Katılımcıların çalıştıkları sektör gereği cinsiyet olarak birbirlerine yakın oranlarda olduğu görülmektedir. Katılımcıların çok büyük bir kısmının (%99) eğitim seviyesi lisans ya da yüksek lisans derecesindedir ve %65’i 31-40 yaş aralığındadır. Katılımcıların %46’sının sektördeki deneyimi 1-3 yıl arasındadır ve %62’sinin geliri 6501 ve daha fazladır.

Çalışmada kullanılan ölçekte yer alan soruların güvenilirlik analizleri de yapılmıştır. Ölçeklere ilişkin güvenilirlik analizi sonuçları Tablo 2’de verilmektedir.

Tablo 2: Ölçeklerin Güvenilirlik Analizlerine İlişkin Bulgular

Ölçekler	Cronbach's Alpha
Örgüt Kültürü	,944
İş Tatmin Derecesi	,951
Örgütsel Bağlılık	,947

Güvenilirlik analizi sonucunda Cronbach’s Alpha değerinin 0.7’nin üzerinde bulunması, ölçeğin güvenilirliğinin iyi olduğunu göstermektedir. Bu çalışmada kullanılan ölçeklerin güvenilirlik sonuçları genelde 0.9’un üstünde çıkmıştır. Bu sonuçlar çalışmanın ölçeklerinin oldukça güvenilir olduğunu göstermektedir.

Çalışmada katılımcıların yaş, cinsiyet, medeni durum, eğitim, çalışma süreleri ve aylık gelirlerine göre değişkenlerin (örgüt kültürü, iş tatmini, örgütsel bağlılık) ortalama puanları arasındaki farklılaşmaları belirleyebilmek için fark testleri gerçekleştirilmiştir. Fark testlerinden elde edilen sonuçlar aşağıda Tablo 3, 4, 5, 6, 7 ve 8’de verilmektedir.

Tablo 3: Katılımcıların Cinsiyetlerine Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Cinsiyet	f	\bar{X}	SS	t	p
-------------	----------	---	-----------	----	---	---

² Gelir ile ilgili rakamlar verilerin toplandığı dönemi yansıtmaktadır.

Örgüt Kültürü	Erkek	86	3,51	,81	,112	,911
	Kadın	70	3,50	,70		
İş Tatmin Derecesi	Erkek	86	53,30	12,70	-,793	,429
	Kadın	70	54,80	10,89		
Örgütsel Bağlılık	Erkek	86	3,47	,85	-1,021	,309
	Kadın	70	3,60	,80		

Analiz sonuçlarına göre banka çalışanlarının örgüt kültürü, iş tatmini ve örgütsel bağlılık puanlarında cinsiyetlerine göre anlamlı bir farklılaşma yoktur ($p>0.05$). Ancak kadın çalışanların iş tatmini ve örgütsel bağlılık düzeylerinin erkek çalışanlara göre çok az da olsa daha yüksek olduğu görülmektedir. Ancak bu sonuç sektörlere göre farklılık gösterebilmektedir. Nitekim restoran işletmelerinde gerçekleştirilen bir çalışmada, erkeklerin iş tatmin düzeylerinin kadınlara göre daha yüksek olduğu belirlenmiştir (Dinler, 2019: 74).

Tablo 4: Katılımcıların Medeni Durumlarına Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Medeni Durumu	f	\bar{X}	SS	t	p
Örgüt Kültürü	Evli	84	3,56	,76	,983	,327
	Bekar	72	3,44	,77		
İş Tatmin Derecesi	Evli	84	54,87	11,60	1.014	,312
	Bekar	72	52,93	12,26		
Örgütsel Bağlılık	Evli	84	3,55	,79	,342	,733
	Bekar	72	3,50	,86		

Analiz sonuçlarına göre banka çalışanlarının örgüt kültürü, iş tatmini ve örgütsel bağlılık puanlarında evli ya da bekar olmalarına göre anlamlı bir farklılaşma yoktur ($p>0.05$). Diğer taraftan evli olan katılımcıların örgüt kültürü, iş tatmini ve örgütsel bağlılık skorları bekar olanlara göre daha yüksek olduğu belirlenmiştir. Başka çalışmalarda da evli olanların bekar çalışanlara göre iş tatmin düzeylerinin daha yüksek olduğu ortaya konulmuştur. Aynı şekilde eczane teknisyenleri ile gerçekleştirilen bir çalışmada da, evli çalışanların bekar çalışanlara oranla iş tatmin düzeylerinin daha yüksek olduğu belirlenmiştir (Yenihan, 2015: 27). Evli olanların bekarlara göre genellikle iş tatminlerinin daha yüksek olmasının nedeni, evli çalışanların bekarlara oranla hayattaki sorumluluklarının daha fazla olması ve bu nedenle de çalıştıkları işi kaybetmemek adına işlerinin olumsuz yanlarını daha az görmeleri şeklinde açıklanabilir.

Tablo 5: Katılımcıların Eğitim Düzeylerine Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Eğitim Düzeyi	f	\bar{X}	SS	F	p
Örgüt Kültürü	Yüksekokul	2	2,81	,62	4,633	,011
	Lisans	94	3,65	,76		
	Lisans Üstü	60	3,31	,72		
İş Tatmin Derecesi	Yüksekokul	2	40,50	4,95	4,394	,014
	Lisans	94	56,00	11,74		
	Lisans Üstü	60	51,25	11,61		
Örgütsel Bağlılık	Yüksekokul	2	3,07	1,21	2,449	,090
	Lisans	94	3,64	,83		
	Lisans Üstü	60	3,36	,78		

Analiz sonuçlarına göre banka çalışanlarının örgüt kültürüne ilişkin değerlendirmeleri ve iş tatmini puanları, eğitim düzeylerine göre istatistiki bakımdan anlamlı bir şekilde farklılaşırken ($p < 0.05$), örgütsel bağlılık puanlarında anlamlı bir farklılaşmanın olmadığı ($p > 0.05$) belirlenmiştir. Bir diğer önemli bulgu üniversite mezunu katılımcıların örgüt kültürü, iş tatmini ve örgütsel bağlılık değerlerinin yüksek okul ve lisansüstü düzeyinde eğitime sahip olan katılımcılara göre daha iyi olduğu belirlenmiştir. Otel işletmelerinde gerçekleştirilen bir çalışmada ise örgütsel bağlılık ile katılımcıların eğitim düzeyleri arasında anlamlı bir farklılık tespit edilmiştir (Tayfun, Palavar ve Çöp, 2010:10) Buradan yola çıkarak örgütsel bağlılık ile eğitim düzeyleri arasında farklılık olması, katılımcıların faaliyet gösterdikleri sektöre göre değişebildiği söylenebilir.

Tablo 6: Katılımcıların Yaşlarına Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Yaş Dağılımı	f	\bar{X}	SS	F	p
Örgüt Kültürü	21-30 yaş	18	3,58	,54	5,329	,000
	31-40 yaş	101	3,35	,76		
	41-50 yaş	23	3,69	,68		
	51-60 yaş	9	4,19	,81		
	61 yaş ve yukarısı	5	4,36	,49		
İş Tatmin Derecesi	21-30 yaş	18	55,00	6,69	5,443	,000
	31-40 yaş	101	51,42	12,21		
	41-50 yaş	23	57,52	10,19		
	51-60 yaş	9	64,67	11,69		
	61 yaş ve yukarısı	5	66,40	6,35		
Örgütsel Bağlılık	21-30 yaş	18	3,53	,61	3,490	,009
	31-40 yaş	101	3,40	,86		
	41-50 yaş	23	3,72	,78		
	51-60 yaş	9	4,06	,67		
	61 yaş ve yukarısı	5	4,40	,21		

Çalışma sonuçlarına göre banka çalışanlarının yaşlarına göre örgüt kültürü, iş tatmini ve örgütsel bağlılık puanları anlamlı farklılık göstermektedir ($p < 0.05$). Genellikle yaş arttıkça örgütsel bağlılık ve iş doyumu artmaktadır. Ancak bu sonuç da sektöre göre farklılık gösterebilmektedir. Nitekim Beden Eğitimi ve Spor Öğretmenleri ile gerçekleştirilen bir çalışmada, örgütsel bağlılığın yaşa göre anlamlı bir farklılık göstermediği belirlenmiştir (Soysal, 2022:33).

Tablo 7: Katılımcıların Çalışma Sürelerine Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Çalışma Süreleri	f	\bar{X}	SS	F	P
Örgüt Kültürü	1 yıldan az	8	3,75	,46	7,541	,000
	1-3 yıl	72	3,22	,74		
	4-6 yıl	32	3,56	,65		
	7-10 yıl	30	3,74	,74		
	11 yıl ve daha fazla	14	4,21	,70		
İş Tatmin Derecesi	1 yıldan az	8	54,38	8,78	8,101	,000
	1-3 yıl	72	49,10	10,90		
	4-6 yıl	32	55,94	11,11		
	7-10 yıl	30	59,00	11,39		

	11 yıl ve daha fazla	14	63,57	10,88		
	1 yıldan az	8	3,71	,55		
	1-3 yıl	72	3,17	,78		
Örgütsel Bağlılık	4-6 yıl	32	3,77	,74	7,621	,000
	7-10 yıl	30	3,84	,83		
	11 yıl ve daha fazla	14	4,04	,67		

Çalışmada gerçekleştirilen analiz sonuçlarına göre banka çalışanlarının çalışma sürelerine göre örgüt kültürü, iş tatmini ve örgütsel bağlılık puanları istatistiki açıdan anlamlı farklılıklar gösterdiği belirlenmiştir ($p < 0.05$). Banka çalışanlarının çalışma süresi arttıkça, genel olarak örgüt kültürünü benimsemeleri, iş tatmin düzeyleri ile örgütsel bağlılık düzeyleri artış göstermektedir. Alan yazındaki çalışmalarda da bu sonuç desteklenmektedir. Örneğin Ankara’da faaliyet gösteren havacılık bakım merkezlerinde çalışanlar ile gerçekleştirilen çalışma sonucunda da iş tatmin düzeylerinin toplam çalışma sürelerine göre farklılık gösterdiği tespit edilmiştir (Kılıç ve Saygılı, 2021:12). Çalışanların örgütte çalışma süreleri arttıkça örgüt kültürü, iş tatmini ve örgütsel bağlılık düzeyleri olumlu yönde farklılaşmaktadır denilebilir.

Tablo 8: Katılımcıların Aylık Gelirlerine Göre Ölçeklerin Farklılık Sonuçları

Değişkenler	Aylık Ortalama Gelirleri	f	\bar{X}	SS	F	P
Örgüt Kültürü	2500-3500	5	4,01	,22	2,381	,054
	3501-4500	9	3,73	,72		
	4501-5500	15	3,86	,49		
	5501-6500	30	3,59	,68		
	6501 ve yukarısı	97	3,38	,82		
İş Tatmin Derecesi	2500-3500	5	56,20	7,56	2,235	,068
	3501-4500	9	59,67	10,83		
	4501-5500	15	58,33	7,69		
	5501-6500	30	56,53	11,24		
	6501 ve yukarısı	97	51,87	12,54		
Örgütsel Bağlılık	2500-3500	5	3,63	,58	1,267	,286
	3501-4500	9	3,93	,80		
	4501-5500	15	3,66	,77		
	5501-6500	30	3,67	,84		
	6501 ve yukarısı	97	3,42	,83		

Analiz sonuçlarına göre banka çalışanlarının örgüt kültürü, iş tatmini ve örgütsel bağlılık puanları gelir düzeylerine göre farklılaşmamaktadır ($p > 0.05$). Bu sonuç elde edilen gelirin örgüt kültürü, iş tatmini ve örgütsel bağlılık düzeyleri açısından çok da etkili bir farklılık yaratmadığı söylenebilir.

Çalışmada örgüt kültürü, iş tatmini ve örgütsel bağlılık değişkenleri arasındaki ilişkiye de bakılmıştır. Değişkenler arasındaki ilişki parametrik test yöntemlerinden “Pearson Korelasyon Analizi” ile incelenmiş, istatistiki anlamlılık $p < 0,05$ seviyesinde değerlendirilmiştir. Korelasyon katsayısının değerlendirmeleri aşağıdaki tabloda verilmektedir;

Tablo 9: Korelasyon Analizi Sonuçları

		1.	2.	3.
1. Örgüt Kültürü	r_p	1	,875**	,813**
	p		,000	,000
2. İş Tatmin Derecesi	r_p		1	,864**
	p			,000
3. Örgütsel Bağlılık	r_p			1
	p			

** p<0.05

Gerçekleştirilen analizler sonucunda özellikle çalışmada belirlenmeye çalışılan örgüt kültürü ile iş tatmini arasında, pozitif yönde ve yüksek düzeyde bir ilişki ($r = 0.875$) olduğu tespit edilmiştir. Örgüt kültürü ile iş tatmini arasında bir ilişkinin var olduğu alan yazındaki çeşitli çalışmalarda da tespit edilmiştir. Örneğin Şeker, Dağ ve Yalçınsoy (2016) Sosyal Güvenlik Kurumunun Diyarbakır'daki çalışanları üzerinde gerçekleştirdikleri çalışmada da bu ilişkinin varlığını tespit etmişlerdir. Aynı şekilde Eryılmaz (2019) İstanbul'da havacılık sektöründe çalışmakta olan kamu çalışanları ile yapmış olduğu çalışmada örgüt kültürü ile iş tatmini arasında bir ilişki olduğunu belirlemişlerdir. Genel olarak iş tatmini ile örgütsel bağlılık, örgütlerde birbiri ile ilişki kavramlardır denilebilir.

Çalışmanın en temel araştırma sorusu olan örgüt kültürü ile iş tatmini arasındaki ilişkinin örgütsel bağlılık üzerinde bir etkiye sahip olup olmadığını tespit etmek amacıyla regresyon analizi gerçekleştirilmiştir.

Tablo 10: Regresyon Analizi Sonuçları

	Standardize edilmemiş katsayılar		Standardize edilmiş katsayılar				F	R^2
	B	Std. hata	B	T	P	VIF		
Sabit	,176	,157		1,121	,264			
Örgüt Kültürü	,261	,088	,242	2,953	,004	4,283	242,712*	,760
İş Tatmini	,045	,006	,652	7,965	,000	4,283		

Bağımlı Değişken: Örgütsel Bağlılık

Regresyon analizi sonucunda örgüt kültürü ile iş tatmini arasındaki güçlü ilişkinin banka çalışanlarının örgütsel bağlılıkları üzerinde anlamlı ve pozitif yönde ($R^2=0.76$) bir etkiye sahip olduğu belirlenmiştir. Başka bir deyişle örgüt kültürü ile iş tatmini arasındaki ilişki, banka çalışanlarının örgütsel bağlılık davranışlarının %76'sını açıklamaktadır. Buradan yola çıkarak bankaların örgüt kültürlerini mümkün oldukça çalışanların arzu ettikleri bir çalışma ortamını sağlayacak şekilde oluşturmaları hem iş tatmini hem de örgütsel bağlılık için önemli olmaktadır.

7. SONUÇ

Çalışmada örgüt kültürü ile iş tatmini arasındaki ilişkinin banka çalışanlarının örgütsel bağlılıkları üzerindeki etkisi incelenmeye çalışılmıştır. Bu amaçla çalışma özellikle rekabetçi bir ortamda faaliyet gösteren ve bu nedenle de çalışanlarının çok yüksek stres altında çalışmalarına neden olan özel bankalarda gerçekleştirilmek istenmiştir. Özel banka çalışanlarının çalışma ortamlarından dolayı örgüt kültürleri benimsemeleri, bu örgüt kültürünün iş tatminleri ile ilişki olarak artıp azalabileceği ve doğal olarak da örgüt kültürü ile iş tatmini arasında var olduğu düşünülen bu ilişkinin banka çalışanlarının örgütsel bağlılıkları üzerinde bir etkiye sahip olabileceği düşünülmüştür.

Çalışma sonuçlarına göre çalışmaya katılan banka çalışanlarının %55'i erkektir ve %53'ü evlidir. Katılımcıların yarıdan fazlası (%60) lisans mezunudur ve 31-40 (%65) yaş aralığındadır. İş tatmini ve örgütsel bağlılık için önemli bir gösterge olan iş deneyimine bakıldığında katılımcıların %46'sının 1-3 yıl arasında bankada çalışma yılına sahip olduğu belirlenmiştir. Çalışmada katılımcıların demografik özelliklerine göre örgüt kültürü, iş tatmini ve örgütsel bağlılık konularında farklılık gösterip göstermedikleri de belirlenmeye çalışılmış ve bu amaçla fark testleri uygulanmıştır.

Fark testleri sonuçlarına göre çalışanların örgüt kültürü, iş tatmini ve örgütsel bağlılık düzeylerinde cinsiyetlerine, medeni durumlarına ve gelir düzeylerine göre anlamlı farklılaşma olmamaktadır. Ancak eğitim düzeylerine göre örgüt kültürü değerlendirmeleri ile iş tatmini düzeyleri anlamlı şekilde farklılık gösterirken örgütsel bağlılık düzeylerinde bir farklılık olmamaktadır. Banka çalışanlarının yaşları arttıkça örgüt kültürü değerlendirmeleri, iş tatmini ile örgütsel bağlılık düzeylerinin de arttığı belirlenmiştir. Aynı şekilde katılımcıların bankada çalıştıkları süre arttıkça örgüt kültürü, iş tatmini ve örgütsel bağlılık düzeylerinde de farklılaşma olduğu belirlenmiştir.

Çalışmada örgüt kültürü ile iş tatmini arasındaki ilişkinin belirlenebilmesi için korelasyon analizi yapılmıştır. Analiz sonuçlarına göre örgüt kültürü ile iş tatmini arasında güçlü ve pozitif yönde bir ilişki ($r = 0.875$) olduğu belirlenmiştir. Bu sonuca göre çalışanların iş tatmin düzeyleri ile bankaların kendilerine has oluşturdukları örgüt kültürleri arasında önemli bir ilişki vardır. Çalışmada bu ilişkinin çalışanların örgütsel bağlılıkları üzerinde etkili olup olmadığı da belirlenmek istenmiştir. Bu etkiyi belirlemek için regresyon analizi gerçekleştirilmiştir. Regresyon analizi sonucunda örgüt kültürü ile iş tatmini arasındaki bu güçlü ve pozitif yönlü ilişkinin, banka çalışanlarının örgütsel bağlılıkları üzerinde olumlu ve yüksek bir etkiye sahip olduğu ($R^2=0.76$) belirlenmiştir. Başka bir deyişle çalışanların örgüte karşı oluşturdukları bağlılığın %76'sı, örgüt kültürü ile iş tatmini arasında bulunan bu güçlü ilişki ile açıklanabilir. Örgüt kültürünün doğru ve çalışanlar tarafından kabul edilir olması ile çalışanların yaptıkları işten tatmin olmaları arasında güçlü bir ilişki bulunmaktadır. Bu nedenle örgüt kültürü oluşturulurken çalışanların rahatlıkla uyum gösterebilecekleri ve çalışanların kolaylıkla adapte olabilecekleri bir örgüt kültürünün oluşturulması, çalışanların yaptıkları işten memnun olmalarını sağlayabilecektir. Aynı zamanda örgütsel bağlılıklarının oluşumunda da bu iki değişken arasındaki ilişki etkili olacaktır. Örgütlerin işyerinde mutlu, performansı yüksek, iş tatmini oluşmuş çalışanlara sahip olabilmesi, oluşturulan örgüt kültürüne bağlıdır. Bu aynı zamanda çalışanların örgüte olan bağlılıklarını da arttırabilecek ve etkinlik ve verimlilik için oldukça önemli olan işgören devir hızı oranını da düşürebilecektir.

Yenilenebilir Enerjinin Sosyal Politika Etkisi: Covid-19 ve Rusya-Ukrayna Savaşı Dönemi Değerlendirmesi

Dr. H.Bayram İRHAN¹

¹Doktor Öğretim Üyesi, Niğde Ömer Halisdemir Üniversitesi, Zübeyde Hanım Sağlık Bilimleri Fakültesi-Sosyal Hizmet Bölümü. Mail: bayramirhan@hotmail.com/ hacibayramirhan@ohu.edu.tr Orcid no: 0000-0002-4945966X.

Özet: Dünya, sürdürülebilirlik için çevresel etkilerin azaltılması ile yüzleşmektedir. Bundan dolayı, Covid-19-mutasyonları(C.19) ve Rusya-Ukrayna savaşı(RUW) sürecinde yenilenebilir enerjiye yönelik hedefler yükseltilmektedir. Bu çalışmada, yenilenebilir enerjinin ekonomik paradigmalara etkisi sosyal politika ilişkili olarak ele alınmaktadır. Ayrıca, çalışma kapsamında, C.19 ve RUW dönemi ithal fosil kaynaklı enerjide yaşanan kısıtlama ve aksamaların yenilenebilir enerjiye geçişi ivmelendirdiği belirtilmektedir.

Çalışmanın temel amacı, refah devletinin temel unsuru olan sosyal politikaların yerine getirilmesinde yenilenebilir enerjinin etkisine dikkat çekmektir. Fosil enerji kaynaklarının tükenmesi, çevre kirliliğine ve küresel ısınmaya neden olması ülkeleri yenilenebilir enerji kaynaklarına yöneltmektedir. Yenilenebilir enerji arzı artışı ülkelerin ithalat bağımlılığını azaltarak yeni iş başlangıçlarıyla istihdama yol açmaktadır. Aynı zamanda, yerli yenilenebilir enerjinin ithal enerji ile ikame edilmesi cari açığı ve enflasyonu azaltıcı bir etki yapmaktadır.

Bu çalışma, ithal enerji yerine yenilenebilir enerji üretimi-tüketimi ile cari açığı azaltmayı önermektedir. Yenilenebilir enerjiye geçiş, ekonomide yerli üretim faktörlerinin etkin ve rasyonel kullanımını sağlamaktadır. Makalede, yenilenebilir enerji, C.19, RUW, beşeri sermaye, cari açık, gini katsayısı, enflasyon, istihdam fenomenlerinin birbirleriyle ilişkili olarak ele alınması dikkat çekmektedir. Ayrıca, bu çalışma yenilenebilir enerji ile sosyal politika ilişkisini kurarak literatüre katkıda bulunmaktadır. Bu alandaki çalışmaların yeterli olmaması makalenin önemini ortaya koymaktadır. Bu çalışmanın farkındalığı, yenilenebilir enerjinin sadece yakıt değil aynı zamanda sosyal, ekonomik, çevresel sürdürülebilirliğin de enerjisi olduğunun belirtilmesidir. Bu çalışmada, "Sürdürülebilirliğin Enerjisi" kavramı ilk kez kullanılarak literatüre kazandırılmıştır. Aynı zamanda, C.19 ve RUW'un sismik etkilerine karşı, bu kavramın öğretilerde ve sosyal politikalarda dikkate alınması gerektiği öne sürülmektedir.

Anahtar Kelimeler: Yenilenebilir Enerji, C.19, RUW, Sosyal Politika.

The Social Policy Impact Of Renewable Energy: An Assessment Of The Period Of Covid-19 And The Russia-Ukraine War

Abstract: The world is facing the reduction of environmental impacts for sustainability. Because of this, Covid-19-mutations(C.19) and in the process of the Russia-Ukraine war (RUW), the targets for renewable energy are being raised. In this study, the effect of renewable energy on economic paradigms is considered in relation to social policy. Also, within the scope of the study, it is stated that there are strictions and disruptions experienced in imported fossil-derived energy during the C.19 and RUW periods accelerated the transition to renewable energy.

The main purpose of the study is to draw attention to the impact of renewable energy on the implementation of social policies, which are the basic element of the welfare state. The Depletion of fossil energy sources, causing environmental pollution and global warming, leads countries to renewable energy sources. The increase in renewable energy supply reduces the import dependence of countries and leads to employment with new business start-ups. At the same time, the substitution of domestic renewable energy with imported energy has a reducing effect on the current account deficit and inflation. Therefore, this study proposes to reduce the current account deficit by renewable energy production-consumption instead of imported energy. The transition to renewable energy ensures the effective and rational use of domestic production factors in the economy. In the article, renewable energy, It is noteworthy that the C.19, RUW, human capital, current account deficit, gini coefficient, inflation, employment phenomena are considered in relation to each other. In addition, this study contributes to the literature by establishing a social policy relationship with renewable energy.

The fact that the studies in this field are not sufficient reveals the importance of the article. The awareness of this study is that it is stated that renewable energy is not only a fuel, but also the energy of social, economic and environmental sustainability. In this study introduces the concept of "Energy of Sustainability" to the relevant literature by using it for the first time. At the same time, against the seismic effects of C.19 and RUW it is suggested that this concept should be taken into consideration in teachings and social policies.

Keywords: Renewable Energy, C.19, RUW, Social Policy.

GİRİŞ

Ekonomi teorisi üretim faktörleri üzerinden maliyet minimizasyonunun sağlanmasını amaç edinmektedir. Bu amacı gerçekleştirmek için üretim faktörlerinden emek hatalı bir şekilde daha çok gündeme getirilmektedir. Bu durum diğer faktörlerin etkinliğinin ihmaline mi yol açmıştır? sorusuna neden olmaktadır. Enerji üretim faktörleri arasında maliyetleri etkileyen bir unsurdur. Teknoloji toplumunda enerjinin kullanım yaygınlığı gittikçe artmaktadır. Bundan dolayı, maliyetlerin düşürülmesinde kullanılan enerji önem taşımaktadır. Yerli yenilenebilir enerjinin yaygınlaştırılması maliyetlerin minimize edilmesinde ve istihdamın genişletilmesinde üzerinde durulması gereken bir konudur.

Glokal süreçte ortaya çıkan birçok çevresel, sosyal, ekonomik sorunlar ve emek ile ilgili ihmal edilen insani etkenler artık işverenleri, politikacıları kısaca tüm insanlığı ilgilendirmektedir. Öyle ki bunlarla ilgili sorunlar C.19 sürecinin gezegenimizdeki etkisine benzer bir durumu ortaya çıkarmıştır. Diğer bir ifade ile alınması gereken dersler bakımından C.19 sanki şimdiye kadar olanların bir özetidir. C.19 sürecinin ilk dönemlerinde kısıtlamalar nedeniyle ulaşımda ve üretimde daralma sonucu petrol, doğalgaz, kömür gibi fosil yakıtların talebinde azalma olmuştur. Diğer yandan, C.19 İkinci Dünya Savaşı'ndan sonra ilk defa küresel ekonomide bir daralmaya neden olmuştur (Economist Intelligence Unit 2020). Bu durum yenilenebilir enerji alanındaki yatırımları ve istihdamı olumsuz yönde etkilemiştir. C.19 sürecinde sağlık, eğitim ve istihdamın etkilenmesi ile dikkatler sosyal politikaların güçlendirilmesine odaklanmaktadır.

Enerji faktöründe dışa bağımlı ekonomilerde döviz çıktıları cari dengeyi negatif yönde etkilemektedir. Yenilenebilir enerji ile ithal enerjiyi ikame edebilen ülkeler yurtdışına ödeme yapmak yerine ülkelerinde yatırım yaparak yeni iş ve işler ile istihdam yaratmaktadır. Bu istihdam alanlarının ilave çalışanlara gelir olması gini katsayısının daha adaletli bir gelir dağılımı yönüne çevrilmesini sağlamaktadır. Aynı zamanda, yenilenebilir enerji kullanımı üretim maliyetlerinin düşmesi yoluyla maliyet enflasyonunu frenlemekte/düşürmektedir. Bununla birlikte, C.19 ve RUW vb. kriz dönemlerinde ithal enerji bağımlı ülkeler arz kısıtlamasının neden olduğu maliyet enflasyonuna ve talep enflasyonuna maruz kalmaktadır. Arz ve talep yönlü ortaya çıkan bu enflasyonist etki toplamda ekonominin diğer paradigmalarını da etkilerken reel ücretlerde ve satın alma gücünde düşmelere neden olarak gini katsayısını gelir dağılımı adaletsizliği yönüne çevirmektedir.

Enerjide dışa bağımlı ülkelerin C.19 ve RUW süreçlerinde arz tedariki sorunlarına ve enflasyona maruz kalmaları yenilenebilir enerjiye dönüşümü ivmelendirmektedir. Özellikle, Avrupa ülkeleri, (Rusya'nın enerji kartını oynamasından sonra) ithal enerji bağımlılığından kurtulmak için çalışmalarını yenilenebilir enerjiye odaklamaktadır. Bu odaklanma, ithal enerji ödemelerini düşürürken cari açık ve enflasyonu azaltmaktadır. Diğer yandan, ithal enerjiden vazgeçilmesi, yenilenebilir enerji yatırımlarını ve istihdamı artırmaktadır. Yeni iş başlangıçlarıyla artan istihdam ülke gelirinin daha çok kişi tarafından paylaşılmasını sağlamaktadır. Bu paylaşma gini katsayısını sıfıra yaklaştırırken daha adaletli bir gelir dağılımına neden olmaktadır. C.19 ve RUW süreçleri, bir yandan kısa dönemde ithal enerji odaklı ekonomik ve sosyal ibreyi negatif yöne çevirirken diğer yandan, uzun dönemde yenilenebilir enerjiye dönüşümü hızlandırarak bu ibrenin pozitif etkiye evrilmesine neden olmaktadır.

Bu çalışmanın giriş bölümünden sonraki kısımda C.19 ve RUW sürecinde ilgili literatür çerçevesinde yenilenebilir enerji konusu sürdürülebilirlik ile ilişkili olarak ele alınmaktadır. Daha sonraki kısımda sosyal politika ve yenilenebilir enerji ilişkisi, fonksiyonel ve grafiksel simülasyonla varsayımlar çerçevesinde ilişkilendirilmektedir. Sonuç olarak, C.19 ve RUW süreci yenilenebilir enerji etkileri sosyal politika ile ilişkili olarak değerlendirilerek öneriler sunulmaktadır.

2. LİTERATÜR

Üretim girdisi olarak kullanılan enerji-de dışa bağımlı ekonomilerde enerji maliyetleri yükselmekte ve enflasyona neden olmaktadır. Enerji maliyetlerinin yükselmesi, ekonomik etkinsizliğe neden olarak reel düşüşlere kapı açmaktadır. Bundan dolayı yenilenebilir enerji kaynaklarının üretimi ve tüketimi döviz çıkışlarını azalttığı gibi maliyet enflasyonuna neden olmamakta ve çalışanların satın alma gücünü zayıflatmayan bir etki yapmaktadır. Aynı zamanda, yenilenebilir enerji kullanımı ile üretim maliyetlerinin uzun dönemde düşmesi sağlanmaktadır. Bunun sonucunda ucuzlayan ya da fiyatı artmayan malların ihracatının artışı cari açığı kapatma etkisi yapmaktadır. Cari açığı kapatmaya yönelik ihracat artışının sağlanması için yapılan ulusal paranın değerinin düşürülmesi hatasının telafisi yenilenebilir enerjinin yaygınlaştırılmasıyla olmalıdır. Diğer bir ifade ile ulusal paranın değeri düşürülmemeli ancak, yenilenebilir enerji yaygınlaştırılmalıdır. Diğer yandan, yenilenebilir

enerji maliyetleri düşürerek fiyat artışlarına fren etkisi yaptığından çalışanların satın alma gücünü güçlendirmekte ve sosyal politikaların uygulanması pozitif yönde etkilenmektedir.

Özellikle enerjide dışa bağımlı ekonomilerde cari açığın kapanması için devalüasyon içeren iktisat politikalarının başarısızlığı sosyal politika uygulamalarının istenen sonucu vermemesine yol açmaktadır. Sürdürülebilirliğin enerjisi, dış bağımlılığı azaltarak döviz çıkışını düşürdüğünden cari dengeyi pozitif yönde etkilemektedir. İthal enerjiye ödenen dövizlerin yurtiçi yatırımlara dönüşmesi sosyal politikaların en önemli etmeni istihdam artırıcı etkide bulunmaktadır. Ekonomideki mikro ve makro düzeydeki iyileşmeler sosyal hizmetlerin yaygınlaştırılarak yerine getirilmesinde önem taşımaktadır. Bununla birlikte, yeşil/yenilenebilir/sürdürülebilir enerjinin yaygınlaştırılması, kirliliği azaltarak sosyal politikanın etmenlerinden sağlıklı bir toplumun oluşmasına neden olmaktadır.

C.19, RUW ve geniş etkili yaşanan yer hareketleri çalışma, sağlık, eğitim ve barınma gibi sosyal politikanın temel taşlarını etkilemektedir. Sosyal politika-sosyal hizmet problemlerinin çözümü tüm disiplinlerin birbiriyle ilişkilendiği çoklu yaklaşımlarla bütünselliğin sağlanmasını gerektirmektedir. Çünkü, ortaya çıkan problemlerin, artık sadece ait olduğu disiplinlerin kendi içindeki paradigmalara açıklanabilmesi ve çözümlenebilmesi yetersiz kalmaktadır. Sosyal politikaların güçlendirilmesi için tüm disiplinlerin birbirleriyle ilişkilendirilerek ele alınması gerekmektedir. Aynı zamanda, bir değerler zincirinin halkası olarak sosyal politika, sürdürülebilirlik için gerekli uygulamaların yerine getirilmesinde anahtar rol üstlenmektedir.

Sosyal politikayı, Üretim olanakları eğrisinde etkinliğin sağlanması ve kaynakların rasyonel kullanımı ile ilişkilendirmek mümkündür. Etkinlik ve rasyonellik sadece kısa dönemde kar maksimizasyonunu değil aynı zamanda uzun dönemde çevrecilik, sürdürülebilirlik, istihdam, barınma, eğitim ve sağlık koşullarının iyileştirilmesini de içermektedir. Bundan dolayı, ekonomik kalkınmada Yeşil etkinlik ve Yeşil rasyonellikten bahsetmek için yenilenebilir enerji önem taşımaktadır. Ekonomik kalkınma, enerji tüketimiyle ilişkilendirilirken yenilenemeyen-fosil yakıtlar kullanımı çevresel problemlere(sağlıksızlık, sürdürülemezlik) (Chang vd. 2018:65-77; Fang ve Zheng, 2019:340-353; Qi vd., 2019; Farooq vd., 2019:12894-12906). Bundan dolayı, üretimde ve tüketimde enerji verimliliğini, çevreciliği, sürdürülebilirliği sağlayan yenilenebilir enerjinin önemi gittikçe artmaktadır. Özellikle, Kyoto protokolü yenilenebilir enerjinin kullanımında lokomotif görevi görmektedir. Bu çerçevede ülkeler enerji politikalarını, sera gazı emisyonlarını azaltmaya yönelik olarak oluşturmaktadır. Bununla birlikte, yenilenebilir enerji endüstrilerinin ve tasarruflu enerji teknolojilerinin gelişimi, toplumların ve dünyanın sürdürülebilirliği ile çevresel hedeflere ulaşmanın bir yolu olmaktadır. Yapılan araştırmalar, enerjide dışa bağımlılığın azaltılması ile yerli yenilenebilir enerji üretimi için yapılan faaliyetler istihdam artırıcı bir etki yapmaktadır (Hillebrand vd., 2006: 3484-3489; Laitner, Bernow ve Cicco 1998: 425-432). Ayrıca, konuyla ilgili çalışmalar yenilenebilir enerji için daha verimli ve düşük karbonlu teknolojileri politika uygulayıcılara önermektedir. Bununla birlikte, karbon emisyonunun önemli ölçüde azaltılması ve genel istihdam ile ekonomik çıktının artırılması hedeflenmektedir (Lenzen ve Dey, 2002: 377-403).

Enerji üretimi ve tüketiminde atmosferik CO2 emisyonlarına katkılarından dolayı fosil yakıtlar, iklim değişikliği üzerinde önemli bir etkiye sahiptir. Bu nedenle, Rio Konferansı(1992) ve Kyoto Protokolü(1997) çerçevesinde, fosil -yakıtlar yerine yenilenebilir enerji ve enerji verimliliği tüm ülkeler için öncelikli bir konu olmuştur (Economidou vd. ,2020:1-5). Bundan dolayı, yenilenebilir enerji ve enerji verimliliği için gerekli teknolojinin geliştirilmesi önem kazanmaktadır. Bunun için beşeri sermayenin yetiştirilmesi-sağlanması da istihdam için yeni bir yön göstermektedir. Mikro düzeyde, daha iyi eğitilmiş hanelerin ve firmaların yöneticilerinin çevreye daha duyarlı olduklarına ve nihayetinde daha az enerji tüketerek enerji açısından verimli olduklarına dair kanıtlar bulunmaktadır. Sürdürülebilir kalkınma, sürdürülebilir enerji kullanımı ile ilgili yabancı yatırımcıları çekmeye yönelik politikalar yenilenebilir enerji sektörü aracılığıyla yerli istihdam yaratılması öngörülmektedir (Kumar ve Majid: 2020:23). Bununla birlikte, sektörler ve ülke düzeyinde enerji verimliliği için kapsamlı bir politika uygulanması istihdam artışını etkileyen olumlu faktörler olarak görülmektedir.(Constantini, Crespi ve Paglialunga 2018; 2510-267). Enerji verimliliğini arttırmak ve enerji maliyetlerini azaltmak, ulusal inovasyon sistemini geliştirmek, yeşil büyüme ile yeni işlerin oluşturularak yeni istihdam olanaklarına yol açılmaktadır. Bu durum bir yandan çalışma ekonomisini güçlendirirken diğer yandan sosyal politikaların-sosyal hizmetlerin geliştirilmesini sağlamaktadır.

Adam Smith'in mutlak üstünlük teorisinde maliyet minimizasyonu ile uluslararası ticarette her iki ülke de avantaj elde etmekle birlikte üründe ve işgücünde uzmanlaşma gerçekleşmektedir. Yenilenebilir enerji kullanımı, maliyetlerin aşağı doğru baskılanmasına neden olarak ihracat artışını desteklemektedir. Yenilenebilir enerji, bir yandan ithal bağımlı enerjiye döviz çıkışını azaltırken diğer yandan üretim maliyetlerini düşürdüğünden rekabetgücü-ihracat artışı ile döviz girişini artırmaktadır. Bundan dolayı, yenilenebilir enerji cari

dengeye pozitif yönde etki etmektedir. Bu etkiler, yatırım, istihdam, gelir artışıyla sağlık, eğitim ve barınma problemlerini çözmeye çalışan sosyal politikaların elini güçlendirmektedir. Sanayileşmiş ülkelerde uygulanan enerji politikalarıyla enerji ve karbon yoğunluğu azaltılmaktadır. Özellikle AB enerji politikaları çerçevesinde Enerji verimliliği; enerji güvenliğinin artırılması, uluslararası maliyet rekabet gücünün teşvik edilmesi ve kirlenici emisyonların azaltılması ile güvenli, sürdürülebilir ve uygun fiyatlı bir enerji sistemine ulaşılması hedeflenmektedir.

Verimlilik kazanımları üretimde maliyet minimizasyonuna neden olurken enflasyona neden olmayan bir ekonomik büyümeyi de beraberinde getirmektedir. Buna ilaveten yerli yenilenebilir enerji kullanımı verimliliği artırmanın yanı sıra enerji ithalatının azaltılmasını ve yerli enerji üretimi ile cari açığı azaltıcı ve istihdamı artırıcı bir etki yapmaktadır. Diğer yandan cari açığın azaltılmasına yönelik ihracatı artırarak döviz girdisi sağlanması için yapılan devalüasyonlara gerek kalmamaktadır. Dolayısıyla gelişen ve az gelişmiş ekonomilerin iktisat politikaların da hatalı bir şekilde uygulanan devalüasyonların ortaya çıkardığı emek ve zaman sömürsünü de ortadan kaldırıcı bir etki yapmaktadır. Ayrıca, ihracat ürünlerinden elde edilen döviz girdisinin devalüasyon esnekliği birden büyük ise cari açığı azaltma etkisi yapmaktadır. Bu esneklik birden küçükse ürün ihracatından elde edilecek döviz girdisi ile cari açık kapanmamaktadır. Her iki durumda da yerli kaynakların ya da üretim faktörlerinin gelir bazlı etkin kullanımı söz konusu değildir. İhracatta kullanılan kaynakların miktarı ile döviz girdisi arasındaki ilişki ne kadardır?(toplam üretim maliyeti ile toplam döviz girdisi arasındaki oran). Etkin kaynak kullanımı hem verimlilik hem de “enflasyon-devalüasyon-cari açık sarmalı” bakımından önem taşımaktadır (İrhan ve Oran: 2022: 82-94). İthal fosil enerji maliyetlerin yükselmesine yol açarken yerli yenilenebilir enerji üretim maliyetlerini düşürerek enflasyon-devalüasyon ve cari açık sarmalının makarasını sınırlandırmaktadır. Sosyal politikalar, istihdam problemine reel etkisiyle ölçüldüğünden yerli yenilenebilir enerji yatırımları önem taşımaktadır. Yapılan araştırmalar, yenilenebilir enerjinin artan payının; istihdamı ve GSMH yı artırıcı, iklim değişikliğini, ithalata bağımlılığı ve cari açığı ise azaltıcı yönünde etkileri olduğunu ortaya koymaktadır (Elder, 2008: 108-117). Diğer yandan, Constantini ve arkadaşlarına göre enerji yoğun endüstrilerde enerji verimliliği kazanımları istihdam artış oranını düşürmesine rağmen kamu sektöründe elde edilen enerji verimliliği, istihdam artışını desteklemektedir (Constantini vd., 2018:250-267).

AB’nin Rusya’nın fosil yakıtlarına olan bağımlılığını sona erdirerek yenilenebilir enerjiye geçmesi ile RUW’un kısa dönemdeki etkilerinden enerji fiyatlarının/enflasyonun frenlenerek düşmesi beklenmektedir. Yenilenebilir enerjinin maliyetleri, düşürücü etkisi ihracat-döviz girdisi artışı ile istihdama ve enerji ithalatını-döviz çıkışını azaltarak cari dengeyi pozitif katkı yapması gini katsayısını da sıfıra yaklaştıracı yönde etkilemektedir. Sosyal politikalar istihdam problemine reel etkisiyle ölçüldüğünden yerli yenilenebilir enerji yatırımlarının artışı sosyal politikaları güçlendirmektedir. Sosyal politikalar, C.19 ve RUW dönemlerinde sosyal hizmetlerin güçlü bir şekilde yerine getirilmesi için beşeri sermayenin, sağlıklı ekonominin ve sosyal refahın anahtarıdır.

C.19 süreci farklı ülkelerde farklı etkiler ortaya çıkarmıştır. İlk çıktığı yer(Wuhan) Çin ile birlikte İtalya en çok etkilenen ülkelerin başında gelmektedir. Küresel salgından dolayı ABD, Çin, Güney Kore başta olmak üzere ekonomi, sağlık vd. faaliyetlerde gecikmeler sosyal politika-sosyal hizmetlerin zaruret rasyosunu yükseltmektedir (Collins vd, 2020: 1073-1082). Bundan dolayı enerji alanındaki yatırımlarında durması bu sektörle ilgili istihdamdaki artışın durmasına neden olmaktadır. Özellikle, C.19’un potansiyel ekonomik zararlarını azaltmak için politika yapıcılar tarafından mali taahhütler verilmektedir (IMF2020, 2020). C.19 pandemisinin insan yaşamına etkileri sosyal politikaları farklı açılardan ilgilendirmektedir. Örneğin ev hapsinin çocuklar üzerindeki etkileri, gıda israfı, atmosfer kirliliğinin C.19 mortalitesi üzerindeki etkileri, C.19 sürecinde hava kirliliği-kalitesi vb. sosyal politika ilişkili çalışmalar hızla artmaktadır (Wang vd.:2020). C. 19 kapanma sürecinde enerji sektöründe işten çıkarma ve kesintiler rüzgar enerjisi ve güneş enerjisi kapasite artış oranlarında azalmalar bu alandaki istihdamın artış oranını yavaşlatmıştır. Diğer yandan, C.19’un küresel enerji tedarik zinciri üzerinde tahrip edici etkisine de dikkat çekilmektedir. Ancak, AB, 2021’de yenilenebilir kaynaklardan elde ettiği brüt nihai enerji tüketiminde, 2020’ye göre yaklaşık 0,3 puan daha düşük bir payla %21,8’e ulaşmıştır. Bu düşüşte muhtemelen C.19 ile bağlantılı kısıtlamaların kaldırılması rol oynadığı öne sürülmektedir (Eurostat-statistic: erişim tarihi: 18.03.2023)

C.19 sürecinde dijitalleşme daha da hız kazanmıştır. Enerji sektöründe, dijitalleşmenin kendi içinde sürdürülebilir ve düşük karbonlu kaynaklarla gerçekleştirilmesi bu dönüşümde hem çevresel hem de ekonomik anlamda önem taşımaktadır. Diğer yandan, enerji sektöründe inovasyonlar ile ekipman, üretim vd. süreçlerin dijitalleşmesi hem enerji hem de teknoloji şirketlerinin bir ihtiyacı haline gelmiştir. Çünkü, yenilenebilir enerji kaynaklarının artan kullanımı, hidrojen veya elektrik araçların yaygın kullanımı gibi gelişmeler iş modellerinde, üretici ve tüketici ilişkilerinde inovatif süreçleri ve yeni mekanizmaları gerekli kılmaktadır. Dolayısıyla yenilikçi regülasyonlar, blok zincir teknolojisi enerji alanında yeni işler ile yeni istihdam alanlarının oluşmasına neden

olmaktadır. Ayrıca, yapay zekanın sunduğu dijitalleşme etkileri enerji sektörünün genele yayılarak bu alanda proaktif uyumluluğu güçlendirmektedir. Yenilenebilir enerji dönüşümü için yapay zeka destekli yeniliklerin adaptasyonunda genişletilmiş yeni uzmanlıklara ve işgücüne ihtiyaç duyulmaktadır. Yenilenebilir enerjinin yeşil işler yaratma etkisi, istihdam, verimlilik ve çevresel hedefler kapasitelerinin geliştirilmesine katkıda bulunmaktadır (Swain, Karimu ve Grad, 2022: 695-708). Yenilenebilir enerjiye dönüşüm için sosyal politikalarda beşeri sermayeye önem verilmesi ihracat ürünlerinin katma değerini yükselterek ve miktar artışı ile sürdürülebilirlik amaçlanmaktadır.

RUW, küresel enerji tedarik zincirinin bozulma riskini yoğunlaştırarak, kısa sürede enerji fiyatlarında keskin dalgalanmalara neden olmuştur. RUW'un küresel enerji tüketimi, ekonomik büyüme, yenilenebilir enerji, karbon emisyonu üzerine etkileri tartışılmaktadır. C.19 ve RUW uzun vadede küresel enerji arzında ve sosyal-ekonomik düzenleri bozarak, GSYİH üzerinde düşürücü bir etki ortaya çıkarmaktadır. Diğer yandan, Rusya'dan enerji ithal etmekten vazgeçilme maliyetinin AB tarafına yazılacağı iddia edilmektedir. Bundan dolayı, AB ekonomisi itibarıyla reel GSYİH'nın %5'in üzerinde bir düşüşü beklenmektedir. Aynı zamanda, arktik bölgedeki enerji tartışmalarının ivmelenmesi ve çözümlerin ekolojik dengeyi bozarak sürdürülebilir olmayan bir sonuç ortaya çıkarmaktadır (Thangaraj ve Chowdhury:2022:2-9). Bunu telafi etmek isteyen AB yenilenebilir enerjinin yaygınlaştırılması ile küresel enerji tüketiminde ve karbon emisyonunda %0-1 arası bir azalma beklenmektedir (Cui vd., 2023; Eurostatt, 2023). Diğer yandan, Rusya'dan enerji ithalatından vazgeçilmesi daha çok yenilenebilir enerjiye geçiş anlamına gelmektedir.

Sürdürülebilirlik kapsamında, Paris Anlaşması, Uluslararası enerji ajansı'nın "2050'ye Kadar Net Sıfır" senaryosu ve BM İklim Değişikliği Konferansı (COP27), temiz enerji için sera gazı (GHG) emisyonlarını azaltma çalışmalarına odaklanmaktadır (Jacobson ve ark., 2017:108-121). Enerji kullanımının artışı, kirliliğin maliyeti, küresel ısınma-iklim hedefleri; rüzgar, su ve güneş (WWS) ve benzeri yenilenebilir enerjiye dönüşümün önemini artırmaktadır. Buna ilaveten, C.19 ve RUW sürecinde enerjide fiyat artışları, ithalat kısıtlama-aksamaları, yanma tehlikesi, arz güvenliği problemleri fosil yakıtlara bağımlılığı azaltmaktadır. RUW sürecinde petrol, doğal gaz ve kömür fiyatları artışı nedeniyle bazı ülkeler enerji matrisinin sürdürülebilir/yenilenebilir tarafına geçmektedir. Diğer yandan, dünya genelinde enerjide fosil yakıtlara bağımlılık enerji ile ilgili küresel senaryoyu etkilemektedir. Bundan dolayı, C.19 ve RUW sürecinde yenilenebilir enerjiye yönelik hedefler yükseltilmektedir. Aynı zamanda, C.19 ve RUW, Avrupa vd. ülkelerde %100 temiz enerji kullanımına yönelik enerji politikalarının kamu desteğini de güçlendirmektedir (REPower, 2022-23; Steffen ve Patt, 2022).

3. SOSYAL POLİTİKA VE YENİLENEBİLİR ENERJİ

Sosyal Politika, devletin toplumda refah ve sosyal korumanın sağlanmasına yöneliktir. Bir ülkede refah olması için cari açığının olmaması, gini katsayısının sıfıra yakın olması, sağlık-eğitim-barınma-sosyal güvenliğinin insana yaraşır olarak ihtiyaçların karşılanması düzeyinde olması gerekmektedir. Bundan dolayı, sosyal politikalar, adil ve güçlü ekonomi ile herkesin yaşam standartlarını yükseltmeyi hedeflemektedir. Diğer yandan, küresel-yerel süreçte sosyal-ekonomik-mühendislik-sağlık gibi tüm disiplinler birbirleriyle etkileşim içerisinde. Ancak, bu çalışmada yenilenebilir enerjinin, ekonominin bazı paradigmalarına etkisi ve sosyal politika ilişkisi üzerinde durulmaktadır. Bu ilişki ilk defa bu çalışmada kurulan aşağıdaki fonksiyon ile açıklanmaktadır.

