, yurtdışına ihracat yapan hizmet sektörlerinde, işlenmiş gıda üretimi yapan sektörlerde, ve otel/konaklama hizmetleri gibi alanlarda devlet yardımı sağlanmaktadır (T.C. Ticaret Bakanlığı, 2022n: 13). Sırbistan'da, tarım ve sanayi sektörlerinden hizmetler sektörüne doğru bir yönelimin olduğu görülmektedir. Sırbistan'da özellikle ecza, tekstil, otomotiv, mobilya ve gıda işleme endüstrileri oldukça gelişmiş durumdadır. Buna karşın ülkedeki kurumların yeterince güçlü olmaması ve demografik yapıda gözlenen bozulma, ekonomik büyümenin istendiği oranda hızlı olmasını engellemektedir (Şaban, 2015: 19) Sırbistan hükümeti, ihracata yönelik şirketler ile küçük ve orta ölçekli işletmelere destek sağlamak amacıyla bir takım teşvik edici önlemler almıştır. Burada alınan teşvik önlemleri, finans sektörü için ilave bir garanti sağlamaya ve yabancı yatırımları teşvik etmeye yöneliktir (Akyol, 2017: 77). Sırbistan, Güneydoğu Avrupa'da pazar büyüklüğü açısından 3. sırada yer almaktadır ve ülkenin 2020 yılındaki dış ticaret hacmi toplam 36 milyar doları bulmuştur (Kocatürk, 2022: 48). Sırbistan, yabancı yatırımcıların ve ihracatçıların ilgisini çeken bir pazar olmakla birlikte, firmalar bazı zorluklarla karşılaşabilmektedir. Bu zorlukları, bürokrasinin ağır işlemesi, şeffaflığın yeterli düzeyde olmaması, hukuk sisteminin zayıf kalması ve bankacılık sistemindeki problemler şeklinde sıralamak mümkündür. Buna karşın, Sırp Hükümeti tarafından, ülkeye yabancı yatırımları çekmek ve ülkeyi yabancı yatırımlar için cazip hale getirebilmek amacıyla önemli reformlar yapılmaktadır (T.C. Ticaret Bakanlığı, 2022m: 20). Bu reformlar kapsamında iş yapma kolaylığına ilişkin veriler incelendiğinde son 15 yıllık dönemde Sırbistan'da, mülk devir vergisi düşürülmek suretiyle mülk devir maliyetleri azaltılmış ve tek noktadan hizmet merkezi sistemi hayata geçirilerek iş kurma süreçleri kolaylaştırmıştır (The World Bank, 2008, 2020d). Bunlara ilaveten ülkede iş yapmayı kolaylaştırıcı reformlar kapsamında mülk kaydından alınan noter harçları düşürülmek suretiyle mülk transferini hızlandıracak bir dizi adım atılmış, şirket kurmak için aranan asgari sermaye şartı ortadan kaldırılmış, depolar için arazi geliştirme vergisi kaldırılarak inşaat izinleri daha az maliyetli bir hale getirilmiş, KDV ve sosyal güvenlik primlerinin beyanı ve ödenmesi için bir elektronik sistem geliştirilmiş ve kentsel arazi kullanım ücreti kaldırılarak şirketler için vergi ödeme kolaylaştırılmıştır (The World Bank, 2009, 2010, 2011, 2012, 2013, 2014, 2016a). Bütün bu iş yapmayı kolaylaştırıcı düzenleme ve reformlar çerçevesinde Tablo 2'deki sıralamalar doğrultusunda Sırbistan'ın inşaat izinlerine yönelik alanlarda başarılı olduğu, ancak firmaların elektrik hizmetine ulaşma sürecinde karşılaştıkları prosedürlerin ve elektrik maliyetlerinin yüksek olmasının ülkedeki iş yapma kolaylığının önündeki en önemli engelleri teşkil ettiği anlaşılmaktadır. Sırbistan'da iş yapma kolaylığına ilişkin olarak yapılmış olan reformlar sayesinde yıllar içinde ülkenin çekiciliğinin arttığını, ancak yatırımcıların daha yoğun bir şekilde Sırbistan'ı tercih etmesi için yapılması gereken daha birçok reformun bulunduğunu söylemek mümkündür. Bu reformları ise, ülkedeki iş kurmaya yönelik bürokratik engellerin azaltılması, iş hayatına ilişkin hukuk sisteminin güçlendirilmesi, ülkedeki bankacılık sisteminin geliştirilmesi, iş hayatında ihtiyaç duyulan eğitilmiş ve nitelikli işgücünün yetiştirilmesine yönelik yatırım ve girişimlerin yapılması, dijitalleşmeye ağırlık verilmesi ve yatırım teşviklerinin artırılması şeklinde sıralamak mümkündür. Bu önerilerin hayata geçirilmesiyle birlikte, Sırbistan'ın iş yapma kolaylığı endeksinde daha da yükselmesi ve yatırımcıların daha yoğun olarak Sırbistan'ı tercih etmesi sağlanabilir.

3.5. Karadağ

Karadağ, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin de içerisinde yer aldığı ülke grubunda 5. sırada, dünya genel sıralamasında ise 50. sırada bulunan küçük bir balkan ülkesidir (The World Bank, 2020a). Karadağ, ormanları, boksiti ve hidroelektrik enerjisi gibi bazı doğal kaynaklarıyla dikkat çeken bir ülkedir. Ülkenin ihracatının yarısından fazlası alüminyum, elektrik enerjisi, çelik ve petrol ürünleri gibi sanayi ürünlerinden oluşmaktadır. İthalatı ise petrol, makineler, elektrikli aletler, motorlu taşıtlar ve gıda maddeleri gibi çeşitli ürünleri içermektedir (T.C. Ticaret Bakanlığı, 2022g: 6). Karadağ, bağımsızlığını ilan ettikten sonraki dönemde Batı ile olan ilişkilerini geliştirmeye yönelik girişimlerde bulunmuştur. Karadağ'ın gümrük uygulamaları, AB ile uyumludur ve ticaret politikasının temeli, düşük gümrük vergilerine ve tarife dışı engellerin bulunmadığı bir yapılanmaya dayanmaktadır (Şaban, 2015: 84). Karadağ, turizm ve hizmetler sektöründe önemli bir gelişim göstermiştir. Ayrıca Karadağ'da, finans sektörünün büyük bir kısmı özelleştirilmiştir. Ülkede tarım sektörü geride kalmıştır. Ülkenin ekonomik genişlemesi için doğrudan yabancı yatırımlara ihtiyaç duyulmaktadır, zira ülkenin ihracatı ve ithalatı kısıtlı ürünlere bağlı olarak gerçekleşmektedir. En önemli ihracat ürünleri arasında alüminyum, elektrik enerjisi ve petrol ürünleri yer almaktadır (Kocatürk, 2022: 50). Karadağ'da yabancı yatırımcılara eşit muamele ilkesi uygulanmaktadır ve yabancı yatırımcılar, Karadağ'da şirket tesisleri, iş yerleri, daireler, inşaat alanları gibi gayrimenkul satın alma haklarına sahiptirler. Yabancı yatırımcılar, ilgi duydukları sektörlerde yatırım yapabilmekte ve gerek kâr ve gerekse de temettü dahil olmak üzere tüm

gelirlerini transfer edebilmektedirler. Şirket kuruluşu, Karadağ resmi makamlarının yayımladığı bilgilere göre, ortalama bir haftada tamamlanmaktadır (T.C. Ticaret Bakanlığı, 2022f: 24). Karadağ'da 2010 yılından sonraki dönemde iş yapma kolaylığına ilişkin reform ve düzenlemeler çerçevesinde, iş kurma alanında yönelik olarak vergi, sosyal güvenlik ve istihdam kaydı da dahil olmak üzere kayıt süreci ve belediye ruhsatı alma sürecini basitleştirilmiş, inşaat izinleri alanında prosedürlerin sayısını azaltılarak inşaat ruhsatı sistemi iyileştirilmiş, kurumlar vergisi oranları ve işverenlerin sosyal güvenlik katkı oranları azaltılarak vergiler şirketler için daha az maliyetli hale getirilmiştir (The World Bank, 2009, 2010, 2011, 2012, 2013, 2014). 2015 yılından itibaren yapılan düzenlemelerde de vergi ödemeyi daha az maliyetli hale getirmek için vergi oranları düşürülmüş, KDV beyanı ve ödemesi için elektronik bir sistem oluşturulmuş, inşaat ruhsatlarına ilişkin işlemleri kolaylaştırmak için gereken süre kısaltılmış, ülkede elektrik tedarik güvenilirliği iyileştirilmiş ayrıca elektrik daha hızlı ve daha ucuz bir şekilde sunulmaya başlanmıştır (The World Bank, 2016a, 2016b, 2018, 2019, 2020a). Karadağ'da iş yapma kolaylığına yönelik olarak yapılan düzenleme ve reformlar sayesinde ülkenin en başarılı olduğu alan, yatırımcılara kredi temini alanı olmuş ve bu doğrultuda yatırımcılara önemli kolaylıklar sağlanmıştır. Buna karşın ülkenin iş yapma kolaylığı açısından en çok sorun yaşadığı ve dolayısıyla en başarısız olduğu alan ise işletmelere elektrik temini noktasında karşılaşılan prosedür ve sorunlar ile elektrik maliyetlerinin yüksekliği olmuştur. Bütün bu yapılan düzenleme ve reformlara rağmen ülkede iş yapma kolaylığının sağlanması adına yapılması gereken daha pek çok reform bulunmaktadır. Bu reform ve düzenlemeler kapsamında ülkede, vergi oranları düşürülerek vergi ödeme maliyetleri azaltılmalı, inşaat izinlerine ilişkin işlemler hızlandırılmalı, iş yapma kolaylığına ilişkin ülkedeki en önemli sorun olan işletmelere elektrik tedarik güvenilirliği iyileştirilmeli, yabancı yatırımcılara ülkedeki yatırım olanaklarını tanıtmak amacıyla çeşitli ajans ve kurumlar oluşturulmalı, ülkede yeni işletmelerin kurulması ve faaliyetlerinin sürdürülmesi için gerekli olan bürokratik prosedürler ve belediye ruhsatı alma süreci basitleştirilmeli, işletmelerin ihtiyaç duyacağı kalifiye elemanların yetiştirilmesine yönelik olarak eğitim programları geliştirmeli ve gençler bu programlara katılım sağlamaları yönünden teşvik edilmelidir. Bu önerilerin uygulanması, Karadağ'ın iş yapma kolaylığı endeksinde daha iyi bir konuma gelmesine yardımcı olacaktır.

3.6. Hırvatistan

Hırvatistan, 2020 yılı İş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin de içinde bulunduğu ülke grubu içerisinde 6. sırada, dünya genel sıralamasında ise 51. sırada bulunan bir ülkedir (The World Bank, 2020a). Hırvatistan, 2019-2021 döneminde 2 milyar dolarlık doğrudan yabancı yatırım çekmiştir ve 2021 yılı itibarıyla 39 milyar dolarlık toplam yabancı sermaye stoğu ile dünyada 73. sırada yer almaktadır. 1 Temmuz 2013'ten itibaren AB üyesi olan Hırvatistan, AB'ye üye olan ülkelerden oluşan gümrük bölgesinin parçası haline gelerek AB'nin gümrük vergilerini ve ortak ticaret politikasını uygulamaya başlamıştır (T.C. Ticaret Bakanlığı, 2022e: 2-4). Genel yapısı itibarıyla orta gelir düzeyine ve etkin bir pazar ekonomisine sahip olan Hırvatistan'da hükümet, özelleştirme programını yabancı yatırımları teşvik edecek şekilde geliştirmiş durumdadır (Şaban, 2015: 34). Hırvatistan Anayasası, yabancı yatırımcılara yönelik çeşitli garantiler sağlamaktadır. Yerli ve yabancı yatırımcılar arasında hak ve yükümlülükler açısından herhangi bir fark gözetilmemekte ve yabancı yatırımcıların kar ve sermaye transferi önünde bir kısıtlama bulunmamaktadır. Yabancı yatırımlar, 1995 yılında yürürlüğe giren İşletmeler Kanunu ile düzenlenmiştir. Bu kanun uyarınca yabancılara da yerli yatırımcılara tanınan hak ve yükümlülükler ile yasal statü tanınmıştır. Sermaye yatırımı yoluyla elde edilen haklar, kanunla veya başka bir hukuki düzenlemeyle sınırlandırılmamakta ve kârın serbest transferine sınırlandırma getirilmemektedir. Hırvatistan'da, karşılıklılık esasına bağlı olarak, yabancı gerçek ve tüzel kişiler gayrimenkul satın alabilirler (T.C. Ticaret Bakanlığı, 2022e: 30). 2008 yılında yayımlanan iş yapma kolaylığına ilişkin veriler incelendiğinde Hırvatistan'da, iş kurmayı kolaylaştırmak amacıyla tek hizmet noktası sistemini geliştirilmiş ve tapu siciline ilişkin işlemlerde yapılan iyileştirmeler sayesinde mülk kaydı için gereken süre azaltılmıştır. Ayrıca ülkede sonraki yıllarda yapılan reform ve düzenlemelerle, inşaat ruhsatı süreci tek bir hizmet kanalından yönetilerek bina yönetmeliğinin uygulanması kolaylaştırılmış, yine vergi konusunda elektronik sistemler geliştirilerek şirketler için vergi ödeme süreci de kolaylaştırılmıştır. Bunlara ilaveten ülkede, sınır ötesi ticareti kolaylaştırmak amacıyla yeni bir elektronik gümrük sistemi uygulanmış, noter ücretleri düşürülerek iş kurma süreci kolaylaştırılmış, inşaat izin süreci basitleştirilmiş ve hızlandırılmış, iş hayatına ilişkin sözleşmelerin uygulanmasını kolaylaştırmak amacıyla dava işlemlerindeki prosedürler basitleştirilmiş ve iflasın çözümünü hızlandırmak amacıyla bir takım kolaylaştırıcı düzenlemeler yapılmıştır (The World Bank, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a). 2016 yılından sonra yapılan reformlarda ise istenen sonuçlar alınamamış ve iş yapma kolaylığı endeksindeki sıralamada önceki yıllara kıyasla ülke daha geri seviyelere düşerek 2020 yılında kendisine 51. sırada yer bulabilmiştir. Tablo 2'deki sıralamalar doğrultusunda 2020 yılı itibarıyla iş yapma kolaylığı endeksinde Hırvatistan'ın en başarılı olduğu alanın sınır ötesine yönelik ticari faaliyetler olduğu, buna karşın inşaat izinleri

konusuna yönelik olmak üzere bir inşaata başlama ve tamamlama sürecinde başarısız olduğu ve iş yapma kolaylığına ilişkin endeksteki sıralamalarda diğer ülkelerin gerisinde kaldığı anlaşılmaktadır. Hırvatistan'da iş yapma kolaylığının geliştirilebilmesi adına yabancı yatırımcılara vergi indirimlerine gitmek suretiyle birtakım teşvikler verilmeli, işletmelerin kurulması ve faaliyet göstermesi için gereken süre ve maliyeti azalmak amacıyla ülkedeki bürokrasi azaltılmalı, ülkede iş hayatının ihtiyaç duyacağı nitelikli elemanları yetiştirmek amacıyla eğitim reformları yapılmalı ve yetenekli işgücünün ülkeye gelmesini sağlayacak nitelikte birtakım teşvikler sunulmalıdır. Ayrıca ülkede inovasyonu teşvik etmek ve Ar-Ge faaliyetlerine daha fazla yatırımlar yapmak suretiyle işletmelerin ülkede daha fazla faaliyet göstermesine olanak sağlanmalıdır. Bu düzenlemelerin, ülkenin ekonomik yönde büyümesine katkı sağlayacağını, ayrıca yeni işletmelerin kurulmasına ve mevcut işletmelerin daha rekabetçi hale gelmesine olanak sağlayacağını söylemek mümkündür.

3.7. Romanya

Romanya, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin içinde bulunduğu ülke grubu içerisinde 7. sırada, dünya genel sıralamasında ise 55. sırada yer alan bir Balkan ülkesidir (The World Bank, 2020a). Romanya, kömür, demir cevheri, bakır ve krom rezervleri açısından oldukça zengin bir ülkedir. Petrol üretimi, ülkenin ihtiyacını karşılamak için yeterli düzeyde değildir. Ancak ülke sahip olduğu doğalgaz rezervleri bakımından oldukça önemli bir konumdadır. Bu alanda Romgaz ve Petrom, ülkenin en önemli firmalarını teşkil etmektedir (Romanya Ülke Bülteni, 2011; T.C. Ticaret Bakanlığı, 2022l: 5). Romanya, 1989 yılından bu yana Batı ile ilişkilerini geliştirmek için serbest piyasa ekonomisine geçiş yaparak mevzuat değişikliklerine gitmiştir. Bu çabalar ülkenin dış ticaret politikasına da yansımıştır. Romanya ekonomisi, AB üyeliği sonrası hızla gelişmiş ve yatırım yapmak için cazip bir ülke haline gelmiştir. Ancak, ülkenin vergi gelirlerinin yetersizliği, ülkedeki kayıt dışı ekonominin büyüklüğü ve vergi tahsilatındaki sorunlar nedeniyle, ülkede eğitim, sağlık, altyapı ve güvenlik harcamaları için yeterli fon oluşturulamamaktadır. Bu durum, Romanya'nın Bulgaristan'dan sonra Doğu Avrupa'da en düşük kişi başına düşen gelire sahip ülke olmasına, çevre standartları açısından en geri ülkelerden biri haline gelmesine, vergi alacaklarının çok yüksek seviyelere çıkmasına ve eğitim harcamalarının çok düşük seviyelerde olmasına neden olmaktadır (Nuroğlu ve Nuroğlu, 2016: 46). Avrupa Birliği'nin bir üyesi olan Romanya, hızlı büyüyen bir ekonomiye sahiptir ve son yıllarda önemli bir yatırım merkezi haline gelmiştir. Bu durum, ülkenin dışa açık ekonomisi ve liberal ekonomik politikaları sayesinde gerçekleşmiştir. Romanya'da özellikle bilgi teknolojisi, otomotiv, elektronik, tekstil, gıda işleme ve turizm sektörleri oldukça gelişmiştir. Romanya, petrol, doğal gaz, kömür, tuz, demir, altın ve gümüş gibi önemli yeraltı zenginliklerine ek olarak, ekilebilir verimli tarım arazileri ve sağlam bir sanayi altyapısına da sahiptir. Ayrıca, Karadeniz'de Avrupa'nın en büyük petrol ve gaz rezervlerinden birine sahip olan ülke, önemli bir enerji üreticisi konumundadır. (Korkmaz vd., 2007: 255). Son yıllarda, Romanya ekonomisi, yatırım çekmek için çeşitli teşvikler sunan hükümet politikaları sayesinde büyük bir ivme kazanmıştır. Ayrıca, Avrupa Birliği'nin üyesi olması, ülkeye Avrupa pazarlarına kolaylıkla erişebilme fırsatı vermiştir. Bununla birlikte, Romanya'nın ekonomisi hala bazı sorunlarla karşı karşıyadır. Özellikle, yolsuzluk ve yargı sistemi üzerindeki baskılar, yabancı yatırımcıların ülkeye olan güvenini olumsuz yönde etkilemektedir. Ayrıca, ülkenin bazı bölgelerinde, özellikle de kırsal kesimlerde, yoksulluk ve işsizlik önemli sorunlar olarak ön plana çıkmış durumdadır (T.C. Ticaret Bakanlığı, 2022l: 5-6). Romanya'da 2008-2013 döneminde iş yapmayı kolaylaştırmak amacıyla birtakım reformlar yapılmıştır. Bu reformlarla, iş kurmayı kolaylaştırmak amacıyla izin belgesi almak için gereken süre kısaltılmış, vergi ödemelerini daha kolay ve vergileri de daha az maliyetli hale getirmek için vergi oranları düşürülmüş, vergi beyannamelerinin elektronik sistem kullanılarak verilmesi teşvik edilmiş ve vergi ödemeleri için elektronik bir ödeme sistemi geliştirilmiş, tüm mahkeme işlemlerini kolaylaştıran ve hızlandıran yeni bir hukuk usulü kanunu kabul edilerek sözleşmelerin uygulanması kolaylaştırılmıştır, iflas işlemlerinin süresini kısaltmak için iflas yasası değiştirilmiş ve tapu-kadastroda hızlandırılmış prosedürler getirilerek mülk kaydı kolaylaştırılmıştır. Ayrıca mülkiyet ve arazi kayıtları sayısallaştırılarak arazi yönetiminin kalitesi iyileştirilmiş, sözleşmelerin uygulanmasını kolaylaştırmak için bazı yetki ve sorumluluklar mahkemeden icra memuruna devredilmiş ve iflas sisteminin iyileştirilmesi için birçok reform yapılmıştır (The World Bank, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a, 2016b, 2018a, 2019, 2020a). Yapılan tüm bu reformlara rağmen Romanya, 2006 yılında iş yapma kolaylığı endeks sıralamasında 61. sırada iken 2020 yılına gelindiğinde sadece 9 ülkeyi geride bırakabilmiştir. Romanya'nın iş yapma kolaylığı açısından yavaş bir ilerleme kaydetmiş olması, ülkede iş yapmayı kolaylaştırmaya yönelik reformlarının çok da fazla amacına ulaşmadığını göstermektedir. Tablo 2'deki sıralamalar dahilinde Romanya'nın iş yapmayı kolaylaştırmaya yönelik olarak en başarılı olduğu alanın sınır ötesi ticari faaliyetler olduğu, buna karşın işletmelerin elektrığe ulaşma noktasında sorun yaşadığı ve elektrik maliyetlerinin yüksekliğinin ülkedeki işletmeler için iş yapma kolaylığını olumsuz yönde etkileyen unsurlar olduğu anlaşılmaktadır. Romanya'da iş yapma kolaylığını artırabilmek adına daha önce yapılmış reform ve

düzenlemelere ilaveten ülkedeki yolsuzlukla mücadele çabalarının artırılması suretiyle yatırımcıların Romanya'ya olan güveni artırılmalı, eğitim ve beceri geliştirme programları sayesinde, işletmelerin kalifiye işgücüne erişimini kolaylaştırılmalıdır.

3.8. Kosova

Kosova 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye içerisinde bulunduğu ülke grubu içerisinde 8. sırada, dünya genel sıralamasında ise 57. sırada bulunan küçük bir Balkan ülkesidir (The World Bank, 2020a). Kosova, Avrupa'nın önemli maden üreticisi ülkelerinden biri konumundadır (T.C. Ticaret Bakanlığı, 2022i: 3). Kosova, son yıllarda yabancı yatırımcılar için önemli bir pazar haline gelmiştir. 2007-2020 yılları arasında ülkeye 4,1 milyar avro değerinde doğrudan yabancı sermaye yatırımı yapılmıştır. Bu yatırımların önemli bir kısmını Alman yatırımcılar yapmıştır (T.C. Ticaret Bakanlığı, 2022i: 8). Kosova'nın liberal ekonomiden uzaklaşma riskinin olmaması, yatırımcılar için cazibedici bir faktör olarak ön plana çıkmış durumdadır. Bununla birlikte, yönetimin istikrarlı ve güven veren yapısı, ülkenin geleceği açısından son derece umut vericidir (Kosova Cumhuriyet Merkez Bankası, 2020). Kosova, aynı zamanda ithalatı kısıtlayıcı uygulamalar yapmayan ve anti-damping şeklindeki ticaret politikası önlemlerine seyrek olarak başvuran bir ülkedir (T.C. Ticaret Bakanlığı, 2022h: 3). Kosova'nın sanayi sektörü, metal işleme, basit makine üretimi, deri işleme ve ağaç işleme gibi alanlarda faaliyet gösteren küçük ölçekli firmalardan oluşmaktadır. Ülkenin altyapısı yetersiz olup, enerji kaynakları güvenilir değildir. Kosova'daki bankaların çoğu, yabancıların mülkiyetindedir. Ülkenin posta ve telekom operatörleri özelleştirme sürecindedir. Kosova ekonomisi, yurt içi talep, işçi dövizleri ve yabancı yatırımlar (özellikle inşaat) tarafından desteklenmektedir (Şaban, 2015: 17). Kosova hükümeti, yabancı yatırımcılara birtakım teşvikler sunmaktadır. Bu teşviklerden en önemlilerini gümrük vergisi muafiyeti, vade ile katma değer vergisi tahsilatı ve bedelsiz arsa tahsis edilmesi şeklinde sıralamak mümkündür. Bununla birlikte, ülkedeki yatırım ortamının daha da iyileştirilmesi için özelleştirmelerin artırılması ve vergi oranlarının düşürülmesi gibi ekonomi politikaları da uygulanmaktadır (Şaban, 2015: 38). Kosova'da şirket kurmak için asgari sermaye beyanı gerekmediğinden dolayı ülkede şirket kurma süreci oldukça hızlı ve kolay bir şekilde ilerlemektedir. Ayrıca, yurtdışı firmalar da Kosova'da şube açabilirler. Buna ilaveten yurtdışı firmaların Kosova'da, ticari faaliyette bulunabilmesi için firmalarının marka değerlerini ve gerçekleştirdikleri projeleri referans olarak göstermeleri de mümkündür (T.C. Ticaret Bakanlığı, 2022h: 18). İş yapma kolaylığı endeksine göre yapılan iş reformları genel olarak olumlu sonuçlar vermiş ve iş süreçlerini kolaylaştırıcı etkiler meydana getirmiştir. İş yapma kolaylığı sağlamak amacıyla Kosova'da uygulamaya konulan reformların başlıcalarını, inşaat izinleri ile ilgili reformlar ve inşaat ruhsatı ücretlerini düşürmeye yönelik düzenlemeler, vergi ödemeyi kolaylaştırmaya ve kurumlar vergisi oranını düşürmeye yönelik düzenleme ve reformlar, sınır ötesi ticareti geliştirmeye yönelik düzenlemeler, iş kurma ile ilgili reformlar kapsamında asgari sermaye gerekliliğini ve işletme kayıt ücretini ortadan kaldırmaya yönelik uygulamalar ve azınlıktaki yatırımcıların korunması ile ilgili reformlar şeklinde sıralamak mümkündür (The World Bank, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a, 2017, 2018, 2019, 2020c, 2020a). Kosova'da iş yapmayı kolaylaştırmak amacıyla yapılan reformlar sonucunda Tablo 2'deki iş yapma kolaylığı endeksindeki sıralamadan ülkede, iş kurma alanında önemli ilerlemelerin sağlandığı ancak ülkenin inşaat izinleri konusunda diğer ülkelerin oldukça gerisinde kaldığı anlaşılmaktadır. Kosova'nın iş yapma kolaylığı endeksinde daha üst sıralara çıkabilmesi için yapılan bu reformlara ek olarak vergi oranlarını daha da düşürülmelidir. Böylece yatırımcıların maliyetleri azaltılabilir ve iş yapma kolaylığı artabilir. Ayrıca siyasi istikrarın sağlanması, piyasada karşılaşılması muhtemel risklerin azalmasına, dolayısıyla da yatırımcıların ülkede uzun vadeli yatırım yapmalarını olanak sağlayabilecektir. Bununla birlikte Kosova'da, özellikle altyapı, enerji kaynakları ve ulaşım ağı gibi alanlarda iyileştirmeler yapılmak suretiyle iş yapma koşulları geliştirilebilir. Buna ilaveten küçük ölçekli girişimcilere iş yapma kolaylığı sağlamak amacıyla işletme kayıt ücretleri tamamen ortadan kaldırılabilir ve şirket kaydı hizmetleri daha da hızlandırılabilir ki bu uygulamalar, yatırımcıların ülkeye yatırım yapma konusunda daha da istekli olmalarına olanak sağlayacaktır.

3.9. Bulgaristan

Bulgaristan, 2020 yılı iş yapma kolaylığı endeks sıralamasında Balkan ülkeleri ve Türkiye'nin de içerisinde bulunduğu ülke grubunda 9. sırada, dünya genel sıralamasında ise 60. sırada bulunan bir balkan ülkesidir (The World Bank, 2020a). Bulgaristan, gümrük rejimi bakımından liberal bir yapıya sahiptir. Ancak Bulgaristan'da milli güvenlik, kamu düzeni, insan, hayvan ve bitki yaşamı ve sağlığı, sanat eserleri, tarihi ve arkeolojik değerler, sınai ve fikri hakların korunması gibi nedenlerle gümrük rejimine bazı yasak ve sınırlamalar getirilebilmektedir. Bu sınırlamalar, AB mevzuatına ve Bulgaristan'ın taraf olduğu uluslararası anlaşmalara dayanmaktadır. Ülke

içindeki yetkili kuruluşlar, izne tabi malların denetimini gerçekleştirmektedir. Bulgaristan'da yatırım yapmayı düşünenlerin, ülkenin yasal düzenlemeleri hakkında bilgi sahibi olmaları ve yatırım yapacakları alanda mevcut olan fırsatları araştırmaları gerekmektedir (T.C. Ticaret Bakanlığı, 2022d: 3-4). Bulgaristan'da 2009 yılında en fazla yatırım finansal aracılık sektörüne yapılmıştır. Bu sektörü gayrimenkul sektörü izlemektedir. Enerji sektörü ise 2009 yılında, 2008 yılına kıyasla daha fazla yatırım çekmiştir. Yenilenebilir enerji kaynakları, bilgisayar üretimi, yüksek teknolojiler, sağlık ve eğitim, Bulgaristan'ın öncelikli sektörlerini teşkil etmektedir (Şaban, 2015: 31). Bulgaristan'da, diğer ülkelerde olduğu gibi Soğuk Savaş sonrasında önemli ekonomik ve siyasi değişiklikler yaşanmış, ancak beklenen başarı yakalanamamıştır. Geçiş ekonomileri arasındaki en yoksul ülke konumundadır ve bunun başlıca nedeni iç ve dış siyasi istikrarsızlık olarak gösterilmektedir. Ülke ekonomisi hizmet sektörüne ve doğal kaynaklara dayalı olarak varlığını sürdürmektedir. Hammadde ve malzemeler, petrol ürünleri, gıda sektörü hammaddeleri, demir dışı metaller ile makineler en çok ihraç edilen ürün grupları iken ham petrol ve doğalgaz, makine-cihazlar, plastik ve kauçuk gibi sektörler, en çok ithalatın yapıldığı ürün gruplarını teşkil etmektedir (Kocatürk, 2022: 52-53). Bulgaristan'da şirket kuruluşları, Adalet Bakanlığı'na bağlı Kayıt Ajansı tarafından tutulan ticaret siciline kayıtlı gerçekleştirilmektedir (T.C. Ticaret Bakanlığı, 2022d: 24).

2006 yılında iş yapma kolaylığı endeksinde 54. sırada yer alan Bulgaristan, 2020 yılında iş yapma kolaylığı açısından daha da gerileyerek 61. sırada yer almıştır. Yaşanan bu durum incelemeye konu olan tüm ülkeler içerisinde sadece Bulgaristan'a özgüdür. Dünya Bankası tarafından yapılan endeks sıralamaları incelendiğinde Bulgaristan'la hemen hemen aynı durumda olan bir diğer ülke Bosna-Hersek'tir. Bununla birlikte Bosna-Hersek 2006 yılında 91. Sırada iken 2020 yılına 90. sıraya yükselmiştir. Ancak Bulgaristan'ın sıralama değerinin Bosna-Hersek'ten daha yüksek olması Bulgaristan'ın yine de Bosna-Hersek'ten daha iyi bir konumda olduğunu göstermektedir.

Son 15 yıllık dönemde Bulgaristan'da iş yapmayı kolaylaştırmak adına bir takım düzenleme ve reformların yapıldığı görülmektedir. Bu reformlardan bazılarını, yargı sisteminde değişiklikler yapılarak sistemdeki şeffaflığın artırılması ve özel icra memurları atayarak sözleşmelerin uygulanmasının kolaylaştırılması, ticari tescil için merkezi bir elektronik veri tabanı oluşturularak, tescil prosedürleri birleştirilerek ve bazı kayıt formaliteleri ortadan kaldırılarak iş kurmanın kolaylaştırılması şeklinde sıralamak mümkündür (The World Bank, 2008, 2009). Ayrıca Bulgaristan'da yine iş yapmayı kolaylaştırmak amacıyla ödenmiş asgari sermaye gereksinimini azaltılmış, ve sosyal güvenlik için işveren katkı oranlarını düşürülmüştür (The World Bank, 2010, 2011). Bunlara ilaveten gümrük beyannamesi formlarının çevrimiçi olarak sunulmasına olanak sağlanarak sınır ötesi ticaret hızlandırılmış, işletme kayıt maliyeti düşürülerek iş kurmak kolaylaştırılmıştır (The World Bank, 2012, 2013). Yapılan tüm bu olumlu reformlara rağmen Tablo 1'de görüleceği üzere Bulgaristan'ın iş yapma kolaylığı endeksindeki genel sırası incelenen dönem itibarıyla gerilemiştir. Bu gerilemenin ülkenin genel ekonomik durumundan kaynaklandığını söylemek mümkündür. Tablo 2'de yer alan 2020 yılı itibarıyla iş yapma kolaylığı endeksindeki sıralamalar incelendiğinde Bulgaristan'ın sınır ötesi ticaret uygulamaları alanında ilerlemeler kaydettiği ve başarılı olduğu ancak ülkede işletmelere elektrik temini konusunda ve elektrik maliyetlerinin yüksekliği konusunda önemli sorunların bulunduğu anlaşılmaktadır. Bulgaristan'da iş yapma kolaylığını artırmaya yönelik olarak yapılan uygulama ve reformlara ilaveten şirket kuruluş prosedürlerinin daha hızlı ve basit hale getirilmesi, ticaret siciline kayıt süresinin kısaltılması, inşaatla ilgili onayların alınmasına yönelik prosedürlerin daha hızlı, aynı zamanda da daha basit hale getirilmesi ve yatırımcılara özellikle yenilenebilir enerji kaynakları, bilgisayar üretimi, yüksek teknolojiler, sağlık ve eğitim gibi öncelikli sektörlerle yatırım yapmaları için teşvikler verilmesi, ülkede iş yapma kolaylığının artmasına önemli katkılar sunabilecektir.

3.10. Yunanistan

Yunanistan 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye içerisinde bulunduğu grupta 10. sırada ve dünya genel sıralamasında 79. sırada bulunan bir balkan ülkesidir (The World Bank, 2020a). Yunanistan, dünya genelinde yüksek teknoloji ihracatı bakımından 45. sırada yer almaktadır (T.C. Ticaret Bakanlığı, 2022r: 7). Yunanistan'ın başlıca ihraç ürünleri arasında mineral yakıtlar, yağlar, eczacılık ürünleri, alüminyum ve alüminyum ürünleri yer almaktadır. İthalatta ise mineral yakıtlar, yağlar, makineler, mekanik cihazlar ve aletler ile elektrikli makine ve cihazlar öne çıkmaktadır (T.C. Ticaret Bakanlığı, 2022r: 7). Yunanistan, Avrupa Birliği (AB) ve Dünya Ticaret Örgütü (DTÖ) üyesi olup, uluslararası ticaret politikası kurallarına uymaktadır. Yunanistan, AB üyesi olduğu 1981 yılından beri dış ticaretini AB ortak mevzuatına göre yürütmektedir. AB ülkeleri dışından gelen mallara Ortak Gümrük Tarifesi uygulanmaktadır. AB ülkeleri içinde serbest dolaşıma konu olan mallar, iç pazarın kurallarına ve Ortak Ticaret Politikasının belirli ilkelerine uymak zorundadır. AB düzenlemeleri, Yunanistan'ın Birlik Gümrük Yasası hükümlerini uygulamasını diğer AB ülkeleriyle birlikte garanti altına almaktadır (T.C. Ticaret Bakanlığı, 2022q: 3). Yunanistan, AB üyeliği sonrası uygulamaya

başladığı istikrar politikalarıyla ekonomisini güçlendirmiş ve AB pazarında rekabet edebilmek için serbest ekonomik düzende faaliyetlerini devam ettirmiştir. Yunanistan'a yönelik yabancı sermaye ilgisi azdır. Bunun nedenlerini, coğrafi uzaklık, küçük pazar, yetersiz ulaşım ağı, uzun süren bürokratik işlemler, işgücü maliyetleri, güçlü sendikalar ve korumacı yaklaşımlar şeklinde sıralamak mümkündür (Şaban, 2015: 41). Yunanistan'daki doğrudan yabancı yatırımların çoğu AB ülkeleri tarafından yapılmaktadır. Kriz öncesi ve sonrası dönemde Yunanistan'a yapılan doğrudan yatırımlarda Almanya ilk sırada yer almaktadır. İsviçre ve ABD'de de Yunanistan'daki yatırımlarını 2008 krizinden sonra neredeyse iki katına çıkarmıştır. Ancak son altı yıllık dönemde Yunanistan'a yapılan doğrudan yatırımlar, önceki altı yıllık döneme kıyasla yüzde 38,7 oranında azalmış durumdadır (Nuroğlu ve Nuroğlu, 2016: 55). Yabancı yatırımcılar Yunanistan'da doğrudan yabancı sermayeli bir şirket kurabilirler. Ticari şirket kuruluşu, şirketin Ticaret Siciline kaydı ile tamamlanmaktadır. Yunanistan'da 2008 yılındaki ekonomik krizinin başlamasından bu yana, yabancı sermayeli yatırımcıları ülkeye çekebilmek için şirket kuruluş mevzuatında iyileştirmeler yapılmıştır. Yunan mevzuatı kapsamında, şube açmak, bir ortaklık kurmak ya da bir başka girişimci ile birlikte ortak girişim sözleşmesi çerçevesinde faaliyet göstermek belli başlı yabancı yatırım türlerini oluşturmaktadır (T.C. Ticaret Bakanlığı, 2022q: 39-41). Tablo 1 incelendiğinde 2006 yılında iş yapma kolaylığı endeksinde 111. sırada olan Yunanistan'ın 2020 yılında 79. sıraya yükseldiği görülmektedir. Yunanistan, balkan ülkeleri içerisinde iş yapma kolaylığı endeksine göre Arnavutluk ve Bosna-Hersek'ten sonra en kötü performansa sahip üçüncü ülkedir. Yunanistan'ın iş yapma kolaylığı endeksinde bu denli geride olmasının temelinde ülkede yaşanan ve etkileri hala devam eden ağır ekonomik krizin önemli bir rol oynadığını söylemek mümkündür.

Yunanistan'da, Dünya Bankası tarafından yapılan iş yapma kolaylığı araştırmasında üst sıralara yükselebilmek amacıyla çeşitli reformlar yapılmıştır. Ancak yapılan reformlar, ekonomik krizin neden olduğu ağır bunalım ortamında ancak sınırlı bir ilerleme kaydetmeye olanak sağlamıştır. Yunanistan'da iş yapma kolaylığını artırmak amacıyla yapılan reform ve düzenlemeleri, şirketlerin ticaret siciline kayıt olma süresinin kısaltılması ve vergi beyannamesi alma gerekliliğinin kaldırılması, mülk devir vergisinin düşürerek mülk devrinin kolaylaştırılması, kurumlar vergisi oranının düşürülerek bu verginin şirketler için daha az maliyetli hale getirilmesi, hukuk usulü kurallarının değiştirilmesi suretiyle sözleşmelerin uygulanmasının kolaylaştırılması, uzlaşma prosedürünün ortadan kaldırılarak iflas sürecinin hızlandırılması, ihracat için gümrük beyannamelerinin elektronik olarak sunulmasına izin veren bir sistem uygulanarak sınır ötesi ticaretin kolaylaştırılması ve kredi bilgilerine erişimin kolaylaştırılması şeklinde sıralamak mümkündür (The World Bank, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a, 2017, 2018, 2019, 2020b, 2020a). Yapılan bu düzenleme ve uygulamalar çerçevesinde Tablo 2'de yer alan bilgiler doğrultusunda Yunanistan'ın 2020 yılı itibarıyla düzenlenmiş olan iş yapma kolaylığına ilişkin kategoriler içerisinde en başarılı olunan alanın iş kurmayı kolaylaştırmaya yönelik düzenlemeler olduğu, en başarısız olunan alanın ise kredi alımına ilişkin olarak ortaya çıktığı ve gerek faiz oranları gerekse de zayıf bankacılık hizmetleri nedeniyle firmaların finansmana erişimini noktasında zorluklar yaşadığı anlaşılmaktadır. Yunanistan'ın iş yapma kolaylığı açısından daha fazla gelişim gösterebilmesi amacıyla işletmelerin kurulması için şart koşulan asgari sermaye gereksinimini kaldırılmak suretiyle iş kurma süreci daha da basitleştirilmeli, vergi sistemini güncelleştirilerek elektronik ödeme sistemleri kolaylaştırılmalı ve daha az belge gerektiren bir vergi sistemi uygulanmalı, hukuk sisteminde düzenlemeler yapılarak mahkeme dosyalarının yönetimi için daha etkili bir elektronik dosyalama sistemi uygulanmalı ve bu sayede mahkeme süreçleri hızlandırılmalı, ihracat işlemlerini kolaylaştırmak adına gümrük beyannamelerinin elektronik olarak sunulmasına izin veren bir sistemle sınır ötesi ticaret kolaylaştırılmalı ve son olarak iflas sürecini iyileştirmek için yeni bir rehabilitasyon süreci başlatılmalıdır.