Sosyal politika kapsamında yerine getirilmesi gerekenler bakımından birinci fonksiyon ifadesi şu şekildedir;

Sosyal Politika= f (İstihdam (Aktif işgücü politikaları (Beşeri sermaye)- Pasif işgücü politikaları) Sosyal Güvenlik, Sosyal Hizmetler, Sağlık, Eğitim, Barınma, Kobi'ler, Kültür-sanat)

-Kobi ve istihdam artışı, sosyal güvenlik-sosyal hizmet yaygınlığı, sağlık-eğitim hizmetlerinin gelişmişliği, aktif işgücü politikalarıyla beşeri sermayenin istihdamdaki oranının yükseltilmesi, pasif işgücü politikalarıyla çalışmayanların yaşam temini ve kültür-sanat faaliyetlerinin her kesim için geliştirilmesi güçlü bir sosyal politika demektir.

Sosyal politikanın güçlü uygulanabilirliği ve yükseltilmesi bakımından ilişki kurulan ikinci fonksiyon ise;

Sosyal Politika = f (Yenilenebilir enerji, Gini katayısı, Cari denge, Teknoloji toplumu, Enflasyon, Ulusal para değeri-Devalüasyon, Ekonomik Kalkınma).

-Yenilenebilir enerjinin payının artırılarak ithal fosil enerji kaynaklarından vazgeçilmesi karbon emisyonunu azaltarak çevresel ve sağlık bakımından sosyal politikalara katkıda bulunmaktadır. Yenilenebilir enerji ile sosyal politika arasında pozitif-doğru yönlü ilişki vardır.

- İthalat ödemelerinin yurtiçinde maliyetleri yükseltmesi enflasyon etkisi yaptığından yenilenebilir enerji artarsa enflasyon azalır. Yenilenebilir enerji ile enflasyon oranları arasında negatif-ters orantılı ilişki vardır. Enflasyon azalması ya da artmaması; reel ücretlerin düşmemesine yol açarak istihdam ve gini katsayısının sosyal politikalar lehine evrilmesini sağlamaktadır.

- Yenilenebilir enerji oranı artarsa istihdam etkisi gelirin daha çok kişi tarafından paylaşımıyla gini katsayısını(0-1 arası) düşürerek daha adil bir gelir dağılımına neden olmaktadır. Yenilenebilir enerji ile gini katsayısı arasında negatif-ters yönlü ilişki vardır.

- Yenilenebilir enerji artışı yeni teknolojiler gerektirdiğinden beşeri sermaye-teknoloji artışı gerçekleşecektir. Yenilenebilir enerji ile teknoloji toplumu arasında pozitif-doğru yönlü ilişki vardır.

- Teknoloji toplumunun beşeri sermayeye ihtiyaç duyarak yetiştirmesi aktif işgücü piyasası politikalarını güçlendirmektedir. Güvenceli Esneklik konseptinin temel uygulamalarından olan aktif işgücü piyasası politikalarının pozitif yönde etkilenmesi sosyal politikaların da pozitif yönde etkilenmesi anlamına gelmektedir.

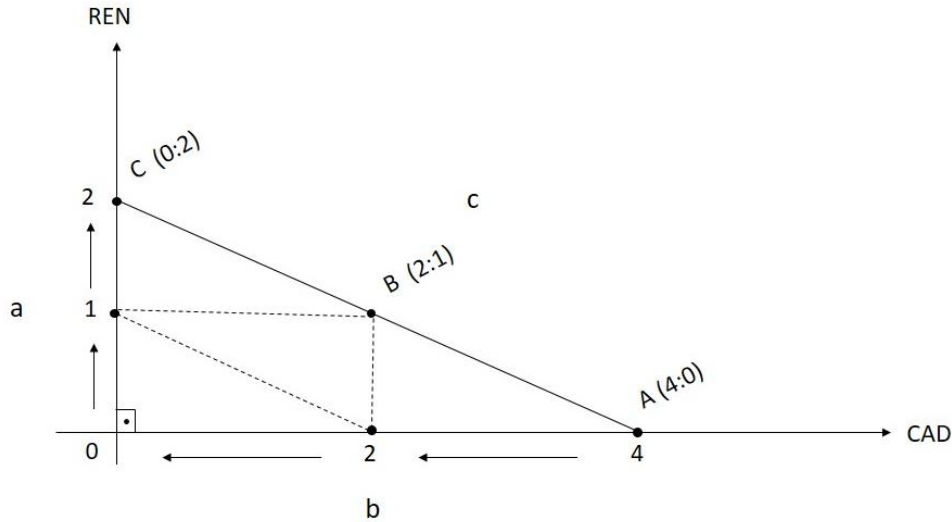

-Yukarıda ifade edilen nedenler ekonomik kalkınmaya pozitif etkide bulunmaktadır. Yenilenebilir enerji ile ekonomik kalkınma arasında pozitif-doğru yönlü ilişki vardır. Ekonomik kalkınmanın gerçekleşmesi sosyal politikanın bir göstergesidir.

-Yenilenebilir enerji payı artırılarak ithal enerjiden vazgeçilirse döviz çıkışı azalacağından döviz talebi düşerek ulusal paranın değeri korunacaktır. Yenilenebilir enerji payı artmasıyla devalüsyon oranı arasında negatif-ters yönlü ilişki vardır.

-Ulusal paranın değerinin korunması, reel ücretlerin düşmemesine yol açarak nüfusun çoğunluğunu oluşturan çalışanların satın alma gücü korunacağından barınma, eğitim vd. sosyal politika etmenleri pozitif yönde etkilenmektedir.

-Yenilenebilir enerji artarsa ithalat ödemeleri azalacağından cari açık varsa azalacaktır. Yenilenebilir enerji ile cari açık arasında negatif-ters yönlü ilişki ve sosyal politikalar ile pozitif-doğru yönlü ilişkisi varsayımsal bir simülasyonu aşağıdaki grafik.1 yardımıyla açıklanmaktadır;

Grafik 1: Yenilenebilir Enerji ve Cari Açık ilişkisinin Sosyal Politika Etkisi

Kaynak: Yazar tarafından ilk defa bu çalışmada oluşturularak çizilmiştir.

REN: Renewable Energy : Yenilenebilir enerji: Dikey Eksen

CAD : Current Account Deficit : Cari Açık: Yatay Eksen

SP : Social Policy: Sosyal Politika = Dik üçgenin sinüsünün değeri -ile ters yönlü ilişkisi vardır-

Varsayımlar;

- REN = 0 iken CAD = 4 (A noktası) SP Zayıf
- REN = 1 iken CAD = 2 (B noktası) SP Orta
- REN = 2 iken CAD = 0 (C noktası) SP Güçlü

Hipotenüs : $a^2 + b^2 = c^2$ ise $2^2 + 4^2 = 20$ $\sqrt{20} \cong 4.47$ karşı dik kenar / hipotenüs = 2: 4.47 $\sin \alpha = 0.447$

Eğer; REN'in CAD kapatma etkisi daha düşük olsaydı örneğin ;

- REN = 0 iken CAD = 2
- REN = 1 iken CAD = 1
- REN = 2 iken CAD = 0 Bu durumda hipotenüs $2^2 + 2^2$ $\sqrt{8} = 2.828$ ve $\sin \alpha = 2: 2.828 \cong 0.7072$

bulunur. Bunun anlamı, $\sin \alpha$ değeri küçüldükçe REN'in CAD üzerindeki -azaltmaya yönelik- pozitif etkisi artarak SP'yi yükseltmektedir.

C.19 ve RUW sürecinde enerji talebinin yükselişi-tüketimi çevresel, ekonomik ve sosyal politikayla ilişkili koşulları kötüleştirdiğinden –sürdürülebilirliğin enerjisinin- öneminin arttığı görülmektedir. Yenilenebilir enerji teknolojileri için beşeri sermayeye yatırım yapmanın sosyal faydaları ve kirli enerji tüketimini azaltarak sağlık ve çevresel faydaları ifade edilmektedir (Li vd. 2020:1-7; Yao vd.2019).

Beşeri sermayenin teknolojiyi geliştirmesiyle yenilenebilir enerjinin üretimi artmakta ve enerji tüketiminde tasarruf yapılmaktadır. Yenilenebilir enerji üretimi ve tüketimi bir yandan enerji verimliliğini etkilerken diğer yandan ekonomik kalkınmayı da tetiklemektedir. Yenilenebilir–temiz enerjilerin gelişmesi ve bununla ilgili teknolojilerin uygulanması enerji sektöründe değişiklikler meydana getirmektedir. Bundan dolayı ekonomik faaliyetleri ve istihdamı tetikleyen çevreci yerli yenilenebilir enerji kullanımı teşvik ve tercih edilmektedir. Ekonomik büyümeye neden olan enerji kullanımını azaltmadan kirli enerji yerine ikame edilen temiz-yenilenebilir enerji, enerji verimliliğini de sağlamaktadır. Bu durum sağlık, istihdam vd. sosyal politika etmenlerini etkilerken çevre kirliliğini azaltarak aynı zamanda ulusal gelir de artırıcı cari açığa azaltıcı bir etki yapmaktadır.

İhracat çeşitlendirmesinin enerji yoğunluğunu azaltmaya yardımcı olduğu, enerji verimliliği ve sürdürülebilir çevrenin iyileştirilmesinde bir politika faktörü olarak kullanılabileceğine ilişkin kanıtlar bulunmaktadır. Ayrıca, ampirik kanıtlar, daha yeşil büyüme, enerji verimliliği ve sürdürülebilir kalkınma hedeflerine ulaşmalarına yönelik sonuçları da bidirmektedir (Shahbaz vd., 2019: 339-345 ; Gözgör ve Can, 2016). Avrupa Birliği, enerjinin verimli kullanımı için Binaların Enerji Performansı Direktifi (EPBD- Energy Performance of Buildings Directive) oluşturarak minimum enerji maliyetinin optimal seviyelerini karşılaştırmalı bir yöntemle belirlerken yenilenebilir enerji kullanılmaktadır (Vasconcelos vd., 2016: 12-15). Bu çerçevede yeni yapılan binaların yenilenen binalara göre enerji verimliliği daha yüksektir (Jakob, 2006:174-187).

Yapılan araştırmalar, Sürdürülebilir Kalkınma Hedefi kapsamında uygun fiyat, güvenilir ve sürdürülebilir enerji için yenilenebilir enerji kaynaklarına geçişin AB'deki sosyal politikanın en önemli bileşeni istihdam üzerinde olumlu bir etkiye sahip olduğunu göstermektedir (Mc Collum, 2018:1-23; Swain ve Karim, 2020: 695-708). Ayrıca, yenilenebilir enerji tüketiminin karbon emisyonunu düşürerek sosyal politikanın bir diğer bileşeni sağlıklı topluma katkı yapması beklenmektedir. Diğer yandan, enerjinin küresel sera gazı emisyonlarının üçte ikisini oluşturmaktadır (IEA, 2021). Bunun değişmesi için yenilenebilir enerji kritik bir unsurdur. Yenilenebilir enerji sistemlerine geçiş gıda ve tarım, ekosistemler ve iklim, yoksulluk, sağlık, istihdam ve ekonomik büyümeyi etkileme potansiyeline sahiptir. Bu potansiyelin gerçekleşmesi ise sosyal politikaların yerine getirilmesinin itici gücü olmaktadır. Bununla birlikte, kişi başı karbon emisyonun azalması, istihdamın ve kişi başı GSYİH artışı öngörülmektedir.(Ortega vd. 2015:940-951; Mu vd., 2018: 256-267). Bu durum yenilenebilir enerji üretim ve tüketimiyle ilgili teknolojiyi geliştiren ve sosyal politikanın unsurlarından beşeri sermaye ile yenilenebilir enerji arasındaki pozitif ilişkiyi ortaya koymaktadır.

Türkiye'nin 1989-2022 yıllarında ara malları ve sermaye malları ticaretinde önemli ölçüde açık verdiği, nihai tüketim malı ticaretinde gelirinin giderinden fazla olduğu, toplamda dış ticaret açığı verdiği ve toplam mal ihracatın, ithalatı karşılamasının bire bir olmadığı görülmektedir(TCMB-EVDS, 2022). Ara mallarındaki açığın; enerjide yaşanan dışa bağımlılıktan kaynaklandığı, sermaye mallarındaki açığın ise teknolojik eksiklik nedeniyle dış ülkelerden alınan makine ve teçhizatın kaynaklanmaktadır. Yenilenebilir enerji kullanımı üretim maliyetlerinin ve vergi oranlarını düşürerek yatırım-üretim-istihdamı teşvik ederek girişim-girişimcilerin karlılığının artmasıyla vergi gelirleri de artırmaktadır. Aynı zamanda, yenilenebilir enerji, verimliliği ve sektörler arası akıllı entegrasyonu teşvik ettiğinden 'Sürdürülebilirliğin Enerjisi' konseptidir. Sürdürülebilirliğin enerjisi ile enerji yoksulluğunun giderilmesi, yenilikçi teknolojiye ait yatırım- istihdam yaratırken diğer yandan verimliliğin ve reel ücretlerin artışına yol açarak gini katsayısını iyileştirmektedir.

Sosyal politika - yenilenebilir enerji ve cari açık ilişkisinde dikkat edilmesi gereken dört unsur aşağıda belirtilmektedir;

- a) Her bir yenilenebilir enerji üretim artışı karşısında döviz gelirinde/giderinde meydana gelen değişimin gini katsayısına etkisi
- b) Yenilenebilir enerjinin artan oranlarının yatırım, üretim, ihracat, istihdam oranlarına yansımaları
- c) Cari dengenin, yenilenebilir enerji esnekliği (yenilenebilir enerjideki % değişimim CAD % değişimine oranı ya da dövizin miktarındaki % değişime oranı)
- d) Hava kirliliğinden kaynaklanan hastalıkların iyileşmesinin yenilenebilir enerji tüketimi esnekliği

4. SONUÇ

Yenilenebilir enerjinin karbon emisyonunu azaltıcı istihdamı ise artırıcı etkileri sosyal, ekonomik ve çevresel sürdürülebilirliğe katkıda bulunmaktadır. Daha az enerjiye ihtiyaç duyulması fosil yakıtlar yerine etkin, rasyonel ve sürdürülebilir enerji olan yenilenebilir kaynaklardır. Yenilenebilir enerji ile güvenli ve uygun maliyetli enerji sağlanması çevreye ve istihdama pozitif yönde etki ederek sosyal politikalara katkı yapmaktadır. Sera gazı emisyonlarını azaltmak, yeni işler oluşmasını sağlamak ve gini katsayısını sıfıra doğru yaklaştırarak yaşam kalitesini yükseltmek sosyal politikanın önemli hedeflerindendir. Sera gazı emisyonlarına neden olmayan yenilenebilir enerji çevresel ve sağlık ile ilgili problemlerin azalmasını etki ederek sürdürülebilir sosyal politikaların katma değerini yükseltmektedir. Sosyal politika parantezinde yenilenebilir enerji ile gini katsayısı, enflasyon, cari açık, istihdam ilişkilerini anlamak, sürdürülebilirliği temin etmeye yardımcı olan sosyal hizmetler için önem taşımaktadır. Sonuç olarak;

- Özellikle enerjide dışa bağımlı ekonomilerde C.19 döneminde tedarik kısıtlama ve aksamaları yanı sıra enerji kullanımının artışı maliyet ve talep yönlü enflasyona neden olurken uzun dönem etkileri görülmektedir
- RUW, enerji kaynaklarında dışa bağımlı (yenilenebilir enerji’de yeterliliği olmayan) ülkelerde enerji fiyatlarını yükselterek küresel enflasyon oranlarını yukarı çekmektedir(Deng vd. 2022).
- RUW savaşı küresel enerji güvenliğini olumsuz etkilemektedir (Mbah ve Wasum, 2022)
- RUW, kısa dönemde fiyatların yükselmesine neden olurken uzun dönemde sürdürülebilir enerjiye geçilmesine neden olmaktadır (Chedid ve Penteado, 2022: 79067-82).
- Arktik bölgedeki enerji savaşının ekolojik dengeyi bozması sürdürülebilir olmayan durumlara yol açması, sürdürülebilir enerjiye dönüşümü zorunlu kılmaktadır.

Yenilenebilir enerjinin, ucuz, temiz ve yurt içinde üretilebilir olması enerji ithalatını (döviz çıkışını) azaltarak cari dengeye pozitif katkı sağlamaktadır. Enerji verimliliğinin sağlanması içinde yenilenebilir enerji üretimi artışının sağlanarak enerjide ithalat bağımlılığının azaltılması gerekmektedir. Bu çalışma, yenilenebilir enerji ile verimliliği artırıcı bir -enerji kümelenmesi-ni enerji ve iktisat politikalarına önermektedir. Ayrıca, kirli enerji kaynakları üzerinden çevreci bir yaklaşım üretim daralmalarıyla ekonomik kısıtlamalara neden olabilmektedir. Dolayısıyla, yenilenebilir enerji yatırım-üretim-istihdam üçlüsünü tetikleyerek ulusal ekonomik güveni güçlendirmektedir. Bu durum geliri ve istihdamı birlikte artırırken ithalatı düşürerek-ihracatı teşvik ederek cari açık ve gini katsayısını birlikte düşürmesi sosyal politika/hizmetlerini güçlendirmektedir.

Bu çalışmanın teorik çerçevesi ve metodolojisi aşağıda gösterilen ve yazar tarafından oluşturulan Sosyal politika fonksiyonu çerçevesinde oluşturulmaktadır. Bu fonksiyon aynı zamanda, yenilenebilir enerjinin sosyal politikaya etkisini ekonomik değişkenlerle birlikte açıklayan birbiriyle bağlantılı bir değerler zincirini oluşturmaktadır. Sosyal politika ile yenilenebilir ilişkisinin öğretide ve ilgili politikalarda dikkate alınması önerilmektedir. Yenilenebilir Enerji çeşitliliği, uyarlanabilirliği, yeterliliği, arz tedarik zinciri ve enerji güvenliği C.19 ve RUW sürecinde daha da önemli hale geldiği görülmektedir.

Scientific Investigation of the Relationship Between Psychological Well-Being and Optimism Levels of Employees

Dr. Bekir DEĞİRMENCI¹

¹Adıyaman Üniversitesi /Besni Ali Erdemoğlu Meslek Yüksekokulu, Büro Hizmetleri ve Sekreterlik Bölümü,
bdegirmenci@adiyaman.edu.tr, ORCID: 0000 0001-5236-5245

Abstract: This study was conducted to investigate the effect of employees' psychological well-being on their optimistic moods. The quantitative method was used as the research method. 497 sample groups were reached throughout Turkey. On the other hand, exploratory factor analysis, correlation, and simple regression analysis methods were applied to the data obtained. First, exploratory factor analysis was applied to reveal the validity of the scale. The scale consists of two sub-dimensions. These are the dimensions of psychological well-being and optimism. As a result of the validity and reliability analysis, it was determined that the scale is valid and reliable scale. Then, correlation and simple regression analyses were performed. As a result of the analysis, it was concluded that psychological well-being affects the optimistic mood of the employees positively. It is recommended to investigate different factors affecting the well-being of employees in future studies. It is recommended that business owners and managers take all kinds of material and moral measures to ensure the psychological well-being of the employees. As a result, it can be argued that when psychological well-being is achieved, employees perform their jobs more optimistically and are more beneficial.

Keywords: Psychological well-being, optimism, employees.

Özet: Bu çalışmada, çalışanların psikolojik iyi oluşlarının onların iyimserlik ruh halleri üzerindeki etkisinin araştırılması amacıyla yapılmıştır. Araştırma yöntemi olarak nicel yöntem kullanılmıştır. Türkiye genelinde 497 örneklem grubuna ulaşılmıştır. Diğer taraftan elde edilen verilerle keşfedici faktör analizi, korelasyon ve basit regresyon analiz yöntemleri uygulanmıştır. İlk olarak ölçeğin geçerliliğini ortaya çıkarmak amacıyla keşfedici faktör analizi uygulanmıştır. Ölçek iki alt boyuttan oluşmaktadır. Bunlar psikolojik iyi oluş ve iyimserlik boyutlarıdır. Yapılan geçerlilik ve güvenilirlik analizi sonucunda ölçeğin geçerli ve güvenilir bir ölçek olduğu tespit edilmiştir. Daha sonra korelasyon ve basit regresyon analizleri yapılmıştır. Yapılan analizler sonucunda psikolojik iyi oluşun çalışanların iyimserlik ruh hallerini olumlu etkilediği sonucuna ulaşılmıştır. Gelecekte yapılması planlanan çalışmalarda çalışanların iyi oluşlarını etkileyen farklı faktörlerin araştırılması önerilmektedir. İşletme sahipleri ve yöneticilerin ise çalışanların psikolojik iyi oluş hallerini sağlayacak her türlü maddi ve manevi önlemleri tavsiye edilmektedir. Sonuçta psikolojik iyi oluş sağlandığında çalışanların işinde daha iyimser bir şekilde icra ettikleri ve daha faydalı oldukları savunulabilir.

Anahtar Kelimeler: Psikolojik iyi oluş, iyimserlik, çalışanlar.

1. INTRODUCTION

It is possible to define psychological well-being as being able to cope with the difficulties encountered in business life, successfully managing all kinds of negative situations, and making positive contributions to business performance. From this point of view, it has made positive human movements the main subject of examination. In the literature, conceptualizations of emotional, physical, cognitive, spiritual, personal, and social processes of psychological well-being are included (Telef, 2013). Optimism is the individual's positive beliefs about the future as a positive perspective that is generalized to all areas of life and is invariably maintained. Optimism can be especially beneficial in increasing psychological well-being and can make the individual feel good by contributing to the capacity of the individual to transform goals into behavior (Parmaksız, 2020: 287). It focuses on the positive qualities of employees with an optimistic mood, the environment in which they worked the society they live in. For this reason, they make more efforts to achieve the goals they set (Aydin et al., 2022: 691).

In this study, which deals with the mental and psychological aspects of public employees, the human element is evaluated in a central position. Considering that psychological capital is more important in work areas where face-to-face communication is effective, public employees have been put at the focus of the research. In this context, the psychological well-being of the employees in public institutions where public service is the first agenda item and their greater resistance to problems positively affects the quality of the service provided. Negative situations such as high job stress, overtime, role ambiguity and role conflicts that public employees are exposed to during working hours need an important factor that public employees can protect themselves from negative conditions that may occur. Telef et al. (2013), psychological well-being is explained as having a person's life goals. In another study on the subject, they state that as the psychological well-being of teachers increases, their academic optimism will increase and that teachers with high psychological well-being levels will

be more successful (Karaçam & Pulur, 2019 cited in Aydın et al., 2022: 693). There are two basic approaches to psychological well-being. While the hedonistic approach focuses on the subjective experience of happiness, which includes obtaining pleasure and avoiding pain, the eudaimonic approach considers happiness in terms of realizing the full potential of the individual and living a meaningful, purposeful, and virtuous life. Subjective well-being, on the other hand, is an individual's holistic personal evaluation of his or her quality of life in a certain period (Karslı, 2019: 175).

The main purpose of this study was to reveal whether the psychological well-being of the employees affects their optimism levels. A quantitative research method was followed, in which the opinions of the employees were consulted. It is estimated that well-being will be among the precursors of the mood of the employees, that is, psychological comfort. In this direction, it is aimed to reveal the relationship between well-being and optimism.

2. CONCEPTUAL FRAMEWORK

2.1. Psychological Well-Being

Today, intensive studies are carried out to examine the psychological structures of people, such as the need for human capital, and their psychological well-being in business life, and to develop solutions for eliminating the problems. If people are seen as an important element in business life, the findings of science in producing solutions to eliminate the obstacles in front of them should be considered. At this point, business owners and managers are expected to show the necessary sensitivity to this issue. The first studies on well-being have emerged recently. Bradburn (1969) provided theoretical information about psychological well-being in his work named "The Structure of Psychological Well-Being" and revealed a scale study to measure psychological well-being. Psychological well-being is also identified with concepts such as personal development, challenge, autonomy, and effort. Psychological well-being theory is more focused on positive attitudes and behaviors toward life. At this point, his model is Maslow's proving one's self, Allport's aspects from inexperience to maturity, Rogers's model of a complete human in every aspect (with people's functions), Jung's personification and getting rid of the influence of others based on the sense of self, Erikson's individual development, Buhler's main philosophy of life and Neugarten's differences between people, Jahoda's views on psychological well-being and Victor Frankl's logic of understanding people were evaluated as a set of actions (Ryff, 1989; Ryff and Singer 2003).

2. 2. Optimism

The concept of optimism is based on the psychological capital theory (Değirmenci, 2019: 49). Nowadays, it is observed that research in the field of positive psychology is concentrated on topics such as psychological well-being, hope, happiness, optimism, curiosity, forgiveness, and well-being. Optimism is explained as individuals looking at their future with confidence and believing that good things are waiting for them in the future (Gillham & Reivich, 2004). It is also stated that optimism tends to see the positive side of events and somehow includes a belief that the future will bring good things (Karacaoğlu and Köktaş, 2016: 121).

With a positive outlook on life, optimists focus on the more favorable aspects of situations and events, while they have a positive expectation that the best developments can be achieved regarding the future. This situation is expressed as the ability of optimists to have positive expectations for the future by focusing on their positive past experiences in terms of the attribution approach (Güler and Emeç, 2016: 131). Academic optimism studies have so far been included in the field of positive psychology. Positivist psychologists analyze positive emotions, particularly optimism, to describe situations in which people can thrive and move forward. It is a way of developing personal control that focuses on optimism, hope, responsibility, and a generally positive disposition toward life (Çoban and Demirtaş, 2011: 321).

3. 3. THEORETICAL FRAMEWORK AND DEVELOPMENT OF HYPOTHESIS

University and Balıkesir University in terms of gender, classes, departments, and universities. In the results of working; They concluded that there is a positive and positive correlation between the student's resilience and well-being scores according to the university, class, and department variables. Optimism is defined in the Dictionary of Psychology (Enç, 1974) as "an attitude or personality trait that always sees the good in every object and event and consists of the belief that it will yield good results". The theoretical structure of the

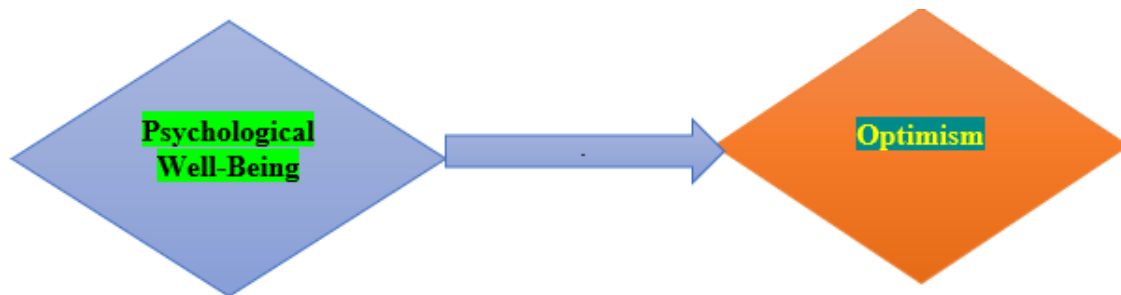

concept of optimism as a capacity of positive organizational behavior has been put forward by Martin Seligman, who is widely accepted as the founder of positive psychology (Luthans et al., 2002). Organizational employees with an optimistic mood believe that they can overcome all kinds of problems by working hard in every period of their business life. A more accurate situation assessment can be made with realistic and flexible optimism, and an appropriate optimistic or pessimistic explanation is chosen. Therefore, for effective optimism in terms of psychological capital, this optimism must be realistic and flexible (Luthans, 2007, 94-96). Examining the studies on the relationship between optimism and psychological well-being, Conversano et al. In their academic publication (2010), it was found that there is a relationship between the two dimensions. In another study, Padhy et al. (2015) concluded that there is a strong relationship between optimism and psychological well-being in their study on police officers. The third hypothesis within the scope of the research is as follows:

H1: There is a positive relationship between psychological well-being and optimism.

4. METHOD

In this study, in which the relationship between psychological well-being and optimism of employees was examined, information was given about the sample group covered in the research, and the scales used were explained. After the scale used in the research in which a certain order was followed, the analysis of the model created in light of the data obtained from the sample group was applied. In this context, first of all, an exploratory factor analysis of each variable was performed. Correlation analyses of the variables and findings related to simple regression analysis are included. The findings obtained as a result of the analysis were compared with the literature and suggestions were made regarding the study (Çelik et al., 2015). The research model created based on the theory and empirical studies is presented in Figure 1.

Figure 1: Research Model

4.1. Population and Sample

In this study, in which the relationship between psychological well-being and optimism of employees was examined, information was given about the sample group covered in the research, and the scales used were explained. After the scale used in the research in which a certain order was followed, the analysis of the model created in light of the data obtained from the sample group was applied. In this context, first of all, an exploratory factor analysis of each variable was performed. Correlation analyses of the variables and findings related to simple regression analysis are included. The findings obtained as a result of the analysis were compared with the literature and suggestions were made regarding the study (Çelik et al., 2015). The research model created based on the theory and empirical studies is presented in Figure 1.

4.2. Data Collection Tool

Psychological Well-Being Dimension (PWB): Diener et al. (2010), the well-being scale developed as 8 items were used in the study. The Turkish validity of the scale used in the study was tested by Telef (2013) and it was revealed as a result of the psychometric analysis that it was suitable for the Turkish sample (Karacaoğlu and Köktaş, 2016: 121). The items on the Psychological Well-Being Scale range from 1 to 7 from strongly disagree (1) to strongly agree (7).

Optimism Scale Dimension (O): The optimism dimension of the measurement of optimism in the questionnaire consists of 6 statements. A 5-point Likert-type scale was used (1- Strongly Disagree - "5- Strongly Agree"). The dimension used in the scale was taken from the study of Karacaoğlu and Köktaş (2016).

4.3. Analysis of Data

The item "When there are uncertainties in my job, I always want the best" of the first item about the optimism dimension cross-loading both the 1st Factor (.415) and the 2nd Factor (.473) and also the difference between these two-dimensional loading. Since the difference was less than 0.100, it was removed from the scale and then the analysis of the scale was continued with 4 items. As a result of the reconstructed CFA, it was determined that the 5-item scale had a single-factor structure, the factors explained 44.86% of the total variance, and the factor loads of the items were above 0.5. The CFA results regarding the items on the 5-item scale and their loads on the factors are shown in Table 1. Values below the factor load 0.3 are not shown in the table.

Table 1: Optimism EFA Results

Items	Loading
O1	,748
O2	,565
O3	,635
O4	,543
O5	,785
Eigenvalues	1,48
Percentage of variance explained	17,48
Total explained variance (%)	44,86

As can be seen in Table 1, the factor explains the variance of 17.48% after rotation. Based on the items loaded under the factor and the theoretical expectation, this factor was named optimism. These results indicate the validity of the single-factor structure of the scale dimension consisting of 5 items.

Exploratory factor analysis was conducted to determine the structural and factorial characteristics of the 8-item Psychological Well-Being Scale used in the study. To test the structural validity of the scale used in the study, EFA was applied by using the principal component analysis and the "varimax" rotation technique. As a result of the EFA, it was concluded that the Kaiser-Meyer-Olkin (KMO) sample adequacy value was,864 and the sample size was very good for factor analysis.

The EFA results regarding the items on the 8-item scale and the loadings of the items on the factors are shown in Table 2. Values below the factor load 0.3 are not shown in the table.

Table 2: Psychological Well-Being EFA

Items	Loading
PWB1	,712
PWB2	,784
PWB3	,778
PWB4	,767
PWB5	,774
PWB6	,649
PWB7	,698
PWB8	,587
Eigenvalues	4,375
Percentage of variance explained	54,868
Total explained variance (%)	57,565

As can be seen in Table 2, the percentage of variance explained in the Psychological Well-Being Scale was found to be 57.565%. Based on the theoretical expectation, this factor was named Psychological Well-being. This result indicates the validity of the single-factor structure of the scale consisting of 8 items.

5. FINDINGS

The data obtained as a result of the questionnaire used within the scope of the study were uploaded to the SPSS 23 program and related analyzes were made. In this context, in the first stage, the reliability coefficients of the participants' psychological well-being and optimism, that is, the two dimensions used were examined. The averages and standard deviations of the analysis results obtained from the participants were presented. Finally, the values obtained for simple regression in this study are shown in the table and comments are given. The results of the reliability coefficients related to the Optimism and Psychological Well-Being dimension are shown in Table 3 below.

Table 3: Reliability Coefficients

Dimensions	Cronbach Alpha Coefficient	Number Items	Confidence Level
Optimism	,712	5	Moderately Reliable
Psychological Well-Being	,89	8	Highly Reliable

The optimism dimension consists of 5 items and the reliability coefficient was found to be 0.712. The reliability coefficient for the psychological well-being dimension was 0.89 and it was found to be quite reliable. Evaluation criteria regarding the "Reliability Level" in the fourth column of Table 3 were utilized from the comments of Kalaycı's study conducted in 2008.

Table 4: Explanatory Statistics of Participants

Dimensions	N	Min.	Max.	Mean	S.D.
Optimism	497	2,38	5,00	3,98	,62
Psychological Well-Being	497	1,17	7,00	6,17	,98

The findings revealed that the participants were generally more optimistic and they were good in terms of psychological well-being. When the findings were evaluated, it was concluded that obtaining the desired results in terms of optimism and well-being, which is very important in business life, and satisfactory results were obtained in terms of representing the universe of the sample group.

The mean, standard deviation, and correlation coefficients of the variables used in the study are given in Table 5.

Table 5: Mean, Standard Deviation, and Correlation Coefficients of Variables (N=497)

Dimensions	Mean	S.D.	1
Optimism	3,98	0,62	-
Psychological Well-Being	6,17	1,17	,43**

** $p < .01$

As seen in Table 6, a positive and moderately significant relationship was found between psychological well-being and optimism ($r = .43$ and $p < .01$).

In the study, the model was used to reveal the relationship between the psychological well-being of public employees and optimism. Statistical results obtained by using simple regression analysis (with the help of the SPSS package program) are given in Table 6.

Table 6: Simple Regression

Hypothesis Number	Relation	B	%95 Bias Corrected Bootstrap CI	P Value	T Value
H ₁	PWW \Rightarrow O	.685***	[.6784, .7268]	.0000	14,98

Abbreviations: PWW: Psychological Well-Being and O: Optimism

It was determined that the psychological well-being of the employees and their optimism mood were positive and significant ($b = .685$, 95% CI [.6784, .7268], $t = 14.98$, $p < .001$). As a result of the analysis, it showed that the H1 hypothesis was supported.

6. CONCLUSION

In this study, which examines the relationship between the psychological well-being of the employees and their optimism, important findings related to the research have been reached as a result of the field study. The hypothesis put forward during the research was supported by the analyzes made.

It has been revealed that the optimism of the employees who have a high level of psychological well-being will also be good. In other words, it was concluded that the psychological well-being of the employees affected their optimism in a positive and meaningful way. As a result of the analyzes made, it was found that the employees have optimistic moods at their jobs and feel good psychologically. On the other hand, it is thought that when business owners and managers are supported by some material and moral elements in reaching positive psychological moods of their employees, they can become more optimistic in their work and thus concentrate on their work positively. It is predicted that complete well-being in terms of mood and optimism will trigger the situations of clinging to work more tightly.

Steel et al. (2015) concluded in their study that employees who feel good also increase their psychological capital levels. Karacaoğlu and Köksal (2016) concluded in their study that the variables of resilience, psychological well-being, and optimism have moderately positive relationships. It is known that private sector employees make significant contributions to meeting social needs. Considering that employees are individuals who make up society, they should be supported through some psychological training programs so that they can fulfill their responsibilities in a state of complete well-being, overcome problems, and look at life more optimistically. It should be kept in mind that the employees' physical, mental, and emotional well-being will have positive reflections on the institution and society. In this respect, organizing activities that motivate employees are very important in terms of ensuring social and public consensus.

An Investigation of the Relationship between Absorption and Motivation in an Organizational Context

Dr. Bekir Değirmenci¹

¹Adıyaman Üniversitesi /Besni Ali Erdemoğlu Meslek Yüksekokulu, Büro Hizmetleri ve Sekreterlik Bölümü,
bdegirmenci@adiyaman.edu.tr, ORCID: 0000 0001-5236-5245

Abstract: This study was carried out to reveal the effect of employees' absorption on their organizational motivation. In the literature research, no study found a direct effect of work concentration on organizational motivation. The universe of the study consists of employees in Turkey. In this direction, data were collected from 392 employees who agreed to participate in the study online. The quantitative research method was used within the scope of the study. The data obtained in this direction were analyzed with the help of SPSS and Process Macro analysis programs. As a result of the analysis, it was determined that absorption of work is one of the prior of organizational motivation. It is recommended to investigate mediator and modulator variables in the relationship between work concentration and organizational motivation in future studies. On the other hand, it is thought that investigating different variables affecting organizational motivation will enrich the literature. Supervisors and business owners are required to take all kinds of actions and measures that will contribute to the motivation of employees to work and their concentration on work.

Keywords: Absorption, Organizational Motivation, Quantitative Research

Özet: Bu çalışmada çalışanların işe yoğunlaşmalarının örgütsel motivasyonlarına etkisinin ortaya konulması amacıyla yapılmıştır. Yapılan literatür araştırmasında daha önce işe yoğunlaşmanın örgütsel motivasyon üzerindeki etkilerinin doğrudan araştırıldığı herhangi bir çalışmaya rastlanmamıştır. Çalışmanın evrenini Türkiye’de çalışanlar oluşturmaktadır. Bu doğrultuda online ortamda çalışmaya katılmayı kabul eden 392 kişiden veri toplanmıştır. Çalışma kapsamında nicel araştırma yöntemi kullanılmıştır. Bu doğrultuda elde edilen veriler SPSS ve Process Macro analiz programları yardımıyla çözümlenmiştir. Yapılan analiz sonucunda işe yoğunlaşmanın örgütsel motivasyonun öncüllerinden birisi olduğu tespit edilmiştir. İleride yapılması planlanan çalışmaların işe yoğunlaşma ve örgütsel motivasyon ilişkisinde aracı ve düzenleyici değişkenlerin araştırılması önerilmektedir. Diğer taraftan örgütsel motivasyonu etkileyen farklı değişkenlerin araştırılmasının literatüre zenginlik katacağı düşünülmektedir. Yönetici ve işletme sahiplerinin çalışanların işe motive edilmeleri konusunda onların işe yoğunlaşmalarına katkı sağlayacak her türlü eylem ve tedbiri almaları gerekmektedir.

Anahtar Kelimeler: İşe yoğunlaşma, Örgütsel Motivasyon, Nicel Araştırma

1. INTRODUCTION

In the 2020s, one of the important factors affecting the productivity and performance of business owners and businesses in the working environment is the organizational support policies they implement for employees. In recent years, the production-oriented management approach has left its place for the employee-oriented management approach. Providing peaceful and happy working environments for employees, wage policies of the management for employees, merit opportunities, and some support activities for the mental and physical integrity of the employees have become important (Erhan, 2021: 5686; Özgül and Gürol, 2019: 112). In this direction, in today's job market, employees are expected to display extra-role behaviors toward their work. In line with this expectation, the study aims to reveal whether the concentration of employees on work affects their motivation. In other words, in this study, whether there is a relationship between motivation and work concentration was examined in terms of employees.

When the literature is examined, many scientists have based the relationship between the business and the employee on the theoretical foundations of the social interaction model. According to the theory of organizational support perception, employees are required to have a say in management, to concentrate on their work, and to be motivated by the work they have done. In the literature, the concept of organizational support refers to the activities in which the employees adopt the values of the business and on the other hand, the business owners care about the welfare of the employees (Pradesa et al., 2013; Neves Eisenberger, 2014; cited in Erkal, 2021: 38). Concentration on work in literature reviews; job engagement (Atilla & Yıldırım, 2019), job dedication (Kambur & Ay, 2020) and job engagement (Kerse & Karabey, 2019) sub-dimensions. It is thought that the concepts of commitment to work, dedication to work, and passion for work have the same purpose. Although there is no common consensus on the naming of the concept in the literature, it has been determined that concentration on work is among the sub-dimensions of all three concepts. On the other hand, the explanation of the concept and the determinations of the literature on the explanation of the concept are out of the scope of this study.

The main problem statement of the study was to wonder whether there is a relationship between employees' absorption and their motivation to work. In this direction, it is aimed to reveal the existence of such a relationship with an applied study on employees.

2. CONCEPTUAL FRAMEWORK

2.1. Motivation

The concept of motivation comes from the French and English words "motivate". The Turkish equivalent of the concept of motivation is determined as a motive. Motivation, on the other hand, is expressed as all the efforts made to continuously mobilize one or more individuals for a certain purpose (Yavuz and Akgemci, 2021: 102). Motivation is the result of the influence of different behaviors associated with the organization in decision-making. Motivation in organizational behavior is to provide a suitable work environment for the needs of the organization and employees to be satisfied. It is the encouragement of an individual to do an action or a job. Motivation is an internal state directly related to work (Karadirek, 2020: 205). In order to increase the productivity of the employees, they should listen to their voices, ensure that they own their organizations, and make efforts to increase their motivation. Motivation is an important factor that we encounter throughout our lives and that affects success, especially in business life. Accurate evaluation of individuals' knowledge and skills is seen as a driving force in increasing their performance (Yavuz and Akgemci, 2021: 101). The sources of motivation are internal and external. While classifying intrinsic motivation as an emotional concept; expressed extrinsic motivation as a cognitive concept. People with high intrinsic motivation have the power to create this resource with their individual interests, desire, and job satisfaction. Intrinsic motivation, based on the nature of internalized utility, includes individuals' desire to perform their learning activity for pleasure. Extrinsic motivation, on the other hand, is the guiding motive that comes from the living space of individuals (Yıldız Yalçın and Özdemir, 2021: 773). Motivated employees have more motivation than unmotivated employees, and this helps employees both improve themselves and do their jobs better (Paais and Pattiruhu, 2020: 578). Increases in employee motivation will support the positive reflection of employee performance (Nawangari, Mintarti, & Sudjatno, 2023: 1802).

2. 2. Absorption

Goffman (1959), who used the concept of absorption for the first time, defined it as absorption in the role one has undertaken and giving himself and all his energy to this role and said that this manifests itself as a visible commitment and active dedication to the work done. Antonison (2010) expressed absorption in the employee's high level of interest in the job, his pride in his job, and his assuming a high level of responsibility (Kambur and Ay, 2020: 534). Absorption is the third and final dimension of engagement. Schaufeli et al. (2002) express absorption as the employee's dedication to his work, and immersing himself in work happily and concentrating. Kahn (1990) also describes this dimension, which he calls cognitive integration, as the awareness of the person. The person who absorption on his work transfers his energy to his work and reaches a high level of awareness and work orientation (Aşcı and Taşçıoğlu Baysal, 2019: 41).

Absorption is characterized as the rapid passage of time while working, the difficulty of disconnecting from one's work, and the fact that the person absorption completely in his work and engages deeply. Absorption, which is a situation in which the employee does not want to lift his head from his job and has difficulty quitting working, can also have negative absorption. If the person's absorption of work comes to the point that it cuts him off from the outside world and disrupts the work and life balance, it can cause conflicts in the person's life (Aydemir and Endirlik, 2019: 1096). In an empirical study, the concept of concentration was explained as the person's completely concentrated and happy devotion to his work, while time flies quickly and he has difficulty in separating himself from his work (Tokmak, 2019: 275). Arifin et al. in their empirical study found that employees who focus on work are more committed to work. On the other hand, it is underlined that an employee who is focused on his job will have a strong possibility of adapting to his role in the organization. Absorption is expressed as the focus of employees on their work and their interest in the work they have done (Airifin et al., 2019: 2-3).

3. THEORETICAL FRAMEWORK

In the literature, theories that help to understand motivation are examined in two separate groups. The first of these is content theories, and the second is process theories. While content theories state that motivation is the concept that triggers and maintains the individual's behavior, process theories try to make sense of how this behavior is triggered, directed, and sustained. The most well-known of the content theories are Maslow's

hierarchy of needs, Alderfer's (1969) ERG Theory, Herzberg's (1993) Two Factor Theory and McClelland's (1961) Learnable Needs Theory approaches. The main process theories are Expectancy Theory, Equity Theory, and Goal Theory (Steers et al. 2004). In this context, according to process theories, needs are seen as an element that directs people to behavior (Yılmaz and Vardarlier, 2021: 1350).

In the literature research, it was reached to the claims that work concentration can be explained with the help of attitude theory (Fishbein and Ajzen, 1975: 340). In the theory of attitude (Fishbein and Ajzen, 1975: 340), thanks to understanding (cognitive), feeling perceptions, it means attention and behavior in the work that represents the employees' organizational policy, whether they like or dislike the work done while performing activities related to their work. Another contribution of resource dependency theory that can be evaluated in explaining alliances may be related to sectoral concentration. In sectors where concentration is moderate, if competitive uncertainty is high, organizations try to eliminate the dependency arising from the competition by forming strategic alliances (Meydan, 2011: 23-24). In the study conducted by Kambur and Ay, they found that the perception of psychological contracts triggers employees to concentrate on their work (Kambur and Ay, 2020: 534). One of the theories that affect the concentration of employees on work is the efficiency theory. Activity theory states that wishing for happiness, thinking, and acting with an effort to reach happiness reduces one's happiness level. According to this theory, individuals should focus on important activities and goals because happiness comes naturally (Atilla and Yıldırım, 2019: 189).

3.1. Examining the Relationship Between Absorption and Motivation and Developing a Hypothesis

As explained earlier within the scope of the study, the concept of absorption was accepted as a sub-dimension of commitment to work in some sources, dedication to work in some sources, and work engagement in some sources. In this context, no study has been found that reveals a direct relationship between absorption and motivation. However, studies aiming to reveal the relationship between work engagement, work dedication, work engagement, and motivation were examined. Polat et al. determined that the passion for work of foundation university library staff is largely in a positive relationship with their motivation (Polat et al., 2019: 204). In another empirical study, positive significant relationships were found between the dimensions of work engagement (vigor, dedication, and absorption) and organizational citizenship dimensions. It has been determined that the activities carried out to increase one of these two concepts also increase the other concept. In addition, it has been determined that work engagement has a significant effect on motivation (Kaplanşeren and Örüçü, 2018: 204). It has been reported that when employees are committed to the job, their job satisfaction will increase and the turnover will be less (Karanika-Murray et al., 2014: 10274). In light of all this information, the hypothesis in its foot has been developed.

H1: There is a relationship between employees' absorption in work and their motivation to work.

4. METHOD

A quantitative method was used in this study. The questionnaire technique was used as a data collection method. In this part of the study, the research model, the hypotheses developed, the sample group of the study, the data collection tool, the analysis of the data, and the findings were mentioned. The research model is given in Figure 1.

Figure 1: Research Model

4.1. Population and Sample

The universe of the study consists of private-sector employees in Turkey. Across Turkey, 392 employees who agreed to participate in the study were reached. There are various sources in the literature regarding the power of this sample group to represent the universe. In an academic study, it is suggested that the sample size should be at least 10 times the number of items in the scale (Ergün and Çelik, 2019: 115).

4.2. Data Collection Tool

A questionnaire was created by using online methods, namely "google forum", and the questionnaire was sent to the sample group in a virtual environment with the help of the "WhatsApp web" program, which can be

downloaded free of charge on the mobile phone. The sub-dimensions of the scale, namely work concentration and organizational motivation dimensions, were included in the analysis at the same time. The study of Karadirek (2020) was used to measure the thoughts of employees on organizational motivation. The organizational motivation dimension consists of 6 statements. Regarding concentration on work, 6 expressions used in Erkal's (2020) study were used. A 5-point Likert scale was used to measure the expressions in the scale.

4.3. Analysis of Data

No analysis was made for the validity and reliability analysis of the scale used in the study. The reason for this is that the expressions in the scale used in the study were taken from previous studies and the analyzes made were valid and reliable expressions. Correlation analysis (SPSS package program) was conducted to reveal the relationships between the dimensions used in the scale. On the other hand, a simple regression analysis was carried out (Hayes Process) to reveal the effect of work concentration on motivation.

5. FINDINGS

Table 1 shows the descriptive statistics (means and standard deviations) of the scale used in the study and the statistical results of the correlation values between the variables.

Table 1: Correlation Analysis

Factors	Mean	Standard Deviation	1	2
Absorption	3,78	0,94	1	
Organizational Motivation	3,84	0,92	0,4198**	2

As seen in Table 1, values in the range of (3.78±0.94) for organizational motivation (3.84±0.92) and absorption were determined. It was determined that the averages of both dimensions had high mean values (3.78 and 3.84), respectively. When the relationship between the dimensions was examined, it was determined that there was a positive and significant relationship between absorption and organizational motivation ($r = 0.419^{**}$ and $p = 0.000$), and this relationship was moderate.

A simple regression analysis was conducted to determine the existence of a relationship between absorption and organizational motivation. Support was provided by the Process Macro program to perform the analysis process. Findings related to the results of the analysis are given in Table 2.

Table 2: Simple Regression

Hypothesis Number	Relation	B	%95 Bias Corrected Bootstrap CI	P Value	T Value
H ₁	A \Rightarrow OB	.6445***	[.6148, .7756]	.0000	17,94

Abbreviations: A: absorption and OB: Organizational Behavior

It was determined that the employees' absorption was positive and significant for their organizational motivation ($b = .6148$, 95% CI [.6148, .7756], $t = 17.94$, $p < .001$). As a result of the analysis, it showed that the H₁ hypothesis was supported.

6. CONCLUSION

It should be ensured that the employees are motivated to work in order to increase the high performance and productivity of the employees in business life. At this point, it is thought that when employees absorption in their work, they will be more motivated to work. In this direction, this study was conducted to reveal this relationship. It has been determined that there is a moderate relationship between absorption and organizational motivation. On the other hand, it was investigated whether work absorption affects organizational motivation and as a result of the analysis, it was determined that work absorption is a triggering force for employees' organizational motivation. In other words, it can be argued that the concept of work concentration is one of the antecedents of organizational motivation.

It is thought that the findings obtained as a result of this study provide some gains for the literature and the business world. First of all, business owners and managers need to take some measures to motivate employees to absorb their work and to ensure their concentration. Employees should be encouraged to concentrate on

their work with both material and moral support. It can be argued that employees who concentrate on their work are thus better motivated to work.