3.11. Arnavutluk

Arnavutluk, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin bulunduğu ülke grubu içerisinde 11. sırada, dünya genel sıralamasında ise 82. sırada bulunan bir balkan ülkesidir (The World Bank, 2020a). Arnavutluk, son yıllarda piyasalarını özgürleştirmek suretiyle ekonomisini canlandırmaya çalışmaktadır. Ancak ülke bu süreçte birçok zorlukla karşılaşmıştır. Ülkede özellikle makroekonomik istikrar ve kayıt dışı ekonomi ile mücadele gibi konularda reformlar yapılırken, kurumsal şirket kültürü henüz gelişmemiştir. Ülkedeki şirketlerin çoğunluğunun patron şirketi olduğu düşünüldüğünde, Arnavutluk'un iş kültürünün hala gelişme aşamasında olduğunu söylemek mümkündür (T.C. Ticaret Bakanlığı, 2022a: 15). Arnavutluk, küresel kriz nedeniyle işsizlik oranında artış yaşayan ülkelere biridir. Ancak, son yıllarda turizm sektöründeki gelişmeler sayesinde işsizlik oranı düşüşe geçmiştir. Ülkedeki uzun dönemli ve genç nüfus işsizliği ile kadın-erkek işgücüne katılımdaki farklılıklar en önemli yapısal sorunları teşkil etmektedir (Serbes ve Tokatlıoğlu, 2019: 177). Ekonomik büyüme açısından Arnavutluk, diğer ülkelere kıyasla başarılı bir performans sergilemektedir. Kriz

döneminde bile küçülme yaşanmayan nadir ülkelerden biridir. Özellikle son yıllarda özel sektör kaynaklı iç talep artışı ve finansman olanaklarının genişlemesi ekonomik büyümeye katkı sağlamıştır. Küresel ölçekli ekonomik kriz nedeniyle, önceki dönemlerde zaten yüksek seviyelerde olan Arnavutluk'un kamusal açık ve borçları, krizden sonraki dönemde de artış göstermiş, ancak son dönemlerde yapılan müdahaleler sayesinde gerek kamu açığı, gerekse de kamu borçları düşüşe geçmiştir ve kamusal borçların milli gelire oranı azaltılarak hedeflenen seviyeye yaklaşmıştır (Serbes ve Tokatlıoğlu, 2019: 173). Arnavutluk, ekonomik kalkınma ve AB üyeliği hedefleri doğrultusunda gerçekleştirdiği reformlarla liberalleşmeye başlamış ve yabancı sermaye yatırımlar için cazip bir ülke haline gelmiştir. Ülkedeki siyasi ve ekonomik istikrar, Dünya Bankası ve NATO üyelikleri, AB tam üyelik sürecindeki gelişmeler ve yapılan özelleştirmelerle birlikte Arnavutluk'a önemli miktarda doğrudan yabancı sermaye girişi sağlanmıştır (Nuroğlu ve Nuroğlu, 2016: 15). Arnavutluk, Dünya Bankası tarafından yayımlanan iş yapma kolaylığı endeksinde Balkan ülkeleri içerisinde Bosna Hersek ile birlikte son sıraları paylaşmaktadır. Bununla birlikte Arnavutluk iş yapma kolaylığı sıralamasında 2006 yılında 115 sırada iken, 2020 yılında 82. sıraya kadar yükselmiş ve Bosna Hersek'ten çok daha iyi bir konuma gelmiştir. Arnavutluk ekonomisinin iş yapma kolaylığı endeksindeki yerini daha üst seviyelere çıkarmak adına yapılmış olan birtakım düzenlemeler ve reform hareketleri bulunmaktadır. Bu düzenleme ve reform hareketlerini, inşaat ruhsatlarının verilmesi ve nihai denetim süreçleriyle ilgili düzenlemeler yapmak suretiyle inşaat izinlerinin kolaylaştırması, elektriğe erişimi kolaylaştırmak için teknik düzenlemelerin yapılması ve otomatik enerji yönetimi sisteminin devreye alınması, tapu sicilinin şeffaflığını artırmak amacıyla mülk kaydının kolaylaştırılması, krediye erişimi güçlendirmek için kredi teminatında değişiklik yapılması ve vergi ödeme sürecini kolaylaştırmak için çeşitli düzenlemeler yapılarak kurumlar vergisi oranlarının düşürülmesi şeklinde sıralamak mümkündür. Tablo 2 incelendiğinde Arnavutluk'un yapılmış olan bu düzenleme ve reformlar sayesinde sınır ötesine yönelik ticaretin gelişmesi noktasında önemli ilerlemeler sağladığı ve ülkenin en başarılı alanının sınır ötesine yönelik ticaret işlemleri olduğu, buna karşın inşaat izinleri konusunda son derece başarısız bir görünüm sergilediği anlaşılmaktadır. Arnavutluk'un iş yapma kolaylığı açısından ülke sıralamasının iyileşmesi ve yabancı sermayeli yatırımcıların ülkeye olan ilgisinin artması için yapılan reform ve düzenlemelere ilaveten şirket kuruluş prosedürleri daha da basitleştirilmeli ve hızlandırılmalı, işe alım ve işçi çıkarma prosedürleri daha esnek hale getirilmeli, ticari uyuşmazlıkların çözümü için daha hızlı ve etkili bir yargı sistemi oluşturulmalı ve hem ticaret hem de vergi politikaları daha açık ve öngörülebilir hale getirilmelidir. Ayrıca işletmelerin finansmana erişimi kolaylaştırılmalı ve kredi süreçleri daha hızlı hale getirilmeli, işletmelerin kayıt dışı ekonomiden uzaklaşmaları için teşvik edici politikalar geliştirilmeli, işletmelerin ihtiyaç duyulan yetenekli işgücüne kolaylıkla ulaşabilmeleri için mesleki eğitim programları teşvik edilmelidir.

3.12. Bosna – Hersek

Bosna-Hersek, 2020 yılı iş yapma kolaylığı endeksinde Balkan ülkeleri ve Türkiye'nin içerisinde bulunduğu ülke grubu içerisinde 12. sırada, Dünya genel sıralamasında ise 82. sırada bulunan bir balkan ülkesidir (The World Bank, 2020a). Bosna Hersek, Avrupa pazarlarına yakınlığı ve enerjiye ilişkin göz önüne alındığında, enerji sektöründe gelişim olasılığı ve yatırım fırsatları sunmaktadır (T.C. Ticaret Bakanlığı, 2022c: 5). Bosna Hersek, 2021 yılında 9 milyar dolarlık toplam yabancı sermaye stoku ile dünyada 123. sırada yer almaktadır. Ülkeye yapılan yatırımların çoğunluğu Avrupa ülkelerinden gelmektedir ve sektörel olarak üretim ve bankacılık gibi alanlar öne çıkmış durumdadır. Bosna Hersek'te dört adet serbest bölge bulunmaktadır (T.C. Ticaret Bakanlığı, 2022c: 10). Serbest bölgelerde her türlü endüstriyel ve ticari faaliyetin yanı sıra finansal, bankacılık ve sigorta hizmetleri de sunulmaktadır. Serbest bölge kullanıcıları KDV ve diğer katkı payları ile gümrük vergilerinden muaftır (T.C. Ticaret Bakanlığı, 2022c: 12). Bosna Hersek, 1998 yılında yürürlüğe giren dış ticaret politikası kanunu ile birçok Avrupa ülkesi için yatırım yapmak amacıyla rekabet edilen bir pazar konumuna gelmiştir. Ülkede doğrudan yabancı sermaye yatırımları, kamu iktisadi teşekküllerin yabancı yatırımcılara satılmak suretiyle özelleştirildiği dönemde en yüksek seviyeye ulaşmıştır. En fazla yatırım yapılan sektörler üretim ve bankacılık sektörleri olup ülkeye en fazla yatırım yapan ülkeler Avusturya, Sırbistan, Hırvatistan ve Rusya'dır. Bosna Hersek'de, çok taraflı serbest ticaret anlaşmaları imzalanarak yerli ve yabancı sermayeli yatırımcılar için uygun bir iş ortamı oluşturulmaya çalışılmaktadır (T.C. Ticaret Bakanlığı, 2022b: 3). Son yıllarda ülkeye yönelik olarak 300-350 milyon € civarında yatırım yapılmıştır (Kocatürk, 2022: 47). Bosna Hersek, yabancı sermayeli şirketlerin sadece silah ve savunma sanayi gibi kamu güvenliğini ilgilendiren sektörlerde sınırlamalarla karşı karşıya olduğu bir ülkedir. Bu sektörlerde faaliyet göstermek isteyen yabancı sermayeli şirketlerin yabancı sermaye miktarı %49 ile sınırlandırılmıştır (T.C. Ticaret Bakanlığı, 2022b: 21). Bu sektör dışındaki diğer tüm sektörlerde yabancı yatırımcıların ülkede yatırım yapılması önünde herhangi bir engel bulunmamaktadır. Bosna Hersek, iş yapma kolaylığı endeksine göre Balkan ülkeleri arasında en kötü performansla sahip ülke konumundadır. Ülke 2006 yılında iş yapma kolaylığı endeksinde 91. sırada iken ülkede yapılan çok saydaki

reformlara rağmen 2020 yılına sadece 1 basamak yükselerek 90. sırada yer almıştır (The World Bank, 2006, 2020a). Bosna Hersek'in ekonomisi ağırlıklı olarak geleneksel bir yapıya sahip olduğu için yapılan reformların, yatırımcılar tarafından doğru bir şekilde anlaşılamamış olabilme ve yapılan reformların ihtiyaca yönelmekten ziyade siyasi birtakım kararlar neticesinde alınmış olabilme ihtimali oldukça yüksektir.

Bosna Hersek'te iş kurmayı kolaylaştırmak amacıyla elektriğin daha hızlı bir şekilde dağıtılmasını sağlamak için gerekli tedbirlerin alınmış, mülk kaydının kolaylaştırılması için arazi idare sisteminin şeffaflığı artırılmış, limited şirketler için ödenmiş asgari sermaye gereksinimini azaltılmış ve noterlik sisteminin etkinliği artırılmış, yapılan çeşitli yasal düzenlemelerle vergi ödemek, şirketler için daha kolay ve daha az maliyetli hale getirilmiş, ticaret siciline ilişkin kayıtlar bilgisayar ortamında yapılmaya başlanmış, inşaat izinlerinin alınmasını kolaylaştırmak için tapu ve kadastro hizmetleri tamamen dijitalleştirilmiş, iflas sürecini iyileştirmek için birtakım düzenlemeler yapılmış ve sınır ötesi ticareti kolaylaştırmak için yeni bir gümrük kanunu çıkarılmıştır (The Word Bank, 2020; The World Bank, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2016a, 2016b, 2018, 2019, 2020a). Tablo 2 incelendiğinde, ülkede alınan bu tedbir ve reformlar sayesinde iş yapma kolaylığı açısından en çok gelişimin sağlandığı alanın sınır ötesi ticari faaliyetler olduğu, buna karşın Bosna-Hersek'te iş kurma alanında önemli sorunlar bulunduğu ve ülkenin bu alanda en geri ülkelerden biri olduğu anlaşılmaktadır. Bosna-Hersek'in iş yapma kolaylığı açısından daha üst sıralara çıkması için alınabilecek tedbirlerden bazılarını, yabancı yatırımcıların ülkeye gelmesini teşvik edecek ve yatırımların artmasına yardımcı olacak nitelikte reformlar yapmak, yatırımcıların Bosna-Hersek'te iş yaparken karşılaştığı bürokratik engelleri azaltmak ve yine yabancı yatırımcıların ülkeye gelmesini kolaylaştırmak için yatırımcılara vergi avantajları, düşük maliyetli işgücü ve hızlı işlem süreleri gibi çeşitli avantajlar sağlayan serbest bölge sayısını artırmak şeklinde sıralamak mümkündür.

4. SONUÇ

Ülkelerin ekonomik açıdan gelişim göstermesi için reel yatırımlar son derece önemlidir. Reel yatırımlar sayesinde üretim hacminde ve gayri safi milli hasılda artışlar gerçekleşebilecek ve ülkede yaşayan bireylerin refah düzeyi yükselebilecektir. Ülkelerin ekonomik gelişimi açısından son derece önemli olan reel yatırımların artırılması için de finansal kaynaklara ve çok miktarda sermayeye ihtiyaç duyulmaktadır. Reel yatırımların artırılması için gerekli olan bu sermaye ise her zaman ülkelerin kendi öz kaynakları ile karşılanamamakta, mutlak surette yabancı yatırımcılara ihtiyaç duyulmaktadır. Yabancı yatırımcıların ilgisini çekmek için de ülkede iş yapma kolaylığının bulunması son derece önemlidir. Ayrıca sadece yabancı yatırımcılar için değil, aynı zaman yerli yatırımcıların da yatırıma yönelmesi için uygun bir iş ortamının varlığına ihtiyaç vardır. Gerek yerli gerekse de yabancı yatırımcılar, yapacakları yatırım sürecinde ve özellikle kuruluş aşamasında yasal engellerle, alt yapı sorunlarıyla ya da sermayeye ulaşma gibi sorunlarla uğraşmak istemez ve yatırım açısından kendilerine bu alanlarda kolaylıklar sağlayan ülkelere yönelirler. Bu bağlamda yatırımcılara, yatırım aşamasında ve üretim sürecinde sağlanacak kolaylıklar ülkedeki yatırım hacminin artış göstermesi açısından son derece önemlidir. İş yapma kolaylığı ile özellikle yatırım ve kurulum aşamasında yatırımcılara sağlanan kolaylıklar ifade edilmektedir. İş yapma kolaylığı kapsamında yatırımcılara sağlanacak olan destekler ve alınacak önlemler ülkelerin ekonomik gelişimine önemli katkılar sağlamaktadır ve bu destekler özellikle az gelişmiş ve gelişmekte olan ülkeler için büyük bir önem arz etmektedir. Bu çalışmada, Türkiye ve Balkan ülkelerinin iş yapma kolaylığı açısından karşılaştırılması amaçlanmıştır. Bir ülkenin iş yapma kolaylığına sahip olup olmadığı tespit edilirken bir takım kriterden yararlanılmaktadır. Bu kriterleri, iş kurma kolaylığı, inşaat izinleri alma sürecinde sağlanan kolaylıklar, firmaların elektrik elde ederken karşılaştıkları sorunların çözümüne yönelik kolaylıklar, tapulaştırma sürecinde karşılaşılan sorunların çözümüne yönelik kolaylıklar, kredi alımı sürecinde sağlanan kolaylıklar, azınlık yatırımcılarına sağlanan korumalar, vergilere ilişkin sağlanan kolaylıklar, sınır ötesi ticarette sağlanan kolaylıklar, sözleşmelerin uygulanmasına yönelik kolaylıklar ve iflasın çözülmesi sürecinde sağlanan destekler şeklinde sıralamak mümkündür. Bu kriterler kapsamında yapılan değerlendirmelerde Türkiye ve Balkan ülkeleri, iş yapma kolaylığı açısından kapsamlı bir değerlendirmeye tabi tutulmuştur ve Dünya Bankası tarafından her yıl düzenli olarak yayımlanan iş yapma kolaylığı endeksindeki sıralama dahilinde açıklamalarda bulunulmuştur. Yapılan incelemeler neticesinde Balkan ülkeleri ve Türkiye'nin bulunduğu toplam 12 ülke içerisinde Türkiye'nin çeşitli kriterlere göre yapılmış sıralamada iş yapma kolaylığı açısından Kuzey Makedonya'dan sonra ikinci sırada yer aldığı görülmektedir. Türkiye'nin iş yapma kolaylığı sağlamak amacıyla 2006-2020 döneminde yaptığı reformları, ödenmiş sermaye gerekliliklerinin ortadan kaldırılarak işletme kurmanın kolaylaştırılması ve noter tasdik ücretlerini kaldırarak iş kurmanın daha az maliyetli hale getirilmesi, inşaat ruhsatlarıyla ilgili işlemlerin kolaylaştırılması, mülk kaydının daha ucuz hale getirilmesi ve bu kaydın hızlandırılması, vergi ödemenin kolaylaştırılması, ihracat ve ithalat için harcanan zamanın ve maliyetin azaltılması, çıkarılan yeni bir ticaret yasası ile yatırımcı korumalarının güçlendirilmesi, performans ölçüm raporları yayınlamak suretiyle

sözleşmelerin uygulanmasının kolaylaştırılması, iflas çözümünün kolaylaştırılması, elektrik temininin kolaylaştırılması ve özel bir kredi bürosu kurularak kredi bilgilerine erişimin iyileştirilmesi şeklinde sıralamak mümkündür. Türkiye, yapılmış olan bu düzenleme ve reformlar sayesinde iş yapma kolaylığı açısından önemli ilerlemeler kaydetmiştir. Ayrıca 2020 yılı itibarıyla iş yapma kolaylığı açısından Türkiye'nin azınlıktaki yatırımcıları koruma noktasında son derece başarılı olduğu, buna karşın iflasın çözülmesi konularında çok fazla ilerleme kaydedemeyerek başarısız olduğu anlaşılmaktadır. Genel olarak Balkan ülkelerinde iş yapma kolaylığına ilişkin olarak yatırımcıların karşılaştığı sorunların başında ise yerli veya yabancı yatırımcıların ilgili ülkede iş kurabilmeleri için uymak zorunda oldukları çeşitli prosedürlerin çokluğu, bir inşaata başlama ve tamamlama sürecindeki prosedürlerin çokluğu ve maliyetlerin yüksekliği, yine firmaların elektrik bağlantısı elde edebilmeleri için uyması gereken prosedürlerin çokluğu ve elektriğin firmaya maliyetinin yüksekliği, firmaların finansmana erişimin noktasında karşılaştıkları sorunlar ve gerek vergi oranlarının yüksekliği gerekse vergi ödenmesine ilişkin sorunların varlığı şeklinde sıralamak mümkündür.

Gerek Türkiye'de gerekse de Balkan ülkelerinde iş yapma kolaylığının geliştirilmesi amacıyla vergi sistemi düzenlenmeli, kuruluş prosedürleri basitleştirilmeli ve yapısal reformlar hayata geçirilmelidir. Ayrıca bu ülkelerde bir takım yapısal reformların yapılmasına ihtiyaç duyulmaktadır. Bununla birlikte Türkiye ve Balkan ülkelerinde iş yapma kolaylığı açısından son yıllarda önemli bir gelişmeler kaydedilmiş ve iş yapma kolaylığı endeksinde yükseliş yaşanmıştır. Bu trendin devam etmesi için daha fazla reforma ihtiyaç vardır ve bu ülkelerin ekonomik yapılarının güçlendirilmesi gerekmektedir. Bu bağlamda öncelikle, Türkiye ve Balkan ülkelerinde girişimciler için vergi oranları düşürmelidir. Vergi oranlarının yüksekliği, işletme maliyetlerinin artmasına neden olmakta ve işletmelerin büyümesini engellemektedir. Bu nedenle, vergi oranlarının düşürülmesi, iş yapma kolaylığı açısından son derece önemlidir. Buna ilaveten Türkiye ve Balkan ülkelerinde iş yapma süreçleri (prosedürleri) basitleştirmelidir. İş kurmak için gereken izinlerin alınması ve işlemlerin tamamlanması uzun ve yorucu bir süreç olabilmektedir. Bu nedenle, iş yapma süreçlerinin basitleştirilmesi, iş kurmak isteyen girişimcilerin cesaretinin artmasında etkili olabilir. Ayrıca Türkiye ve Balkan ülkeleri işletme kurallarını ve düzenlemelerini daha net hale getirmelidir. İşletme düzenlemeleri karmaşık olduğunda, girişimcilerin işletme kurma sürecinde karşılaştığı sorunlar da artmaktadır. Bu nedenle, işletme kurallarının ve düzenlemelerinin net hale getirilmesi, iş yapma kolaylığı açısından önem arz etmektedir. Son olarak, Türkiye ve Balkan ülkelerinde işletmelerin dijitalleşmesi teşvik edilmelidir. Dijitalleşme, iş yapma süreçlerinin hızlanmasına katkıda bulunmak suretiyle işletmelerin verimliliğini artırabilir. Bu nedenle, işletmelerin dijitalleşmesinin teşvik edilmesi, iş yapma kolaylığı açısından son derece önemlidir.

Özet: Günümüzde dış ticaret faaliyetleri, ülke ekonomileri açısından son derece önemli konuma gelmiş durumdadır. Buna ilaveten dış ticaret verileri, ülke ekonomilerinin en önemli makroekonomik değişkenlerinden biridir ve aynı zamanda ekonomik gelişmişliğinin anlaşılması açısından son önemli göstergelerden birini teşkil etmektedir. Bu kapsam dahilinde Türkiye, sınır komşusu ülkeler ile önemli büyüklüklere ulaşan ticari faaliyetlerde bulunmaktadır. Bu ülkelerden biri de Bulgaristan'dır. Türkiye ile Bulgaristan arasındaki ticari faaliyetler, hem coğrafi yakınlık açısından sağladığı avantajlar hem de Bulgaristan'ın AB üyeliği nedeniyle Türkiye'nin AB pazarına açılması açısından son derece önemlidir. Bu bağlamda Türkiye ile Bulgaristan arasındaki dış ticarete ön plana çıkan sektörlerin tespit edilmesi hem yapılacak yatırımların yönlendirilmesi hem de iki ülke arasındaki ticarete ülkelerin sahip olduğu avantaj ve dezavantajlarını ortaya konulması açısından son derece önemlidir. Çalışmada TÜİK, World Trade Organization(WTO) ve Trade Map'den elde edilen 2003-2021 dönemine ait sektörel bazda yıllık veriler kullanılarak Türkiye ve Bulgaristan arasındaki rekabet gücü, seçilmiş sektörler (tarım ürünleri, imalat, tekstil, gıda, demir çelik, kimyasallar) bazında karşılaştırılmalı ihracat performansı CEP (Comparative Export Performance) indeksi ile analiz edilmiştir. Yapılan analiz neticesinde, analize dahil edilen 6 sektörden imalat, tekstil ve demir çelik sektöründe Türkiye'nin Bulgaristan'a karşı karşılaştırılmalı üstünlüğü sahip olduğu, tarım ürünleri, gıda ve kimyasallar sektöründe ise Bulgaristan'ın Türkiye'ye karşı karşılaştırılmalı üstün olduğu tespit edilmiştir.

Anahtar Kelimeler: Türkiye, Bulgaristan, Karşılaştırılmalı İhracat Performansı.

Comparative Export Performance Index and Analysis of Competitiveness between Turkey and Bulgaria on the Basis of Selected Sectors

Abstract: Nowadays, foreign trade activities have become extremely important for the economies of countries. Moreover, foreign trade data is one of the most important macroeconomic variables of the economies of countries and at the same time it is one of the last important indicators in terms of understanding their economic development. In this context, Turkey has significant trade activities with its neighbouring countries. One of these countries is Bulgaria. The trade activities between Turkey and Bulgaria are extremely important, both in terms of the advantages it offers in terms of geographical proximity and in terms of Turkey's opening to the EU market through Bulgaria's EU membership. In this context, it is necessary to identify the sectors that come to the fore in the foreign trade between Turkey and Bulgaria, to direct the investments to be made and to reveal the advantages and disadvantages of the countries in the trade between the two countries. In this context, it is necessary to identify the sectors that come to the fore in the foreign trade between Turkey and Bulgaria, to direct the investments to be made and to reveal the advantages and disadvantages of the countries in the trade between the two countries. In the study, the competitiveness between Turkey and Bulgaria, selected sectors (agricultural products, manufacturing, textile, food, iron and steel, chemicals) was analysed using annual data on sectoral basis for the period 2003-2021 obtained from TUIK, World Trade Organisation (WTO) and Trade Map. The comparative export performance was analysed using the CEP (Comparative Export Performance) index. As a result of the analysis, it was found that Turkey has a comparative advantage over Bulgaria in the manufacturing, textile and iron and steel sectors, among the 6 sectors included in the analysis, and Bulgaria has a comparative advantage over Turkey in the agricultural products, food and chemicals sectors.

Keywords: Turkey, Bulgaria, Comparative Export Performance

1. GİRİŞ

Türkiye ve Bulgaristan arasında yapılan ticarete ön planda olan sektörlerle ilişkin durum tespiti yapmak, iki ülke arasındaki ticarete üstün olan sektörleri tespit etmek ve buna bağlı olarak yapılan mevcut ticareti daha da artırmak için politikalar geliştirmek ve geliştirilen politikalara ilişkin öneri ve tavsiyelerde bulunmak amacıyla hazırlanmış olan çalışmada, TÜİK (Türkiye İstatistik Kurumu), TRADEMAP (Trade statistics for international business development) ve WTO (World Trade Organization)'den elde edilen 2003-2021 dönemine ilişkin verilerden yararlanılarak karşılaştırmalı analiz yapılmıştır. Bu analiz kapsamında, dünyadaki yeni ekonomik düzenin önemli getirilerinden olan serbest dış ticaretin, ülkelerin refah düzeylerini artıracak anlayışına bağlı

olarak Türkiye'nin Bulgaristan karşısında elde ettiği rekabet gücü, Karşılaştırmalı İhracat Performansı açısından ölçülmektedir. Bununla birlikte Wziatek-Kubiak (2003), ülkelerin uluslararası rekabet gücünü ölçmek için literatürde net bir yöntem bulunmadığını ifade etmektedir.

Karşılaştırmalı üstünlük teorisi, endüstriyel ürün gruplarında değişim göstermekle beraber, ülkelerin rekabet gücünün test edilmesi açısından oldukça önemli bir kavramdır. Uluslararası ticarete karşılaştırmalı üstünlük kavramından sıklıkla bahsedilmektedir. Bu kavramı ölçmek ve ampirik bulgulara dönüştürmek açısından birtakım eksiklikler bulunmaktadır. Bu eksiklikleri gidermek adına, karşılaştırmalı üstünlükler ve rekabet gücünün ölçülmesinde açıklanmış karşılaştırmalı üstünlük (AKÜ) katsayıları kullanılmaktadır (Sanidas and Shin, 2010: 8).

Çalışmada Balassa (1965) tarafından ortaya konulan Açıklanmış Karşılaştırmalı Üstünlükler (AKÜ) indeksinin Donges et al. (1982) tarafından geliştirilmiş versiyonu olan Karşılaştırmalı İhracat Performansı İndeksi (CEP) kullanılmıştır. Bu indeks ülkelerin, rakipleri karşısındaki rekabet gücünü ölçmek için kullanılmaktadır. AKÜ ile sadece bir ülkenin ihracat yaptığı mal ve mal grupları açısından rekabet gücünü ölçmek mümkün olmaktadır (Gacener Atış , 2014). CEP indeksiyle ise rakip ülkelerin rekabet güçleri karşılaştırmalı olarak hesaplanabilmekte ve buna bağlı olarak da ihraç edilen mal ve mal gruplarında ihracat performansları karşılaştırmalı olarak ortaya konulabilmektedir.

2. LİTERATÜR TARAMASI

Literatürde Karşılaştırmalı İhracat Performansı İndeksi (CEP) indeksi ile yapılan çalışmalara az sayıda rastlanmaktadır ve bu çalışmalar Tablo 1'de yer almaktadır.

Tablo 1: CEP İndeksine İlişkin Literatür Taraması

Yazarlar	Ülkeler ve Yıllar	Yöntem ve Sektör	Sonuç
Saraçoğlu ve Köse (2000)	İtalya, Fransa, Belçika, ABD, Tayland, Almanya, İspanya, Kanada, Hollanda, Belçika, Lüksemburg, İngiltere, Danimarka, Çin ve Japonya (1992-1997)	Karşılaştırmalı İhracat Performansı İndeksi (CEP) (Makarna, bisküvi ve buğday unu)	Türkiye makarna ürününde tüm dönem boyunca İtalya'ya karşı dezavantaja sahipken diğer ülkeler karşısında avantaja sahiptir. Bisküvi için Türkiye 1992'de Belçika Lüksemburg, 1992,1993,1994 yıllarında Danimarka karşısında dezavantaja sahiptir. Diğer yıllarda Türkiye avantajlı durumdadır. Bisküvi sanayinde Türkiye; Belçika, Lüksemburg ve Danimarka hariç tüm ülkeler karşısında tüm dönem boyunca üstünlüğe sahiptir. Buğday ununda ise tamamında Türkiye avantajlı durumdadır.
Akgüngör, Barbaros ve Kumral (2002)	Türkiye, Yunanistan, Portekiz, İspanya (1994-1997)	Karşılaştırmalı İhracat Performansı İndeksi (CEP) (Domates, Üzüm ve Narenciye İşleme)	Türkiye'nin domates ve mamulleri grubunda hiçbir üstünlüğe sahip olmadığı, üzümde, Yunanistan dışında; turuncgillerde ise İspanya dışındaki rakip ülkeler karşısında rekabet gücünün yüksek olduğu tespit edilmiştir.
Kösekahyaoğlu ve Özdamar (2005)	Türkiye, Çek, Macaristan, Polonya, Estonya (1990-2003)	Karşılaştırmalı İhracat Performansı İndeksi (CEP) (Tüm mal grupları)	Türkiye ile Çek Cumhuriyeti karşılaştırıldığında, Türkiye'nin hammadde ve işgücü yoğun mallar grubunda avantaja sahip olduğu, sermaye yoğun mal grubunda ise dezavantaja sahip olduğu, ancak 2004 yılında avantajlı durumda olduğu tespit edilmiştir. Türkiye, Macaristan karşısında, genel olarak mal gruplarında üstünlüğe sahipken kolayca ve zor taklit edilen mal gruplarında inişli çıkışlı bir trend göstermiştir. Türkiye Polonya karşısında işgücü yoğun mallar hariç diğer tüm mal gruplarında dezavantaja sahiptir. Estonya ile kıyaslandığında ise Türkiye'nin sadece

					ışgücü ve sermaye yoğun mal gruplarında üstün olduğu sonucuna ulaşılmıştır.
Turkecul, Günden, Abay, ve Miran (2010)	Türkiye, İspanya, Yunanistan, Suriye (1990-2006)	Tunus, (1990-2006)	Karşılaştırmalı Performansı (CEP) (Zeytinyağı)	İhracat İndeksi	İncelenen dönemin tamamında zeytin yağı konusunda rekabet üstünlüğü açısından Tunus, İspanya ve Yunanistan'ın Türkiye'ye karşı avantajlı, Türkiye'nin ise AB ülkelerine karşı dezavantajlı durumda olduğu, Yunanistan ve Suriye ile de aynı seviyede bulunduğu tespit edilmiştir.
Gacener (2014)	Türkiye, ABD, Orta Kuzey Afrika (1995-2012)	AB-27, Doğu-Afrika	Karşılaştırmalı Performansı (CEP) (Tekstil Konfeksiyon)	İhracat İndeksi ve	Türkiye, AB pazarında; neredeyse tüm ürün gruplarında avantaja sahipken, Çin, Hindistan, Pakistan, Bangladeş ve İsviçre (tekstil ürünleri ve hammadde) ile karşılaştırıldığında nispeten düşük; buna karşın Endonezya, ABD, Güney Kore ve Japonya'ya karşı yüksek bir rekabet gücüne sahiptir. Türkiye konfeksiyon ürünlerinde ABD pazarında Japonya'ya karşı üstün, ancak ODKA pazarında Japonya, İsviçre, ABD ve AB-27'ye karşı tekstil ve konfeksiyon ürünlerinde; Güney Kore, Endonezya, Hindistan ve Pakistan'a karşı tekstil ürünlerinde; Bangladeş'e karşı tekstil ve konfeksiyon ürünlerinde ve Çin'e karşı da kısmen hammadde ve tekstil ürünlerinde avantaja sahiptir.
Şahin (2016)	Türkiye ve ülkeleri (1995-2012)	BRIC (1995-2012)	Açıklanmış Üstünlük (AKÜ) Karşılaştırmalı Performansı (CEP) (İmalat)	İhracat İndeksi	Türkiye'nin, Rusya'ya karşı SITC 8 endüstri grubunda daha yüksek bir ihracat performansına sahip olduğu görülmektedir. Ayrıca SITC 5, SITC 6 ve SITC 7 endüstri gruplarında da Türkiye'nin Rusya'ya göre rekabet üstünlüğü olduğu görülmektedir. Türkiye, Hindistan'a karşı da SITC 6, SITC 7 ve SITC 8 endüstri grubunda avantajlı durumdadır. Türkiye'nin Çin'e karşı SITC 6 grubunda üstünlüğe sahip olduğu ve SITC 5 grubunda artış trendi sağladığı, SITC 7 ve SITC 8 grubunda ise dezavantajlı durumda olduğu tespit edilmiştir.
Alidou, Ceylan ve Ilbasım (2017)	Benin, Burkina Faso (1994-2014)	Nijerya, Faso	Karşılaştırmalı Performansı (CEP) (Tarım)	İhracat İndeksi	Analiz sonuçlarına göre, Burkina Faso'nun Benin'e karşı avantajlı durumda olduğu ve Benin ise Nijerya'ya karşı avantajlı durumda olduğu sonucuna varılmıştır.
Kuşat (2019)	Türkiye, Sırbistan, Karadağ, Arnavutluk, Makedonya, Bosna Hersek (2006-2016)	ve	Karşılaştırmalı Performansı (CEP) (İmalat, tarım, gıda, tekstil, demir çelik ve kimyasallar)	İhracat İndeksi	Türkiye'nin rakip ülkeler karşısında tekstil sektöründe avantajlı olduğu ancak tekstil sektöründe elde edilen bu avantajın incelenen yıllar içinde azaldığı tespit edilmiştir. Türk gıda sektöründe ise tüm beklentilerin boşa çıktığı ve bu sektörde Türkiye'nin rakipleri karşısında rekabet gücü açısından dezavantajlı durumda olduğu sonucuna ulaşılmıştır. Türkiye tarım sektöründe ise Arnavutluk, Makedonya ve Bosna Hersek karşısında kısmi oranda bir avantaja sahip olmasına karşın; Sırbistan ve

			Karadağ karşısında dezavantajlı durumdadır. Rekabet gücü en düşük ülke Bosna-Hersek'tir. Ayrıca Türkiye'nin imalat sektöründe Makedonya, tarım ve gıda sektörlerinde Karadağ ve Sırbistan, demir çelik sektöründe Makedonya ve Arnavutluk, kimyasallar sektöründe ise Makedonya ve Sırbistan karşısında dezavantajlı olduğu tespit edilmiştir.
Kılıçaslan (2021)	Türkiye ve Çin, Hindistan, Japonya, Rusya (2010-2019)	Açıklanmış Karşılaştırmalı Üstünlük (AKÜ) indeksi, Açıklanmış Simetrik Karşılaştırmalı Üstünlükler (ASKÜ) indeksi, Ticaret Dengesi İndeksi (TDI) ve Karşılaştırmalı İhracat Performansı İndeksi (CEP) (Çelik)	Türkiye'nin çelik sektöründe Çin, Hindistan, Japonya, Rusya karşısında avantajlı durumda olduğu tespit edilmiştir.

3. VERİ SETİ

Ülkelerin ekonomik gelişmişliğinin bir göstergesi olan rekabet gücünün ölçülmesi son derece önemlidir. Çalışmada Türkiye ile Bulgaristan arasındaki dış ticarete ön plana çıkan sektörlerin tespit edilmesi, yapılacak yatırımların planlanması ve ülkelerin sahip olduğu avantajlar ile dezavantajlarını ortaya konulması amaçlanmıştır. Çalışmada TÜİK (Türkiye İstatistik Kurumu), TRADEMAP (Trade statistics for international business development) ve WTO (World Trade Organization)'dan elde edilen 2003-2021 dönemine ait sektörel bazda yıllık veriler kullanılarak iki ülke arasında yapılan ticarete ön plana çıkan sektörlerle ilişkin durum tespiti yapılmış, Bulgaristan'ın Türkiye'ye ve Türkiye'nin de Bulgaristan'a karşılaştırmalı olarak üstün olduğu sektörler tespit edilmiş, bu bağlamda mevcut ticareti daha da artırmak için ne gibi politikaların uygulanması gerektiğine ilişkin öneri ve tavsiyelerde bulunulmuştur.

4. YÖNTEM

Literatürde ülkeler arasındaki karşılaştırmalı üstünlükleri tespit etmek amacıyla kullanılan birkaç yöntem kullanılmaktadır. Bu yöntemlerden en çok kullanılanı "Açıklanmış Karşılaştırmalı Üstünlükler (AKÜ)" yöntemidir. Liesner (1958), Açıklanmış Karşılaştırmalı Üstünlükler (AKÜ) indeksini kullanmak ve geliştirmek suretiyle ihracat verilerinden yararlanarak bir ülkenin rekabet gücünü ölçmeye yönelik ilk çalışmayı gerçekleştirmiştir (Miteva-Kacarski, 2018:62). Rekabet gücünü ölçmek için kullanılan bu indekste, bir ülkenin bir ürüne ait toplam ihracatı, diğer bir ülkenin aynı ürüne ait toplam ihracatına oranlanmaktadır (Utkulu ve Seymen , 2004: 7-8).

Liesner tarafından yapılan çalışmaların ardından Balassa (1965), Açıklanmış Karşılaştırmalı Üstünlükler indeksini geliştirmiştir. Bu nedenle de bahsi geçen indeks Balassa indeksi olarak bilinmektedir. Daha sonra da Açıklanmış Karşılaştırmalı Üstünlükler İndeksi, Donges vd. (1982) tarafından uyarlanarak Karşılaştırmalı İhracat Performansı İndeksi (Comparative Export Performance–CEP)'ne dönüştürülmüştür. Karşılaştırmalı İhracat Performansı İndeksi, bir ülkenin rakip ülkeler karşısında sektörel bazda rekabet gücünü ölçmek için kullanılan bir indekstir. Donges vd. (1982)'ne göre ithalatın da dahil edilmesiyle ölçülebilen Açıklanmış Karşılaştırmalı Üstünlükler (AKÜ) indeksleri, ithalat yapılırken uygulanan tarife ve kotalara yönelik olarak alınan politik kararların etkisi nedeniyle yanlış hesaplamalara yol açabilmektedir. Bu nedenle de rekabeti ölçmek için ihracat verilerinin kullanılması daha doğru sonuçlar vermektedir.

Donges vd. (1982) tarafından geliştirilen Karşılaştırmalı İhracat Performansı indeksi (CEP)'ne ilişkin formül aşağıdaki şekildedir.

$$CEP_{krj} = (X_{kj}/X_{rj}) / (X_{kt}/X_{rt}) \quad (1)$$

Formülde:

CEP_{kj} : k ülkesinin rakip ülke karşısındaki j mal grubundaki ihracat uzmanlık indeks katsayısı

X_{kj} : k ülkesinin j mal grubundaki ihracatı

X_{kt} : k ülkesinin toplam ihracatı

X_{rj} : rakip ülkenin j mal grubundaki ihracatı

X_{rt} : rakip ülkenin toplam ihracatını göstermektedir.

Bir ülkeye ait farklı mal gruplarının ele alınmasıyla hesaplanan bu yöntemle göre CEP indeks değerinin 1'den büyük olması durumunda söz konusu ülkenin analiz edilen mal grubunda avantajlı, 1'den küçük olması ise aynı ülkenin dezavantajlı durumda olduğunu göstermektedir (Kösekahyaoglu, 2012). CEP indeks değerinin 0 ile 1 arasında olması karşılaştırmalı üstünlüğün bulunmadığı, 1 ile 2 arasında olması zayıf karşılaştırmalı üstünlüğün bulunduğu, 3 ile 4 arasında olması orta düzeyde karşılaştırmalı üstünlüğün bulunduğu ve 4'ün üzerinde olması da güçlü bir karşılaştırmalı üstünlüğün bulunduğunu ifade etmektedir (Hinloopen ve Marrewijk, 2001).

5. TÜRKİYE VE BULGARİSTAN'IN KARŞILIKLI TİCARETİN GELİŞİMİ

Türkiye, sınır komşu ülkeler ile önemli ölçüde ticari faaliyetlerde bulunmaktadır. Türkiye'nin önemli sınır komşularından biri olan Bulgaristan hem coğrafi yakınlık açısından hem de Türkiye'nin AB pazarına açılması açısından büyük bir önem teşkil etmektedir.

Tablo 2: Türkiye'nin Bulgaristan'a Yönelik Dış Ticaretin Gelişimi (2003-2021) (Milyon dolar)

Yıllar	Türkiye'nin Bulgaristan'a İhracatı	Türkiye'nin Bulgaristan'dan İthalatı
2003	621.7	689.5
2004	894.3	959.5
2005	1.179.3	1.190.1
2006	1.568.0	1.663.4
2007	2.060.2	1.951.6
2008	2.151.5	1.840.0
2009	1.385.5	1.116.9
2010	1.497.4	1.702.5
2011	1.622.8	2.474.6
2012	1.685.0	2.753.6
2013	1.971.2	2.760.3
2014	2.040.2	2.846.2
2015	1.675.9	2.254.8
2016	2.383.5	2.142.5
2017	2.803.9	2.773.1
2018	2.670.0	2.501.4
2019	2.541.3	2.337.8
2020	2.476.0	2.066.2
2021	3.667.0	2.505.6
2022	4.443.1	2.698.2

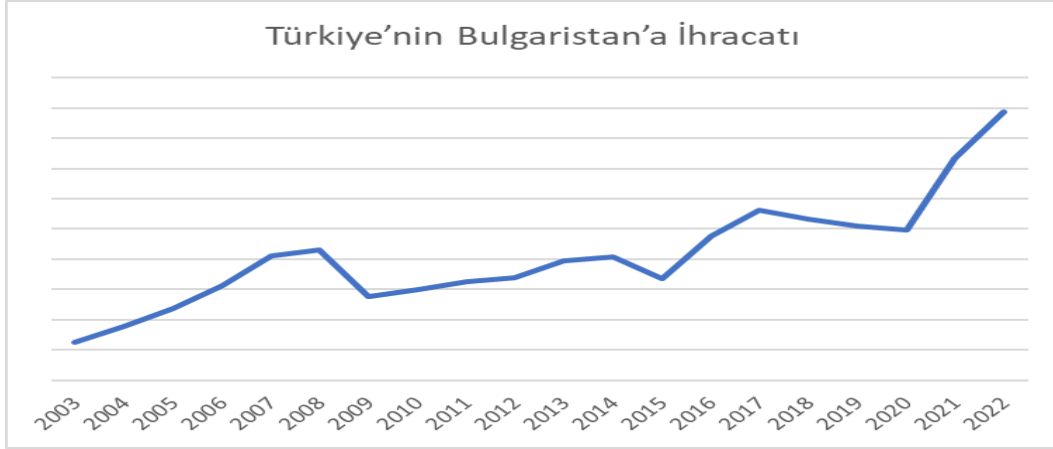

Kaynak: www.tuik.gov.tr, (10.03.2023)

Tablo 2'de Türkiye'nin Bulgaristan'a yaptığı ihracat, aynı zamanda Bulgaristan'ın Türkiye'den yaptığı ithalatı ifade ederken, Bulgaristan'ın Türkiye'ye yaptığı ihracat da Türkiye'nin Bulgaristan'dan yaptığı ithalatı ifade etmektedir.