On the other hand, it is thought that the effects of absorption on organizational motivation have not been directly found in the literature, and this contributes positively to the literature. This study, it is aimed to reveal the relationship between absorption and organizational motivation. It is recommended that researchers who plan to carry out studies on this subject in the future should investigate the antecedents to reveal different antecedents of organizational motivation. Among these predecessors; It may be recommended to conduct research on variables such as organizational support, work engagement, and psychological well-being. In addition, it is estimated that investigating the mediation and regulatory effects of different variables in the relationship between work concentration and organizational motivation will make positive contributions to the literature.

Economic Importance of Water for Sustainable Development and Sectorial Sharing

Berna SAVAŞ^{1*}

Assoc. Prof. Teoman AKPINAR²

^{1*} Business Manager, TR-16110 Bursa Türkiye, Email: bernaistanbulluoglu@gmail.com

²Tekirdağ Namik Kemal University Çorlu Vocational School, TR-59860 Tekirdağ Türkiye, Email: takpinar@nku.edu.tr

Abstract: In sustainable development, which aims to present a normative perspective by combining the world economy with social inclusion and environmental awareness, the economic value and sectorial sharing of water has constituted the article subject. In this sense, by analysing scientific data collected from national and international organizations, non-governmental organizations, websites and documents such as various books, articles, declarations and reports on the subject, the economic importance and sectorial sharing of water in sustainable development at macro level has been revealed. In the article, analyses were carried out within the changing water paradigm under main headings: the age of sustainable development, the world water existence and water sharing in sustainable development. The place and importance of water, which is an indispensable resource for all living things, accepted as the common right of humanity and which should be preserved for future generations, has been emphasized. As a commercial commodity that is bought and sold today due to the increasing world population and the developing industrial sector, water, which is an investment and gain element, has now formed its own economy. Water, which is seen as the common of all living things and economic sectors, has been suggested to be used by people within the natural cycle in the most efficient way both in terms of quantity and quality, within the economic, social and environmental benefits, while meeting the needs of today, without taking away the opportunities to meet their needs in future generations, in a sustainable development.

Keywords: Sustainable development, Presence of water, Water economy, Water management, Water sectorial sharing.

1. Introduction

Water, which is necessary for all humanity, has also been at the center of civilizations established by humanity. This is a conscious choice in the historical process. People have settled in areas where they can irrigate their crops and plantings as well as providing their own drinking and utility water needs. With the simple irrigation methods they introduced, they provided the opportunity to obtain more nutrients. The increasing population required more water over time. When small settlements started the urbanization process and with the developing engineering techniques, people started to use water resources to their last limits in order to benefit from and control water.

It is of great importance to protect usable water resources due to the increasing need for clean water with rapid urbanization and the increase in water use in industry. For this reason, it is inevitable to turn to new approaches and searches in the protection and management of water resources. Because water has now become a commodity that can be bought and sold, commercialized and privatized. Without compromising the sustainability of the economic potential of surface and underground water resources and vital ecosystems, In other words, it is of great importance in terms of ensuring continuity in socio-economic development by being developed in line with the principles of continuous and balanced development, taking into account environmental effects, in order to maximize economic and social welfare.

With this article, it is aimed to make a unique contribution to the economic role of water for a sustainable development strategy and to provide coordination between the sectors that use water, by drawing attention to the economic importance of the decreasing water resources.

The materials on which the article is based are based on scientific literature. A comprehensive literature review was made, especially from national and international studies, and the material was compiled. In this sense, scientific theses and articles, various written books and reports on the subject were examined. Their views and thoughts around the world and in Turkey have been evaluated. As a result of these analyses, the economic importance of water in sustainable development and its sectorial distribution have been revealed. Turkey's water management policy and the reflection of water on the economy for sustainable development were discussed, future goals were determined and necessary suggestions were made in order to reach them.

2. The age of sustainable development

2.1. Development concept

Countries have been in an effort to benefit from economic resources, starting from their basic needs, in order to ensure the welfare and happiness of their populations. In this sense, they aimed at the growth and development of the country by increasing the amount of national income per capita.

Growth is the ability of an economy to potentially produce more. However, this is not the case that the country is developing. Development is a much broader scope that includes economic growth. The aim of development is to achieve many goals together. It is the development of the infrastructure that will enable the society to live better (Akar, 2019: 10).

The developmental economy model emerged after the Second World War with the definite change of concepts and policies. Accordingly, purposes such as mass consumption have been passed from traditional society. Today's economies have adopted a more ambitious way of thinking than in the past (Tolunay and Akyol, 2006: 118). It is aimed to raise the standard of living of the whole world by providing continuous goods and services against the increasing population. In this case, it has started to cause social problems and environmental degradation that are not experienced in traditional society.

The development seen in its current form has revealed growth and progress. However, while providing certain financial gains, excessive resource consumption and environmental degradation have now entered the process of threatening and endangering today's life. All these have led to the emergence of many social, environmental and economic problems (Yücel, 2003: 9).

The main purpose in the development of countries is not only to increase the national income, but also to change their social, cultural, environmental and economic structures. In a nutshell, development is a positive change in the structural characteristics of a country.

2.2. Sustainability

While the concept of sustainability is an expression meaning "to protect" and "to support", in a simple definition, it is the ability of something to protect or renew itself without damaging the environment, scientifically, legally and without harming the environment. Based on this meaning, the concept of sustainability; means meeting the needs of the present while preserving the opportunities of future generations (Yeni, 2014: 184).

The concept of sustainability, which deals with society, nature and the economy together, was first introduced by the World Commission on Environment and Development (WCED) to the United Nations General Assembly in 1987, in the "Our Common Future (Brundtland Report)" found with the report. According to this report, sustainability is defined as "the provision and use of the daily needs of the present generation without compromising the needs of nature and future generations" (Yeni, 2014: 196).

2.3. Sustainable development concept

Sustainable development is one of the basic concepts of our age. It is a solution method among the problems faced by the world.

There are 7.2 billion people living in the world today. It is about 9 times the size of the estimated 800 million people in 1750, the beginning of the industrial revolution. It continues to increase by around 75 million every year. So many people are chasing economic activities together every day (Sach, 2019: 21).

Unfortunately, the world economy exhibits striking inequality. The poor struggle to survive. Middle-income people are looking for a bright future. High-income people compete for their place among the wealthy (Alvaredo, Chan, Piketty, Saez and Zucman, 2018: 233).

All this struggle of people creates a huge environmental pollution in the world economy and this situation threatens the lives of billions of people, not only their own species, but also the existence of millions of species living in the world. It changes the world's climate, plant and animal existence. Limits access to fresh water (Alvaredo, Chan, Piketty, Saez and Zucman, 2018: 299).

Therefore, sustainable development also offers a normative (ethical) perspective to the world. In other words, it proposes a set of goals that will make the world more livable (Sach, 2019: 29). Thus, it calls for a world where

economic development is widespread, extreme poverty is ended, social trust is strengthened and the environment is protected from human-induced deterioration. It envisages three basic component objectives for a good society. These are the dimensions of social (communal) development, ecological (environmental) conservation and sustainability in economic growth (Harris, 2000: 5-6).

2.3.1. Social sustainability

The advocates of sustainable development have emphasized human developments related to basic needs and social equality, which have an important place in the history of the economy, as the fundamental component of the new values. Social sustainability is a development model that allows different groups of societies to live together in a culturally and socially harmonious way, while at the same time promoting social unity and solidarity through improvements in the quality of life for all parties of the society (Evli, 2018: 5).

People need to live in a social system that meets their own needs. In societies where trust and common behavior patterns exist, people increase their chances of being successful in their work. In general, social development has a place that strengthens social ties, which are important for sustainable development.

2.3.2. Ecological sustainability

All living things on earth either compete with each other or unwittingly change the environment while cooperating in order to survive. In particular, people have the power to destroy the ecosystems they live in and even more so to maintain their existence. However, they obtain all their material needs such as nutrition, shelter and energy from the ecosystem in which they live (Gedik, 2020: 8). People who have always lived in harmony with their nature for hundreds of thousands of years have started to cause irreversible damage to the ecosystem they live in, but with the increasing population. After the industrial revolution, they caused air, water and soil pollution and decreased biodiversity (Kılıç, 2012: 202-203). However, in order for the economic activities to be sustainable, the environmental elements on which people depend must be protected.

2.3.3. Economic sustainability

Sustainable development rejects models that have no upper bound on economic development. Economic sustainability is an economic development model that has no limitations on social and ecological sustainability.

In today's social structure, the economy has become a freer field than ever before, compared to previous periods. The environment, individuals, and sometimes even societies have become sacrificing in order to get out of the endless crises in the world economy. As long as such approaches come to an end, the consumption impulse is curbed, the gap between the rich and the poor can be kept at an acceptable level, and the production-consumption balance can be preserved in nature, a sustainable development will be possible. Although the fact that sustainable development is made in a market economy is seen as one of the important obstacles in expressing the concept itself, it should not cause the abandonment of the struggle for this cause (Kılıç, 2012: 207-208). Execution of a social and ecologically based sustainable economic development strategy is an indispensable requirement.

2.4. The place and importance of water in sustainable development

Water, which is needed for the survival of all living things, accepted as the common right of humanity and must be protected for future generations, has an undeniable place and importance in the development of countries.

Water, which was the natural right of all living things until the last century, has become an investment and income element in national and international markets as a commercial commodity that can be bought and sold today.

Water, which is an irreplaceable resource for all living things, has now created its own economy due to the increasing world population and the developing industrial sector. It is stated that the global water market has already reached 500 billion dollars. According to World Bank data, it is predicted that this market will grow much more in the coming years and that the annual water market will exceed 4 trillion dollars in total (Harris, 2000: 11).

The concept of sustainability, which was brought to the agenda for the first time in the United Nations in 1987, has been used by organizations such as the Food and Agriculture Organization (FAO), the World Health

Organization (WHO), and the Education, Scientific and Cultural Organization (UNESCO), which are specialized institutions of the United Nations, in the following years included in various reports.

Within the concept of sustainability, the protection and development of water resources in social, environmental and economic sustainable development have been the development indicators of countries (Sach, 2019: 33-34).

The unequal distribution of water resources in the world in terms of time and space has brought water to the center of international problems. It has been the cause of conflicts in many parts of the world.

There is also competition between water and economic sectors. Approximately 70% of the total water used is used in the agricultural sector. With the developing industry and increasing urbanization, the amount of water used is increasing every year. Waste and pollution of limited water resources is an important environmental problem. The fact that it is seen as a very valuable input that directly affects economic activities has made water management a specialty.

2.5. Applicability of sustainable development

It is very important that sustainable development is applicable to real life rather than being an intellectual endeavour. But how does an economy with 7.2 billion people and \$90 trillion in GDP change? What drives economic growth? How to eradicate billions of poverty? Can the poor escape their fate? How can unemployment and immigration problems be overcome? How can a system with such a large income, wealth and power inequality be operated? How can malnutrition, unsafe housing be resolved? How will access to clean fresh water be ensured? Where will environmental threats, floods and drought that arise with changing climatic conditions evolve? Can biodiversity be protected? Will the known behaviour of multinational corporations be disciplined? Will conflicts and wars be avoided? How will a social and ecological sustainable development policy solve all these? (Alvaredo, Chan, Piketty, Saez and Zucman, 2018: 333).

Today, all humanity is the addressee of the problems, some of which are listed above, and lives under these conditions. All of them think about the future of their children and they know what needs to be done. The time is to dream of solving all these problems, putting your doubts aside. To be able to say why not.

3. Presence of water

Expressed by scientists on the subject with the Big Bang, which took place 13.8 billion years ago, galaxy islands, star clusters within galaxies, planets around some stars, and satellites around some planets were formed, and the general architecture of the universe emerged (Monroe and Wicander, 2015: 26).

In the world we live in, it was formed as a place where volcanoes erupted continuously about 4.5 billion years ago (Ward and Kirschvink, 2015: 32).

The water, which is the source of life for all living things, hundreds of millions of years after this formation, in the process of formation and change of the world, according to one of the two known general opinions, with the release of water vapour along with the gases erupting from the constantly erupting volcanoes, and this creates clouds and therefore rains; according to the other, it was formed as a result of small comets formed from glaciers and frozen asteroids colliding with the Earth (Wicander and Monroe, 2013: 43).

Water exists in different places in nature and in different states such as liquid, solid, gas, and rotates between different regions of the earth. This whole cycle of water in nature is called the water cycle or hydrological cycle. The water cycle has neither beginning nor end. If we take the evaporation of water from the oceans as a starting point, the water (cloud) formed as a result of evaporation and in the atmosphere in the form of vapour is transported by the movement of the air mass. Clouds condense under suitable conditions and form rain clouds that can turn into precipitation. It falls to the earth as precipitation due to the effect of gravity (Okman, 1994: 11; Bayazit, 1995: 17).

Some of the precipitation that falls towards the earth in the form of rain, snow, hail or other forms is returned to the atmosphere by evaporation from the land and open water surface and by transpiration from plants. Some of it is kept on buildings and plants, some of it seeps into the soil, it forms soil water and groundwater with infiltration in the soil. The remaining water fills the pits on the soil surface, and when the pits overflow, it moves in the direction of the prevailing slope with the effect of gravity, creating excess precipitation, that is,

surface runoff. The energy required for this whole cycle is provided by the sun and gravity (Raghunath, 2006: 22).

3.1. World water availability

Nature is in dynamic balance in terms of the amount of water. The total amount of water in the world is an inexhaustible natural resource that does not change over time. The amounts of water entering and leaving any part of the water cycle are equal over a long period of time. For example, the precipitation that falls on the earth in a year is equal to the amount of water that evaporates and returns to the atmosphere in that year. This amount is about 1,000 mm per year on average. In Turkey, this amount is 650 mm per year. However, in a short period of time in the cycle, it is seen that there are large changes in the amount of water (Shaw, 1994: 33).

The distribution of water between various parts of the earth at any given moment is given in Table 1. It is seen that a large part of it (97,39%) is located in the seas (hydrosphere). The distribution of 36.12 million km³ of fresh water on land (lithosphere) and in the air (atmosphere) is as follows, as given in Table 2. 77.23% in polar ice, 12.35% in deep groundwater, 9.86% in near-surface groundwater, 0.35% in lakes, 0.17% in soil moisture, 0.04% in atmosphere, 0.003% in rivers and It is 0.003% in living beings. As can be seen, the percentages of water in the atmosphere, streams and living things at any given time are very low (Ward and Robinson, 2000: 28).

Table 1: World water resources distribution

Location	Volume (km ³)	%
Atmosphere	13.000	0,001
Lakes and streams	225.000	0,02
Groundwater	8.062.000	0,58
Polar ice caps	27.820.000	2,01
Seas and oceans	1.348.000.000	97,39
Total	1.384.120.000	100,00

Source: Ward and Robinson, 2000.

Table 2: Distribution of fresh water in the world

Location	%
Living things	0,003
Streams	0,003
Atmosphere	0,04
Soil moisture	0,17
Lakes	0,35
Subsurface water	9,86
Groundwater	12,35

3.2. Turkey's water availability

Turkey is not a water-rich country. In fact, if necessary measures are not taken in the near future, it is a candidate country to experience water problems. The main reason for this is that the total annual precipitation average is less than the world average, as well as the uneven distribution of precipitation and existing water resources according to the regions and the sources cannot be controlled due to the irregularities in the country's topography.

The precipitation regime of Turkey, which has an average annual precipitation of 643 mm, varies greatly according to the seasons and regions. In return, an average of 501 km³ of water per year. 274 km³ of this amount is returned to the atmosphere through evaporation from soil and water surfaces and plants; it feeds the groundwater reserves of 41 km³ by surface seepage; It is accepted that 186 km³ of it is discharged into the lakes in the closed basins through rivers of various sizes. In addition, considering that 7 km³ of water per year is

included in the country's water potential with the rivers originating from neighbouring countries, the total renewable fresh water potential is 234 km³ gross (Okman, 1994; 13).

As a result of some acceptances and evaluations made according to today's conditions and possibilities, it has been determined that the amount of surface and groundwater used for various purposes that can be consumed technically and economically is 110 km³. It is accepted that 95 km³ of this amount can be obtained from the rivers originating in the country, 3 km³ from the rivers reaching the country from abroad and 12 km³ from the groundwater.

Our usable water per person is 1,450 m³, and the water potential is around 3,400 m³. When compared with some countries and the world average in terms of water availability, it is seen that Turkey is among the countries with water limitations (Bayazıt, 1995: 19). Per capita water potentials of some neighbouring countries and main continents are given in Table 3.

Table 3: Per capita amounts of water in some countries and continents (m³ person-1 year)

Countries	Water potential	Countries	Water potential
Georgia	12.000	Armenia	2.750
Greece	6.900	Bulgaria	2.650
Azerbaijan	3.750	Iranian	1.950
Türkiye	3.400	Syria	1.600
Iraq	3.250	Israel	300
Africa	7.000	Asia	3.000
West Europe	5.000	South America	23.000

Source: Brutsaert, 2008.

Countries with an average water potential of 8,000 m³ per person per year are considered water-rich (Brutsaert, 2008: 36). However, Turkey is far behind this number with its water potential of 3,400 m³ per capita. It is seen that Turkey has limited amount of water resources. Depending on the increasing amount of Turkey's population in the coming years, it can be said that there will be a continuous decrease in the amount of usable water (Bayazıt, 1995: 20).

It is possible to estimate the possible pressures on water resources due to factors such as the change in water consumption habits of countries and their growth rates. In this sense, Turkey needs to protect its resources very well and use them wisely in order to leave healthy and sufficient water for future generations.

4. Sharing of water in sustainable development

4.1. Water usage indicators

The world population is 7.79 billion people according to the most recent estimates. The world population, which was 300 million two thousand years ago, has shown the highest increase in its history in the last 100 years. Despite this, the world water resource is 1.4 billion km³ with its constant amount and the amount per capita is decreasing very rapidly every year (Yılmaz, 2011: 316).

In addition, when the world water resources potential is examined, it is seen that its distribution on the earth shows great differences. There are serious inequalities between continents, in different countries within those continents. Access to water is getting more and more difficult every year. According to UNICEF, as of 2017, 2.1 billion people in the world do not have access to drinking water. About twice as many people continue to live without the necessary hygiene facilities (www.unicef.org/turkey/basin).

In a country, the annual amount of renewable fresh water is given as the best indicator of whether the water resources are sufficient or not. In this sense, one of the common benchmarks is the Malin Falkenmark indicator. It is calculated by dividing the water resources of a particular country or region by the population living in that country or region. In the indicator developed to define water stress and scarcity, the amount of 1,700 m³ person-1 year is taken as the threshold value (Hakyemez, 2019: 8).

A similar indicator in this regard is the Shiklomanov renewable water indicator. Here, too, countries or regions are classified as water-rich or poor. Another measurement value is the Simon Damkjaer indicator, which is defined as the ratio of the annual total usage amount in a region to the annual total supply amount. It gives the water risk ratio of the region (Hakyemez, 2019: 9). Classifications related to all these indicators are given in Tables 4, 5 and 6.

Table 4: Malin Falkenmark renewable water indicator classes

Indicator ($\text{m}^3 \text{ person}^{-1} \text{ year}$)	Class
< 500	Absolute famine
500 – 1.000	Famine
1.000 – 1.700	Water stress
> 1.700	Stress free

Source: TSKB, 2019

Table 5: Shiklomanov renewable water indicator classes

Indicator ($\text{m}^3 \text{ person}^{-1} \text{ year}$)	Class
< 2.000	Very little
2.000 – 5.000	Little
5.000 – 50.000	Middle
> 50.000	High

Source: Kınacı, 2017

Table 6: Simon Damkjaer water risk ratio classes

Indicator (%)	Class
< % 10	Very low risk
% 10 - % 20	Low risk
% 20 - % 40	Medium risk
> % 40	High risk

Source: TSKB, 2019

The average annual precipitation in Turkey is 643 mm, which is well below the world average of 1,000 mm. This amount corresponds to approximately 501 billion m^3 of water per year. According to the 2015 data of 25 river basins in Turkey, the Falkenmark indicator showed very different values between 109 – 18,064 $\text{m}^3 \text{ person}^{-1} \text{ year}$ (Hakyemez, 2019: 9).

The amount of water per capita was calculated as 1,422 m^3 in 2015. In 2022, when the population of Turkey was 85,279,533 people, it was calculated as 1,313 m^3 . When other countries in the world and neighbouring countries are examined, Turkey is one of the countries experiencing water stress in terms of the amount of water available per capita. If the Falkenmark indicator for any country or region is between 1,000 and 1,700 m^3 per person per year, that country or region can be said to be under "water stress". The water potential of "water-stressed" Turkey, which is expected to have a population of 88,5 million in 2030, will decrease to 1,267 $\text{m}^3 \text{ person}^{-1}$ in this year. Whereas, as a general comparison, a country with more than 5,000 m^3 of water per capita per year is considered "water stress-free" (Hakyemez, 2019: 9).

The World Natural Resources Institute (WRI) has published in its "Water Risk" report that there is a risk of water shortage in about a quarter of the world. This is the number one problem in the world, and as a result, food shortages, internal turmoil, economic instability and migration are commonplace. In the near future, it will be inevitable to experience water and related problems in many countries, mostly in the Middle East. It is expressed as a part of these problems in Turkey, which is surrounded by seas on three sides (Yılmaz, 2011: 317).

4.2. Sustainable water management

Sustainable water management is defined as the systematic use of water by people in the world, both in terms of quantity and quality, for the best economic, social and environmental benefits, while meeting the needs of today, without compromising the ability of future generations to meet their own needs (Meriç, 2004: 28-29).

For sustainable water management, it is necessary to look at the event within a hydrological system. Evaluations should be made by taking into account the potential that will exist in the future and its long-term use, as well as today. A management policy should be followed to give the necessary opportunities for nature to renew itself. This should be done within the legal limits, protecting water rights, using the fairest collection according to the priority and type of use under social and economic conditions (Meriç, 2003: 34).

4.2.1. Water management in the world

The aim of sustainable water management in the world is to transfer it to future generations in the best conditions without creating undesirable changes in all elements of the ecosystem. Sustainability, which is a desirable design practice, is in a sense walking together with the concept of management.

In this context, the management of water resources is the principle of providing a balance between the amount of water added to the system and the amount used. The main input of the system is that the balance of the system is not deteriorated as a result of precipitation and use during operation periods, changes in storage and natural discharge.

There are many relevant organizations in the world for the equitable use of water, its fair distribution and the provision of water security. Their direct or indirect goals, visions and activities constitute the general principles of water management (Kirtorun and Karaer, 2018: 154).

Chief among these is the United Nations. The institution recommends providing clean drinking water with integrated watershed management of water resources. General targets and areas of interest have been established for water quality, transboundary waters, climate change, natural disaster management and water pricing (Muluk, Kurt, Turak, Türker, Çalışkan, Balkız, Gümrükçü, Sarıgül and Zeydanlı, 2013: 42).

The most important legislation on the management of water resources in the European Union is the “Water Framework Directive”. According to this directive, the EU sees water not as a commercial product, but as a heritage that must be protected and managed very well. It is aimed to protect and improve all waters in the Union geography. The EU aims to manage the entire European water policy with a single framework perspective, rather than different sectoral practices related to water. Accordingly, with the water framework directive, it is foreseen that the management of water resources should be carried out with the approach of “integrated river basin management” based on river precipitation areas, not according to administrative or national borders (Akkaya, Efeoğlu and Yeşil, 2006: 196).

4.2.2. Water management in Turkey

Water management in Turkey is the responsibility of the public. Strategic decisions and related practices are taken by the central government. Policies and plans are implemented by the regional directorates of the relevant ministries or by local administrations, especially by municipalities, depending on their size (Muluk, Kurt, Turak, Türker, Çalışkan, Balkız, Gümrükçü, Sarıgül and Zeydanlı, 2013: 37).

The Constitution of the Republic of Turkey constitutes the source of water management in Turkey. According to Article 168 of the Constitution: *“Natural wealth and resources are under the rule and disposal of the State. The right to explore and exploit them belongs to the State. The state may transfer this right to real and legal persons for a certain period of time. The exploration and operation, of which natural wealth and resource will be carried out jointly by the state with real and legal persons, or directly by real and legal persons, depends on the express permission of the law. In this case, the conditions to be complied with by real and legal persons, the procedures and principles regarding the surveillance and inspection to be carried out by the state, and the sanctions shall be indicated in the law.”* contains the provision (Alpaslan, Tanık and Dölgün, 2008: 139-142).

During the Ottoman Empire, water management was carried out by foundations. After the establishment of the Republic of Turkey, it started to be carried out with public institutions. Since the first years of the Republic, various laws related to water have been enacted and legal planes have been tried to be established for water management. With the instruction of Atatürk, the General Directorate of Waters was established in 1929 under the Ministry of Public Works, formerly known as the Nafia Vekâleti. By 1954, the duties and powers of the General Administration were expanded and it was named the General Directorate of State Hydraulic Works (Kinacı, 2017: 153).

Following the establishment of State Hydraulic Works, the general approach of developing water resources in water management has been adopted in Turkey as in the rest of the world. During this period, many projects for the development of water resources were implemented.

The Environmental Law was enacted in 1983 in order to prevent the environmental and water pollution seen with the increasing population, urbanization and industrialization in the following years. Then, in 1988, the Water Pollution Control Regulation was enacted. While the development of water resources is a priority investment, investments have also been made to improve water quality. In the following years, many legal

regulations have been made that directly and indirectly concern water management. The powers and duties given to different Ministries and their subordinate institutions have made water management quite complex in Turkey. Today, studies are carried out on the issuance of a water law in order to eliminate and compile all this mess (Meriç, 2004: 34).

4.3. Sectoral sharing of water

Water is a natural asset with a multi-purpose use, and therefore has sufficient quantity and quality principles in the management of its use. In the sectoral sharing of water, it is necessary to make plans considering the water source and the purposes of use (Kubaş, Atlas and Yılmaz, 2010: 1553).

Although the sectoral distribution of water in the world is given at different rates in different sources, approximately 67-70% is used in agricultural activities, especially as irrigation water, 22-23% is used for industry and 7-11% for domestic use for drinking and utility water. This situation is realized as 73% in agriculture sector, 11% in industry and 16% in domestic use in Turkey (Gürsakaç, 2007: 4-6). Sectoral distribution of fresh water resources is given in Table 7 in detail.

Table 7: Sectoral use of fresh water resources (%)

Sector	World	Developed countries	Developing countries with	Underdeveloped countries	Europe	Türkiye
Agriculture	67-70	39	52	86	33	72-75
Industry	22-23	46	38	7	51	10-12
Domestic	8-10	15	10	7	16	15-16

Source: Gürsakaç, 2007.

4.3.1. Domestic water use

More than half of the world's population, about 54%, lives in cities. By 2050, this rate is expected to increase to 66% (Tatar, Özüdoğru, Uysal and Uygur, 2017: 414). Growing settlements with their increasing populations consume the water resources in their immediate vicinity and create an intense pressure on ecosystems such as forest areas and pastures that are water sources. The daily water consumption per capita for domestic purposes is about 500-800 m³ in developed countries. This amount is about ten times that of developing countries. In areas with water scarcity, it decreases to 20-60 m³ (Muluk, Kurt, Turak, Türker, Çalışkan, Balkız, Gümrükçü, Sarıgül and Zeydanlı, 2013: 44).

It is reported that Turkey's population growth rate, which is 1.35% today, will continue to decrease in the coming years (Türkiye Statistical Institute, 2011). The population is estimated to reach 100 million by 2030. In this case, it is stated that the amount of domestic water use per capita will be around 1,100 m³/year. Domestic water use, which was 5 billion m³ per year as of 2000, is estimated to reach approximately 18 billion m³ in 2030 (Şahin, 2007: 18).

According to the data of the Türkiye Statistical Institute (2011), the population of the municipality served by the drinking water network in 2010 is 82% of the total population. Municipalities provide services to 99% of their population with drinking water networks. In other words, 33 million people, who make up 45% of the population, were provided with domestic water and treatment services. A total of 9.1 billion m³ of wastewater was discharged from the sewerage networks of municipalities and villages. Of this discharged wastewater, 70.4% went to the sea, 24.3% to the river, and 5.2% to other receiving environments. Only 33% of the total discharged wastewater has been treated (Alpaslan, Tanık and Dölgen, 2008: 64-65).

In recent years, drinking and utility water treatment technologies have made significant developments. Membrane processes are the leading among them. With this technology, it has started to be used in Turkey for the purpose of supplying water from sea water. They have become an indispensable method for industrial and tourism facilities and residences in coastal areas that face the threat of serious thirst. In this regard, Istanbul Metropolitan Municipality continues its efforts to establish a desalination plant (reverse osmosis) to help solve the water problem. Balıkesir Avşa Municipality has been meeting the domestic water needs of the island with the water it has obtained from sea water since 2012 (Başaran, 2015: 22; Bıyıklı, 2017: 39).

4.3.2. Industry sector

The agricultural sector, which uses the most water, is being replaced by the industrial sector in developed countries. A large part of the growing world population needs much more industrial products due to the growing economy and rising quality of life. This requires water, which is the most important input to meet the industrial production needs of the developed society. The average industrial water requirement across the world is 22-23%. This rate is around 10% in underdeveloped and developing countries. In developed countries, the average industrial water requirement reaches 60%, which is a very high value. Even more, in developed countries such as Germany and Finland, the water use of the industry is above 80%. The water demand of the industrial sector is constantly increasing (Körbalta, 2013: 2).

Water is used as raw material and process water (washing, cooling, dyeing, etc.) in the water industry sector. The water used as raw material is usually directly in beverage facilities. It is used for various purposes as process water. Considering the amount among these, the cooling water holds a significant proportion (Körbalta, 2013: 11).

The industrial sector supplies 34.7% of the water it uses in all production activities from fresh water sources. It provides 17.1% of this water from wells, 5.7% from city networks, 4.8% from dams and ponds, 3.6% from springs and springs and 3.5% from rivers (Yıldız and Yıldız, 2016: 3).

Considering the water use of the industrial sector compared to other sectors, it is lower than the agricultural sector. However, the scattered settlement structure of the industry causes very important negativities. The use of domestic water resources and waste areas by some of the industry makes it difficult to determine the amount of use and to monitor the pollutant effect (Özkan and Kubaş, 2008: 20).

Leaving the water used in industrial facilities to nature without being subjected to any treatment causes very important environmental pollution. Stream pollution in many watersheds of Turkey is one of the important proofs of this. This situation threatens human and ecosystem health. It limits agricultural activities and industrial production. Agricultural production is becoming impossible in many areas. Industrial facilities have to make additional treatment in supplying the fresh water they need (Yıldız and Yıldız, 2016: 5).

The European Union emphasizes the elimination of pollution at the source in the water framework directive. In this sense, it places a lot of emphasis on measures such as waste reduction or zero waste, reuse and recycling. It strongly recommends switching to practices that will enable more efficient use of water resources by minimizing the use of water in all sectors and thus the generation of wastewater (Özveren, 2005: 56).

4.3.3. Agriculture sector

The field of activity in which water use is the most intense in the world is the agricultural sector. In underdeveloped and developing countries, 85-90% of the total fresh water is used in agricultural activities, especially in agricultural irrigation. However, in developed countries, this usage rate declines to 16% (Yıldız, 2010: 47).

In the world and in Turkey, water is mostly used for irrigation in the agricultural sector. Agricultural production activity is carried out on 11% of the world's land. Unsustainable traditional agriculture is widely practiced in these areas. Agriculture is practiced with intensive water consumption, high chemical input, and ignoring the ecosystem characteristics of the region. However, in recent years, the amount of irrigated industrial agriculture has doubled. Traditional agriculture leaves its place to extensive (industrial) agriculture (Ayten, 2014: 73).

Turkey has geography with very different climatic characteristics. Despite this, the country average has a total annual precipitation of 643 mm. This amount of precipitation corresponds to an average of 501 billion m³ of water per year. The amount of surface and ground water that can be reached technically and economically in today's conditions is about 112 billion m³. According to the data of recent years, approximately 44 billion m³ (39%) of this amount can be utilized for various purposes (Alpaslan, Tanık and Dölgen, 2008: 139-142).

Turkey's technically and economically irrigable land resources are 8.5 million hectares. It is aimed that this entire area will be opened to irrigation in 2025. This corresponds to approximately 72 billion m³ as irrigation water. Thus, it is aimed to reduce the share of total consumption of agricultural irrigation from 75% at the beginning of 2000 to 64% in 2025 (Akpınar ve Özyıldırım, 2016: 1233).

The agricultural sector, which consumes 72-75% of the water in Turkey, provides two thirds of this water from surface water resources and the remaining one third from underground water resources. The agricultural

sector, which uses the vast majority of Turkey's water resources, today, uses this water in 5.6 million hectares of agricultural land. Uncontrolled flood irrigation is used in 82% of these irrigated agricultural areas (5.6 million hectares). 17% of the rest is irrigated by sprinkler and 1% by drip irrigation method, where water saving is very high (Evsahibioğlu, Aküzüm and Çakmak, 2010: 122).

Water, which is one of the most important strategic resources of today's world and the future, is a very important input of modern agriculture. The savings to be achieved in the transfer of water from the source to the irrigation area, its distribution within the network, its operation and in-field application methods are very important.

Studies show that excessive water loss occurs due to the widespread use of flood irrigation methods. This situation causes salinization, that is, barrenness, which means the loss of soils. On the other hand, it leads to wastage of water. In the application of water in the field, if one of the sprinkler or drip irrigation methods is preferred according to soil, plant and climatic conditions, water losses will decrease between 30-80%. Therefore, it is inevitable to encourage and encourage high-efficiency pressurized irrigation methods (Evsahibioğlu, Aküzüm and Çakmak, 2010: 124).

In the basins and areas where water is insufficient, the cultivation of crops with high water needs should be abandoned. Plant patterns should be determined by considering the climatic and soil conditions of the regions as well as the presence of water. In case of limited water availability, limited irrigation should be done by creating optimum plant patterns. New technological measures to prevent product losses due to water should be included in the sector. Agriculture, which has a vital place in the lives of people and societies, is an important employment environment due to its ancient history. It is a sector that requires special talent, experience and intuition. The agricultural sector is a very important element in the prevention of irregular migration, which is a social problem (Special Expertise Commission Report, 2018: 29).

4.3.4. Energy sector

About 15% of fresh water in the world is used in the production of electrical energy. It is estimated that world energy use will increase 40% more than today's consumption in 2035. It is predicted that the amount of water used will increase to 18% within the scope of meeting this amount of energy production (Yıldız and Yıldız, 2016: 6).

90% of global energy production is provided by the use of water resources. The use of water in energy production is a method that has been used for a long time. Because water is present in all energy production systems, especially in hydroelectric, nuclear and thermal power plants. Water is used in the extraction of raw materials and cooling processes in thermal processes. Again, water is used in an area as wide as the operation of turbines. For example, 40-50% of their fresh water is drawn only by power plant cooling processes in Europe and the USA. The production of products for biofuels is also done with water (Adaçay, 2014: 93).

The ever-increasing energy demand in the world puts great pressure on water resources. The situation is not different in Turkey. In the projections for the next decades, it is predicted that Turkey's energy consumption will increase by approximately 7.5% every year. This means that the share of water that Turkey will use in energy production will increase (Yıldız, 2010: 49).

It is inevitable to increase the share of energy production based on renewable energy sources all over the world and in Turkey. The current climate change and its negative effects on water resources necessitate this. In other words, resource diversification and reduction of greenhouse gas emissions in the long run are required for security of supply in energy policies.

Turkey's most important renewable energy source is water, as well as wind and sun. The commissioning of the hydroelectric energy potential, which is among the 2023 targets, will have significant effects on water resources. Hydroelectric energy dams, regulators and hydroelectric power plants use surface water resources. In the basins where these facilities are located, temporary and permanent effects are experienced on water resources in terms of quantity and quality. The water whose energy is taken is ultimately put out of use. However, as in all water-using sectors, the current process should be reviewed in hydroelectric power generation planning (Oral, Behçet and Aykut, 2017: 32).

5. Conclusion

Half a century has passed since 1987, when the United Nations Environment and Development Commission first decided on sustainable development with the report *Our Common Future*.

In the report, the decision and all diagnoses about sustainable development, which is defined as meeting the needs of the present while not compromising the ability of future generations to meet their own needs, were basically correct. However, at the point reached today, the difficulties in combining economic growth with social inclusion and especially environmental sustainability have not been overcome yet (Engelman, 2014: 5).

The endless pursuit of economic growth has posed a threat to sustainability. Insisting on economic growth as the main priority is challenging both today's world and future generations. To change this trajectory, far greater transformations are required than have been made so far. Society must seek new options to support world system resilience. Using enough speed and intelligence, it must embark on a path that provides social and ecological resilience and resilience in the long run. An environment should be created in which environmental thresholds that support the social and economic development of the world are not exceeded (Folke, 2014: 31).

In this sense, global fresh water use is included in the nine limit values that are determined and discussed for a sustainable development. It must ensure the freshwater use of all ecosystems by people impacting water resources around the globe. It should be emphasized that water is a human right in international organizations and country laws and access to water is too important to be left to market conditions.

It is very important to define water as a human right in order to benefit from the strong meaning of the concept of human right. The right to water is a limited right as a human right. It is insufficient to define water only as a human right. In order to survive and sustain their lives, at least as much as humans, other non-human species also have the right to benefit from water. Therefore, it should go beyond being a human right and be seen as a right to access and benefit from water and to live. By questioning the property relations to which water is subject, it will be ensured that water is seen as a right to life. It is necessary to depart from the understanding that radically conceptualizes water in the dichotomy of private-public property.

Multi-purpose water should be seen as the common of all living things and economic sectors. Water should be used by people in the most efficient way, both in terms of quantity and quality. It should be ensured that it remains in the natural cycle with economic, social and environmental benefits. In a sustainable development, while meeting the needs of today, it should be used without taking away the opportunities for future generations to meet their own needs.

For the sectoral sharing of water, it is necessary to look at the event within a hydrological system. While making the evaluation, it should not ignore the potential in the future and the amount of use in the long-term as much as it does today. When pursuing a sharing policy, opportunities should be given for the natural system to renew itself. It is desirable that this be within legal limits. It should have the most appropriate allocation. Priority and diversity of use should be ensured under social and economic conditions, taking into account water rights.

The European Union Water Framework Directive, which entered into force at the beginning of the twenty-first century, has brought important suggestions in this sense. With this directive, "integrated river basin management", which is based on river basin borders, not administrative borders, is foreseen in the management of water resources. Again, important regulations have been introduced to establish a balance between the volumetric amount of water used from a water source (a river basin) and the feeding of water resources and their environmental needs.

In the directive, it is recommended to consider all cost factors related to water use. In the control of water pollution, it is obligatory to know both the water quality of the receiving water environment and the emission amounts of the waste water. The necessity of including environmental expenses in the determination of water charges has been made important.

Although the sectoral share of water in the world varies according to various sources, approximately 67-70% of it is used primarily as irrigation water in the agricultural sector, 22-23% is used for industry and 7-11% for domestic use for drinking and utility water. This situation is realized as 73% in agriculture sector, 11% in industry and 16% in domestic use in Turkey (Gürsakaç, 2007: 4-6).

The annual amount of water per capita in Turkey has been calculated as 1,386 m³ as of 2017 (Turkey population is 80,810,525 people). In terms of usable water per capita, Turkey stands out as one of the countries that suffer from water shortages when other countries in Europe and the world are analysed. The water potential of Turkey, which is expected to have a population of approximately 88,5 million, will decrease to the level of 1,267 m³ person⁻¹ in 2030 (Hakyemez, 2019: 9).

The savings to be made in the transmission and distribution of water, which is an important input of modern agriculture, in the operation of the system and in the application methods in the field are of utmost importance. Studies show that excessive water is applied by surface irrigation methods due to its widespread use. On the one hand, this situation causes the agricultural lands to become barren, which means that they become unusable. It leads to wastage of water. In the application of water in the field, sprinkler and drip irrigation systems should be used. With these methods, water losses are reduced by 30-80% depending on soil, plant and climatic conditions. For this reason, it is inevitable to encourage water-saving pressurized irrigation methods.

Compared to other sectors, the industrial sector uses less water. It is particularly low compared to the agricultural sector. The industrial sector has a scattered settlement structure. The use of domestic and other waste water source areas makes it difficult to follow the usage share and pollutant effect of the industry. It causes water pollution at significant rates in many river basins of Turkey, and the water used in production is left to nature without treatment. Domestic wastewater is the same. This situation threatens not only human and ecosystem health, but also agricultural and industrial production.

Increasing energy demand puts great pressure on water resources in the world. This situation is not different in Turkey. It means an increase in the share of water to be used in energy production in Turkey, where the energy demand is estimated to increase by approximately 7.5% in the projections for the next decades. It is very important to increase the share of energy production based on renewable energy sources. Because it is thought that the negative effects on climate change and water resources will decrease. In other words, resource diversification in energy policies will make significant contributions. It will be effective on water resources, reducing greenhouse gas emissions and supply security in the long run.

It is vital that Turkey uses its water resources effectively and efficiently with a sustainable hydro politics. For this reason, it has formed the relevant state institutions and bureaucracy responsible for the development, management and protection of water resources. However, we must be aware of the limits of water in our nature and learn to live within these limits. Throughout history, we have used nature's water systems with a philosophy that envisions leaning on the limits by managing the natural water cycle as much as engineering knowledge allows. Now, instead of constantly looking far for more, we should look closer, to our own region, to our immediate surroundings, to our homes and even to ourselves, and look for new ways to meet our needs while respecting the role that water plays in sustaining life.

We should never ignore that every litre of water we waste pollutes tens, sometimes hundreds of litres of water. We should not forget that the cheapest method to develop our water resources is to take precautions and raise public awareness. Our water resources are not worthless assets that we will use rudely; they are the basic element of life and a sacred relic that we will leave for the next generations.

Özet: Bu çalışmanın amacı, Etkin Piyasa Hipotezi çerçevesinde Türkiye Hisse Senedi Piyasasının zayıf formda etkinliğinin araştırılmasıdır. Çalışmanın amacı doğrultusunda, Borsa İstanbul'da yer alan beş endekse öncelikle Harvey ve Leybourne (2007) ve Harvey vd. (2008) doğrusal olmama testleri uygulanmıştır. Doğrusal olmama bulgusu elde edilen endeks serilerine, Gürış (2019) Fourier Kruse birim kök testinin bir uzantısı olan yeni bir birim kök testi uygulanmıştır. Elde edilen ampirik sonuçlara göre, Türkiye Hisse Senedi Piyasasının zayıf formda etkin olduğu ortaya koyulmuştur.

Anahtar Kelimeler: Etkin Piyasa Hipotezi, Doğrusallık Analizi, Fourier Birim Kök Testi

1. GİRİŞ

Etkin piyasa hipotezi uzun yıllardır finans literatürünün en önemli konularından biri olmuştur. Etkin piyasa hipotezinin geçerliliğinin finans teorileri ve yatırım stratejileri üzerinde önemli etkileri vardır. Piyasa etkinliğinin kapsamlı bir şekilde anlaşılması, alınacak kararlar ve yapılacak olan işlemler araştırmacılar, yatırımcılar ve düzenleyici otoriteler için önem arz etmektedir (Degutis ve Novickytė, 2014: 7). Bir hisse senedi piyasasının etkin olmaması, fiyatlandırma mekanizmasının bir ekonomi içinde sermayenin etkin dağılımını sağlamayacağı anlamına gelir. Bu durumda ekonomi için olumsuz etkiler söz konusu olabilecektir (Borges, 2010: 711).

Bir hisse senedinin fiyat geçmişinin, gelecekteki fiyatına dair anlamlı tahminini yapabilmek için ne ölçüde kullanılacağı uzun yıllardır üzerinde tartışılan bir konu olmuştur ve bu konu üzerinde geliştirilen birçok teori olmasına rağmen hepsi, menkul kıymet fiyatının geçmişteki davranışının gelecekteki davranışına ilişkin bilgi açısından zengin olduğu varsayımını yapmaktadır. Geçmiş fiyat davranış kalıpları, gelecekte de aynı davranış özelliklerine sahip olma eğiliminde olacaktır. Bunun anlamı, fiyat hareketlerinin dikkatli bir şekilde analiz edilmesiyle fiyat davranış kalıpları için bir anlayış geliştirildiği takdirde, fiyatların gelecekte sergileyecekleri davranışları tahmin etmek, dolayısıyla beklenen kazançları artırmanın mümkün olacağıdır. Buna karşın hisse senetlerinin rassal ve öngörülmesi mümkün olmayan bir yol izlediğini savunan rassal yürüyüş hipotezi, birbirini takip eden fiyat değişikliklerinin bağımsız değişkenler olduğunu söyler. Bunun anlamı ise, fiyat değişimleri serisinin bir hafızaya sahip olmadığı, dolayısıyla geçmiş değerlerin bugüne etkisinin olmadığıdır. Hipoteze göre, rassal hareketler sebebiyle geçmiş geleceği anlamlı bir biçimde tahmin etmek için kullanılamaz. (Fama, 1965: 34). Böylece bir yatırımcının piyasanın üzerinde bir kazanç elde etmesi imkansız olmaktadır. Bu bağlamda piyasanın etkin olup olmadığının ortaya koyulması, yatırımcıların yatırımlarını çeşitlendirmesi açısından önemlidir.

Fama (1970) çalışmasında, sermaye piyasası içinde piyasa etkinliğini üç farklı şekilde ifade etmiştir. Bunlardan ilki rassal yürüyüş hipotezi olarak ifade edilen zayıf formdaki etkinliktir. Zayıf form etkinlik, geçmiş fiyat ve getirilerin bilgisine dayanarak gelecekte üstün karlar elde etmenin mümkün olmadığını öne sürer. İkinci olarak yarı güçlü etkinlik olarak ifade edilen form, yatırımcıların kamuya açık herhangi bir bilgiyi kullanarak riske göre ayarlanmış üstün getiriler elde edemeyeceğini belirtir. Bir başka deyişle, bilgi kamuya açık hale gelir gelmez o an fiyatlara dahil edilir ve dolayısıyla bir yatırımcının bu bilgi aracılığıyla getirileri tahmin ederek beklentinin üstünde bir kazanç elde etmesi mümkün olmaz (Shleifer, 2000: 6). Üçüncü olarak hisse senetlerine dair tüm bilginin herkes tarafından eş zamanlı olarak ve kolaylıkla elde edilebildiğine dayanan güçlü formda etkinliktir. Güçlü formda etkin olan piyasalar, hisse senedine ait geçmiş dönem bilgileriyle birlikte cari dönemde mevcut halka açıklanan ve açıklanmayan firma içi bilgileri de yansıtmaktadır. Bir başka ifadeyle, hisse senedine dair tüm bilgi herkese aynı zaman içerisinde hızlı bir şekilde ulaşır ve hisse senedi fiyatını etkiler. Bu nedenle yatırımcıların aşırı kazanç elde etmesi mümkün olmamaktadır (Zeren vd., 2013: 143). Güçlü formda etkin olan bir piyasa, yarı güçlü form ve zayıf formda da etkindir.

Etkin piyasa hipotezi için temel teorik durum üç argümana dayanmaktadır. Birincisi, yatırımcılar rasyoneldir ve menkul kıymetleri rasyonel biçimde değerlendirirler. Rasyonel yatırımcılar, menkul kıymetler hakkında yeni bir bilgi edindiklerinde ve haberler iyi olduğunda fiyatları artırırlar aksi durumda ise fiyatları düşürürler. Bu şekilde

yeni bilgiye hızlı bir şekilde karşılık verirler. İkincisi, piyasada irrasyonel davranışlar sergileyen yatırımcılar da vardır ancak bu yatırımcıların piyasadaki işlemleri rastgeledir ve bu sebeple fiyatları etkilemeden birbirlerini dışlarlar. Üçüncüsü ise yatırımcılar aynı yönde irrasyonel davranışlar sergileseler de, piyasada bulunan rasyonel arbitrajcular, bu davranışların fiyatları etkilemesine izin vermezler (Shleifer, 2000: 2-3).

Etkin piyasa hipotezinin geçerliliği, incelenen serinin durağanlığının sınındığı birim kök testleri ile analiz edilebilmektedir. İncelenen serinin durağan olması etkin piyasa hipotezinin geçersiz olduğunu göstermektedir. Etkin piyasa hipotezinin geçerliliğinin araştırıldığı çalışmalar çeşitli birim kök testleri ile analiz edilebilmektedir. Mevcut çalışmalar incelendiğinde, analizin çoğunlukla doğrusal birim kök testleri ile gerçekleştirildiği görülmektedir. Ancak doğrusal olmayan bir yapıya sahip olan bir seriyi doğrusal yöntemlerle analiz etmek, çalışma sonuçlarının yanıltıcı olmasına sebep olacaktır. Ayrıca veri yaratma sürecinin doğrusal olmaması kullanılan doğrusal birim kök testlerinin istatistiksel gücünü azaltmaktadır. Birim kök analizinin gerçekleştirildiği çalışmalarda dikkat edilmesi gereken bir diğer özellik ise yapısal kırılmalardır. Yapısal kırılmaların dikkate alınmaması, aslında durağan olan bir serinin birim köklü olarak bulunmasına sebep olabilmektedir. Bu sebeple doğrusal olmama durumu ve yapısal kırılma varlığı göz ardı edilmemelidir. Bu çalışmada tüm bu sebepler dikkate alınarak öncelikle çalışmada ele alınan serilerin doğrusal olup olmama durumları Harvey ve Leybourne (2007) ve Harvey vd. (2008) doğrusal olmama testleri ile incelenmiştir. Doğrusal olmama bulgusu elde edilen serilere Gürış (2019) çalışmasıyla literatüre kazandırılan Fourier Kruse (2019) birim kök testinin bir uzantısı olarak geliştirilen Yavuz Fourier Kruse (2023) birim kök testi uygulanarak, etkin piyasa hipotezinin geçerliliği test edilmiştir.

Bu çerçevede çalışmanın ikinci kısmında literatür taramasına, üçüncü kısmında ekonometrik yöntem hakkında bilgiye, dördüncü kısmında veri ve ampirik sonuçlara son olarak beşinci kısmında analizden elde edilen sonuçlara yer verilmiştir.

2. LİTERATÜR TARAMASI

Etkin piyasa hipotezi temelinde hisse senedi piyasalarının zayıf formda etkinliğinin araştırıldığı birçok çalışma mevcut literatürde yer bulmuştur. Çalışmalar incelendiğinde, kullanılan yöntemlerin ve elde edilen sonuçların birbirinden farklılık gösterdiği görülmektedir. Bu kısımda Türkiye için hisse senedi piyasasının etkinliğinin araştırıldığı bazı çalışmalara yer verilmiştir.

Gözbaşı (2014) çalışması, Türkiye hisse senedi piyasasının etkinliğinin incelendiği çalışmalardan biridir. Çalışmada Borsa İstanbul hisse senedi piyasasının zayıf formda etkin olup olmadığı, doğrusal olmayan Kapetanios, Shin ve Snell (KSS) (2003) ve Kruse (2011) birim kök testleri ile analiz edilmiştir. Elde edilen sonuçlar piyasanın zayıf formda etkin olduğunu göstermiştir. Türkiye hisse senedi piyasasının etkinliğinin incelendiği bir diğer çalışma Gözbaşı vd. (2014) çalışmasıdır. İlgili çalışmada incelenen seriler Kruse (2011) doğrusal olmayan birim kök testi ile analiz edilmiştir. Analiz sonuçları Türkiye hisse senedi piyasasının zayıf formda etkin bir piyasa olduğunu göstermiştir. Yücel (2016) çalışmasında Borsa İstanbul kapsamında hesaplanan 22 endeks incelenerek, zayıf formda etkinlik hipotezi sınanmıştır. Endekslere Genişletilmiş Dickey-Fuller (ADF) ve Phillips-Perron (PP) geleneksel birim kök testleri uygulanmıştır. Test sonuçlarına göre incelenen tüm endeksler birim köke sahip bulunmuştur dolayısıyla zayıf formda etkin piyasa hipotezinin geçerli olduğu ortaya koyulmuştur. Kurtaran vd. (2018) çalışmasında zayıf formda piyasa etkinliği Türkiye hisse senedi piyasası için analiz edilmiştir. Çalışmada Borsa İstanbul'da yer alan 9 endeks incelenmiştir. Gerçekleştirilen analizde ADF birim kök testi kullanılmıştır ve testin sonuçlarına göre incelenen tüm endekslerde piyasaların etkin olduğu sonucuna ulaşılmıştır. Bektur ve Aydın (2019) yapmış oldukları çalışmada, etkin piyasa hipotezinin geçerliliği BİST100 getiri ve alt endeksleri serileri yardımıyla incelemiştir. Etkin piyasa hipotezinin geçerliliğinin araştırıldığı bu çalışmada, analiz için geleneksel birim kök testlerinden ADF, PP, Kwiatkowski-Philips-Schmidt-Shin (KPSS) ve Dickey-Fuller GLS birim kök testleri ve trigonometrik terimler ile genişletilmiş Fourier KPSS testi kullanılmıştır. Tüm birim kök testi sonuçları zayıf formda etkinliğin geçerli olduğunu göstermiştir. Eyüboğlu ve Eyüboğlu (2020) çalışmasında Borsa İstanbul'da hesaplanan 22 endeks seçilerek, etkin piyasa hipotezinin zayıf formda etkinliği sınanmıştır. Sınama, yapısal kırılmayı dikkate alan doğrusal ve doğrusal olmayan birim kök testleri ile gerçekleştirilmiştir. Ampirik bulgulara göre incelenen 22 endeksin 13'ünde zayıf formda etkinliğin geçerli olduğu belirlenirken, 9'unda zayıf formda etkin olmadığı belirlenmiştir. Karademir ve Evci (2020) çalışması Borsa İstanbul hisse senedi piyasasının zayıf formda etkinliğinin analiz edildiği bir başka çalışmadır. Analiz ADF ve PP geleneksel birim kök testleri; iki yapısal kırılmaya izin veren Lee-Strazicich (LS) (2003) birim kök testleri ile gerçekleştirilmiştir. Elde edilen ADF test sonuçları, incelenen 27 endeksin 6'sının durağan; PP test sonuçları 7'sinin durağan; LS test sonuçları ise 1'nin durağan olduğunu göstermiştir. Bal vd. (2021) çalışmasında Türkiye'de bankacılık sektörü için etkin piyasa hipotezinin zayıf formda etkin olup olmadığı test edilmiştir. 11

bankayı içeren BİST Bankalar endeksi, geleneksel birim kök testlerinden ADF birim kök testi ve doğrusal olmayan Christopoulos ve Leon-Ledesma (2010) Fourier-ADF tipi birim kök testi ile analiz edilmiştir. Elde edilen sonuçlar uygulanan farklı iki birim kök testinin de incelenen endeksin birim kök içerdiğini göstermiştir. Buna göre ele alınan piyasada zayıf formda etkin piyasa hipotezinin geçerliliği ortaya koyulmuştur. İldırar ve Dallı (2021) çalışmasında Türk Bankacılık sektörünün zayıf formda etkinliği incelenmiştir. İlgili çalışma kapsamında BİST banka endeksi dahil 12 bankanın aylık kapanış fiyatları ele alınmıştır. Çalışmanın analiz kısmında ADF, PP ve KPSS birim kök testleriyle birlikte varyans oranı testi uygulanmıştır. Birim kök testlerinin sonuçlarına göre yalnızca bir banka hariç tüm bankaların zayıf formda etkin olduğu sonucuna ulaşılmıştır. Oğuz (2021) çalışmasında zayıf formda piyasa etkinliği, BİST100 endeksi kullanılarak analiz edilmiştir. Çalışmada yapısal kırılmayı dikkate alan doğrusal Zivot-Andrews (ZA) (1992) birim kök testi ve doğrusal olmayan KSS birim kök testi uygulanmıştır. Ampirik bulgulara göre BİST100 endeksinin zayıf formda etkin olduğu sonucuna ulaşılmıştır. Altuntaş vd. (2022) tarafından ortaya koyulan çalışmada, Borsa İstanbul'da yer alan altı endeks için etkin piyasa hipotezinin geçerli olup olmadığı test edilmiştir. Çalışmada etkin piyasa hipotezinin geçerliliği yapısal kırılmalar, doğrusal olmama ve normal dağılmama durumları göz önüne alınarak sınanmıştır. Bunun için ADF, RALS-ADF, Fourier-ADF ve Fourier-KSS birim kök testleri uygulanmıştır. Çalışmada elde edilen bulgulara göre, bir endekse uygulanan tüm birim kök testi sonuçları etkin piyasa hipotezinin geçerliliğini ifade eden temel hipotezin reddedilemediği yönünde sonuç verirken, bir endeks için temel hipotez reddedilmekte, dolayısıyla etkin piyasa hipotezinin geçersiz olduğu gösterilmiştir. Diğer endekslere uygulanan birim kök testi sonuçları, yapısal kırılmaların ve doğrusal olmama durumu göz önüne alındığında birbirinden farklılık göstermektedir. Özdemir vd. (2022) çalışmasında BİST100 endeksinin zayıf formda etkinliği sınanmıştır. Çalışmada geleneksel birim kök testlerinden ADF, PP ve KPSS; yapısal kırılmalı birim kök testlerinden Perron, ZA ve LS; doğrusal olmayan birim kök testlerinden KSS birim kök testi; runs ve varyans oranı testleri uygulanmıştır. Çalışmada uygulanan tüm birim kök test sonuçları incelenen endeksin birim köke sahip olduğunu, dolayısıyla zayıf formda etkin piyasa hipotezinin geçerli olduğunu göstermiştir. Aynı zamanda runs ve varyans oranı test sonuçlarının zayıf formda etkin piyasa hipotezinin geçerliliğini destekler nitelikte olduğu ortaya koyulmuştur.

3. EKONOMETRİK YÖNTEM

Etkin piyasa hipotezi çerçevesinde hisse senedi piyasalarının zayıf formda etkinliğinin analiz edilmesinde kullanılan yöntemlerden biri birim kök testleridir. Hisse senedi piyasalarının zayıf formda etkin olup olmadığının analiz edilmesindeki esas nokta, söz konusu olan piyasaya ait fiyat endeksi sürecinin rassal yürüyüş olduğu varsayımdır (Hepsağ ve Akçalı, 2015: 78). Fiyat endeksinin rassal yürüyüş izlemesi, serinin birim köke sahip olduğu anlamına gelir ve bu durum piyasanın zayıf formda etkin olduğunu ifade etmektedir.

Geleneksel birim kök testlerinde şokların geçici etkiye sahip olduğu varsayımı vardır. Bunun anlamı, seriyi etkileyen şokların uzun dönemli bir etki yaratmayacağı, yani seri hafızasının kısa olduğudur. Ancak Nelson ve Plosser (1982) çalışmasında durumun bu şekilde olmadığı, seriyi etkileyen şokların kalıcı etkiye sahip olduğu ortaya koyulmuştur. Seride yapısal kırılma varsa ve bu göz ardı edilirse, kurulan regresyon modellerinde spesifikasyon hatası yapılmakta ve uygulamalarda tahmin sonuçlarının güvenilirliği azalmaktadır (Güriş ve Çağlayan, 2010: 275). Bu sebeple model tahmininden önce yapısal kırılma varlığının sınanması ve varlığı durumunda, incelenen zaman serisinin birim kök sürecini analiz etme aşamasına dahil edilmesi önem arz etmektedir. Çünkü seride yapısal kırılma olduğunda birim kök analizinin geleneksel birim kök testleriyle incelenmesi, serinin birim köklü olduğunu ifade eden temel hipotezin reddedilememe yönünde olmasına sebep olacaktır (Esenyel, 2017: 45). Benzer bir durum, doğrusal olmayan modellerde de geçerlidir. İncelenen serinin doğrusal olmaması ve birim kök analizinin doğrusal birim kök testleriyle gerçekleştirilmesi, yine serinin birim köklü olduğu yönünde sonuçlar verecektir (Güriş vd., 2016: 35).

Türkiye'de hisse senedi piyasasının zayıf formda etkinliğinin araştırıldığı bu çalışmada, öncelikle incelenen serilerin doğrusallık durumları Harvey ve Leybourne (2007) ve Harvey vd. (2008) tarafından geliştirilen doğrusal olmama testleri ile incelenecektir.

Harvey ve Leybourne (2007) çalışmasında durağan ve durağan olmayan veri üretim süreci ikinci dereceden Taylor açılımı kullanılarak ifade edilmiştir (Harvey ve Leybourne, 2007):

$$y_t = \beta_0 + \beta_1 y_{t-1} + \beta_2 y_{t-1}^2 + \beta_3 y_{t-1}^3 + \varepsilon_t \quad (1)$$

$$\Delta y_t = \beta_0 + \beta_4 \Delta y_{t-1} + \beta_5 (\Delta y_{t-1})^2 + \beta_6 (\Delta y_{t-1})^3 + \varepsilon_t \quad (2)$$

(1) no'lu denklem $I(0)$ sürecini, (2) no'lu denklem $I(1)$ sürecini göstermektedir. Testin temel hipotezi doğrusallığı, alternatif hipotezi ise doğrusal olmamayı ifade etmektedir. Durağan süreçte temel hipotez,

$$H_0: \beta_2 = \beta_3 = 0$$

durağan olmayan süreçte ise

$$H_0: \beta_5 = \beta_6 = 0$$

şeklinde. Çalışmada durağan ve durağan olmayan süreçlerin varlığına birlikte izin veren denklem aşağıdaki şekildedir:

$$y_t = \beta_0 + \beta_1 y_{t-1} + \beta_2 y_{t-1}^2 + \beta_3 y_{t-1}^3 + \beta_4 \Delta y_{t-1} + \beta_5 (\Delta y_{t-1})^2 + \beta_6 (\Delta y_{t-1})^3 + \varepsilon_t \quad (3)$$

(3) no'lu denklem kullanıldığında temel ve alternatif hipotezler,

$$H_0: \beta_2 = \beta_3 = \beta_5 = \beta_6 = 0$$

$$H_1: \text{En az bir parametre sıfırdan farklıdır.}$$

şeklinde. Harvey ve Leybourne (2007) çalışmasında önerilen test istatistiği aşağıdaki gibidir:

$$W_T^* = \exp(-b|DF_T|^{-1})W_T, W_T = \frac{RSS_1 - RSS_0}{RSS_0/T} \quad (4)$$

Burada $b \neq 0$ 'dır, DF_T kısıtlı regresyondan elde edilen standart ADF t istatistiğidir. RSS_i , H_i , ($i = 0, 1$) ilgili hipotez için hata teriminin kareler toplamını, T ise gözlem sayısını ifade etmektedir. Harvey ve Leybourne, durağan $I(0)$ ve durağan olmayan $I(1)$ süreçlerde aynı kritik değerleri elde etmek için (5) no'lu denklemin kullanılmasını önermişlerdir:

$$P(W_0 > c_a) = P(\exp(-b|DF_T|^{-1})W_1 > c_a) = \alpha \quad (5)$$

$$W_T^* \sim \chi^2(4)$$

(6)

Test istatistiği χ^2 dağılımına uygunluk göstermektedir. Burada 4, temel hipotezdeki kısıt sayısıdır.

Harvey vd. (2008) çalışmasında serilerin entegrasyon derecesi hakkında bilgi gerektirmeyen yeni bir doğrusal olmama testi geliştirilmiştir. Zaman serisinin $I(0)$ sürecinde olduğu varsayımı altında kullanılacak model aşağıdaki gibi yazılabilmektedir (Harvey vd., 2008):

$$y_t = \beta_0 + \beta_1 y_{t-1} + \beta_2 y_{t-1}^2 + \beta_3 y_{t-1}^3 + \sum_{j=1}^p \beta_{4,j} \Delta y_{t-j} + \varepsilon_t$$

(7)

Burada Δ fark operatörü, p ise gecikme sayısıdır. Çalışmada maksimum gecikme sayısının hesaplanması için

$$p_{max} = \text{int}(8(T/100)^{\frac{1}{4}})$$
 esas alınacaktır. Test için kullanılan hipotezler aşağıdaki gibidir:

$$H_{0,I(0)}: \beta_2 = \beta_3 = 0$$

$$H_{1,I(0)}: \beta_2 \neq 0 \text{ ve/veya } \beta_3 \neq 0$$

Temel hipotez doğrusallığı, alternatif hipotez doğrusal olmamayı ifade etmektedir.

Test istatistiğinin hesaplanması:

$$W_0 = T \left(\frac{RSS_0^r}{RSS_0^u} - 1 \right) \quad (8)$$

şeklinde. RSS_0^r ve RSS_0^u sırasıyla kısıtlı ve kısıtsız modelden elde edilen hata terimi kareler toplamını ifade etmektedir ve T gözlem sayısıdır.

Zaman serisinin $I(1)$ sürecinde olduğu varsayımı altında kullanılacak model:

$$\Delta y_t = \lambda_1 \Delta y_{t-1} + \lambda_2 (\Delta y_{t-1})^2 + \lambda_3 (\Delta y_{t-1})^3 + \sum_{j=1}^p \lambda_{4,j} \Delta y_{t-j} + \varepsilon_t \quad (9)$$

şeklinde yazılmaktadır. Test için kullanılacak hipotezler aşağıdaki gibidir:

$$H_{0,I(1)}: \lambda_2 = \lambda_3 = 0$$

$$H_{1J(1)}: \lambda_2 \neq 0 \text{ ve/veya } \lambda_3 \neq 0$$

Temel hipotez doğrusallığı, alternatif hipotez doğrusal olmamayı ifade etmektedir.

Test istatistiği,

$$W_1 = T \left(\frac{RSS_1^r}{RSS_1^u} - 1 \right) \quad (10)$$

şeklinde hesaplanacaktır. RSS_1^r ve RSS_1^u kısıtlı ve kısıtsız modelden elde edilen hata terimi kareler toplamını göstermektedir ve T gözlem sayısıdır.

İncelenen zaman serisinin durağanlık özellikleri bilinmediğinde, bu iki test istatistiği kullanılarak aşağıdaki test istatistiğinin hesaplanması mümkündür:

$$W_\lambda = \{1 - \lambda\}W_0 + \lambda W_1 \quad (11)$$

W_λ test istatistiği χ^2 dağılımına uygunluk göstermektedir ve kısıt sayısı 2'dir.

Doğrusal olmama bulgusu elde edildikten sonraki aşamada analiz doğrusal olmayan birim kök testleri kullanılarak gerçekleştirilmelidir. Mevcut birim kök literatüründe, incelenen zaman serisinin seviyesinde ve/veya trendinde bir veya iki yapısal kırılmanın varlığı varsayımı vardır ancak uygulamalı çalışmalarda kırılma tarihlerinin ve kırılma sayısının bilinmemesi mümkündür. Aynı zamanda, yapısal kırılmaların anlık olarak meydana geldiği veya ortalamada ani sıçramalar veya eğimde ani değişiklikler yaparak kendilerini eş zamanlı olarak gösterdikleri varsayılır. Bu varsayım birçok durumda gerçekçi olmayabilmektedir. Bu nedenle, modelin deterministik bileşeninin yumuşak bir geçiş süreci olması için kırılmalara izin veren birim kök testlerinin dikkate alınması arzu edilir (Enders ve Lee, 2004: 2). Bu bağlamda geliştirilen Fourier birim kök testleri, tahmin denkleminde dahil edilen fourier fonksiyonları ile yapısal kırılmaların formu ve sayısı hakkında herhangi bir varsayıma ihtiyaç duymadan birim kök analizinin gerçekleşmesini mümkün kılmaktadır. Bu sebeple analize, Güriş (2019) çalışmasıyla literatüre kazandırılan Fourier Kruse (2019) birim kök testinin bir uzantısı olarak geliştirilen Yavuz Fourier Kruse (2023) birim kök testi ile devam edilecektir.

Yeni önerilen birim kök testinde, yapısal kırılmalar fourier fonksiyonlarıyla, doğrusal olmayan durağanlık Üstel Düzgün Eşik Otoregresif (ESTAR) model ile modellenmektedir. Yapısal kırılma ve doğrusal olmama durumlarının eş zamanlı olarak ele alındığı yeni testin birim kök test süreci aşağıdaki gibidir:

İlk aşamada doğrusal olmayan deterministik bileşene sahip olan model, Christopoulos ve Leon-Ledesma (2010) çalışmasındaki test sürecine benzer bir şekilde tahmin edilmektedir:

$$y_t = \alpha_0 + \alpha_1 \sin\left(\frac{2\pi kt}{T}\right) + \alpha_2 \cos\left(\frac{2\pi kt}{T}\right) + \alpha_3 \text{trend} * \sin\left(\frac{2\pi kt}{T}\right) + \alpha_4 \text{trend} * \cos\left(\frac{2\pi kt}{T}\right) + v_t \quad (12)$$

Modelde yer alan k, optimal frekansı ifade etmektedir. Optimal k'nin seçiminde k'ye 1 ile 5 arasında değişen değerler atanır ve bu değerler ile sırasıyla En Küçük Kareler Yöntemi kullanılarak denklem tahmin edilir. Denklem tahminlerinden sonra, hata terimlerinin kareleri toplamını minimize eden k, optimal k olarak seçilir. Optimal k ile tahmin edilen modelden hata terimleri elde edilmektedir:

$$v_t = y_t - \alpha_0 - \alpha_1 \sin\left(\frac{2\pi k^* t}{T}\right) - \alpha_2 \cos\left(\frac{2\pi k^* t}{T}\right) - \alpha_3 \text{trend} * \sin\left(\frac{2\pi k^* t}{T}\right) - \alpha_4 \text{trend} * \cos\left(\frac{2\pi k^* t}{T}\right) \quad (13)$$

Bu aşamada elde edilen hata terimleri kullanılarak Kruse (2011) testinde olduğu gibi aşağıdaki denklem tahmin edilmektedir:

$$\Delta v_t = \delta_1 v_{t-1}^3 + \delta_2 v_{t-1}^2 + \sum_{i=1}^k \beta_i \Delta v_{t-i} + \varepsilon_t \quad (14)$$

Temel ve alternatif hipotezler aşağıdaki gibidir:

$$H_0: \delta_1 = \delta_2 = 0$$

$$H_1: \delta_1 < 0, \delta_2 \neq 0$$

Birim kök temel hipotezinin reddedilememesi, serinin durağan olmadığı anlamına gelmektedir. Hipotez testinin gerçekleşmesi için kullanılacak olan kritik değerler Yavuz (2023) çalışmasında tablolastırılmıştır. Bu aşamada birim kök temel hipotezi reddedilir, yani serinin durağan olduğu bulgusu elde edilirse, $H_0: \alpha_1 = \alpha_2 = \alpha_3 = \alpha_4 = 0$ temel hipotezine karşı $H_1: \text{En az bir parametre sıfırdan farklıdır}$ alternatif hipotezi F testi kullanılarak test edilebilmektedir. Temel hipotezin reddedilmesi, serinin kırılmalı deterministik fonksiyon etrafında durağan olduğu anlamına gelmektedir.

4. VERİ SETİ VE AMPİRİK BULGULAR

Etkin piyasa hipotezi çerçevesinde, Türkiye hisse senedi piyasasının zayıf formda etkinliğinin araştırıldığı bu çalışmada 02.01.2003-23.02.2023 dönemi ele alınarak, incelenen fiyat endekslerinin kapanış fiyatlarının doğal logaritmaları kullanılmıştır. Endekslere ait veriler TCMB veri dağıtım sisteminden elde edilmiştir.

Çalışmada 02.01.2003-23.02.2023 dönemi için, incelenen fiyat endekslerinin doğrusal yapıda olup olmadıkları Harvey ve Leybourne (2007) ve Harvey vd. (2008) doğrusallık testleri ile incelenmiştir.

Tablo 1: Doğrusal Olmama Test Sonuçları

Endeks	Harvey vd. (2008)	Harvey ve Leybourne (2007)		
		%1	%5	%10
BİST100 Bileşik	50.13***	24.49 ^a	25.47 ^b	27.29 ^c
BİST100 Mali	40.74***	32.81 ^a	33.12 ^b	33.66 ^c
BİST100 Teknoloji	125.08***	95.37 ^a	96.92 ^b	99.74 ^c
BİST100 Hizmet	138.41***	104.47 ^a	107.30 ^b	112.51 ^c
BİST100 Sınai	75.81***	55.37 ^a	56.26 ^b	57.86 ^c

Not: Harvey ve Leybourne (2007) doğrusal olmama testi kritik değerleri %1, %5 ve %10 için sırasıyla 13.27, 9.48 ve 7.77'dir. Harvey vd. (2008) doğrusal olmama testi kritik değerleri %1, %5 ve %10 için sırasıyla 9.21, 5.99 ve 4.60'dır. ***, ** ve * sırasıyla %1, %5 ve %10 için doğrusallık temel hipotezin reddedildiğini ifade etmektedir. a, b ve c sırasıyla %1, %5 ve %10 için doğrusallık temel hipotezin reddedildiğini ifade etmektedir.

Tablo 1'de yer alan doğrusal olmama testlerinin sonuçlarına göre, Türkiye hisse senedi piyasasında hesaplanan endeks serilerinin doğrusal olmayan yapıya sahip oldukları belirlenmiştir. Bu sonuçlara göre, hisse senedi piyasasının zayıf formda etkinliğinin araştırılmasında doğrusal olmayan birim kök testlerinin kullanılması uygun olmaktadır.

Türkiye hisse senedi piyasasının zayıf formda etkin olup olmadığı, yapısal kırılmalar ve doğrusal olmama durumlarının eş zamanlı ele alındığı Yavuz Fourier Kruse (2023) birim kök testi ile incelenmiştir. Teste ait sonuçlar Tablo 2'de yer almaktadır.

Tablo 2: Yavuz Fourier Kruse Birim Kök Testi Sonuçları

Endeks	k	Yavuz Fourier Kruse
BİST100 Bileşik	1	9.33
BİST100 Mali	1	8.30
BİST100 Teknoloji	1	6.14
BİST100 Hizmet	1	15.40
BİST100 Sınai	1	7.50

Not: Yavuz Fourier Kruse (2023) test istatistiğine ait kritik değerler Yavuz (2023) çalışmasından elde edilmiştir. k=1 için tablo değerleri %1 için 25.05, %5 için 20.06 ve %10 için 17.70'dir. ***, ** ve * sırasıyla %1, %5 ve %10 için birim kök temel hipotezin reddedildiğini ifade etmektedir.

Tablo 2'de yer alan Yavuz Fourier Kruse (2023) birim kök testi sonuçlarına göre Türkiye hisse senedi piyasasında hesaplanan endeks serilerinin birim köklü olduğu sonucuna ulaşılmıştır. Birim kökü ifade eden temel hipotez hiçbir seri için reddedilememiştir. Temel hipotez reddedilemediği için, trigonometrik terimlerin F testi aracılığıyla anlamlılığının test edildiği aşamaya geçilememiştir. Sonuçlar incelenen serilerin ortalamaya dönme eğiliminde olmadığı yönündedir. Ele alınan seriler rassal yürüyüş özelliği göstermektedirler ve bu durum zayıf formda etkin piyasa hipotezinin geçerli olduğunu ifade etmektedir.

5. SONUÇ

Etkin piyasa hipotezi geçmişten günümüze gerek finans literatüründe, gerek akademik çalışmalarda en çok incelenen konulardan biri olmuştur. Zayıf formda etkin piyasa hipotezine göre incelenen serilerin birim kök süreci izlemesi yani durağan olmaması piyasanın etkin olduğu anlamına gelmektedir. Buna göre, fiyat oluşumları rassaldır ve hisse senedi fiyatları geçmişteki hareketlerinden yola çıkılarak tahmin edilememektedir.

Rassal yürüyüş sürecine sahip olan hisse senedine ait geçmiş fiyat hareketlerini analiz ederek normal üstü bir kazanç elde edilemeyecektir.

Türkiye hisse senedi piyasasının zayıf formda etkinliğinin araştırıldığı bu çalışmada, 02.01.2003-23.02.2023 dönemi ele alınarak Türkiye hisse senedi piyasasında hesaplanan fiyat endekslerinin kapanış fiyatlarının doğal logaritmaları kullanılmıştır. Öncelikle serilerin doğrusal olup olmadıkları Harvey ve Leybourne (2007) ve Harvey vd. (2008) doğrusal olmama testleri ile incelenmiştir. Analiz sonuçlarına göre, incelenen serilerin her iki test için de tüm anlamlılık düzeylerine göre doğrusal yapıya sahip olmadıkları ortaya koyulmuştur. Doğrusal yapının olmadığı bulgusu elde edildikten sonra analize Fourier Kruse (2019) birim kök testinin geliştirilmiş bir versiyonu olan, Yavuz Fourier Kruse (2023) birim kök testi ile devam edilmiştir. Bulgulara göre, birim kökü ifade eden temel hipotez söz konusu seriler için reddedilememiştir. Bu durumda incelenen serilerin durağan olmadığı dolayısıyla zayıf formda etkin piyasa hipotezinin geçerli olduğu ortaya koyulmuştur.

Zayıf formda etkin piyasa hipotezinin geçerli olduğu durum, hisse senedi piyasalarının rassal yürüyüş süreci ile karakterize edildiğini ifade eder. Bu piyasalardaki güncel fiyatların geçmişteki fiyatların bilgisini yansıttığı anlamına gelir. Böylece bu piyasalarda geçmiş fiyat hareketleri takip edilerek ortalama üstü bir kazanç elde etmek mümkün olmamaktadır. Yapılan analiz sonucuna göre Türkiye hisse senedi piyasası zayıf formda etkindir. Zayıf formda etkin olması, bu piyasada bir yatırımcının ortalama üstü bir kazanç elde edemeyeceğini göstermektedir.

İnsanlığın Ortak Bir Olgusu Olarak Kültür ve Kültürün Özellikleri

Öğr. Gör. Dr. Coşkun DOĞAN¹

¹ Trakya Üniversitesi / Eğitim Fakültesi / Yabancı Diller Bölümü, coskundogan2002@yahoo.de, ORCID:
<https://orcid.org/0000-0002-6072-2721>

Özet: Kültür, belli bir toplumun yaşam deneyimlerinin biçimini düşünsel ve eylemsel olarak yansıtan olguların tümüdür. İnsan aklı ile yoğrulmuş zaman içerisinde edinilen yaşam deneyimleri, toplumun belleği ve sürekliliği açısından yaşamsal bir öneme sahiptir. İnsanlığın var oluşundan günümüze kadar, bir toplumun yaşam deneyimleri, diğer toplumların deneyimleri ile çeşitli nedenlerle etkileşim içine girmektedir. Bu etkileşim o toplumları birbirine bağlamakta ve ortak eylemler bağlamında, toplumsal bir kaynaşma aracı haline gelmektedir.

İnsanoğlunun tarih içerisinde yapmış olduğu yolculuklar sonucu ürettiği düşünsel ve eylemsel ürünlerin değişen toplumsal çevreye göre şekillendiğini ve farklılaşan toplumsal gereksinimlerden ötürü değişime uğradıkları görülmektedir. Ancak her ne kadar kültürel değişimler olsa da, toplumların tek bir kültürel değerler sistemi çerçevesinde varlıklarını sürdürmedikleri görülmektedir. Çünkü her toplumun dünyayı ve olayları algılayış ve ifade ediş biçimi farklıdır. Bunu yanında farklı toplumların genel temel kültürel değerler etrafında birleştikleri mümkün olmaktadır. Bu bağlamda toplumların özgün kültürel değerlerinin yanında tüm insanlığın hemfikir olduğu ortak kültürel olgular da söz konusudur. Her toplumun kültürel ürünlerinin kendine özgün olması özelliğine karşın, kültürün birçok değişim araçları aracılığı ile tüm insanlığın ortak değerleri söz konusu olmuştur.

Bu çalışma kapsamında; kültürün her toplumun kendine özgünlüğü bağlamında, insanlığın ortak evrensel değerlerini içinde barındıran uygarlık kavramına vurgu yapılacaktır. Farklı kültürlerin uygarlık bağlamında etkileşimleri irdelenecektir. Kültürün dinamik bir olgu olması, zamansal ve mekânsal olarak toplumsal gereksinimler çerçevesinde değişebilirliği, kültürel değişim araçlarının etkisi de göz önüne alınarak değerlendirilecektir.

Anahtar Sözcükler: Kültür, Kültürel Benzerlikler, Evrensel Değerler

Culture as a Common Phenomenon of Humanity and Its Characteristics

Abstract: Culture is the totality of phenomena that reflect, intellectually and practically, the form of life experiences of a particular society. Life experiences gained in time kneaded with the human mind have a vital importance in terms of the memory and continuity of the society. From the existence of humanity to the present, the life experiences of a society interact with the experiences of other societies for various reasons. This interaction connects those societies and becomes a means of social cohesion in the context of common actions.

It is seen that the intellectual and operational products produced by human beings as a result of their journeys throughout history are shaped according to the changing social environment and they have undergone changes due to differentiating social needs. However, although there are cultural changes, it is seen that societies do not maintain their existence within the framework of a single cultural value system. Because each society's way of perceiving and expressing the world and events is different. In addition, it is possible for different societies to unite around general basic cultural values. In this context, besides the unique cultural values of the societies, there are also common cultural phenomena that all humanity agrees on. Despite the uniqueness of the cultural products of each society, the common values of all humanity have come into question through many means of change of culture.

This scope of work; In the context of the uniqueness of each society, the concept of civilization, which includes the common universal values of humanity, will be emphasized. Interactions of different cultures in the context of civilization will be examined. The fact that culture is a dynamic phenomenon, its changeability in terms of time and space within the framework of social needs will be evaluated by taking into account the effect of cultural change tools.

Keywords: Culture, Cultural Similarities, Universal Values

1. GİRİŞ

Farklı kültürel dokuya sahip toplumların çeşitli nedenlere dayalı olarak yaşamış oldukları ilişkiler, kültürler arasında etkileşimleri meydana getirmiştir. Kültürlerarasında gerçekleşen kültürel öğelerin alış verişleri ve iç içeliğin kültürel benzerlikleri oluşturduğu yadsınamaz bir geçektir. Bu anlamda toplumların günlük yaşamı içerisindeki uygulamaları arasında geçişler söz konusu olmuştur. Kaynak toplumdan alınan kültürel unsurlar, alıcı toplum tarafından kendi düşünce ve uygulama bağlamında kültürüne dahil edildiğinde, ortak kültürel benzerlikler ortaya çıkacaktır. Kültürel benzerlikler, kültür alt öğelerinin (dil, din, gelenek ve görenekler, tarih,

sanat gibi) süreç içerisinde ortak kullanımlarının sonucudur. Bu anlamda her ne kadar toplumlar özgün kültüre sahip gibi görünse de temelde kültür insanlığın ortak mirası olmaktadır.

Kültürünün, toplumun bireylerini bir arada tutma ve değerler etrafında toplama gibi bir yaptırımı vardır. Bu nedenle, kültür- toplum ilişkisi sürekli ve sürekli. Biri olmadan diğeri varlığını sürdüremez. Kültür, bu açıdan bakıldığında toplumun zamanla değişen gereksinimlerini karşılayabilmek için değişmek zorunda kalmaktadır. Bu değişimler kültüre farklı zenginlikler katmaktadır.

Kültürün yazılı bir anayasası yoktur. Kültür, toplumun günlük yaşam içerisinde uygulamaları ve toplumun davranış tutum olarak kabul gören özelliklerini kapsamaktadır. Bir topluma ait olan ve her biri farklı bir parça gibi gözükse de kültürel olgular, aslında bir bütünün parçalarıdır. Bu parçalar uyum içerisinde. Toplumların yaşam tarzları zamanla değişkenlik gösterebilmektedir.

Bugün dünyada yaşanan hızlı değişimler, toplum ve kültürlerin yapılarının değişimlerini tetiklemektedir. Uluslararası sıkı ve hızlı ilişkilerin yoğunluğu, hemen hemen yaşamın her alanını etkileyen iletişim ve ulaşım kolaylıkları, dünyayı küçültmüştür. Bu anlamda farklı kültürlerin hızlı şekilde bir araya gelmesi ve etkileşimleri kaçınılmaz hale gelmiştir. Toplumların birbirlerine bağımlılıkları arttığı için, farklı toplumların yaşadığı sorunlar ve çözümleri artık diğer toplumları da ilgilendirmektedir.

2. İNSANLIĞIN ORTAK DEĞERİ OLARAK KÜLTÜR

İnsanoğlunun tarih boyunca ürettiği kültürel birikimler, gelecek kuşaklarla arasında bir köprü oluşturmaktadır. Kültür, ait olduğu toplum kadar, dünyadaki diğer tüm toplumların geçmişteki yaşamsal deneyimlerini hatırlatan bir olgudur. Kültür, tüm insanlığın ortak bir mirasıdır. Tüm toplumlar dünya kültürel mirasına katkıda bulunmaktadır. Bu düşünceden hareketle, dünyanın neresinde olursa olsun, insanlık tarihine ışık tutan sanatsal, yazınsal, düşünsel kültürel miraslar insanlığın ortak değerleridir. Evrenselci görüşe göre; kültür varlıkları insanlığın ortak mirası olup milli yargılardan ve mülkiyet hakkından bağımsız nesnelerdir. Bundan dolayı da devletlerarasında bu varlıkların değişimi yapılabilir ve özellikle kaynak ülkede (kültür varlığının üretildiği ülke) yeterli bir şekilde korunamayan eserler, başka ülkelere -daha iyi korunacaksa- getirilebilmelidir (Göğebakan, 2009:23).

Kültür etkileşiminin herhangi bir sınırı yoktur. Aynı dönemde yaşayan ve insanlığın kültürel mirasına katkıda bulunan kişiler herhangi bir şekilde birbirlerinden etkilenmektedir. Ulaşım olanaklarının zor olduğu bir dönemde örneğin, Alman edebiyatının ünlü yazar ve şairi Johann Wolfgang von Goethe'nin "Genç Werther'in Acıları" eseri, Çin'de yankısı bulmuş ve porselen tabaklara Werther'in resimleri çizilmiştir. Dünyada ortak gençlik kültürü davranışları oluşmuştur. Toplumları var eden ve onlara bir kimlik kazandıran kültürün değişime kapalı sabit formlar olmadığı çok açıktır. Tarih boyunca insanlar ve toplumlar değiştiği gibi, kültürler de değişime uğramış, farklı toplumların kültürleriyle etkileşime girmiştir (Ölçekçi, 2020:159).

Bugün dünyada kültürel değişim araçları küreselleşme, göç hareketlilikleri ve medya, kültürlerarası etkileşimde büyük rol oynamaktadır. Farklı kültürlerle sahip toplumları bir araya getiren nedenler, kültürlerin etkileşimini sağlamaktadır. Bu etkileşimin sağlanması ortak bir dille olanaklıdır. Küreselleşme ve onun beraberinde getirdiği insan hareketlilikleri, kültürlerin bir yerden farklı bölgelere taşınmasına ve farklı kültürlerle kaynaşmasına neden olmaktadır. Kültürel kaynaşma, birlikte yaşam kültürünün ortaya çıkmasında ve ortak kültürel değerler oluşturulmasında önemlidir. Farklı kültürleri bünyesinde barındıran toplumlarda birlikte yaşama kültürünün zemini ortak paylaşılan değerler üzerinden tesis edilmektedir. Başka bir ifadeyle birlikte yaşama olgusu, farklı kültürlerin birbirlerinden soyutlanarak veya bigâne kalarak değil, karşılıklı etkileşimler sonucunda tezahür eden ortak değerler üzerinde vücut bulmaktadır (Yalçın, 2022:150).

Kültürler birbirinden çok farklı gibi dursa da birbirlerine mutlaka benzer yönleri mevcuttur. İnsanlığın temelinde yatan davranış ve tutumlar, insanın yaşama hakkı bağlamında benzerlikler göstermektedir. Bu bağlamda tarihsel süreçte oluşturulan yaşamsal deneyimler ve eserler insanlığın ortak değerleri olarak gelecek nesillere aktarılmaktadır. Temel olan insani kültürel olguların çokluğu, toplumlar arası çatışmaların önüne geçecektir. Kültür olgusunun temel özellikleri her toplumda benzer olduğundan, özgün kültürel değerler çerçevesinden uzaklaşarak, tüm insanlığın değerleri haline gelmiştir.

3. KÜLTÜRÜN TEMEL ÖZELLİKLERİ

Kültür, toplumları birbirinden ayıran en temel olgudur. Toplumlar hakkında bilgi edinmek, kültürlerinin tarihsel süreç içerisinde aldıkları mesafe ile olanaklıdır. Kültür değişebilen bir olgu düşüncesinden hareketle; geçmişte

bir toplumun özgün pratiği olan davranış ve tutumları sonra ki dönemlerde farklı olabilmektedir. Toplamların, her bir üyesi tarafından yaşam içerisinde pratikte uyguladıkları yaşamsal deneyimleri, zaman içerisinde değişime uğramaktadır. Ancak kültürün belirgin olan özellikleri kalıcıdır. Bunlar, toplumun bireylerini bir arada tutarak, varlıklarının sürmesini sağlamaktadır. Kültür bir toplum yapısının temel taşıdır. Kültürün toplamları birbirinden ayırt edici özelliği bilinmektedir. Bu anlamda kültür, toplamların referans aracıdır (Doğan,2021:54).

Kültürün özellikleri, her toplumda ortaktır ve amaçlara yönelik olarak uygulamada kendini göstermektedir. Kültür, toplumsal bir üründür. Bu anlamda bir miras olarak sonraki nesillere kalmaktadır. Kültür, genetik bir olgu olmayıp, öğrenilmektedir. Kültür yeniliklere açıktır. Her ne kadar toplumsal kalıtım yoluyla gelecek nesillere aktarılsa bile, ihtiyaçlar doğrultusunda olan değişimler kültüre zenginlik katmaktadır. Kültürel olgular, sürekliedir. Toplum var oldukça asla yok olmaz. İnsanların fizyolojik hem de sosyal gereksinimlerini kültür yoluyla karşılanmaktadır. Bu anlamda bütün kültürlerde ortak kültürel olgular söz konusudur. Bir toplumun kültürel olguları birbirinden bağımsız ancak belli bir ahenk içerisinde. Bu uyumluluk, toplum düzeni için gereklidir. Kültürel olgular yazılı olamayan kurallar bütünüdür. Bu kurallar, toplumun düzenini sağlamaktadır. Kültürün önemli işlevlerinden biri de bütünleştirici özelliğidir. Ortak çıkarlarda buluşma kültürel olgular sayesinde gerçekleşmektedir. Mutlu (1999), daha genel anlamda kültürün özelliklerini özetlemeye çalışmıştır. Kültür; öğrenilir, uyarlanabilir, kuşaktan kuşağa aktarılabilir, paylaşılabilir, sınırlayıcıdır, simgeleyicidir ve birbirini bütünleyen çeşitli unsurlardan oluşur. Kültür, öğrenilerek ve tecrübe edilerek kazanılır ve bunun yanında kültür üzerinde uyarlama yapmak insanın doğal kabiliyeti dâhilindedir. Kültür, nesilden nesile aktarılır ve toplumun bütün bireyleri tarafından paylaşılmaktadır. Kültür, ait olduğu toplumu bir takım ölçüler içerisine sokarak sınırlamaktadır. Kültür, bir olgunun başka bir olgu tarafından tanımlanması, simgelenmesi veya kullanılmasıyla alakalıdır(Yeşil, 2013:55).

Toplamları bir arada tutan kültür, karmaşık olduğu kadar da sistematiktir. Toplumsal kuralların uyum içerisinde sürdürülmesini sağlamaktadır. Ancak kültürel bağlamda toplumsal kuralların değişebilirliği de söz konusudur. Bunun en büyük nedeni hızlı teknolojik gelişmelerdir. Hızlı iletişim ve ulaşım olanakları farklı toplamların daha hızlı ve sık etkileşim içerisine girmelerini sağlamıştır. Bu da toplumsal ve kültürel değişimlere yol açmaktadır.

4. TOPLUMSAL DEĞİŞİM VE KÜLTÜR

İnsan sosyal bir varlıktır. İnsanın diğer türdeşleri ile birlikte ortak yaşaması, ortak yaşamsal deneyimlerin oluşmasına yani kültürün ortaya çıkmasına kaynaklık etmektedir. Dolayısı ile kültür insandan önce değildir. Kültür bir insan ürünüdür. Bu bağlamda kültür, insanların gelenek görenek ve yaşam tarzlarını yansıtan bir olgu olarak tanımlanabilir. Ancak karmaşık ve kapsam alanı oldukça çok olan kültürün tanımı oldukça fazladır. Kültür kavramı sorunsal bir kavramdır. Çünkü kültür, farklı insanlar tarafından farklı bağlamlarda ele alınmaktadır (Nieto, 1999: 128). Kültür sosyolojisi çalışmalar içerisinde en geniş kullanımlı kavramlar arasındadır. Ancak Kültür kavramının anlamındaki bu genişliğe rağmen genellikle tanımlar üç gruba ayrılmaktadır (Edles, 2005: 5). Buna göre kültür tanımlamaları, estetik, etnografik ve sembolik tanımlar şeklinde gruplandırılabilir (Şahin, 2019:459).

Kültür sözcüğü Latince “cultura”sözcüğünden gelmektedir. “Cultura”, sözcüğü, inşa etmek, işlemek, süslemek, bakmak anlamlarına gelmekte ve “colere” sözcüğünden türetilmiştir. Kültür sözcüğü, Türkçe’de tam olarak “ekin, sipariş, bakım” demektir (Kartarı 2014: 31). Kültür sözcüğü, bugünkü anlamıyla Latince’den Avrupa dillerine, önce Fransızcaya oradan da Almancaya geçmiştir. Bu dillerden de diğer tüm dillere yayılmıştır. Kültür sözcüğü, farklı anlamlarda kullanılmıştır. Önce (Fuat, 1992) insanların “zihinsel yetkinliğini” sonra da “bir toplumun genel olarak zihinsel gelişimini” ifade eder duruma gelmiştir. Daha sonraları, “sanatları bütünüyle içeren” bir anlam edinmiştir. Henüz 20. yüzyıla doğru da, “bütün yönleriyle, bir topluluğun yaşam biçimi” anlamında kullanılmaya başlanmıştır. Batı dillerinde zaman içinde bu şekilde anlam değişikliklerine uğrayan “kültür” sözcüğü Türkçede de farklı şekillerde tanımlanmıştır. Örneğin; (Turan,1994) tarımda “ekin”, “ürün”; tıpta, “uygun koşullarda bir mikrop türünü üretmek”; anlamında; tarih öncesi dönemlerde “insan eliyle yapılmış ve ortak nitelikleri bulunan eşyalar topluluğu ile belirlenen evre veya çağ”; “belli bir konuda edinilmiş geniş ve sistemli bilgi”; “eleştirme, değerlendirme, zevk alma yetilerinin geliştirilmiş olması durumu”; bir topluma, ulusa ya da uluslar topluluğuna özgü “düşünce, davranış ve sanat yapıtlarının tümü” ve tarihsel gelişme süreci içinde yaratılan bütün maddesel ve tinsel (manevi) değerlerle bunları yaratma ve sonraki kuşaklara aktarmada kullanılan araçların tümü olan “uygarlık” gibi anlamlarda kullanılmaktadır (Akt: Kartal, 2010: 449-450).

Taylor, kültürü “bilgiyi, imanı, sanatı, ahlâkı, örf ve âdetleri, ferdin mensup olduğu cemiyetin bir uzvu olması itibarı ile kazandığı ihtiyatlarını ve bütün diğer maharetlerini ihtiva eden gayet girift bir bütün” olarak tanımlar. Wissler de kültürü bir halkın yaşama tarzı olarak belirler. Alman Antropolog Thurnwald ise kültürü “bir

toplulukta örf ve adetlerden, davranış tarzlarından, teşkilat ve tesislerden kurulu ahenkli bir bütün” şeklinde tanımlar. Malinowski’ ye göre kültür “aletlerden ve tüketim mallarından, çeşitli toplumsal gruplaşmalar için yapılan anayasal belgelerden, insana özgü düşün ve becerilerden, inanç ve törelerden oluşan bütünsel bir toplamdır (Kaya, 2022: 56-57).

Dünya da bugün küreselleşme hâkimdir. Küreselleşme bir kültürel değişim aracıdır. Hiçbir kültür ve toplum yaşanan kültürel etkileşimlerde kayıtsız kalmamaktadır. Yani tek kültür kalıbı içerisinde sıkışmış durumdan çıkmıştır. Özellikle ulaşım olanaklarının insanlara kolay erişebilirlik olanağı sunması, birçok kültürün bir arada yaşamasına ada şans vermektedir. Ayrıca medya alanında yaşanan gelişmeler, özellikle internet dünyanın her alanında mevcut bilgi kaynaklarına ulaşmayı mümkün kılmaktadır. Tüm bunlar kültürlerarası etkileşimi sağlamaktadır (Limon, 2012:108).

Toplum ve kültür birbirinden ayrılamaz olgulardır. İnsanların yaşam tarzları ile yakından inilti olan bu iki olgu birbirini tamamlamaktadır. Ancak hem toplum hem de kültür yaşanan süreç içerisinde duyulan gereksinimlere göre değişimler gösterebilmektedir. İnsanlığın uygarlaşma döneminden başlayarak, bu güne gelen kadar bu değişim devam etmiş ve bundan sonrada devam edecektir. Süreklilik arz eden ve nesilden nesile aktarılan kültür olgusu, toplumun temel taşı olan bireylerin değişen yaşam tarzlarına uygun olarak günlük yaşam içerisinde uygulanmaktadır. Toplumsal yapılarda, hızlı veya yavaş ama sürekli hareketlilik ve değişme vardır. Bu değişimler kaynağını, ya toplumsal yapının mevcut unsurlarında ortaya çıkan farklılaşmalardan (örneğin demografik değişimler veya maddi ve manevi kültürdeki değişimler... gibi) veya farklı toplumlarla kurulan iletişim sırasında onlardan ithal edilen unsurlardan alır. Başlı başına kültür, toplumsal değişmeyi yönlendiren önemli bir faktördür. Bir toplumda toplumsal değişimin ortaya çıkması, insan unsurunun doğal çevreyi ve teknolojiyi kullanabilmesine bağlıdır. Bu da kültürün bir fonksiyonudur. Toplumlar kültürünün yaratıcılığı ve zenginliği ölçüsünde doğal çevre ve teknolojiden faydalanabilmektedir. Manevi kültürün zenginliği maddi kültürün gelişmesi, yeni tekniklerin bulunması ve uygulanmasında belirleyici faktördür (Kaya, 2022:53).

5. KÜLTÜRLERARASI ETKİLEŞİM VE KÜLTÜR AKTARIMI

Kültürlerarası etkileşimin temelinde kültürel olguların aktarımı söz konusudur. Tarihi süreçte kültürel arası aktarım savaşlar, ticaret, uluslararası ilişkiler ve göç hareketlilikleri büyük rol oynamıştır. Farklı kültürlerin karşılıklı olarak temasında kültürel olguların aktarımı gerçekleşmiştir. Kaynak kültürden erek kültüre gerçekleştirilen kültürel öğelerin aktarımı, mutlaka kabul görmesi gerekmektedir. Aksi takdirde alıcı kültür, kültürel aktarımı sonucunda etkilenmemiş olur. Örneğin Türkiye yiyecek piyasasına, öz ve öz lahmacun varken, pizzanın sokulması pek kolay olmamıştır. Ancak çok sevilen Ninja Kaplumbağalar çizdiği filmi ile birlikte başarıya ulaşmıştır. Kültür aktarımı bağlamında, bir kültür ögesi olan pizza Türkiye yiyecek pazarında yerini almıştır (Şimşek, 2021:38).

Her toplumun kendine özgün değerleri vardır. Bu değerler aracılığı ile toplumun yaşam kültürünü öğrenmek olasıdır. Değerler, toplumları oluşturan bireylerde istedik davranışların ve tutumların sergilenmesini sağlamaktadır. Toplamların önem verdiği normların öne çıkmasını ve bunlar çerçevesinde kültürel öğelerin desteklenmesi yine değerler tarafından gerçekleştirilmektedir. İnsanların değerlerini öğrenmek veya keşfetmek onlar hakkında çok bilgi edinmek demektir. Kültürlerarası etkileşim ve aktarım tesadüfleri kabul etmez. Kültür değişken ve bütünleşmecedir. Her bir farklı parça diğer bir parça ile anlamlı bütünler oluşturur ve birbirini tamamlar (Özkalp, 2005:65-66).