Tablo 2'de Türkiye'nin Bulgaristan'a yaptığı ihracat 2003 yılında 621.7 milyon dolar iken izleyen yıllarda artış meydana geldiği gözlemlenmektedir. Yıllar itibarıyla artış eğilimi göstermeye devam eden ihracat rakamları 2008 yılında tüm dünyayı etkisi altına alan küresel ekonomik kriz nedeniyle azalma eğilimi göstermektedir. 2008 yılında 2.1 milyar dolar olan Türkiye'nin Bulgaristan'a yönelik olarak ihracatında elde ettiği gelirlerin, krizin etkisiyle 2009 yılında yaklaşık 800 milyon dolar azalarak 1.4 milyar dolara gerilediği görülmektedir. 2009 yılı itibarıyla Türkiye'nin Bulgaristan'a yönelik ihracatında meydana gelen artışlar, 2015 yılına kadar devam etmiştir. Ancak 2015 yılında 365 milyon dolar civarında gerileyen ihracat gelirleri, yaklaşık 1.7 milyar dolar olarak

gerçekleşmiştir. Sonraki yıllarda ise Türkiye'nin Bulgaristan'a ihracatı dalgalı bir seyir izlemiş ve 2022 yılında yaklaşık 4.4 milyar dolar olarak gerçekleşmiştir.

Şekil 1: 2003-2022 Yılları Arasında Türkiye'nin Bulgaristan'a Yaptığı İhracat

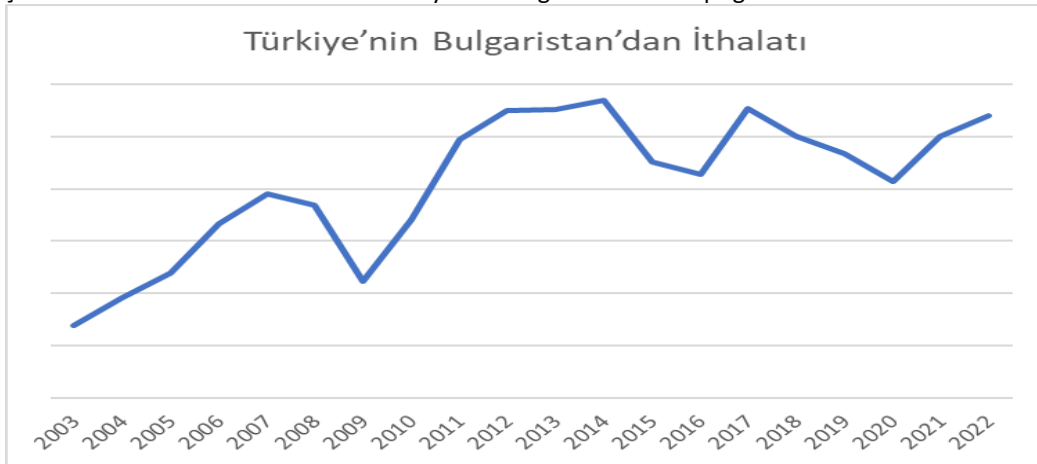

Kaynak: TÜİK, www.tuik.gov.tr, (10.03.2023)

Şekil 1'de, 2003-2022 dönemine ilişkin Türkiye'nin Bulgaristan'a yaptığı ihracattan elde ettiği gelir yıllar itibariyle bir grafik yardımıyla gösterilmektedir. Grafikte, Türkiye'nin Bulgaristan'a yaptığı ihracattan elde ettiği gelirin yıllar itibariyle artış eğilimi gösterdiği, 2008 yılında yaşanan küresel kriz nedeniyle keskin bir azalış gösteren Türkiye'nin Bulgaristan'dan elde ettiği ihracat gelirlerinin önemli bir gerileme gösterdiği, ancak 2009 yılından itibaren 2014 yılına kadar sürekli bir artış eğiliminde olduğu görülmektedir. 2014 yılına kadar devam eden ihracat gelirlerindeki artışlar, 2015 yılında bir miktar gerilemiş olsa da 2017 yılına kadar artış eğiliminin devam ettiği görülmektedir. Ancak 2017 yılından sonraki dönemde yaşanan gelişmeler ve özellikle 2019 yılında yaşanan pandemi nedeniyle azalış gösteren ihracat gelirlerinin son yıllarda yeniden ve yüksek oranda arttığı görülmektedir.

Türkiye'nin Bulgaristan'dan yaptığı ithalat rakamları değerlendirildiği zaman ise ihracat rakamlarında olduğu gibi yıllar itibariyle artış meydana geldiği gözlemlenmektedir. Türkiye'nin Bulgaristan'dan ithalatı 2003 yılında 689 milyon dolar iken 2008 yılına kadar sürekli olarak artış göstermiş ve 2007 yılında yaklaşık 2 milyar dolar olarak gerçekleşmiştir. 2008 yılında ise meydana gelen küresel ekonomik krizin etkisiyle Türkiye'nin Bulgaristan'dan yaptığı ithalat bir miktar gerilemiş, asıl gerileme ise 2009 yılında meydana gelmiş ve Türkiye'nin Bulgaristan'dan ithalatı yaklaşık 1.1 milyar dolar olarak gerçekleşmiştir. Krizden sonra ekonomik açıdan toparlanma sürecine girilmiş olmasına rağmen Türkiye'nin Bulgaristan'dan ithalatı önemli oranda artış ve azalışlar şeklinde olmak üzere dalgalı bir eğilim sergilemiştir. 2020 yılında tüm dünyayı etkisi altına alan Covid-19 salgını Türkiye'nin Bulgaristan'dan yaptığı ithalatı da önemli oranda olumsuz yönde etkilemiş ve 2017 yılında 2.7 milyar dolar olan ithalat harcamaları, 2020 yılında yaklaşık 2 milyar dolar seviyesine kadar gerilemiştir. 2022 yılında ise Türkiye'nin Bulgaristan'a yönelik ithalat harcamaları yaklaşık 2,7 milyar dolar olarak gerçekleşmiştir.

Şekil 2: 2003-2021 Yılları Arasında Türkiye'nin Bulgaristan'dan Yaptığı İthalat

Kaynak: TÜİK, www.tuik.gov.tr, (10.03.2023)

Şekil 2’de, 2003-2022 dönemine ilişkin Türkiye’nin Bulgaristan’dan yaptığı ithalat harcamalarının seyri bir grafik yardımıyla açıklanmıştır. Türkiye’nin Bulgaristan’dan gerçekleştirdiği ithalat için yaptığı harcamalarda yıllar itibariyle artış ve azalışların gerçekleştiği, 2003 yılından 2007 yılına kadar olan dönemde Bulgaristan’dan yapılan ithalatın artış gösterdiği, 2007-2009 döneminde ise Bulgaristan’a yönelik ithalat harcamalarının keskin bir şekilde gerilediği görülmektedir. 2009 yılından 2014 yılına kadar geçen süreçte ise Bulgaristan’dan yapılan ithalat hızlı bir şekilde artış göstermiştir. 2014-2016 döneminde yeniden azalış eğilimine giren ithalat harcamalarının 2017 yılında yeniden yükseldiği ancak sonraki yıllarda pandeminin de etkisiyle hızlı bir şekilde azaldığı görülmektedir. Tüm dünyayı etkisi altına alan Covid-19 salgını nedeniyle 2020 yılı önceki yıllarla karşılaştırıldığında 2009 yılından sonra ithalat harcamalarında en fazla azalışın yaşandığı yıldır.

Tablo 3: Türkiye ve Bulgaristan’ın Toplam İhracat Rakamları (2003-2021) (Milyon Dolar)

Yıllar	Türkiye'nin Toplam İhracatı	Bulgaristan'ın Toplam İhracatı
2003	47.252.564	7.540.176
2004	63.167.153	9.931.087
2005	73.476.408	11.739.329
2006	85.534.462	15.101.457
2007	107.271.750	18.575.129
2008	132.027.196	22.485.509
2009	102.142.613	16.502.520
2010	113.883.219	20.608.005
2011	134.906.869	28.165.220
2012	152.461.737	26.698.780
2013	161.480.915	29.510.574
2014	166.504.862	29.386.540
2015	143.844.066	25.778.746
2016	142.606.247	26.688.183
2017	156.992.940	31.588.418
2018	167.923.862	33.787.144
2019	180.870.841	33.454.448
2020	169.657.940	31.914.704
2021	225.264.314	41.370.857

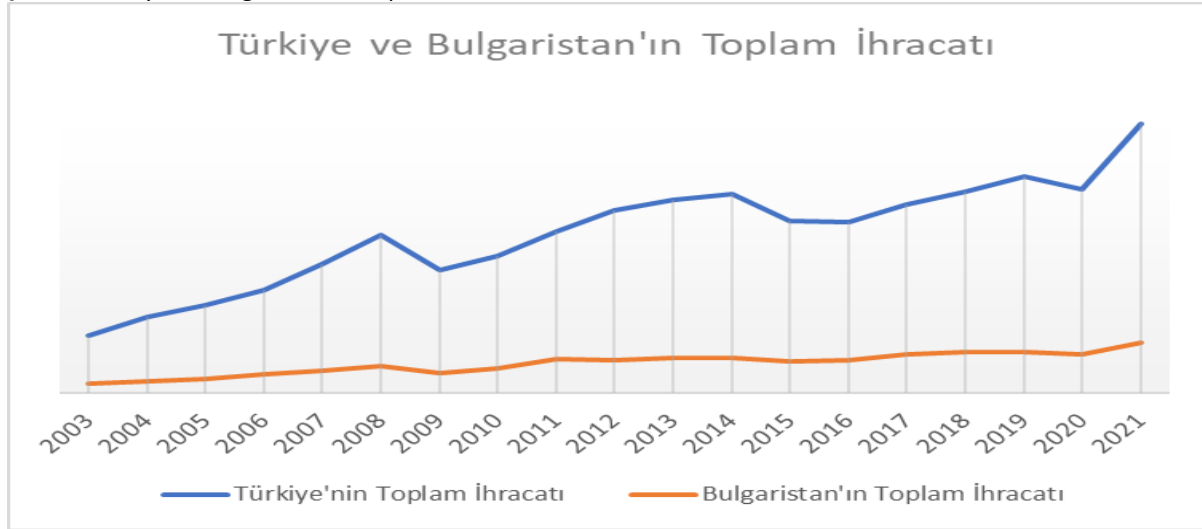

Kaynak: Trade Map, www.trademap.org (10.03.2023)

Tablo 3’de Türkiye ve Bulgaristan’ın tüm dünya’ya gerçekleştirdikleri ihracat rakamları yer almaktadır. Bulgaristan’a ait toplam ihracat verileri 2021 yılına kadar bulunduğu için 2003-2021 dönemine ait veriler kullanılmıştır. Tablo 3 incelendiğinde 2003-2008 döneminde artış gösteren Türkiye’nin toplam ihracatının, 2008 yılında meydana gelen küresel ölçekli ekonomik kriz nedeniyle 2009 yılında azaldığı görülmektedir. Türkiye’nin toplam ihracatı 2008 yılındaki yaklaşık 132 milyar dolar seviyesinden 2009 yılında yaklaşık 102 milyar dolar seviyesine kadar gerilemiştir. 2010-2014 döneminde ise Türkiye’nin toplam ihracatı düzenli olarak artış göstermiştir. Ancak 2015 yılında, ihracat gelirlerinin önemli miktarda azaldığı ve 2014 yılındaki yaklaşık 166.5 milyar dolar seviyesinden 2015 yılında yaklaşık 144 milyar dolar seviyesine, 2016 yılında da yaklaşık 143 milyar dolar seviyesine kadar gerilediği görülmektedir. Özellikle 2016 yılının ihracat gelirlerindeki bu azalışlarda darbe girişimi nedeniyle üretim hacmindeki azalışların etkisinin bulunduğu söylemek mümkündür. 2017 yılından 2020 yılına kadar geçen süreçte ise Türkiye’nin ihracat hacminin yıllar itibariyle düzenli bir şekilde artış gösterdiği ve 2019 yılında 181 milyar dolara kadar yükseldiği görülmektedir. Ancak 2019 yılında ortaya çıkan ve 2020 yılında ülkemizde görülen Corona Virüs pandemisi nedeniyle küresel ölçekteki tüketim harcamalarının azalmasına bağlı olarak Türkiye’nin ihracat harcamaları yaklaşık 11 milyar dolar gerileyerek yaklaşık 170 milyar dolar seviyesinde gerçekleşmiştir. 2021 yılında ise Türkiye’nin ihracat gelirleri yaklaşık 55 milyar dolarlık bir artışla 225 milyar dolar seviyesine kadar yükselmiştir. İhracat gelirlerindeki bu yükselişte pandemi döneminde küresel çapta ertelenen tüketim harcamalarının gerçekleştirilmesinin etkili olduğunu söylemek mümkündür.

Tablo 3’te Türkiye’nin toplam ihracat rakamlarının yanı sıra Bulgaristan’ın tüm dünya’ya gerçekleştirdiği ihracat rakamları da yer almaktadır. Tablo 3’te görüldüğü üzere Bulgaristan’ın 2003 yılında 7.5 milyar dolar olan ihracat gelirlerinin 2009 yılına kadar geçen dönemde yıllar itibariyle arttığı ve 2008 yılı itibariyle yaklaşık 22 milyar dolar seviyesine kadar yükseldiği görülmektedir. Ancak 2008 yılında tüm dünyayı etkisi altına alan küresel ekonomik kriz nedeniyle Bulgaristan’ın ihracat gelirleri 2009 yılında azalmış ve yaklaşık 16,5 milyar dolar olarak gerçekleşmiştir. Bulgaristan’ın ihracat gelirlerinin sonraki yıllarda ise inişli çıkışlı bir gelişim göstermekle birlikte

artış eğiliminin geçerli olduğu ve 2020 yılında yaklaşık 32 milyar dolar ve 2021 yılında da yaklaşık 41 milyar dolar seviyesine kadar yükeldiği görülmektedir.

Şekil 3: Türkiye ve Bulgaristan'ın Toplam İhracat rakamları

Kaynak: Trade Map, www.trademap.org (10.03.2023)

Şekil 3'de ise Türkiye ve Bulgaristanın yıllar itibariyle toplam ihracatında meydana gelen gelişmeler karşılaştırmalı olarak gösterilmektedir. Şekil 3 incelendiğinde yıllar itibariyle Türkiye'nin toplam ihracat gelirlerinin inişli çıkışlı bir seyir izlemiş olmakla birlikte artış eğiliminde olduğu, buna karşın Bulgaristanın toplam ihracat gelirlerinin yıllar itibariyle stabil bir yapıya sahip olduğu ve çok fazla artış göstermediği görülmektedir.

6. BULGULAR VE DEĞERLENDİRMELER

Donges vd. (1982) tarafından geliştirilen Karşılaştırmalı İhracat Performansı (CEP) indeksine göre Türkiye'nin rakip ülke olan Bulgaristan karşısındaki, Bulgaristan'ın rakip ülke olan Türkiye karşısındaki ihracat performansı tarım ürünleri, gıda, imalat, tekstil, demir çelik ve kimyasallar sektörleri için ayrı ayrı hesaplanarak değerlendirilmiştir.

6.1. Rekabet Gücünün Belirlenmesinde CEP İndeks Değerlerinin Hesaplanması

Çalışmada Türkiye ile Bulgaristan arasındaki ticarete ön plana çıkan sektörlerle yönelik olarak analiz gerçekleştirilmiştir. Bu sektörler sırasıyla tarım ürünleri, imalat, tekstil, gıda, demir çelik ve kimya sektörleridir. Sektörel bazda rekabet gücünü ölçmek adına (1) no'lu eşitlik kullanılarak CEP indeks değerleri hesaplanmıştır. Hesaplanan CEP indeks değerleri aşağıdaki tabloda verilmiştir.

Tablo 4: Türkiye ve Bulgaristan'ın Seçilmiş Sektörler Bazındaki CEP İndeks Değerleri (2003-2021)

Yıllar	Tarım Ürünleri		Gıda		İmalat		Tekstil		Demir Çelik		Kimyasallar	
	Türkiye	Bulgaristan	Türkiye	Bulgaristan	Türkiye	Bulgaristan	Türkiye	Bulgaristan	Türkiye	Bulgaristan	Türkiye	Bulgaristan
2003	0,87	1,15	0,99	1,01	1,27	0,79	3,44	0,29	0,96	1,04	0,49	2,05
2004	0,80	1,25	0,90	1,12	1,35	0,74	3,26	0,31	1,06	0,94	0,57	1,76
2005	0,89	1,12	1,00	1,00	1,37	0,73	3,56	0,28	1,10	0,91	0,50	1,99
2006	0,95	1,05	1,08	0,92	1,52	0,66	3,73	0,27	1,26	0,79	0,66	1,51
2007	0,85	1,17	0,97	1,03	1,44	0,69	3,42	0,29	1,32	0,76	0,54	1,85
2008	0,62	1,61	0,65	1,54	1,53	0,66	3,36	0,30	2,33	0,43	0,54	1,84
2009	0,61	1,64	0,62	1,60	1,45	0,69	3,42	0,29	2,56	0,39	0,63	1,59
2010	0,61	1,64	0,64	1,57	1,55	0,65	4,36	0,23	2,94	0,34	0,68	1,48
2011	0,64	1,56	0,66	1,51	1,57	0,64	4,78	0,21	2,66	0,38	0,66	1,51
2012	0,61	1,65	0,63	1,58	1,47	0,68	4,74	0,21	3,07	0,33	0,63	1,58

2013	0,56	1,79	0,58	1,73	1,46	0,68	4,71	0,21	2,91	0,34	0,65	1,54
2014	0,62	1,62	0,65	1,53	1,37	0,73	4,40	0,23	2,63	0,38	0,60	1,66
2015	0,77	1,31	0,81	1,24	1,43	0,70	4,33	0,23	2,66	0,38	0,65	1,53
2016	0,72	1,39	0,74	1,34	1,36	0,73	4,10	0,24	2,36	0,42	0,60	1,67
2017	0,77	1,31	0,80	1,24	1,45	0,69	4,43	0,23	1,77	0,57	0,60	1,67
2018	0,74	1,36	0,77	1,30	1,44	0,69	4,36	0,23	2,11	0,47	0,64	1,56
2019	0,66	1,51	0,69	1,46	1,34	0,75	4,14	0,24	2,63	0,38	0,59	1,69
2020	0,71	1,41	0,72	1,38	1,29	0,77	3,74	0,27	2,55	0,39	0,64	1,56
2021	0,65	1,54	0,65	1,54	1,32	0,76	3,93	0,25	2,64	0,38	0,63	1,60

(10.03.2023)sitelerinden elde edilen verilerden yararlanılarak tarafımızca hesaplanmıştır.

Tablo 4’te, Türkiye ve Bulgaristan’ın seçilmiş sektörler bazında ölçülen CEP indeks değerleri yer almaktadır. İlk olarak tarım ürünleri sektöründeki rekabet gücü değerlendirildiği zaman 2003-2021 yılları arasında Bulgaristan’ın Türkiye’den üstün olduğu görülmektedir. Yani Türkiye’nin CEP indeks değerlerinin 0 ile 1 arasında olması nedeniyle tarım ürünleri sektöründe Türkiye’nin Bulgaristan’a karşı üstünlüğünün bulunmadığı anlaşılmaktadır. Buna karşın Bulgaristan tarım ürünlerinde Türkiye’ye karşı, karşılaştırmalı olarak üstün konumdadır.

Gıda sektöründe ise Bulgaristanın genel olarak üstünlüğünü koruduğu, ancak 2005 yılında her iki ülkenin de birbirine karşı üstünlük sağlayamadığı, 2006 yılında ise Türkiye’nin gıda sektöründe Bulgaristan’a karşında karşılaştırmalı üstünlük elde ettiği görülmektedir. CEP indeks değerlerinin 2005-2006 yıllarında 1 ile 2 arasında olması nedeniyle karşılaştırmalı üstünlük açısından Türkiye’nin Bulgaristan’a karşı zayıf üstünlüğe sahip olduğu anlaşılmaktadır.

İmalat sektöründe ise incelenen dönemin tamamında Türkiye’nin Bulgaristan karşısında karşılaştırmalı olarak üstünlük elde ettiği görülmektedir. İmalat sektöründe Türkiye’nin CEP indeks değerleri 1 ile 2 arasında yer almaktadır. Bu nedenle de Türkiye’nin imalat sanayi sektöründe Bulgaristan’a karşı zayıf üstünlüğe sahip olduğunu söylemek mümkündür.

Tablo 4’te yer alan CEP indeks değerlerine bakıldığı zaman Türkiye’nin Bulgaristan karşısında en fazla üstünlük elde ettiği sektörün tekstil sektörü olduğu anlaşılmaktadır. Türkiye’nin tekstil sektörü, CEP indeks değerlerine göre 2003-2009 yılları arasında Bulgaristan’a karşı orta düzeyde üstünlüğe sahip iken 2009-2019 yılları arasında güçlü bir üstünlüğe sahip olduğu ancak 2020-2021 yıllarında Türkiye’nin Bulgaristan’a karşı yine orta düzeyde üstün gerilediği gözlemlenmektedir.

İki ülke, demir çelik sektöründeki üstünlük açısından değerlendirildiği zaman da yine Türkiye’nin 2003 yılı hariç dönemin tamamında Bulgaristan karşısında üstünlük elde ettiği anlaşılmaktadır. CEP indeks değerlerinin verdiği bilgiler doğrultusunda Türkiye’nin Demir Çelik sektöründe 2003 yılında Bulgaristan’a karşı üstünlük elde edemediği ancak sonraki yıllarda genel olarak zayıf ve orta üstünlüğe sahip olduğu görülmektedir.

Kimya sektöründe ise iki ülke arasındaki CEP indeks değerlerine bakıldığında incelenen dönemin tamamında Bulgaristan’ın Türkiye’ye karşı zayıf üstünlüğe sahip olduğu anlaşılmaktadır.

SONUÇ

Ülkeler açısından iç ve dış piyasalardaki rekabet gücünün iyileştirilmesi ve bu amaç doğrultusunda ticaret politikalarının uygulanması, bu ülkelerin şimdi veya gelecek dönemde hem ekonomik ve hem de politik açıdan küresel ölçekte söz sahibi olabilmelerine önemli katkılarda bulunacaktır. Çalışmada Türkiye ve Bulgaristan arasındaki rekabet gücü, seçilmiş sektörler (tarım ürünleri, imalat, tekstil, gıda, demir çelik, kimyasallar)’de karşılaştırılmalı ihracat performansı CEP (Comparative Export Performance) indeksi ile analiz edilmiştir. Yapılan bu analiz sayesinde, 2003-2021 döneminde Türkiye ile Bulgaristan arasındaki dış ticarete konu olan önemli sektörler tespit edilmiş ve bu iki ülkenin sektörel bazda birbirine karşı karşılaştırmalı üstünlükleri ortaya konulmuştur. Yapılan analiz neticesinde, CEP indeks değerlerine göre tarım ürünleri sektöründe Bulgaristan’ın Türkiye karşısında üstünlük elde ettiği, elde edilen CEP indeks değerlerinin 0 ile 1 arasında olması nedeniyle de söz konusu üstünlüğün zayıf bir üstünlük olduğu tespit edilmiştir. Gıda sektörüne ait CEP indeks değerlerine göre, yine Bulgaristan Türkiye’ye karşı 2005-2006 yılları hariç genel bir üstünlük elde etmiştir. Elde edilen CEP

indeks değerlerine göre söz konusu üstünlüğün zayıf nitelikte bir üstünlüğü olduğu anlaşılmaktadır. İmalat sektörüne ait CEP indeks değerleri incelendiğinde ise Türkiye'nin Bulgaristan karşısında avantajlı bir durumda olduğu ve söz konusu üstünlüğün zayıf nitelikte bir üstünlük olduğu görülmektedir. Yapılan analizlerden elde edilen sonuçlar bize Türkiye'nin Bulgaristan'a göre en fazla avantaja sahip olduğu sektörün tekstil sektörü olduğunu göstermektedir. Tekstil sektörüne ilişkin CEP indeks değerlerine bakıldığında elde edilen indeks değerleri, Türkiye'nin Bulgaristan'a karşı tekstil sektöründe bazı yıllarda orta derece üstünlüğe bazı yıllarda da güçlü üstünlüğe sahip olduğunu sonucunu ortaya koymaktadır. CEP indeks değerlerine göre demir çelik sektöründe de yine Türkiye, 2003 yılı hariç diğer yıllarda Bulgaristan karşısında üstünlük elde etmiş durumdadır. Son olarak kimya sektöründe ise CEP indeks değerlerine göre Bulgaristan'ın Türkiye'ye karşı dönemin genelinde zayıf karşılaştırmalı üstünlüğe sahip olduğu görülmektedir. Çalışmada elde edilen bulgulara ilişkin olarak genel bir değerlendirme yapıldığında Karşılaştırmalı İhracat Performansı indeksi (CEP) sonuçlarına göre analiz edilen 6 sektörden imalat, tekstil ve demir çelik sektöründe Türkiye'nin Bulgaristan'a karşı avantajlı konumda olduğu, tarım ürünleri, gıda ve kimyasallar sektöründe ise Bulgaristan'ın Türkiye karşısında karşılaştırmalı üstünlük elde ederek avantajlı konumda bulunduğu sonucuna ulaşılmıştır. Bölgesinde pek çok açıdan lider konumda bulunan Türkiye'nin başta Bulgaristan olmak üzere sınır komşuları ile yapacağı ticari faaliyetleri geliştirmesi, bu gelişim sürecinde karşılaştırmalı olarak üstün konumda bulunmadığı sektörlerle yönelik yatırımlarını artırması ve bu yönde politikaları benimseyerek uygulamaya koyması Türkiye'nin dış ticaret hacmini ve dolayısıyla da dış ticaret gelirlerini artırması açısından büyük bir önem arz etmektedir.

Özet: Toplumsal cinsiyet, kadınlara ve erkeklere toplumsal olarak yüklenen rolleri, sorumlulukları ve beklentileri içeren bir kavramdır. Ancak, zamanla bunlar toplum içinde eşitsizliğe ve ayrımcılığa yol açabilmektedir. Toplumun her kesiminde cinsiyet ayrımcılığı bulunmakta iken araştırmanın konusu iş yaşamında da cinsiyet ayrımcılığı söz konusudur. Özellikle kadınlara biçilen toplumsal cinsiyet rolleri, onların rekabetçi işgücü piyasasında erkek çalışanlarla eşit fırsatlara sahip olmaları konusunda daha fazla çaba göstermelerini gerektirmektedir. Zira kadının işgücü piyasasında yer almak istemesi toplum tarafından kadına konulmuş olan sınırların dışına çıkması anlamına gelmektedir. Bu yaklaşım sonucunda kadınlar ayrımcılık içeren uygulamalarla karşı karşıya kalmak zorunda bırakılmıştır. Doğal olarak cinsiyet ayrımcılığı pek çok alanda kişinin varlık gösterememesine, eşit fırsatlara sahip olamamasına, eşit koşullarda hayatını idame ettirememesine yol açmakta ve sosyal davranışlarını şekillendirmektedir. Örgütlerde yaşanan cinsiyete yönelik ayrımcılık algısı da, örgüt açısından bazı olumsuz sonuçlara neden olmaktadır

Bu çalışmada, cinsiyete yönelik ayrımcılık algısının işten ayrılma niyeti, norm dışı iş yeri davranışı ve iş tatmini üzerindeki etkisi incelenmiştir. Çalışma kapsamında Kocaeli Sanayi Odası'na kayıtlı firmalarda çalışan, basit örnekleme yöntemi ile seçilen 360 beyaz yakalı çalışana ulaşılmış ve anket formunu doldurmaları talep edilmiştir. Özensiz ve eksik doldurulan formlar çıkarılmış ve değerlendirmeye 327 adet anket kalmıştır. Çalışmada veriler, Cinsiyete Yönelik Ayrımcılık Algısı, İşten Ayrılma Niyeti, İş Tatmini ve Norm Dışı Davranış ölçeği kullanılarak toplanmıştır. Her bir ölçeğin faktör yapısını görebilmek için açıklayıcı faktör analizi uygulanmıştır. Hipotezleri test etmek için ise regresyon analizi kullanılmıştır. Elde edilen sonuçlara göre cinsiyete yönelik ayrımcılık algısının işten ayrılma niyeti ve norm dışı davranışlar sergileme üzerinde pozitif ve cinsiyete yönelik ayrımcılık algısının iş tatmini üzerinde negatif etkisinin olduğu görülmektedir.

Anahtar Kelimeler: Cinsiyete yönelik ayrımcılık, işten ayrılma niyeti, iş tatmini, norm dışı davranışlar

1. GİRİŞ

Toplumun belirlediği sınırlar ve kadınların istihdamı arasındaki ilişki, toplumsal cinsiyet kavramıyla ifade edilmektedir. Toplumsal cinsiyet; kişiye toplum tarafından yüklenen cinsiyetine özgü roller, anlamlar, özellikler, davranış kalıpları bütünüdür. Kadın ve erkekler için belirlenen tüm bu rollerin, özelliklerin, davranış kalıplarının toplumsal ve sosyal yaşamlarında sergilenmesi beklenmektedir. Kadınlardan ve erkeklerden beklenen roller, kısaca toplumsal cinsiyet kaynaklı davranış kalıpları kişilerin sonradan kazandığı davranış kalıplarıdır. Kişinin kültürüne, ailesine bağlı olarak farklı özellikleri kapsamaktadır (Türkoğlu vd., 2022: 1104). Diğer bir ifade ile toplumsal cinsiyet, kadın ve erkeğin toplumsal rol ve sorumluluklarının biyolojik farklılıklarından kaynaklanmadığını, bunu sosyalleşme süreci içinde kültürel olarak öğrendiklerini ve toplum tarafından onlara atfedildiklerini anlatmaktadır (Yıldız, 2017: 122). Ancak, zamanla bunlar toplum içinde eşitsizliğe ve ayrımcılığa yol açabilmektedir. Toplumun her kesiminde cinsiyet ayrımcılığı bulunmakta iken iş yaşamında da özellikle kadınlara yönelik cinsiyet ayrımcılığı söz konusudur.

Sanayi devrimiyle birlikte çalışma yaşamında kadınlar ücretli çalışan olarak yer edinmeye başlamıştır. Ancak kadınların erkek egemen bir çalışma yaşamına dahil olmaları beraberinde bazı zorlukları da getirmektedir. İş yaşamında da kişilerden toplumun kadına ve erkeğe yüklediği toplumsal cinsiyet rollerine uygun davranışlar sergilemeleri beklenmektedir. Bu durum cinsiyete yönelik ayrımcılığa neden olmaktadır. Özellikle, kadının ev işleri, annelik gibi ailevi sorumlulukları sebebi ile işlerle yeterince ilgilenemeyeceği ya da kadınların evlenene kadar çalışabileceği gibi düşünceler kadınlara yönelik işe girişte ayrımcılık yapılmasının temelini oluşturmaktadır. Bunun yanında, gerçekleştirilen iş aynı bile olsa erkek ve kadına farklı ücret ödenmesi, üst yönetim kademelerine terfi ettirilmeme vb. gibi uygulamalar cinsiyete yönelik ayrımcılığa neden olmaktadır (Alparslan vd., 2015).

Cinsiyet ayrımcılığına maruz kalmak, çalışanlarda çeşitli olumsuz tutum ve davranışlarla sonuçlanmıştır. Bunlardan bir tanesi işten ayrılma niyetidir. Çalışanlar, cinsiyetleri nedeniyle birtakım engellerle karşılaştıklarında mevcut işlerinden ayrılma ve yeni bir iş arama eğilime girmektedir. Algılanan cinsiyet ayrımcılığı ile işten ayrılma niyeti arasındaki pozitif ilişki, özellikle kadın çalışanların adaletsiz ve erkek egemen

bir iş ortamında kendilerini kısıtlanmış hissetmelerini, mevcut işlerinden ayrılma ve alternatif iş imkanlarını araştırma eğiliminde olduklarını göstermektedir (Shaffer vd., 2000; Foley vd., 2005; Foley vd., 2006; Qu vd., 2020).

Örgütlerde her anlamda kayıplara neden olan ve örgütsel yaşamın kalitesini etkileyen kavramlardan biri norm dışı işyeri davranışlardır. Çalışanların örgüt kurallarını bozarak, örgütün veya üyelerinin iyi durumlarını tehdit eden davranışlar olarak tanımlanan norm dışı iş yeri davranışları örgütlerin varlığına da zarar vermektedir. Çalışanlar örgüt içerisinde cinsiyet ayrımcılığına maruz kaldıklarını anladıkları anda örgütlerine karşı olumsuz duygular gelişebilecek ve cinsiyetleri nedeniyle engellendiklerini düşündükleri ölçüde, tepki olarak norm dışı davranışlar gösterebileceklerdir (Anwar, 2011; Kim vd., 2015; Golparvar vd., 2015).

Belirli bir cinsiyet grubuna mensup çalışanlar, başka bir cinsiyet grubuna kıyasla, işe alınma, maaş artışı, terfi olanakları gibi istihdam faaliyetlerinden, karar verme sürecinden veya işyerindeki diğer faaliyetlerden sınırlandıklarında veya dışlandıklarında ve kariyer gelişimleri engellendiğinde genellikle cinsiyet ayrımcılığını algılamaktadırlar (Qu vd., 2020: 3). Cinsiyete yönelik ayrımcılık yapıldığı düşüncesine sahip bir kişi de beklentilerinin karşılanmadığını düşünmekte ve işine, yöneticisine ve iş ortamına yönelik olumsuz tutum sergileyebilmekte bu tutumlardan bir tanesi de iş tatmininde azalmadır. (Ensher vd., 2001; Cihannar, vd., 2011; Imam vd.; 2013; Insarauto, vd., (2022)

Teorik temeller ve literatüre bakarak aşağıdaki hipotezler geliştirilmiştir. Yukarıda belirtilen teorik ve kavramsal temeller ışığında, bu çalışmada cinsiyete yönelik ayrımcılığın işten ayrılma niyeti, norm dışı işyeri davranışı ve iş tatmini üzerindeki etkisi incelenmektedir. Bu anlamda Kocaeli Sanayi Odası'na kayıtlı firmalarda çalışan beyaz yakalı personele anket metodu uygulanarak bir saha çalışması gerçekleştirilmiştir. Çalışmada ilerleyen bölümlerde kuramsal çerçeveden bahsedilmekte ve araştırmanın hipotezleri sunulmaktadır. Devamında araştırmanın yöntemi açıklanmakta, veriler analiz edilmekte, araştırmanın bulguları ortaya konulmaktadır. Sonuç kısmında ise araştırma sonuçları ve sınırlılıkları üzerine tartışılmakta ve gelecekteki araştırmalara yönelik öneriler sunulmaktadır.

2. CİNSİYETE YÖNELİK AYRIMCILIK

Ayrımcılık; pek çok alanda karşılaşılan bir kavramdır. Kelime anlamı bir toplulukta ırk, cinsiyet, toplumsal konum ya da din sebebiyle bir gruba farklı davranma olgusu ya da devletin ya da toplumun bazı fertlerinin, diğerlerine sağlanan bazı hak ve ayrıcalıklardan mahrum edilmesidir (Ataöv 1996:1). Diğer bir ifade ile ayrımcılık, bireylere yalnızca belli bir grubun üyesi olmaları nedeniyle eşit ve adil olmayan davranışlar sergilenmesi olarak ifade edilmektedir (Çolak ve Altan, 2003: 203). Ayrımcılık konularının en başında ise tüm toplumlarda yaşanan cinsiyete yönelik ayrımcılık gelmektedir. Cinsiyete yönelik ayrımcılık, genel anlamda bireylere cinsiyetlerinden dolayı toplumda adaletsiz bir şekilde davranılmasıdır (Demirbilek, 2007: 14). Cinsiyete yönelik ayrımcılığı; sosyal, kültürel, ekonomik, politik hak ve hürriyetlerin tanınmasının ve bunlardan faydalanılmasının önüne geçen, cinsiyete bağlı olarak yapılan ayırım, mahrumiyet ve kısıtlama olarak tanımlamak mümkündür (Tuskan, 2007: 561). Kişiler, diğer kişileri kadın ve erkek olarak gruplandırdıktan sonra bu gruplara çeşitli kalıp yargılar geliştirmekte, bu gruplara ait olması beklenen özellikleri belirlemektedir. Bu özellikler çoğunlukla biyolojik nedenlere bağlanmaktadır. Cinsiyete yönelik ayrımcılık kavramı, cinsiyetlerin birbirinden farklı ayırt edici özelliklerinin, söz konusu cinsiyete özgü sözde sınırlar içinde kalması gerektiği düşüncesine dayanmaktadır (Yalçın, 2008: 10).

Cinsiyete yönelik ayrımcılığın en çok yaşandığı ve en önemli alanlardan biri de iş yaşamıdır. Toplumun kadınlara yüklediği en önemli rol eş ve anne olmaktır. Kariyerinde ilerlemek isteyen çalışan kadınlar, erkek meslektaşlarına oranla daha fazla güç sarf etmek ve iş yerindeki çalışmasının yanı sıra aile içi görevlerine de devam etmek durumunda kalmaktadır. Toplumsal değerlerin etkisi ile kadınlara ve erkeklere atfedilen buna benzer rollerden dolayı çalışma hayatında bazı meslekler kadınlara, bazı meslekler de erkeklere uygun olarak görülmektedir. Dolayısıyla cinsiyete yönelik ayrımcılık; işe alım, ücretlendirme ve kariyer gelişimi gibi konularda yoğun olarak yaşanmaktadır (Göçmener, 2008, 13-14). Cinsiyete yönelik ayrımcılık, örgütlerde çalışanlara sahip olduğu yetkinliklerinden ve iş performansından çok cinsiyetine göre davranılmasından dolayı önemli bir sorun haline gelmektedir. Kişiye işinde gösterdiği performans sebebi ile değil, kendisine atfedilen rolden ve cinsiyetinden dolayı ayrımcılık yapılmaktadır (Onay, 2009: 1102). Diğer bir ifade ile iş yerlerinde biyolojik cinsiyetler baz alınarak, haklı ve geçerli bir neden olmaksızın eşit işlem ve politika uygulanmamasına yola açan durumlardır (Onaran Yüksel, 1999: 28).

Cinsiyete yönelik ayrımcılıkla ilgili literatür incelendiğinde daha çok kadınlara yönelik gözlemlenen ayrımcılıktan bahsedilmektedir (Yalçın, 2008; Demir, 2011; Bebekoğlu ve Wasti, 2002; İleri, 2016; Demirbilek, 2007). Örgütlerde cinsiyete yönelik ayrımcılığın; kadınların dışlanması, örgütsel güç, tatmin düzeyi ve gelirin erkekler arasında paylaştırılması bununla birlikte fırsatların, kaynakların, ödüllerin erkekler arasında dağıtılması şeklinde yaşandığı görülmektedir (Kasımoğlu ve Halıcı, 2000: 374). Bununla birlikte, kadınların terfi olanakları kısıtlanmakta, erkeklere göre daha kötü şartlarda çalıştırılmakta, örgüt hiyerarşisi içinde karar alma ve idari pozisyonlarda ikincil planda konumlandırılmaktadırlar (Özçatal, 2009: 57). Kadınların iş yaşamında en çok karşılaştıkları eşitsizlik konuları ise işe alım, eğitim, görevde yükselme, ücret ve sosyal haklardan yararlanma olarak sıralanabilir (Kocacık ve Gökkaya, 2005: 206; Parlaktuna, 2010: 1217).

3. CİNSİYETE YÖNELİK AYRIMCILIK VE İŞTEN AYRILMA NİYETİ

Cinsiyete yönelik ayrımcılığının hem çalışan hem de örgüt için önemli olumsuz sonuçları bulunmaktadır (Qu vd., 2020). İşten ayrılma niyeti bu sonuçlardan biridir. İşten ayrılma niyeti, örgütten ayrılmaya yönelik bilinçli ve kasıtlı bir isteklilik olarak tanımlanmaktadır (Tett ve Meyer, 1993: 262). Diğer bir ifade ile işten ayrılma niyeti çalışanın iş koşullarından tatmin olmama halinde sergilenen yıkıcı, aktif ve olumsuz bir eylemdir. (Rusbult vd, 1988: 602). Vanderberg ve Nelson (1999: 1315) tarafından ise çalışanların, yakın bir gelecekte örgütten kalıcı olarak ayrılacağı yönünde kendi tahmin ettiği bir olasılık olarak tanımlanmıştır. Tanımlardan yola çıkarak işten ayrılma niyeti, çalışanların beklentilerinin karşılanmaması durumunda ortaya çıkan iş ilişkisini bitirme yönünde geliştirdiği düşünceler olarak ifade edilmektedir.

Yapılan araştırmalar, cinsiyete yönelik ayrımcılığının, çalışanların işten ayrılma niyetini olumsuz etkilediğini göstermiştir (Foley vd., 2005; Foley vd., 2006; Qu vd., 2020; Shaffer vd., 2000). Kadın çalışanlar, cinsiyetleri nedeniyle birtakım engellerle karşılaştıklarında mevcut işlerinden ayrılma ve yeni bir iş arama eğilime girmektedir. Algılanan cinsiyet ayrımcılığı ile işten ayrılma niyeti arasındaki pozitif ilişki, kadın çalışanların adaletsiz ve erkek egemen bir iş ortamında kendilerini kısıtlanmış hissettiklerinde mevcut işlerinden ayrılma ve alternatif iş imkanlarını araştırma eğiliminde olduklarını göstermektedir (Elçi vd., 2021). Pakistan üniversitesinde öğretim üyeleri arasında yapılan bir araştırmaya göre işten ayrılma niyeti ile cinsiyet ayrımcılığı arasında pozitif bir ilişki bulunmuştur. Bu ilişki, çalışanların mevcut örgütte cinsiyet ayrımcılığı yaşadıklarında veya algıladıklarında, işten ayrılma olasılıklarının daha yüksek olduğu açıklamasını sağlar (Shah vd., 2018). Kara ve Yıldırım tarafından 2011 yılında Ankara’da spor tesislerinde görev yapan öğretmenler arasında yapılan araştırma sonuçlarına göre, kadınların cinsiyete yönelik ayrımcılık algıları örgütsel bağlılıklarını negatif yönde etkilemekte, bu durum da işten ayrılma niyetini tetiklemektedir (Kara ve Yıldırım, 2011). Qu vd.,(2020) tarafından Çin’de otel çalışanları arasında yapılan araştırma sonuçları da benzer şekilde cinsiyete dayalı ayrımcılık algısı ile işten ayrılma niyeti arasında pozitif yönlü anlamlı bir ilişki tespit etmiştir (Qu vd., 2020). Literatürde çok sayıda aynı sonucu tasdik eden çalışma mevcuttur. Yine Foley ve arkadaşları Protestan din adamları arasında cinsiyet ayrımcılığı ve işten ayrılma niyetini araştırmış ve cinsiyet ayrımcılığının işten ayrılma niyeti üzerinde doğrudan etkisi olduğunu göstermiştir (Foley vd., 2005). Teorik temeller ve literatüre bakarak aşağıdaki hipotez geliştirilmiştir

H₁: Cinsiyete yönelik ayrımcılığın işten ayrılma niyeti üzerinde anlamlı ve pozitif bir etkisi bulunmaktadır

3. CİNSİYETE YÖNELİK AYRIMCILIK VE NORM DIŞI İŞYERİ DAVRANIŞI

Çalışanlar, örgütün amaçlarına erişmesini sağlayan, örgütleri farklılaştıran en önemli unsurların başında gelmektedir. Ancak çalışanlar zaman zaman bu durumdan negatif yönde sapmakta ve hoş karşılanmayan davranışlar sergileyerek örgütteki güzel havayı bozabilmektedir (Üzüm ve Şenol, 2020: 457). Bu davranışlar örgütsel değer ve normlara ters düşen, örgüt çalışanlarınca bilinçli ve planlı bir şekilde gerçekleştirilen davranışlardır (Demirel, 2009: 122). Örgüt için olumsuz olan bu tip işyeri davranışları kavramsallaştırılırken literatürde farklı araştırmacılar farklı terimler kullanmışlardır. Robinson ve Bennett (1995) tarafından “norm dışı işyeri davranışı (sapkın işyeri davranışları), Vardi ve Wiener (1996) tarafından “uygun olmayan örgütsel davranışlar”, Skarlicki ve Folger (1997) tarafından “örgütsel misilleme davranışı”, Neuman ve Baron (1998) tarafından “işyeri saldırganlığı” Robinson ve O’Leary (1998) tarafından “anti sosyal davranışlar”, Fox vd. (2001) tarafından ise “üretkenlik karşıtı işyeri davranışları” olarak isimlendirilmiştir (Karaeminoğulları, 2016: 478). Bu çalışmada söz konusu davranış tiplerinin çoğuna hitap etmesi, örgütün amaçlarına ulaşmasına engel olan davranışları vurgulayabilmesi sebebi ile örgüt içerisinde tercih edilmeyen bu davranış tipine norm dışı işyeri davranışı denilecektir. Temel olarak örgüte ve çalışanlara zarar verme amacıyla olan bu davranışları detaylandırmak gerekirse; çalışma arkadaşlarının görevlerini yapmalarına engel olmak, işe geç gelmek, işten

vaktinden önce ayrılmak, olması gerekenden fazla mola vermek, öğle yemeği arasını uzun tutmak gibi önemsiz davranışlara rastlanırken; örgüte ve çalışanlara daha fazla kötü sonuç yaratabilecek başkalarına yönelik fiziksel ya da sözlü saldırılar gerçekleştirmek, eşya çalmak, bilinçli bir şekilde işi yanlış yapmak gibi davranışlar da bulunmaktadır. Ayrıca sözü edilen bu davranışlar; örgütün ilke ve kurallarına kasten uymamak, iş birliği yapmamak, yalan söylemek, işi istenildiği şekilde yapmamak gibi pasif hareketler olarak da şekillenebilmektedir (Erdost Çolak vd., 2018: 77; Demir vd., 2018: 438).

İş yaşamında cinsiyetlerinden dolayı işe alınma, ücretler, yükselme, terfi olanakları konusunda farklı uygulamalara maruz kalmaları ya da mesleklerinde ilerleme konusunda daha fazla çalışmak ve daha uzun süre beklemek zorunda bırakılmaları çalışanlarda eşitsizlik hissi uyandırmaktadır. Bu tarz bir his beraberinde beklentilerin karşılanmadığı düşüncesini de getirmektedir. Örgüt tarafından beklentilerinin karşılanmadığını düşünen çalışanlar, hissettikleri kırgınlık ve kızgınlık duyguları nedeniyle memnuniyetsizliklerinin ifadesi olarak norm dışı iş yeri davranışları sergileyebilmektedir (Üzüm ve Şenol, 2019: 68). Cinsiyete yönelik ayrımcılığı ve norm dışı iş yeri davranışı üzerine çalışma yapan Anwar vd.'nin (2011) araştırmasına göre kadın akademisyenlerin erkek akademisyenlere göre cinsiyete yönelik ayrımcılık algısına bağlı olarak daha fazla norm dışı iş yeri davranışı sergilediği belirtilmektedir. Kim vd.'nin (2015) gerçekleştirdiği çalışmada kişinin iş yaşamında karşılaştığı kötü ve düşmanca davranışların, ayrımcılığın, norm dışı iş yeri davranışı üzerinde etkili olduğu saptanmıştır. Golparvar vd.'nin (2015) yaptığı çalışmada ise kadınları örgütte strese sokan önemli nedenlerden birinin algıladıkları cinsiyet ayrımcılığı olduğu ve bu algı neticesinde kadınların stres seviyeleri arttığı, buna bağlı olarak norm dışı işyeri davranışı sergileme düzeylerinde artış söz konusu olduğu ortaya konulmaktadır. Teorik temeller ve literatüre bakarak aşağıdaki hipotez geliştirilmiştir.

H₂: Cinsiyete yönelik ayrımcılığın norm dışı iş yeri davranışı üzerinde anlamlı ve pozitif bir etkisi bulunmaktadır

3. CİNSİYETE YÖNELİK AYRIMCILIK VE İŞ TATMİNİ

İş tatmini, en basit tanımla çalışanların işleriyle ne derece mutlu olduklarının tespit edilmesi olarak ifade edilmektedir (Tekeli ve Paşaoğlu, 2012: 179). İş tatminini Lu vd. (2005: 212), çalışanın işine karşı sahip olduğu duygusal yönelme şeklinde tanımlarken benzer bir ifade ile Weiss (2002: 173) iş tatminini çalışanların işlerine yönelik sergiledikleri duygusal tepkiler olarak nitelendirmektedir. Özetle iş tatmini, kişinin işine yönelik neler hissettiği ile ilgili bir tutumdur. Bu nedenle iş tatmini, işin kişiye sunduğu kazanımlar ile kişinin beklentilerinin birbirine uyumlu olduğu zamanlarda ortaya çıkmaktadır (Bingöl, 1990: 200). Diğer çalışanlara kıyasla daha fazla çalıştığını ve bunun karşılığı olarak daha az ücret aldığını düşünen bir kişi, diğer bir ifade ile beklentileri karşılanmayan bir kişi işine, yöneticisine ve iş ortamına yönelik olumsuz bir tutum sergileyecektir. (Can ve Soyer, 2008: 65).

Belirli bir cinsiyet grubuna mensup çalışanlar, başka bir cinsiyet grubuna kıyasla, işe alınma, maaş artışı, terfi olanakları gibi istihdam faaliyetlerinden, karar verme sürecinden veya işyerindeki diğer faaliyetlerden sınırlandıklarında veya dışlandıklarında ve kariyer gelişimleri engellendiğinde genellikle cinsiyet ayrımcılığını algılamaktadırlar (Qu vd., 2020: 3). Cinsiyete yönelik ayrımcılık yapıldığı düşüncesine sahip bir kişi de beklentilerinin karşılanmadığını düşünmekte ve işine, yöneticisine ve iş ortamına yönelik olumsuz tutum sergileyebilmekte bu tutumlardan bir tanesi de iş tatmininde azalmadır. Literatürde de benzer sonuçlar bulunmaktadır. Cihannar vd.'nin (2011) Pakistan'da yaptıkları çalışma sonuçlarına göre; işyerindeki cinsiyette yönelik ayrımcılığının çalışanların stres düzeyini arttırdığı buna karşılık iş tatmin, motivasyon, bağlılık ve iş heyecanını düşürdüğü saptanmıştır. Imam vd.'nin (2013) yine Pakistan'da gerçekleştirdiği çalışmada sonucunda cinsiyet ayrımcılığının iş tatmini üzerinde negatif bir etkisinin olduğunu, stresin bu etkide negatif yönde aracılık rolü üstendiği bulunmuştur. Ensher vd. (2001)'nin ABD'de gerçekleştirdiği çalışmada, örgüte gerçekleşen ayrımcılığın iş tatmini, örgütsel bağlılık ve örgütsel davranışı olumsuz olarak etkilediği tespit edilmiştir. Insarauto vd. (2022) 'in Fransa'da yaptıkları çalışmanın sonuçlarına göre ayrımcılık algısının kadınların kariyer beklentileri ve iş-yaşam dengesi açısından memnuniyetlerini olumsuz etkilediği saptanmıştır. Teorik temeller ve literatüre bakarak aşağıdaki hipotez geliştirilmiştir.

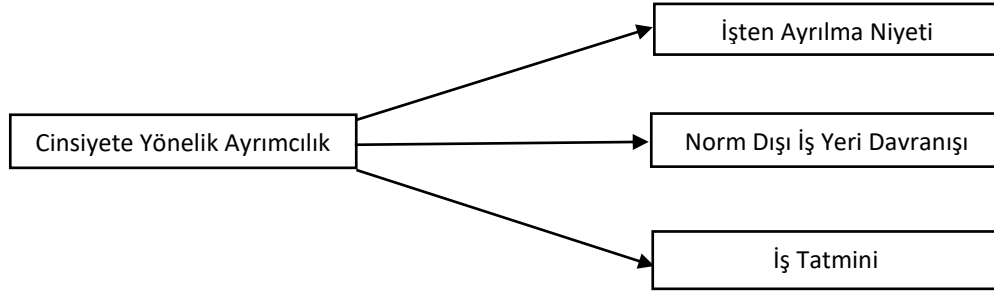

H₃: Cinsiyete yönelik ayrımcılığın iş tatmini üzerinde anlamlı ve negatif bir etkisi bulunmaktadır

4.ARAŞTIRMANIN YÖNTEMİ

4.1. Araştırmanın Amacı ve Modeli

Bu çalışmanın amacı, cinsiyete yönelik ayrımcılığın işten ayrılma niyeti, norm dışı işyeri davranışı ve iş tatmini üzerindeki etkisinin araştırılmasıdır. Bu amaç doğrultusunda, araştırmanın hipotezlerini test etmek için oluşturulan model aşağıdaki gibidir.

Şekil 1: Araştırmanın Modeli

4.2. Araştırmanın Örneklemi

Araştırmanın örneklemini Kocaeli Sanayi Odası'na kayıtlı firmalarda çalışan beyaz yakalı personel oluşturmaktadır. Kolayda örnekleme yöntemi ile seçilen 360 beyaz yakalı çalışana ulaşılmış ve anket formunu doldurmaları talep edilmiştir. Özensiz ve eksik doldurulan formlar çıkarılmış ve değerlendirmeye 327 adet anket formu kalmıştır. Genel anlamda araştırma katılımcılarının demografik özelliklerine bakıldığında, katılımcıların büyük bir bölümünün kadın (%56,3), evli (%71,6), lisans eğitimi almış (%72,6), 31-40 yaş aralığında (%51,2) çalışanlar olduğu söylenebilir.

4.3. Veri Toplama Aracı

Anket formu demografik bilgilerinin yer aldığı sorularla başlamaktadır. Ardından araştırmada incelenen cinsiyete yönelik ayrımcılık, işten ayrılma niyeti, norm dışı işyeri davranışı ve iş tatmini değişkenlerini ölçmeye yönelik ölçekler bulunmaktadır. Katılımcıların tüm ölçek maddelerine katılma derecelerini ölçmek için 5'li Likert ölçeği kullanılmıştır (1= Hiç Katılmıyorum; 5= Tamamen Katılıyorum).

Cinsiyete Yönelik Ayrımcılık Ölçeği: Katılımcıların cinsiyete yönelik algılarının ölçülmesi için Sanchez ve Brock (1996) tarafından geliştirilen, Foley, Hang-Yue ve Wong (2006) tarafından çeşitli araştırmalarda kullanılan 4 maddelik ve tek boyutlu ölçek kullanılmıştır.

İşten Ayrılma Niyeti Ölçeği: Katılımcıların işten ayrılma niyetlerinin ölçülmesi için Rosin ve Korabick (1995) tarafından geliştirilen 4 maddelik ve tek boyutlu ölçek kullanılmıştır.

Norm Dışı İş yeri Davranışı Ölçeği: Katılımcıların norm dışı iş yeri davranış gösterme eğilimlerini ölçülmesi için Bennett ve Robinson'dan (2000) uyarlanan Jung ve Yoon (2019) tarafından geliştirilen 6 maddelik tek boyutlu ölçek kullanılmıştır.

İş Tatmini Ölçeği: Katılımcıların iş tatmini düzeylerinin ölçülmesi için Cellucci and Devries 'dan (1978) uyarlanan ve Fu ve Deshpande (2013) tarafından geliştirilen 3 maddelik tek boyutlu ölçek kullanılmıştır.

4.4. Verilerin Analiz Yöntemi

Araştırma kapsamında anket yöntemi ile toplanan veriler SPSS paket programı aracılığı ile test edilmiştir. Araştırma da kullanılan değişkenlerin faktör yapılarını ve güvenilirliklerini test etmek için faktör analizi ve güvenilirlik analizi uygulanmıştır. Geliştirilen hipotezler ise regresyon analizi ile test edilmiştir.

5. BULGULAR

Hipotezler test edilmeden önce araştırmaya katılan kişilerin demografik özellikleri özetlenmiş, ardından çalışmada kullanılan ölçekler için güvenilirlik testi ve ölçeklerin faktör yapılarını anlayabilmek için açıklayıcı faktör analizi uygulanmıştır. Ölçeklerin güvenilirliğini değerlendirmek için, Cronbach α (Cronbach's Alpha)

katsayıları kullanılmıştır. Örneklemen faktör analizi için uygunluğunu ve yeterliliğini ölçmek için Kaiser-Meyer-Olkin (KMO) testi, değişkenlerin birbirleriyle olan ilişkilerinin anlamlılığını tespit etmek için ise Bartlett Küresellik Testi kullanılmıştır. KMO katsayısı 0 ile 1 arasında değişen bir katsayıdır ve 0,60'ın üstünde olması istenmektedir. Bartlett Küresellik Testi neticesinin ise $p < 0,05$ çıkması gerekmektedir. (İslamoğlu ve Alınacı, 2019).

5.1. Demografik Özellikler

Katılımcıların demografik özelliklerine bakıldığında; katılımcıların %54,7'sinin kadın, %45,3'ünün erkek; %53,6'sının evli, %33,6'sının ise bekâr olduğu görülmektedir. Katılımcıların yaşları incelendiğinde, en fazla 26-35 yaş arası katılımcı olduğu (%36,2), en az 18-25 yaş arası katılımcı olduğu (%10,9) görülmektedir. Eğitim durumlarına bakıldığında, %59 gibi yüksek bir oranda lisans mezunu katılımcı olduğu gözlenmekle birlikte, en az katılımcı 140 oranı %4' ile doktora ve üzeri mezuniyet seviyesine sahip katılımcılardan oluşmaktadır. Yine gelir düzeyi %71,4 gibi yüksek bir oranla 5001-10000 arasında bir seviyedeysen, en az 15001 ve üzeri gelir seviyesine sahip katılımcı bulunmaktadır. Katılımcılar arasında en fazla memur (%70) en az üst kademe yönetici (%3,1) bulunmaktadır. Katılımcıların ilk yöneticisinin cinsiyeti sorulduğu zaman %70 gibi büyük bir oranda erkek yönetici, %30 kadın yöneticiye sahip oldukları gözlenmektedir.

5.2. Faktör ve Güvenilirlik Analizleri

Araştırmada kullanılan cinsiyete yönelik ayrımcılık, işten ayrılma niyeti, norm dışı iş yeri davranışı ve iş tatmini ölçeklerine ilişkin faktör ve güvenilirlik analizi sonuçları Tablo 1 de sunulmuştur.

Tablo 1: Güvenilirlik ve Açıklayıcı Faktör Analizleri

DEĞİŞKENLER	İFADELER	FAKTÖR YÜKLERİ			
		F1	F2	F3	F4
CİNSİYETE YÖNELİK AYRIMCILIK	3.Çalıştığım kurumda, pek çok kişinin cinsiyetimle ilgili kalıplaşmış düşünceleri vardır ve bana da bu düşüncelerini davranışlarıyla yansıtıyorlar.	0,918			
	1.Çalıştığım kurumda, bazı zamanlarda cinsiyetimden dolayı sınırlamalarla karşılaştığımı düşünüyorum.	0,917			
	4.Çalıştığım kurumda, diğerlerinin, cinsiyetimden dolayı faaliyetlerinde beni ayrı tuttuğunu hissedirim.	0,896			
	2.Kariyerimde, cinsiyetimin olumsuz etkisi vardır.	0,870			
İŞTEN AYRILMA NİYETİ	4.İşimden ayrılmayı düşünüyorum.		0,935		
	2.Son zamanlarda işimden ayrılmayı daha sık düşünmeye başladım.		0,926		
	1.Eğer imkanım olsaydı işimden ayrılırdım.		0,892		
	3.Aktif olarak yeni bir iş arıyorum.		0,812		
NORM DIŞI İŞ YERİ DAVRANIŞI	2.İş yerinizde kabul edilebilir olandan daha uzun bir mola verdiniz mi?			0,809	
	5.İş için daha az çaba gösterdiğiniz oldu mu?			0,783	
	1.Kasıtlı olarak çalışabileceğinizden daha yavaş çalıştığınız oldu mu?			0,778	
	3.İşe izinsiz olarak geç kaldığınız oldu mu?			0,545	
İŞ TATMİNİ	2.Genel olarak işimden çok memnunum.				0,922
	1.Her gün gerçekleştirdiğim faaliyetlerden memnunum.				0,884
	3.İşimden ayrılmayı düşünmüyorum.				0,847
KMO		0,766	0,737	0,746	0,701
Bartlett Küresellik Testi Ki-Kare		1248,711	1184,504	382,939	482,875

df	15	6	15	3
p değeri	0,000	0,000	0,000	0,000
Toplam Açıklanan Varyans	%80,95	%79,66	%41,50	%78,28
Cronbach Alpha Katsayısı	0,922	0,913	0,748	0,860

Tüm ölçekler için yapılan güvenilirlik testleri neticesinde Cronbach α katsayıları sırası ile cinsiyete yönelik ayrımcılık için 0,922, işten ayrılma niyeti için 0,913, norm dışı işyeri davranışı için 0,748, iş tatmini için 0,860 hesaplanmıştır. Bu durum ölçeklerin güvenilir olduğunu ifade etmektedir. KMO değeri cinsiyete yönelik ayrımcılık için 0,766, işten ayrılma niyeti için 0,737, norm dışı işyeri davranışı için 0,746, iş tatmini için 0,860 hesaplanmış olup Bartlett Küresellik Testi sonuçları ise tüm ölçekler için istatistiksel açıdan anlamlıdır ($p=0,000$). Bu durumda, örneklem faktör analizi için uygun ve yeterlidir. Tablo 1’de faktör analizi neticesinde oluşan sırası ile cinsiyete yönelik ayrımcılık, işten ayrılma niyeti, norm dışı işyeri davranışı ve iş tatmini faktör yükleri görülmektedir. Katılımcılara uygulanmış ölçeklerin her biri tek faktör altında toplanmıştır. Cinsiyete yönelik ayrımcılık toplam varyansın %80,95’ini, işten ayrılma niyeti toplam varyansın %79,66’sını norm dışı işyeri toplam varyansın %41,50’sini ve iş tatmini toplam varyansın %78,28’ini açıklamaktadır.

5.3. Hipotez Testleri

Araştırmada daha sonra hipotezlerin test edilmesine geçilmiştir. Cinsiyete yönelik ayrımcılığın işten ayrılma niyeti, norm dışı iş yer davranışı ve iş tatmini üzerindeki etkisinin tespiti için regresyon analizleri yapılmıştır.

Tablo 3: Cinsiyete Yönelik Ayrımcılığın İşten Ayrılma Niyeti Üzerindeki Etkisi

Değişken	β	Standart Sapma	T	p
Sabit	2,132	0,135	15,759	0,000*
Cinsiyete Yönelik Ayrımcılığın	0,272	0,048	5,089	0,000*

$R=0,272$; $R^2=0,074$; $F=25,903$; $p<0,001$

* $p<0,001$

Bağımlı Değişken: İşten Ayrılma Niyeti

Bağımsız Değişken: Cinsiyete Yönelik Ayrımcılık

Tablo 3’e göre cinsiyete yönelik ayrımcılığın işten ayrılma niyeti üzerindeki etkisini saptamak için kurulan regresyon modeli bir bütün olarak anlamlıdır ($F=25,903$; $p=0,000$). Kurulan modeldeki bağımsız değişken, bağımlı değişkenlerdeki varyansın %7,4’ünü ($R^2=0,074$) açıklamaktadır. Yapılan regresyon analizi sonucunda cinsiyete yönelik ayrımcılığın işten ayrılma niyetini istatistiksel olarak anlamlı ve pozitif yönde etkilediği ortaya çıkmıştır ($\beta=0,272$; $p=0,000$). Dolayısı ile H1 hipotezi desteklenmiştir.

Tablo 4: Cinsiyete Yönelik Ayrımcılığın Norm Dışı İş Yeri Davranışı Üzerindeki Etkisi

Değişken	β	Standart Sapma	T	p
Sabit	1,561	0,055	28,179	0,000*
Cinsiyete Yönelik Ayrımcılığın	0,167	0,020	3,046	0,000*

$R=0,167$; $R^2=0,028$; $F=9,277$; $p<0,001$

* $p<0,001$

Bağımlı Değişken: Norm Dışı İş Yeri Davranış

Bağımsız Değişken: Cinsiyete Yönelik Ayrımcılık

Tablo 4’e göre cinsiyete yönelik ayrımcılığın norm dışı iş yeri davranışı üzerindeki etkisini saptamak için kurulan regresyon modeli bir bütün olarak anlamlıdır ($F=9,277$; $p=0,000$). Kurulan modeldeki bağımsız değişken, bağımlı değişkenlerdeki varyansın %2,8’ini ($R^2=0,028$) açıklamaktadır. Yapılan regresyon analizi sonucunda cinsiyete yönelik ayrımcılığın norm dışı iş yeri davranışını istatistiksel olarak anlamlı ve pozitif yönde etkilediği ortaya çıkmıştır ($\beta=0,167$; $p=0,000$). Dolayısı ile H₂ hipotezi desteklenmiştir.

Tablo 5: Cinsiyete Yönelik Ayrımcılığın İş Tatmini Üzerindeki Etkisi

Değişken	β	Standart Sapma	T	p
----------	---------	----------------	---	---

Sabit	3,764	0,117	32,163	0,000*
Cinsiyete Yönelik Ayrımcılığın	-0,224	0,042	-5,373	0,000*
$R=0,286$; $R^2=0,082$; $F=28,864$; $p<0,001$				

* $p<0,001$

Bağımlı Değişken: İş Tatmini

Bağımsız Değişken: Cinsiyete Yönelik Ayrımcılık

Tablo 5'e göre cinsiyete yönelik ayrımcılığın iş tatmini üzerindeki etkisini saptamak için kurulan regresyon modeli bir bütün olarak anlamlıdır ($F=28,864$; $p=0,000$). Kurulan modeldeki bağımsız değişken, bağımlı değişkenlerdeki varyansın %8.2'ini ($R^2=0,082$) açıklamaktadır. Yapılan regresyon analizi sonucunda cinsiyete yönelik ayrımcılığın iş tatminini istatistiksel olarak anlamlı ve negatif yönde etkilediği ortaya çıkmıştır ($\beta=-0,224$; $p=0,000$). Dolayısı ile H_3 hipotezi desteklenmiştir.

6. SONUÇ

Araştırma bulguları, cinsiyete yönelik ayrımcılık algısının işten ayrılma niyeti ile norm dışı davranışlar sergileme üzerinde pozitif ve cinsiyete yönelik ayrımcılık algısının iş tatmini üzerinde negatif etkisinin olduğunu göstermektedir. Nitekim literatür incelendiğinde iş yaşamında cinsiyete yönelik ayrımcılığa maruz kalan çalışanların kendilerine adaletsiz davranılması ve iş ortamında kendilerini kısıtlanmış hissetmeleri nedeni ile mevcut işlerinden ayrılma ve alternatif iş imkanlarını araştırma eğiliminde oldukları görülmektedir (Shaffer vd., 2000; Foley vd., 2005; Foley vd., 2006; Qu vd., 2020). Yine literatürde, örgüt içerisinde cinsiyet ayrımcılığı yaşadıklarını anladıkları anda çalışanlarda örgütlerine karşı olumsuz duygular geliştiğine ve cinsiyetleri nedeniyle engellendiklerini düşündükleri ölçüde, tepki olarak norm dışı davranışlar gösterdiklerine yönelik çalışmalar mevcuttur (Anwar, 2011; Kim vd., 2015; Golparvar vd., 2015). Cinsiyete yönelik ayrımcılık ve iş tatmini ile ilgili çalışmalara bakıldığında da cinsiyet ayrımcılığı yaşayan kişilerin yöneticisine ve iş ortamına yönelik olumsuz tutum sergiledikleri ve iş tatminlerinin azaldığı görülmektedir (Ensher vd., 2001; Cihannar, vd., 2011; Imam vd., 2013; Insarauto, vd., 2022). Dolayısıyla araştırma bulguları ile önceki çalışmaların bulguları tutarlılık göstermektedir.

Örgütlerde çalışanlar tarafından hissedilen olumsuz algılar, örgütsel sonuçları etkilemektedir. Bu araştırma kapsamında ele alınan cinsiyete yönelik ayrımcılık algısı gibi olumsuz algılar, bazı olumsuz örgütsel sonuçlara neden olmaktadır. Cinsiyetleri sebebi ile hak ettikleri görevi, pozisyonu ya da yükselmeyi elde edemeyen çalışanların beklentilerinin aksine bir durumun oluşması, çalışan açısından verimliliğin düşmesine, motivasyon ve moralinin bozulmasına yol açabilmektedir. Bu nedenle örgütlerin, cinsiyete yönelik ayrımcılık algısının azaltılmasına ve cinsiyet eşitliğinin sağlanmasına yönelik çalışmalar yapması önerilmektedir. Örgütte işe alımdan, terfiye, ücretlendirmeden sosyal haklardan faydalanmaya kadar eşit ve adaletli bir yönetim anlayışının yerleşmesi cinsiyete yönelik ayrımcılığın daha az yaşanmasına katkı sağlayacaktır. Yasal olarak verilen eşitlikçi hakların uygulamada da yerine getirilmesinin önünün açılması gerekmektedir. İş yaşamındaki cinsiyete yönelik ayrımcılığın engellenmesinde toplumun eğitilmesinin ve bilinçlendirilmesinin de önemli bir yeri bulunmaktadır. Küçük yaşlardan itibaren ailede ve okullarda toplumsal cinsiyet eşitliği eğitimlerinin verilmesi cinsiyet ayrımcılığı ile ilgili toplumsal bilincin sağlanması açısından faydalı olacağı düşünülmektedir.

Cinsiyete yönelik ayrımcılık algısı farklı kültürlerde ve farklı sektörlerde değişim gösterebilmektedir. Bu araştırmanın kısıtlarından birisi, Kocaeli Sanayi Odasına kayıtlı şirketlerde çalışan beyaz yakalıları arasında yapılmış olmasıdır. Bundan sonraki çalışmalar farklı sektörlerde ya da doğu bölgeleri-batı bölgeleri gibi farklı kültürlerde yapılabilir. Çünkü cinsiyete yönelik ayrımcılık algısının farklılaşması örgütsel yansımaları da etkileyecektir. Bununla birlikte farklı düzenleyici veya aracı değişkenlerin kullanılması da bu alandaki literatürün zenginleşmesini sağlayacaktır.

Özet: Günümüzde küreselleşmenin temel fonksiyonu olarak kabul edilen bilgi, kaynak, mal ve hizmetlerin ülkeler arasındaki akışı tanımlaması açısından denizcilik sektörü küresel ekonominin kilit noktasıdır. Bu özelliği ile denizcilik dünyada stratejik bir sektör olarak kabul edilmektedir. Denizcilik sektöründe temel gösterge global piyasalardır. Çünkü deniz ticareti ve denizcilik ekonomisi küresel bir karaktere sahiptir. Dolayısıyla deniz ticareti ülkelerin her çeşit malın alınıp satıldığı büyük bir ulaşım mekanizmasıdır. Ülkeler bazında karşılıklı ticaretin olmazsa olmaz koşulu olan deniz ticareti her dönemde önemini korumaktadır. Yeni gelişen ülkeler de ekonomilerine ivme kazandırmak amacı ile denizcilik sektöründen yeterince yararlanmayı tercih etmektedirler. Bu çalışmanın amacı seçilmiş yeni gelişen ekonomilerden olan Türkiye, Yunanistan, Macaristan, Çek Cumhuriyeti ve Meksika deniz ticaretlerinin ekonomik büyümeye olan etkilerini incelemektir. Bu bağlamda, 2000-2021 dönemine ait yıllık panel verileri kullanılarak seçilmiş yeni gelişen ekonomilerden seçili 5 ülke grubu için Panel ARDL metodu ile uzun dönemde meydana gelen değişimler tahmin edilmiştir. Analizde kullanılan denizyolu ihracatı ve denizyolu ithalatı veri setleri Denizcilik Genel Müdürlüğünden, Sanayi Üretim Endeksi verileri ise Dünya Bankası (WB) 'ndan elde edilmiştir. Tahmin sonuçları ise deniz ticaretini gösteren katsayının tüm ülkeler için beklendiği gibi negatif (-) ve istatistiksel olarak anlamlı olduğunu işaret etmektedir. Bu etkiler kısa ya da orta vadede etkisini göstermektedir. Çünkü ilgili ülke grubu için, seçili yıl aralığında meydana gelen şokların etkisi uzun dönemde ortadan kalkmaktadır ve dengeye gelmektedir. Bu nedenle, analiz sonucundan elde edilen bulgular seçili yeni gelişen ülke ekonomileri grubu için, deniz ticaretinin uzun dönemde ekonomik büyüme üzerinde pozitif bir ilişkinin varlığını tespit etmektedir.

Anahtar Kelimeler: Deniz Ticareti, Ekonomik Büyüme, Seçilmiş Yeni Gelişen Ekonomiler, Panel ARDL Testi.

Analysis of the Impact of Maritime Trade on Economic Growth in Selected Emerging Economies with Panel ARDL Test

Abstract: The maritime sector is the key point of the global economy in terms of defining the flow of information, resources, goods and services between countries, which is accepted as the main function of globalization today. With this feature, maritime is accepted as a strategic sector in the world. The main indicator in the maritime sector is global markets. Because maritime trade and maritime economy have a global character. Therefore, maritime trade is a great transportation mechanism where all kinds of goods are bought and sold. Maritime trade, which is the indispensable condition of mutual trade on the basis of countries, maintains its importance in every period. Newly developed countries also prefer to benefit from the maritime sector sufficiently in order to accelerate their economies. The aim of this study is to examine the effects of maritime trade in Turkey, Greece, Hungary, Czech Republic and Mexico, which are selected emerging economies, on economic growth. In this context, long-term changes were estimated with the Panel ARDL method for 5 selected country groups from the emerging economies, using annual panel data for the 2000-2021 period. The maritime export and maritime import data sets used in the analysis were obtained from the General Directorate of Maritime Affairs, and the Industrial Production Index data from the World Bank (WB). Estimation results indicate that the coefficient showing maritime trade is negative (-) and statistically significant as expected for all countries. These effects show their effects in the short or medium term. Because for the relevant country group, the effect of the shocks occurring in the selected year range disappears in the long term and comes to equilibrium. Therefore, the findings obtained from the analysis result determine the existence of a positive relationship of maritime trade on economic growth in the long run for a selected group of emerging economies.

Key Words: Maritime Trade, Economic Growth, Selected Emerging Economies, Panel ARDL Test.

1. GİRİŞ

Seçilmiş yeni gelişen ekonomiler uzun süredir mal ve hizmet ithalatçıları ve ihracatçıları olup, deniz ticaret akışlarını yönlendirmektedir. 1970'lerden bu yana, denizcilik dünya çapında önemli ölçüde değişti. Bu ülkeler artık sadece hammadde tedarikçileri değil, aynı zamanda küreselleşen üretim süreçlerinde ve artan talep kaynaklarında önemli oyuncular. Literatürde Adam Smith ve David Ricardo gibi neoklasik ticaret ekonomistleri ekonomilerin yalnızca açık ticaret yoluyla dünyanın geri kalanıyla etkileşime girebileceğine ve

uzun vadede istikrarlı bir büyüme sağlayabileceğine inanmaktadırlar (Schumacher, 2016:764-793). Buna dayanarak bazı iktisatçılar ise ticaret ile ekonomik büyüme arasında önemli bir ilişki olduğunu savunurken, bazıları ise ithalat-ihracat ticaretinin temsil ettiği ticaretin ekonomik büyümeye önemli bir katkı sağlamadığını savunmaktadır. Bu anlaşmazlıklar literatürde çözülmesi gereken zorluklar doğurmaktadır.

Ülke ekonomilerinde ithalat-ihracat ticareti çeşitli taşımacılık yöntemleriyle yapılmaktadır. Bu yöntemlerden biri olan deniz ticareti, malların ihracatçıdan alındığı / yüklendiği, gemiye binme limanları (menşei) ile malların ithalatçı tarafından toplandığı varış limanı arasındaki gemilerden geçişini kapsamaktadır. Deniz ticareti genellikle uluslararası ticaretin çapası olarak bilinmekte ve hacimce dünya mal ticaretinin yüzde 80'inden fazlasına katkıda bulunmaktadır (Wahidul ve Xiangmin, 2019:78-146).

Deniz taşımacılığı incelemesi, ticari gemi operasyonlarının dünya ekonomisine tahmini 380 milyar ABD Doları navlun oranına katkıda bulunacağını tahmin edilmekte ve bu, toplam küresel ticaretin yaklaşık yüzde 5'ine tekabül etmektedir. Bu durum artan dünya ekonomik gelişmesiyle birlikte, pazarlara ve hammaddelere yakınlık gibi faktörlerin yanı sıra talep, büyük ticaret ortakları ve deniz yolları da dahil olmak üzere küresel ekonomiyi şekillendiren diğer faktörlerin yanı sıra yüksek düzeyde karşılıklı bağlantı ve karşılıklı bağımlılığı teşvik eden ana faktör haline gelmektedir (Ogunleye, 2020:48-61). Gelecekteki ticaret akışı beklentileri, nakliye, limanlar, terminaller, lojistik tesisler, karayolu, demiryolu ve iç su yolları altyapısında hem özel sektör hem de kamu sektörü için yatırım kararlarına yansıtılmaktadır. Ticaret akışlarını hafife almak, eksik yatırıma yol açabilmekte ve potansiyel ticareti sınırlayabilmektedir. Ticaret akışlarının gereğinden fazla tahmin edilmesi, aşırı yatırıma ve değer kaybına yol açabilir. Muhtemel deniz ticareti akış senaryolarının değerlendirilmesi, politika yapıcılara politika ve düzenleyici çerçevelerin yeterliliği hakkında da bilgi vermektedir.

Öte yandan, nüfus ve gayri safi yurtiçi hasıla (GSYİH) büyümesi ile deniz ticareti büyümesi arasında güçlü bir ilişki bulunmaktadır. Araştırmalar doğrultusunda, nüfusun önemli ölçüde artması öngörülse de, 2050'den sonra nüfusun artış hızının yavaşlayacağı tahmin edilmektedir. Bu eğilimin temelinde değişen demografik modeller yatmaktadır. Birçok gelişmiş ülke ve ekonomi yaşlanan bir nüfusla karşı karşıya kalacak. Bu, tüketici davranışında, örneğin mallardan hizmetlere geçiş anlamına gelebilmektedir. Dahası, genel GSYİH'nın artması beklenmekte, ancak bu artış önceki dönemlerden daha düşük bir oranda beklenmektedir. Uzun vadede ise gelişmiş ve gelişmekte olan ülkelerdeki büyüme oranları birbirine yaklaşacaktır (Yenal, 2011: 1-16).

Çalışmada ele alınan seçilmiş yeni gelişen ekonomilerden biri olan Türkiye açısından daha ayrıntılı ele alındığında, denizcilik sektörü Türkiye için en önemli ekonomik sektördür. Coğrafi konum avantajı, deniz kıyılarının uzunluğu, nüfusun ve sanayinin büyük bir kısmının kıyılarda bulunması nedeniyle Türkiye, kaynak ihtiyacını karşılama potansiyeline sahiptir (Özer vd, 2020). Türkiye'nin jeostratejik konumu, bu verimli kaynağın kullanımını belirlemektedir. Yükselen bir başka ekonomi olan Yunanistan'da ise, denizcilik Yunanlılar için en eski istihdam biçimi durumundadır. Ayrıca, uzun süredir Yunan ekonomik faaliyetlerinin önemli bir bileşeni olduğundan, Yunanistan geleneksel olarak bir denizcilik ülkesidir. Yunanistan bir Akdeniz ülkesi olmakla birlikte, GSYİH büyümesine doğrudan veya dolaylı olarak katkıda bulunarak Yunan ekonomisinin toparlanmasında kilit bir rol oynamaktadır. Sektör önemli bir işveren konumundadır. Denizcilik şirketleri denizcilikle ilgili birçok sektöre yatırım yaptığından, ithalat Yunan ekonomisindeki yatırım boşluğunun doldurulmasında önemli rol oynamaktadır. Bu koşullar altında, Yunanistan'a daha fazla ticari gemi çekmek ve deniz kümelenme hizmetlerini geliştirmek, denizciliğin ülke GSYİH'sına katkısını ve Yunan ekonomisinin dışa dönüklüğünü artırabilmektedir (Korkmaz, 2012: 97-109).

Mevcut duruma seçilmiş yeni gelişen ekonomilerden olan Macaristan açısından bakıldığında ise, 2022'in ilk yarısında deniz yoluyla gelen istifli konteyner trafiği 2021'in aynı dönemine göre yüzde 20 artış yaşamıştır. Ayrıca, deniz taşımacılığında mevcut olan sorunlar nedeniyle (konteyner eksikliği, Süveyş Kanalı'ndaki trafiğin durması vb.) navlun oranları önemli ölçüde (beş kattan fazla) artış göstermiş ve istikrarlı bir şekilde artmaya devam etmektedir. Araştırmaya dahil edilecek Çek Cumhuriyeti'nin güncel durumuna bakıldığında ise, Çek Cumhuriyeti limanları, ülkenin ihracat ve ithalat ticaretinde önemli bir rol oynamaktadır. Çek Cumhuriyeti hükümeti tarafından işletilen limanlar, Çek Cumhuriyeti liman otoritesi tarafından işletilmektedir (Fremont, 2014: 27-36). Çek cumhuriyeti liman otoritesi, limanlarda güvenli ticaret sağlayan ve ülkenin ekonomik refahını artıran güvenli ve verimli ulaşım sistemi sağlamaktadır. Ülkenin liman otoritesi, Çek Cumhuriyeti limanları da dahil olmak üzere su yollarını yönetmekte, işletmekte ve bakımını yapmaktadır. Çek cumhuriyeti limanları, diğer ülkelerle önemli nakliye hatları aracılığıyla doğrudan nakliye bağlantılarına sahiptir. Son olarak seçilmiş yeni gelişen ekonomilerden olan Meksika'da ise, batıda Pasifik'e, doğuda ve güneyde Meksika Körfezi ve Karayip Denizi'ne bakan stratejik bir konuma sahip nispeten uzun bir kıyı şeridine sahiptir. Büyük bir ekonomiye sahip

bir imalatçı ülkedir ve büyük ölçekte mal ithal etmektedir; ancak limanlarında elleçlenen deniz yükü miktarı bunu yansıtmamaktadır.

Dolayısıyla bu çalışma, seçilmiş yeni gelişen ekonomilerden olan Türkiye, Yunanistan, Macaristan, Çek Cumhuriyeti ve Meksika deniz ticaretlerinin ekonomik büyümeye olan etkilerini incelemektir. Bu bağlamda, 2000-2021 dönemine ait yıllık panel verileri kullanılarak seçilmiş yeni gelişen ekonomilerden seçili 5 ülke grubu için Panel ARDL metodu ile uzun dönemde meydana gelen değişimler tahmin edilerek seçilmiş yeni gelişen ülkelerde gerçekleştirilen deniz ticaretinin ekonomik büyümeye etkisi tespit edilecektir.

2. LİTERATÜR

Çalışma konusu ile ilgili yapılan literatür taraması sonucunda, deniz ticareti ve ekonomik büyüme arasındaki ilişkinin analiz edildiği önemli çalışmalar ele alınmıştır.

Gherghina vd. (2018), çalışmalarında farklı taşımacılığın etkisini değerlendirerek ekonomik büyümeye ilişkin altyapı sistemlerini (deniz taşımacılığı dahil) araştırmışlardır. Analiz, 1990- 2016 dönemine ait veriler kullanılarak AB ülkeleri için sabit etkili panel regresyonlar incelenmiştir. Bulgular, denizcilik, ilgili yatırımlar ve ekonomik büyüme arasında pozitif bir ilişki ve hava kirleticileri ile ekonomik büyüme arasında negatif bir ilişki olduğunu göstermektedir.

Saidi vd. (2018), çalışmasında ulaştırma altyapısının, genelleştirilmiş anlar yöntemini kullanarak ekonomik büyümeyi olumlu yönde etkilediği sonucuna varmıştır. Kaibullaev ve Bayramlı (2020), Hazar Denizi'ndeki (Rusya, Azerbaycan, Türkmenistan, Kazakistan ve İran) birçok ülke için deniz taşımacılığının gelişimi ile ekonomik büyümenin dinamikleri arasındaki ilişkiyi inceleyerek daha iyi yönetim yoluyla deniz taşımacılığının geliştirilmesi, sürdürülebilir ekonomik kalkınmayı teşvik edeceğini tespit etmektedirler.

Kenneth (2019), çalışmasında deniz ticaretinin yalnızca bir ulusun ekonomisine büyük faydalar sağlamakla kalmadığını aynı zamanda bir bölge için büyük bir gelişme sağladığını savunmaktadır. Çalışmada deniz ticaretinin Asya'daki Angkor ve Champa'nın anakara medeniyetlerinde sosyo-ekonomik entegrasyon sistemlerinin gelişmesine nasıl yol açtığından bahsetmektedir. Ayrıca, Funan'ın bir deniz deposu olarak başarısının ve bölge içinde ulaşımı kolaylaştırmak için deniz ticaretinde hizmet verecek devlet yönetimi modellerinin tanıtılmasının nasıl olduğu konusunda tespitlerde bulunmaktadır.