Farklı kültürlerin kesiştiği zamanlarda kültürel etkileşimin ve aktarımların hangi koşullar altında gerçekleştiği, kültürel ürünlerde kendisini göstermektedir. Kültürlerarası etkileşimde dilsel iletişim önemli bir etkindir. Kültürel olguların aktarımında ortak dil köprü görevi üstlenmektedir. Bugün Almanya’ya işçi olarak giden Türkler, kendi kültürel öğelerini de beraberinde götürmüşlerdir. Her iki kültüre ait değerler, karşılıklı olarak her anlamda hem Türk hem de Alman vatandaşları etkilemiştir. Bu anlamda kültür melezleşmesi oluşmuş ve farklı kimlikli bir toplum ortaya çıkmıştır. Göç hareketleri, dünyada birçok yaşam alanını arasında bağ kurulmasına neden olmuş ve ulus kültür anlayışını zayıflatarak kültürler arası karşılıklı bir değişimleri ön plana çıkarmıştır (Şimşek, 2021:31).

Bugün kültür aktarım araştırmaları, her bir kültürün kendi ihtiyacı doğrultusunda farklı kültürlerden etkilendiğini göstermektedir. Kaynak kültürden alınan kültür ögesi, alıcı toplum tarafından kabullenmesi ve toplumsal yaşam içerisinde uygulanması, kültürlerarası etkileşimin ortak kültür oluşumunda ne denli önemli bir önemli rol oynadığını göstermektedir. Kültür aktarımı farklı toplumların birbirlerine bağlanmasını sağlamaktadır. Middell’e göre; kültür aktarımı araştırmalarının paralelliği ve dünya tarihine olan ilginin

yenilenmesi hiçbir şekilde tesadüfi değildir. Her iki yön de, toplumların karşılıklı bağımlılığının arttığına dair mevcut gözlemlere dayanmaktadır ve küresel süreçlere yönelik konumlandırmanın ikna edici bir tarihsel açıklamasının, yalnızca ve öncelikle izole olarak düşünülen toplumların iç gelişmelerinden değil, yalnızca somut karşılıklı bağımlılıkları gözlemleyerek elde edilemeyeceği fikrini paylaşmaktadır (Çev. Çakır, 2021: 78).

6. SONUÇ

Toplumsal bir varlık olan insan, yaşamını sürdürebilmek için ait olduğu toplumun kültürel öğelerinin çerçevesinde davranış ve tutumlar göstermek zorundadır. Aksi halede toplum içerisinde kabul görmeyecektir. Toplumların ihtiyaçları zaman içerisinde değişebilmektedir. Bu değişime paralel kültürel olgularda değişir. Çünkü toplum ve kültür birbirini tamamlamaktadır. Toplumların varlığını sağlayacak ve geçmişi ile bugünü arasında bağlantı kuracak kültürel olgulardır. Toplumun belleği niteliğinde olan kültür, toplumun her bir yeni üyesine aktararak unutulmaması sağlanmaktadır. Kültür toplumun ve üyelerinin kimliği niteliğindedir.

Toplumlar, çeşitli nedenlere bağlı olarak etkileşim içerisine girmekte ve kültürel olguların aktarımını yapmaktadırlar. Alıcı kültürde kabul gören kaynak kültürden gelen kültürel olgular, o toplum tarafından içselleştirilmekte ve kullanılmaktadır. Bu anlamda toplumlararası yaşanan kültürel benzerlikler, toplumların birbirlerine bağlılıklarını arttırmaktadır. Kültürel aktarımlar ve benzerlikler, insanlığı ortak değerler çerçevesinde buluşmasını sağlamaktadır.

Hızlı teknolojik gelişmeler, toplumlararası kültür alış verişini hızlandırmıştır. Bu da toplumların daha fazla yakınlaşmasını ve kültürel bağlamda etkileşimlerini arttırmıştır. Özellikle kültürel değişim araçları yoluyla farklı kültürler bir arada yaşamak zorunda kalmışlardır. Bu anlamda ortak kültürel olguların farklı toplumlarda kullanılıp kabul görmesi, toplumların ortak sorunlarına daha kısa zamanda çözüm bulunmasını sağlayacaktır.

Kültürel Benzerliklerin Çokkültürlü Yaşama Etkileri Ve Toplum Çevirmenliği

Öğr. Gör. Dr. Coşkun DOĞAN¹

¹ Trakya Üniversitesi / Eğitim Fakültesi / Yabancı Diller Bölümü, coskundogan2002@yahoo.de, ORCID:
<https://orcid.org/0000-0002-6072-2721>

Özet: Toplamların yaşamsal deneyimleri, tarihsel süreçte mekânsal durum nedeniyle karşılıklı etkileşim içerisinde benzerlik taşıyabilmektedir. Ayrıca farklı toplamların içerisinde yaşadıkları ortak çevre koşullarına uyum sağlamak ve varlıklarını sürdürmek için benzer düşüncüyü taşıyan sosyal davranış biçimleri benzerlik gösterebilmektedir. Bu bağlamda farklı toplamların düşünceleri, gelenekleri, normları, değerleri, eylemleri gibi özgün kültürel özelliklerinin benzerlikleri söz konusudur.

Dünyada her alanda çok hızlı ve sürekli bir değişim yaşanmaktadır. Özellikle iletişim ve ulaşım alanlarındaki inanılmaz gelişmeler toplumsal yaşamı derinden etkilemektedir. Yaşanan toplumsal olaylar, farklı kültürlere sahip olan toplamları bir arada yaşamaya ve ortak çalışmaya zorunlu kılmaktadır. Bu nedenle toplamların ortak yaşam alanı olan dünyada bir arada hoşgörü ve uyum içerisinde varlıklarını sürdürebilmeleri için, bugünde kabul gören yeni bir siyasi sistem düşüncesi "Çokkültürlülük" üzerinde durulmaktadır.

Çokkültürlülük, farklılıkların bir arada yaşamasına olanak veren siyasi bir yapıdır. Çokkültürlülüğün olduğu her yerde çeviri olgusu da yaşamsal bir önem taşır. Çokkültürlü bir sistemde, farklı sosyo-kültürel özgünlüğe sahip toplamlar bir arada eşit koşullarda yaşayabilmek ve kendi kültürlerini ifade edebilmek için dilsel olarak kendilerini ifade etmeleri gerekmektedir. Ancak birçok alanda benzer kültürel sembollere sahip toplamların birbiri ile anlaşması ve bir arada yaşaması daha kolay gözükmemektedir. Çokkültürlü bir toplum yapısına kültürel benzerliklere sahip toplamlar daha hızlı uyum süreci yaşamaktadır.

Bu bağlamda, insanların ortak yaşam alanları ve dünyadaki gelişmelerin, kültürlerin yeniden yorumlanmasını ve üretilmesini gerekliliğini ortaya koymaktadır. Bu çalışmada da kültürün dinamik özelliğinden hareketle; farklı kültürel yapısı olan toplamların "Çokkültürlü" bir sistem etrafında birlikte yaşamaları kolaylaştıran toplum çevirmenliği bağlamında irdelenecek ve benzer kültürel yapıya sahip toplamların çokkültürlü sistem içerisinde varlıklarını daha kolay sürdürebildiklerine vurgu yapılacaktır.

Anahtar Sözcükler: Kültür, Çokkültürlülük, Toplum Çevirmenliği

The Effects of Cultural Similarities on Multicultural Life and Community Translation

Abstract: The vital experiences of societies can bear similarities in mutual interaction due to the spatial situation in the historical process. In addition, in order to adapt to the common environmental conditions in which different societies live and to maintain their existence, social behavior patterns with similar thinking may show similarity. In this context, there are similarities of unique cultural characteristics such as thoughts, traditions, norms, values and actions of different societies.

There is a very rapid and continuous change in every field in the world. Incredible developments, especially in the fields of communication and transportation, deeply affect social life. Experienced social events oblige societies with different cultures to live together and work together. For this reason, in order for societies to continue their existence together in tolerance and harmony in the world, which is the common living space, the idea of a new political system that is accepted today, "Multiculturalism" is emphasized.

Multiculturalism is a political structure that allows differences to live together. Translation is vital wherever there is multiculturalism. In a multicultural system, societies with different socio-cultural specificities need to express themselves linguistically in order to live together under equal conditions and to express their own cultures. However, in many areas, it seems easier for societies with similar cultural symbols to agree with each other and live together. Societies with cultural similarities to a multicultural society structure experience a faster adaptation process.

In this context, it reveals the necessity of reinterpreting and producing cultures, common living spaces of people and developments in the world. In this study, based on the dynamic feature of culture; It will be examined in the context of community interpreting, which facilitates the coexistence of societies with different cultural structures around a "multicultural" system, and it will be emphasized that societies with similar cultural structures can more easily maintain their existence in a multicultural system.

Keywords: Culture, Multiculturalism, Community Translation

1. GİRİŞ

Toplamlararası etkileşim arttıkça, kültürlerarasındaki benzerlikler ve ortak özellikler artmaktadır. Teknolojinin gelişmemiş olduğu dönemlerde, kültürel benzerliklerin en temel nedeni, toplamların yaşadığı coğrafya ve onun

beraberinde getirdiği yaşamsal zorluklarla mücadeleye yönelik davranışlar ve tutumlardı. Çünkü toplumlararası iletişim ve ulaşım olanakları kısıtlı durumda bulunmaktaydı. Ancak teknolojinin insanlığa her alanda sunduğu hızlı gelişmeler, farklı kültürel kimliğe sahip toplumları daha sık bir araya getirmekte ve hatta birlikte yaşamaya zorlamaktadır. Bu bağlamda ortaya çıkan karşılıklı kültürel etkileşimler, toplumlararası ortak kültür değerlerinin oluşmasına da katkıda sunmaktadır.

Bugün dünyada yaşanan ve farklı toplumların bir araya gelmesini olanaklı kılan kültürel değişim araçları (Küreselleşme, göç ve medya), toplumların özgün olan kültürlerini derinden etkilemektedir. Bu etkileşim, toplumu oluşturan bireylerin toplumsallaşmasında, farklı kültürel yapıları tanıyarak belli kalıpların dışına çıkmasını sağlamaktadır. Aynı coğrafyada yaşayan farklı kültüre sahip toplumların, bir arada uyum içerisinde yaşamaları birbirlerini anlamaktan geçmektedir. Birden çok farklı kültürün aynı çıkarlar doğrultusunda örgütlenme biçimi önemlidir ve bu da çokkültürlülük terimi ile ifade edilmektedir. Çokkültürlülük altında, kültürel ilişkilerin çok yoğun yaşandığı farklılıkların birlikteliği, ortak toplumsal kurumların oluşturulduğu bir süreçtir. Siyasi bir şemsiye altında aidiyetlerini bulan farklı kültürlerin, kendilerini ifade etmeleri ve kabul görmeleri karşılıklı iletişim ve anlaşmadan geçmektedir. Bu nedenle kültürel farklılıkların çokkültürlü bir toplumda varlıklarını sürdürebilmeleri için, onları çok iyi tanıyan hem toplum uzmanı hem de dil uzmanı olan toplum çevirmenleri gerekmektedir.

Çokkültürlü toplumların uyum içerisinde yaşayabilmeleri için dilsel iletişim bir ön koşuldur. Sosyal ve dilsel donanım gerektiren toplum çevirmenliği çokkültürlü toplumların zengin çeşitliliğinin korunması ve güven içerisinde olabilmeleri açısından önemli bir uygulamadır. Ortak insanlık değerlerinden hareketle, farklı kültürlerin birlikte yaşamlarını sürdürmemelerini ve birbirlerinin farklılıklarına hoş görü ile bakmaları sağlanabilmektedir. Ortak olan kültürel değerlerin yaşamsal boyutta uygulanabilirliği konusunda farklı kültürel dokuları tanıyan toplum çevirmenliği uzamları etkili olmaktadır.

2. KÜLTÜRÜN TANIMI VE ÖZELLİKLERİ

Kültür tanımı oldukça çok yapılan ve kapsam alanı geniş bir kavramdır. Her toplumsal yapının kendisine özgün bir kültürel birikimi vardır. Kavramsal olarak kültür sorunsalını tanımlayabilmek için, toplumların nesilden nesile aktardığı inanç, bilgi, duruş ve seziş uygulamalarını tarihsel süreç içerisinde de tanımak ve tanımlamak gerekmektedir (Limon, 2012:108). Her toplumun yaşamsal deneyimleri, bireylerin toplumsal yaşam içerisinde belli davranış ve tutumları, kültürün birer yansımalarıdır. Doğuştan başlayarak bireyde kendi edindiği kültürün çerçevesinde kendi davranış ve tutumlarını oluşturmaktadır.

Kültür, Latince’de tarım anlamında kullanılan gelen Cultura kelimesinden türetilmiştir. Daha sonra batı dillerinin birçoğunda Culture olarak kullanılmış ve bu sözcük Osmanlıcada karşılığını hars şeklinde bulmuş ve bugüne kadar gelmiştir. Kültür sözcüğü, Avrupa’da 19.Yüzyılın sonunda İngiliz Antropologları, etnografya tarafından incelenen toplumlara özgü olan düşünce, eylem biçimleri, inançlar, değer sistemleri, simgeler ve tekniklerin tümünü anlatmak üzere kullanmışlardır. Özellikle sosyolojinin konusu olan kültür kavramı, etkileşimlere yön veren senaryo ve rollerin işleyişinin daha iyi anlaşılmasına yardım eden bir kavram olarak kullanılmaktadır (Kocadaş, 2006: 2).

Kültür kavramında asıl söz konusu olan kültürün değişen değerler, gelenekler, sosyal ve politik ilişkiler ve yaratıcı dünya görüşü şeklinde, paylaşımları ve dönüşümleri ortak bir tarih, coğrafya, dil, sosyal sınıf ve din birlikte yaşayan insanlar tarafından üretilmesidir (Şahin, 2019:460). Kültür sözcük olarak il kez Taylor tarafından kullanılmış ve tanımı yapılmıştır. Taylor’a göre kültür; “Kültür toplumun bir üyesi olarak insanoğlunun kazandığı bilgi, sanat, ahlak, gelenekler ve benzeri diğer yetenek ve alışkanlıkları kapsayan karmaşık bir bütündür”. Taylor bu tanımında, kültürün karmaşık bütünlüğü kavramıyla onun insan tarafından kazanıldığı gözlemini, büyük bir ustalıkla bir araya getirmektedir Limon, 2012: 108).

Kültür, insanoğlundan önce mevcut olmayan bir olgudur. İnsanoğlunun varlığı, bulunduğu coğrafyaya göre uyarladığı yaşam tarzına göre kültürün oluşmasını sağlamış ve uygarlık seviyesine göre nesilden nesile geliştirerek aktarmıştır. Kültürlerin yok olmadan devamının sağlanması, toplum yeni katılan bireylerin toplumsallaşmasını sağlayan kurumlarla olanaklıdır. Bu kurumlar, kültürün anlamlı bir bütün halinde toplumun yeni üyelerine aktarılmaktadır. Bu kurumlar, aile kurumu, ekonomi kurumu, din kurumu, siyaset kurumu, eğitim kurumu gibi alt kültür gruplarıdır. Bütün bu alt kültür gruplar, toplumdan ayrı kendi içerisinde bağımsız kurumlar değildir. Diğer kurumlarla birlikte bir anlam üretmektedir (Şahin, 2019:460).

Bir toplumu bir arada tutan ve varlığının temel nedeni olan kültürün temel özellikleri, sonradan her bir bireyin toplumun bir üyesi olması şeklinde öğrenilmektedir. Kültür; belli bir gruba aittir, nesilden nesile aktarılır,

değerler sisteminden oluşur ve grup üyelerinin davranışlarını sürekli ve tahmin edilebilir bir şekilde etkilemektedir. Mutlu (1999) kültürün özelliklerini şu şekilde özetlemeye çalışmıştır. Kültür; öğrenilir, uyarlanabilir, kuşaktan kuşağa aktarılabilir, paylaşılabılır, sınırlayıcıdır, simgeleyicidir ve birbirini bütünleyen çeşitli unsurlardan oluşur. Kültür, öğrenilerek ve tecrübe edilerek kazanılır ve bunun yanında kültür üzerinde uyarlama yapmak insanın doğal kabiliyeti dâhilindedir. Kültür, nesilden nesile aktarılır ve toplumun bütün bireyleri tarafından paylaşılmaktadır. Kültür, ait olduğu toplumu bir takım ölçüler içerisine sokarak sınırlamaktadır. Kültür, bir olgunun başka bir olgu tarafından tanımlanması, simgelenmesi veya kullanılmasıyla alakalıdır (Akt. Yeşil, 2013:55).

Bugün dünyada tüm toplumlar ve onlara ait kültürler hızlı bir değişim içerisinde bulunmaktadır. Bunun temel nedeni teknolojik gelişmelerin beraberinde insanlığa sunduğu hızlı ulaşım ve iletişim olanaklarıdır. Bu bağlamda farklı kültürler, çeşitli nedenlere dayalı olarak aynı coğrafya üzerinde birlikte yaşamak zorunda kalmaktadırlar. Yani birden çok farklı kültürün bir araya gelmesi ile çokkültürlü toplumlar oluşmaktadır. Çokkültürlü toplum yaşamı da ortak ve benzer kültürel olguların oluşmasına neden olmaktadır.

3. ÇOKKÜLTÜRLÜ TOPLUMUN TANIMI VE YAPISI

Dünyada bugün farklı toplumların, barış içerisinde birlikte aynı coğrafya ve siyasi yönetim altında yaşamlarını sürdürdüklerine tanık olunmaktadır. Özellikle gelişmiş ülkeler başta olmak üzere, neredeyse tüm ülkeler etnik, dinsel ve toplumsal farklılıklar açısından çeşitlilik göstermektedir. Geleneksel siyasi yapıya sahip ülke yapıları yok olmakla birlikte, farklılıkların eşitliği temelinde modern devlet düşüncesi ortaya çıkmıştır. Aslında bu düşünce yüzyıllardır Anadolu'da oluşan kültür mozaiki yapısını aklı getirmektedir. Bu düşünceden hareketle, azınlık hakları ve farklılıkların barış içerisinde bulunması ve korunması, insani bir olgudur. Temel hak ve özgürlükler çerçevesinde, farklılıkların özgün kimliklerinin ortadan kaldırılmasına yönelik çabalarının olmasına izin verilmemektedir. Farklılıkların özgünlüğünü yok etmeden uyum ve barış içerisinde yaşamlarını sağlamak çokkültürlü toplumları kapsayan politikalarla olanaklıdır. (Bağlı & Özensel, 2013: 14).

Toplumsal ve kültürel değişim araçlarından küreselleşme ve göç bugün, toplum yapılarını belirleyen en büyük güçtür. Bu nedenle kültürel farklılıkların sürekli hareketlilikleri, kendi değerlerini kaybetmeden ve belli bir kaosa dönüşmeden bir siyasi şemsiye altında toplanması zorunluluğu doğmuştur. Bu düşünce çokkültürlü toplum yapısıdır. Çokkültürlülük, farklı kültürlerin barışçıl bir şekilde var olabilmeleri için önemli bir adımdır. Lacorne (1967), göre, ilk kez 1941 yılında ortaya çıkan çokkültürlülük kavramı, önyargısız ve bağısız bireylerden oluşan kozmopolit bir bir toplumu nitelendirmek için kullanılmıştır (Doytcheva,2013:15).

Çokkültürlülük, öncelikle farklılıklardan oluşan belli bir nüfus yapısına işaret etmektedir. Farklılıkların temelinde, farklı toplumsal yapılardan gelen kimselerin yanında dini farklı olan kimselerin, etnik kökenleri farklı kimselerin varlıkları söz konusudur. Çokkültürlülük, diğer bir anlamda, farklı kültürlerle sahip toplumların kendi özgünlerini koruyarak birlikte inşa ettikleri siyasi bir yapılanma anlamına gelmektedir. Çok sesliliğe ve toplumsal çeşitliliğe önem veren demokratik bir ideoloji olarak ifade edilmektedir. Tüm bunların yanında çokkültürlülük, farklılıkların aidiyetlerinin varlığını ve değerinin kaybolmasını önlemek ve korumak için kayıt altına alan siyasi bir programı içermektedir (Doytcheva,2013:17).

Farklı kültürel yapıların varlığını sürdürülmesine yönelik çokkültürlülük yapısı, yeni bir dünya toplumu anlamına gelmemektedir. Kamusal alanları ve toplumsal ilişkilerin dünya çapında genişlemesine olanak veren çokkültürlülük, farklı düzey ve kimliklere sahip toplumların birlikte iç içe yaşayabilmelerine zemin oluşturmaktadır (Çınar, 206:26). Farklı toplumların arasında mesafelerin kaldırılmasında ve farklılıkların meşruluk kazanmasında çokkültürlülük düşüncesi temelli siyasi yapılanma önemli bir rol oynamaktadır. 'Evrensel Yurttaşlık' anlayışının yattığı sorunların çözümünde çokkültürlülük siyasi yapılanması, farklı toplumların, belli bir büyük topluma adaptasyonuna kaynaklık etmektedir (Yanık, 2016:43).

Çokkültürlü bir siyasi model yapılması, her ne kadar kültürel farklılıkların ortak çıkarlar doğrultusunda bir araya gelerek yaşaması olsa da, farklılıkların bir arada uyumlu ve barış içerisinde yaşamasında kültürel benzerliklerin önemi oldukça büyüktür.

4. KÜLTÜREL BENZERLİKLERİN ÇOKKÜLTÜRLÜ YAŞAMA ETKİLERİ

Kültürler arasında milliyet, etnik köken, cinsiyet, yaş, fiziksel özellikler, cinsel yönelim, ekonomik durum, eğitim, meslek, din gibi olgulardan, kültürel benzerlikler ise daha çok sonradan kazanılan değerler, inançlar ve davranışlardan oluşmaktadır. Çokkültürlü yaşamı hem kültürel farklılıklar hem de kültürel benzerlikler yakından

etkilemektedir. Özellikle, kültürler arasında oluşan etkileşim sonucu paylaşılabilen kültürel benzerlikler, dil, din, etnik köken, cinsiyet gibi farklılıklarla oluşmuş çokkültürlü toplum yaşamını kolay hale getirebilmektedir. Kültürler arasında ne kadar çok benzerlik söz konusu olursa, farklılıkları daha iyi anlayabilme ve farklı kültürleri anlama olanağı fazlalaşmaktadır. Farklılıkları bir bütün gibi algılamak ve parçalardan bütüne doğru ilerlemeyi amaçlamak, farklı değerlerden oluşan kültürler arası öğrenme açısından önemlidir. Özellikle çokkültürlü toplumlarda karşılıklı olarak değerler, inançlar, davranışlar, yazılı ve sözlü edebiyat, dil, müzik, din, ahlâk, estetik vb.leri konusunda uzlaşmak, farklı kültür ve kimliklere hoşgörü olmaktadır (Küçük, 2011:239).

Kültürel benzerlikler, ötekini daha kolay kabullenmekte anahtar bir rol oynamaktadır. Özellikle dil, din ve tarihsel olaylarda birliktelik, toplumların birbirine daha fazla hoşgörü ve saygı ile bakmasını sağlamaktadır. Geçmişte toplumlar arasında çeşitli temellere dayanan etkileşimler, kültürel benzerliklerin çoğalmasını ve ortak özelliklerin oluşmasına kaynaklık etmiştir. Çokkültürlü yaşamda kültürel benzerlikler, beraberinde getirdiği ortak değerler çerçevesinde her bir taraf için diğer tarafı hızlıca tanıma olanağı sunmaktadır. Benzer kültürlere sahip toplumların olaylara karşı sergiledikleri davranışları ve tutumları da benzerlik göstermektedir. Kültürlerin gizemli etkisi farklılıkların yanında benzerliklerinin de etkisini çoklu toplumsal yaşam içerisinde kendisini göstermektedir. Bireyin toplumsallaşmasında büyük rol oynayan kurumlardan eğitim ve öğretim programları kültürlerin benzeşmelerini sağlamaktadır. Kültürlerin devamını sağlarken, kültürlerarası etkileşimi de olası kılmaktadır. Bu anlamda kültürün benimsetilmesinde önemli bir araçtır (Kocadaş, 2006:4)

Teknolojinin hızla gelişmesi ve toplumlar arası ulaşım ve iletişim olanaklarının artması, kültürel benzerliklerin artmasına neden olmuştur. Özellikle kültürel değişim araçlarından medya, kültürel farklılıkların ortadan kaldırmaya ve benzerliklerin oluşmasını sağlamıştır. Medya, farklı kültürlerin küreselleşmesinde büyük rol oynamıştır. Bu yüzyılın son çeyreğinde, medya, özellikle kitle iletişim araçları oldukça yaygınlaşmış ve uluslararası ilişkilerin yanında kültürler arası ilişkilerin de iç içe girmiştir (Taylan & Arkan, 2008: 86). Kültürel olarak farklılıkların birbirlerinin farkındalığı çokkültürlü yaşamın gelecekteki varlığı açısından önemlidir. Ancak kültürel anlamda benzeşmek tek başına yeterli olmamaktadır. Farklılıkların birbirlerini anlamaları ve kültürel boyutta tanımaları için ortak bir dilsel iletişime gereksinimleri vardır. Bu gereksinim de her farklı kültürleri tanıyan dil ve toplum uzmanları olan toplum çevirmenleri ile olasıdır.

5. TOPLUM ÇEVİRMENLİĞİNİN ÇOKKÜLTÜRLÜ YAŞAMDA GEREKLİLİĞİ

20. Yüzyılın ikinci yarısından itibaren sözlü çevirinin alt bir türevi olarak ortaya çıkan toplum çevirmenliği (Otto Kade 1968, Hans J. Vermeer und Katharina Reiß 1984), bugün çalışma alanı oldukça çok genişleyerek günlük yaşam içerisinde kullanılan özgün bir disiplin haline gelmiştir. Farklı dillerin ve kültürlerin buluştuğu çokkültürlü toplumlarda, tüm herkesin kamu hizmetlerinden eşit şekilde faydalanabilmeleri açısından çeviri desteği ihtiyacı söz konusudur. Bu ihtiyacın giderilmesi için, adına toplum çevirmenliği denilen sözlü çeviri etkinliği kullanılmaktadır. Nüfus yapısı çeşitliliği çok olan Kanada ve Avusturalya gibi ülkelerde bu çeviri türü oldukça sık kullanılmaktadır (Doğan, 2015:62).

Toplum çevirmenliği, çokkültürlülüğün olduğu her yerde söz konusudur. Bu anlamda, çeviri alanının dilbilimden ayrı özgün bilimsel bir alan olarak araştırmalara konu olmasıyla birlikte, diğer bilimsel disiplinlerin de ortak araştırma ortağı haline gelmiştir. Özellikle sosyoloji ve çeviri ilişkisi, çevirinin salt dilsel iletişim görevi olmadığını, kültürlerarası ve toplumlararası önemli bir olgu olduğunu işaret etmektedir. Bu anlamda Pöhhacker'e göre toplum çevirmenliği; insanbilim ve toplumbilim arasında yeni bir paradigma olan toplum çevirmenliği, 2004 yılından itibaren farklı bilim alanlarında araştırma yapan bilim insanlarının ilgisini çekmeye başlamıştır. 2004 yılında toplum çevirmenliği çalışmaları literatürdeki önemli yerini almıştır. Aynı yıl içerisinde toplum çevirmenliği ile ilgili bilimsel alanda yazılmış kitaplar yayınlanmıştır (Akt. Doğan, 2020: 75).

Toplum çevirmenliği, gönüllülük esasına dayalı olarak yapılan sözlü bir çeviri alanı iken, artık çalışma alanlarının genişlemesi nedeniyle daha kurumsal hale gelmiştir. Bugün gelişmiş batılı ülkelerde ve çokkültürlülüğü bir siyasi rejim olarak kullanan ülkelerde toplum çevirmenliği, çeşitli kurumların bir uzmanlık departmanı olarak hem sahada hem de alanda çalışmaktadır. Toplum çevirmenliği ile uğraşan kimseler bir uzaman olarak, dünyada yaşanan küreselleşme ile birlikte oldukça çok bilimsel alanın çalışma grubunda yer almaktadır. Örneğin son dönemlerde oldukça sık yaşanan uluslararası göç olayların de ve afetlerde toplum çevirmenliğinin yaşamsal bir rol üstlendiği görülmüştür. Afette toplum çevirmenliği grupları, her hangi bir afet durumunda, afet olan ülkeye gelen yabancı arama ve kurtarma ekiplerine; ülkeye girdikleri andan itibaren, arama kurtarma yaptıkları anlarda iletişim sorunlarını karşılamakla sorumludur (Kurultay, & Bulut, 2012:78).

Toplum çevirmenliği, farklı ülkeler de değişik isimler de de söylenmektedir. Örneğin, İngilizcede “community interpreting, public service interpreting”, Fransızcada “interpretariat communautaire”, Almandada “Sprach-und Kulturmittler, Sprach- Intergrationmittler, ve resmi dili almanca olan Avusturya’da “Kommunaldolmetscher”, İsviçre’de “interkultureller Übersetzer” ifade edilmektedir (Doğan, 2017: 73). Bu da toplum çevirmenliğinin farklı kültürlerin ortak yaşam alanlarında ne kadar önemli bir işlevi olduğunun kanıtıdır. Çokkültürlü toplumların oluşması ve varlığını sürdürmesi, birbirini anlamdan ve hoşgöründen geçmektedir. Toplum çevirmenliği meslek olarak çokkültürlülüğün devamlılığını sağlayabilecek bir toplumsal ve dilsel köprü görevi yapmaktadır.

6. SONUÇ

Tarihsel süreç içerisinde kültürlerarası iletişim ve etkileşim olmuştur. Bu etkileşimler, kültürlerarası benzerliklerin oluşmasına kaynaklık etmiştir. Ayrıca yaşanan coğrafyanın benzerliğine göre oluşturulan kültürel deneyimlerin de birbirine benzemesi olasıdır. Bu bağlamda farklı kültürlerin ortak kültürel semboller oluşturması ve bu çerçevede birbirlerini kabullenmeleri daha kolay olacaktır.

Dünyada bugün yaşanan ve kültürlerarası iletişimini zorunlu hale getiren gelişmeler, kültürlerin ortak değerler oluşturmasına ve farklılıkların birlikte yaşamasına neden olmaktadır. Özellikle kültürel değişim araçları küreselleşme, göç ve medya, çokkültürlü toplumların oluşmasını ve birlikte yaşamasını zorunlu kılmaktadır. Farklılıkların birbirini anlaması ve kültürel özgünlüklerine hoşgörü ile bakması için, bir iletişim koridoru olması gerekmektedir. Farklılıklar arasında bu bağlantıyı çeviri, özellikle de dil bile toplum uzmanlığı donanımlarına sahip toplum çevirmenleri sağlayacaktır. Kültürel benzerlikler, çokkültürlü bir siyasi şemsiye altında buluşan farklı kültürlerin birlikte uyum içerisinde ve kendi kültürel kimliklerini kaybetmeden yaşamalarını sağlayacaktır.

Özet: Osmanlı ekonomisi tarımsal üretime dayanmaktadır. Bu özelliği Osmanlı kamu maliyesine de yansımıştır. Bu bağlamda, tarım sektöründen elde edilen vergilerin önemli gelir kalemleri arasında yer aldığı söylenebilir. Ziraî tarımın vergilendirilmesinin esasında öşür (aşar) vergisi bulunurken hayvancılıkta ağnam vergisi öne çıkmaktadır. Osmanlı Devleti'nde gayrimüslim hayvan sahiplerinin yetiştirdiği domuzlar ise canavar resmi ile vergilendirilmiştir. Bu vergi türü resmi kayıtlarda “*resm-i hınzır*” veya “*resm-i canavar*” olarak da adlandırılmış, klasik dönem Osmanlı Devleti Kanunnamelerinde yer almıştır. Canavar resmi Tanzimat Fermanı öncesinde halktan gelen talepler sebebiyle kaldırılmıştır. Fakat, 1857-1858 mali senesinde, üç aylık yavrular hariç tutulmak üzere, domuz başına 10 kuruş nispetinde tekrar tahsil edilmeye başlanmıştır. Osmanlı arşiv belgeleri incelendiğinde II. Abdülhamit döneminde de verginin yürürlükte olduğu görülmektedir. Bu kapsamda, giriş bölümünde canavar resminin Osmanlı mali sistemindeki yeri aktarılacaktır. Daha sonra, II. Abdülhamit döneminde canavar resminin miktarına, vergi yükümlülüklerinin tespitinde hayvan sayımlarına ve verginin tahsilat sürecine değinilecektir Devlet Arşivleri Başkanlığı Osmanlı Arşivi (BOA) taramalarından elde edilen belgeler okuyucu ile buluşturulacaktır. Böylece, Osmanlı mali ve iktisadi tarihi çalışmalarına, II. Abdülhamit dönemi araştırmalarına katkıda bulunulacaktır.

Anahtar Kelimeler: Osmanlı Devleti, Osmanlı Devleti Maliyesi, II. Abdülhamit Dönemi, Canavar Resmi

The Taxation Of Non-Muslim Animal Owners By The Swine Tax In The Abdulhamit II Period

Abstract: In the Ottoman Empire, agriculture is the main source of income. The Ottoman public finances reflected this trait as well. In this context, it is appropriate to say that among the significant sources of income are the taxes collected from the agricultural sector. In contrast to the tithe tax, which is used to tax agricultural production, the ağnam tax (ağnam tax was an annual tax on sheep and goats in the Ottoman Empire) comes to the forefront in animal husbandry. The Ottoman Empire imposed a tax known as the "swine tax" on the pigs raised by non-Muslim animal owners. This kind of tax was called as “*resm-i canavar*” (beast tax) or “*resm-i hınzır*” (swine tax) and took place in the Ottoman Legal Codes of the classical era. Prior to the Tanzimat Edict, the swine tax was eliminated as a result of popular demands. However, it resumed collection in the fiscal year 1857–1858 at a rate of 10 kuruş per pig, excluding piglets under three months old. It can be seen from the Ottoman archive documents that the tax persisted under Abdulhamit II's rule. In this context, the introduction will explain the role of the swine tax in the Ottoman financial system. Later, the amount of the swine tax, animal counting in determining tax liabilities, and the tax collection process during the reign of Abdulhamit II will be discussed. The reader will be presented with documents obtained from the Ottoman Archives of the Presidency of State Archives (BOA). As a result, This research will have contributed to the Ottoman financial and economic history studies as well as Abdulhamit II period researches.

Key Words: Ottoman Empire, Ottoman Finance, Abdulhamit II Period, The Swine Tax

1. GİRİŞ

Klasik dönem Osmanlı Devleti'nin mali yapısı tımar sistemi çerçevesinde düzenlenmiştir. Bu özelliği ile birlikte tımar kesiminde vergileme temelde üç başlık altında gerçekleştirilmiştir. Ürün üzerinden alınan vergiler (harac-ı mukaseme), toprak üzerinden alınan vergiler (harac-ı muvazzaf) ve kişi üzerinden alınan vergiler mali gelirlerin ana başlıklarını ifade etmektedir. Ürün üzerinden alınan vergiler, ziraî vergiler ve hayvanlardan alınan vergiler olmak üzere iki kısımdan meydana gelmektedir. Hayvanlardan alınan vergiler kapsamında koyun-keçi sahipliği ağnam resmi ile vergilendirilmiştir (Tabakoğlu, 2012: 299-300).

* Bu makale, Marmara Üniversitesi Orta Doğu ve İslam Ülkeleri Araştırmaları Enstitüsü Orta Doğu Ekonomi Politikası Ana Bilim Dalında hazırlanmakta olan “II. Abdülhamit Dönemi Hayvancılık Politikası: Varidat, İslahat, Baytariye” adlı doktora tezinden türetilmiştir.

Ağnam resminin mükelleflerini Osmanlı Devleti'nde yaşayan tüm koyun-keçi sahipleri oluşturmaktadır. Hayvanların adedi üzerinden maktu olarak alınan ağnam resmi yılda bir defa ödenmektedir ve elde edilen gelirler hazineye aktarılmaktadır. Makalemizin inceleme alanını oluşturan canavar resminde ise konu yetiştiriciliği yapılan domuzların vergilendirilmesidir. Bu verginin mükellefleri gayrimüslim hayvan sahipleridir. Domuz başına maktu olarak alınan canavar resmi harman sonunda ödenmiş ve tımar sahipleri (hazine) tarafından tahsil edilmiştir (Öner, 2005: 140-141).

Canavar resmi Osmanlı Devleti Kanunnameleri'nde de yer almaktadır. Bu açıdan değerlendirildiğinde verginin "kadim" bir gelir türü olduğu söylenebilir. Fatih Sultan Mehmet'in Umumi Kanunnamesi'nde yabanda yürüyen ve sığırla güdülen iki domuzdan (donuz) 1 akçe, evde kümeslerde beslenenlerden hayvan başına 1 akçe alınması istenmiştir. II. Bayezid'in Umumi Kanunnamesi'nde domuzların (hınzır) kesimi yapıldığında, sahiplerinin tımarlı sipahiye hayvan başına 1 akçe vermesi gerektiği belirtilmiştir (Osmanlı Vergi Mevzuatı, 1999: 12, 50).

Tanzimat Fermanı öncesinde, Belgrat ve Alacahisar sancaklarında bulunan domuzların her birinden senede 4 para alındığı ancak halkın talepleri sonrasında affedildiği ve bu gelir türüne çokça önem verilmediği belirtilmektedir. 1193 (miladi 1779-1780) yılından sonra canavar resminin tahsilinin yapılmadığı ifade edilmektedir (Sayın, 1999: 32).

Canavar resmi, Tanzimat Fermanı'nın ilanından sonra, 1273 (miladi 1857-1858) senesinde tekrar tahsil edilmeye başlanmıştır. Bu kararda domuzların çoğalma-üreme oranlarının yüksek olması, ormanlarda masrafsızca beslenebilmesi ve yavrularından istifade imkanları dikkate alınmıştır. Muhtelif resimler tek başlık altında birleştirilerek ve 3 aylık yavrular hariç tutularak hayvan başına 10 kuruş vergi miktarı belirlenmiştir. Miktarın bir anda 10 kuruş derecesinde belirlenmesi domuz sahiplerine ağır gelmiştir. Bu gerekçe ile vergi miktarı önce 1274'te (miladi 1858-1859) 7 kuruşa ve sonra 1279'da (miladi 1863-1864) 3 kuruşa indirilmiştir (Sayın, 1999: 500; Şener, 1990: 144).

II. Abdülhamit döneminde de domuzların vergilendirilmesine devam edilmiştir. Bunun bir göstergesi de II. Abdülhamit dönemi bütçelerinde yer almasıdır. Vergi ile ilgili tahmin, tahakkuk ve tahsilat bilgilerine 1876-1877 senesi bütçesinden başlamak üzere 1908-1909 senesi bütçesine kadar ulaşılabilir. Bazı yıllar ve başlıklarla ilgili rakamlar bulunmamakla birlikte veriler Tablo 1'de gösterilecektir. Bu tabloda canavar resminden elde edilen gelirlerin adi bütçe gelirleri içindeki payı da yer alacaktır.

Tablo 1: II. Abdülhamit Dönemi Bütçelerinde Canavar Resmi

Mali Yıllar	Tahmin (Lira ⁴)	Tahakkuk (Lira)	Tahsilat (Lira)	Tahsilatın Adi Bütçe Gelirleri İçindeki Payı (%)

1907-1908	-	-	-	-
1908-1909	-	-	-	-

Kaynak: Akar (1998: 332, 345).

Tablo 1 incelendiğinde, mali yılların büyük çoğunluğunda canavar resmi gelir tahminlerinin yapıldığı görülmektedir. Buna karşın, tahakkuk sütununda 12, tahsilat sütununda 14 yılın bilgileri bulunmaktadır. Tabloda ilgili tarihlerde tahakkuk ve tahsilat bilgilerinin yer almaması, bu tarihlerde canavar resminin tahsil edilmediği anlamına gelmemektedir. Çünkü, örneğin, 1900-1901 ve 1904-1905 mali yılları arasında gayrimüslim nüfusun önemli bir bölümünün yaşadığı Selanik, Manastır ve Kosova Vilayetleri bütçe gelirlerinde canavar resmi yer almaktadır (Bayraktar, 2014: 10-12).

Tablo 1’de canavar resmi tahsilat gelirlerinin II. Abdülhamit dönemi adı bütçe gelirleri içindeki payı da yer almaktadır. Sağ sütunda yer alan ve yüzde cinsinden ifade edilen bu oranlar dönem genelinde çok küçük paylara sahip olmuştur. Bu itibarla, canavar resminin II. Abdülhamit dönemi bütçe gelirleri arasında önemli bir kalemi ifade etmediği değerlendirilebilir.

2. II. ABDÜLHAMİT DÖNEMİNDE CANAVAR RESMİNİN MİKTARI

II. Abdülhamit dönemi öncesinde canavar resminin miktarına ilişkin bilgiler yukarıda ifade edilmiştir. II. Abdülhamit döneminde, 1880 yılında alınan kararla domuz başına 3 kuruş vergi alınmıştır. Dört aylıktan küçük yavrular bu kapsamın dışında tutulmuştur (BOA, ŞD.: 1910/54). 1885’te Priştine sancağı Kolaşin bölgesinde 3.5 kuruş, Mitrovica kazasında 4 kuruş alındığı belirlenmiştir (BOA, ŞD.: 308/46).

1888 yılında canavar resmi 5 kuruşa yükseltilmiştir (BOA, MV.: 38/13). Bu zam bazı bölgelerde halkın tepkisine neden olmuştur (BOA, MV.: 42/30). Cezayir-i Bahr-i Sefid Vilayeti’nde verginin 3-3.5 kuruş seviyesine indirilmesi talep edilmiştir (BOA, MV.: 59/6).

Canavar resmi miktarı her zaman ilgili görevliler tarafından belirlenmemiştir. Osmanlı haricindeki civar bölgeler de bu konuda örnek alınabilmiştir. 21 Ağustos 1897 tarihinde, Yenişehir muhasebecisi vergiyi diğer yerlerdeki gibi 5 kuruştan mı yoksa Bosna’daki ağnam gibi 50 paradan mı alacağını sormuştur. Yetkililer Yunan Hükümeti’nce ne kadar alınıyorsa aynısının alınması bildirilmiştir (BOA, MV.: 93/13).

1906 yılında canavar resmi miktarı yeniden belirlenmiştir. Bu belirlemede hayvanların kaç aylık oldukları ve yaşları hesaba katılmış, bu şekilde vergilemede farklılaşmaya gidilmiştir. Maliye Komisyonu’ndaki müzakerelerde canavar yavrularının 3-6 ay arasında 40-50 kuruş, 6 ay-1 yaş arasında 70-80 kuruş kıymetleri olduğu belirlenmiştir. Bu tespitlerle birlikte 3-6 aylık canavarlardan 5, 6 ay-1 yaş arasından 7.5 ve 1 yaş üstü canavarlardan 10 kuruş alınması karara bağlanmıştır (BOA, MV.: 113/15).

18 Kasım 1907 itibarıyla canavar resmi 5 kuruşa indirilmiş, tahsil olunan fazla miktarın hayvan sahiplerine iade olunacağı ifade edilmiştir (BOA, TFR.I.SL.: 164/16365).

Literatür kaynakları ve yukarıda aktarılan arşiv belgeleri temelinde 19. yüzyıl Osmanlı Devleti’nde canavar resminin yıllar itibarıyla değişimi Tablo 2’de özetlenebilir. Bu sayede bilgilerin takibi daha kolay hale gelecektir.

Tablo 2: 19. Yüzyılda Osmanlı Devleti’nde Canavar Resminin Miktarı

Yıl	Canavar Resmi Miktarı (Kuruş)
1857	10
1858	7
1863	3
1880	3
1885	3.5-4

1888	5
1906	5-7.5-10
1907	5

Kaynak: Sayın, (1999: 500); Şener, (1990: 144); BOA, (ŞD.: 1910/54); BOA, (ŞD.: 308/46); BOA, (MV.: 38/13); BOA, (MV.: 113/15); BOA, (TFR.I.SL.: 164/16365).

Tablo 2’de 19. yüzyılda canavar resmi miktarının yıllar itibarıyla farklılaştığı görülmektedir. 1857, 1858 ve 1863 yıllarında sırasıyla 10, 7 ve 3 kuruş miktarlarıyla tahsilatlar yapılmıştır. II. Abdülhamit döneminde 1880 yılında 3 kuruştan alınan vergi 1906’da 10 kuruşa kadar yükselmiştir. 1907’de canavar resminde indirim yapılmış, vergi miktarı 5 kuruş seviyesine düşürülmüştür.

19. yüzyıl genelinde canavar resmi 3 kuruş ile 10 kuruş arasında değişim göstermiş, alınan kararlar ve halktan gelen talepler neticesinde miktarlarda değişiklikler yapılmıştır.

3. II. ABDÜLHAMİT DÖNEMİNDE CANAVAR RESMİNDE VERGİ YÜKÜMLÜLÜKLERİNİN TESPİTİNDE SAYIMLAR

Osmanlı Devleti’nde mali kaynakların tespiti ve giderlerin finansmanı için sayımlar yapılmıştır. Bu faaliyetler aynı zamanda kayıtlı iktisat anlayışının göstergesidir. Bu yöntem Osmanlı öncesinde Roma, Sasani, Bizans, Emevi, Abbasi, Selçuklu ve Memlük devletleri tarafından da uygulanmıştır (Tabakoğlu, 2012: 251).

Sayımların pratikteki çıktısı tımar sisteminin uygulanması, idari, sosyal, askeri düzenlemelerin yapılması olmuştur (Tabakoğlu, 2016: 160).

II. Abdülhamit döneminde domuz sahiplerinin vergi yükümlülüklerinin tespiti için sayımlar yapılmıştır. Bununla ilgili, farklı tarihlerde yürürlüğe konulmuş iki talimatname bulunmaktadır. Bu talimatnameler aslen ağnam vergisini ilgilendirmekle birlikte canavar resminde de bu talimatnamelerde yer alan hükümlerin uygulanacağı belirtilmiştir.

Bu uygulamalar “Ağnam Resminin Suret-i İdare ve İstifasına Dair Talimatname” ve “Ağnam Resminin Suret-i Tadad ve Cibayetine ve Yoklama Muamelatının İfasına Dair Talimat” adlarını taşımaktadır. Sırasıyla 4 Şubat 1888 ve 27 Mart 1907 tarihlerinde yürürlüğe konulmuşlardır. Talimatnamelerde temelde şu konulara değinilmiştir:

- Ağnamın tadadı (sayım) ve yoklaması,
- Tadad ve yoklamanın nasıl gerçekleştirileceği,
- Mektum (vergi ödememek amacıyla sayım sürecinde gizlenmiş hayvan) bulunacak hayvan için uygulanacak ceza,
- Ağnam resminin tahsilat süreci.

İlgili maddeler sonrasında canavar resmi sayımlarının da bu usullerle icra edileceği ifade edilmiştir. Canavar resminin ağnam resminden ayrılan yönü hayvan sayımı ve vergilerin ödeme zamanıdır. Ağnam resmi için sayımlar nisan veya mart aylarında yapılmaktadır Sayımı takip eden ilk üç ay içinde borçlar ödenmektedir. Canavar resminde ise hayvan sayımları eylül ayında gerçekleştirilmektedir. Eylül, teşrin-i evvel ve teşrin-i sani ayları sonunda ödemeler alınmaktadır (Osmanlı Vergi Mevzuatı, 1999: 849-859, 1479-1487). Bu işlemlerde rûmî takvim takip edilmektedir.

4. II. ABDÜLHAMİT DÖNEMİNDE CANAVAR RESMİNİN TAHSİLATI

II. Abdülhamit döneminde canavar resminin tahsilat sürecinde olumsuzluklar meydana gelmiştir. Burada tahsilat masrafları, kaynağı bilinmeyen noksanlıklar ve bakayalar (tahsilatın zamanında yapılmaması, vergi ödemelerinin sonraya bırakılması) mali açıdan önemli yükler oluşturmıştır. Örneğin 1877 tarihli Bosna canavar rüsumundan, tahsilat masrafları hariç olmak üzere, 565 bin 189 kuruş 36 para gelir elde edilebilecek iken 436 bin 262 kuruş 6 para tahsil edilebilmiştir. 147 bin 485 kuruş 28 para çeşitli nedenlerle noksan kabul edilmiş, 129 bin 327 kuruş 30 para da bakaya kalmıştır. Bu belgede verginin emaneten idare edildiği belirtilmiştir. (BOA, İ.ŞD.: 33/1642).

1907 yılına ait belgede de sayım ve tahsilat masraflarının yüksekliği ifade edilmektedir. Buna göre, içinde bulunan senede tahsil edilen vergi miktarının %4’ü sayım masraflarına harcanırken %50’lik kısmı tahsilat masraflarına ayrılmaktadır (BOA, TFR.I..MN.: 144/14324).

Bakayalarla ilgili sorunlara çözümler getirilmeye çalışılmıştır. Nezaret-i Umur-ı Aşar ve Rüşumat İdaresi'ne ait belgede yüklü bakayaların olduğu yazmaktadır. Bu gerekçe ile Edirne ve Selanik Vilayetleri maliye müfettişi Mustafa Vasfi Efendi ilgili makamlara bir tahrirat göndermiştir. Bu tahriratta ağnam resmi ödemelerinin taksit sürelerinin bitiş tarihinden beş gün sonra, haziranın on beşine kadar tamamen tahsil edildiği konusunda bilgilendirme yapılmıştır. Ayrıca ağnam memurların tahsilat işlemleri için %20 oranında tahsildariye geliri elde ettiklerini, bununla alakalı lahika olduğunu yazısına eklemiştir. Canavar resminde de bu uygulamanın hayata geçirilmesinin uygun maslahat olacağını iletmiştir (BOA, ŞD.: 371/30). Bu sayede ağnam resminde olduğu gibi canavar resminde de bakayaların azalması ve gelir artışlarının yaşanması öngörülmüştür.