Park vd. (2019), çalışmasında ekonomik büyümeyi ulaşım arzı ve talebi ile birleştiren hibrit bir üretim yaklaşımı kullanarak OECD ve OECD üyesi olmayan ülkelerde deniz, hava ve kara taşımacılığının ekonomik büyüme üzerindeki etkisini incelemektedirler. Araştırmacılar, deniz taşımacılığının ekonomik büyüme üzerinde, özellikle gelişmekte olan ülkelere ekonomik büyümeyi bazen olumsuz etkilemeyen hatta olumsuz etkileyen hava ve kara taşımacılığından daha güçlü bir etkiye sahip olduğu sonucuna ulaşmışlardır.

Lane ve Pretest (2020), çalışmalarında deniz ticareti ve deniz taşımacılığına erişim, bir ülkenin ekonomik büyümesini belirlerken önemli bir rol oynadığı sonucuna ulaşmışlardır. Ayrıca yazarlar deniz ticareti, küresel ekonomi söz konusu olduğunda önemli olduğunu ve ekonomik sistemin varlığında bir omurga haline geldiği sonucuna ulaşmışlardır.

Khan vd. (2021), çalışmalarında 40 heterojen ülkeden oluşan bir panel kullanarak konteyner limanı trafiği ile kişi başına düşen gelir arasında pozitif bir bağlantı elde etmişlerdir. 2010-2017 dönemine ait veriler kullanılarak Afrika'daki 27 ülkeyi ele alan Sakyi ve Immurana (2021), çalışmalarında toplam ticaret üzerindeki liman verimliliğini değerlendirmişlerdir. Analizde Panel GMM tahmin tekniği kullanılmıştır. Çalışmanın sonuçları, limanların etkinliğinin uzun ve kısa vadede ticaret dengesini artırdığını göstermektedir. Bu nedenle, Afrika'da liman verimliliğinin artırılmasının zorunlu olduğu sonucuna ulaşılmaktadır.

Fedorenko vd. (2021), çalışmalarında 2010-2019 yılları arasında beş Rusya örneğinde liman yatırımının ticaret üzerindeki etkisini araştırmaktadır. Çalışmada, panel verileri ve doğrusal olmayan modeller kullanan regresyon analizinden yararlanılmıştır. Analizden elde edilen bulgular, limanlara yapılan yatırımın ev sahibi ülke ve komşu ülkelerde dış ticaret büyümesini teşvik ettiğini göstermektedir. Ayrıca araştırma sonuçları; göre çevre maliyeti, ithalat ve ihracat hacmi arasında negatif bir ilişkinin varlığını tespit etmektedir.

Gidwani (2022), çalışmasında deniz ticaretinin 1991- 2020 dönemi arasında Sierra Leonean ekonomisini nasıl etkilediğini incelemektedir. İki hipotezin tümü için bağımlı değişken milyon dolar cinsinden deniz ticaretiyken, birinci ve ikinci hipotezler için bağımsız değişkenler Sierra Leone'nin Hayri safi yurtiçi hasılası ve yabancı rezervlerinden oluşmaktadır. Dolayısıyla çalışmada, deniz ticaretinin rolünü, Sierra Leonean ekonomisi

üzerindeki olumlu ve olumsuz etkilerini değerlendirilmektedir. Elde edilen bulgular, Sierra Leone'nin GSYH'ın ve ekonomisinin deniz ticaretinden önemli ölçüde etkilendiğini göstermektedir.

3. Veri Seti ve Model

3.1. Veri Seti

Bu çalışma, seçilmiş yeni gelişen ekonomilerden olan Türkiye, Yunanistan, Macaristan, çek Cumhuriyeti ve Meksika deniz ticaretlerinin ekonomik büyümeye olan etkisini analiz etmeyi amaçlamaktadır. Bu amaçla deniz ticareti (FT) ve ekonomik büyüme (GDP) arasındaki ilişki seçilmiş 5 yeni gelişen ekonomi için 2000-2021 dönemine ait yıllık veriler kullanılarak Panel ARDL yöntemi ile analiz edilecektir. Değişkenler Tablo 1'de yer almaktadır.

Tablo 1: Modelde Kullanılan Değişkenler

Değişken	Sembol	Kaynak
Sanayi Üretim Endeksi	GDP	Dünya Bankası (WB)
Denizyolu İhracatı Ve Denizyolu İthalatı	FT	Denizcilik Genel Müdürlüğü

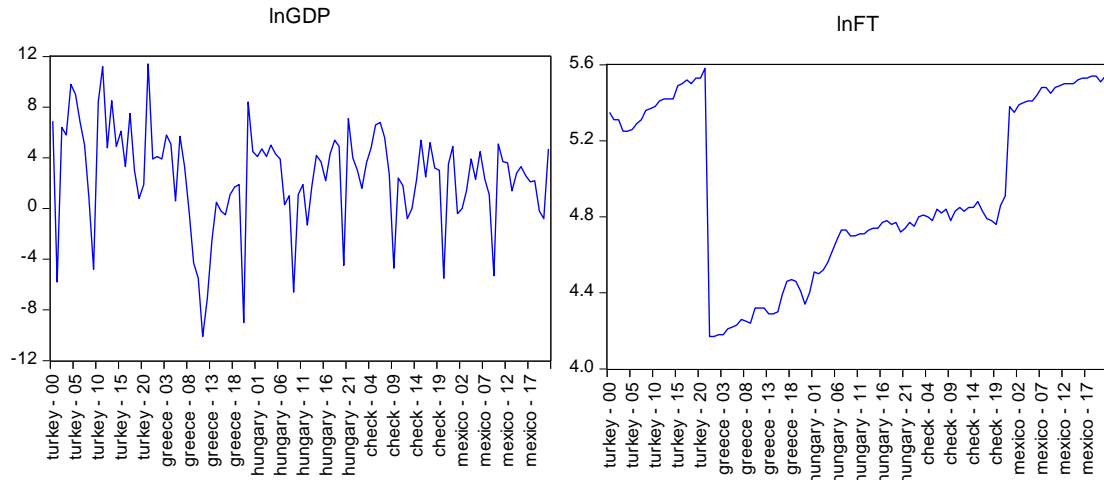

$$\text{Model 1: } \ln GDP_t = a_1 + \beta_1 \ln FT_t + \epsilon_{1t} \quad (1)$$

$$\text{Model 2: } \ln FT_t = a_2 + \beta_2 \ln GDP_t + \epsilon_{2t} \quad (2)$$

Burada; a_1 , a_2 sabit terimleri, β_1 , β_2 analizde kullanılan değişkenlere ait tahmin edilen katsayıları ve ϵ_{1t} , ϵ_{2t} hata terimlerini ifade etmektedir (Usta ve Sarı, 2021, 1-14).

Ek olarak serilerin zaman içindeki seyri Şekil 1'de gösterilmiştir.

Şekil 1: Serilerin Zaman İçindeki Seyri

3.2. Model

Bu çalışmadaki önsel beklenti deniz ticaretinin ekonomik büyüme üzerinde uzun dönemde pozitif bir etki yapacağı yönündedir. Bu bağlamda çalışmada Anwar vd. (2017) modeli izlenerek aşağıdaki model tahmin edilmiştir (Dam ve Şanlı, 2019:1-19):

GDP = (Ekonomik Büyüme)

FT = (Deniz Ticareti)

$$GDP_{it} = a_0 + a_1 FT_{it} + \epsilon_{it} \quad (3)$$

$$FT_{it} = a_0 + a_1 GDP_{it} + \epsilon_{it} \quad (4)$$

Burada; a_0 = Sabit ; Eğim Katsayısı; $T=1,2,\dots,22$; $i=1,2,\dots,5$ ülke ve ϵ_{it} = Hata terimini belirtmektedir.

4. Ekonometrik Yöntem ve Bulgular

2000-2021 dönemini kapsayan bu çalışmada öncelikle serilerin birim kök taşıyıp taşımadıklarına karar vermek için Fisher ADF ve Fisher PP birim kök testleriyle incelenmiştir. Bulgular, değişkenlerin düzey değerlerinde durağan olduklarını göstermektedir. Çalışmada serilerin durağanlıkları tespit edildikten sonra değişkenlerin uzun dönem ve kısa dönem katsayıları Tablo 2’de gösterilmiştir.

Tablo 2: ARDL (1,2) Uzun ve Kısa Dönem Tahmini

Variable	Coefficient	Std. Error	t-Statistic	Prob.*
Long Run Equation				
FT	3.916588	5.169944	0.757569	0.0407
Short Run Equation				
D(FT)	30.10276	18.45413	1.631221	0.1064
D(FT(-1))	-22.25552	16.28498	-1.366629	0.1752
C	-13.83172	2.124964	-6.509153	0.0000
ECT	-0.812230	0.085433	-9.507247	0.0000

Tablo 1’deki uzun dönem sonuçları incelendiğinde bağımsız değişken olan deniz ticareti (FT), bağımlı değişken olan ekonomik büyümeyi açıklamada istatistiksel olarak anlamlı tespit edilmiştir. Uzun dönemde deniz ticaretinde meydana gelen %1’lik bir artış ekonomik büyümeyi 3.91 oranında arttırmaktadır. Elde edilen bulgular deniz ticaretinin ülke ekonomileri üzerinde etkili olduğunu göstermektedir.

Tablo 1’de kısa dönem analizine bakıldığında, hata düzeltme teriminin katsayısının negatif ve istatistiksel olarak anlamlı olduğu da bulunmuştur. Bu durum, uzun dönemde birlikte hareket eden seriler arasında, kısa dönemde meydana gelen sapmaların ortadan kalktığı ve serilerin tekrar uzun dönem denge değerine yakınsadıkları anlamına gelmektedir. Uzun dönem ve kısa dönem verileri karşılaştırıldığında deniz ticaretin kısa dönemde değil, uzun dönemde ekonomik büyüme üzerinde pozitif etki oluşturduğu görülmektedir. Son olarak değişkenlerin yönünü belirlemek için Granger’ın 1969 yılında literatüre kazandırdığı Granger nedensellik testine başvurulmuştur.

Tablo 3: Panel Granger Nedensellik Testi Sonuçları

H ₀ Hypothesis:	Obs	F-Statistic	Prob.
FREIGHT_TRANSPORT does not Granger Cause GDP	100	3.84162	0.0249
GDP does not Granger Cause FREIGHT_TRANSPORT		0.69868	0.4998

Tablo 3’te değişkenlerin yönü hakkında bilgi verilmektedir. H₀ hipotezi reddedilerek değişkenler arasında tek taraflı nedensellik tespit edilmiştir. Deniz ticaretinin ekonomik büyümenin nedene olduğu ve deniz ticaretinden ekonomik büyümeye doğru bir tek yönlü ilişki bulunmuştur.

5. SONUÇ

Literatürde genel olarak, gelişmiş ulaşım altyapısı, “ticari faaliyetin genişlemesi, yenilikler, yatırımlar, işgücü piyasası, rekabet, iç ve dış ticaret, küresel mobil faaliyet, bölgesel ekonomik kalkınma, nüfus refahı, çevre güvenliği ve sağlık” gibi belirli makroekonomik verimlilik itici güçleri aracılığıyla getiri sağlamaktadır. Bunun beraberinde deniz taşımacılığı, ulaşım sisteminin önemli bir bileşeni durumunda olup dünya ticaretinin büyük bir bölümünü oluşturmaktadır. Ayrıca, küresel deniz ticaretine katılmanın küresel sermayeyi çekmek için önemli bir faktör olduğu düşünülmektedir. Bu büyük önem göz önüne alındığında, deniz taşımacılığı literatürde oldukça tartışılmakta ve son yıllarda denizcilikle ilgili her türlü konuyla ilgili birçok makale yayınlanmaktadır. Deniz taşımacılığıyla ilgili başlıca akademik kaygılar, limanların ve gemi taşımacılığının mikro yönetimini ele alırken, son yıllarda, genel araştırma eğilimleri, daha önce ilgi çekici olan düzenlemelerden ve politika yönetiminden verimli ve sürdürülebilir deniz taşımacılığına doğru yönelmektedir. Bu nedenle, birçok araştırma makalesi deniz taşımacılığının ekonomik büyüme ve gelişme üzerindeki etkisini analiz etmekte ve deniz taşımacılığının

uluslararası ticaret, ekonomik başarı ve küresel kalkınma kalıpları için önemini vurgulamaktadır (Veitch, 2017:1-27).

Literatüre katkı sağlamayı amaçlayan bu çalışmada ise, seçilmiş yeni gelişen ekonomilerden olan Türkiye, Yunanistan, Macaristan, Çek Cumhuriyeti ve Meksika'yı ekonomilerindeki deniz ticaretinin ekonomik büyümeye olan etkisi 2000-2021 dönem aralığında panel ARDL yöntemi uygulanarak analiz edilmiştir. Çalışmadan elde edilen sonuçlar; deniz ticaretini gösteren katsayının tüm ülkeler için beklendiği gibi negatif (-) ve istatistiksel olarak anlamlı olduğunu işaret etmektedir. Bu etkiler kısa ya da orta vadede etkisini göstermektedir. Dolayısıyla seçilmiş yeni gelişen ekonomilerden oluşan 5 ülke grubu için (Türkiye, Yunanistan, Macaristan, Çek Cumhuriyeti ve Meksika) , 2000-2021 dönem aralığında meydana gelen şokların etkisi uzun dönemde ortadan kalkmaktadır ve dengeye gelmektedir. Bu nedenle, analiz sonucundan elde edilen bulgular seçili yeni gelişen ülke ekonomileri grubu için, deniz ticaretinin uzun dönemde ekonomik büyüme üzerinde pozitif bir ilişkinin varlığını tespit etmektedir.

Enflasyonun İş Ahlakı Üzerindeki Etkilerinin Azaltılması Mümkün mü? Düzenleyici ve Denetleyici Kurumlar Perspektifinden Bir İnceleme

Doç. Dr. Ayla YAZICI¹

Doç. Dr. Resül YAZICI²

¹ Anadolu Üniversitesi, İİBF, İktisat Bölümü, Eskişehir, Türkiye, ayazici@anadolu.edu.tr, ORCID:0000-0002-7491-8709

² Bilecik Şeyh Edebali Üniversitesi, İİBF, İktisat Bölümü, 11100-Bilecik, Türkiye, resul.yazici@bilecik.edu.tr, ORCID: 0000-0002-7875-3331

Özet: En genel ifadesiyle, bir yıllık dönemde, ilgili ülke sınırları içerisinde sahip olunan üretim faktörleri kullanılarak üretilmiş nihai mal ve hizmetlerin piyasa fiyatlarıyla hesaplanmış değeri Gayrisafi Yurtiçi Hasıla (GSYİH ya da GDP) olarak tanımlanır. Ülkenin GSYİH'nin elde edilmesi sürecinde kullanacağı üretim faktörlerinin arzındaki yetersizlik, nihai mal ve hizmet piyasalarında kıtlığa dolayısıyla fiyatlar seviyesinde yükselme hızı olarak bilinen enflasyona sebep olacaktır. İç veya dış nedenlerle yükselen enflasyonist ortamda sabit gelirliilerin satın alma güçleri erirken, girdi fiyatlarındaki yükselmeyi başkalarına yansıtabilenler daha zengin olabilecektir. Gerçek ve tüzel kişilerin bu süreçte kendilerini koruma davranışları enflasyonist süreci besleyecektir. Özellikle sabit gelirliiler aleyhine gelir dağılımında adaletsizlik oluşumundan birilerinin yararlanması kaçınılmazdır. Çünkü:

- İç üretimin planlanması, teşvikle yönlendirilmesi yerine ithalat silahının kullanılması,
- Piyasaların kapsayıcı bir şekilde düzenlenmesi ve denetlenmesi yerine yasaklamaların getirilmesi,
- Para politikasının destek vermemesi,
- Maliye politikasının popülist olması gibi kısa dönemli araçlar kullanılması enflasyon sorununun çözümünü ertelediği gibi büyümektedir.

Hanehalklarının, enflasyondan kendilerini koruma davranışlarının, ister istemez iş ahlakı üzerindeki olumsuz etkileri maddi ve manevi değerleri erozyona uğratmaktadır. Çünkü insanoğlunun içinde yaşadığı dünyayı ahlâk ve etik değerler düzenler, biçimlendirir. Objektif, normatif bir kavram olan etik değerleri; kanunlar, standartlar belirler. Subjektif, kişiye özel bir kavram olan ahlak, etiğin pratiğe yansımaları olarak ifade edilebilir ki, kişiyi kendi davranışları hakkında bir yargıda bulunmaya iten; ahlaki değerleri üzerinde yargılama yapmasını sağlayan vicdanını şekillendirir. Her geçen gün ahlaki değerlerdeki yozlaşmanın, vicdanın yok olmasının kötü örnekleri artmaktadır. Dolayısıyla ekonomide, üretim ve tüketimde bireysel hırslar yerine kolektif davranışların yaygınlaştırılabilmesi için evrensel ilkelere sahip bir ekosistem tasarlanmalıdır. Zira dini yaklaşımlarda da faiz, aşırı kâr, stokçuluk yasaklanmış ama bu şekildeki emir veya söylemler önemsenmemiş veya yeterli olmamıştır. Fakat ekonomi ve ahlak bir bütündür. Parçaları arasında tesis edilecek denge, sosyoekonomik yapının unsurlarına da yansımaktadır. Eğer ekosistemde denge yoksa kesimler arasında barışın tesisi; kaynakların etkin dağılımı; her türlü adalet, dürüstlük gibi değerlerin egemen olması mümkün olmayacaktır. Özetle uygulamaların gönüllülük boyutu istisnai bir durum olacağı için piyasaların, bağımsız düzenleyici ve denetleyici kurumlar tarafından düzenlenmesi ve denetlenmesinin nasıl olacağı bu niteliksel çalışmanın konusudur.

Anahtar Kelimeler: İş Ahlakı, Enflasyon, Düzenleyici ve Denetleyici Kurumlar, Maliye Politikası, Para Politikası

1. GİRİŞ

Bir ülke sınırları içerisinde sahip olunan üretim faktörleri ile üretilmiş nihai mal ve hizmetlerin piyasa fiyatlarıyla hesaplanmış değeri Gayrisafi Yurtiçi Hasıla (GSYİH ya da GDP) olarak tanımlanır. Ülkenin GSYİH'nin elde edilmesi sürecinde kullanacağı üretim faktörlerinin arzındaki yetersizlik, arz şokları nihai mal ve hizmet piyasalarında kıtlığa dolayısıyla fiyatlar seviyesinde yükselme hızı olarak bilinen enflasyona sebep olacaktır. İç veya dış kaynaklı nedenlerle yükselen enflasyonist ortamda sabit gelirliilerin satın alma güçleri erirken, girdi fiyatlarındaki yükselmeyi başkalarına yansıtabilenler daha zengin olabilmektedirler. Gerçek ve tüzel kişilerin bu süreçte kendilerini koruma davranışları enflasyonist süreci katbekat artıracaktır Özellikle plansızlıklar, küresel ısınma gibi mevsimsel sorunlar, doğal felaketler sonucunda sabit gelirliiler aleyhine yaşanacak gelir dağılımındaki adaletsizlikten birilerinin yararlanması kaçınılmazdır. Çünkü:

- İç üretimin planlanması, teşvikle yönlendirilmesi yerine ithalat silahının kullanılması,
- Piyasaların kapsayıcı bir şekilde düzenlenmesi ve denetlenmesi yerine yasaklamaların getirilmesi,
- Para politikasının destek vermemesi,

- Maliye politikasının popülist uygulanması gibi kısa dönemli araçlar kullanılması enflasyon sorununun çözümünü ertelediği gibi büyütmektedir.

Dolayısıyla hanehalklarının, enflasyondan kendilerini koruma davranışlarının, ister istemez toplumsal yaşamda, özelde iş ahlakı üzerindeki olumsuz etkileri maddi ve manevi değerleri erozyona uğratmaktadır. Çünkü insanoğlunun içinde yaşadığı dünyayı ahlâk ve etik değerler düzenler, biçimlendirir. Objektif, normatif bir kavram olan etik değerleri; kanunlar, standartlar belirler. Subjektif, kişiye özel bir kavram olan ahlak, etiğin pratiğe yansımaları olarak ifade edilebilir ki, kişiyi kendi davranışları hakkında bir yargıda bulunmaya iten; ahlaki değerleri üzerinde yargılama yapmasını sağlayan vicdanını şekillendirir. Her geçen gün ahlaki değerlerdeki yozlaşmanın, vicdanın yok olmasının kötü örnekleri artmaktadır. Dolayısıyla ekonomide, üretim ve tüketimde bireysel hırslar yerine kolektif davranışların yaygınlaştırılabilmesi için evrensel ilkelere sahip bir ekosistem tasarlanmalıdır. Zira dini yaklaşımlarda da faiz, aşırı kâr, stokçuluk yasaklanmış ama bu şekildeki emir veya söylemler önemsenmemiş veya yeterli olmamıştır. Fakat ekonomi ve ahlak bir bütündür. Parçaları arasında tesis edilecek denge, sosyoekonomik yapının unsurlarına da yansımaktadır. Eğer ekosistemde denge yoksa kesimler arasında barışın tesisi; kaynakların etkin dağılımı; her türlü adalet, dürüstlük gibi değerlerin uygulamadaki egemenliği mümkün olmayacaktır. Özetle uygulamaların gönüllülük boyutu istisnai bir durum olacağı için piyasaların, bağımsız düzenleyici ve denetleyici kurumlar tarafından düzenlenmesi ve denetlenmesinin nasıl olacağı bu niteliksel çalışmanın konusudur. Bağımsız düzenleyici ve denetleyici kurumlar yönlendiriciliğinde ilgili sivil toplum örgütlerinin yapmaları gerekenlerin neler olabileceği çalışmada aktarılmaya çalışılmıştır.

2. TEMEL KAVRAMLAR: AHLAK, İŞ AHLAKI, ETİK, ENFLASYON, DEFLASYON, FİYAT İSTİKRARI

2.1. Ahlak ve Etik

Ahlak ve etik kavramları sıkça birbirlerinin yerine kullanılan kavramlardır. Her ne kadar bu iki kavram aynı kökten türemiş olsa da aslında farklı anlamlara sahiptirler.

İnsan ilişkilerinde “iyi” ya da “doğru” veya “kötü” ya da “yanlış” olarak adlandırdığımız değer yargılarını (Aktan, 2009: 38) ifade eden ve genel olarak iyiye yönelen davranış kuralları bütünü olarak tanımlanan ahlak kavramının iki anlamı vardır. Bunlardan ilki belirli bir insan topluluğunda bu insanların birbirleriyle ilişkilerini düzenleyen eylem modellerini ya da kurallarını ifade ederken, ikincisi ise bu kurallara uymanın insan açısından bir kişilik özelliği olduğunu yansıtmaktadır. Kısaca ahlak bireylerin tutum ve davranışlarını ifade etmek için kullanılmaktadır.

Buna karşılık etik kelimesi töre, gelenek, görenek gibi anlamlar taşımasının yanı sıra, toplumun sahip olduğu gelenek görenek, değer yargılarını olduğu gibi benimseyip sorgulayarak, eleştirerek içselleştirme ve benimseyerek kişiliğin bir özelliği haline getirmek anlamına gelmektedir. Etik, toplum tarafından insan eylemlerine iliştilen ahlaki değerler olarak görülebileceği gibi, insani amaçlara hizmet ettikleri için kodlar veya bir kontrol sistemi olarak da görülebirlirler. Genellikle, etik standartlar yasalarla belirlenir; ancak etik davranış bundan daha fazlasıdır ve devlet düzenlemeleri ile yasalarının ötesine geçer. Dolayısıyla ahlak davranışlara, etik ise usul veya biçim ya da ilkelere odaklanmaktadır.

2.2. İş ahlakı

İş etiği, işin ahlaki davranışını yöneten ilkeler veya standartlar kümesini ifade eder. İş ahlakı buna karşılık, tüketiciler ve işletmeler ile çeşitli piyasa katılımcıları arasında belirli bir temel düzeyde güvenin var olmasını sağlar. Dolayısıyla iş ahlakı terimi, bir şirketin davranışına rehberlik eden ahlaki ilkeler kümesini ifade eder. Bu ilkeler, devlet ve diğer işletmelerle etkileşimi, çalışanlarına davranışı ve müşterileriyle ilişkileri dahil olmak üzere şirketin faaliyetlerinin her yönünü kapsamaktadır. İş ahlakı, yasal kurallarla sınırlı değildir ve işletmenin faaliyet gösterdiği topluluklardaki kültür ve norm unsurlarını da içermektedir.

Bir işletmenin teknikleri, uygulamaları ve hedefleri arasındaki ilişki ile ilgili olan iş ahlakı, işletmelerin kendilerine ve topluma karşı dürüst olmaları gerektiğini ifade etmektedir. İşçilere adil davranmak, müşterilerden adil fiyatlar talep etmek, kaliteli mal ve hizmetler sağlamak, makul karlar elde etmek, malların doğru ve adil ağırlıklarını kullanmak vb. iş ahlakına verilebilecek bazı örneklerdir. Buna karşılık yanıltıcı reklamlar yoluyla müşterileri dolandırmak, işletmenin muhasebe defterleri ve finansal tabloları üzerinde oynamak, işletmenin mal ve varlıklarını kişisel kullanım için kullanmak, ticari sırları rakiplere ifşa etmek gibi ise iş ahlakına aykırı davranışlara örnek gösterilebilir.

Örgütsel yapılarını iş ahlâkı normlarına dayandıran işletmelerin güvenilirlik düzeyleri yükselmekte, kurumsallaşmaları kısa zamanda gerçekleşmekte, ürünlerinin tercih potansiyeli yükselmekte, geniş ve sürekli bir müşteri tabanı bulabilmekte ve sonuç olarak yüksek bir rekabet gücüne kavuşabilmektedirler (İlhan, 2005:58).

2.2.1. İş Ahlakı Türleri

- **Kurumsal sosyal sorumluluk:** Kurumsal sosyal sorumluluk paydaşların ihtiyaçlarını karşılarken, bu ihtiyaçları karşılayanın çalışanlar, çevre, toplum ve işin faaliyet gösterdiği topluluk üzerindeki etkisini hesaba katmayı ifade eden bir kavramdır. İşletmeler için elbette kar büyük bir öneme sahiptir ancak toplumun, müşterilerin ve çalışanların refahı dikkate alındığında kar ikincil bir öneme sahip olması gerekmektedir. Çünkü yapılan araştırmalar, kurumsal yönetimin ve etik uygulamaların işletmelerin finansal performansını artırdığı sonucuna varmıştır.
- **Şeffaflık ve Güvenilirlik:** Şirketlerin mali performanslarını şeffaf bir şekilde raporlamalarını sağlamaları çok önemlidir. Bu sadece gerekli finansal raporlar için değil, genel olarak tüm raporlar için geçerlidir. Bu raporların çoğu, yalnızca düzenleyicilere sunulan raporları değil, aynı zamanda kararların nasıl ve neden alındığını, hedeflere ulaşıp ulaşılmadığını ve performansı etkileyen faktörleri ana hatlarıyla belirtmektedir. Bunun dışında basın bültenleri, şirketlerin şeffaf olabilmesinin başka bir yoludur. Yatırımcılar ve müşteriler için önemli olan olaylar, iyi ya da kötü haber olup olmadığına bakılmaksızın yayınlanmalıdır.
- **Adalet/Tarafsızlık:** Bir işyeri, ırk, din, inanç, yaş veya kimliğe bakılmaksızın tüm çalışanlar için kapsayıcı, çeşitli ve adil olmalıdır. Adil bir çalışma ortamı, herkesin terfi edebileceği ve kendi yolunda başarılı olabileceği yerdir.
- **Teknolojik Uygulamalar ve Etik:** Özellikle e-ticaret uygulamalarının büyük ölçüde arttığı günümüzde, işletmelerin topladıkları müşteri bilgilerini iş ahlâkı çerçevesinde kullanılmasını sağlaması ihtiyacını beraberinde getirmektedir. Bunun yanı sıra özellikle birçok işletme müşteri bilgilerini sakladığından ve kötü niyetli kişilerin kullanabileceği verileri topladığından, teknolojinin mümkün olan en üst düzeyde güvence altına alınmasını sağlamalıdır.
- **Sosyal ve Çevresel Sorumluluk:** Kurumsal sosyal ve çevresel sorumluluk, bir şirketin pazarın dışındaki etkisini fark etmesi anlamına gelmektedir, çünkü işletmenin kar elde etmesi toplum pahasına olmamalıdır. Bu nedenle, kurumsal sosyal sorumluluklar işletmelerin çevreyi korumaya, sosyal amaçlara ve farkındalığı yaymaya yönelik çalıştıkları yaygın bir uygulamadır.

2.3. Enflasyon, Deflasyon ve Fiyat İstikrarı

Enflasyon kısaca fiyatlar genel seviyesinin sürekli yükselmesi veya paranın sürekli değer kaybetmesi olarak tanımlanmaktadır. Burada dikkat edilmesi gereken husus enflasyon fiyatlar genel seviyesindeki bir defalık veya kısa dönemde meydana gelen bir artış olmadığı gibi, tek bir maldaki veya birkaç maldaki fiyat artışları da değildir.

Diğer taraftan literatürde enflasyonun nedenlerini ve etkilerini dikkate alan farklı tanımlamalar da vardır. Bunlardan biri, enflasyonun çok para ile az mal alınabildiği toplam talep fazlası durumu olarak tanımlarken, bir başka tanım ise enflasyonun, toplam ya da kişi başına para stokunda ya da parasal gelirdeki artış olduğu biçimindedir. Bu tanımların her ikisi de enflasyonun nedenini göz önüne almaktadır. İlk tanıma göre enflasyon mal piyasasındaki taleple ilişkili iken, ikinci tanımda para arzındaki değişimin sonucu olarak açıklanmaktadır (Yıldırım, 2001:319).

Enflasyonun tam tersi olan deflasyon ise, genel fiyat seviyesindeki uzun süreli düşüşler olarak tanımlanmaktadır. Hem enflasyonun hem de deflasyonun ekonomi üzerinde olumsuz sonuçları olmaktadır.

Fiyat istikrarı ise enflasyon veya deflasyonun olmadığı bir ekonomide, ekonominin parasal dengesinin belli bir fiyat düzeyinde sabitlendiği durumu ifade etmektedir. Fiyat istikrarının olduğu bir ekonomik yapıda paranın değeri korunduğundan, yatırım, tüketim ve tasarruf gibi kararların alınmasındaki belirsizlikler ve alınan riskler daha düşük olmaktadır.

3. ENFLASYONUN İŞ AHLAKINA ETKİLERİ

Enflasyonist ortamda, enflasyonun maliyetleri toplum ve ekonominin tamamı açısından önemli olmaktadır. Çünkü böyle bir ortamda satın alma güçlerinin düşmesi nedeniyle bireyler mal ve hizmet tüketimlerini sınırlandırmak zorunda kalmaktadırlar. Benzer şekilde yatırımcılar uzun vadeli kararlar almaktan kaçınırlar. Yatırımların genellikle orta ve uzun vadeli yapılması nedeniyle, yüksek enflasyon ortamında yatırımcılar yatırımın getirisi ile katlanılacak maliyet arasındaki farkı öngöremediklerinden yatırım yapmaktan kaçınırlar.

Enflasyonun önceden tahmin edilemeyen değişikliklere neden olarak yarattığı belirsizlik, yatırımcının kendini garantiye almak ve riskten korunmak için fazladan bir getiri talep etmesine ve dolayısıyla reel faizlerin yükselmesine yol açar. Bu da borçlanma maliyetlerini artırarak, üreticinin kredi taleplerini kısıtlayan ve yatırımı engelleyen bir unsur olarak ortaya çıkar (TCMB, 2004:7).

Enflasyon, kısa dönemde işletmelerin yatırım yapma risklerinin artmasına, üretim maliyetlerinin yükselmesine ve faiz yükünün artmasına sebep olurken, uzun dönemde işletmelerin muhasebe sistemlerini ve mali tablolarını anlamsızlaştırmaktadır (Altınışık, 2019:5).

Böyle bir enflasyonist ortamda yaşanan belirsizlik ve kararsızlık, bireylerin ve işletmelerin tüketim ya da yatırım yapmak yerine enflasyonun zararlı etkilerinden korunmak amacıyla döviz, altın, gayrimenkul gibi üretken olmayan araçlara yönelmelerine neden olmaktadır. Bu durum da üretim ve verimlilik üzerinde olumsuz etkiler yaratarak, uzun dönemde ekonomik büyümenin yavaşlamasına yol açmaktadır (TCMB, 2013:7).

Enflasyon dönemlerinde faiz oranları ve yabancı kaynaklardan sağlanan fonların maliyeti artmaktadır. Bu da borçlanmaya ağırlık veren işletmelerin satışlarında finansman giderlerinin payının artmasına ve kârlılıklarının azalmasına sebep olabilir (Kantar ve Öndeş, 2022:41).

Bunun dışında yerli üreticilerin uluslararası piyasalarda rekabet gücünün düşmesine neden olarak, ihracatın azalmasına, dolayısıyla dış ticaret dengesinin bozulmasına yol açmaktadır.

Enflasyon, ülkedeki servet ve gelir dağılımının bozulmasına ve sosyal adaletsizliğin artmasına da neden olmaktadır. Özellikle sabit gelirli ve düşük gelirli bireyler üzerindeki olumsuz etkisi daha fazladır ve yoksullaşmayı artırır.

Öte yandan yüksek enflasyon vergi kalemleri üzerinde de olumsuz etki yaratabilmektedir. Tahakkuk eden vergilerin tahsil edilmesi uzun bir döneme yayıldığından, enflasyonun artması reel vergi kalemlerinde bir azalmaya neden olacaktır. Ayrıca yüksek enflasyon, maliyetleri artırmak yoluyla işletme kârlarını da düşüreceğinden, gelirler üzerinden tahakkuk eden vergi miktarını da azaltmış olacaktır (TCMB, 2013:7).

Dolayısıyla yüksek enflasyonun neden olduğu belirsizlik o toplumda sosyal ve siyasi ilişkilerde çıkarıcı ve ahlaki olmayan davranışların artmasına neden olacaktır. Enflasyonist ortamda ekonomik birimlerin kendi çıkarlarını toplumun çıkarlarının üstünde tutmaları, enflasyonun ahlaki bir boyutu olduğunu göstermektedir.

Enflasyonun işletmeler üzerindeki olumsuz etkileri sonucunda, karlarını korumak, varlıklarını devam ettirmek gibi nedenlerle iş ahlakına uymayan davranışlarının artması söz konusu olacaktır. Amacı kar maksimizasyonu olan işletmelerin enflasyonist ortamda maliyetlerinde meydana gelen artışı fiyatlarını artırarak tüketicilere yansıtmaları bir noktaya kadar kabul edilebilir. Ancak işletmelerin/satıcıların büyük bir kısmı enflasyonu fiyatları yükseltmek için bir bahane olarak görmesi, dolayısıyla tüketiciye sunması gereken “adil” fiyatın çok üzerinde bir fiyattan mal ve hizmetleri sunmaları yaygınlaşmaktadır.

Bunun dışında işletmeler iş ahlakına aykırı olarak ürünlerin boyutunu küçültmek ve gramajını azaltmak gibi uygulamalar gidebilirler. Ekonomist Pippa Malmgren tarafından shrinkflation (görünmeyen enflasyon) olarak adlandırılan bu uygulama, işletmeler tarafından kar marjlarını artırmak veya artan girdi maliyetleri sırasında kar marjlarını korumak için gizli bir taktik olarak kabul edilmektedir. Özellikle artan enflasyon dönemlerinde artan hammadde, işçilik, paketleme ve taşıma maliyetleri ile mücadele etmek için işletmelerin sıkça başvurdukları bir uygulamadır (Wood, 2022:3).

Ayrıca, stoklamanın artması, kayıtdışı olarak yabancı işçi çalıştırmak, yanıltıcı reklamlar yapmak, malların kalitesini düşürmek gibi iş ahlakına aykırı davranışlar da artmaktadır.

4. İŞ AHLAKININ KURUMLAŞMASINDA BAĞIMSIZ DÜZENLEYİCİ VE DENETLEYİCİ KURUMLARIN ÖNEMİ

Ahlak insanların toplumda nasıl davranmaları gerektiği konusuna ilişkin ölçütler koymaktadır. Ahlak aynı zamanda insanlara bir sorumluluk bilinci de yüklemektedir. Toplumdaki değer yargıları ışığında ahlak insanlara

bir rol biçmekte; neyin iyi neyin kötü, hangi davranışların erdemli hangi davranışların erdemsiz olduğu da toplumdaki değerlerin bileşimi sonucunda ortaya çıkmaktadır (Sakal ve Kitapçı, 2009: 33).

Toplumdaki bireylerin ahlaki değerleri bir şekilde iş ahlakına da yansımaktadır. “Genel olarak iş ahlakı; bütün ekonomik faaliyetlerde dürüstlük, güven, saygı ve hakça davranmayı ilke edinmek ve çevreyle temas halinde bulunurken aynı çevreyi paylaşan topluma destek olmaktır (Özgener, 2020: 57). Türkiye gibi gelişmekte olan ülkelerde hükümetler ve yöneticiler, iş normlarını ve ahlaki değerleri uygulamaya yansıtmak için öncü rolü oynamalıdır. Yöneticiler, özellikle üst düzey yöneticiler, kurumsallaşan iş ahlakı sayesinde ahlaki karar vermeyi teşvik edecek ve destekleyecek bir örgütsel ortamı yaratmak için birinci derecede sorumluluğa sahiptirler. Neticede iş ahlakının kurumsallaşmasıyla, ahlaki kavramların veya kuralların günlük eylemlere uygulanması ve entegrasyonu ifade edilmektedir (Özgener, 2020: 152).

Toplumdaki ahlaki boyutun eksikliği durumunda, maddi varlıkların ve isteklerin tatmini araç olmaktan çıkıp başlı başına birer amaç olurlar. Böylece tatmin, ihtiyaçların karşılanması bir fonksiyonu olarak kalmaz ve başkalarıyla yarışmaktan çok daha fazlası haline gelir. Dolayısıyla birey üzerindeki baskılar altından kalkabileceğinin çok ötesine geçer ve iç huzur zarar görür. (...) Böylece kaynaklar üzerindeki talepler katlanır, dengesizlikler artar ve bu mücadeleye ayak uyduramayanlar geride kalır. Yoksulluk ve ekonomik eşitsizlikler ortaya çıkar. İhtiyaçların giderilmesi hedefi giderek daha çok hasar görür. Tatminsizlik ve toplumsal gerilim kızışır, ümitsizlik ve yabancılaşma belirtileri bireysel ve toplumsal hayatın her alanına yansır (Chapra, 2018:360).

Yansımaların sonucu olarak kısacası piyasalar, “katılımcıların yolsuzluk ya da rekabet karşıtı davranışlar içerisine girmesi hakkında çöker. İşlem maliyetlerinin, teknolojik ve diğer parasal olmayan dışsallıkların içselleştirilmesini engellemesi halinde de çöker. Ayrıca, eksik bilginin etik tehlikeler ve olumsuz seçimlere yol açması halinde de çöker (Rodrick, 2014: 41). Dolayısıyla sistemdeki dönüşümün sağlanabilmesi için temel koşullar Acemoğlu ve Robinson (2016: 407) göre, “mülkiyet haklarını hayata geçiren, eşit rekabet şartları sağlayan ve yeni teknoloji ve becerilere yatırım yapmayı teşvik eden kapsayıcı ekonomik kurumlar olmalıdır”.

Bağımsız düzenleyici ve denetleyici kurumların faaliyetlerinde kapsayıcılığın sağlanabilmesi için de uluslararası düzenlemeler ve standartlar kapsamında organize olmaları; bağımsızlık, hesap verebilirlik, şeffaflık kriterlerine göre faaliyetlerini siyaset üstü bir anlayışla yürütebilmeleri gerekir. Çünkü: Bireylerin, piyasalardaki alıcı ve satıcı rolleri, siyasi ortamda oy veren; vergi ödeyen; bürokrat veya kamu hizmetlerinden yararlanan; politikacı gibi statülere dönüştüğü için kişilik değişimleri de kaçınılmaz olabilir. Bu yüzden sistem, bireysel ahlaki değerlerin devreye girmeyeceğini varsayarak tedbiri elden bırakmadan; etik düzenlemeleri; bağımsız düzenleyici ve denetleyici yapıları kapsayıcı bir şekilde devreye almalıdır. Sakal ve Kitapçı (2009: 33) çalışmalarında bu gerekliliği şöyle ifade etmişlerdir: Tüm kamu kaynaklarını yönetmekle ve bunları adaletli bir şekilde tahsis etmekle görevlendirilen siyasetçilerin de ahlaka uygun davranmaları son derece önemlidir. Siyaset insanları mutlu kılma adına gerçekleştirilen en önemli araçlardan biridir. Siyasetin bir araç olarak görülmeyip bir amaç olarak görülmesi siyasal ahlakın dışına çıkmak demektir. Siyasal ahlak siyasetin temel yapı taşlarından birisidir. Siyasal ahlakın dışına çıkılması siyaseti de ahlaksız bir hale büründürmektedir.

4.1. Bağımsız Düzenleyici ve Denetleyici Kurumların Başarısının Artırılmasında Temel Faktörler

Yüksek enflasyon sürecinin yaşandığı ekonomilerde, işin başında göstergeler tam okunmadığı, baskılandığı veya önemsenmediği durumlarda piyasa fiyatlarında sinyal etkisi oluşmadığı için zamanında müdahaleler yapılmamıştır. Çünkü bağımsız düzenleyici ve denetleyici kurumlar görev tanımlamalarının gereklerini zamanında yapamamışlar veya dikkate alınmamışlardır. Bu yüzden uzun dönemli ve sürekli başarıların sağlanabilmesi için kurumsal yapılara ve hafızalarının dinç tutulmasına ihtiyaç vardır. Zira sorun, bireylerin alım gücünün eksiye düşmesine yol açan (paranın iç ve dış değerindeki kayıpların yansımalarıyla oluşan) enflasyonun neden mi sonuç mu olduğunu tartışmak yerine; bu sonuca yol açan faktörler; piyasa düzensizlikleri; asimetrik bilgi kaynakları; ters seçim, ahlaki tehlike gibi problemler nelerdir, nasıl önlenebilir sorularının cevapları aranmalıdır.

Naqvi'ye (2019: 64) göre de: “Kamu politikasının ekonomik olan ve olmayan özgürlükler arasında ve ayrıca politik özgürlük ile gelir ve servetin eşit dağıtımı arasında denge kurmayı başarması için onun adil, doğru, tarafsız ve yerleşik çıkarlara hizmet etmiyor olarak görülmesi gereklidir. Yalnız o zaman kapsayıcı bir politik mutabakat inşa edilebilir ve kanunen eşitlikçi bir kamu politikası için kamu desteği kazanılabilir”. Kamunun bu yönlendiriciliği, işletmelerinde de paydaşlar kapitalizmi anlayış ile faaliyetlerini yürütmelerine önderlik edebilir.

4.1.1. Paydaşlar Kapitalizmi Yaklaşımının İçselleştirilmesinde Uluslararası Standartlar Referans Alınmalı

Bağımsız düzenleyici ve denetleyici kurumların başarısının artırılabilmesi için çalışma alanlarında kapsayıcılığın sağlanabilmesi gerekir. Bunun için de temel kural, uluslararası düzenlemeler ve standartlar kapsamında organize olunması; birbirine benzeyen işletmeler arasında homojenliğin sağlanması ve haksız rekabetin yaşanmaması için denetlenebilmesi gerekmektedir. Bu yaklaşım ve şeffaflık sonucunda, ekonomik faaliyetlerin temel kurumları olan işletmelerin tüm paydaşlarına iyi bir model olması sağlanabilecektir.

Makro ölçekte böyle bir yapının inşası, işletmelerin bu felsefeyi içselleştirecek bir bakışa sahip olmalarını teşvik edecek başta bağımsız düzenleyici ve denetleyici kurumlar ve diğer paydaşlar ile mümkün olacaktır. Çünkü paydaşlar kapitalizmi yaklaşımında, üretim sürecinden tüketime kadarki her aşamada israfın önlenmesini; doğal çevrenin korunabilmesini ve nihayetinde paylaşımda adaleti sağlayabilecek sürdürülebilir bir ekonomik sistem için gerekli temel kurumsal yapıların kapsayıcı bir şekilde organize edilebilmesi felsefesi esastır.

Paydaşlar kapitalizminin yaklaşımını Schwab (2020) şu şekilde açıklamaktadır: İşletmelerde profesyonel yönetimin amacı, müşterilere, hissedarlara, işçilere, çalışanlara ve topluma hizmet etmek ve paydaşların farklı çıkarlarını aşağıda özetlendiği şekilde uyumlu hale getirmektir:

- Yönetim, paydaşlarından müşterilerinin ihtiyaçlarını karşılarken onlara en iyi değeri vermek zorundadır. Bunun için yeni fikirleri ve teknolojik ilerlemeyi, ticari ürün ve hizmetlere dönüştürmelidir. Bu bağlamda işletmeler arasındaki rekabet de müşterilerin en iyi değer seçimini almasını sağlamanın olağan ve kabul görmüş bir yoludur.

- Yönetim hissedarların vekili olarak, yüksek bir getiri sağlayarak yatırımcılarına hizmet etmelidir.

- Yönetim, çalışanlarına hizmet etmelidir, çünkü özgür bir toplumda liderlik, yönetilenlerin çıkarlarını bütünleştirmelidir. Özellikle yönetim, çalışanların devamlılığını, reel gelirin iyileştirilmesini ve iş yerinin insancıl olmasını sağlamak zorundadır.

- Yönetim, topluma hizmet etmek zorundadır. Gelecek nesiller için maddi evrenin vekili rolünü üstlenerek; elindeki maddi ve maddi olmayan kaynakları en uygun şekilde kullanmak; yönetim ve teknolojiye bilgi sınırlarını sürekli genişletmek zorundadır. İçin bulunduğu iktisadi yapının hedeflerini yerine getirmesine izin vermek için girişiminin, topluluğa uygun vergiler ödemesini garanti etmelidir. Yönetim ayrıca kendi bilgi ve deneyimini topluma sunmak zorundadır.

Özetle yönetim, sorumlu olduğu ekonomik işletme aracılığıyla yukarıdaki hedeflere ulaşabilir. Bu nedenle işletmenin uzun vadeli varlığını sağlamak önemlidir. Uzun vadeli varoluş, yeterli karlılık olmadan sağlanamaz. Bu nedenle karlılık, yönetimin müşterilerine, hissedarlarına, çalışanlarına ve topluma hizmet etmesini sağlamak için gerekli araçtır. Dolayısıyla iktisadi yapının temel kurumları olan işletmelerin, üretim faktörlerinin etkin istihdamını sağlayabilmesi, haklarını ödeyebilmesi için bu bakışın içselleştirebilmesi gerekir. Bunun için de kurum kültürü anlayışının oluşması ve yaygınlaştırılması gerekmektedir.

4.1.2. Kurum Kültürü Oluşumunda İş Ahlakı Kurallarının Norm Şekline Getirilmesi Teşvik Edilmeli

Kurum kültürü oluşumunda “çalışma ve iş ahlakıyla iç içe olan bir diğer konu meslek ahlakıdır. Burada belli bir mesleğin mensuplarının, uyulması gereken ahlaki ilkeler doğrultusunda hareket etmeleri beklenir. Bu ahlaki ilkeler o meslek bakımından esas itibarıyla evrenseldir. Örneğin dünyanın her köşesinde hekimlerin ortak mesleki ilkeler doğrultusunda aynı hipokrat yeminini etmesi gibi. Meslek mensuplarının uyması ve sahip çıkması gereken kurallar veya meslek ahlakı ilkeleri (code of conducts) barolar, tabip odaları, iş adamları dernekleri, eczacılar birliği gibi meslek örgütlerinin disipline edici düzenlemeleri neticesinde oluşur ve meslek saygınlığını da beraberinde getirir. Bu ilkelere uyulmaması halinde meslekten geçici veya sürekli men yaptırımı uygulanabilmektedir” (Kurtuluş, 2010: 744).

Özel sektörde iş ahlakı çalışmalarına bakıldığında daha çok büyük ölçekli kurumlar ve uluslararası şirketlerin varlığında yürütüldüğünü görmekteyiz. Kurumsallaşmış büyük firmalarda ahlaki kod uygulamaları yaygın bir şekilde kullanılmaya başlamıştır. Bunun için de işletmeler ahlaki kodların oluşturulması için danışman desteklerini alarak, bu işleyişi yukarıdan aşağıya doğru yürütmeye özen göstermektedirler. Ülkemizdeki birçok işletme iş ahlakı ile ilgili davranış ve ilkeleri belirlerken konjonktürel sebeplerden yola çıkmaktadırlar. Bu ilkeleri belirlerken de ihtiyaçtan ziyade piyasada “etik kod”a sahip olan firma etiketi almak için bu kodları talep etmektedirler. İş ahlakı kodlarının firmalarda uygulanmasında zaman zaman sorunlar yaşansa da uzun dönemde fayda sağlandığı da tespit edilmiştir. Başlangıçta sadece yazılı olarak uygulamaya konulmuş, akabinde şirket

çalışanları arasında bu etik kodlar benimsenmiş ve hayata geçirilmeleri için çabalar sarf edilmiştir (Akol ve diğ., 2023: 2478).

5. SONUÇ VE ÖNERİLER

İktisadi yapının temel kurumları olan işletmelerin paydaşlar ekonomisi anlayışıyla faaliyet gösterebilmeleri için bağımsız düzenleyici ve denetleyici kurumlar yönlendiriciliğinde sivil toplum örgütlerinin, toplumu ilgilendiren birçok konuda işlerin merkezinde yer alması, iş ahlakının bir baskı unsuru olarak kullanmaları gerekmektedir. Sivil toplum örgütlerinin yapması gereken şey, devleti temsilen bağımsız düzenleyici ve denetleyici kurumlar yönlendiriciliğinde, ekonomik gelişmelerin yanında ahlak ve diğer tüm konularda aktif olarak görev almaları ve buna dair planlı bir program halinde çalışmaları gerekmektedir. Çünkü “özellikle iş ortamında baş gösteren; adam kayırmacılık, fırsatçılık, torpil döngüsü ve performans yetersizlikleri, etik ilkelerin yeniden yapılandırılması ihtiyacını ortaya çıkarmıştır. Bu olumsuzlukların ortadan kaldırılması için, hükümetler, sivil toplum kuruluşları, üniversiteler ve akademik kurumlar iş etiğinin sağlam temeller üzerine kurulması, kurumsallaştırılması ve temiz bir toplum oluşturma konusunda işbirliği yoluna” gitmelidirler (Akol ve diğ., 2023: 2476).

Sonuç olarak, bağımsız düzenleyici ve denetleyici kurumlar yönlendiriciliğinde ilgili sivil toplum örgütlerinin yapmaları gereken şey, toplumda bir kamuoyu oluşturarak, iş ahlakı kurallarının norm hâline getirilmesini sağlamaktır.

Özet: 21.yüzyılın ilk çeyreğinde yaşanan küresel gelişmeler ile neoliberalizmin yarattığı derin politik ve ekonomik krizler, yeni çıkış yollarının aranmasına neden olmuş ve bu çıkış, neoliberal devlete karşı sol siyasette sosyal bir devlet vurgusunun ön plana çıkması olarak belirmiştir. Güçlü bir sosyal devlet tahayyülü ile günlük kitlelere soldan hitap eden, anti-kapitalist olmasa da anti-kapitalist söyleme sahip, sermayeyi dışlamadan emeği ön plana alan sosyal demokrat bir devlet inşa etme isteği, geçmişe dönük sol popülist bir söylemle bağ kurulmasına neden olmuştur. Bu bağın Türkiye özelinde sol siyasette, özellikle 1970’li yıllarda Bülent Ecevit döneminde demokratik sol bir anlayışla kurulduğu iddia edilebilir. Zamanla geline nokta sosyal demokrasi ile sol popülizmin ortak çizgisinin olabileceği ve krizde olan neoliberal devlete karşı sosyal demokrasinin bir çözüm yolu olacağı düşüncesi güçlenmiştir. Bu bildirinin amacı, neoliberal hegemonya ve neoliberalizmin krizine sol popülist bir söylemle karşı çıkan sosyal demokrasinin popülist niteliğini sorgulamak, geçmişte uygulanan ve popülist açılımları olan demokratik solun günümüze uygulanabilirliğini ve merkez sol düşünce ile popülizmin içsel açmazlarının ne ölçüde derin olduğunu sosyal demokrasinin ve popülizmin geçmişine ve günümüze referansla incelemektir.

Anahtar Kelimeler: Neoliberalizm, Sol Popülizm, Sosyal Demokrasi.

Left Imagination in Social Democracy Between Past and Future

Abstract: Global developments in the first quarter of the 21st century and deep political and economic crises that neoliberalism created have led to a search for new solutions and these solutions have hereby been crystallized in left politics with coming into prominence of an emphasis on a social democratic state against neoliberal one. Together with a strong social democratic state imagination, the claim for its construction which can appeal to fragmented masses, utter an anti-capitalist discourse without necessarily being anti-capitalist, and highlight labor without neglecting capital have necessarily brought about establishing a rapport with a retrospective left populist discourse. It can be suggested that the rapport had been established in Turkey under the period of Bülent Ecevit in the 1970s with a democratic left view. In due course, it is acknowledged that social democracy and left populism can have a common ground and the former can be a solution for the neoliberal state in crisis. The aim of this work is to scrutinize the populist structure of social democracy that challenges neoliberalism in crisis with a left populist discourse and to investigate whether democratic left can be practiced in today’s world and to what extent center left thought and populism encompass a deep internal predicament. Therefore, it tries to analyze the fundamental presuppositions of social democracy and populism with a reference to past and future.

Keywords: Neoliberalism, Left populism, Social Democracy.

1. GİRİŞ

Son yılların siyaset bilimi açısından en popüler kavramlarından biri olan popülizm, beraberinde getirdiği tanımsal tartışmalar ile hem sağ hem de sol ideolojiler için önemli bir uğrak noktası olmuştur. Popülizmin referans noktası olarak kurgulanan ‘yozlaşmış elit’ ve ‘halk ikilemi’ sağ ve sol ideolojilere eklenilebilmede kolaylık sunmuştur. Sağ ve sol düşüncenin popülizm ile kesişen noktası da burada ortaya çıkmaktadır: ‘biz’ ve ‘onlar’ söyleminin rahatlıkla ideolojik bagajlarında yer bulabilmesi. Bu bildirinin ana konusu da sosyal demokrasinin sol popülizm ile 21. yüzyılda yaşanan neoliberal devletin krizine karşı kurmak istediği söylemsel rabitanın Türkiye’de özellikle 1970’li yıllarda Bülent Ecevit dönemi ışığında günümüzde uygulanabilirliğinin imkân ve sınırlarını incelemektir.

2. SOSYAL DEMOKRASİDE POPÜLİST SÖYLEM

1970’lere kadar altın çağını yaşayan ve özellikle İskandinav ülkelerde ve Avrupa ülkelerinde (özellikle Almanya ve Thatcher dönemine kadar İngiltere’de) hâkim ideoloji haline gelen sosyal demokrasi hem etkin olduğu dönemde özellikle 70’lerde hem de üçüncü yol arayışlarının olduğu dönemde popülist tınılara sahiptir. Sosyal demokrasinin popülist yapısı kendine sol popülist söylemde vücut bulmuştur. Bu nitelik sosyal demokrasinin temel argümanının işçi sınıfının partisi olma niteliğinde saklıdır. İşçi sınıfının partisi ya da ideolojisi olma

temelinde yükselen sosyal demokrasinin planlamacılık ve refah devleti ‘projeleri’ ve işçi hareketleri ile sendikalarla olan organik bağı ve özellikle 1970’lerde kendisine atfedilen “merkez sol” olma özelliği sol popülist içgüdünün yansımasıdır. Yine de şunu da belirtmek gerekir ki her siyasal söylem ve politika, popülist nitelik taşımaz. Ancak günümüzde sosyal demokrasinin sol popülist bir söylem benimsediği argümanı sosyal demokrasinin, neoliberalizmin yükselişinde ve yeni sağ söylem ile verdiği mücadelede aranmalıdır. Neoliberalizmin yükselişi, sosyal demokrasinin çöküşü ile eş zamanlı gerçekleşen olgulardır. Bu süreçte de sosyal demokrasinin neoliberalizm ile verdiği ‘yeni dünyada var olma’ mücadelesi, mevcudiyetini sürdürmek için sol popülizm ile bir çıkış yoludur.

2.1. Sol Popülizme Giden Yol

Siyaset biliminde tanımsal netliği muğlak olan popülizm kavramı, Krastev’e göre, “liberalizm, sosyalizm veya muhafazakarlık biçiminde bir ideoloji olamayacak kadar eklektiktir” (Krastev, 2007). Popülist söylemin temel tanımlayıcı niteliğini, toplumun iki homojen ve karşıt gruba ayrıldığı ve bu grupların özdeş, ‘olduğu gibi insanlar’ ile ‘yozlaşmış seçkinler/ elitler’ söylemi oluşturmaktadır. Popülist anlayışta siyasette ‘genel iradenin’ esas olduğu ve toplumda gerçekleşecek olan değişimin ancak seçkinlerin radikalleştirilmesi ile mümkün olabileceği düşüncesi vardır (Krastev, 2017). Diğer taraftan Jan-Werner Müller, popülistleri çoğulculuk karşıtı olarak tanımlar. Popülistler sadece ve sadece kendilerinin halkı temsil ettiği iddiasındadır. Ayrıca iktidar mücadelesinde popülistler siyasi rakiplerini ahlaksız ve yozlaşmış elitler olarak tanımlamaktan çekinmezler ve iktidara sahip iken hiçbir koşulda muhalefeti meşru olarak görmezler (Müller, 2019: 15). Müller, popülist iktidarların üç temel özelliğini şu şekilde sıralar: devlet aygıtını gasp, yolsuzluk ve kayırmacılık ile sivil toplumun bastırılması için sistemli bir çaba (Müller, 2019: 16). Ayrıca popülistlerin iktidarda kalmasına en büyük yardımcı metin olarak anayasalar görülür. Bu anlayışa göre, siyasal iktidar tarafında “eğer iktidarda kalmak tek hedef haline gelmişse, popülistlerin anayasayı bir perde olarak görmesi ve perdenin arkasında farklı şekillerde davranması ihtimali vardır. İktidarda kalma amacına hizmet etmez hale gelirse kendi anayasalarını bile kurban edebilirler” (Müller, 2019: 81).

Böylece, popülizmin net bir tanımı olmamakla birlikte ‘popülist siyasetin’ ancak uygulama alanında netlik kazandığını söylemek yanlış olmayacaktır. Müller’in popülizme ilişkin koşulları belirlerken tanımladığı devlet aygıtını gasp, yolsuzluk, sivil toplumun baskılanması ve hatta otoriterleşmeye/ baskıcı rejime giden anlayış popülizm tanımı altında “sağ popülizm” için bir tanımdır. “Pejoratif” bir söylem tarzı olarak nitelenen popülizm, genelde sağ popülist liderlerce yönetilen siyasal iktidarlarda vücut bulur. Ralf Dahrendorf’un kısaca belirttiği üzere “birinin popülizmi diğerinin demokrasisidir ve tam tersi”. Ernesto Laclau ise başka bir açıdan popülizmi “demokrasinin demokratikleştirilmesi” olarak nitelemektedir (Bora, 2019).

Cas Mudde’ye göre popülist ideolojinin temel özellikleri tekçilik ve ahlakçılıktır: hem halk hem de elitin temelde aynı çıkarları ve değerleri paylaştığı görülürken, aralarındaki temel ayrım ahlaka dayanır. Mudde’ye göre popülizm bir ideolojidir – yani bir dünya görüşüdür, ancak ince merkezlidir, yani siyasi gündemin yalnızca bir kısmına hitap eder- örneğin, en iyi ekonomik veya siyasi sistemin ne olduğu hakkında bir fikri yoktur. Sonuç olarak, hemen hemen tüm siyasi aktörler, popülizmi, normalde sağda bir tür milliyetçilik ve solda da bir tür sosyalizm olan, sözde bir ev sahibi ideolojiyle birleştirecektir (Mudde, 2017). Mudde’nin de belirttiği gibi popülizmin solda bir tür sosyalizm olan ideolojiyle birleşmesi de “sol popülizm” kavramını ortaya çıkarır. Tanıl Bora günümüzde popülist sol bir politikanın sınıfsal dayanağı ve ‘momentini’ kapitalizmin süper-esnek ağı içerisinde sadece istihdam rejimi bakımında değil duygulanımsal bakımdan da atomize olmuş, hatta dağılmış ve seyyarlaşmış, geleneksel sınıf örgütlenmelerin dışında olan “prekaryada” bulur (Bora, 2019). Bora’nın dikkat çektiği diğer bir nokta ise halk kelimesinin popülizm tanımı içindeki muğlaklığıdır. Ancak tam da halk tanımındaki bu muğlaklık, popülizmin siyasi arenadaki gücü ve zaferidir. Halk, yurttaşlar topluluğu anlamına da avam anlamına da aynı zamanda millet anlamına da gelmektedir. Böylece popülizmin alacağı şekil, bu anlamların hangisini tercih ettiğine göre şekillenecektir (Bora, 2019).

Sağ popülizmin iddiası elitlerin gasp ettiği halk egemenliğini geri getirmek ve demokrasiyi eski haline döndürmektir ancak bu egemenlik ulusal egemenliktir ve “memleketin asıl sahiplerine”, yozlaşmamış, homojen ve ahlaklı kitlelerine mahsustur. Diğer önemli bir nokta ise sağ popülistler için eşitlik talebinin pek bir öneminin olmamasıdır (Mouffe, 2019: 35). Öte yandan Mouffe’ye göre sol popülizmin amacı demokrasiyi derinleştirmek ve geliştirmektir. “Sol popülist bir strateji ortak hasmın (oligarşinin) karşısına dikilecek bir “biz”i, yani bir “halk”ı inşa etmek için demokratik talepleri bir kolektif irade altında birleştirmeyi amaç edinir” (Mouffe, 2019: 36). Sol popülizmin tahayyülü de günümüzde neoliberal ekonomi politüğün eleştirisini yapmak ve hatta geçmişe dönük

alternatif politikalar ile başka bir düzen arayışı içerisine girmektedir. Bu noktada sol popülizm ve sosyal demokrasi arasındaki ‘bağı’ Türkiye üzerinden incelemek daha doğru olacaktır.

2.2. Sol Popülizmde 1970’ler Türkiye’si Örneği

Sosyal demokrasinin meşruiyet krizinin başladığı 1980’li yıllar sosyal demokrasinin sol popülist niteliğin de aşıldığı yıllardır. Bu süreçte “yenilenme” söylemiyle birçok sosyal demokrat parti ‘sol’ kimliğini bir kenara bırakarak kendilerini “yeni sol” olarak tanımlamıştır. Bu kavramın bir sonucu olan ‘Üçüncü Yol’ politikasına Mouffe’nin yorumu şu şekildedir: “Yeni merkez sol hükümetlerin neoliberal küreselleşme karşısında nasıl Thatcher’ın şu meşhur ‘başka bir alternatif yok’ (There is no alternative- TINA) dogması çerçevesinde pekiştirilen hegemonik mıntıkeyi kabul edip, Stuart Hall’un ‘neoliberalizmin sosyal demokrat bir yorumu’ diye adlandırdığı şeyi uygulayarak kendilerini tükettikleridir” (Mouffe, 2019: 16) şeklindedir. Sosyal demokrasinin bu kadar çok yıpranmasında şüphesiz “merkez sol” siyasetteki bölünmenin ve parçalara ayrılmanın da etkisi büyüktür. Örneğin, Alman Sosyal Demokrat Partisi SPD’nin eski Genel Başkanı G. Schröder’in şansölyelik görevini yürütürken Blair ile ortak bir deklarasyon yayımlaması ve SPD’nin politikasını “Yeni Merkez” olarak adlandırması, parti tabanı, sendikalar ve sol düşünürler tarafından tepkiyle karşılanmıştı (Karakaş, 2008: 254).

Türkiye’ye bakıldığında ise sosyal demokrat politika ve düşünce, 1965 yılında Cumhuriyet Halk Partisi’nde ortaya çıkmıştır. İsmet İnönü 1961 Anayasası ile oluşan görece demokratik bir ortamda ve toplumsal koşulların da değiştiği bir ortamda CHP’nin “ortanın solunda” bir parti olduğunu ilan etti. Bu noktada CHP’nin gelenekçi kesiminden sol kavramı kullanıldığı için tepki almış ve sonunda Bülent Ecevit “demokratik sol” kavramını benimsemiştir (Karakaş, 2008: 254). Ecevit siyaseti içinde vücut bulan demokratik sol siyaset, popülizmin bazı özelliklerini barındırsa da 1990’larda İngiltere ve Almanya’da ortaya çıkan popülist soldan daha farklı bir muhtevaya sahiptir. Öncelikle bu sol anlayış, Ecevit ile kült haline gelen bir siyasi geleneğin oluşmasına katkı sağlamıştır. Necmi Erdoğan’a göre Türkiye siyasetinde popülizm-lere bakıldığında ortaya çıkan “siyasal söylemlerin tarihi aynı zamanda popülizmlerin de tarihidir” (Erdoğan, 2007: 262). Çünkü popülizm, özellikle çok partili hayata geçiş ile birlikte siyasal alana sirayet etmiş ve söylemlerin tayin edici bir uğrağı haline gelmiştir (Erdoğan, 2007: 262). İdeolojik bir öge olarak popülizmin uğrakları arasındaki “düşüm noktası, birer boş gösteren” olarak “halk” ve “millet”tir. 1970’ler Türkiye siyasetinde de toplumsal-siyasal karşıtlıkların halk ve millet kavramları üzerinde yükseldiği ve bu gerilim hattında yoğunlaştığı söylenebilir (Erdoğan, 2007: 262). Türkiye’deki sol popülizmini açıklamak için bu kavramlar önem taşımaktadır.

Türkiye’de sol popülist söylemin temelini şüphesiz “halk” kavramı oluşturmaktadır. Popülizmin söylem niteliğine de bakıldığında ortaya çıkan *halka* karşı *onlar* ikilemidir. Bu ikilemin bir tarafında ezilen ve emeği sömürülen halk, diğer tarafında da ezen ve sömüren yer almaktadır. 1970’lerde Ecevit liderliğinde ve kültüründe oluşturulan demokratik sol tahayyülde bu ikilemi görmek mümkündür. Böylece Ecevit, demokratik sol düşüncesini sol popülist söylemlerle güçlendirmiştir. Popülizm, Ecevit’in söylemlerinin birleştirici ilkesidir ve toplumsal-siyasal alan, söylemlerinde, “halk” ve “halktan olmayanlar”, ezenler ve ezilenler olarak net bir şekilde ayrılır. Ecevit’in söyleminde halk, kendi emeğiyle kazanıp geçinen ve gelirini başkasının sömürülmesi sonucu kazanmayan, toplumda ayrıcalık gözetmeyen, ezilen ve sömürülen köylü, işçi ve memurlardan oluşur. Halktan olmayanlar ise kendilerinin ayrıcalıklı gören ve hatta artı değere el koyan, toplumun yönetimi üzerinde aşırı bir ağırlığa sahip olan tekeli sermaye, büyük toprak sahipleri veya üretimde emeği olmayan kesimdir (Erdoğan, 2008: 264-266). Ecevit, halk kavramını açıklarken millet ve halk kavramlarını ayrı tutarak milleti siyasal bir kavram olarak anlatmaktadır. Halkı ise sosyal bir kavrama gönderme yapar. Ecevit’in dikkat çektiği nokta, millet ve halkın birbirleriyle çelişmediği aksine tamamlayıcı bir bütün olduklarıdır (Ecevit, 2008). Ecevit, halk tanımını yaparken öncelikle genel bir halk tanımı olduğunu vurgular. Buna göre “halk, bir ulusun tümünü kapsayan bir anlamda, genelleştirici bir niteleme biçiminde ele alınabilmektedir”. Aynı tanımın sol açıdan yorumu ve kullanımı ise özel bir anlam içerir. Halk, toplumu oluşturan sınıf ve zümrelerden sadece bir bölümdür. Kuşkusuz büyük bölümdür, ama ulusun tümüne karşılık gelmez. Ecevit, bu tanımdan sonra halk kavramına sınır koyar. Bu sınırlar, kendini ayrıcalıklı gören, halkın dışındadır şeklindedir. “Halkın dışındakiler” için şöyle bir tanımlama yapar; “toplumda kendilerini imtiyazlı gören, kendilerine bazı imtiyazlar, herkesin yararlanamayacağı bazı olanaklar bulunması gerektiğini düşünen veya öyle olanakları elde etmiş olan ve bu olanaklardan yararlanarak emeğin artı değerinden dengesiz pay alabilen veya demokrasinin eşitlik ilkesinin ötesinde bir güç edinebilen, toplum yönetimine ağırlığını aşırı ölçüde koyabilen kimseler halk kavramının dışında görülebilir” (Ecevit, 2008). Yani Ecevit’in demokratik solunda kavramsallaştırdığı halk ve diğerleri, aslında olağan süreç içerisinde halktan kendini ayırtıranların oluşturdukları bir karşıtlıktır. Popülizmin temel argümanı olan biz ve onlar, Ecevit’in demokratik solundaki sol popülizmde kendini toplumdaki kendini ayırtıran ve üstün/ayrıcalıklı gören, eşitlik temelinde yer almayanların oluşturduğu bir *onlar* olarak karşımıza çıkmaktadır.

Ecevit'in demokratik sol anlayışının sol popülist anlamda tamamlayıcısı ise yaşam tarzı ve giyim kuşamıdır. Ecevit'e atfedilen 'Karaoğlan' sıfatı aslında Ecevit'in sadece esmer biri olmasından değil, "halkın dilini konuşan" bir kişi ya da lider olmasından kaynaklanmaktadır. Bu sıfat, Ecevit'in halk tarafından benimsendiğinin adeta içlerinden biriymiş gibi hissedilmesinin bir yansımasıdır. Ecevit ile özdeşleşen kasket ve mavi gömlek de halkın içinden biri olduğunun göstergesi olmuştur. Ecevit'in gerçekleştirmeye çalıştığı sol popülist tahayyülünün halk için halk ile birlikte düşüncesini benimseyen, Atatürk gibi halkçı olmak ve halkla özdeşleşebilmek ve CHP'yi devlet partisinden halk partisine dönüştürebilmek olduğu söylenebilir (Erdoğan, 2008: 267).

Günümüzde Ecevit döneminden bugüne kadar gelen CHP'de özdeşleşen merkez sol siyasete bakıldığında da 2010 yılında başlayan lider ve söylem değişikliğiyle, bu partinin AKP iktidarının oluşturduğu sağ popülist siyaseti dengeleyecek bir söylemsel ağırlığı olmasa da yüksek sesle dile getirilen yolsuzluklar, işsizlik, yoksulluk, adaletsiz gelir dağılımı ve kötü çalışma koşulları gibi sosyal konulara değinerek yeni bir açılım yapmış olmasındır. 2011 yılında CHP'nin dile getirdiği Aile Sigortası önerisi gibi daha çok halka dokunan sosyo-ekonomik öneriler söylem değişikliğinde geçilen bazı önemli duraklardır (Boyras, 2021). Bu söylem değişikliği tüm dünyayı etkileyen pandemi süreci ile birlikte daha da hissedilmiş ve daha sert ve yüksek tondan söylemlerin oluşmasına zemin hazırlamıştır. Pandemi ile birlikte ortaya çıkan siyasal, ekonomik ve sosyal krizler muhalefet tarafından daha sert eleştirilere tabi tutulmuştur. Bu dönemde neoliberal devletin yetersiz kaldığı, artık sermayeden yana değil yurttaş odaklı politikalar üretmesi gerektiği ve sosyal devletin yapması gereken yardımlar CHP'de daha çok dile getirilmiştir. Buna yönelik sosyal politikaların özellikle kazanılan İstanbul, Ankara ve İzmir Büyükşehir Belediyeleri tarafından (Halk Ekmek fabrikalarının artırılması ve "erişilebilir" fiyatların uygulanması, Halk Süt, Aile Kartları, Askıda fatura ve benzeri) aktif politikaya dönüştürülmesi sosyal belediyeçilik parolası ile hareket edilmesine ve 1970'li yıllardaki kimliğine ufak çaplı da olsa bir dönüş olmuştur (Boyras, 2021). Bunlarla birlikte "bir taraftan toplum içindeki çoğul değerleri eşit bir şekilde kucaklayan ve ayrıştırıcı bir dil yerine kapsayıcı olmayı hedefleyen siyasal stratejisi ile, diğer taraftan da somut maddi sorunların altını çizen ve sol popülist temaları aktif bir şekilde söyleminde yer veren yaklaşımıyla, tek parti dönemi halkçılığından farklı ve yeni bir popülist yorumun CHP içerisinde geliştiği" (Boyras, 2021) söylenebilir. Ortaya çıkarılan yeni siyaset, görece sol popülist olmakla birlikte özellikle Ecevit dönemi siyasetinde yer alan sosyal devlet anlayışı ve kendinden farklı düşüncede olsa bile yapılan koalisyonların bugüne de taşındığı CHP'nin de ortağı olduğu Millet İttifakı örneğinde görülebilir. Ecevit'in Necmettin Erbakan ile 1974 yılında kurduğu DSP ve MSP hükümeti koalisyonunun bugüne yansıması olarak Saadet Partisi ve diğer ittifak ortakları ile kurulan 'Millet İttifakı' geçmişin, geleceğe yansıması olarak değerlendirilebilir.

Ancak burada önemli bir kısıt da bulunmaktadır: Neoliberal devletin krizine karşı popülist solun ne şekilde yaklaşacağı sınıfsal dinamikler açısından önem arz etmektedir. Batı'da ortaya çıkan sol popülist siyasayı "kimlik siyasetine karşı sınıf siyasetinin" canlanması olarak benimseyenlerin olduğu ve özellikle ABD'de Trump sonrası, solun kendi rengi olan "kırmızıyı unuttuğu", feminizm, LGBT ve benzeri gündeme odaklanılıp sosyal hak mücadelelerini unutmuş olduğu rağbet gören bir görüştür (Bora, 2019). Nancy Fraser'da "neoliberal ilericiliğin" bastırılan kimliklerin tanınma taleplerini asimile etmesine ve sosyal hak mücadeleleri gündeminden ayırmasına fırsat verilmiş olmasından rahatsızdır. Fakat yine de birini öncelemek yerine eşitlik ve sosyal hak talepleri ile bunların birbirine iliklenmesi gerektiğini savunmaktadır. Özellikle 1960'lı yıllardan itibaren yükselen yeni toplumsal hareketlerin ve kimlik hareketlerinin sınıf ilişkileri ve oluşumlarını teşhis etmenin zihin açıcı katkısı yadsınamaz (Bora, 2019). Neoliberalizmin şüphesiz ötelediği, sömürdüğü sınıf olan prekaryanın popülist solun kilit noktasından olduğunu vurgulayan Bora, prekaryayı "kapitalizmin bilişimsel ve süper esnek üretim ağı içinde sadece istihdam rejimi bakımından değil duygulanımsal bakımdan da atomize olmuş, dağılmış, seyyarlaşmış, geleneksel sınıf örgütlenmelerinin kapsama alanına giremeyen" olarak tanımlar. Srnicek ve Williams da proletaryanın tarihsel süreç içerisinde hiç olmadığı kadar parçalandığı bu durumda *halk* anlayışına popülist bir yaklaşımın, farklı emek sektörlerinin tecrübe ve çelişki dünyalarını birleştirebileceğini düşünmektedir (Bora, 2019). Adil bir toplum yaratımı için siyasal ve ekonomik alanda yapılacak *dönüşümlerin (özellikle sol dönüşümün)* önemine dikkat çeken Alphan Telek ise prekaryayı sosyo-ekonomik ve siyasal alanda ortaya çıkan adalet talebinin öznesi olarak politize etmeyi sol dönüşümün anahtarı olarak kabul etmektedir. Sol dönüşüm demesinin ve popülizmden kaçınılması gerektiğine dair düşüncesinin sebebi ise popülizmin bu dönüşümü engelleyeceğidir. Popülizm yerine ilkeli bir şekilde ve cesaretle yapılan dönüşümleri sahiplenmek gerektiğini vurgulanmaktadır. Telek, sol popülizm kavramının oldukça muğlak ve olumsuz bir anlam içerdiğini ve politikalara sol dönüşüm (*socialist transformation*) demenin daha iyi olacağını söylemektedir. Son olarak dikkat edilmesi gereken noktanın da sol dönüşüm hükümetlerinin adaletten koptuğu takdirde "çağımızın genel hastalığı olan popülizme" hızla kapılabileceğini belirtmektedir (Telek, 2017).

3. SONUÇ VE DEĞERLENDİRME

Sosyal demokrasi her şeyden önce kendisinden önce gelen ideolojilerden sosyalizm, Marksizm ve hatta liberalizmden etkilenmiş ve etkinlik gösterdiği parti programlarına göre şekillenmeye başlamıştır. Çıkış noktasında yer alan “devrim” düşüncesi zamanla yerini “iktidarın demokratik yollarla değiştirilmesine” bırakmış ve kesin bir çizgi ile Marksist ve Leninist düşünceden de ayrılığını netleştirmiştir. İlk zamanlarında fikirlerini benimsediği ve sosyal demokrat partide ağırlığı bulunan Marx ile kesin bir yol ayrımına gitmiştir. Böylece sosyal demokrasinin evriminde yapmaya çalıştığı politika, kapitalizme sosyalist bir şekil vermek değil, kapitalizmi kendi ideolojisi ile dönüştürmektir. Geliri eşit ve düzenli bir şekilde paylaşırma esasında şekillenen refah devleti yerini özellikle 1980’lerde zaferini net bir biçimde ilan neoliberalizme ya da yeni sağ ideolojiye kaptırmıştır. Sosyal demokrasi girdiği bu meşruiyet krizi ve bunalım sürecinden çıkışını Batı Avrupa’da “Üçüncü Yol” söyleminde bulmuş ve küreselleşen yeni dünya düzeni ile uyumlu, küresel ekonomik sistem, bilginin artık bu yeni dünya düzeninde erişilebilir bir hale gelmesi gibi yaklaşımlarda kendini bulmuştur. Özellikle 1980’li yıllarda değişen ve dönüşen dünya düzeninde siyasal rakiplerinin artması ve sağ nitelikli iktidarların artması ile kendisine yeni bir söylem bulmuştur: “Sol popülizm”. Bu bildirinin savunduğu argümanlardan birisi de sosyal demokrat ideolojinin sol popülist bir özellik taşıdığıdır. Bir taraftan popülist söylemin yapısı genellikle sağ iktidarlara eş tutulmakta ve söylemde daha çok ayrıştırıcı siyaset ön plandadır. Biz ve onlar ayrımını ahlakçı bir bakış açısı ile halk ve yozlaşmış elitler olarak ele alır. Diğer taraftan ise sol popülist söylem, halkçı bir söyleme sahiptir ve ezen-ezilen, emeği sömürülen ile sömüren gibi görece daha sınıfsal ve halkı temsil eden bir role bürünür. Bu noktada Türkiye örneğinde olduğu gibi sosyal demokrat politikalar, 1970’li yıllarda Ecevit döneminde sol popülist söylem ile var olmuştur. Bu sosyal demokrat popülist söylemde özne, ezilen ve emeği sömürülen halktır. Emeği sömürülen halkın destekçisi de sosyal adaleti, eşitliği ve demokrasiyi referans alan sol iktidarlardır. Geçmişin gücünden etkilenen CHP ise 2010 yılında girdiği değişim sürecinden günümüze gelene kadar daha keskin çizgilerle ve daha net bir şekilde yolsuzlukları, yoksulluğu, gelir dağılımı adaletsizliğini, fırsat eşitsizliğini, kadın, çocuk ve LGBT haklarını, demokrasi ve laiklik vurgusu ile geliştirdiği söylem ile dile getirmektedir. Yeri geldiğinde sosyal demokrat halkçı bir çehreye bürünen ve sol popülist söyleme kayan siyasası ve kurulan Millet İttifakı ile geçmişte yapılan iki kutupta yer alan ideolojilerin birleşmesinin bugüne yansımaları iktidarın sağ popülist söylem ve politikaları ile rekabet etmektedir. Fakat burada dikkat edilmesi gereken hususun Batı Avrupa’da 1990’larda ortaya çıkan neoliberalizme eklemlenmiş bir sol söylemin Türkiye’de ne kadar belirleyici olacağıdır. Bununla birlikte popülizmin sınırlıkları arasında siyasetin ahlaklaştırılması olduğuna da dikkat etmek gerekecektir. Bu durum, sol popülist söylemi etkileyecek ve karşısına yeni sınırlılıklar getirecektir. Karşısına çıkacak en büyük tehlike sol ideolojinin temeli olan sınıfı ve sınıf çelişkilerini görememek riski olacaktır. Sonuç olarak prekaryanın popülist söylem içerisinde kaybolma tehlikesi mevcuttur. Keza, popülizmin içinde bulunduğu muğlaklık zamanla kullanılan siyasal dile sirayet etmekte ve gerçekliği perdeleyebilmektedir.

0000-0002-5457-7687

Özet: Arıcılık, stratejik öneme sahip ve desteklenmesi gereken bir sektör olarak görülmektedir. Arıcılık faaliyeti, diğer hayvansal üretimlere göre daha az sermaye ve daha az işgücü gerektirdiği gibi yatırım geri dönüş süresi daha kısa ve geri dönüş oranı daha yüksektir. Arıcılık tüm dünyada olduğu gibi Türkiye’de de son yıllarda önemli gelişme kaydeden bir sektör durumuna gelmiştir. Türkiye 2022 yılında 8.984.676 adet kovan varlığı ve 118.297 ton bal üretimi ile dünya arıcılığında söz sahibi ülkelerden birisidir. Arıcılık Çanakkale ilinde de son yıllarda oldukça artmakta olan bir faaliyettir. Çanakkale ili 2022 yılında 90.494 adet kovan varlığı ve 1.890 ton bal üretimi ile kayıtlara geçmiştir. Bu çalışmada, bal üretiminin ve kovan sayısının, Çanakkale ilinin Türkiye konumundaki yeri ve önemi ortaya konulmuştur. Çalışma kapsamında arıcılık faaliyetinin Türkiye’de ekonomik ve ticari durumu çeşitli kurum ve kuruluşlardan elde edilen veriler ile desteklenmiştir. Bal veriminin artırılması için, sektöre verilen doğrudan destekleme modeli yerine üretimi arttırıcı kaliteyi yükseltici yeni destekleme politikalarının uygulanması gerekmektedir. Üreticilerin çoğu bal dışındaki diğer arı ürünlerine pek fazla yönelmemektedir. Sadece bal ile değil diğer arıcılık ürünleri de fazla üretilirse arıcılık sektörüne daha yararlı olacaktır.

Anahtar Kelimeler: Arıcılık, Tarım, Çanakkale, Bal Üretimi

1.GİRİŞ

Arıcılık, stratejik öneme sahip ve desteklenmesi gereken bir sektör olarak görülmektedir (Çukur ve Çukur,2019). Arıcılık, doğayı ve emeği beraber kullanarak; bal, bal mumu, propolis, polen, arı sütü ve arı zehri gibi ürünler ile ana arı, oğul arı gibi canlı materyaller ile ürünlerin hammaddelerini doğadan toplamaları nedeni ile doğaya bağımlı hayvancılık faaliyetidir.

Bal, bitki nektarlarının, bitkilerin canlı kısımlarının salgılarının veya bitkilerin canlı kısımları üzerinde yaşayan bitki emici böceklerin salgılarının bal arısı tarafından toplandıktan sonra kendine özgü maddelerle birleştirerek değişikliğe uğrattığı, su içeriğini düşürdüğü ve petekte depolayarak olgunlaştırdığı doğal ürününü olarak tanımlanmıştır (Bogdanov, 2012a; Ulusoy, 2012).