Mustafa Vasfi Efendi'nin önerileri 3 Temmuz 1897'de Şura-yı Devlet Maliye İdaresi'ne, 13 Temmuz 1897'de Sadaret'e ulaşmıştır. 14 Temmuz 1897 tarihinde Serkatip Tahsin bu belgeyi cevaplamış, konu daha sonra padişaha arz edilmiştir (BOA, İ..ML.: 22/28; BOA, BEO, 980/73450). Mustafa Vasfi Efendi'nin tavsiyelerinin uygulandığına yönelik belgelere ulaşamamıştır.

Bakayaların memurlara verilen maaşlarla ilgili olduğunu destekleyen başka örnekler bulunmaktadır. Maliye Nezareti'nden gelen tahrirata göre görevlilere 100 kuruşta 20 para tahsildariye ödemesi yapılmalıdır. Selanik Vilayeti Defterdarlığı bu konunun yeniden gözden geçirilmesini talep etmiş, tahsildariye ödemelerine dair Rumeli Vilayeti Müfettiş Umumiliği'ne yazı yazmıştır. Çünkü tahsilatlarda ulaştırma masrafları bulunmaktadır ve görevlilerin tahsilat işlemleri için vesait tedarik etmeleri gerekmektedir (BOA, TFR.I.SL.: 87/8628). 100 kuruşta 20 para ödenmesi %2 seviyesine denk gelmektedir.

Tahsildariye ödemelerinin azlığı tahsilat memuru bulmada zorluklara da neden olmuştur. Manastır Defterdarlığı'na gönderilen belgede maaşlar %2 seviyesinde belirlenmişken sayım masraflarının %2.5 oranında gerçekleştiği belirtilmektedir (BOA, TFR.I..MN.: 149/14860). Bu halde sayım memurlarının yaptıkları işten gelir elde etmesi mümkün olmayacaktır.

Selanik Defterdarlığı'na yazılan belgede de aynı sorun dile getirilmiştir. Bu belgeye göre, tahsilattan ayrılacak %10'luk pay sayım memurlarının, emval tahsildarlarının ve muhtarların harcamalarını karşılamayacaktır. Bu kişiler tahsilatlar için 40 gün kadar köylerde beklemekte, işin tamamlanabilmesi için harcamalar yapmaktadır. Ancak belirlenen oranların değiştirilmesi kabul edilmemiş ve kararların idare-i maslahat olduğu söylenmiştir (BOA, TFR.I.SL.: 167/16601).

Canavar resminde yaşanan tahsilat sorunlarının ağnam resmi ile karşılaştırmalı olarak verilmesi konunun izahını somutlaştıracaktır. Bu amaçla hazırlanan Tablo 3'te 1903-1904 ve 1904-1905 yıllarına ait Selanik, Manastır ve Kosova Vilayetleri'nin ağnam ve canavar resmi verileri yer alacaktır. Her bir vilayet ve vergi geliri başlığı için tahakkuk, geçmiş ve cari yıl tahsilat miktarları kuruluş cinsinden ifade edilecektir. Tahsilatların başarısını ölçmek için yıllık tahsilat miktarları tahakkuk başlığına bölünecek ve çıkan oran yüzde olarak ifade edilecektir.

Tablo 3: 1903-1904 ve 1904-1905 Mali Yıllarında Selanik, Manastır, Kosova Vilayetleri Ağnam ve Canavar Resmi Bilgileri

Selanik Vilayeti	1903-1904			1904-1905		
	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)
Ağnam Resmi	14.443.160	14.438.853	%99	14.048.706	14.048.045	%99
Canavar Resmi	517.430	327.996	%63	486.790	199.735	%41
Manastır Vilayeti	1903-1904			1904-1905		
	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)
Ağnam Resmi	7.877.861	7.551.552	%95	7.290.210	6.865.784	%94
Canavar Resmi	533.540	376.205	%70	269.745	233.068	%86
Kosova Vilayeti	1903-1904			1904-1905		
	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)	Tahakkuk (Aslı)	Geçmiş ve Cari Yıl Tahsilatı	Tahsilat/Tahakkuk (%)

	Tahsilatı			Tahsilatı		
Ağnam Resmi	7.184.461	6.777.979	%94	6.916.417	6.516.202	%94
Canavar Resmi	541.020	322.832	%59	465.210	247.189	%53

Kaynak: Bayraktar, (2014: 10-12).

Tablo 3'te aktarıldığı üzere, her bir vilayet ve ilgili yıllar için ağnam resmi tahsilat başarısı canavar resmine göre daha yüksektir. Bir diğer ifade ile canavar resminden elde edilen yıllık gelirler tahakkuk miktarının çok gerisinde kalmış, tahsilat süreçleri iyi yönetilememiştir. Tahsilat miktarının tahakkuka oranı ağnam resminde en düşük %94 oranında gerçekleşmiştir. Canavar resminde ise en iyi oran 1904-1905 yılı için Manastır Vilayeti'nde gerçekleşmişse de bu rakam belirtilen üç vilayet özelinde %41'lere kadar gerileyebilmiştir. Bu sonuçlarda yukarıda örneklenen sorunların etkili olduğu çıkarımı yapılabilir.

Canavar resminin tahsilatı her dönemde tahsilat memurları ile yapılmamıştır. Maliye Nezareti'ne iletilen evrakta canavar sayımı zamanının yaklaştığı bildirilmiştir. Gerekli işlemlerin ağnam resminde olduğu gibi vergi tahsildarları ile mi yoksa önceden yapıldığı gibi muvakkat yani geçici memurlarla mı yapılacağı sorulmuştur. Bu soruya verilen cevapta geçici memurların istihdam edileceği bildirilmektedir. Vazifenin tahsildarlara verilmesi tahsilat sürecinde aksamalara neden olabilecektir (BOA, TFR.I.UM.: 14/1376).

1906 yılında vergi miktarlarında yaş-ay hesabının yapılması sayım işlemlerini olumsuz etkilemiştir. Bu sebeple memurlar ek sorumluluklar üstlenmiştir. Bazı mahallerde sayımların tekrarı için ikinci kez köylere gidilmiştir. Ayrıca, sayımlarda canavar yavrularının kaç aylık olduğuna dair belirsizlikler yaşanmıştır. Selanik Defterdarlığı'ndan Selanik Vilayeti Müfettişliği'ne yazılan belge buna örnek gösterilebilir. Burada 5-6 kazada yavruların sayımlarda ayrılması istenmiş, sayımı yapılan yerlerde ise 3 aydan küçük yavruların yoklamalardan çıkarılması talep edilmiştir (BOA, TFR.I.SL.: 91/9086). Bu isteğe bağlı olarak sayımların ve ilgili tutanakların yeniden düzenlenmesi gerekecektir. Memurların 3 aydan küçük yavruları ayırmak üzere tekrar köylere gönderilmesi durumu Rumeli Vilayeti Müfettiş Umumiyesi'ne gönderilen belgede de bulunmaktadır. Bu işlemler padişahın emri üzerine yapılmaktadır (BOA, TFR.I.SL.: 94/9301).

Manastır Vilayeti'nde 3 aydan küçük olduğu kabul edilen yavruların bir ay sonraki sayımda 3 aylıktan fazla olduğu tespit edilmiştir. Görevli memurlar bu hayvanların mektum olduğunu iddia etmiş, sahiplerine verginin iki katı kadar ceza ödetmek istemiştir. Muhtarlar bu durumu ilgili makamlara şikayet etmiş, bunun üzerine 3 aydan küçük yavruların da kayıtlarının yapılması kararlaştırılmıştır (BOA, TFR.I.MN.: 149/14860). Alınan bu karar hayvan sayım süresinin uzamasına, buna bağlı olarak masrafların artmasına sebep olacaktır.

Tahsilatlarda yolsuzluklar da yaşanmıştır. Bununla ilgili belgede Çatalca Oklağı karyesi muhtarı Aristi'nin canavar resminden zimmetine para geçirdiği yazmaktadır. Aristi'ye Ceza Kanunu'nun 90. maddesi gereğince 3 ay hapis cezası verilmiştir. Ayrıca Aristi'den zimmetine geçirdiği paranın iki katı da alınacaktır (BOA, DH.MKT.: 1810/133).

Cuma-i Bala kazasında da sayım memuru İstöl ve katibi Veli Efendi kasten hile yaptıkları gerekçesiyle sorgulanmıştır. Meclis-i İdare-i Kaza 3 ay mahkumiyetlerine karar vermiştir. Bu dava daha sonra Mahkeme-i İdare-i Liva'da istinafen yeniden görülmüştür. 11 adet canavarın kötü maksatla kayıtlarının yapılmadığı karara bağlanmıştır. Ceza Kanunu'nun 102. maddesinin ilk fıkrasına atfen 1 maaş miktarı para cezası alınmasına ve vergi borcunun bir katı olan 110 kuruşun suçlular tarafından ödenmesine hükmedilmiştir (BOA, TFR.I.SL.: 116/11527).

5. SONUÇ

Canavar resmi ile Osmanlı Devleti'nde yaşayan gayrimüslim hayvan sahipleri vergilendirilmiştir. Verginin konusu, yetiştiriciliği yapılan domuzlardır. Bu vergi türü klasik dönem Osmanlı Devleti'nde de tahsil edilmiş, Osmanlı Kanunnameleri'nde yer almıştır. Tanzimat Fermanı'ndan önce tahsilatından vazgeçilmişse de sonradan tekrar yürürlüğe dahil edilmiştir.

Canavar resminin II. Abdülhamit dönemi bütçelerindeki görünümü Tablo 1'de aktarılmıştır. Bu bilgilere göre, tahsilatın gerçekleştiği yıllarda canavar resmi gelirleri toplamı adi bütçe gelirleri içinde çok küçük bir orana sahip olmuştur. Bu yönüyle önemli gelir kalemleri arasında yer almadığı tespit edilmiştir. Ayrıca, bütçelerde tahakkuk ve tahsilat verileri her yılda bulunmamaktadır.

19. yüzyıl boyunca vergi miktarı 3-10 kuruş arasında değişiklik göstermiştir. II. Abdülhamit döneminde de miktar bakımından benzerlik söz konusudur. Bu dönemde, 1906 yılında, alınan kararla domuzlardan ay-yaş hesabına göre vergi alınmıştır. Vergi miktarı farklılaşmasında hayvanların piyasa değerleri hesaba katılmıştır.

Ödenecek vergi miktarının tespit edilmesi için hayvanların sayımı yapılmıştır. Burada uygulanacak usul ve esaslar ağnam vergisi çerçevesinde belirlenmiştir.

Tahsilatlarda çeşitli masraflar, kaynağı bilinmeyen noksanlıklar ve bakayalar temel sorunları temsil etmektedir. Özellikle bakayalar örneğinde aktarılan arşiv belgeleri tahsilat süreçlerindeki problemleri aktarmaktadır.

Tahsilat memurlarına ödenen maaşların gerektiği düzeyde tespit edilmemesi vergilemede aksamalara neden olmuştur. Öyle ki, bu oranlar neredeyse mevcut masrafları karşılamayacak düzeydedir. Bu sorunun somut hali Tablo 3'te gösterilmiştir. Canavar resmi ve ağnam resminin karşılaştırmalı analizine bakılacak olursa ağnam resminde bir tahsilat başarısı, canavar resminde ise bir tahsilat başarısızlığı ortaya çıkmaktadır.

Özet: Çiftçi Kayıt Sistemi (ÇKS) ile ilgili iş ve işlemler, 27 Mayıs 2014 tarihli ve 29012 sayılı Resmî Gazete’de yayımlanan ÇKS Yönetmeliği hükümleri kapsamında yapılmaktadır. Konuyla ilgili olarak 23 Eylül 2023 tarih ve 31962 sayılı Resmî Gazete’de ÇKS Yönetmeliğinde yapılan değişiklik neticesinde 1 Ekim 2022 tarihi itibarı ile e-devlet üzerinden üreticilerin ÇKS’ye başvuru yapmaları sağlanmıştır. Üreticilerin üretim planını belirlemekle beraber yararlanmak istedikleri tarımsal desteklemeler arasında köprü görevi yapan ÇKS önemli bir veri tabanıdır. Mevcut ÇKS’nin üretici açısından yoğun bir iş yükü ve bürokrasi oluşturması tarımsal desteklemelerden faydalanma etkinliğini düşürmektedir. Bu çalışma ile e-devlet üzerinden yapılan başvuruların ve resmî kurumlardaki işleyiş akışında oluşan değişikliğin, üretici açısından ne gibi bir etki yarattığı tespit edilmiş ve sistemin aksayan yönleri ile ilgili öneriler geliştirilmiştir. Araştırmanın ana materyalini Çanakkale İli Ezine İlçesindeki toplam 2172 çiftçiden ÇKS’ne e-devlet üzerinden başvuran 526 üreticiden oransal örnekleme yolu ile belirlenen 100 üretici ile yapılan anketler oluşturmaktadır. Anketlerden elde edilen veriler temel istatistikler ve skor analizleri yapılarak değerlendirilmiştir. Araştırma Ezine İlçesindeki 50 Adet köyü/mahalleyi kapsamaktadır. Araştırmadan elde edilen sonuçlara göre üreticilerin tamamının sistemden memnun olduğu, %40,0’nın çeşitli nedenlerle süreci tamamlayamadığı tespit edilmiştir. Sistemin işleyişinde çeşitli kurumların desteklerinin artırılması, görsel materyal, online destek ve eğitim videolarıyla sistemin desteklenebileceği önerilmiştir.

Anahtar Kelimeler: Çiftçi Kayıt Sistemi (ÇKS), e-devlet, desteklemeler, Çanakkale, Türkiye.

1. GİRİŞ

Tarım sektörünün yapısal özelliklerinden dolayı, tarımsal gelirin diğer sektörlerle göre düşük, fakat tarımsal ürünlerin stratejik bir öneme sahip olması, bu sektörün destekleme politikaları ile desteklenmesini gerektirmektedir. Destekleme politikaları ile üretimi yönlendirme, üretimde devamlılığı ve kalitede iyileştirme sağlama, üretimde verimliliği artırma ve alternatif üretim yöntemleriyle yeni ürün çeşitliliğini geliştirme amaçlanmaktadır (Yavuz vd., 2004). Her ülkede olduğu gibi Türkiye’de de verilen desteklemeler için kontrol mekanizmasının oluşturulması gerekmektedir. Diğer bir ifade ile destekleme için ayrılan kaynakların etkin kullanılıp kullanılmadığı, mevcut destekleme politikalarının amacına ulaşıp ulaşmadığı, üreticilere yeterli ve etkin destek sağlanıp sağlanmadığının ölçülmesi gerekmektedir. Bu sayede uygulanan politikaların iyileştirilmesi ve faydasının artırılması mümkün olacaktır (Demirdöğen, 2018).

Bu bağlamda Türkiye Cumhuriyeti’nin kurulduğu yıllardan itibaren ve özellikle de 1963 yılından itibaren Planlı Dönemle birlikte tarım ürün destekleri, fiyat destekleri, girdi destekleri ve diğer çok amaçlı desteklerle sürekli desteklenmiştir. Dünyadaki küreselleşme tüm dünyada olduğu gibi Türkiye’de de tarım politikalarında reform eğilimlerini oluşturmuştur. Türkiye’de tarım politikalarında reform uygulamalarına geçişte en önemli adım Dünya Bankasıyla yapılan “Ekonomik Reform Kredisi Anlaşması” kapsamında uygulanmaya başlayan “Tarım Reformu Uygulama Projesi–ARIP” dir (Tan vd., 2010). Bu proje ile Türkiye’de ki tüm tarımsal destekler tek çatı altında toplanmasına karar verilmiş ve o yıllarda Doğrudan Gelir Desteği (DGD) ile birlikte Çiftçi Kayıt Sistemi (ÇKS) uygulanmaya başlamıştır. Dolayısıyla ÇKS Tarım ve Orman Bakanlığı’nın çiftçileri kayıt altına aldığı bir veri tabanı olup aynı zamanda tarımsal destekleme ödemelerinin yapılmasında köprüdür. Tarımda çok önemli bir veri tabanı olan ÇKS’nin işleyişi 27 Mayıs 2014 tarihli ve 29012 sayılı Resmî Gazete’de yayımlanan ÇKS Yönetmeliği hükümleri kapsamında yapılmaktadır (RG, 2014). Bununla birlikte mevcut uygulamanın üretici açısından yoğun bir iş yükü, bürokrasi ve tarımsal desteklerden faydalanma etkinliğini düşürmesi gerçeğinden yola çıkarak ÇKS yönetmeliğinde 23 Eylül 2022 tarih ve 31962 Sayılı Remi Gazetede yapılan değişiklik neticesinde, Ekim 2022 tarihinden itibaren ÇKS’ne başvuruların e-devlet üzerinden yapılmasına karar verilmiştir (RG, 2022). Bu değişikliğin temel amacı ise tarımsal desteklemelerin etkinliğinin artırılması ve dijitalleşme ile e-devlet uygulamasının Tarım Bilgi Sistemi (TBS)’ne entegre edilmesi ve üretici odaklı bir başvuru düzeni oluşturulmasıdır. Bu şekilde tarımdaki veri sistemlerinin sağlıklı bir şekilde olması çalışmanın önemini ortaya koymaktadır. Nitekim tarım işletmelerinin faaliyetleri sonucunda kaynakları etkin kullanıp kâr elde edip etmediğini belirlemek için üretimde kullanılan faktörlerle bu faktörler için yapılan masraflar ve elde edilen üretim değerinin hesaplanması gerekmektedir (Çelik, 2014).

Bir tanıma göre e-devlet; kullanıcıların elektronik ortamda sunulacak kamu hizmetlerine farklı platformlardan, güvenilir şekilde ve tek noktadan erişebilecekleri, vatandaş ve iş dünyasının ihtiyaçlarına odaklanmış, birlikte işler ve bütünleşik hizmetlerin sunulacağı, katılımcı, şeffaf ve hesap verebilir bir devlet yapısını ifade etmektedir. Bu yapısı ile e-devlet, daha etkin ve etkili kamu yönetimine ulaşma konusunda en önemli araçtır (DPT, 2009). Dolayısıyla tüm dünyada yaşanan teknolojik ve bilimsel değişimler kamu yönetimini etkilemekte ve kamu yönetimi sürekli kendini yenileme eğilimine girmektedir. Özellikle küreselleşmenin etkisiyle; toplumların devletlerden beklentileri artmış, bu durum devletlerin kamu hizmetlerinin sunumunda farklı yollar ve hizmetlere başvurması sonucunu da beraberinde getirmiştir (Çakır, 2015).

Bu çalışma ile Çanakkale ili Ezine ilçesinde bulunan üreticilerin ÇKS'ne e-devlet aracılığı başvuruları konusundaki genel eğilimleri ve görüşlerinin incelenmesidir. Böylelikle yeni uygulamanın güçlü ve zayıf yanları ele alınarak sistemin iyileştirilmesi yönünde öneriler geliştirilebilecektir. Araştırma sonucunda elde edilecek bulgular ile ÇKS'ne e-devlet üzerinden başvurmanın üreticinin hayatını kolaylaştırıcı etkisinin olup olmadığı, Bürokrasiyi minimum düzeye indirmenin üretici üzerindeki etkisinin tespiti, e-devlet ile başvuru yapılabilmesinin sürdürülebilir etkilerinin tespiti, üreticilerin e-devlet uygulamasını tercih etmelerinin kurumlardaki iş yüküne etkisi, üreticinin e devlet üzerinden ÇKS'ye başvurularının dışında diğer tarımsal desteklere de online olarak başvuru yapıp yapılamayacağı konusunda fikir vermesi, ÇKS başvuru sürecinde e-devlet sisteminin kullanılabilir olmasının tarımsal desteklemelerin etkinliğini artırıcı katkı sağlayıp sağlamadığı yönünde bir sonuçlar değerlendirilmiştir.

Tarımsal desteklemeler açısından temel veri tabanı niteliğinde olan Çiftçi Kayıt Sisteminin (ÇKS) işleyişi ile ilgili daha önce bazı çalışmalar yapılmıştır. Ancak sisteme e-devlet üzerinden yapılan kayıtların üreticiler açısından değerlendirildiği bir çalışma henüz yapılmamıştır. Dolayısıyla tarımsal desteklemelerin belirleyici bir dinamiği olan ÇKS'ne e-devlet üzerinden yapılacak kayıtların desteklemeler üzerine etkisini inceleyecek bu çalışmanın literatüre, bölgedeki paydaşlara ve politika belirleyicilere ışık tutması beklenmektedir.

2. MATERYAL VE YÖNTEM

Çalışmanın ana materyalini, Çanakkale ili Ezine ilçesinde ÇKS'ne e-Devlet uygulaması üzerinden kaydolan üreticilerden anket yolu ile elde edilen birincil nitelikli veri kaynakları oluşturmaktadır. Ek olarak konuyla ilgili çeşitli bilimsel çalışmalar da araştırmanın ikincil nitelikli veri kaynaklarını oluşturmaktadır.

Anket yapılacak üretici sayısı ÇKS'ne e-Devlet uygulaması üzerinden kaydolan 526 üreticiden Oransal Örneklem Yöntemiyle belirlenmiştir. Örneklem sürecinde ortalamadan izin verilen hata payı %10 ve %95 güven derecesinde çalışılmıştır. Anket yapılacak örnek hacminin hesaplanması aşağıdaki formül yardımıyla bulunmuştur (Kızıloğlu ve Kızıloğlu, 2013).

$$n = \frac{NP(1 - P)}{(n - 1)\sigma_p^2 + p(1 - p)}$$

Eşitlikte; n anket yapılacak e-devlete başvuru yapan kişi sayısını, N ana kitlede bulunan ÇKS'ye kayıtlı üretici sayısı, p tahmin oranı (0,50 maksimum örnek büyüklüğü için), σ_p^2 oran varyansını ifade etmektedir. Yapılan örneklem sonucunda örneğe çıkan üretici sayısı 82 olup 100 üreticiye tamamlanmıştır. Anketten elde edilen veriler tamamlayıcı istatistikler ve skor analizleri ile değerlendirilmiştir.

3. ARAŞTIRMA BULGULARI

3.1. Genel Bulgular

Çalışma kapsamında yapılan ankete katılan üreticilerin yaş, eğitim, sosyal güvence durumu, tarım dışı gelir durumu, tarımla uğraşma ve ÇKS'ne kayıt olma yılları genel bulgular olarak incelenmiştir. Bu kapsamda araştırmaya dahil olan üreticilerin yaş ortalamaları 46,34 olup, en genç üretici 20 yaşında en yaşlı üretici 78 yaşındadır (Tablo 1). Bu değerler popülasyonumuz ortalama yaş ağırlığı orta yaş grubunu temsil ettiğini göstermektedir.

Tablo 1: Üreticilerin Yaş Ortalamaları

Yaş (yıl)	Ortalama	Standart sapma	Minimum	Maksimum
	46,34	12,955	20	78

Üreticilerin büyük bir kısmı (%33,0) lise mezunu iken bunu lisans (%30,0), ilkokul (%18,0) ve ön lisans (%10,0) eğitimi alanlar takip etmektedir. Lisan üstü eğitim alanların, ortaokul mezunlarının ve sadece okur yazar olanların oranı ise (%3,0) olarak belirlenmiştir. Üreticiler arasında okur yazar olamayan olmadığı tespit edilmiştir. Ankete katılan üreticilerin %89,0'u sosyal güvenceye sahip, %11,0'i ise sahip olmadığını ifade etmiştir. Sosyal güvenceye sahip olanların %43,0'ü SSK, %38'i bağkur, %8,0'i emekli sandığı olarak belirtmiştir (Tablo 2).

Tablo 2: Üreticilerin Eğitim Durumuna Göre Dağılımları

	Frekans	Yüzde
Okur-yazar	3	3,0
İlkokul	18	18,0
Ortaokul	3	3,0
Lise	33	33,0
Ön lisans	10	10,0
Lisans	30	30,0
Lisansüstü	3	3,0
Toplam	100	100,0
Üreticilerin Sosyal Güvence Durumu		
	Frekans	Yüzde
Sosyal güvencesi olan	89	89,0
Sosyal güvencesi olmayan	11	11,0
Toplam	100	100,0
Sosyal Güvence Türü		
	Frekans	Yüzde
SSK	38	43,0
BAĞ-KUR	34	38,0
Emekli sandığı	7	8,0
Diğer	10	11,0
Toplam	89	100,0

Üreticilerin çoğunluğu kendi mülkleri üzerinde tarımsal faaliyet yapmaktadır. Ortalama işletme büyüklüğü 111,97 da olup, en küçük işletme 5 da. iken en büyük işletme ise 768 da. Olarak belirlenmiştir (Tablo 3).

Tablo 3: Üreticilerin Mülkiyet Durumuna Göre Toplam Arazi Varlığı (da)

	Ortalama	Standart sapma	Minimum	Maksimum
Kendi (da)	56,66	105,467	1	764
Kiralık (da)	80,1	90,386	4	500
Ortakçılık (da)	58,5	58,69	17	100
Toplam (da)	111,97	137,064	5	768

Ankete katılan üreticilerin 94'ü tarım dışı gelirlerinin olduğunu ifade etmiştir. Tarım dışı geliri olan üreticiler sırasıyla %41,5'i maaş geliri, %26,6'sı emekli geliri, %8,5'i kira geliri, %13,8'i diğer farklı gelirleri, %9,6'sı ise sayılan bu maddelerden birkaçına sahip olduğunu belirtmiştir (Tablo 4).

Tablo 4: Üreticilerin Tarım Dışı Gelir Durumu

	Frekans	Yüzde
Maaş geliri olan	39	41,5
Emekli maaş geliri olan	25	26,6
Kira geliri olan	8	8,5
Diğer geliri olan	13	13,8
Birden fazla gelir	9	9,6
Toplam	94	100,0

Üreticilerin ortalama tarımsal faaliyet yapma süresi 20,45 yıl olarak belirlenmiş, anket yapılan üreticilerin minimum 2 yıl maksimum 60 yıldır tarımla uğraştıkları tespit edilmiştir. Diğer taraftan ÇKS'ne üyelik süresi minimum 1 yıl, maksimum 15 yıl olmak üzere ortalama 6,83 yıl olarak hesaplanmıştır (Tablo 5).

Tablo 5: Tarımsal Faaliyet Süresi ve ÇKS'ye Üyelik Süresi

	Ortalama	Standart sapma	Minimum	Maksimum
Tarım yapma süresi (yıl)	20,45	14,393	2	60
ÇKS kayıtlı olma (yıl)	6,83	3,188	1	15

3.1. ÇKS ve e-Devletle İlgili Bulgular

Çiftçi Kayıt Sistemine üye olmak için Ziraat Odası kayıt şartı arandığı için katılımcıların tamamı Ziraat Odasına kayıtlıdır. Katılımcıların yarıdan fazlası Ziraat Odasından memnun olduğunu belirtirken, %27,0'si kararsız olduğunu, %18,0'i memnun olmadığını, %3,0'u ise hiç memnun olmadığını ifade etmişlerdir (Tablo 6).

Tablo 6: Ziraat Odasından Memnun Olma Durumu

	Frekans	Yüzde
Çok memnun olan	5	5,0
Memnun olan	47	47,0
Kararsız	27	27,0
Memnun olmayan	18	18,0
Hiç memnun olmayan	3	3,0
Toplam	100	100,0

ÇKS'ne kayıtlı olan her üretici mazot gübre desteğinden doğrudan faydalandırılmaktadır. Bu yüzden katılımcıların tamamı mazot gübre desteğinden yararlanmış olup ortalama yararlanılan alan 102,69 da olup, üreticilerin %9,0'u bu destekten memnun, %8,0'i kararsız, %63,0'u memnun olmadığını, %20,0'si %83'ü ise hiç memnun olmadığını ifade etmiştir (Tablo 7).

Tablo 7: Mazot Gübre Desteği (Alan)

	Ortalama	Standart sapma	Minimum	Maksimum
Mgd yararlanılan alan (da)	102,69	128,998	5	750
Mazot Gübre Desteğinden Memnuniyet Durumu				
	Frekans			Yüzde
Çok memnun olan				
Memnun olan	9			9,0
Kararsız	8			8,0
Memnun olmayan	63			63,0
Hiç memnun olmayan	20			20,0
Toplam	100			100,0

Üreticilere e-devlet sistemine rahatlıkla ulaşabilmeleri açısından bilgisayarları olup olmadığı sorulmuş ve hepsi en azından akıllı telefon aracılığı ile e-devlete girebildiğini belirtmiştir. Diğer taraftan üreticilerin %80,0'i aktif internet kullandığını, %8,0'i kullanmadığını, %12,0'si ise ara sıra kullandığını belirtmiştir.

Tablo 8: Aktif İnternet Kullanım Durumu

	Frekans	Yüzde
Aktif kullanan	80	80,0
Aktif kullanmayan	8	8,0
Bazen kullanan	12	12,0
Toplam	100	100,0

e-Devlet Kullanım Durumu

	Frekans	Yüzde
e devleti kullanan	85	85,0
e-devletle ilk defa karşılaştım	8	8
e-devleti kullanmayan	7	7,0
Toplam	100	100,0
e-Devlet Kullanımında Yardım Alma Durumu		
	Frekans	Yüzde
Yardım alanlar	51	51,0
Yardım almayanlar	49	49,0
Toplam	100	100,0
e-devlet sisteminden ÇKS Belgesi alma durumu		
	Frekans	Yüzde
Dijital ÇKS alan	51	51,0
Dijital ÇKS almayan	49	49,0
Toplam	100	100,0

Yine bu üreticilerin %85,0'i e-devleti kullandıklarını, %8,0'i e-devlet sistemi üzerinden ÇKS'ne başvuru yapmak sayesinde e-devlet ile ilk kez tanışma fırsatı bulduğunu %7,0'si ise kullanmadığını ifade etmiştir. Ayrıca üreticilerin %51,0'i e-devlet üzerinden ÇKS'ne üye olurken yardım aldığını %49,0'u ise yardım almadığını belirtmişlerdir (Tablo 8).

Üreticilerin %51,0'lik kesim e-devlet sistemi üzerinden dijital barkodlu ÇKS Belgesine ulaşarak bu belgenin iş ve işlemlerini kolaylaştırdığı sonucuna varılmıştır. Üreticiler ücretsiz yaralandıkları bu hizmet sayesinde kurumlardaki işlemlerini pratik bir şekilde halledebilme imkânı bulmuşlardır. Elde edilen bu bulgular ankete katılan katılımcıların teknolojiye yararlanabilme durumları oldukça yüksek, internete ulaşma konusunda problem yaşamadıklarını göstermektedir. Üreticilerin yarısından fazlası e-devlet üzerinden ÇKS başvurularını yaparken ilçe müdürlüğü personeli, torun, internet bilen bir yakını gibi kaynaklardan yardım aldığını, buna rağmen bu şekilde başvurunun bürokrasiyi %100 azalttığını, gelecek üretim sezonu için yeniden dijital sistemi kullanacaklarını ifade etmişlerdir.

Ankete katılan üreticilerin %60,0'ı e-devlet üzerinden ÇKS kaydını tamamlayabildiğini, %40,0'ı ise tamamlayamadığını belirtmiş olup, e-devlet sisteminden ÇKS belgesi alma nedenlerini sırasıyla bankaya kredi başvurusu işlemleri (%64,7), tarım kredi işlemleri (%23,6), destek başvuruları (%9,8) ve yağlı tohumlar desteği (%1,9) amacıyla kullandıklarını belirtmiştir. Üreticilere e-devletten başvuru hakkında kimden bilgi aldıkları sorulmuş, sırasıyla il ve İlçe Müdürlükleri (%40,0), çevre, tanıdık, eş, dost (%29,0), internet bilgi kaynakları (%25,0), görsel basın (%7,0) şeklinde bilgi verilmiştir. Diğer taraftan üreticilerin %46,0'sı dijital uygulamaların devam etmek istedikleri, %29,0'u istemediğini ve %25,0'i de bu konuda kararsız olduklarını ifade etmişlerdir (Tablo 9).

Tablo 9: e-Devlet Sisteminden ÇKS Kaydını Tamamlama Durumu

	Frekans	Yüzde
Tamamlayan	60	60,0
Tamamlamayan	40	40,0
Toplam	100	100,0
e-Devlet sisteminden ÇKS Belgesi Alma Nedeni		
	Frekans	Yüzde
Bankaya kredi başvuru	33	64,7
Tarım kredi	12	23,6
Destek başvuru	5	9,8

Dijital uygulamalar devam etmesin	29	29,0
Kararsız	25	25,0
Toplam	100	100,0

Anket verilerinden elde edilen bulgular ışığında üreticilere e-devlet üzerinden ÇKS'ni neden tamamlayamadıkları sorulmuş, yapılan skor analizinde birinci sırada kira sözleşmesinin bitmesi, ikinci sırada sisteme ikinci ürün ekleyememe, üçüncü sırada parsel ekleme ve çıkarma ile ilgili sorunlar, dördüncü sırada başvuru zorluğu ve karmaşıklığı, beşinci sırada internet bağlantısı sorunları ve altıncı sırada ise bilgisayar veya telefon yokluğu şeklinde bir sıralama yapılmıştır (Tablo 10). Üretim sezonunda beyan edilen ürün desenine ikinci ürünü ekleyememe, kişinin sahip olduğu parsellere yenisini ekleme ya da var olanı çıkarma işlemini e-devlet sistemi üzerinden tamamlayamadıkları için başvurularını Tarım İlçe Müdürlüğü üzerinden tamamlamak zorunda kalmışlardır.

Tablo 10: e-Devlet Sisteminden ÇKS Kaydını Tamamlayamama Sebepleri

	Skor	Yüzde	Sıralama
Başvuru zor ve karmaşık	83	14,02	4
İnternet bağlantım yetersiz	42	7,09	5
Bilgisayar yokluğu	32	5,41	6
Kira sözleşmesi bitmesi	162	27,36	1
Sisteme ikinci ürün ekleyememe	140	23,65	2
Parsel ekleme/çıkarma	133	22,47	3
Toplam	592	100,0	

Çanakkale Ezine İlçesinde ankete katılan üreticilerin e-devlet üzerinden ÇKS'ne başvuru yapmanın kolaylıkları sorulmuş ve yapılan skor analizlerinde birinci sırada muhtar, aza imzasının olmayışının işlemleri hızlandığı, ikinci sırada bulunduğu yerden başvurunun kısa zaman alması, üçüncü sırada Ziraat Odasına gitme zorunluluğunun olmamasını, dördüncü sırada daha düşük ücret ödendiğini, kolaylaştırıcı faktörler arasında sıralamıştır. Üreticilerin %6,73'ü ise bu işlemin herhangi bir kolaylık sağlamadığını belirtmiştir (Tablo 11).

Tablo 11: e-Devlet ile ÇKS'ne Başvuru Yapmanın Sağladığı kolaylıklar

	Skor	Yüzde	Sıralama
Muhtar, aza imzası olmaması işlerimi hızlandırdı	454	30,27	1
Bulunduğum yerden başvuru kısa zaman aldı	439	29,27	2
Ziraat odasına gitmek zorunda kalmadım	303	20,2	3
Daha az ücret ödedim	203	13,53	4
Değişen bir şey olmadı/kolaylık sağlamadı	101	6,73	5
Toplam	1500	100,0	

Uygulamada 2023 yılı itibarıyla ÇKS'ne e-devlet sistemi üzerinden başvuru imkanı sağlanmasının yanında mazot gübre desteği de üreticilerin hesabına nakit olarak değil anlaşmalı işyerlerinden mazot-gübre alışverişlerinde harcamaları şartıyla hesaplarına tanımlanmıştır. Mevcut desteklemeler arasında ÇKS'nin en yaygın olarak kullanıldığı Mazot-Gübre desteği ile ilgili üretici görüşleri sorulmuş yapılan skor analizinde üreticiler birinci sırada mazot gübre desteğinin para olarak ödenmesini, ikinci ve üçüncü sırada Mazot-Gübre fiyatlarındaki dengesizliklerin ödenen desteği yetersiz bıraktığını, dördüncü sırada dosya başvuru ücretinin desteklemeden kesilmemesini ve beşinci sırada ise karta yüklenen desteğin mazot gübre dışında kullanamama zorluklarından bahsetmişlerdir. Desteğe başvuru dönemini kapsayan 1 Eylül-31 Aralık tarihleri arasındaki 4 aylık süre ile ilgili olarak üreticilerin %70,0'i bu sürenin yeterli olduğunu, %30,0'u ise yeterli olmadığını belirtmiştir (Tablo 12).

Tablo 12: Mazot Gübre Desteği Ödemesi ve Başvuru Süresi Nasıl Olmalı?

	Skor	Yüzde	Sıralama
Mazot gübre desteği para olarak ödenmelidir	445	30,29	1
Mazot fiyatlarındaki dengesizlik ödenen desteği yetersiz bırakıyor	398	27,09	2
Dosya başvuru ücreti destekleme ödemesinden kesilmemeli	176	11,98	4
Gübre fiyatlarındaki dengesizlik ödenen desteği yetersiz bırakıyor	295	20,08	3
Karta yüklenip mazot gübre haricinde kullanamama	155	10,55	5
Toplam	1469	100,0	
1 Eylül - 31 Aralık (4 aylık) Başvuru Süresi Değerlendirme			
	Frekans	Yüzde	
Süre yeterli	70	70,0	
Süre uzatılmalı	30	30,0	
Toplam	100	100,0	

Ankete katılan üreticilere ÇKS'ne e-devlet üzerinden başvuru sürecinde sistemsel olarak karşılaşılan sorunlar ve çiftçi önerileri sorulmuş yapılan skor analizinde birinci sırada İl/İlçe Müdürlüklerince çiftçi eğitimi/bilgilendirme yapılmalıdır ve görsel videolar ile sisteme başvuru anlatılmalıdır önerileri gelmiştir. İkinci sırada başvuru aşamaları kolaylaştırılmalı, üçüncü sırada Ziraat Odaları üreticilere destek olmalı, dördüncü sırada online çağrı merkezi ile sistem desteklenmeli önerileri gelmiştir (Tablo 13).

Tablo 13: ÇKS'ne e-Devlet Başvuru Aşamasında Eksiklikler ve Öneriler

	Skor	Yüzde	Sıralama
Online çağrı merkezi ile sistem desteklenmelidir	78	16,56	4
Ziraat Odaları üreticiye destek olmalıdır	97	20,59	3
İl/İlçe Müdürlüklerince çiftçi eğitimi/bilgilendirme yapılmalıdır	99	21,02	1
Görsel videolar ile sisteme başvuru anlatılmalıdır	99	21,02	1
Başvuru aşamaları kolaylaştırılmalıdır	98	20,81	2
Toplam	471	100,0	

4. SONUÇ VE ÖNERİLER

Çiftçi Kayıt Sistemi (ÇKS) Tarım ve Orman Bakanlığı'nın çiftçileri kayıt altına aldığı bir veri tabanı olup aynı zamanda tarımsal destekleme ödemeleri ÇKS üzerinden yapılmaktadır. Sistemin işleyişi 27 Mayıs 2014 tarihli ve 29012 sayılı Resmî Gazete'de yayımlanan ÇKS Yönetmeliği hükümleri kapsamında yapılmakta iken, mevcut uygulamanın üretici açısından yoğun bir iş yükü, bürokrasi ve tarımsal desteklerden faydalanma etkinliğini düşürmesi gerçeğinden yola çıkarak ÇKS yönetmeliğinde 23 Eylül 2022 tarih ve 31962 Sayılı Remi Gazetede yapılan değişiklik ile ÇKS'ne başvuruların e-devlet üzerinden yapılmasına karar verilmiştir.

Çanakkale İli Ezine İlçesinde üreticiler ile yapılan anketler sonucunda yaş ortalaması 46,34 olup üreticilerin büyük kısmının lise ve üniversite mezunu oldukları ve tamamına yakının sosyal güvenceleri olduğu tespit edilmiştir. Araştırma bölgesinde genellikle üreticilerin kendi mülkleri üzerinde tarımsal faaliyet yaptıkları, ortalama işletme büyüklüğünün 111,97 da. Olduğu belirlenmiştir. Üreticilerin tarımsal faaliyet tecrübesi

ortalama 20 yılın üzerindeyken ÇKS'ne kayıtlı olma durumu ortalama 6-7 yıl civarındadır. Araştırma bölgesinde ankete katılan üreticilerin büyük çoğunluğunun en azından telefonla internet erişimlerinin olduğu %85,0 civarında bir oranda e-devleti kullandıkları ifade edilmiştir. Yine üreticilerin %60,0'nın ÇKS'ne üyeliği e-devlet üzerinden tamamladıkları e-devlet sistemi üzerinden dijital barkodlu ÇKS Belgesine ulaşarak bu belgenin iş ve işlemlerini kolaylaştırdığı sonucuna varılmıştır.

Sonuç olarak e-devlet ile sisteme başvuru aşamasında üreticilerce tespit edilen kira sözleşmesi, ikinci ürün ekleme, parsel ekleme çıkarma gibi sorunlar çözülerek sistem kolaylaştırılmalı ya da sisteme videolu anlatım desteği konulması gerektiği sonucuna varılmıştır. Ayrıca İlçe Müdürlüklerince bilgilendirme yapılması üreticilere kolaylık sağlayacağı sonucuna varılmıştır.

Sürdürülebilir Kent Yaklaşımlarından Topraksız Tarım: Paris ve Barselona Örnekleri

Bilim Uzmanı. Doğan KURBAN¹

Dr. Öğretim Üyesi. Gökhan ZENGİN²

¹Trakya Üniversitesi SBE Kamu Yönetimi ABD, dogancankurban@trakya.edu.tr, ORCID: 0000-0002-3060-5903

²Trakya Üniversitesi, İİBF, SBKY Bölümü, zengingokhan@trakya.edu.tr, ORCID: 0000-0001-8726-4604

Özet: İklim değişikliğinin kentsel yaşam üzerinde birçok olumsuz etkisi bulunmaktadır. Aynı zamanda kentlerdeki sanayi, ulaşım, tarım gibi ekonomik faaliyetler de küresel ısınmayı dolaylı olarak arttırmaktadır. Tarım sektörü küresel sera gazı emisyonlarının çeyreğinden sorumludur. Küresel ticaretle gıda tedarik zincirinde oluşan israflar ve ulaşım maliyetleri karbon ayak izini arttırmaktadır. Bu nedenle tarımda istikrarı sağlamak, hasat edilen ürün miktarının kalitesini ve çeşitliliğini arttırmak için teknolojinin daha fazla kullanıldığı yeni tarım yöntemleri öne çıkmaya başlamıştır. Bu yöntemlerin ortaya çıkışının bir başka sebebi de tarım topraklarının hızla azalarak kentsel alana dönüştürülmesidir. Tarımsal faaliyetlerin yarattığı karbon ayak izini düşürmek ve ekilebilir alanlarını arttırmak için uygulanan yöntemlerden birisi de topraksız tarımdır. Kentin sürdürülebilirliğini sağlamada topraksız tarım birtakım fırsatlar sunmaktadır. Topraksız tarım yöntemleri ile %95 su tasarrufu sağlanır. Ayrıca gübre kullanılmaması yıl içinde tarlaya göre birçok kez hasat yapılması, ilaç kullanılmaması ürünlerin daha organik ve sağlıklı olmasını sağlamaktadır. Dikey tarımla beraber kullanıldığında birim alan başına hasat miktarı artar. Yatırım yapan şirketlerin en büyük maliyetlerinden biri de enerjidir.

Bu çalışmada sürdürülebilir kent yaklaşımları bağlamında topraksız tarımın sunduğu fırsatlar ortaya konulurken örnek olarak Paris ve Barselona şehirlerinin uygulamaları ele alınmıştır. Paris ve Barselona vatandaşın eğitilmesi, kentsel tarımın desteklenmesi ve uzun vadeli hedeflerin konulması, gıdanın karbon ayak izinin azaltılması konusunda çalışmalar örnek çalışmalar yürütmektedir. Özellikle de Paris şehrinde Barselona'ya göre topraksız tarıma daha fazla önem verildiği görülmüştür. Belediyeler kentte topraksız tarım yapan şirketleri vergi, arazi ve bina tahsis ederek destekleyebilir. Bu üretim alanları profesyonel şekilde bir bütünleşmiş tarım ve enerji tesisi şeklinde inşa edilmelidir. Tarımsal üretim sırasında ortaya çıkan gıda atıklarının perma kültür yöntemleriyle doğal gübre üretimi, biyoyakıt tesislerinde enerji üretimi, güneş paneli, rüzgâr türbinleri ile enerji maliyetlerinin sera gazına neden olmadan düşürülmesi mümkündür.

Anahtar Kelimeler: Topraksız Tarım Yöntemi, Sürdürülebilir Kent Yaklaşımları, Paris ve Barselona'da Topraksız Tarım

Soilless Agriculture from Sustainable Urban Approaches: Paris and Barcelona Examples

Abstract: Climate change has many negative effects on urban life. At the same time, economic activities in cities such as industry, transportation and agriculture indirectly increase global warming. The agricultural sector is responsible for a quarter of global greenhouse gas emissions. Waste and transportation costs in the food supply chain with global trade increase the carbon footprint. For this reason, new agricultural methods, in which technology is used more, have begun to come to the fore in order to ensure stability in agriculture and to increase the quality and diversity of the harvested product amount. Another reason for the emergence of these methods is the rapid decline of agricultural lands and their transformation into urban areas. One of the methods applied to reduce the carbon footprint created by agricultural activities and increase arable land is soilless agriculture. Soilless agriculture offers some opportunities in ensuring the sustainability of the city. With soilless farming methods, 95% water savings are achieved. In addition, not using fertilizers, harvesting many times according to the field during the year, and not using pesticides ensure that the products are more organic and healthy. When used with vertical farming, the amount of harvest per unit area increases. One of the biggest costs of investing companies is energy.

In this study, while revealing the opportunities offered by soilless agriculture in the context of sustainable urban approaches, the practices of the cities of Paris and Barcelona are discussed as examples. Paris and Barcelona carry out exemplary studies on educating citizens, supporting urban agriculture and setting long-term goals, reducing the carbon footprint of food. Especially in the city of Paris, it has been seen that soilless agriculture is given more importance compared to Barcelona. Municipalities can support companies engaged in landless agriculture in the city by allocating taxes, land and buildings. These production areas should be professionally constructed as an integrated agricultural and energy facility. It is possible to reduce the energy costs without causing greenhouse gas, with the production of natural fertilizers by perm culture methods of food wastes generated during agricultural production, energy production in biofuel facilities, solar panels, wind turbines.

Keywords: Soilless Agriculture Method, Sustainable Urban Approaches, Soilless Agriculture in Paris and Barcelona

1. GİRİŞ

Tarım ve gıda sektörü küresel ısınmanın yarattığı kuraklıktan en çok etkilenen sektördür. Yaşamsal önemi çok büyük yeterli ve bozulmamış gıdaya erişimin giderek zorlaşması tüm Dünya’da gıda güvenliğini tehlikeye atmaktadır. Küresel ısınmanın yanında, tarım arazilerinin kentleşme ve yangınlar sebebiyle kaybı ile tüketim alışkanlıklarının yarattığı israf mekanizması gıda güvenliğini olumsuz etkileyen diğer faktörlerdir. İnsan kaynaklı iklim değişikliği halihazırda birçok hava ve aşırı iklim olayını etkilemektedir. Sanayileşmenin başladığı 19.yy’dan bu yana atmosfer, okyanuslar, kriyosfer ve biyosferde yaygın ve hızlı değişimler olmuştur. İklim etkileri konusunda 1990’lardan sonra artan kamusal ve siyasal farkındalık ve risk algılaması, 170 ülke ve birçok şehrin iklim politikalarında uyum ve planlama süreçleri geliştirmeleri ise olumlu gelişmeler olarak görülmektedir. Sanayileşmenin hız kazandığı 19.yy’dan itibaren fosil yakıtlardan elde edilen enerjinin kullanımı sonucu ortaya çıkan karbondioksit (CO₂), metan (CH₄) ve kloroflorokarbon (CFCs) gazlarının aşırı birikimi atmosferde sera etkisi yaratmıştır. Sera etkisinin en önemli sonucu da küresel sıcaklık artışı ve bununla bağlantılı olarak aşırı hava olaylarının görülmesidir. Küresel sıcaklıklar, 2011–2020’de 1850–1900’e göre ortalama 1,1°C artış göstermiştir. Karasal yüzeylerde ortalama sıcaklık 1.59°C artarken, okyanuslardaki ortalama sıcaklık artışı 0,88°C olmuştur (IPCC; 2023). Küresel karbon (CO₂), emisyonları sanayileşmenin başladığı 1850 yılından 1989 yılına kümülatif karbon emisyonu karşılığı (Gigatone CO₂) karşılığı %58 artarken; 1990-2019 kümülatif artış %42 olarak gerçekleşmiştir (IPCC, 2023; 8). Artış oranlarından anlaşılacağı gibi küresel ısınmanın en önemli sebebi olan karbon emisyonu artışı son 30 yılda zirve yapmıştır.

Küresel ısınma Dünya’nın farklı bölgelerini farklı şekillerde etkilemektedir. Birleşmiş Milletler İklim Değişikliği Paneli’nin (IPCC) çok kapsamlı çalışmalarına göre küresel ısınmanın 2050 yılına kadar 1.5°C artması durumunda, böceklerin %6’sı, bitkilerin %8’i ve omurgalıların %4’ünün iklimsel olarak belirlenmiş coğrafi alanlarının yarısının kaybolacağı senaryosu ortaya konulmuştur (IPCC, 2018). Sıcaklık artışının 3.2°C olacağı daha kötümser bir senaryoda ise; böceklerin %49’unun, bitkilerin %44’ünün, omurgalıların ise %26’sının doğal yaşam alanlarını kaybedebileceği öngörülmektedir (Warren vd. 405-406, 2018). Uluslararası kuruluşların bilimsel verilerle ortaya acil uygulanması gereken önlemlerin bile ulusal düzeyde yaptırım gücünün sınırlı olması aslında Dünya olarak kötü senaryoların sonuçlarına hazır olmamız gerektiğini de önümüze koymaktadır. Küresel sıcaklık artışından etkilenme biçimleri coğrafi konuma göre değişmektedir. Kuzey Afrika, Avustralya, Orta Doğu, Güney Amerika ve Güney Asya’da yaklaşık 3 milyar insanın aşırı sıcaktan etkileneceği belirtilmektedir. Ayrıca ülkemizin içinde bulunduğu Akdeniz Çanağı denilen bölgede yüksek etkiye maruz kalacak yerlerdendir. Küresel sıcaklık artışı gıda üretimini de çok etkileyecektir. Gıda üretkenliğindeki gerileme hızlanarak artacak ve gıda üretimi ciddi zararlar görecektir. Raporlara göre küresel ekonomi ise 2050’ye kadar %10 değer kaybedecektir (Daşcıoğlu, 2021, s. 2). Küresel sıcaklık artışı engellenemezse, kuraklığın artışı ve sulama yetersizliği gibi etkenlerle tarımsal ürün hasadında %20-%50 azalma görülebilecektir. Bu senaryoya göre 2050 yılında günümüze kıyasla %50 daha fazla tarım ürününün yetiştirilmesi gerekecektir (Chatham House, 2021). Dünyadaki sera gazlarının %30’unu emen tarım toprakları yutak görevi görürken hem azaltım hem uyum imkânı içerir (IPCC, 2019).