Bal arıları propolisi kovan girişini davetsiz misafirlerden korumak ve kovanda istenmeyen mikroorganizmaların gelişmesini önlemek amacıyla kullanır. Propolis fenolik asitler, esterler ve flavonoidler gibi çok sayıda aktif bileşik içermektedir. Propolis sahip olduğu bu biyolojik ve iyileştirici özellikleri nedeniyle, doğal bir ilaç olarak, antik zamanlardan bu yana yaygın olarak kullanılmıştır (Güney ve Yılmaz,2013).

Polen, çiçekli bitkilerin antenlerinde oluşan ve döllemede rol alan erkek üreme birimidir. Bal arıları poleni ayakları ile çiçeklerden toplar arka ayaklarında biriktirir. Kovanda kendi sindirim enzimleri ve bir miktar nektar ile karıştırıp petek gözlerinde saklar (Sorucu, 2019). Kovanlarda bulunan polen tuzakları sayesinde arıların ayaklarında getirmiş oldukları polenler tuzaklara takılarak tepsiye düşmektedir. Tepsiye düşen polenlerde toplanarak insan sağlığında kullanılmaktadır.

Arıcılık faaliyeti, diğer hayvansal üretimlere göre daha az sermaye ve daha az işgücü gerektirdiği gibi yatırım geri dönüş süresi daha kısa ve geri dönüş oranı daha yüksektir. Arıcılık, bal üretiminin yanı sıra bitkilerin tozlaşmasında da etkin rol oynayarak bitkisel üretime de katkıda bulunmakta olup, kırsal kalkınmada önemli rol oynayan bir hayvansal üretim faaliyetidir (Çevrimli ve Sakarya, 2018).

Arıcılık, arazi varlığına bağlı bir iş kolu olmamakla beraber iklim şartlarının uygun olduğu her yerde yapılabilen ve birçok ülkede ciddi bir istihdam kaynağı olan bir faaliyettir. Ayrıca arıcılık, tarımla uğraşan ailelerin hem esas geçim kaynağı hem de diğer tarımsal uğraşların yanında ikinci bir gelir kaynağı yani yan gelir kaynağı olarak da yapılmaktadır.

Dünyada önemli tarım ürünlerinin %87’si böcek aracılı polinasyona ihtiyaç duymaktadır; bu da dünyadaki tarım arazilerinin %35’inin tozlayıcılardan etkilendiği anlamına gelmektedir. Tozlayıcılara bağlı tarımsal üretim hacmi son 50 yılda %300 artmıştır. Ayrıca, tozlaşmaya bağlı ürünler, tozlaşmaya ihtiyaç duymayanlardan beş kat daha değerlidir (Mockler and Tardif, 2015; Silva, 2018). Küresel olarak, Brezilya, Çin, Hindistan, Japonya, ABD ve Türkiye tozlaşma hizmetlerinden en büyük ekonomik fayda elde eden ülkelerin başında gelmektedir

(Greenpeace, 2018). Dünyadaki arı ırklarının %20'si Türkiye'de bulunmaktadır (Borum 2017; Aydın ve ark 2020). Türkiye'deki balların florası dünya florasının %75'ine sahiptir. Türkiye bitki florası açısından büyük bir arıcılık potansiyeline sahiptir.

Türkiye'de arıların bitkisel üretime olan katkıları ile arıcılıktan elde edilen gelir birlikte dikkate alındığında, arıcılık faaliyetinin ülke ekonomisine olan toplam katkısının 500 milyon TL dolayında olduğu tahmin edilmektedir (T.C. Tarım ve Orman Bakanlığı, 2017).

Arıcılık faaliyetlerinin her geçen gün arttığı ülkemizde sorunların belirlenmesi ve bu sorunlara çözüm bulunması halinde arıcılık sektörü gerçek değerine ulaşabilir. Sektörün doğru bilgi eksikliği, ekonomik yönü, arıcılık için uygun yer bulma gibi sorunları vardır. Bu ve benzer sorunlara çözüm bulunması sektörün geleceği için önemlidir (Baydemir,2022).

FAO verilerine göre; Türkiye 2021 yılında 8.733.394 adet kovan sayısı ile Dünya'da üçüncü sırada olup, 96.344 tonluk bal üretimi ile ikinci sırada yer almaktadır (FAO,2023).

Arıcılık tüm dünyada olduğu gibi Türkiye'de de son yıllarda önemli gelişme kaydeden bir sektör durumuna gelmiştir. Türkiye 2022 yılında 8.984.676 adet kovan varlığı ve 118.297 ton bal üretimi ile dünya arıcılığında söz sahibi ülkelerden birisidir (TÜİK,2023).

Arıcılık Çanakkale ilinde de son yıllarda oldukça artmakta olan bir faaliyettir. Çanakkale ili 2022 yılında 90.494 adet kovan varlığı ve 1.890 ton bal üretimi ile kayıtlara geçmiştir (TÜİK,2023).

Bu çalışmada, bal üretiminin ve kovan sayısının, Çanakkale ilinin Türkiye konumundaki yeri ve önemi ortaya konulmuştur. Çalışma kapsamında arıcılık faaliyetinin Türkiye'de ekonomik ve ticari durumu çeşitli kurum ve kuruluşlardan elde edilen veriler ile desteklenmiştir.

2. MATERYAL VE YÖNTEM

Çalışmanın materyalini Food and Agriculture Organization (FAO), Türkiye İstatistik Kurumu (TÜİK), Tarım ve Orman Bakanlığı, Çanakkale İl Tarım ve Orman Müdürlüğü başta olmak üzere bilimsel yayınlar ve çeşitli sektör raporlarından ikincil veri kaynakları olarak geniş ölçüde faydalanılmıştır. Çalışmada Dünya'nın, Türkiye'nin ve Çanakkale'nin bal üretiminde ekonomik ve ticari olarak ele aldığı istatistikler tablo ve grafikler haline getirilerek yorumlanmıştır.

3.BULGULAR VE TARTIŞMA

3.1.Dünya'da Arıcılık

Arıcılık faaliyetinin her geçen gün artması sebebiyle ülkelerin kovan sayılarında da artışlar görülmektedir. Dünya'da kovan sayısı bakımından en zengin olan ülkeler Hindistan, Çin ve Türkiye'dir.

Söz konusu kovan sayısında 2021 yılında 12.848.197 adet kovan ile Hindistan ilk sırada yer almaktadır. Çin, 9.383.682 kovan ile ikinci sırada yer almaktadır. Çin'i, 8.733.394 adet kovan ile Türkiye takip etmektedir (Tablo 1). Türkiye; kovan sayısında Dünya'da %8,59'luk bir paya sahiptir.

Tablo 1: Dünya'da Önemli Ülkelerin Kovan Sayısı (Adet)

	2018	2019	2020	2021
1-Hindistan	12.124.140	12.347.544	12.588.707	12.848.197
2-Çin	9.307.321	9.319.838	9.354.094	9.383.682
3-Türkiye	8.108.424	8.128.360	8.179.085	8.733.394

Kaynak: FAO,2023.

Türkiye, Dünya genelinde önemli bal üreticisi ülkeler arasında yer almaktadır. Dünya'da başlıca bal üreticisi ülkelerin bal üretim durumları incelendiğinde, 2021 yılında 485.960 ton bal üretimi ile Çin birinci sırada yer alırken ikinci sırada 96.344 tonluk bal üretimi ile Türkiye ikinci sırada yer almaktadır. Türkiye'den sonra üçüncü sırada 77.152 ton bal üretimi ile İran olmuştur. Türkiye'nin Dünya'daki bal üretimindeki payı %5,94'tür. Ayrıca kovan sayısında birinci olan Hindistan'ın bal üretim miktarlarının bulunduğu tabloda ilk üç sırada yer almadığı görülmektedir (Tablo 2).

Tablo 2. Dünya’da Önemli Ülkelerin Bal Üretim Miktarları (Ton)

	2018	2019	2020	2021
1-Çin	457.182	446.961	466.487	485.960
2-Türkiye	107.920	109.330	104.077	96.344
3-İran	72.796	72.851	74.293	77.152

Kaynak: FAO,2023.

3.2.Türkiye’de Arıcılık

Arıcılık tüm dünyada olduğu gibi Türkiye’de de son yıllarda önemli gelişme kaydeden bir sektör durumuna gelmiştir. Türkiye’de floralı kaynakların ve koloni varlığının zengin olması, birbirinden farklı iklim ve bölgelerin bulunması, tarımsal amaçlı işlenmeyen alanların fazlalığı, tarımsal mücadele ilaçlarının kullanımının az olması, arı gen kaynaklarınca zengin olması ile gezginci ve sabit arıcılığın uygun olması, ayrıca arıcılık faaliyetlerini arttırmak amacıyla T.C Orman ve Su İşleri Bakanlığınca oluşturulan Bal Ormanı Eylem Planı kapsamında, 296 bal ormanının tesis edilmesi arıcılığı avantajlı duruma getirmiştir (Sancak vd., 2013).

Türkiye’nin 2020 yılı toplam hayvansal üretim değeri 108 milyar 598 milyon TL’dir. Bunun içerisinde bal üretim değerinin almış olduğu pay %4,27 ile 4 milyar 640 milyon TL’dir (TUIK,2022).

Arıcılık yapan işletme sayısı 2022 yılında 95.386 olup, toplam kovan sayısı da 8.984.676 adet olarak verilmiştir. Aynı zamanda 2022 yılında bal üretim miktarı 188.297 ton ve bal verimi de 20,95 kg’dır. Tablo incelendiğinde 2018 yılından itibaren gerek işletme sayısında gerek kovan sayısında ve gerekse bal üretim ve verimlerinde ciddi bir artış gösterdiği görülmektedir (Tablo 3).

Tablo 3. Türkiye’de Arıcılık Verileri

		2018	2019	2020	2021	2022
Arıcılık Yapan İşletme Sayısı		81.830	80.675	82.862	89.361	95.386
Toplam Kovan Sayısı (Adet)		8.108.424	8.128.360	8.179.085	8.733.394	8.984.676
Bal Üretim Miktarı (Ton)		107.920	109.330	104.077	96.344	188.297
Bal Verimi (kg/kovan)		13,31	13,45	12,72	11,03	20,95

Kaynak: TUIK,2023.

Arıcılık, bitkisel üretime katkısı, kısa sürede gelir getirmesi, küçük bir sermaye ile yapılabilmesi ve arazi varlığına bağlı olmaması gibi özellikleriyle tarımsal faaliyetler içinde ayrıcalıklı bir yere sahiptir (Uzundumlu, Aksoy ve Işık, 2011). Türkiye’de arıcılık faaliyetinde yıllar itibarıyla yaşanan gelişmeler ışığında sektör sürekli gelişme göstermektedir (Çukur ve Çukur,2021).

Ülkemizin kovan sayıları bakımından en önemli illeri Muğla başta olmak üzere Ordu, Adana ,Mersin, İzmir Çanakkale’dir (Tablo 4) 2022 yılında 884.096 adet kovan ile birinci sırada Muğla yer almaktadır. Muğla’yı 609.427 adet kovan ile Ordu, sonrasında 494.432 adet kovan ile de Adana izlemektedir. Dördüncü sırada 347.045 adet kovan ile Mersin yer almakta olup İzmir ili de 287.179 adet kovan ile beşinci sırada yerini almıştır. Çanakkale bir önceki yıla göre %3,5 gibi bir artış göstermiş olup kovan sayısında 90.944 adet 33. sırada yer almaktadır.

Tablo 4. Türkiye’nin Önemli İllerinin Kovan Sayıları (Adet)

	2018	2019	2020	2021	2022
1-Muğla	935.463	918.116	900.583	949.267	884.096
2-Ordu	568.547	573.358	573.375	604.213	609.427
3-Adana	461.987	469.938	481.557	481.878	494.432
4-Mersin	267.251	282.749	290.795	303.120	347.045
5-İzmir	232.009	244.519	273.949	276.918	287.179
33-Çanakkale	79.635	82.866	83.854	87.634	90.944

Kaynak: TUIK,2023.

Ülkemiz adeta bir arıcılık cennetidir. Türkiye'nin değişik yörelerinde çok kaliteli ballar elde edilmektedir. Ülkemiz, dünya ballı bitkiler florasının % 75'ine sahiptir. Zengin florası, uygun ekolojisi, koloni varlığı, arı popülasyonundaki genetik varyasyon bakımından Türkiye büyük arıcılık potansiyeline sahiptir (Sancak vd., 2013; Aydın ve ark 2020).

Türkiye'de bal üretim miktarında 2022 yılında 19.098 ton ile Ordu ilk sırada yer almaktadır. Adana 12.646 ton ile ikinci sırada yer almaktadır. Adana'yı 6.578 ton ile Muğla takip etmektedir. Sivas 6.079 ton bal üretimi ile dördüncü sırada yerini alırken, Kocaeli bal üretiminde bir önceki yıla göre önemli bir artış göstererek beşinci sırada yer almıştır. Çanakkale ise 1.890 ton ile Türkiye'de 16. sırada yer almaktadır (Tablo 5).

Tablo 5. Türkiye'nin Önemli İllerinin Bal Üretim Miktarı (Ton)

	2018	2019	2020	2021	2022
1-Ordu	16.994	17.057	17.213	11.377	19.098
2-Adana	10.941	11.077	12.171	12.336	12.646
3-Muğla	14.777	14.688	6.104	3.820	6.578
4-Sivas	5.048	5.029	5.470	5.744	6.079
5-Kocaeli	624	656	561	555	4.726
16-Çanakkale	1.689	1.897	1.716	2.122	1.890

Kaynak: TÜİK,2023.

3.3.Türkiye'nin Dış Ticareti

Dünya'nın önemli ülkelerinin bal ihracat miktarları incelendiğinde Türkiye'nin on sekizinci sırada yer aldığı görülmektedir. Türkiye bir önceki yıla % 66'lık artış göstererek tabloda üst sıralarda yerini almaya başlamıştır (Tablo 6). Arı ürünlerinin ekonomik açıdan daha fazla gelir getirmesi adına Türkiye'nin ihracatta biraz daha üst sıralara yükselmesi gerekmektedir.

Tablo 6. Türkiye'nin Bal İhracatı (Ton)

	2018	2019	2020	2021
1-Çin	123.477	120.845	132.469	145.886
2-Hindistan	58.231	65.351	54.834	70.514
3-Vietnam	29.944	26.228	34.482	61.427
4-Ukrayna	49.366	54.957	80.872	61.166
5-Arjantin	68.692	63.522	68.985	60.406
18-Türkiye	6.386	5.499	5.985	9.991

Kaynak: FAO,2023.

Türkiye tablo 6'da bal ihracat miktarında on sekizinci sırada yer alırken tablo 7'de yirmi ikinci sırada yer aldığı görülmektedir. Önceki yıla göre ihracat değerinde artış görülmüş olsa dahi bu sonuç bal ihracatında, balın değerinde satılamadığını göstermektedir. Tabloda birinci sırayı 551.218 USD \$ ile Yeni Zelanda almıştır. Yeni Zelanda'yı ikinci sırada bulunan 260.047 USD \$ ile Çin takip etmektedir.

Yeni Zelanda'nın Tablo 6'da yer almamış olup Tablo 7'de ilk sırada yer alması dikkat çekmektedir. Bunun sebebi de ülkede yetişmekte olan Manuka Balı'nın değerinin üzerinde pazarlanmasıdır. Manuka Balı, arıların Manuka bitkisinin nektarından toplayarak ürettikleri şifa kaynağı olarak bilinen bir baldır. Manuka Balı, Yeni Zelanda ve Güney Doğu Avustralya'nın dağlık arazilerine özgü bir bal çeşididir. Manuka Balı incelendiğinde yüksek antibiyotik özellikleri göstermektedir. Manuka Balı; yara tedavilerinde, soğuk algınlığı ve enfeksiyonlara karşı kullanılmaktadır.

Tablo 7. Türkiye'nin Bal İhracat Değeri (1000 USD \$)

	2018	2019	2020	2021
1-Yeni Zelanda	245.491	230.178	328.035	551.218
2-Çin	249.251	235.314	254.045	260.047
3-Arjantin	169.748	142.086	164.086	202.721
4-Brezilya	95.420	68.384	98.560	163.341
5-Almanya	140.794	130.723	147.659	147.350
22-Türkiye	25.563	24.581	26.006	30.952

Kaynak: FAO,2023.

3.4.Çanakkale’de Arıcılık

Çanakkale arıcılık faaliyetleri için uygun zengin floraya sahiptir. İlde ağırlıklı olarak çiçek balı üretilmekle birlikte çam balı üretimi de gerçekleştirilmektedir (Aktürk ve Aydın,2019). Çanakkale’de son beş yılda arıcılık yapan işletme sayısının ve buna bağlı olarak da kovan sayısının artmış olduğu görülmektedir. Bal üretim miktarı 2022 yılında düşüş göstermiş olsa da bal verimi açısından Türkiye ortalamasının oldukça üzerinde olduğu görülmektedir (Tablo 8).

Tablo 8.Çanakkale’de Arıcılık Verileri

	2018	2019	2020	2021	2022
Arıcılık Yapan İşletme Sayısı	1.430	1.546	1.506	1.598	1.617
Toplam Kovan Sayısı (Adet)	76.635	82.866	83.854	87.634	90.494
Bal Üretim Miktarı (Ton)	1.689	1.897	1.716	2.122	1.890
Bal Verimi (kg/kovan)	22,03	22,89	20,46	24,21	20,88

Kaynak: TUIK,2023.

Çanakkale’de arıcılık yapan işletme sayısının artmasıyla beraber Çanakkale’nin toplam kovan sayısı da paralel olarak artış göstermektedir. Kovan sayısında Biga, Çan, Merkez ve Yenice ilçeleri ön plana çıkmaktadır.

2022 yılında 15.395 adet kovan ile birinci sırada Biga ilçesi yer almaktadır. Biga’dan sonra 15.350 adet kovan ile Çan, üçüncü sırada ise 11.120 adet kovan ile Merkez yer almaktadır. Sonrasında Yenice, Bayramiç, Ezine, Gelibolu, Lapseki, Ayvacık, Gökçeada, Eceabat ve Bozcaada ilçeleri de sırasıyla tabloda yerlerini almışlardır (Tablo 9).

Tablo 9. Çanakkale’nin İlçelerinin Kovan Sayısı (Adet)

	2018	2019	2020	2021	2022
1-Biga	14.852	15.328	16.205	16.775	15.395
2-Çan	10.346	10.220	13.823	13.260	15.350
3-Merkez	10.124	10.153	10.280	10.705	11.120
4-Yenice	8.943	9.016	9.046	9.520	9.994
5-Bayramiç	5.894	6.545	6.729	7.219	8.171
6-Ezine	5.318	5.830	4.550	5.298	5.775
7-Gelibolu	5.090	5.020	5.260	6.750	5.650
8-Lapseki	3.776	4.495	4.748	4.267	5.330
9-Ayvacık	7.532	7.660	6.095	6.310	5.300
10-Gökçeada	3.635	4.449	4.027	4.139	4.149
11-Eceabat	3.275	3.300	2.022	2.400	3.650
12-Bozcaada	850	850	824	800	610

Kaynak: TUIK,2023.

Son yıllarda arıcılıktan elde edilen ürünlerin insan sağlığı üzerindeki olumlu etkileri de göz önüne alındığında, arıcılık üretim faaliyetinin önemi gittikçe artmaktadır. Çanakkale ili de gerek coğrafi konumu gerekse bitki örtüsünün zenginliğinden dolayı arıcılık üretim faaliyeti yaygın olarak yapılmaktadır.

Çanakkale’de bal üretim miktarında 2022 yılında 337 ton ile Çan ilk sırada yer almaktadır. Biga 306 ton ile ikinci sırada yer almaktadır. Biga’yı 243 ton ile Merkez takip etmektedir. Sonrasında Yenice, Bayramiç, Ayvacık, Ezine, Lapseki, Gelibolu, Eceabat, Gökçeada ve Bozcaada sırasıyla bal üretimi tablosunda yerlerini almışlardır (Tablo 10). Tablo incelendiğinde Biga ilçesinin bir önceki yıla göre bal üretiminde ciddi miktarda düşüş olduğu görülmektedir.

Tablo 10. Çanakkale’nin İlçelerinin Bal Üretim Miktarı (Ton)

	2018	2019	2020	2021	2022
1-Çan	226	234	276	317	337
2-Biga	325	366	354	417	306
3-Merkez	261	272	204	276	243
4-Yenice	178	188	181	239	239

5-Bayramiç	116	143	147	179	195
6-Ayvacık	125	169	115	143	109
7-Ezine	124	142	97	134	103
8-Lapseki	81	98	94	101	100

10-Eceabat	65	72	49	58	80
11-Gökçeada	72	89	80	83	74
12-Bozcaada	12	13	14	14	11

Kaynak: TÜİK,2023.

Çanakkale'nin hayvansal ve bal üretim değerleri Tablo 11'da verilmiştir. Çanakkale'nin 2021 yılı toplam hayvansal üretim değeri 2 milyar 735 milyon TL'dir. Bunun içerisinde bal üretim değerinin almış olduğu pay %2,33 ile 63 milyon 730 bin TL'dir. Çanakkale'nin coğrafyasının arıcılık için oldukça elverişli ve flora bakımından zengin olması ile bal üretim değerini de oldukça yükseltmektedir.

Tablo 11. Çanakkale'nin Hayvansal ve Bal Üretim Değerleri (1000TL)

	2018	2019	2020	2021
Hayvansal Üretim Değeri	1.330.000	1.636.000	2.111.000	2.735.000
Bal Üretim Değeri	25.346	30.345	34.279	63.730
Payı (%)	1,90	1,85	1,63	2,33

Kaynak: ÇANAKKALE İL TARIM VE ORMAN MÜDÜRLÜĞÜ,2023.

3.5. Çanakkale'de Arıcılık Yapan İşletmelerin Pazarlama Durumu

Çanakkale'de arıcılık yapan işletme sayısı 2022 yılı itibari ile 1.617 kişidir. Bu işletmelerden 617 adet işletme sahibi de Çanakkale İli Arı Yetiştiricileri Birliği'ne kayıtlı bulunmaktadır. Bunların dışında Bal Üreticileri Birliği'ne kayıtlı olan ve birlik üyesi olmayan işletme sahipleri bulunmaktadır.

Çanakkale İli Arı Yetiştiricileri Birliği üyelerinin ürettiği ballarının %57,98'i perakende satış şeklinde, %42,02 'si toptan satış şeklinde yapılmıştır. Aynı zamanda Arı Yetiştiricileri Birliği üyelerinden toptan bal alışı da yapmaktadır. Üyelerinden toptan almış olduğu balların, Arıburnu markası ile perakende satışlarını yapmaktadır. Her zaman tüketicilerin sağlığını göz önünde bulundurmaları sebebi ile doğal ve katkısız ürünlerini piyasaya sunmaktadırlar. Aynı zamanda Birlik, satış bürosunda arıcılık malzemesi ve arıcılık ekipmanlarının satışını yaparak üreticiye de destek olmaktadır. Kovan başına arıcılık destekleme ödemesi birlik üyesi olan işletmeler için 30 TL iken birlik üyesi olmayan işletmeler de kovan başına 20 TL'dir.

4.SONUÇ VE ÖNERİLER

Arıcılık dünyanın diğer ülkelerinde olduğu gibi Türkiye'de de özellikle son yıllarda önemli bir gelişme kaydeden bir sektördür. FAO 2023 yılı verilerine göre Dünya kovan sayısı bakımından birinci sırada %12,64'lük bir pay ile Hindistan, ikinci sırada %9,23'lük pay ile Çin ve üçüncü sırada da %8,59'luk bir pay ile Türkiye yer almaktadır. FAO 2023 yılı verilerine göre Dünya bal üretimi bakımından birinci sırada %24,94'lük bir pay ile Çin, ikinci sırada %5,93'lük bir pay ile Türkiye ve üçüncü sırada %4,75'lik bir pay ile İran yer almaktadır.

TÜİK 2023 verilerine göre Türkiye'de arıcılık yapan işletme sayısı ve toplam kovan sayısı artmıştır. Buna paralel olarak da Türkiye'de bal üretim miktarı ve kovan başına düşen bal verimi artmıştır. TÜİK 2023 yılı verilerine göre Türkiye'de kovan sayısı bakımından birinci sırada %9,84'lük bir pay ile Muğla, ikinci sırada %7,78'lik pay ile Ordu ve üçüncü sırada %5,50'luk bir pay ile Adana, otuz üçüncü sırada da %1'lik bir pay ile Çanakkale yer almaktadır. TÜİK 2023 yılı verilerine göre Türkiye'de bal üretimi bakımından birinci sırada %10,69'luk bir pay ile Adana, ikinci sırada %16,14'lük bir pay ile Ordu ve üçüncü sırada %5,13'lük bir pay ile Sivas, on altıncı sırada da %1,59'luk bir pay ile Çanakkale yer almaktadır.

TÜİK 2023 yılı verilerine göre Çanakkale'de kovan sayısı bakımından birinci sırada %17'lik pay ile Biga, ikinci sırada %16,96'lık pay ile Çan ve üçüncü sırada %12,28'lik bir pay ile Merkez yer almaktadır. TÜİK 2023 yılı verilerine göre Çanakkale'de bal üretimi bakımından birinci sırada %16,19'luk pay ile Biga, ikinci sırada %17,83'lük pay ile Çan ve üçüncü sırada %12,85'lik bir pay ile Merkez yer almaktadır.

Üreticilerin çoğu bal dışındaki diğer arı ürünlerine pek fazla yönelmemektedir. Sadece bal ile değil diğer arıcılık ürünleri de fazla üretilirse arıcılık sektörüne daha yararlı olacaktır.

Arıcılık faaliyetinde arılı kovan başına verilen destek miktarı az gelmektedir. Kovan başına verilen destek miktarı artırılıp diğer arı ürünleri için de destek verilmesi sağlanmalıdır.

Öte taraftan kovan başına bal veriminin artırılması için, sektöre verilen doğrudan destekleme modeli yerine üretimi arttırıcı ve kaliteyi yükseltici yeni destekleme politikalarının uygulanması gerekmektedir.

Arıcılıkta en önemli sorunların başında bilinçsiz yapılan arıcılık gelmektedir. Diğer önemli sorunlarda da pazarlama ve konaklama yeri gelmektedir. Üreticilere arıcılık konusunda teknik eğitim verilmesi amacıyla bölgedeki ilgili kuruluşlar ile irtibatla olunmalıdır. Üreticilerin kovan koyacakları noktaların önceden belirlenmesi konaklama yeri sorununun olmaması adına faydalı olacaktır. Ayrıca arıcı, nektar kaynağına ne kadar yakın olursa kovan verimi de o kadar yüksek olup, kovan başına gelirin de artabilme durumu söz konusu olduğu için üreticiler bilgilendirilmelidir.

Fakat bu konuyu sadece bilinçsiz arıcılık ile değil bilinçsiz çiftçilik ile de değerlenmekte fayda olacaktır. Çünkü çiftçilerin bilinçsizliği ile birçok arı ölümlerine rastlanmaktadır. Gündüz saatlerinde yapılan zirai ilaçlar hem arıyı öldürmekte hem de verimi düşürmektedir. İlaçlamanın akşam saatlerinde yapılması için gerekli kurum ve kuruluşlar çiftçilere eğitim vermelidir.

Pazarlama sorunlarının en başında gelen diğer bir sorun balda yapılan hilelerdir. Sahte balın son yıllarda oldukça gündeme gelmesi sebebi ile bilinçli tüketicilerin kafasında her zaman soru işaretleri bulunmaktadır. Aynı zamanda piyasada dolaşmakta olan sahte balların diğer doğal ve katkısız ballara nazaran çok daha ucuz olması sebebi ile üretici elindeki ürünün değerinde satamamaktadır. Yetkili kurum ve kuruluşların bu durumu daha yakından incelemesi ve denetlemesi hem tüketicilerin hem üreticilerin faydasına olacaktır.

Üreticiler nakliye maliyetlerini karşılamada zaman zaman güçlük çekmektedir. Krediler arıcıların ihtiyaçlarını karşılayabilecek miktarlarda olmalı ve faiz oranları düşük tutulmalıdır.

Arıcılık işletmelerinde karlılığının sağlanması için arı ürünlerinin doğrudan pazarlanması önemli görülmektedir. Doğrudan pazarlama yapılabilmesi için sunulan bal tüketici açısından bir değer taşımali, aksi takdirde tüketicilerden fazla ilgi görmeyecektir.

Özet: Tarım sektörü üretim aşamasında belirsizlikleri içerisinde bulunduran bir sektördür. Tarım hava koşullarından, doğal afetlerden vb. her türlü olumsuzluktan etkilenmekte ve bunun sonucunda ciddi maddi zararlar ortaya çıkmaktadır. Yaşanan olumsuzluklar ve maddi kayıplar sonucunda tarımda sigortaya ihtiyaç duyulmaktadır. Aynı durum hayvancılık içinde geçerlidir. Hayvan hastalıkları, verim kayıpları ve ölüm nedeniyle işletmelerde canlı hayvan sermayesinde önemli ekonomik kayıplar yaşanmaktadır. Gelir ve sermaye kayıplarının sigorta aracılığı ile telafi edilmesi işletmelere önemli avantaj sağlayabilmektedir. Ancak, hayvansal üretimin sürdürülebilir olması için bir takım risk ve belirsizliklere karşı önlem alınması günümüzde bir zorunluluk durumuna gelmiştir. Buradan hareketle Denizli-Acıpayam ilçesinde büyükbaş hayvancılık işletmelerinin büyükbaş hayvan hayat sigortası (BHHS) Yaptırma Durumu irdelenmiş, üreticilerin beklentileri üzerinde durulmuştur. Acıpayam ilçesinde 70 büyükbaş hayvancılık işletmesi sahibi ile yüz yüze yapılan anketler yoluyla veriler toplanmıştır. Veriler analiz aşamasında iki kritere (işletme büyüklüğü ile sigortalı olup-olmama durumuna) göre gruplandırılmıştır. Büyükbaş hayvan hayat sigortası önemli bir risk transfer aracı olarak görülmektedir. Ankete katılan 70 üreticiden %52.9'unun (37 kişi) büyükbaş hayvan hayat sigortası yaptırdığı ve kalan %47.1'inin (33 kişi) büyükbaş hayvan hayat sigortası yaptırmadığı saptanmıştır. Yörede hayvancılık (büyükbaş) sigortası henüz istenilen seviyelere ulaşamamıştır. Bölgenin hayvansal üretimden geçimini sağlamayı sürdürebilmesi için hayvanların risk ve olumsuzluklardan sigortalatma yöntemi ile korunmalarının doğru bir yaklaşım olacağı düşünülmektedir. Denizli yöresinde BHHS'nın üreticiye benimsetilip önemi konusunda farkındalık yaratılması için daha çok çalışmanın ve bilinçlendirme faaliyetlerinin yürütülmesi gerekmektedir.

Anahtar Kelimeler: sigorta, büyükbaş hayvancılık, risk, Denizli-Acıpayam ilçesi

A Research on the Status of Cattle Insurance in Denizli-Acıpayam District

Abstract: The agricultural sector has uncertainties in the production phase. Agriculture can be affected by weather conditions, natural disasters, etc. It has been observed that it has been affected by all types of negativities and as a result, serious material damages have occurred. As a result of the negativities and financial losses experienced, insurance is needed in agriculture. This condition is same for livestock. Due to animal diseases, yield losses and death, significant economic losses are experienced in livestock capital in enterprises. Compensation of income and capital losses through insurance can provide significant advantages to enterprises. From this point of view, the Cattle Insurance of the Cattle Breeding Farms in Denizli-Acıpayam District was examined and the expectations of the producers were emphasized. Data were collected through face-to-face surveys with 70 cattle producers in Acıpayam district. The data were grouped according to 2 criteria (farm size and insured or not) during the analysis phase. Cattle insurance is seen as an important risk transfer tool. It was determined that 52.9% (37 people) of the 70 producers participating in the survey had cattle insurance and the remaining 47.1% (33 people) did not have cattle insurance. Livestock (cattle) insurance in the region has not yet reached the expected levels. In order for the region to maintain its livelihood from animal production, it is thought that it would be a right approach to protect their animals from risks and negativities by insuring them. More work and awareness-raising activities should be carried out in Denizli province in order to make the producers adopt the cattle insurance and raise awareness about its importance.

Keywords: insurance, animal insurance, risk, Denizli-Acıpayam district.

1.GİRİŞ

Tarım çok hassas bir sektör olduğu için bu sektörde, risk yönetimi oldukça önemlidir. Günümüzde tarım sektörü için kullanılan en önemli ve etkili risk yönetim aracı tarım sigortasıdır (Yazgı ve Olhan, 2018; Karahan Uysal vd., 2020). Sigorta, risklerin gerçekleşmesi sonucu doğabilecek zararları karşılayabilmek için kullanılan mali araç olarak tanımlanmaktadır. Sigortalı yetiştiricilik özellikle gelişmekte olan ülkelerde bitkisel ve hayvansal üretimdeki riski azaltmak, işletmeleri beklenmeyen şoklara ve kırılmalara karşı korumak ve bunlardan

kaynaklı etkileri en aza indirmek için en etkili stratejilerden biri olarak kabul edilmektedir (Hayran & Gül, 2015; Mat vd., 2020; Yıldız, 2022).

Geçmişten günümüze süregelen sigorta, halen ülkeden ülkeye farklılık gösteren bir kurumsal yapıya sahip bulunmaktadır. Türkiye AB'ye üyelik sürecine girdiği zaman içinde Almanya, Avusturya, İtalya, Fransa, İspanya gibi gelişmiş tarım uygulamalarının faaliyette olduğu ülkelerde tarım sigortaları çalışmalarını incelemiş ve İspanya'da devletin %50 dolayında prim desteği sağladığı modeli dikkate almıştır. Türkiye'de bu modelden yararlanılarak 14.06.2005 tarih 5363 sayılı "Tarım Sigortaları Kanunu" çıkarılmıştır. Kanun kapsamındaki risklerin belirlenmesi, oluşan hasarlar sonucunda tazminatın tek elden ödenmesi, tarım sigortalarının geliştirilmesi ve yaygınlaştırılması için Sigorta Havuzu (TARSİM) kurulmuştur.

Bugüne değin, havuz kapsamındaki tüm işlemler havuza katılan 24 sigorta şirketinin ortak oldukları TARSİM tarafından yürütülmeye devam etmektedir (TARSİM, 2023). Üreticilerin oluşabilecek her türlü katastrofik ve meteorolojik riskler ile doğal afet sorunlarının neden olduğu üretim risklerinden korunması ve devlet prim desteğinden yararlanabilmesi için bitkisel ürün sigortası için "Çiftçi kayıt sistemine (ÇKS)", büyükbaş, küçükbaş ve kümes hayvanları sigortası için, Tarım ve Orman Bakanlığı Kayıt Sistemi'ne yani Hayvan Bilgi sistemine, sera için Örtü Altı Kayıt Sistemi'ne (ÖKS'ye), arıcılık sigortası için "Arıcılık Kayıt Sistemi (AKS)'ne", su ürünleri çiftlikleri için Su Ürünleri Kayıt Sistemi'ne (SKS'ye) kayıt yaptırmaları zorunludur.

Türkiye'de 2017 yılından 2022 yılına kadar seyreden süreçte, Bitkisel ürün sigortası, Sera sigortası, Büyükbaş hayvan hayat sigortası, Küçükbaş hayvan hayat sigortası ve Kümes hayvanları hayat sigortasında poliçe sayısı sürekli artış göstermiştir. Bu artış birçok ilde gözlemlenmektedir. Denizli ilinin de tarım açısından büyük bir potansiyele sahip bir il olduğu bilinmektedir. Özellikle Acıpayam ilçesi ve çevresinde yapılan büyükbaş hayvancılık faaliyetleri büyük bir alana yayılmış durumdadır. Bölgenin kırsal kesiminde yaşayanların büyük bir bölümü hayvansal üretim faaliyeti ile geçimini sağlamaktadır. Dolayısı ile hayvan hayatının risk taşıdığı ve hayvansal üretimi olumsuz etkileyen durumların yaşanmasının mümkün olduğu durumlar da yöre halkı için büyükbaş hayvan hayat sigortası önemli bir risk transfer aracı olarak görülmektedir. Bölgenin hayvansal üretimden geçimini sağlamayı sürdürülebilmesi için üreticilerin hayvanlarını risk ve olumsuzluklardan sigortalatma yöntemi ile korumalarının doğru bir yaklaşım olacağı düşünülmektedir. Buradan yola çıkarak araştırmada, Denizli ili Acıpayam ilçesindeki büyükbaş hayvan üreticilerinin Büyükbaş Hayvan Hayat Sigortası(BHHS) yaptıрма durumlarını ve sigortaya yönelik bakış açılarını değerlendirmek amaçlanmıştır.

2. MATERYAL ve YÖNTEM

Araştırma bölgesi olan Denizli ili Acıpayam ilçesinde büyükbaş hayvancılığın yoğun olarak yapıldığı Ucarı mahallesinde 2021 yılı sonu itibarıyla ÇKS'ye kayıtlı 78 üreticinin 70'inin büyükbaş hayvancılık faaliyetinde bulunduğu belirlenmiştir. Bu üreticiler ana kitle olarak belirlenmiş ve tam sayım yöntemi (Kitle birimlerinin tamamına ulaşılarak gerekli bilgilerin elde edilmesi işlemi) kullanılarak Acıpayam ilçesindeki 70 büyükbaş hayvan üreticisi ile yüz yüze yapılan anketler yoluyla veriler toplanmıştır. Anket yöntemi ile toplanan veriler gerekli kodlamalar ve kontroller yapılarak MS Excel ve SPSS paket istatistik programına girilmiş ve analiz edilmiştir. Veriler analiz aşamasında 2 kritere (işletme büyüklüğü ile sigortalı olup- olmama durumuna) göre gruplandırılmıştır. Sigortalı işletme sayısı 37 iken, sigortasız işletme sayısı 33'dür. İşletme büyüklüğü olarak; işletmeler 1. Grup 10 baş ve üzeri (34 işletme) ve 2. Grup 11 baş ve üzeri (36 işletme) olarak iki grup altında değerlendirilmiştir. Verilerin analizinde tanımlayıcı istatistiklere yer verilmiştir. Mann Whitney-U ve t Testi uygulanmıştır. Bunun yanı sıra ölçekli sorularda 5'li likert ölçeği kullanılmıştır.

3. TÜRKİYE'DE ve DENİZLİ İLİNDE BÜYÜKBAŞ HAYVAN HAYAT SİGORTALARI

Türkiye'de 2017 yılından 2021 yılına seyreden 5 yıllık süreçte, Bitkisel ürün sigortası, Sera Sigortası, Büyükbaş hayvan hayat sigortası, Küçükbaş hayvan hayat sigortası ve Kümes hayvanları hayat sigortasında ve Su ürünleri hayat sigortaları poliçe sayısı sürekli artış göstermiştir (Çizelge 3.1). 2021 yılı toplam poliçe sayısının %85,31'ini bitkisel ürün sigortası oluştururken, bunu ikinci sırada %9,57 ile büyükbaş hayvan hayat sigortası, üçüncü sırada ise %3.20 ile küçükbaş hayvan hayat sigortası izlemektedir. İlgili dönemde en fazla artış %421,51 ile küçükbaş hayvan hayat sigortalarında görülürken, bunu %349,91 ile kümes hayvanları hayat sigortası ve % 339,35 ile büyükbaş hayvan hayat sigortaları izlemiştir.

Hayvan hayat sigortaları, "Hayvan Hayat Sigortası Genel Şartlarındaki" hayvanları her türlü adi ve bulaşıcı hastalıklardan, kazalardan, doğal afetler nedeniyle meydana gelen zorunlu öldürmeler veya ölümlerinden sigortalının doğrudan doğruya uğradığı maddi zararı temin etmektedir. Büyükbaş hayvan hayat sigortaları Süt Sığırları ve Mandalar (11. günden itibaren 7 yaşına kadar), sigortalanan hayvanın geçmiş 3 yıllık poliçe

döneminde kesintisiz sigortalanması koşulu ile 9 yaşına kadar (9 yaş dahil), Erkek Besi Sığırlarını (11. günden itibaren 3 yaşına kadar) kapsamaktadır.

Özsayın (2021) tarafından yapılan bir çalışmada, TR22 Güney Marmara Bölgesinde 2020 yılına kadar hayvan hayat sigortalarında önemli ilerlemelerin olduğu, ancak toplam büyükbaş ve küçükbaş hayvan sayısı dikkate alındığında, sigortalı hayvan sayısı oranının düşük olduğu ortaya konulmuştur. Aynı yıl Van ilinde yapılan bir çalışmada, Van ili Damızlık Sığır Yetiştiricileri Birliğine (DSYB) üye olan ve olmayan toplam 178 işletmeden 150'sinin (%84,27) hayvan sigortası yaptırmadığı belirlenmiştir (Terin vd., 2021). Araştırmada DSYB'ne üye işletmelerin %21,35'inin, DSYB'ne üye olmayan işletmelerin ise %10,11'inin hayvan sigortası yaptırdıkları belirlenmiştir. Buna göre DSYB'ne üye işletmelerin hayvan sigortası yaptırmaları daha yüksektir. Yapılan diğer bir araştırmada ise üreticiler için TARSİM hayvan hayat sigortasının yaygın yaptırılmamasının nedenleri arasında ilk sırayı hayvancılıktan sağlanan gelirin yetersiz veya düzensiz olması alırken, ikinci sırada hayvan başına sigorta poliçe bedelinin yüksek olması almıştır (Kaygısız vd., 2022).

Tablo 3.1: Yıllara Göre Poliçe Sayısı (Adet)

Branş Adı	2017	2018	2019	2020	2021	Değişim (%) 2017-2021
Bitkisel Ürün	1.493.392	1.607.121	1.900.609	1.952.825	2.147.758	43,82
Sera	24.139	25.208	28.825	34.252	37.608	55,80
Büyükbaş Hayvan Hayat	54.856	90.904	117.920	181.773	241.012	339,35
Küçükbaş Hayvan Hayat	15.441	21.903	31.573	57.244	80.526	421,51
Kümes Hayvanları Hayat	561	696	1.123	2.060	2.524	349,91
Su Ürünleri Hayat	77	107	89	125	134	74,03
Arıcılık	9.803	10.489	7.721	7.347	8.142	-16,94
Genel Toplam	1.598.269	1.756.428	2.087.860	2.235.626	2.517.704	57,53

Kaynak: TARSİM Faaliyet Raporu, İstatistiki Veriler, Çeşitli Yıllar.