İklim değişimi tarımsal ürün verimliliğini ve çeşitliliğini azaltırken, tarımsal üretimde iklim değişikliğine sebep olan sera gazlarını atmosfere bırakmaktadır. Bu negatif etki özellikle Yeşil Devrim ile ortaya çıkmıştır. Tarım, sanayi öncesi toplumunda önemli bir enerji kaynağı olmasına rağmen modern tarıma geçilmesiyle enerjinin net bir tüketicisi haline gelmiştir. Yeşil Devrim diye anılan modern tarıma geçilmesiyle birlikte fosil türevli yakıtlardan üretilen nitrojen gübreler (N), pestisit ve herbisit gibi girdileri arttırarak tarımsal üretimde fosil yakıtı bağımlılığı arttırmıştır. Bu girdilerin yanında çiftlik makinelerinin kullanımı ve gıda lojistiğinde kullanılan yakıtlar da tarımda fosil yakıtı bağımlılığın diğer göstergeleridir. Özellikle de sera tipi üretimde kullanılan bu gübre ve pestisitler önemli oranda metan gazını açığa çıkarmaktadır. Güncel verilere göre atmosferdeki metan emisyonunun %37’sinden tarım sektörü sorumludur (IEA, 2023). Türkiye’de metan emisyonlarının %61,4’ü, diazotmonoksit (N₂O) emisyonlarının ise %78’i tarım sektöründen gelmektedir (TÜİK, 2023). Türkiye’de sera gazı emisyonları 1990’dan 2021’e %157 artarken ağırlıklı olarak tarım üretimi sonucu ortaya çıkan metan ve diazotmonoksit toplam sera gazı emisyonlarının ortalama %20’sinden sorumludur (TÜİK, 2023). Türkiye’de sera gazı emisyonlarının sektörlere dağılımına bakıldığında ise tarımın payının %12.8 (2021 yılı) olduğu görülmektedir. 1990-2021 verilerinde bakıldığında tarımın sera gazı emisyonlarına katkısının ortalama %13 civarında olduğu ortaya çıkmaktadır (TÜİK, 2023). Türkiye’de güncel sera gazı emisyon oranları yorumlandığında tarımsal üretimin, iklim değişikliğine sebep olan gazlardaki payının hiç de azımsanmayacak bir seviyede olduğu göze çarpmaktadır.

Sağlık teknolojileri ve imkânlarının gelişmesi ile son 100 yılda dünya nüfusu 4 katına çıkarken 65 yaş üzeri olan yaşlı nüfus 10 kat artmıştır (Tekin & Kara, 2018, s.222). 2022 yılında Dünya nüfusu 8 milyarı geçmiştir. 2050

yılında ise Dünya nüfusunun 10 milyarı geçmesi öngörülmektedir (UNFPA, 2022). Diğer yandan Maltus'un beklediği kadar hızlı geometrik nüfus artışı da görülmemiştir. Maltus; nüfus ile gıda üretiminin aynı oranda artmayacağını ve yoksulluk nedeniyle nüfusun azalacağını söylese de tersi yaşanmıştır (Demir, 2018, s.144). Zenginleşmenin yaşandığı toplumlarda daha az çocuk yapma eğilimi yıllık nüfus artış oranını %1'in altına indirmiştir. Türkiye'nin nüfus artışı buna paralel seyretmektedir (World Bank, 2023).

Artan nüfus gıda talebini zorlaştırırken iklim değişikliğinin olumsuz etkileri çarpan etkisi yaratmaktadır. Gıda güvenliği ile bir başka sorunda özellikle Batı Avrupa ve ABD'de görülen bilinçsiz tüketim alışkanlığıdır. 2011 verilerine göre dünyada üretilen her 3 gıda ürününden biri çöpe giderek yıllık 940 milyar dolar maliyet oluşturmaktadır. Bu maliyet sahra altı Afrika ülkelerinin 5-6 yıllık gıda üretimine yakındır. 2 milyar insan orta ve yüksek düzeyde gıda güvensizliği çekmekte, gıdaya erişimde zorlanmaktadır. İklim değişikliği başta olmak üzere pek çok nedenle arz ve fiyat dalgalanmaları yaşanmaktadır. İsrafın artışına kayıtsız kalmak arz ve maliyet sorunlarının artarak devam etmesine neden olacaktır (Dölekoğlu, 2017, s. 179 ve 185).

Küresel iklim değişikliği konusunda Birleşmiş Milletlerin ve Avrupa Birliği'nin önderliğinde yürütülen uluslararası müzakereler yetersiz kalırken yerel ve bölgesel yönetimler adeta hava olaylarındaki hızlı ve sert değişime ayak uydurmak konusunda kendi başlarına uyum stratejileri geliştirmek zorunda kalmaktadırlar. Bazı kentler iklim değişikliğinin olumsuz etkilerini ve sera gazı emisyonlarını azaltmak için "iklim eylem planları" geliştirmektedirler. Bu çerçevede birçok yaklaşım da ortaya çıkmıştır. Bu yaklaşımlardan literatürde en sık kullanılanları; sürdürülebilir kent, kompakt ve eko-kompakt kent, yeşil kent, akıllı kent ve simbiyotik kent şeklinde adlandırılan yaklaşımlardır. Sürdürülebilir kent yaklaşımı sosyo ekonomik çıkarların çevre ve enerji ile uyumlaştırıldığı bir yapıya işaret ederken; "ekolojik kent" yaklaşımı ise yeşil öğelerin artışı ve pasif güneş enerjisi kullanımını öne çıkarmaktadır (Geenhuysen & Nijkamp, 1994, s.131). Kompakt kent; kentsel yayılmayı önlemek ve ulaşımı kolaylaştırmak için bina yoğun kent tasarımı vurgularken (Tuğaç, 2018, s. 1053); "akıllı kent", sürdürülebilirlikte teknoloji ile enerjinin ve doğal kaynakların daha verimli kullanılmasına vurgu yapar (Mirghaemi, 2019, s. 39). Yeşil kent; yeşil ekonomiye geçişte kentsel alanların sunduğu fırsatları işaret etmektedir (Dağdeviren & Yaylı, 2022, s. 63). Simbiyotik kent; kent işlevleri arasındaki sinerjiyi geliştirerek fayda ve etkinliğin artışına odaklanmış durumdadır (Aki, 2015).

Bu yaklaşımların ortak noktaları enerjiyi daha verimli kullanmak ve fosil yakıtlara bağımlılığı azaltmaktır. Bu amaçla kent içinde çeşitli fiziksel-mekânsal tasarımlar uygulanmaya başlanmıştır. Yeşil çatı, yağmur bahçeleri, kent ormanları, kent bahçeleri, yeşil binalar, enerji verimli binalar gibi yenilenebilir enerji kaynaklarını mümkün olduğunca çeşitlendirip kullanan kent tasarımı yaklaşımları ortaya çıkmıştır (Uysal, 2022, s. 340). Doğal kaynakların üretim ve tüketimi arasındaki biyolojik ihtiyacın farkını ifade eden "ekolojik ayak izi" kavramı ise "sürdürülebilir kenti" sistematik olarak tartışmaya açmıştır (Rees, 2012). Bu çalışmada ekolojik ayak izini azaltmak ve sürdürülebilir kenti sağlamak için bir araç olarak kullanılan topraksız tarım, türleri, avantajları ve dezavantajları ele alınmıştır. İyi uygulama örnekleri olabilecek Barselona ve Paris şehirleri üzerinde topraksız tarım çalışmaları da çalışmanın kapsamına alınmıştır. İki şehrin de kent çeperinde şirketlerin topraksız dikey tarım yapması gerektiği örnek olarak alınma sebeplerindendir.

2. Sürdürülebilir Tarım

Sürdürülebilir tarım, yeterli ve kaliteli gıdanın uygun maliyetlerle üretilmesi, arazinin ve çiftçinin korunmasını geliştirecek sistem ve uygulamaları içermektedir. Bu yaklaşım, entegre ilaç yönetimi, su ve toprak kayıplarının önlenmesini, aşırı gübreleme ve vahşi sulamanın önüne geçilmesini, anız yakılarak topraktaki organik madde kaybının engellenmesini, sentetik gübrelerden uzak durarak kalite, sağlık ve çevresel standartlara dikkat eden yöntemleri içermektedir (Turhan, 2005, s.14). Dünya Gıda Örgütü (FAO) kentsel tarımı, "küçük alanlarda (çatı, balkon, bahçe, park, boş araziler) mevsimlik sebze ve meyve tür ve çeşitlerin üretimini yapmak, yakın çevre satışına yönelik mesleki ve ticari olmayan küçük ölçekli bir etkinlik" olarak tanımlamaktadır. Kentsel tarım bir anlamda eski kent bostanı ve bahçıvanlığın çağdaşlaştırılmış halidir. Bu yaklaşımda dikey veya yatay yöntemler kullanılmaktadır. Kentsel tarımın en büyük faydası lojistiğin mesafesini kısaltarak ulaşım kaynaklı emisyonları azaltmasıdır. Dikey tarım ile daha dar alanda aynı miktarda ürün üretilmekte ve böylece diğer tarımsal araziler korunmaktadır. Dünya gıda ihtiyacının %20'si kentsel tarım ile karşılanmaktadır. Kanada'nın Toronto ve Vancouver şehirlerinde ev sahiplerinin %40'tan fazlası kentsel tarım ile ilgilenmektedir (Durukan, 2019, s. 6). Şirketler tarafından binalarda teknoloji ile uygun şartları sağlayarak bitkisel üretim yapılmakta, daha kaliteli ve daha sık hasat imkânı olduğu savunulmaktadır (Rootistanbul, 2022). Tarımsal üretimin yarattığı karbon ayak izini ve kentin güvenli gıda tedarikini sağlamada Dünya Gıda Örgütü'nün tanımının aksine kentsel tarım büyük ölçeklerde ele alınmak zorundadır. Çünkü topraksız tarım yatırımları bilgi birikimi ve ileri mühendislik desteği

istemektedir. Ayrıca kurulum maliyetleri de çok yüksektir. Ölçek büyümesi de ekonominin prensipleriyle paralel olarak birim başı maliyetleri düşürecektir. İklim değişikliğinin etkilediği başlıca sektörler arasında; tarım, gıda üretimi, ormancılık, hayvancılık, balıkçılık, dış ticaret, turizm, lojistik, finans ve sigortacılık yer alır. Tarım sektörü; iklim değişikliği nedeniyle şiddetli kuraklık ve dengesiz aşırı yağışlar gibi hava olayları tarafından olumsuz etkilenmektedir. Kentlerin tarım arazilerine yayılımı verimli alanların kaybedilmesine neden olmaktadır. Bu olumsuz etkileri azaltmak için kentsel tarım, hobi bahçeleri, çatılarda tarım yapılması gibi yöntemler tarımın karbon ayak izini azaltmaya yönelik yeni yaklaşımlardır. Bunlara ek olarak “Tarım 4.0, Dijital Tarım, Akıllı Tarım” gibi teknoloji yoğun yöntemler yayılmaktadır. Diğer yandan birim alandan daha fazla ürün üretilmesi, ilaç ve gübre ile gıdanın zehirlenmediği topraksız tarım (hydroponic) yöntemleri de gelişmekte ve yaygınlaşmaktadır. Bu gelişmelere rağmen Türkiye’de geleneksel tarım ve sulamanın çok daha yaygın olduğu bilinmektedir.

İklim değişikliği ile olumsuz etkileşim halinde olan gıda sektörüne ait bazı veriler dikkat çekmektedir. Küresel gıda tedarik zinciri sera gazı emisyonlarının yaklaşık çeyreğinden sorumludur. Örneğin 1 kg sığır eti üretimi için yaklaşık 60 kg CO₂ eşdeğeri açığa çıkmaktadır. Hayvansal etin karbon ayak izinde sığır ilk sırada yer alırken onu 24 ve 21 ile koyun ve peynir takip etmektedir. Bitter çikolatanın karbon ayak izi 18,7 kg iken zeytinyağının 6 kg’dır (Poore & Nemecek, 2018). Tarım ürünleri arasında ise karbon ayak izi açık ara farkla en yüksek olan pirinçtir. Soya fasulyesi, mısır, palm yağı ve buğday ise onu takip etmektedir. Buğday ve pirinç üretiminde kullanılan su miktarı küresel tarımda kullanılan suyun yaklaşık %70’ini oluşturur. Araştırma ürünlerin küresel miktarı üzerinden hesaplanmıştır (Oxfam, 2016). Tarımsal kaynaklı sera gazlarının azaltılması için gıda tüketimi alışkanlıklarının değiştirilmesi, tüketiciye yakın alanlarda yerel gıdaların üretimi teşvik edilmelidir. Ayrıca Türkiye’de kullanılan suyun %74’ü sulamada kullanılmakta. Sulama yöntemleri arasında en fazla kayıp ise %35-60 ile yüzey sulamadır. Damla sulamada bu oran %5-25 arasındadır. Örneğin topraksız tarımda su devridaim ettiği için tarla üretimine göre %90 su tasarrufu sağlanmaktadır (AÜSYE, 2016). Diğer yandan dünyanın 2/3’ü sularla kaplı fakat bunun ancak %2,5’i içilebilir düzeydedir. İçilebilir suyun %70’i kutuplarda bulunurken küresel ısınmayla eriyen buzullar, okyanuslara karışmaktadır (Sekin, 1996, s.247). Bu nedenle yağmur suyun geri kazanımı için mor su, kullanılmış suyun geri kazanımı için gri su yöntemleri ortaya çıkarken tarımda su israfına izin verilmemesi gerekir. Bu sorunun çözümünde en etkili yöntemlerden biri topraksız tarımdır.

3. Topraksız Tarım

Topraksız tarım 1980’li yıllardan sonra dünyada yayılmış ve sera üreticileri için önemli hale gelmiştir. Besinler su çözeltisi halinde bitkiye verilmesine hydroponic tarım denilmektedir. Ürünler genellikle hindistan cevizi lifleri, perlit veya kaya yününde yetiştirilmektedir. 2016 yılı verilerine göre Türkiye’de 12 bin dekar topraksız tarım alanı bulunmaktadır (Yarış & Çelik, 2019, s.5). Topraksız tarım su ve katı ortam olmak üzere iki farklı şekilde yapılmaktadır. Perlit, kum, kaya, çakıl gibi ortamlarda sulama yapılması durumunda katı ortam kültürü denir. Organik, doğal veya yapay inorganik olmayan üzere alt başlıkları da vardır. Topraksız tarımda en sık hydroponic, aeroponic ve aquaponic sistemler kullanılmaktadır. Hydroponic sistem bitkiyi besinli solüsyonlarla yetiştirme yöntemlerine verilen bir çatı kavram haline gelmeye başlamıştır. İlk Akan Su Kültürü (NFT) denilen sistemde köklerin tamamı suyla temas ediyorsa “besleyici film tekniği” köklerin ucu değişiyorsa “derin su kültürü” denilmektedir. İkinci bitkilerin 5 cm derinlikteki sürekli akan sudan besinlerini aldığı “Modifiye NFT” yöntemleridir. Aeroponic Sistemde; bitki köklerinin besinli suyun püskürtülerek/sislendirilerek sulanmasıdır. 2-3 dakikada bir sislendirme yapılır (MEB, 2017, s.39-43). Aquaponic Sistemde ise farklı olan balık üretiminde kullanılan suların sisteme dâhil edilmesidir (Hektaş, 2021).

Tarımda kullanılmadan önce zararlı atıklar arındırılmalıdır. Çok sayıda bitki patojeni virüs vektöre ihtiyaç duymadan sulanabilmektedir. Böylece bitki kökleri enfekte olmakta, sınırlı sayıda virüs köklerden giriş yaparak salgına neden olabilmektedir. Tüm topraksız tarım sistemlerinde böyle küçük detaylara dikkat edilmesi gerekir (Şevik, 2011, s.178). Fakat entegre üretim sistemlerine sıra dışı bir örnek olarak dikkat çeker. Topraksız tarımla kavun, karpuz, biber, domates, çilek hatta patates yetiştirilebilmektedir. Katma değeri yüksek olan bazı aroma bitkilerde de tercih edilmektedir. Fakat bitkilerin karakterine uygun yöntemlerin seçilmesi gerekir. Patates üretiminde “Aeroponi” yönteminin kullanılması sonucu, normalde bir patates kökünde 5-6 yumru olurken 30 kat verim sağlanarak 100-150 yumruya varan hasatlar gerçekleşmektedir. Bu durum bir çıktısı ise yumruların çok küçük olmasıdır. Hasadın ağırlığı açısından değerlendirmekte fayda vardır (TarımTV, 2018). Çilek yetiştiriciliğinde örnek olduğu üzere toprak kirliliğinin sonuçlarının önüne geçilmesi için topraksız tarım bir çözüm olarak görülmeye başlanmıştır. Aynı zamanda hasadın sıklığı, devamlılığı ve miktarı artarak üreticinin kazancıda artmıştır (Demirsoy, Mısır, & Adak, 2017, s.78).

Dikey tarım ise şehir ortamında yapılan büyük ölçekli entegre tarım yöntemidir. Ekilebilir toprak alanlarının kaybedildiği günümüzde binalarda, balkona veya teraslarda, mini bahçelerde tarım ürünlerinin farklı bir sistemle yetiştirilmesidir. Amacı kirlotici tarım ilaçlarını azaltmaktır. Açık veya kapalı alanda hem örtü altı hem topraksız yapılabilen ileri teknoloji ile verimliliği artan modern bir tarım yöntemidir. Gökdelenlerde topraksız dikey tarım fikri henüz yayılmasa da teknolojik gelişmeler her geçen gün maliyetleri düşürmektedir. Böylece daha cazip hale gelmiştir. Sera hidroponiği geleneksel tarıma göre %90 su tasarrufu sağlamaktadır (Bingöl, 2015, s.93-94). Dikey hidroponic yöntem ise %95 su tasarrufu sağlayabilmektedir. Ayrıca bu yöntemler sonucunda ürünler aşırı hava olaylarından olumsuz etkilenmeyecektir. IPCC'ye göre bazı geri dönülemez seviyelere gelmiş dünya için afetlerin sayısında ve şiddetinde artış görülmeye devam edecektir. Bu nedenle hava olaylarından kaynaklı mahsulün israf olmasının önüne geçilmesi için kapalı ortamda gerçekleştirilen topraksız tarım yöntemlerinin ilerleyen yıllarda daha çok tercih edilmesi beklenebilir.

Topraksız ve dikey tarımın avantajları şu şekilde sıralanabilir:

- I. Aşırı hava olaylarına karşılık üretimin kırılganlığının azalması,
- II. Yıl boyunca tarlaya göre daha sık ve fazla miktarda hasatla beraber mahsul kayıplarının azalması,
- III. Gübre ve ilaç kullanılmamasının yanı sıra ürün kalitesinin daha istikrarlı oluşu,
- IV. %70-95 arasında su tasarrufu ve dijital tarım yöntemleri ile üretimde tam kontrol imkânı,
- V. Pazara yakın olmasından dolayı ulaşım kaynaklı maliyetler ve karbon ayak izinin düşürülmesi,
- VI. Satıcı ve tüketiciye yakınlıktan dolayı tedarik ve depolamadaki israfın azalması, taze gıdanın temini,
- VII. Hidroponic sistemde yetişen bitkiler geleneksel tarıma göre yaklaşık %30 daha büyük olur,
- VIII. Kendi yenilenebilir enerjisini üreten işletmelerde devlet desteklerinden dolayı sabit maliyetlerin düşmesi gibi avantajlar kent çeperindeki topraksız ve dikey tarımı hem ekonomik hem sürdürülebilirlik açısından daha cazip hale getirmektedir.

Şüphesiz topraksız tarım avantajları olduğu gibi dezavantajları vardır. Birçok sektörde benzer riskler bulunur. Fakat topraksız tarıma yeni girecek kişilerin bilmesi gerekenlere vurgu yapılması gerekir. Dezavantajlar şu maddelerle ifade edilebilir;

- I. İlk yatırım maliyeti çok yüksektir. Verimli üretim için bilgi birikimi gerekmektedir. Oysa henüz yeterli yetişmiş personel temini bulunmamaktadır. Fakat bununla ilgili sertifikalı eğitimler hızla yayılmaya başlamıştır,
- II. Enerji maliyetlerin çok büyük bir kısmını kaplamaktadır. Fakat yenilenebilir enerji yatırımı hem şirketin maliyetlerini düşürecek hem kurumsal karbon ayak izini azaltacaktır. Bu durum yatırım maliyetlerini artırdığı için bir ölçüde küçük çiftçilerin yapabileceği bir iş olmaktan çıkarmaktadır,
- III. Bitkiler için hazırlanan besin solüsyonları hatasız olmalıdır yoksa bütün üretim zinciri hasar görecektir,
- IV. Elektrik kesintileri büyük risk oluşturur. Alınacak önlemlerse yine maliyetleri yükseltir,
- V. Topraksız tarım bir sistem bütünüdür. Sistemde yaşanan sorunlar için alternatif yollar önceden geliştirilmelidir (Hektaş, 2021).

Günümüzde dünyadaki sera tipi üretiminin %3,5'i hidroponic sistemlerle gerçekleştirilmektedir. Türkiye sera tipi üretimde İspanya'dan sonra Avrupa'da ikinci dünyada ise 4. sıradadır. Son 10 yıldır topraksız tarım hızla yayılmaktadır (Türktemel, 2018). Diğer yandan İzmir'in Dikili ilçesindeki "Tarıma Dayalı İhtisas Sera Organize Sanayi Bölgesi" gibi tesisler örnek çalışmalar olarak dikkat çekmektedir. Bu tesis dijital tarım yöntemlerinin topraksız seralarda kullanıldığı 3.000 dekada sera ve sanayinin birleştiği dijital ve topraksız tarım yöntemlerinin yenilenebilir enerji sistemleri ile entegre edildiği bir tesistir (Dikili TDİOSB, 2019). Birim alanda yüksek üretimin yapıldığı, entegre sistemlerle maliyetlerin ve karbon ayak izinin düşürüldüğü tesislerin kent çeperinde gerçekleştirilmesi gerekmektedir.

2050 yılına kadar Dünya nüfusunun 10 milyar olması beklenirken gıda üretiminin de yaklaşık %70 artması gerekmektedir. 2021 yılında ABD'de topraksız tarım pazarı 1 milyar dolar civarında iken 2026 yılında 10 milyar dolara yaklaşması öngörülmektedir. Bu sistemde enerji yoğun şekilde tüketilmektedir. Geleneksel

yönteme göre 100 kat ve seralara göre 15 kat daha fazla enerji kullanılabilir. Fakat bu alanlarda buğday, soya veya mısır gibi ürünlerin yetiştirilemediğini belirtmek gerekir (Öncü, 2022). Türkiye özelinde topraksız tarımın maliyetine ilişkin olarak hibe ve kredilerle jeotermal topraksız tarım arazisinin kendisini 4 yılda amorti ettiği iddia edilmektedir. Hatta detaylı bir mali analize göre 1,56 masraf oranı, %21 mali rantabilite ve %33 iç karlılık oranı ile karlı bir yatırım olarak görülmektedir. Tabi jeotermal enerjinin kullanımının bunda büyük bir payı vardır. Ayrıca Türkiye jeotermal sera üretiminde Avrupa'nın en büyüğüdür. Bu yöntemin karbon ayak izi de doğal olarak daha düşüktür. Türkiye'deki sera üretiminin ise ancak %1,7'si topraksız tarımdır yöntemiyle yapılmaktadır (Hasdemir, 2020).

4. Paris Şehrinde Kentsel Tarım

Fransa'da tarım sektörü ulusal sera gazı emisyonlarının %20'sini oluşturmaktadır. Paris'te Parislilerin ve turistlerin tükettiği yiyeceklerin toplamı yaklaşık yıllık 4,7 milyon ton karbondioksit üretmektedir. Bu miktar Paris'in karbon ayak izinin %18'ini oluşturur. Bu nedenle yerel yönetim, tarım kaynaklı sera gazı emisyonlarını düşürmeyi öncelikleri arasına almıştır. Bu çerçevede yapılan çalışmalarla 2007 yılından 2016 yılına kadar 17 bin ton karbondioksitten kaçınılarak ciddi aşamalar kat edilmiştir. Yerel gıdanın teşvik edilmesi ve çeşitli kentsel tarım yöntemleri ile beraber gıda sektörü içerisinde sürdürülebilir gıdanın payı %37,7'ye çıkarılmıştır. Günümüzde Paris, Fransa'nın en büyük organik ürün alıcısı konumuna ulaşmıştır (City Of Paris, 2018, s. 7).

Paris; her gün 2,2 milyon Parisliyi, 1 milyon Parisli olmayan işçiyi ve 280 bin turisti beslemek durumunda olduğundan gıdada diğer bölgelere bağımlıdır. Bölgesel gıda ağının kurulması ve yerel organik gıdaya erişimin kolaylaştırılması, Paris bölgesinin yüzey alanının 2030 yılına kadar %20'si, 2050 yılına kadar %30'unun organik tarım alanı haline getirilmesi öngörülmüştür. Paris, gıda konusunda çevresine bağımlı kalmış bir kenttir. Bu nedenle iklim değişikliğinin gıda ve tarıma yönelik tehditlerini azaltmak adına kent yönetimi kentsel tarım ve tarım arazilerinin korunması, kentsel yayılımın oluşturduğu baskının azaltılması yönünde çalışmaları bulunmaktadır. Ayrıca gıda tedarikinin sağlanmasında şehrin iç su yolları kullanımının %50'ye çıkarılması, elektrikli araçların kullanılması gibi projeleri bulunur. Böylece 2030 yılına kadar gıda kaynaklı sera gazı emisyonlarının %40 azaltılması hedeflenmiştir (City Of Paris, 2018, s. 49). Kısa mesafeli gıda tedarik zincirleri kritik önemde görülmektedir. 2030 yılına kadar Paris'te tüketilen gıdanın %50'sinin ve 2050 yılına kadar %75'inin Paris Havzasından sağlanması hedeflenmiştir (City Of Paris, 2018, s. 51). Böylece Paris'in ekolojik açığı kapatılırken, gıdada kent çeperi dışına bağımlılık azalacaktır. Ulaşım kaynaklı emisyonlar ve tedarik zinciri kaynaklı ürün kayıpları azalacaktır.

Paris'te sürdürülebilir kent olma yolunda yeşil çatılar ve kentsel tarım uygulamalarına metropol belediye yönetimi tarafından önem verilmiştir. 2014 yılında seçim vaatleri arasında kentin yeşil dokusunun artırılması bulunan Hidalgo seçilmiş, yeşil çatı ve kentsel tarım uygulamalarına koyulmuştur. Kentsel tarım alanında 100'e yakın organizasyonla çalışılarak önemli hasat hedefleri seçim vaadi olarak verilmiştir. Kentsel tarıma ayrılan örneklerin en önemli örneklerden birisi 2016 yılında duyurulan "Parisculteurs" isimli Paris metrosuna ait bir tıp merkezinin çatısına kurulan Chambeaudie Çiftliğidir. 5380 metrekaare alanda topraksız tarım gerçekleştirilmekte ve ürünler restoranlara, manavlara satılmaktadır. Bu çiftlikte aynı zamanda 120 kişi istihdam edilmektedir. Belediyenin web sitesinde de gerek kent içinde gerek kent dışında birçok sürdürülebilir tarım arazisinin hasat döneminde vatandaşların oraları gezip görmesi için teşvik ettiği, adreslerini ve özelliklerini verdiği bilgiler bulunmaktadır (Sönmez, 2018). Dünyanın en büyük çatı çiftliği ile Avrupa'nın en büyük şehir çiftliği 2020 yılında Paris'te açılmıştır. Paris Expo Porte de Versailles Sarayı'nın çatısına inşa edilen projeye "Agropolis" adı verilmiştir. 6 katlı bina ve 14 bin m2 alanda günde bir tona yakın gıda üretilirken 30 bitki türü tercih edilmiştir. 300 kişilik restoran ile "tarladan masaya" konsepti sunularak hem reklam yapılmakta hem bilinç kazandırılmaktadır. Birçok kentsel tarım projelerini hayata geçiren Paris'te her geçen gün daha fazla topraksız tarım kullanıldığı görülmektedir (NU Paris, 2023). Paris, iklim eylem planlarında kentin direncine odaklanırken güvenli gıda için topraksız tarıma yönelmiştir. Birçok çatı ve binada topraklı/topraksız tarım tercih edilerek kentsel ısı adaları dağıtılırken güvenli gıda temin edilmektedir. Parisculteurs projesi kapsamında tarım projeleri desteklenmektedir. Agropolis projesi binada modern topraksız tarım ve vatandaş katılımı sunmaktadır. Çevre işletmelere ve kendi restoranına gıda temin ederek topraktan sofraya anlayışının önemli bir örneğini oluşturmuştur. 2050 yılına kadar gıda teminin %75'inin Paris Havzasından sağlanması için topraksız tarımın tercih ediliyor olması hedeflere ulaşmayı sağlayabilir.

5. Barselona Şehrinde Kentsel Tarım

Avrupa'nın 1. ve dünyanın 3. en büyük sera üretimi İspanya'da yapılmaktadır. 1970'li yıllardan beri güneyde yer alan Almeria bölgesinde açık tarla üretimleri seracılığa dönüşmüştür. Böylece dünyanın en büyük sera yoğunluğuna ulaşmıştır. Ülkenin toplam sera alanı 52 bin hektardır (Tarla Sera, 2015). 350 km² alanda 26 bin hektar sera (örtü altı sera) üretimi yapılmaktadır. Karşılaştırmak açısından belirtirsek Türkiye'de 41 bin hektar alanda sera (cam+plastik) üretimi yapılmaktadır. İspanya'nın sebze ihracatının %40'ı bu seralardan hasat edilen ürünlerden sağlanmaktadır. Seraların üstünün beyaz olması nedeniyle bu geniş alan çevresine göre 0,8 C°'lik bir soğuma eğilimi içindedir (Ayaşlıgil & Çelik, 2022, s.113-115). Barcelona'daki üretim maliyetleri Hollanda'dakinin yarısıdır. 3 bin saat güneşlenme ve ılıman iklimin olduğu Almeria' da enerji maliyetleri düşüktür. Barcelona şehrindeki seraların %10'un topraksız tarım yöntemini kullanılmaktadır (Geography Field Work, 2022). Rakamlardan anlaşılabileceği üzere İspanya sera üretiminde önde gelen bir ülkedir ancak üretimin büyük kısmı sadece Almeria' da yapılmaktadır. Barselona'da topraksız tarım ve seracılık bulunsu da Paris'ten çok daha azdır.

Barcelona İklim Eylem Planında Barselona çevresinde meyve sebze üretiminin 3 katına çıkarılması ve her bölgede çiftçi pazarlarının kurulması planlanmıştır (Uncu, 2019, s. 68). Kent yönetimi tarafından sürdürülebilirliğe önem verilmesi adına bazı projeler yürütülmektedir. Bu çalışmalarda yenilenebilir enerji, yeşil çatı ve duvarlar, kentsel tarım, atık yönetimi ve gri su altyapıları birlikte bulunmaktadır. Bu örneklerden biri La Fàbrica del Sol olarak gösterilebilir. Geleceğin şehirlerinin zorluklarını vatandaşlara ve özellikle öğrencilere göstermek adına biyoyapı ve eko tasarım malzemeleri ile çevreye entegre olmuş örnek bir yapı oluşturulmuştur (Ajuntament de Barcelona, 2022d). Barselona belediye yönetimi kentsel tarımı destekleyici bazı teşviklerde bulunmaktadır. Bu çerçevede vatandaşlara çeşitli dernekler ve kuruluşlar üzerinden kentsel tarım, ekolojik tarım eğitimleri verilmektedir. 2013 yılında başlatılan *Yeşillik ve Biyoçeşitlilik Planı* çerçevesinde organik tarımı teşvik eden ve bir mahalle tarafından yönetilen erişilebilir çiçek ve sebze bahçeleri programı yürütülmektedir. Kentin arsalarında, kamu veya özel sektörün binalarının çatı ve teraslarında, belediye veya çeşitli toplulukların bahçe ve arsalarında genç yaşlı her türlü vatandaşın kent çeperi içerisinde tarımla uğraşabildiği bir ortam yaratılmaya çalışılmaktadır (Ajuntament de Barcelona, 2022b).

Barcelona'da önemli tarım alanlarından biri Baix Llobregat Tarım Parkı gösterilmektedir. Barcelona'nın 10 dk batısında yer alan park çeşitli belediye ve birlikler ile kurulmuştur. 2930 hektarlık alanda kaliteli meyve ve sebze üretilmektedir. Hem açık hem sera üretimi yapılmaktadır (Urban Reforestation, 2021). Park, Barselona'yı çevreleyen tarım arazilerini kapsamaktadır. Yüzyıllardır Barselona'ya taze meyve ve sebze tedarik eden köklü bir geçmişe sahiptir (Açıksöz vd., 2013, s.447). Üretilen ürünlerin %63'ü sebze ve kalanı meyvedir. Fakat seracılık tarım parkının %1,2'sine karşılık gelmektedir. Barselona'yı besleyen bu tarım arazisinde seracılığın hatta topraksız tarımın çok az olması kentin gıda bakımından dışarıya bağımlı kalmasına neden olmaktadır. Buna rağmen Barselona sınırındaki tüm bahçecilik üretiminin üçte biri ve taze meyve üretiminin yarısına karşılık gelmektedir (Es.wikipedia, 2023). Sürdürülebilir kent için kent çeperinde yeterli gıda üretilmelidir. Diğer yandan ekolojik açığı belirlerken kentin çeperinin ne kadar olduğu kritik bir detaydır. Barselona ve İstanbul karşılaştırması üzerinde örnek vermek daha anlaşılır kılacaktır. Barselona 100 km² yüzölçümüne sahip AB'nin en yoğun nüfuslu kentidir (Ajuntament de Barcelona, 2020, s. 19-20). İstanbul, Barselona'nın 53 katı genişlikte iken nüfus yoğunluğu Barselona'nın 1/6'idir. İstanbul'un %45'i orman iken Barselona'nın %17'dir. İstanbul'un nüfusu da Barselona'nın 10 katıdır (Global Forest Watch, 2023).

Barselona sınırlı araziye sahip yoğun nüfuslu bir şehirdir. Çatılarda yapılan kentsel tarım hem yeşil alan sağlayacak hem kentsel ısı adalarını dağıtacaktır. Diğer yandan 1,6 milyon olan nüfusa gıdanın çatılarda üretilmesi mümkün değildir. Bu nedenle pazara yakın ve verimliliği yüksek olmasının avantajları nedeniyle binalarda yapılan topraksız tarım Barselona için kaçınılmaz bir çözümdür. ılıman iklimi sahip bir bölge olması nedeniyle ısıtma kaynaklı enerji maliyetleri ciddi şekilde düşecek ve pazarda rekabet gücü artacaktır. Bu durum Barselona'da kentsel tarımın gelişmesinde önemli bir rol oynayabilir (Mengual, 2015, s.191). Paris'in topraksız tarıma verdiği hassasiyetin Barselona'da olmadığı söylenebilir. Baix Llobregat Tarım Parkı Barselona'nın yüzyıllardır gıda ihtiyacını karşılasa da günümüzde yetersiz kalmaktadır. İspanya'nın ulusal seracılık faaliyetlerinin Almeia'da yoğunlaşması Barselona'nın gıda konusunda risk görmemesine yol açmış olabilir. Fakat Paris gibi kendi havzasından gıdasının çoğunluğunu temin etmesi sürdürülebilir kent olma açısından bir gerekliliktir. Söz konusu tarım parkında ise seracılığın çok küçük bir oranına sahiptir. Bu çerçevede Paris ve Barselona'ya topraksız tarım açısından bakıldığında Paris'in büyük ve sonuç değiştirecek projelere imza attığı ve bu yönde hem kamuoyu hem siyasal desteğin olduğu görülmüştür. İspanya'da ise seracılık tek bir alanda yoğunlaşırken Barselona topraksız tarım yatırımlarından görece mahrum kalmıştır. Oysa dar ve yoğun nüfuslu Barselona'da sürdürülebilir kent inşa edilirken topraksız tarıma Paris'ten daha çok ihtiyaç vardır.

Barcelona aynı zamanda Avrupa’da “Güneş Enerjili Isıtma Kuralını” uygulayan ilk (2000) kent olmuştur. Kentin iklim değişikliği etkileri azaltım politikalarından biri olan bu uygulama tüm yeni veya yenilenmiş veya kullanım amacı değişmiş binalarda sıcak su ihtiyacının en az %60’lık kısmının güneş enerjisinden karşılanmasını zorunlu tutan bir regülasyon getirmiştir. Barcelona’da kurulu güneş enerjisi paneli 2000 yılında 1.650 m² iken 2010 yılında 87.600m²’ye çıkartıldı. Bunun yanında bina yapım yönetmeliğinde yapılan regülasyonlar ile yenilenebilir enerji kullanımı arttırılmaya çalışılmıştır (ICLEI, 2014).

6. SONUÇ

Kentsel yaşamdaki üretim yapısı ve tüketim alışkanlıkları iklim değişiminin en önemli sebebidir. Ancak kentler gerçekten uygulanacak sürdürülebilir yaklaşım ve uygulamalarla iklim krizinin çözümüne yönelik bazı fırsatlar da barındırmaktadır. Sürdürülebilir kent, ekolojik kent, yeşil kent gibi yaklaşımların uygulama araçları tarımsal üretim alanında da yeni çözümlere işaret etmektedir. Kentlerde bozulan doğal drenaj ağının yeniden kurulmasına yönelik mikro havza ölçeğinde doğa temelli çözümlerin geliştirilmesi kentlerin doğal sistemler gibi işleyerek su akışını dengeleyecek bir yapıya bürünmesini sağlayacak sünger kent, yağmur suyu hasadı, gri suyun artırılarak yeniden kullanımı gibi önlemler kuraklık sorununa karşı en önde gelen sürdürülebilir kent yönetimi düşüncesinin araçlarıdır (Hepcan, 2022: 87).

Dünyadaki yaşamsal döngü için biyoçeşitliliğin devamı en hayati konudur. Bu sebeple de çevreyi koruyan sürdürülebilir bir gıda üretimi eski zamanlara göre çok daha önemlidir. Biyolojik çeşitliliğin gıda ve tarımsal üretimi destekleyen ekolojik süreçlere ve ekosistem hizmetlerine katkılarının bilinmesi, ekolojik süreçleri koruyan ve direncini arttıran yönetim stratejilerinin geliştirilmesi gerekmektedir. Gıda ürünlerinin üretim ve tüketim ihtiyaçları gözetilerek akıllı ve sürdürülebilir tarım tekniklerinin kullanılması, iklim koşullarına uygun ürünlerin yetiştirilmesi, tarımsal ekosistemlerde doğa temelli çözümlerin geliştirilmesiyle az su tüketimiyle de verim arttırılabilir (FAO, 2019). Bilinçsiz yapılan geleneksel tarım yöntemleri toprağı kirleterek bitkilerin zehirlenmesi, verimin düşmesi, kalitesiz ürün yetiştirme, su israfı ve karbon ayak izinin artması gibi sonuçlar doğurmuştur. Böylece seracılığa yönelim olsa da toprağın zehirlenmesi tam olarak durdurulamamıştır. Sera alanındaki toprağında 4-5 yılda bir yenilenmesi gerekmektedir.

Topraksız tarım yöntemi geleneksel tarıma tam bir alternatif bir yöntem olarak ele alınamaz. Çalışmanın da böyle bir iddiası yoktur. Toprak azlığı, su kıtlığı ya da lojistik maliyetleri biraz olsun azaltmak amacıyla belirli yerlerde ve sınırlı çeşitte ürün için başvurulabilecek bir sürdürülebilir tarım yaklaşımıdır. Başka bir yorumla iklim değişiminin etkilerine karşı tarımsal bir dirençlilik yaratma yöntemidir. Çünkü topraksız tarım su verimliliği sağlarken üretimde kontrolü ve hasat miktarını da artırmaktadır. İklim değişikliği kaynaklı aşırı hava koşullarına karşı cam veya plastik seralar yerine daha kapalı ortamlarda üretim tercih edilmelidir. Bu üretimin kentsel tarım kavramı içerisine alınıp kent çeperinde gerçekleştirilmesi de ulaşım kaynaklı maliyet ve karbon ayak izini de düşürecektir. Yüksek kurulum maliyetleri ve ileri teknolojik gereksinimi gibi sebeplerle de kamusal teşviklerin varlığı topraksız tarım uygulamalarının yönünü belirleyecektir.

Özet: Rekabet, hayatın varoluşuyla başlamaktadır. Küreselleşen dünyada var olabilmek için ülkelerin sürdürülebilir rekabet avantajı sağlaması büyük bir gerekliliktir. Bu bağlamda sürdürülebilir bir rekabet avantajı elde etmek için rekabeti etkileyen faktörlerin derinlemesine algılanması ve uygulanması gerekmektedir. Son yıllarda, küresel rekabetin artması ve lojistik yeteneklerin, lojistik hizmet sağlayıcıların başarısı için giderek daha kritik hale gelmesinden dolayı lojistik sektörü karmaşık bir yapıya sahiptir. Küresel ekonomide, sahip olduğu kendine has özelliklerinden dolayı denizyolu taşımacılığı ise uluslararası taşımalarda açık ara en fazla tercih edilen taşımacılık türüdür. Türkiye ise, üç tarafı denizle çevrili olup birçok ülke ile deniz bağlantıları bulunmaktadır. Dahası Asya, Avrupa ve Afrika arasındaki ulaşım da çok önemli bir rol oynamaktadır. Bu coğrafi konum hem tarihsel olarak hem de yakın geçmişte lojistik merkezlerin kurulması, paralel ve dengeli taşıma ağlarının oluşturulması gibi lojistik açıdan Türkiye'ye birçok önemli fırsat sunmaktadır. Bununla birlikte, özellikle denizcilik geliştirilmesi, limanların merkezler olarak yeniden yapılandırılması ve kara ve diğer ulaşım ağları ile bağlantılı liman ve hinterlandların desteklenmesi ihtiyacının olduğu denizcilik endüstrisinde yapılacak daha çok yenilik bulunmaktadır. Dolayısıyla, deniz taşımacılığının sadece malların menşe ülkeleri ile değil, aynı zamanda kıyı devletlerinin deniz ticareti rekabetine katılma isteği ile birleştirildiğinde, bu ülkelerin de denizcilik yatırım ve teşvikler gibi gerekli önlemleri alma eğiliminde oldukları görülmektedir. Denizcilik sektöründeki koruma uygulamalarının kaldırılması, denizcilik faaliyetlerinin serbestleştirilmesi gibi gelişmeler bu tür yatırımların desteklenmesinde rol oynamaktadır. Denizcilik sektörüne ilişkin korumacı uygulamaların düşürülmesi, denizcilik faaliyetlerinin serbestleştirilmesi gibi gelişmeler bu tür yatırımların içerisinde destekleyici rol oynamaktadır. Bu çalışma, Türkiye'nin küresel ekonomide deniz lojistiği faaliyetlerindeki rekabet avantajlarının, Türkiye'nin küreselleşen dünyada deniz lojistiği faaliyetlerinde sürdürülebilirliğinin sağlanmasına yönelik öneriler ve geleceğe ilişkin varsayımlar üzerine ele alınmıştır.

Anahtar Kelimeler: Küresel Ekonomi, Deniz Lojistiği, Rekabet, Rekabet Avantajı.

Abstract: Competition begins with the existence of life. In order to exist in the globalizing world, it is a great necessity for countries to provide a sustainable competitive advantage. In this context, in order to gain a sustainable competitive advantage, it is necessary to perceive and implement the factors affecting competition in depth. In recent years, the logistics industry has a complex structure as global competition has increased and logistics capabilities have become more and more critical to the success of logistics service providers. In the global economy, maritime transport is by far the most preferred mode of transport in international transport due to its unique characteristics. Turkey, on the other hand, is surrounded by sea on three sides and has sea connections with many countries. Moreover, it plays a very important role in transportation between Asia, Europe and Africa. This geographical location provides many important opportunities for Turkey in terms of logistics, such as the establishment of logistics centers, parallel and balanced transportation networks, both historically and in the recent past. However, there is still more innovation to be made in the maritime industry, particularly where there is a need to develop shipping, restructure ports as hubs, and support ports and hinterlands linked to land and other transport Networks. Therefore, when maritime transport is combined not only with the country of origin of the goods, but also with the desire of the countries that have a coast to take a share in the maritime trade competition, it is seen that these countries also tend to take the necessary steps such as investment and incentives in maritime transport. Developments such as the reduction of protective practices in the maritime sector and the liberalization of maritime activities play a supportive role in such investments. In this study, Turkey's competitive advantages in marine logistics activities in the global economy, Turkey's sustainability in marine logistics activities in the globalizing world, suggestions for the future and assumptions are discussed.

Key Words: Global Economy, Maritime Logistics, Competition, Competitive Advantage.

1. GİRİŞ

Literatürde J. Johnson (1999), M. Porter (1998) ve A. Baublys (2003), bir ülkenin etkin ekonomik kalkınmasının ve üretim ve ticaret şirketlerinin işleyişinin başarısının ulaşım sisteminin etkinliğine dayandığını savunmaktadırlar. Malların taşınmasının en önemli aşaması, ulaşım araçlarının kullanımı ile ilgili olan ve bir lojistik sistemin temel işlevi olarak kabul edilen taşımacılık olarak kabul edilmektedir. Bu nedenle, bir lojistik sistemde kullanılan ulaşım sisteminin etkinliğinin artırılmasıyla rekabet avantajının en fazla olması sağlanabilmektedir. Bir ülkenin lojistik sisteminin rekabet gücü, bireysel ulaşım türlerinin rekabet gücünün düzeyi ve yoğunluğu ile belirlenmektedir. Teknolojik, çevresel, ekonomik, bilgi teknolojileri ve finansal önlemlerin yardımıyla kararlaştırılır ve onaylanır (Lee vd., 2010:563-583) Küresel ekonomik ilişkilerin

konularının coğrafi konumu, lojistik sistemler tarafından sağlanan hizmetler durumunda fayda miktarını etkilemektedir. Etkinlik göstergelerinin ve rekabet edebilirlik parametrelerinin ifadeleri olarak mutlak değerin gerçeklerini doğrulayan mutlak rekabet üstünlüğü ilkesi de vurgulanmaktadır. Öte yandan, verimli bir tedarik sistemi, lojistik sistemin işleyişinin göreceli göstergelerini (iş verimliliği göstergeleri, teknolojilerin kullanım verimliliği vb.) etkilemekte ve bu da küresel ekonomideki göreceli etkinliğin genel göstergelerini belirlemektedir (Anikin, 2011:405). Bu durumda göreceli rekabet benzerliği ilkesi vurgulanmaktadır. Akışların yönetimi ve organizasyonu, minimum maliyetle maksimum nihai sonuca ulaşılacak şekilde uygulanmalıdır. Bu durum bir lojistik sisteminin rekabet üstünlüğünü belirleyen en temel ekonomik kriterdir. Sadece malların miktarını ve kalitesini koruyarak lojistik süreci ve tüketicinin belirlediği yere ulaştırılarak, belirtilen kriteri karşılayan ülkeler hedefe ulaşmaktadır (Rondinelli ve Berry, 2000:398-410).

Bir lojistik sistemin işleyişindeki en önemli kategori ve rekabet gücü etkinliktir. En genel anlamda etkinlik, sonucun ve bu sonuca ulaşılırken ortaya çıkan maliyetlerin oranıdır. Ekonomik etkinlik, makroekonomik sonuçları tanımlayan bir kategoridir. Tüm ekonomi açısından etkinlik, sınırlı kaynak olması durumunda toplumun ihtiyaçlarının daha kapsamlı bir şekilde karşılandığı bir durum olacaktır. (Ahmad vd., 2021:93). Zamandaki değişim faktörleri, bir lojistik sistemin etkinliğini tanımlayan temel parametrelerdir. Bunlara ayrıca maddi, finansal ve bilgi akışlarının nitel parametrelerinin değerlendirilmesi de eşlik eder. Makro ortam değiştiğinde, tüketicilerin ihtiyaçları önemli ölçüde değişir; Bu nedenle, bu yeni kalite standartlarının getirilmesini gerektirebilir.

Bir lojistik sistemin rekabet gücünü değerlendirirken, unsurların, ilişkilerin ve akışların nitel özelliklerini analiz etmek ve belirlemek zorunludur. Sistemi oluşturan ve geliştiren yeni makroekonomik koşullar ve dinamik verimlilik önlemleri ile belirlenmektedir. Bu şekilde, rekabet üstünlüğünün kazanılması, bir lojistik sistemin başarılı bir şekilde uyarlanma sürecini belirlemektedir. Adaptasyon sürecinde, lojistik sistemini karakterize eden bazı parametreler, çevre koşullarına uyacak şekilde değiştirilir. Literatürdeki bilimsel teoriler dikkate alındığında; bir lojistik sistem geri bildirimli bir sistem olarak tanımlanabilir. Bu nedenle, bir lojistik sistem, geri bildirimi ve çevre ile belirli ilişkileri olan açık bir sistem olarak ele alınmaktadır. Lojistik sisteminin parametreleri, çevre faktörlerinin etkisi altındaki standartlardan sapmaktadır. Bu sapmalar nedeniyle anlaşmazlıklar, geri bildirimler, sistemin aktif olma koşulları, gelişim ve adaptasyon sürecine duyulan ihtiyaç ortaya çıkar ve bunun sonucunda rekabet avantajı elde edilir. Bu nedenle, ekonominin küreselleşmesi bağlamında lojistik sistemin gelişim sürecinin bir aşaması olarak rekabet üstünlüğünün kazanılmasının ve rekabet gücünün değerlendirilmesinin tanımlanması uygundur.