2021 yılında araştırma bölgesi olan Denizli ilinin Türkiye sıralamasında üretici sayısı bakımından 11. sırada, toplam sigorta bedeli ile 23. sırada, toplam hayvan sayısı ile 15. sırada ve ödenen tazminat ile 6.sırada olduğu görülmektedir (Tablo 3.2). Türkiye'de ve araştırma yöresinde ödenen hasarlarda ise ilk sırayı hayvan ölümleri alırken, bunu ikinci sırada ise zorunlu kesimin izlediği belirlenmiştir.

Tablo 3.2: Denizli İli Büyükbaş Hayvan Hayat Sigortaları (2021)

	Üretici Sayısı	Toplam Sigorta Bedeli (TL)	Toplam Hayvan Sayısı (Baş)	Toplam Prim Tutarı (TL)	Ödenen Tazminat (TL)
Denizli İli (1)	5.145	602.286.870	52.348	54.542.774	20.142.637
Türkiye'deki Sıralaması	11	23	15	5	6
Türkiye Toplamı (2)	216.829	32.186.579.961	3.606.944	1.370.397.772	477.015.043
Oran (%) (1/2)	2,37	1,87	1,45	4,0	4,22

4. BULGULAR ve TARTIŞMA

4.1 İşletmelerin Sosyo-Ekonomik Özellikleri

Ankete katılan işletmelerde 70 üreticinin yaş ortalaması 56,71'dir. Özsayın (2019) tarafından Çanakkale'de süt sığırcılığında risk kaynakları ve stratejilerine yönelik yapılan bir çalışmada ise ortalama üretici yaşı 45,2 olarak bulunmuştur. Bu durum kırsalda hayvancılıkla uğraşan üretici yaşının daha da yükseldiğini, gençlerin hayvancılıktan uzaklaştıklarını göstermektedir. Üreticilerin %2,9'u kadın (2 kişi) %97,1'i (68 kişi) erkektir. Aylık ortalama gelir içerisinde hayvansal üretimin payı ortalama yaklaşık %49'dur. Bu çalışmada tarım sigortası yaptıran işletmelerde hayvancılık deneyiminin 24 yıl, sigorta yaptırmayan işletmelerde hayvancılık deneyiminin yaklaşık 29 yıl olduğu göz önünde bulundurularak, sigortalı işletmelerin sigortasız işletmelere göre hayvancılık deneyiminin düşük olduğu görülmüştür. İşletme başına aylık gelir ortalaması, 5943,57 TL'dir. Hayvancılığın toplam gelirdeki payı %49,43'dür. Bağımsız örneklem t-testine göre; aylık ortalama gelir ile sigorta yaptıran üreticiler ve sigorta yaptırmayan üreticiler (p=0,047) arasında istatistiksel açıdan fark olduğu saptanmıştır. Üreticilerin %75,7' sinin (53 kişi) tarım dışı bir gelir kaynağı bulunmakta ve %24,3'ünün (17 kişi) tarım dışında bir gelir kaynağı bulunmamaktadır (Tablo 4.1).

Tablo 4.1: Üreticilerin Demografik Özellikleri

Özellikler	1.Grup (≤ 10 baş) (34 işletme)	2.Grup (≥ 11 baş) (36 işletme)	Sigortalı (37 işletme)	Sigortasız (33 işletme)	Genel Ort. (70 işletme)	P değeri
Yaş	58,24	55,28	54,43	59,27	56,71	0,220
Eğitim Durumu (Yıl)	6,47	7,67	7,76	6,33	7,09	0,050*
Ailedeki birey sayısı	2,79	3,44	3,08	3,18	3,13	0,703
Tarımla uğraştığı süre (Yıl)	33,65	30,06	28,59	35,39	31,80	0,101
Hayvancılık ile uğraştığı süre (Yıl)	26,18	26,19	24,00	28,85	26,29	0,162
Aylık Ortalama gelir (TL)	5834,72	6058,82	5943,57	5348,48	5943,57	0,047*

*Mann Whitney-U ve t Testine Göre p<0,05 İçin Anlamlıdır

Üreticilerin %97,1'inin (68 kişi) kooperatif veya birlik üyeliği bulunmakta olup, hepsi yaşadıkları mahallenin kooperatifi olan Ucarı Sulama Kooperatifine ortaktır. Üreticilerin %2,9'u (2 kişi) herhangi bir kooperatif veya birliğe ortak/üye değildir. Üreticilerin tamamı ÇKS'ye Kayıtlıdır. Üreticilerin %12,9'unun (9 kişi) hastalıktan arılık belgesi bulunmakta ve kalan %87,1'inin (61 kişi) hastalıktan arılık belgesi bulunmamaktadır.

Üreticiler en az 10 dekar, en çok 100 dekar arazi işlemektedir. Toplam işlenen arazi miktarı ortalama 32,10 dekadır. Arazilerin parsel sayısına bakıldığında işletmelerin en az 2 en çok 16 parsel(parça) sayısı olduğu ve ortalama parsel sayısının 5,44 adet olduğu görülmektedir. Yöre arazileri çok parçalıdır. Mülk arazi durumuna bakıldığında en az 2 dekar en çok 80 dekar ve ortalama 21,28 dekar mülk arazi işlenmektedir. En az 5 dekar, en çok 25 dekar ve ortalama 15 dekar arazi ortak olarak işlenmektedir. En az 5 dekar en çok 60 dekar ve ortalama 15,72 dekar arazi kira ile işlenmektedir. Yörede arazi işleme şekli ağırlıklı olarak mülk şeklindedir. Acıpayam bölgesinde hayvansal üretim yapan 70 üreticinin verileri değerlendirildiğinde toplam inek sayısı en az 2 en çok 40 baş olup, ortalama 12,69 baş inek yetiştiren küçük aile işletmelerinden oluşan bir yapı olduğu görülmektedir. Ortalama sağmal inek sayısı 6 baştır.

4.2 Yöredeki Üreticilerin Sigortalılık Durumu

Görüşülen 70 üreticinin %57,1'i (40 kişi) tarımsal sigortalar hakkında bilgili olduğunu, %8,6'sı (6 kişi) tarımsal sigortalar hakkında bilgisi olmadığını ve %34,3 ü (24 kişi) tarımsal sigortalar hakkında kısmen bilgili olduğunu belirtmiştir. Bilgi durumuna bakıldığında ölçek ortalaması 3,51'dir. Üreticiler genel olarak tarımsal sigortalar hakkında bilgi sahibidir. İşletme büyüklüklerine göre durum incelendiğinde 1. Grup işletmelerdeki üreticilerin %55,88'i (34) bilgisi olduğunu söylerken 2. Grupta yer alanların %58,33'ü (36) bilgisi olduğunu belirtmiştir. Ankete katılan 70 üreticiden %52,9'unun (37 kişi) tarım sigortası yaptırdığı ve kalan %47,1'inin (33 kişi) tarım sigortası yaptırmadığı saptanmıştır. Üreticilerin tarım sigortaları içerisinde hangi sigortaları yaptırdıkları incelendiğinde, 70 üreticinin %7,1'i (5 kişi) bitkisel ürün sigortası; %52,9'unun (37 kişi) büyükbaş hayvan hayat sigortası, %4,3'ünün (3 kişi) küçükbaş hayvan hayat sigortası yaptırdığı saptanmıştır. Üreticilerden %18,6'sının TARSİM'den daha önce sigorta yaptırdığı belirlenmiştir. TARSİM'den sigorta yaptıran üreticilerin az olmasının nedeni üreticilerin TARSİM'i iyi tanımıyor olmasından kaynaklanmaktadır. Çalışmada üreticilere sigorta yaptırma nedenleri sorulup değerlendirilmiştir. Üreticiler sigorta yaptırma nedenleri arasında ortalama en fazla (4,18) kooperatif veya banka mecbur tuttuğundan ve ortalama en az (2,21) doğal afetlerden korunmak için sigorta yaptırdıklarını belirtmiştir.

Büyükbaş Hayvan Hayat Sigortası yaptıran 37 kişi olup, en az 1, en çok 6 yıl ve ortalama 2,27 yıldır sigorta yaptırmaktadır. 1. Grup üreticilerin sigorta yaptırma süresi 1,94 yıl, 2. Grup işletmelerin sigorta yaptırma süresi 2,57 yıldır. Üreticilerin Büyükbaş Hayvan Hayat Sigortası (BBHS) yaptırmaya süreleri incelendiğinde, Acıpayam yöresinde büyükbaş hayvan hayat sigortası yaptıranın çok önceki tarihlere dayanmadığı söylenebilir (Tablo 4.2).

Tablo 4.2: Üreticilerin Sigorta Yaptırma Süresi

Sigorta Yaptırma Süresi	1. Grup (≤ 10 baş) (16)	2.Grup (≥ 11 baş) (21)	Min.	Max.	Ortalama (Yıl) (37 kişi)
Yıl	1,94	2,57	1	6	2,27

Üreticilerin %44,3'ü (31 kişi) dar kapsamlı ve geniş kapsamlı BBHS'na ilişkin tarifieden haberdar iken, %55,7'sinin (39 kişi) dar kapsamlı ve geniş kapsamlı tarifieden(Bkz. haberi bulunmamaktadır. Üreticilerin %70,27'si (26 kişi) Ziraat Bankası ile, %24,32'si (9 kişi) Tarım Kredi Kooperatifi ile, %5,41'i (2 kişi) Denizbank ile BBHS yaptırmaktadır. Üreticilerin, %75,7'sinin (53 kişi) sigorta primlerinin devlet destekli olarak ödendiğini bildiği,

%24,3'ünün (17 kişi) sigorta priminin devlet destekli olarak ödendiğini bilmediği saptanmıştır. BBHS olmayan 33 üreticiye BHHS yaptırmama nedenleri sorulduğunda, ortalama en çok (4,52) BHHS hakkında yeterli bilgisinin olmaması ve ortalama (4,33) sigorta primlerinin yüksek olması; ortalama en az (2,97) sigortanın kapsamını yetersiz bulması nedenlerinin etkili olduğu saptanmıştır (Tablo 4.3).

Tablo 4.3: Üreticilerin BHHS Yaptırmama Nedenlerine İlişkin Görüşleri

İfadeler	Ortalama*	St. Sapma
Hayvan sigortası hakkında yeterli bilgisinin olmaması	4,52	8,779
Sigorta primlerinin yüksek olması	4,33	,816
Gelirinin sigorta için yetersiz veya düzensiz olması	4,03	1,045
Devletin prim desteğinin yetersiz olduğunu düşünmesi	3,70	1,132
Alışkanlığın olmaması	3,64	1,220
Bugüne kadar herhangi bir riskle karşılaşmamış olması	3,61	1,171
Gereksiz masraf olduğunu düşünmesi	3,48	1,093
Sigorta şirketlerine güvenmemesi	3,42	1,324
Hasarın gerçekten ödeneceğine inanmaması	3,33	1,242
Sigorta kapsamını yetersiz bulunması	2,97	0,883
* 1)Kesinlikle etkisiz 2)Etkisiz 3)Ne etkili ne etkisiz 4)Etkili 5)Kesinlikle etkili		

Üreticilerin gelecekte BHHS yaptırma durumu incelendiğinde ortalama en çok (3,61) gelirin artması durumunun ve ortalama en az (2,40) yeterli bilgilendirmenin yapılması durumunda sigorta yaptırmanın etkili olacağı saptanmıştır (Tablo 4.4). Mat vd., (2020) tarafından yapılan bir araştırmada büyükbaş hayvancılık işletmesi sahiplerinin %77,1'inin gelirinin artması durumunda sigorta yaptırabileceği sonucu ortaya çıkmıştır. Yıldız, (2022) tarafından Bursa'da yapılan bir araştırmada ise üreticilerin gelirlerinde artış olması durumunda tarım sigortası yaptırmak isteyecekleri (%62,50) belirlenmiştir.

Tablo 4.4: Gelecekte BHHS Yaptırma Durumu Üzerine Görüşler

İfadeler	Ortalama*	St. Sapma
Gelirim artarsa gelecekte sigorta yaptırırm.	3,61	1,365
Sigorta priminde indirimle gidilirse gelecekte sigorta yaptırırm.	3,23	1,332
Primler daha düşük olsaydı gelecekte sigorta yaptırırm.	3,16	1,519
Devlet desteği daha çok olsa gelecekte sigorta yaptırırm.	2,89	1,378
Sigorta kapsamı genişletilirse gelecekte sigorta yaptırırm.	2,86	1,277
Hayvan hayatı kapsamında riskler artarsa gelecekte sigorta yaptırırm.	2,64	1,155
Hayvan hayat sigortası kapsamına giren herhangi bir sorun ile karşılaşırsa gelecekte sigorta yaptırırm.	2,47	1,293
Yeterli bilgilendirme yapılırsa gelecekte sigorta yaptırırm.	2,40	1,209
* 1)Kesinlikle etkisiz 2)Etkisiz 3)Ne etkili ne etkisiz 4)Etkili 5)Kesinlikle etkili		

5. SONUÇ ve ÖNERİLER

Dünyada ve Türkiye'de tarımsal faaliyetlerin bazı olumsuz durumlar ve risklerle karşı karşıya olduğu göz önüne alındığında bu risklerin kontrol altına alınması ve telafi edilebilmesi için tarımsal sigortalara ihtiyaç duyulmaktadır. Denizli ili Acıpayam ilçesinde yürütülen bu çalışmada üreticilerin Büyükbaş Hayvan Hayat Sigortası(BHHS) yaptırmama durumları ve bakış açıları değerlendirilmiştir. Yörede yaygın olarak yapılan hayvansal üretim, pazarlama olanağı bulunması ve kooperatiflere yer verilmesi hayvancılığı destekler niteliktedir. Ancak yörede her ne kadar hayvancılık yaygın olarak gerçekleştirilse de üreticilerin %50'si hayvancılık ile uğraşmaktan memnun değildir. Bunun nedeni ise günden güne artan girdi maliyetleri ve kazancın düşük olmasıdır. Üreticilerin yarısından fazlasının (%57,1) tarımsal sigortalar hakkında bilgi sahibi olmasına rağmen, %42,9'unun bilgi sahibi olmadığı belirlenmiştir. Üreticilerin sigorta yaptırmama nedenleri arasında en fazla kooperatif veya banka zorunlu kıldığı için sigorta yaptırdıkları ortaya çıkmıştır. Sigorta yaptıran üreticilerin %70,27'sinin Ziraat Bankasından aldığı kredi nedeniyle sigortalatma yaptığı anlaşılmıştır. Yörede sigorta yaptırmanın yeni yaygınlaştığı söylenebilir. Üreticilerin yarısından fazlası (%62,9) büyükbaş hayvan hayat sigortası hakkında bilgilidir. Yörede BHHS yaptırmama durumlarına gelir durumu ve sigorta prim fiyatlarının etkili olduğu saptanmıştır. Üreticilerin gelecekte sigorta yaptırmalarında en çok gelirin artması durumunda sigorta

yaptıracakları belirlenmiştir. Üreticilerin pazarda söz sahibi olmaları, ürün ve girdi fiyatlarının iyileştirilmesi, TARSİM sigorta primlerinin düzenlenmesi, üreticilere sigorta hakkında bilginin verimli bir şekilde ulaştırılması sonucunda sigorta yaptıran yetiştirici sayısının gelecek yıllarda artacağı düşünülmektedir. Tarım Sigortaları sektöründe mali sürdürülebilirliğin temel koşulu sisteme yüksek düzeyde üretici katılımıdır. Özellikle son dönemde yaşanan doğal afetlerin ve ekonomideki dalgalanmaların hayvancılık sektörünü de olumsuz yönde etkilediği ve hayvanların girdi maliyetleri nedeniyle kesime gönderilmesi de göz önüne alındığında primlerin yeniden revize edilmesi, hayvan yetiştiricinin korunması yani desteklenmesi açısından son derece önemlidir.

²Anadolu Üniversitesi, SBE, Yönetim Organizasyon, ali121@anadolu.edu.tr, ORCID:0009-0002-2779-2266

Özet: Bu çalışmanın amacı, örgüt kültürü ile iş tatmini arasındaki ilişkinin varlığını ortaya koymak ve bu ilişkinin banka çalışanlarının örgütsel bağlılıkları üzerinde bir etkiye sahip olup olmadığını belirleyebilmektir. Bu amaçla çalışma, amaçlı örnekleme yöntemi kullanılarak belirlenmiş olan Eskişehir ilinde faaliyet göstermekte bulunan 6 özel bankanın 156 çalışanı üzerinden yürütülmüştür. Çalışmada veriler anket yöntemi kullanılarak toplanmıştır. Ankette katılımcılara demografik özellikleri, örgüt kültürü, iş tatmini ve örgütsel bağlılık ile ilgili sorulmuş toplam 54 soru bulunmaktadır. Çalışmada örgüt kültürü ile iş tatmini arasındaki ilişkinin belirlenebilmesi için korelasyon analizi yapılmıştır. Bu analiz sonucunda örgüt kültürü ile iş tatmini arasında pozitif yönlü ve yüksek düzeyde bir ilişki ($r = 0.875$) olduğu tespit edilmiştir. Örgüt kültürü ile iş tatmini arasındaki ilişkinin örgütsel bağlılık üzerindeki etkisini belirleyebilmek için ise regresyon analizi gerçekleştirilmiştir. Regresyon analizi sonucunda örgüt kültürü ile iş tatmini arasındaki güçlü ilişkinin banka çalışanlarının örgütsel bağlılıkları üzerinde anlamlı ve pozitif yönde ($R^2 = 0.76$) bir etkiye sahip olduğu belirlenmiştir. Başka bir deyişle örgüt kültürü ile iş tatmini arasındaki ilişki, banka çalışanlarının örgütsel bağlılık davranışlarının %76'sını açıklamaktadır. Buradan yola çıkarak bankaların örgüt kültürlerini mümkün oldukça çalışanların arzu ettikleri bir çalışma ortamını sağlayacak şekilde oluşturmaları hem iş tatmini hem de örgütsel bağlılık için önemli olduğu söylenebilir.

Anahtar Kelimeler: Örgüt Kültürü, İş Tatmini, Örgütsel Bağlılık, Banka Çalışanları

Determining The Impact of The Relationship Between Organizational Culture and Job Satisfaction on The Organizational Commitment of Bank Employees

Abstract: The aim of this study is to reveal the existence of the relationship between organizational culture and job satisfaction and to determine whether this relationship has an effect on the organizational commitment of bank employees. For this purpose, the study was carried out on 156 employees of 6 private banks operating in Eskişehir, which was determined by using the purposive sampling method. In the study, data were collected using the survey method. In the survey, there are 54 questions asked to the participants about demographic characteristics, organizational culture, job satisfaction and organizational commitment. In the study, correlation analysis was performed to determine the relationship between organizational culture and job satisfaction. As a result of this analysis, it was determined that there is a positive and high level relationship ($r = 0.875$) between organizational culture and job satisfaction. Regression analysis was carried out to determine the effect of the relationship between organizational culture and job satisfaction on organizational commitment. As a result of the regression analysis, it was determined that the strong relationship between organizational culture and job satisfaction had a significant and positive ($R^2 = 0.76$) effect on the organizational commitment of bank employees. In other words, the relationship between organizational culture and job satisfaction explains 76% of bank employees' organizational commitment behaviors. From this point of view, it can be said that it is important for both job satisfaction and organizational commitment for banks to establish their organizational culture as much as possible in a way that provides a working environment that employees desire.

Key Words: Organizational Culture, Job Satisfaction, Organizational Commitment, Bank Employees

1. GİRİŞ

Günümüzün yoğun rekabet koşullarında faaliyet göstermekte olan örgütler, kendilerine rekabette öne çıkacak temel yetenekler geliştirmeye çalışmaktadır. İnsan kaynakları da bu yeteneklerden biridir. Bu nedenle örgütler tatmin düzeyleri yüksek ve örgüte bağlı çalışanlara sahip olmak istemektedirler. Bunun bir yolu çalışanlara rahat çalışabilecekleri bir ortam yaratabilecek örgüt kültürleri oluşturmalarından geçmektedir. Örgütlerin kendilerine has oluşturdıkları örgüt kültürü, örgütte işlerin nasıl yerine getirileceği belirlemekte ve doğal olarak da örgütte çalışanların mutlu bir ortamda ya da huzursuz olarak yerine getirmelerinde belirleyici olmaktadır. Örgüt kültürü, örgüt ile ilgili pek çok konuyla ilişkili olmakta pek çok alanı etkilemektedir. Örgüt

¹ Bu çalışma Anadolu Üniversitesi SBE yüksek lisans öğrencisi Abla Ali Abdallah Ali'nin "Örgüt Kültürü ile İş Tatmini Arasındaki İlişkinin Örgütsel Bağlılık Üzerindeki Etkisi" başlıklı tez çalışmasından üretilmiştir.

kültürü örgütte pek çok şeyle ilişkilidir. İş tatmini de örgüt kültürü ile ilişkili olan bir konu olmaktadır. Örgütsel bağlılığın oluşabilmesi için ise çalışanların iş tatmin düzeylerinin yüksek olması gerekir. Buradan yola çıkarak bu çalışmada örgüt kültürü ile iş tatmini arasındaki ilişkinin çalışanların örgütsel bağlılık düzeylerini nasıl etkilediği belirlenmeye çalışılmıştır. Bu amaçla çalışma özellikle rekabetin çok yoğun olduğu ve çalışma koşullarının da bir o kadar yoğun olduğu özel banka çalışanları ile gerçekleştirilmek istenmiştir.

2. ÖRGÜT KÜLTÜRÜ

Örgüt kültürü, örgüt çalışanlarının davranışlarını yönlendiren ve her örgütün kendine has olan normlar, değerler, inançlar ve alışkanlıklar olarak tanımlanabilir. Örgüt kültürü, örgütlerin amaç ve hedeflerine ulaşmalarına yardımcı olan ve bu nedenle de bazı örgütlere rekabet üstünlüğü kazandırabilen örgüte has bir temel yetenek olarak değerlendirilmektedir. Örgüt kültürü yönetim alanında uzun zamandır araştırma konusu olarak ele alınmaktadır. Örgüt kültürü ve örgüt ile ilgili pek çok değişken arasındaki ilişki ya da etki bu araştırmaların konusu olmuştur. Örneğin Valizadeh ve Ghahremani (2012) çalışanların iş-yaşam koşulları kalitesi ile örgüt kültürü arasındaki ilişkiyi araştırmış ve ikisi arasında doğrudan anlamlı bir ilişki olduğunu tespit etmiştir (s.1722). Dursun (2013) örgüt kültürü ile strateji arasındaki ilişkiyi Hofstede'in örgüt kültürü boyutları açısından araştırmış ve örgüt kültürü ile strateji arasında birbirini tamamlayan ve dönüştüren bir etkileşimin olduğunu belirlemiştir (s.43). Balay, Kaya ve Cülha (2013) örgüt kültürü ile örgütsel sinizm arasındaki ilişkiyi araştırdıkları çalışmalarında örgüt kültürü ile örgütsel sinizm algısı arasında pozitif yönde düşük düzeyde ilişki olduğunu ortaya koymuşlardır (s.123). Aydın ve Aktan (2016) akademisyenlerin Cameron-Freeman örgüt kültürü türleri ekseninde örgüt kültürü ile bilgi güvenliği algısı arasındaki ilişkiyi belirlemeye çalışmıştır. Yazarlar çalışma sonucunda örgüt kültürü türleri ile akademik personelin bilgi güvenliği algısı arasında istatistiksel olarak anlamlı ve orta düzeyde pozitif yönlü bir ilişki belirlemiştir (s.324). Oberföll, Camarena ve Saavedra (2018) örgüt kültürü ile örgüt performansı arasındaki ilişkiyi araştırdıkları çalışmalarında, örgüt kültürü değişkenleri ile işgören devir hızı, iş doyumu, örgütten memnuniyet ve satışlar gibi örgüt performansı değişkenleri arasında anlamlı bir ilişki olduğunu ortaya koymuşlardır (s.24). Aranki, Suifan ve Sweis (2019) örgüt kültürü ile örgütsel bağlılık arasındaki ilişkiyi araştırdıkları çalışmaları sonucunda örgüt kültürü ile örgütsel bağlılık arasında pozitif yönlü ve anlamlı bir ilişki olduğunu tespit etmişlerdir (s. 137). Akif (2021) örgüt kültürü ile çatışma yönetim tarzları arasındaki ilişkide psikolojik güvenliğin aracı rolünü incelediği çalışmasında, psikolojik güvenliğin örgüt kültürü ve çatışma yönetim tarzlarından özellikle işbirliği, kaçınma ve adanmışlık üzerinde önemli bir etkisinin olduğunu belirlemiştir (s.475). Karadirek (2022) ise örgüt kültürü ile örgütsel performans ve bağlılık arasındaki ilişkiyi araştırdığı çalışmasının sonucunda, örgüt kültürü ile örgütsel performans arasındaki ilişkinin örgütsel bağlılığa göre daha güçlü olduğunu ortaya koymuştur (s. 46). Aichouche, Chergui, Brika, El Mezher, Musa ve Laamari (2022), örgüt kültürü türü ile bilgi yönetim süreçleri arasındaki ilişkiyi bir meta analitik yol analizi ile keşfetmeye çalıştıkları çalışmalarının sonucunda klan, adhokrasi ve pazar kültürlerinin özelliklerinin dengeli bir şekilde bir araya getirildiği örgüt kültürlerinde başarılı bir bilgi yönetiminin mümkün olduğunu belirlemişlerdir (s.1). Örgüt kültürünün örgüt ile ilgili pek çok alanda ilişkisi incelenmiştir ancak örgüt kültürü ile iş tatmini arasındaki ilişkinin örgütsel bağlılık üzerindeki etkisini belirlemeye çalışan bir çalışmaya ne yerli ne de yabancı literatürde rastlanılmamıştır.

3. İŞ TATMİNİ

İş tatmini çalışanların yerine getirdikleri işin kendilerinde yarattığı olumlu duyguları ve beklentilerini ne ölçüde karşıladığı ile ilgili bir kavramdır. İş tatmin düzeyinin düşük olması çalışanların işten ayrılma niyetlerini arttırmakta yüksek olması ise hem performansı arttırmakta hem de örgüte karşı bağlılık oluşmasına katkı sağlamaktadır. Bu nedenle iş tatmini de örgüt kültürü gibi örgütlerde en sık irdelenen konular arasında yer almaktadır. Örneğin çalışanların bireysel özelliklerinin iş tatmini üzerindeki etkisine bakılan bir çalışmaya göre çalışanların tatmin düzeyi çeşitli bireysel faktörlerden etkilenecek şekilde değişmektedir (Özaydın ve Özdemir, 2014, 251). Örgüt depresyonu ile iş tatminine arasındaki ilişkinin incelendiği bir başka çalışma sonuçlarına göre ise iş tatmini ile örgütsel depresyon arasında yüksek derecede anlamlı bir ilişki olduğu ortaya konulmuştur (Bakan, Taşlıyan, Taş ve Aka, 2014, 314). İş tatmini ve yaşam tatmini ilişkisinde iş arkadaşlığının aracılık rolüne bakılan çalışmada, iş arkadaşlığının kısmi aracılık etkisinin olduğu belirlenmiştir (Özyer, İrk ve Anaç, 2015, 261). Lee, Yang ve Li (2017) iş tatmininin işten ayrılma niyeti ile arasındaki ilişkiyi araştırdıkları çalışmalarında kariyerinin henüz başında olan çalışanların iş tatminlerinin geliştirilmesi yoluyla işten ayrılma davranışlarının kontrol edilebileceği sonucuna varmışlardır (s.697). Türkiye'de belediyelerde çalışanların iş tatminleri ile örgütsel bağlılıkları arasındaki ilişkinin araştırıldığı çalışmada, örgütsel bağlılık ile iş tatmini arasında pozitif yönde bir ilişki olduğu tespit edilmiştir (Güven, 2020, 133). İş tatmini, işe bağlılık ve örgütsel vatandaşlık ilişkisinin

araştırıldığı çalışma sonuçlarına göre ise, işe bağlılık düzeyi arttıkça çalışanların daha fazla örgütsel vatandaşlık davranışı sergilediği ve işe bağlılık ve iş tatmini değişkenlerinin örgütsel vatandaşlık sergileme tutumuna olumlu etki gösterdiği belirlenmiştir (İnan, 2020, 348). Çalışma koşullarının iş tatmini üzerindeki etkisini belirlemeye çalışan bir çalışmaya göre, işgören tatmin düzeyinin arttırılabilmesi için çalışma koşullarına odaklanılması gerekmektedir (Taheri, Miah ve Kamaruzaman, 2020, 1). İş becerikliliği ile iş tatmini arasındaki ilişkinin araştırıldığı çalışma sonuçlarına göre iş tatminini sağlamak isteyen örgütler iş becerisi tutumlarını teşvik etmelidir (Ceylan ve Nazari, 2020, 995). Okolocha (2021) güneydoğu Nijerya'daki belirli üniversiteler üzerinde yapmış olduğu çalışmada, iş tatmini ile işgören verimliliği arasındaki ilişkiyi araştırmıştır. Çalışma sonuçlarına göre iş tatminini etkileyen unsurlardan olan çalışma koşulları ile ücret düzeylerinin işgören verimliliği üzerinde pozitif ve anlamlı bir etkiye sahiptir (s.127). Bir metropol bölgesinde genel bir popülasyonda iş tatminine yönelik bilgi, tutum ve uygulamaların incelendiği çalışmada, medeni durum ve çocuk sahibi olmak, iş tatminini olumsuz yönde etkileyen etmenler iken, bilgi düzeyindeki artışın ve uygulamalar ile ilgili davranışların iş tatmini üzerinde olumlu bir etkiye sahip olduğu belirlenmiştir (Montuori, Sorrentino, Sarnacchiaro, Di Duca, Nardo, Ferrante, D'Angelo, Di Sarno, Pennino, Masucci, Triassi ve Nardone, 2022, 1). Literatürde iş tatmini ile ilgili olarak yapılan çalışmalara bakıldığında, iş tatmin ile örgüt kültürü arasındaki ilişkinin örgütsel bağlılık üzerindeki etkisini ele alan herhangi bir çalışmaya rastlanılmamıştır.

4. ÖRGÜTSEL BAĞLILIK

Örgütsel bağlılık, çalışanların örgütte çalışmaya devam etmelerinde önemli bir duygusal tutumdur. Örgütlerin elde ettikleri başarıları sürdürebilmeleri ve hayatta kalabilmeleri için özellikle kritik çalışanların örgüte karşı bağlılık oluşturmaları ve örgütten ayrılmak istememeleri önemli olmaktadır. Meyer ve Allen (1997:11) örgütsel bağlılığı, çalışanların örgütle olan ilişkisi ile şekillenen ve örgütün uzun süreli bir üyesi olma kararını almalarına neden olan bir davranıştır şeklinde tanımlamaktadır (akt Sabuncuoğlu, 2007, 614). Örgütsel bağlılık konusu da iş tatmini ve örgüt kültürü gibi literatürde oldukça çok yer alan bir örgütsel davranış konusudur. Özellikle iş tatmini ile örgütsel bağlılık arasında yakın bir ilişki olduğu düşünüldüğü için özellikle bu iki konu literatürde en sık üzerinde durulan ve birlikte ele alınan konular olmuştur. Bu çalışmalardan birinde Ay, Alper, Bircan ve Öncül (2015) örgütsel bağlılığın iş tatmini üzerindeki etkisini belirlemeye çalışmışlardır. Çalışma sonucunda örgütsel bağlılık boyutlarından özellikle normatif bağlılığın iş tatmini üzerinde önemli bir etkisi olduğu belirlenirken devam bağlılığı boyutunun iş tatmini olumsuz yönde etkilediği belirlenmiştir (s.806). Örgütsel özdeşleşme, örgütsel bağlılık ve iş tatmini ilişkisinin araştırıldığı çalışma sonuçlarına göre ise, bu üç değişken arasında pozitif ve anlamlı bir ilişki olduğu ortaya konulmuştur (Sökmen, 2019, 980). Örgütsel bağlılık ve iş tatminini oluşturan faktörlerin iş performansını oluşturan faktörler ile arasındaki ilişkiyi araştıran çalışma sonucunda, bu ilişkinin düşük ve orta düzeyde bir ilişki olduğu tespit edilmiştir (Çelik ve İnce, 2020, 144). Örgütsel bağlılığın ve çalışma koşullarının iş tatmini üzerindeki etkisinde motivasyonun aracılık rolünü inceleyen çalışma sonucunda, motivasyonun örgütsel bağlılığın iş tatmini üzerindeki etkisine aracılık rolü oynamadığı belirlenmiştir (Suyono, Eliyana, Ratmawati ve Elisabeth, 2021, 681). Öztürk ve Özdoğan (2022) Tatvan devlet hastanesinde çalışanların örgütsel bağlılıkları ile iş tatminleri arasındaki ilişkiyi araştırdıkları çalışmalarında, örgütsel bağlılık ile iş tatmini arasında olumlu bir ilişki olmadığını tespit etmişlerdir (s.8). Örgütsel bağlılığın iş tatmini ile ilişkisinin yanı sıra çalışmalarda örgütsel bağlılığın örgüt ile ilgili başka konularla olan ilişkisi ya da etkisi de araştırılmıştır. Örneğin bu çalışmalardan birinde, liderlik tarzları ile örgütsel bağlılık arasındaki ilişki araştırılmıştır. Çalışma sonuçlarına göre özellikle dönüştürücü liderlik özelliklerine sahip liderler ile çalışanların örgütsel bağlılıkları arasında pozitif yönlü bir ilişki mevcuttur (Keskes, 2014, 40). Bir diğer çalışmada ise örgütsel iletişimin örgütsel bağlılığa olan etkisine bakılmıştır. Bu çalışmanın sonuçlarına göre örgütsel bağlılığı etkileyen en önemli faktörün, yetersiz iletişim boyutu olduğu belirlenmiştir (Saltık, Ünsar ve Oğuzhan, 2015, 57). Naktiyok ve İşcan (2019) örgütsel desteğin örgütsel bağlılık üzerindeki etkisinde örgütsel güven algısının aracılık rolünü belirlemeye çalışmışlardır. Çalışma sonucunda örgütsel güven algısının, örgütsel destek ve bağlılık arasındaki etkileşimde tam bir aracılık rolü üstlendiğini belirlemişlerdir (s.1029). Örgütsel kariyer yönetimi ile örgütsel bağlılık arasındaki ilişkinin incelendiği bir çalışmanın sonucunda ise, iki değişken arasında yüksek düzeyde olumlu bir ilişki olduğu tespit edilmiştir (Serinkan ve Yurtseven, 2021, 130). Öğretmenlerin örgütsel bağlılıklarının performanslarını nasıl etkilediğini araştıran çalışma sonucunda, örgütsel bağlılığın örgütsel performans üzerinde etkisinin olduğu ve özellikle de özel okullarda çalışan öğretmenlerin bağlılık düzeylerinin daha yüksek olduğu belirlenmiştir (Karayılan ve Mert, 2022, 357). Örgütsel bağlılık ile iş tatmini arasındaki ilişkiyi inceleyen literatürde pek çok çalışma olmasına rağmen, örgüt kültürü ile iş tatmini arasındaki ilişkinin örgütsel bağlılık üzerindeki etkisini ele alan herhangi bir çalışmaya rastlanılmamıştır. Bu nedenle bu çalışmanın literatüre katkı sağlayacağı düşünülmektedir.

5. YÖNTEM

Bu bölümde çalışmanın amacı, önemi, evren ve örnekleme, veri toplama tekniği ve bulgular hakkında bilgilere yer verilecektir.

5.1. Araştırmanın Amacı ve Önemi

Bu çalışmanın amacı, örgüt kültürü ile iş tatmini arasındaki ilişkinin, çalışanların örgütsel bağlılıkları üzerindeki etkisini belirlemeye çalışmaktır. Örgüt kültürü bir örgütte işlerin nasıl yürüyeceğini gösteren ve çalışanlar tarafından kabullenilen normlar, değerler, gelenek ve görenekler olarak çalışanların iş yapış şekillerini ve doğal olarak örgütün verimliliğini etkilemektedir. İş tatmini ise çalışanın örgütten beklentilerinin ne derece karşılandığını gösteren bir unsur olarak örgütün verimliliğini etkileyebilmektedir. Örgütsel bağlılık ise, çalışanların örgüt ile aralarında duygusal bir bağ oluşturmaları sonucunda oluşmaktadır ve örgütün yine verimliliği üzerinde önemli bir etki yaratabilen işgören devir hızının artmasına ya da azalmasına etki eden bir unsurdur. Bu üç değişken de örgütün verimliliğini etkileyen unsurlardır ve doğal olarak üçünün bir arada ele alınması gerekmektedir. Ancak örgütlerin verimliliği için bu derece önemli olan bu üç değişkeni ele alan ve özellikle de örgüt kültürü ile iş tatmini arasındaki ilişkinin çalışanların örgütsel bağlılıkları üzerindeki etkisini belirlemeye çalışan bir çalışmaya yerli ve yabancı yazında rastlanılmamıştır. Bu nedenle bu çalışmanın alan yazına katkı sağlayacağı için önemli olmaktadır.

5.2. Araştırmanın Evren ve Örnekleme

Çalışmanın evreni Türkiye’de faaliyet göstermekte olan tüm özel bankalardır. Evrenin tamamına ulaşmak mümkün olmadığı için çalışmada amaçlı örnekleme yöntemi kullanılarak bir örneklem belirlenmiş ve çalışma bu örneklem üzerinden yürütülmüştür. Çalışmanın amacı örgüt kültürü ile iş tatmini arasındaki ilişkinin örgütsel bağlılık üzerindeki etkisini ölçmektir. Bu bağlamda hizmet sunan işletmeler olarak emek yoğun çalışan bankalar arasında özellikle özel bankaların rekabetçi bir ortamda faaliyet göstermeleri ve bu nedenle çalışanların iş tatminlerine ve örgütsel bağlılıklarına daha fazla önem vermeleri ve her bir özel bankanın birbirlerinden farklı örgüt kültürlerine sahip olmaları nedeniyle çalışma özel bankalar üzerinden yürütülmek istenmiştir. Bu amaçla amaçlama örnekleme yöntemi kullanılarak Eskişehir ilinde faaliyet göstermekte olan 6 özel banka örneklem olarak seçilmiş ve bu bankalarda çeşitli pozisyonlarda çalışan 156 çalışan üzerinden çalışma yürütülmüştür. Örneklemde yer alan bankalar QNB Finansbank, Albaraka Türk Katılım Bankası, HSBC, Türk Ekonomi Bankası (TEB), Yapı ve Kredi Bankası ve Garanti BBVA’dır.

5.3. Veri Toplama Tekniği

Çalışmada nicel veri toplama tekniklerinden biri olan anket yöntemi kullanılarak veriler toplanmaya çalışılmıştır. Çalışmanın anket formu 4 bölümden oluşmaktadır. Birinci bölümde katılımcıların demografik özelliklerini (yaş, cinsiyet, medeni durum gibi) belirlemek üzere sorulmuş toplam 6 soru yer almaktadır. İkinci bölümde toplam 18 sorudan oluşan bankaların örgüt kültürlerini belirlemeye çalışan sorular yer almaktadır. Bu bölümdeki sorular hazırlanırken Demir’in 2005 yılında yapmış olduğu “Örgüt Kültürü-İş Tatmini İlişkisi: Plastik Sektöründe Bir Araştırma” başlıklı doktora tez çalışmasında kullanmış olduğu ölçekte yer alan 42 sorudan oluşan ölçekten yararlanılmıştır. Demir’in çalışmasında kullandığı ölçekte yer alan 42 sorudan bu çalışma için uygun olduğu düşünülen 18 soru alınmış ve çalışmaya uygun ifadeler olacak şekilde uyarlanarak ölçekte kullanılmıştır. Çalışmanın üçüncü kısmında banka çalışanlarının iş tatmin düzeylerini belirlemek üzere Minnesota İş Tatmin Ölçeğinde yer alan sorulardan faydalanılmıştır. Bunun yanı sıra Scarpello ve Campbell (1983)’in çalışmalarında kullandığı genel iş tatminini belirlemek üzere sorulmuş tek maddelik “Yaptığınız iş sizi her yönüyle ne derece memnun ediyor?” sorusu da sorulmuştur. İş tatmini ile ilgili sorular hazırlanırken yine Demir’in (2005) çalışmasında kullanmış olduğu ölçek ifadelerinden yararlanılmıştır. Anketin son kısmında banka çalışanlarının örgütsel bağlılıklarını belirleyebilmek için Meyer, Allen ve Smith (1993) tarafından oluşturulmuş ölçeğin Dağlı, Elçiçek ve Han (2018) tarafından Türkçe’ye çevrilmiş olan çalışmasında yer alan 18 ifade bulunmaktadır. Anket soruları 5’li likert ölçeği kullanılarak sorulmuştur. Veriler 1 Kasım-31 Aralık 2021 tarihleri arasında toplanmıştır. Çalışmanın gerçekleştirilebilmesi için Anadolu Üniversitesi etik kurulundan 26.10.2021 tarihinde etik kurul onayı alınmıştır.

6. BULGULAR

Çalışmada öncelikle katılımcıların demografik özellikleri belirlenmeye çalışılmıştır. Çalışmanın örnekleminde yer alan 156 banka çalışanının demografik özellikleri aşağıda Tablo 1’de verilmektedir.

Tablo 1: Katılımcıların Demografik Özelliklerine İlişkin Bulgular

		f	%
Cinsiyet	Erkek	86	55,1
	Kadın	70	44,9
Medeni Durum	Evli	84	53,8
	Bekar	72	46,2
Eğitim Düzeyi	Yüksekokul	2	1,3
	Lisans	94	60,2
	Lisans Üstü	60	38,5
Yaş Grupları	21-30 yaş	18	11,5
	31-40 yaş	101	64,7
	41-50 yaş	23	14,8
	51-60 yaş	9	5,8
	61 yaş ve yukarı	5	3,2
	1 yıldan az	8	5,1
Bankada Çalıştığınız Süre	1-3 yıl	72	46,2
	4-6 yıl	32	20,5
	7-10 yıl	30	19,2
	11 yıl ve daha fazla	14	9,0
	2500-3500	5	3,2
Aylık Gelirleri ²	3501-4500	9	5,8
	4501-5500	15	9,6
	5501-6500	30	19,2
	6501 ve yukarı	97	62,2