Genel olarak günümüz müşterilerine bakıldığında ise, deniz lojistiği işletmecilerinden daha verimli ve etkili bir hizmet vermeleri beklenmektedir. Ayrıca lojistik operatörlerinin müşterilerini memnun etme nihai hedefine ulaşmak için organizasyonel verimliliği ve etkinliği geliştirme ihtiyacını doğurmaktadır. Böylece deniz lojistiği değeri, sunulan denizcilik hizmetlerinin operasyonel verimliliğine ve etkinliğine yansıtılmaktadır (Notteboom vd., 2021:179-210). Lojistik verimliliği, bir kuruluşun hizmetlerini daha düşük maliyetlerle ve daha kısa sürede nasıl sağlayabileceğine bağlıdır ve hizmet etkinliği, kuruluşun malları daha esnek, duyarlı ve güvenilir bir şekilde nasıl teslim ettiğine yansıtılabilir. Deniz lojistiği değeri, hem deniz taşımacılığındaki bireysel birimlerin hem de bir bütün olarak lojistik sistemin performansını büyük ölçüde etkilemektedir (Ballou, 1992: 7). Çünkü bir lojistik sistemdeki tüm faaliyetler birbiriyle bağlantılıdır ve işlevleri karşılıklı olarak doğrudan veya karşılıklı olarak etkilenmektedir. Dolayısıyla, deniz lojistiği değerini artırmanın kilit bir yolu olarak deniz lojistiği değerini en üst düzeye çıkarmak, son zamanlarda denizcilik operatörlerinin operasyonlarında dikkate alması gereken önemli bir stratejik konu haline geldi.

Son zamanlarda yapılan çalışmalar, tüm lojistik faaliyetlerin oldukça entegre bir şekilde gerçekleştirildiğinde lojistik performansın maksimize edildiğini belirtmektedir. Buna göre, deniz taşımacılığı işletmecileri, küresel bir lojistik entegrasyon sisteminin merkezi bir üyesi olarak diğer lojistik işlevlerine ayak uydurmaya teşvik edilmektedir. Deniz taşımacılığı hizmetinin yanı sıra depolama, malzeme elleçleme, envanter ve paketleme gibi ilgili lojistik hizmetleri sunarak lojistik entegrasyon taleplerine cevap veren deniz taşımacılığı, bir deniz lojistik sistemi olarak adlandırılabilir (Charlampowicz, 2021:93-99).

Orta Asya'dan günümüz Türkiye'sine Türkiye'nin binlerce yıldır varlığını sürdürmesinde lojistiğin önemli bir rol oynadığı yadsınamaz bir gerçektir. Türklerin tarihine bakıldığında, İpek Yolu ve Baharat Yolu gibi ticaret yollarındaki deneyimler, yeni çağları açan kavimleri göçü ve karadan gemilerin taşınmasıyla birlikte gerçekleştirilen İstanbul'un fethi de dahil olmak üzere göçebe bir kültür doğmuştur. Türk tarihindeki bu kilometre taşları, lojistiğin bütün bir ulusun kaderini şekillendirmedeki rolünün ne kadar önemli olduğunu göstermektedir (Kuşular, 2020:27-86).

Türkiye kıtalar arasında bir köprüdür ve Asya, Avrupa ve Afrika arasındaki ulaşımında çok önemli bir rol oynamaktadır. Bu coğrafi konum hem tarihsel olarak hem de yakın geçmişte lojistik merkezlerin kurulması, paralel ve dengeli taşıma modlarının kurulması gibi lojistik açıdan birçok önemli fırsat sunmuştur. Bununla birlikte, özellikle denizciliğin geliştirilmesi, limanların merkezler olarak yeniden yapılandırılması ve kara ve diğer ulaşım modları ile bağlantılı liman ve hinterlandların desteklenmesi ihtiyacının olduğu denizcilik endüstrisinde yapılacak daha çok inovasyon bulunmaktadır (Boscheck, 1994: 132-151). Lojistik merkezlerle sağlanacak verimlilik, ülke ekonomisine fayda sağlayacak ve Türkiye'nin gelecekte lojistikte küresel bir merkez olma rolünü kolaylaştıracaktır. Bu tür lojistik merkezlerin oluşturulması Türkiye'nin 5 yıllık yatırım programlarında yer almakta ve bu plan doğrultusunda şimdiden bazı adımlar atılmış durumdadır. Dolayısıyla bu çalışma, Türkiye'nin küresel ekonomide deniz lojistiği faaliyetlerindeki rekabet avantajlarının, Türkiye'nin küreselleşen dünyada deniz lojistiği faaliyetlerinde sürdürülebilirliğinin sağlanmasına yönelik öneriler ve geleceğe ilişkin varsayımlar üzerine ele alınmıştır.

2. ULUSLARARASI LOJİSTİK VE REKABET AVANTAJI

Ekonomik sistemin bir parçası olarak bir lojistik sistem, doğrudan ekonomik sistemin denge durumunun sağlanmasına bağlıdır. Bu durumda lojistik sisteminin makro ortamının ve verimlilik önlemlerinin değerlendirilmesi uygun olur. Ayrıca makro çevre faktörlerini ve bunların verimlilik ölçülerini gruplara ayırmak gerekir: lojistik sistemin unsurlarını etkileyen faktörler, sistem unsurları arasındaki ilişkileri etkileyen faktörler ve lojistik sistemi karmaşık bir şekilde etkileyen ve oluşturan faktörler. Lojistik sistemin denge durumu bozulursa, lojistik sistemlerin yapısı, biçimi ve hedef yönleri ile unsurlar arasındaki ilişkilerin nicel ve nitel ifadesi değişir. Bu nedenle, lojistik sistemlerin rekabet gücünü değerlendirirken, lojistik sistemin var olma aşamasını ve sistemin durumunun dengeye yaklaşımını tanımlayan oranları belirlemek zorunludur. (Rodrigue, 2017:1-7).

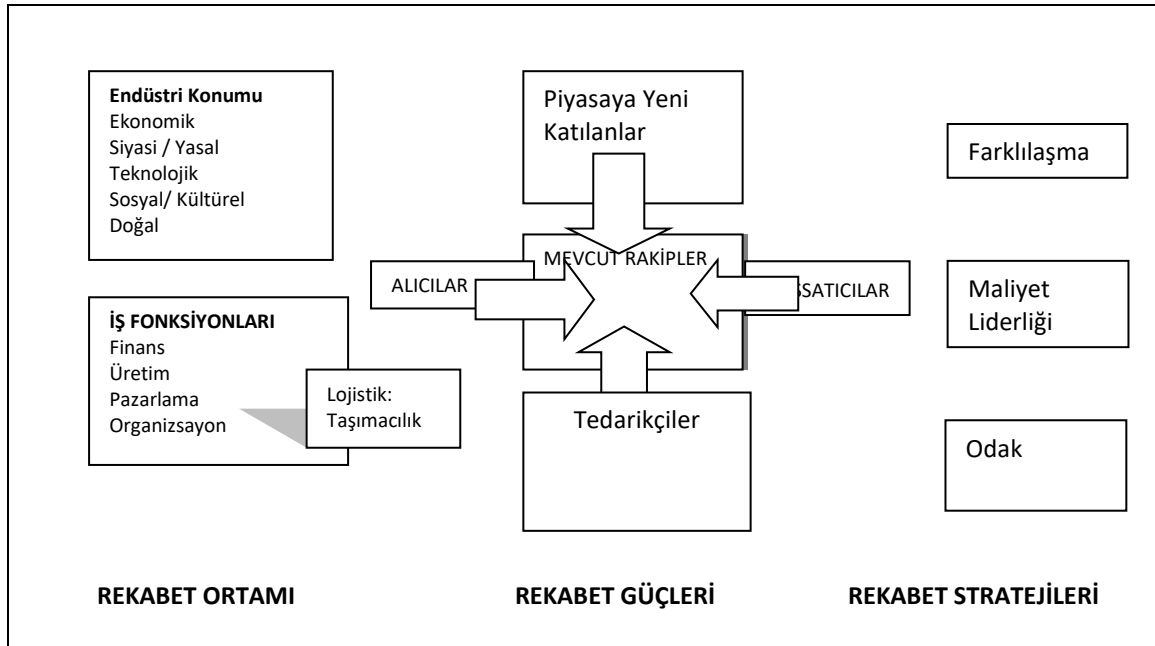

Porter (1985)'in dış etkenlere yaklaşımı, onları endüstri rekabetini belirleyen beş rekabet gücüne ayırmaktır.

- **Sektördeki Rekabet:** Bu güç, sektördeki rekabetin ne kadar yoğun olduğunu incelemektedir. Mevcut rakiplerin sayısını ve her birinin neler yapabileceklerini dikkate almaktadır. Rakiplerin sayısı ve sundukları eşdeğer ürün ve hizmetlerin sayısı ne kadar fazla ise bir şirketin gücü o kadar az olur.
- **Sektöre Yeni Girenlerin Potansiyeli:** Bu güç, rakiplerin sektöre katılmasının ne kadar kolay ve zor olduğunu dikkate almaktadır. Yeni giren rakibin sektöre girmesi ne kadar kolaysa, köklü bir şirketin konumu o kadar önemli ölçüde zayıflayabilmektedir.
- **Tedarikçilerin Gücü:** Porter (1985) modelindeki bir sonraki faktör olan tedarikçilerin ne kadar güce sahip olduğunu ve fiyatlarını yükseltme potansiyeli üzerinde ne kadar kontrole sahip olduğunu araştırmaktadır. Bu durum da bir işletmenin karlılığını düşürmektedir.
- **Müşterilerin Gücü:** Müşterilerin fiyatları veya güç seviyelerini düşürmeleri, beş rekabet gücünden biridir. Bir şirketin kaç alıcısı veya müşterisi olduğundan, her bir müşterinin ne kadar önemli olduğundan bir şirkete üretimi için yeni müşteriler veya pazarlar bulmanın ne kadara mal olacağından etkilenmektedir.
- **İkame Ürün Tehdidi:** Porter (1985) 'in beş rekabet gücünden sonuncusu ikamelere odaklanmaktadır. Bir şirketin ürün ve hizmetlerinin yerine kullanılabilecek ikame mal ve hizmetler tehdit oluşturmaktadır. Yakın ikamelerin mevcut olduğu durumlarda, müşteriler bir şirketin ürününü satın almaktan vazgeçme seçeneğine sahip olacak ve şirketin gücü zayıflayacaktır.

Porter (1985)'in ayrıca belirli bir sektördeki rekabete ilişkin faaliyetleri iki kategoride sınıflandırmaktadır (Psaraftis, 2016: 133-142). Bunlar; birincil faaliyetler ve destek faaliyetleridir. Değer zinciri, bir firmanın birincil faaliyetleri olarak 'gelen lojistik' ve 'giden lojistik'ten oluşur ve taşımacılık her ikisinde de önemli bir rol oynamaktadır. Bir endüstride üstün performans için üç genel strateji Porter (1985) tarafından maliyet liderliği, farklılaşma ve odaklanma stratejileri olarak tanımlanmaktadır.

Uluslararası pazarlarda rekabet eden şirketler için lojistik (ve bunun bir parçası olarak nakliye), diğer birincil faaliyetlerle aynı şekilde, alıcılar için değer yaratmak için destek faaliyetlerinden yararlanmaktadır (Panayides ve Song, 2013: 295-308). Ulaştırma sistemleri uluslararası pazarlama sisteminin bir parçasıdır ve bu nedenle sistemi çevreleyen tüm dış ve iç faktörlerden etkilenmektedir. Ayrıca, ulaşım sisteminin kendisi rekabet güçlerine tabidir; ulaşım hizmetinin rekabet stratejilerine göre konumlandırılması hizmetin sonuçlarını etkilemektedir.

Şekil 1: Uluslararası Pazarlama Sisteminde Taşımacılığın Rekabetçi Konumu

Uluslararası taşımacılık endüstrisinin hizmet kalitesi, müşterilerinin, yani ihracatçıların ve ithalatçıların rekabet avantajını artırmaya yardımcı olmak için belirli standartları karşılamalıdır (İvut, 2012:377). Hizmet kalitesinin belirleyicileri, pazarlama uzmanları tarafından temel parametreleri olarak güvenilirlik, yanıt verme, yetkinlik, erişim, nezaket, iletişim, güvenlik, anlama/bilme, müşteri ve somutluk kavramları olarak tanımlanarak on değişken olarak tespit edilmiştir. Daha fazla araştırmanın ardından, bu on boyut birleştirilerek güvenilirlik, yanıt verme, somutluk, güvence ve empati olarak beş grupta kategorileştirilmiştir (Unimar, 2020: 3-19).

2.1. Deniz Lojistiği ve Rekabet Avantajı

Uluslararası pazarlamanın bir unsuru olarak, taşımacılık hizmetinin işlevsel yönleri, denizcilik, karayolu, havayolu, demiryolu veya boru hattı taşımacılığı olmak üzere her bir taşıma modunun özel özelliklerine göre taşımacılık işinde gerçekleşen operasyonel faaliyetleri kapsamaktadır. 1997'de dünya deniz ticareti 5,07 4 milyar metrik tona ulaşarak nakliye, açık ara uluslararası mal taşımacılığının ana modu olmaya devam etmektedir. (Waters, 2003: 42-56). Deniz lojistiği rekabetçi bir endüstridir ve dünya ülkelerinin nakliye hizmetlerine olan talepleri türetilmiş taleptir. Genel anlamda denizcilik sektöründeki kargo hizmetlerinde alternatif uygulamalar yer almamaktadır. Dolayısıyla ülkeler arası deniz lojistiği sektöründe rekabet söz konusu olmaktadır.

Dünya ülkelerinin deniz lojistiği alanında rekabete girmelerinin birçok nedeni bulunmaktadır. Bunlardan ilki, ülkelerin kıyı sularındaki bazı kısıtlamalar dışında, gemiler serbesttir ve uluslararası rakipleri davet etmektedir. İkincisi deniz lojistiği küçük yatırımlarla başlamaktadır. Nakliye sefere başlamak için küçük bir yatırım gerektirmektedir. Kalıcı yol, işaretler, köprüler, tüneller, menfezler ve platformlar vb. inşaatına yapılan sermaye yatırımı, bir vapur veya gemi satın alırken bulunmamaktadır. Liman otoriteleri tarafından yükleme, boşaltma ve barınma tesisleri sağlanmakta ve bu nedenle armatör tarafından herhangi bir yatırım yapılmamaktadır. Bu tür tesisler, liman ücretlerinin ödenmesiyle kullanılabilir hale gelmektedir. İlk yatırım küçük olduğundan, dünyanın farklı köşelerinden birçok rakibi davet etmektedir. Deniz lojistiğindeki bir diğer rekabet unsuru ülkelerin bu sektörde oran belirleme özgürlüğüdür. Demiryolları ve motorlu taşıtlarda oran ve ücretler büyük ölçüde ülke hükümeti tarafından düzenlenir, ancak nakliyede oranlar ve ücretler herhangi bir düzenleyici hüküm olmaksızın serbest koşullar altında belirlenir. Dolayısıyla, oranların değişmesi gereken minimum veya maksimum limitler bulunmamaktadır. Bu nedenle, nakliyede oran düşürme ve tekel ücretlendirme yaygındır (Bukold, 1993: 24-34).

Deniz lojistiğinin en önemli avantajı ise ölçek ekonomilerinde yer almaktadır. Denizcilik sektörünün gücü ulaşım hızına değil, kapasitesine ve kapsamına bağlıdır (Esalco, 2020:3-17). Kısacası demiryolu ve karayolu ulaşımları

coğrafi ve hacim boyutlarında trafiği kaldıramamaktadır. Kargo ve gemilerin uzmanlaşması, konteynerleştirme ölçek ekonomilerine büyük ölçüde katkı sağlamaktadır.

3. LİTERATÜR

Literatürde küresel ekonomide deniz lojistiği faaliyetlerinin rekabet avantajları üzerinde birçok çalışma bulunmaktadır. Literatür taramasının özetleri Tablo 1’de gösterilmiştir.

Tablo 1: Literatür Taraması Özeti

Yazar ve Çalışma Yılı	Ülke	Dönem	Bulgular
Jacks & Pendakur (2008)	İngiltere	19. Yüzyıl Sonları	Çalışma döneminde küresel ticaretteki artışın ana itici gücünün deniz taşımacılığı olmadığını, ancak artan gelirlerle bağlı yakınsamanın bu ticaret artışının ana nedeni olduğu tespit edilmiştir.
Topuz (2010)	Türkiye	1923-1980	Navlun gelir giderlerinin odak noktası olarak alındığında uluslararası deniz ticareti taşımacılığının Türkiye ekonomisine katkısının son derece düşük olduğu sonucuna varılmıştır.
Burmaoğlu (2012)	AB Ülkeleri	2009	İnsan kaynakları ve entelektüel varlıkların ülkelerin lojistik performansları üzerinde pozitif etkisi tespit edilmiştir.
Deveci ve Çetin (2013)	Türkiye	2004-2012	Lojistik Performans Endeksi’nde ilk sıralarda olan ülkelerin ağırlık verdiği konteyner taşımacılığının ülkemizde de büyük artış gösterdiği sonucuna varılmıştır.
Sofyalıoğlu & Kartal (2013)	Türkiye ve Avrasya Ülkeleri	2012	Yapılan çalışmada Türkiye ile Avrasya ülkelerinin Lojistik Performans Endeksleri karşılaştırılarak Türkiye’nin lojistik faaliyetlerinde nispi üstünlüğü tespit edilmiştir.
Rasa (2014)	Litvanya	2007-2011	Litvanya’da deniz lojistiğinin uluslararası yatırımları çeken en önemli sektörlerden biri olduğu tespit edilmiştir.
Pascali (2017)	İngiltere	1850-1900	Deniz lojistiğinin dünyadaki uluslararası ticaret kalıpları üzerinde önemli bir etkiye sahip olduğu ve seçilen zaman diliminde dünyanın zengin ve fakir bölgeleri arasındaki ekonomik farklılıkların artmasının ana nedeni olduğu sonucuna varılmıştır.
Çalışkan (2019)	Türkiye, İspanya, Almanya	2011-2017	Araştırma analizinde açıklanan insan kaynaklı şoklar söz konusu olduğunda, ülkeler ortak politikalar oluşturma ve bunlara göre hareket etmesi durumunda deniz taşımacılığını olumsuz etkileyen şokların etkisinin en aza indirilebileceği sonucuna varılmıştır.
Kuşular (2020)	Gelişmekte olan 24 ülke (Mısır, Filipinler, Türkiye,...)	2009-2018	Ankete katılan 24 gelişmekte olan ülke arasında Mısır en rekabetçi olan ülke olurken, Filipinler en az rekabetçi olan ülke olarak tespit edilmiştir. Ayrıca Türkiye, gelişmekte olan ülkeler arasında en rekabetçi ikinci ülke olarak bulunmuştur.
Usta & Sarı (2021)	Türkiye	2010-2019	Analiz sonuçlarına göre, ekonomik büyüme, dış ticaret koşullarının gelişmesi deniz ticaretini önemli ölçüde etkilemektedir.

4. SONUÇ

Deniz taşımacılığı küresel ticaretin uluslararası lojistiği için kritik öneme sahiptir ve etkili bir şekilde yönetilmesi gerekmektedir. Uluslararası lojistiğin entegre bir bileşeni olarak konteynerli yüklerde deniz taşımacılığı, artık sadece deniz taşımacılığı hizmeti değil, depolama, malzeme elleçleme, envanter ve paketleme gibi ek lojistik hizmetler de sunan bir deniz lojistiği sistemi olarak kabul edilmektedir. Nakliye hatları, liman-terminal operatörleri ve nakliye komisyoncuları gibi büyük deniz taşımacılığı operatörlerinden oluşan deniz lojistiği sistemindeki unsurlar, lojistik değerlerinin, hizmetlerinin daha verimli ve etkin bir şekilde sistematik olarak gerçekleştirilmesi için önemli bir paya sahiptir (Yang, 2019: 108-117). Deniz lojistiği değeri, operatörler daha

düşük bir fiyatla daha hızlı, daha duyarlı, esnek ve güvenilir hizmetler sunduğunda iyileştirilebilir. Deniz lojistiği değerinin maksimize edilmesi, işletmecilerin sürdürülebilir rekabet edebilirliklerinin iyileştirilmesine ek olarak, tüm lojistik performansının iyileştirilmesine yardımcı olabileceğinden, denizcilik işletmecilerinin ulaşmak istedikleri en önemli stratejik hedeflerden biri haline gelmiştir.

Bir ülkenin lojistik merkez olabilmesi için üç koşul gerekmektedir. Bunlar; coğrafi avantaj, fiziksel altyapı ve kurumsal altyapıdır. Türkiye'nin birinci şartı yerine getirdiği yadsınamaz bir gerçektir. Ancak Türkiye'nin çağdaş standartlara ulaşması için fiziki ve kurumsal altyapısını geliştirmesi gerekmektedir. Bu amaçla Türkiye bir ulaşım planları ve kalkınma stratejileri oluşturmuştur, ancak bu geliştirmeleri tamamlamak için lojistik entegrasyon ve stratejik yaklaşımlara ihtiyaç duyulmaktadır. Türkiye ekonomisi dünya ekonomisinde 20., Türk Ticari Deniz Filosu ise dünyada 14. sıradadır. Türkiye'nin jeostratejik konumu önemli olmakla birlikte Türkiye ticari ve lojistik gücünü geliştirmeye çalışmalı ve elde edilen fırsatları iyi değerlendirmelidir. Şöyle ki; köprüler kurup geçiş ülkesi olmak zenginlik getirmez. Türkiye ekonomideki yüksek payını ancak lojistikte bir merkez haline gelmesiyle alacaktır. Ancak bu durum, özellikle stratejik planlamada yüksek derecede planlama gerektirmektedir. Lojistik sektörünün Türkiye'nin sanayi politikasına dahil edilmesi bu koordinasyonu kolaylaştırmaktadır.

Özet: Endüstriyel pazarlar ürün ve hizmetlerin üretimde kullanmak ya da yeniden satmak amacıyla işletmeler, hükümetler veya kurumlar tarafından alınıp satıldığı pazarlardır. Endüstriyel pazarlama ise, endüstriyel veya kurumsal müşterilere mal ve hizmetlerin pazarlanması faaliyetleridir. Nihai tüketiciler gibi endüstriyel alıcılar da satın alma kararlarını verirken birçok aşamadan geçer ve çeşitli faktörlerden etkilenirler. Ancak endüstriyel pazarlarda satın alma karar süreçleri, nihai tüketicilere göre daha karmaşıktır ve endüstriyel alıcılar satın alma kararlarını verirken daha rasyonel, kurallı ve sistematik davranırlar. Satın alma kararı, örgüt içinde farklı seviyelerde bulunan birçok insan arasındaki etkileşimi içerir. Endüstriyel ürünlerin satın alınması sürecinde profesyonel satın alma görevlileri rol alır. Nihai tüketicilere kıyasla endüstriyel alıcılar daha bilgilidir, satın alma kararında daha profesyonel davranır ve rasyonel hareket ederler. Rasyonel açıdan bakıldığında endüstriyel alıcılar ekonomik fiyat, yüksek kalite ve performans, verimlilik, kolay ulaşılabilirlik, zamanında teslimat, tedarikçi güvenilirliği ve satış sonrası destek gibi beklentilere sahiptir. Endüstriyel pazarlamada alıcı ve satıcı arasında kurulan kaliteli ve uzun süreli bir ilişki, alıcı firmanın algıladığı belirsizliği, dolayısıyla kontrolleri azaltarak verimliliği ve performansı artırır; ona kısa vadeli ilişkilerde sağlayamayacağı özel indirimler, yakın danışmanlık hizmetleri gibi ilave avantajlar sağlar. Diğer taraftan, endüstriyel pazarlarda satın alma görevlilerinin, tedarikçi firmanın satış personeli ile kurduğu kişisel ilişkiler de satın alma karar sürecinde rol oynayabilir. Bu kişisel ilişkiler çerçevesinde hediye, ağırlama, eğlence gibi uygulamalar gündeme gelerek rasyonel olmayan bazı değerlendirmeler yoluyla satın alma kararlarını etkileyebilir.

Bu çalışmada, endüstriyel pazarlarda satış elemanları ile satın almacılar arasında kurulan kişisel ilişkiler ve genel olarak “temsil harcamaları” olarak isimlendirilen hediye ve ağırlama gibi uygulamaların, satın alma kararları üzerindeki etkisi pazarlama ve iş ahlakı perspektifinden incelenmiştir. Bu amaçla satış elemanları ve satın almacılar üzerinde derinlemesine mülakat yöntemiyle nitel bir çalışma yapılmıştır. Çalışma kapsamında Kocaeli ilinde organize sanayi bölgeleri içerisinde yer alan on farklı işletmenin satış ve satın alma birim yöneticileri ile mülakatlar yapılmıştır. Görüşmelerde satış elemanlarına temsil harcamaları ve benzeri enstrümanları hangi amaçlarla, ne düzeyde, hangi sıklıkta kullandıkları ve bu tür uygulamaların satış performansını ne düzeyde etkilediği sorgulanmıştır. Satın alma yöneticilerine ise bu tür uygulamalar hakkındaki görüşleri, etik açıdan değerlendirmeleri ve satış personeli ile olan ilişkilerini nasıl yönettikleri sorulmuş, bu uygulamaların satın alma karar sürecindeki etkileri irdelenmiştir. Yapılan analizler sonucunda satış elemanları açısından temsil ve ağırlama harcamalarının satış performansını pozitif yönde etkilediği, satın almacılar ile satış personeli arasındaki ilişkiyi güçlendirdiği, ancak bazı uygulamaların iş ahlakı açısından sorgulanabilir nitelikte algılandığı tespit edilmiştir.

Anahtar Kelimeler: İş Ahlakı, Pazarlama Ahlakı, Satış Elemanı, Endüstriyel Pazarlama, Derinlemesine Mülakat

1. GİRİŞ

Endüstriyel pazarlama, ürün ve hizmetlerin işletmeler tarafından diğer işletmelere, kamu kurum ve kuruluşlarına, kar amacı gütmeyen organizasyonlara ve araçlara pazarlanması faaliyetidir (Dwyer ve Tanner, 2002: 24). Endüstriyel pazarlama, diğer işletmelerin taleplerini ve ihtiyaçlarını karşılamak ve onlara değer yaratmak için ürünlerin geliştirilmesini, fiyatlandırılmasını, dağıtımını ve tutundurmasını kapsayan bir yönetim sürecidir; kısaca, işletmeden işletmeye yapılan pazarlama faaliyetleridir.

Kiralanan ya da satın alınacak mamul ve hizmetlerin üretiminde kullanılmak üzere mamul ve hizmet satın alan işletmelerin oluşturduğu pazarlar endüstriyel pazarlardır (Yükselen, 2021: 117). Diğer bir ifadeyle; endüstriyel pazar, işletmeden diğer işletmelere ürün veya hizmet satılan, kiralanan ya da tedarik edilen, başka ürün ve hizmetlerin üretiminde kullanmak için satın alan organizasyonları içeren pazardır (Akoğul ve Tuna, 2016: 30). Endüstriyel pazarlarda alıcı sayısı tüketici pazarlarına göre daha az olup genellikle belirli bölgelerde toplanmışlardır. Bu firmaların üretim ve hizmet satışlarına bakıldığında son noktada nihai tüketiciye ulaşmaktadır. Tüketicilerin taleplerinde yaşanacak daralmalar endüstriyel pazarlarda faaliyet gösteren firmaların endüstriyel ürünlere olan talebini azaltmaktadır. Yine tüketici pazarına göre endüstriyel pazarlarda profesyonel satın alma ağırlıktadır. Endüstriyel alıcılar, nihai tüketicilere göre daha akılcı davranırlar. Endüstriyel alıcılar satın alma kararlarında duygusal güdülerden çok, akılcı güdülerle hareket ederler. Endüstriyel işletmeler, üretime veya ticari faaliyetlerine yönelik ihtiyaçları karşılamak için alım yaptıkları için, satın alınacak ürün ya da hizmetin işlevleri ve teknik özellikleri ile ilgili ayrıntılı bilgi edinmek isterler. Bu yüzden de, satın alma işleminden önce nihai tüketicilere kıyasla çok daha ayrıntılı incelemeler gerçekleştirirler (Mucuk,2014: 96-104). Endüstriyel

satın alma sürecinde, gereksinimlerin belirlenmesi, tedarikçi seçimi, uygun fiyatı bulma, şartlar ve faktörlerin saptanması, sipariş veya sözleşmenin hazırlanması ve uygun teslimat ile ödemenin takibinin yapılması gibi aşamalar bulunmaktadır (Ersoy, 2015: 32).

Endüstriyel pazarlarda, pazardaki talep durumu, ekonomik canlılık, teknolojik gelişmeler, yasal düzenlemeler gibi çevresel faktörler satın alma kararlarında etkilidir. Bunun yanı sıra örgüt içi düzenleme ve kurallar, satın alma birimi görevlileri ve bu kişilerin kişisel özellikleri, geçmiş deneyim ve tecrübeleri de satın alma kararında önemli bir yere sahiptir. Diğer taraftan, endüstriyel pazarlarda satın alma görevlilerinin, tedarikçi firmanın satış personeli ile kurduğu kişisel ilişkiler de satın alma karar sürecinde rol oynayabilir. Bu kişisel ilişkiler çerçevesinde hediye, ağarlama, eğlence gibi uygulamalar gündeme gelerek rasyonel olmayan bazı değerlendirmeler yoluyla satın alma kararlarını etkileyebilir (Fisher, 2007). Kişisel satışta hediye, ağarlama vb. uygulamalar konusundaki araştırmalar konuta daha çok pazarlama etiği açısından bakmaktadır. (Dubinsky ve Gwin, 1981; Chonko ve Hunt, 1985; McClaren, 2000). Bu araştırmalar genellikle tanımlayıcı olma eğilimindedir (Finn & Moncrief, 1985; Schurr & Calder, 1986) ve çoğu zaman satışçının bakış açısına odaklanmaktadır (Mullins, Ahearne, Lam, Hall ve Boichuk, 2014; Vosgerau, Anderson, & Ross, 2008). Kişisel satışta eğlence, ağarlama ve hediye konusuna hem satın almacıların hem de satışçıların bakış açısını irdeleyen çalışmalar oldukça sınırlıdır (Inks, Avila, Chapman, 2004; Gegez, Inks & Avila, 2006; Oakley, Bush, Moncrief, vd. 2021). Oysaki, eğlence, ağarlama ve hediye verme gibi konularda hem satışçının hem de satın almacının algılarını karşılaştırmak ve bu tür uygulamaların alıcı-satıcı arasındaki ilişkileri ne şekilde etkilediğini incelemek, kişisel satışta etik dışı davranışın nedenlerinin daha iyi anlaşılmasına ve satış yöneticilerinin bu konuda gereken önlemleri almasına yardımcı olabilir.

Bu bağlamda, bu araştırmanın amacı temsil harcamaları olarak adlandırılan hediye ve ağarlama gibi uygulamaların, endüstriyel pazarlarda satıcı-satın almacı ilişkisini nasıl etkilediği ve satın alma kararlarına nasıl yansıdığını irdelemektir. Bu araştırmanın sonuçlarının bir taraftan endüstriyel pazarlamada alıcı-satıcı ilişkisine dair literatüre katkı sağlarken, diğer taraftan ise temsil ve ağarlama faaliyetlerinin planlanması ve uygulanmasında satış yöneticilerine yol gösterici bilgiler sunması beklenmektedir. Bu kapsamda Kocaeli ili organize sanayi bölgelerinde yer alan on farklı firmada satış ve satın alma birimlerinde çalışan personel ve yöneticiler ile derinlemesine mülakat yöntemi ile nitel bir çalışma yapılmıştır. Çalışmanın bundan sonraki bölümünde endüstriyel pazarlar ve endüstriyel pazarlarda satın almayı etkileyen faktörler ile ilgili literatür özeti sunulmuştur. Daha sonra araştırmanın yöntemi ve veri toplama süreci açıklanmış, toplanan veriler analiz edilerek sonuçlar üzerinde tartışılmıştır.

2. ENDÜSTRİYEL PAZARLAMA

İşletmeler arası pazarlama (B2B) olarak da isimlendirilen endüstriyel pazarlama, kişisel veya ailevi ihtiyaçlar için ürün ve hizmetleri satın alan nihai tüketicilerden ziyade diğer işletmelere ürün ve hizmet sağlama konusunda uzmanlaşmış bir iletişim ve satış dalıdır. Endüstriyel pazarlama kavramı hizmet ve malların başka mal ve hizmetlerin üretimi için tekrar endüstriyel müşterilere pazarlanma işlemi olarak tanımlanmaktadır (Arslan, 2012: 7). Bu pazarlama üretici, toptancı, perakendeci arasındaki ticari işlemleri kapsamaktadır. Endüstriyel pazarlama faaliyetleri için uzman satışçılar ve pazarlamacılara ihtiyaç duyulur. Endüstriyel pazarlamada odak noktası kişisel satıştır. Endüstriyel pazarlama yapan işletmelerin amacı, müşterileriyle uzun vadeli ilişkiler kurarak onlar için vazgeçilmez bir tedarikçi olmaktır. Uzun vadeli ilişkilerin kurulabilmesi için dinamik ve proaktif bir satış gücü aracılığıyla müşterilere değer yaratmak, bunu sunmak ve onların gelişimlerine katkıda bulunarak birlikte kazanmak gerekmektedir (Tatlıpınar, 2019: 32).

Endüstriyel pazarlar ise, işletmelerin nihai mal ve hizmetleri üretebilmek için ihtiyaç duydukları her türlü girdinin alıcılara sunulduğu yerlerdir. Bu işletmeler üretimleri için, malzemeler, hammaddeler, aksamlar vb. gibi ürünleri, tesisat, tesis, donatım ekipmanları vb. gibi ürüne kısmen dahil olanları ve büro hizmetleri, endüstriyel hizmetler vb. gibi ürüne dahi olmayan ürünleri talep etmektedirler (Tektaş ve Kavak, 2010:52). Endüstriyel pazarın özellikleri şu şekilde sıralanabilir (Balta, 2006: 32):

- Az sayıda ve tüketici pazarlarındaki alıcılara göre büyük alıcılardan oluşur.
- Müşteriler belli bölgelere toplanmışlardır.
- Endüstriyel pazarda talep, nihai tüketici talepleri ile orantılıdır.
- Talep elastikiyeti düşüktür, tüketici taleplerine göre değişim gösterebilir.
- Alıcıların daha karmaşık satın alma kararları bulunmaktadır.
- Satın alma kararları rasyoneldir.

- İlişkiler uzun dönemlidir.
- Satın alma kararları birden çok kişi tarafından verilebilir.
- Satın almacılar ve satıcılar arasında karşılıklı bağlılık bulunmaktadır.
- Satın alının yanında kiralama işlemleri de mevcuttur

Endüstriyel pazarlarda müşterileri elde tutmak ve pazarlama ve satış performansı, karlılık gibi unsurlarda, işletmelerin uzun dönemde performanslarını en üst seviyeye çıkartabilmeleri için müşterilerle uzun vadeli, karşılıklı fayda sağlayan ilişkilerin kurulması, geliştirilmesi ve sürdürülmesi gereklidir. Taraflar arasında güçlü ilişkiler kurulması sayesinde, alıcı-satıcı ilişkisinde gereksiz maliyetleri azaltmak hatta tamamen ortadan kaldırmak için her iki taraf kendi süreçlerini belirlemekte, bu da işlemlerde hız ve esnekliği, güven ve kaliteyi artırmaktadır. İşletmeler ürün karlılığının, ürün performansı ve müşteri memnuniyeti boyutlarına bağlı olarak üst düzey faydalar elde ettikleri ortaklarına bir ilişki taahhüt etmektedirler (Yürük ve Kayapınar, 2016:100-101).

3. ENDÜSTRİYEL PAZARDA SATIN ALMA

Endüstriyel pazarlarda satın alma, örgütlerin faaliyetlerini sürdürebilmesi için ihtiyaç duyduğu mal ve hizmetlerin tedarik edilmesi sağlayan sistemlerdir. Satın almanın verimli olabilmesi için ürün ve hizmetlerin doğru zamanda, doğru maliyetle, doğru kalitede ve doğru tedarikçi ile sağlanması gereklidir (Koçoğlu ve Avcı, 2014). Endüstriyel satın alma süreçleri bireylerin satın alma süreçlerine göre daha karmaşık bir yapıya sahiptir. Örgütler için üretimde maksimum verimliliğin veya yeniden satışta maksimum karlılığın sağlanması için endüstriyel satın alma süreçleri kullanılmaktadır. Bu süreçler sayesinde örgütler kendi pazarlarında rekabet avantajı yakalamaktadır.

Endüstriyel satın alma aşmaları ihtiyacın doğması ve gereksinimin farkına varılmasıyla başlar. Tüketici pazarlarında olduğu gibi beklentilerle gerçekleşen durum arasında fark oluştuğunda gereksinimler ortaya çıkar. Sonrasında satın almacı gereksinim duyulan ürünlerin nitel ve nicel özelliklerini belirler. Ürüne ait teknik bilgi, kullanım şekilleri gibi detaylı bilgiler gerektiği durumlarda satın alma ile bağlantılı mühendisler gibi teknik personel bilgisine başvurabilir (Çağlar ve Kılıç,2005: 88). Satın almacı bu aşamada ürünle ilgili gerekli araştırmayı yapar, bütçeyi oluşturur ve alım sürecini netleştirir. Bir sonraki aşamada, satın almacı muhtemel tedarikçileri araştırır, uygun tedarikçileri belirleyip teklifleri toplar. Tekliflerde ürün özellikleri, ödeme ve teslim şartları varsa garanti süreleriyle ilgili bilgiler talep edilir (Sağlam,2012: 195). Tekliflerin toplanması sonrası alternatiflerin değerlendirilmesi aşamasına geçilir. Bu aşamada teklifler istenen özellikler doğrultusunda birbirleriyle karşılaştırılır. Tekliflerdeki ürünler ile tedarikçilerin de değerlendirmesi geçmiş dönem performansları, finansal durumları, teslimat süreleri, iletişim ve kişisel tercihler doğrultusunda yapılır. Bu aşamaya kadar yapılanların sonucunda satın almacı karar vermek için ihtiyaç duyduğu tüm bilgilere sahip olur. Karar verme sürecine dahil olan satın alma ekibi üyeleri eldeki tüm verileri değerlendirdikten sonra en doğru seçimi yapmaya çalışır (Sağlam,2012: 195). Satın alma kararının verilmesini takiben, gerekli görülmesi durumunda tedarikçi ile sözleşme imzalanabilir. Bu sözleşmelerdeki amaç olası risklerin azaltılması, riskin oluşması durumunda uygulanacak prosedürlerin baştan belirlenmesidir. Satın alıma konu ürünlerin teslim alınması sonrası, ürünle ilgili talep edilen özelliklere sahip olup olmadığı kontrol edilerek, tedarikçi performansı değerlendirmesi yapılır.

Satın almacılar, satın alıma konu ürünün niteliklerine veya şirket satın alma politikalarına göre üç şekilde satın alma yaparlar. Daha önceden satın alınmış, onaylı ve belirli tedarikçilerden temin edilen rutin alımlar doğrudan satın alma olarak gösterilir. Bu tip satın almalarda tedarikçilerin geçmiş olumlu performanslarını devam ettirmeleri beklenir. Satın alınan ürünle ilgili çok az bilgiye ihtiyaç duyulması, sürekli aynı ürünün alınması gibi durumlarda kullanılır. Satın almacının mevcut satın alınan ürünle ilgili özellik, fiyat, çalışma koşulu veya teslim şartı değişikliğine gitmek istemesi durumunda değiştirilmiş yeniden satın alma modeli ortaya çıkar. Bu tip satın alma modelinde yeni tedarikçilerin sisteme girme ihtimali artar (Çağlar ve Kılıç,2005: 86). Bir ürünün ilk defa satın alındığı durumlarda harcama ve risk kalemlerinin büyüklüğü ile orantılı olarak satın alma kararına katılacak kişi sayısı artabilir. Doğrudan satın almaya göre karar süreçleri uzayabilir. Bu satın alma modelinde tedarikçiler müşterilerinin korunması için kalitesi yüksek ürünler ve güvenilir hizmetler sunmaya devam ederek müşteri memnuniyetini en üst seviyede tutmaya çalışmalıdırlar (Peter ve Donnelly, 2007:56).

Tablo 1: Endüstriyel satın alma türlerinin genel özellikleri

Doğrudan satın alma	Değiştirilmiş yeniden satın alma	İlk defa satın alma
	İlk defa satın alma ya da doğrudan satın alma durumundan kaynaklanabilir	Daha önce ortaya çıkmamış bir talep veya sorun bulunmaktadır.
Talep sürekli tekrarlanır.		

Her bir satın alma işlemine ait karar genellikle satın alma departmanı tarafından alınır.	Talep sürekli ya da zaman içinde tekrarlanabilir veya belirli faaliyetlerin büyüme düzeylerine bağlı olarak genişletilebilir.	Satın almaya konu ürünle ilgili geçmiş bir deneyim veya bilgi yoktur.
Belirli tedarikçiler içerisinde seçim yapılır.	Satın almaya ilişkin alternatifler bellidir, ancak bunlarda da değişiklik olabilir	Satın alma sürecinde bilgiye ihtiyaç vardır.
Yeni tedarikçinin sisteme katılması zordur.	Satın alma kararı öncesi ek bilgiye ihtiyaç duyulabilir.	Soruna ve ihtiyaca yönelik tedarikçi araştırmaları yapılır.
Geçmiş deneyimler nedeniyle çok az bilgiye ihtiyaç duyulur.	Örgüt dışı faktörler kaynaklı olarak bu satın alma modeli ortaya çıkabilir.	Tedarikçi çok önemlidir çünkü daha sonraki doğrudan satın alımlar için kaynak oluşturur.
Satın alma durumunda, işletmedeki satın alma örgütünün yaptığı her bir satın alma toplamda satın alınan mal miktarının çok olduğunu gösterir	Yeni satın alma etkileri, potansiyel maliyet değişiklikleri, kalite ve hizmet kaynaklı değişimler bu satın alma modelini oluşturabilir.	Yaratıcı pazarlama çalışmalarıyla önceden tahminlenebilir.

Kaynak: Balta,2006: 65

Endüstriyel satın alma, biçimsel bir örgüt yapısı içinde, birden fazla kişinin diğeriyle etkileşim halinde olduğu ve tanımlı roller çerçevesinde birlikte gerçekleştirilen bir karar sürecidir. Örgütsel satın alıcı davranışına etki eden faktörler çevresel (ekolojik, teknolojik, ekonomik, politik, yasal ve kültürel), örgütsel (örgütün yapısı, amaçları, satın alma birimi üyeleri, satın alma gücü ve miktarı vb.), sosyal (satın alma görevi ile ilgili süreçler, görev dışı etkileşimler, satın alma birimi üyelerinin güçleri vb.) ve bireysel faktörler (örgütsel alıcının kişiliği, algılanan rol seti, motivasyonu, düşünce seti ve öğrenme süreçleri) olmak üzere dört başlıkta incelenebilir (Webster ve Wind, 1972). Bu faktörler karmaşık bir şekilde bir araya gelerek nihai karar üzerinde etki yaratabilirler. Buna göre, endüstriyel pazarlarda satın alma birimi üyelerinin rolü çok önemlidir. Son tahlilde, tüm örgütsel satın alma davranışları bireysel davranışlardır. Örgüt içinde bu konuda görevlendirilmiş kişiler (satın almacılar) tarafından gerçekleştirilen satın alma kararları, her zaman rasyonel biçimde gerçekleştirilmediği için satın almacı ve satıcı arasındaki kişisel ilişkiler de satın almada önemli bir rol oynar. Satın almacılar genel olarak güvendikleri ve bildikleri satış personelinin satın almayı tercih ederler (Odabaşı,2001: 60). Satın alma karar sürecinde satın almacının beklentileri, algıları, kişisel düşünceleri, yaşam biçimleri ve algıladıkları riskler de stratejik öneme sahiptir (Balta,2006: 52). Satın alma çalışanlarının örgüt amaç ve beklentilerinin yanı sıra kişisel beklentileri de bulunmaktadır. Kişisel amaç ve beklentiler kimi zaman çatışmaya yol açabileceği gibi zaman zaman da işbirliği doğurabilir (Balta,2006: 56).

Çevresel faktörler satın alma kararlarını büyük ölçüde etkileyen ancak örgüt tarafından kontrol edilemeyen coğrafi koşullar, kültürel faktörler, politik ve yasal düzenlemeler, enflasyon, büyüme, kredi gibi ekonomik koşullar, rekabet ve teknolojik gelişmelerden oluşmaktadır (Webster ve Wind, 1974). Örgütsel faktörler ise örgütün yapısı, amaçları, tanımlı görevleri, satın alma politikaları, kaynak ve imkânları ile satın alma ekibi içindeki aktörlerde oluşmaktadır (Mucuk,2014: 94). Son yıllarda yaşanan ekonomik koşullar, uluslararası rekabet, ürün kıtlığı gibi sebeplerden ötürü satın alma kararlarında merkezîyetçilik, uzun dönemli sözleşmeler ve satın alma ekibi performans değerlendirmesi gibi uygulamalar başlatmıştır (Tek,1999: 9).

Satın alma karar sürecinde, satın alma birimindeki aktörlerin kendi aralarındaki etkileşimleri ve satışçılar ile kurdukları sosyal ilişkileri kişiler arası etkileşim faktörlerini oluşturur. Satın almacıların ve satış personelinin bilgi düzeyleri, iletişim yetenekleri, ilişki kurabilme becerileri satın alma kararlarını doğrudan etkiler. Endüstriyel satın alma davranışı her ne kadar örgütlerle ilgili olsa da son tahlilde değerlendiriciler ve karar vericiler bireylerden oluşmaktadır. Kültürel, örgütsel ve sosyal faktörler birey üzerinde önemli etkilere sahiptir ve önceki deneyimlerine, farkındalığına, belirli satıcılara ve ürünlere yönelik tutumlarına ve tercihlerine ve satın alma kararlarına yansır. Endüstriyel satın alma kararlarına kişisel faktörlerin de etki ettiğini göz önünde bulundurmak gereklidir. Satın alma ile ilgili stratejik pazarlama kararlarının temeli olarak örgütsel alıcının psikolojik özelliklerini ve tutumlarını, tercih yapısını ve karar modelini anlamak önemlidir. Satın alma kararına etki eden kişisel faktörler satın alma personelinin kendisi ile ilgilidir. Satın almacıların demografik (yaş, cinsiyet, eğitim) ve psikografik (benlik, kişilik, motivasyon, değerler, inançlar) özellikleri ile bilgi birikimleri ve deneyimleri karar süreçlerini etkilemektedir. Bu sebeple aynı durumla ilgili farklı satın almacılar farklı kararlar verebilirler. Bunların yanı sıra alıcı-satıcı arasında uzun süreli güvene dayalı bir ilişki kurulması bağlamında kişisel ve ilişkisel faktörler

de devreye girmektedir. Satıcılar bu ilişkinin hızlı kurulabilmesi için hediye, ağırlama, eğlence gibi argümanları yaygın olarak kullanabilmektedir.

4. ENDÜSTRİYEL PAZARDA SATIŞÇI VE SATIN ALMACI İLİŞKİLERİ

Endüstriyel satın almaların büyük hacimli yatırımlar gerektirmesi, genellikle karmaşık ürünler için özel çözümlere ihtiyaç duyulması ve riski yüksek işlemler nedeniyle endüstriyel pazarlarda alıcı-satıcı etkileşimleri kritik bir rol oynamaktadır. Endüstriyel pazarlamada satışçıların öncelikli sorumluluğu müşterilerle ilişki kurmak ve sürdürmek, ihtiyaç duyulan pazar bilgisini toplamak ve işletmeye gelir getirmektir. Bu sorumlulukları yerine getirebilmek için satışçılar, müşterinin temsilcileri olan satın almacılarla çeşitli düzeylerde etkileşime girerler. Günümüzde pek çok işletme sürdürülebilir rekabet avantajı elde etmenin yollarından birisi olarak hizmet perspektifini benimsemiş (Grönroos, 2000) ve müşterileriyle uzun vadeli karşılıklı fayda sağlayan ilişkiler kurmaya yönelmiştir. İlişki pazarlaması yaklaşımı, pazarlamaya konu olan değişimleri tek seferlik bir satış olarak görmek yerine, onları sürekli devam eden bir işbirliği olarak görmektedir (Möller ve Halinen, 2000). Bu bağlamda, alıcıların ve satıcıların karşılıklı bağımlılığı ve aralarında uzun vadeli ilişkilerin geliştirilmesi, günümüzde endüstriyel pazarlamanın temel özelliklerinden biri olarak tanımlanmaktadır (Petrof, 1997). Bu ilişkiler, uzun vadeli bir bakış açısıyla bağlılık, güven ve işbirliğine dayalı olarak kurulan ve her iki tarafa da yarar sağlayan ilişkilerdir. İlişkisel pazarlamanın temelinde, alıcı ve satıcı arasında kurulan etkileşimle karşılıklı değer yaratmak ve bir kazan-kazan durumu oluşturmak yatmaktadır (Fisher, 2007).

Örgütler arasındaki ilişkinin başarısı büyük ölçüde bu örgütleri temsil eden bireyler (satışçı ve satın almacı) arasındaki ilişkinin başarısına bağlıdır. İş ilişkisinin bir sonucu olarak satın almacı ve satış elemanı arasında bir sosyal yakınlık gelişebilir. Bu sosyal ilişkide satışçı ile satın almacının iletişim şekilleri, birlikte geçirdikleri zaman ve gerek işle ilgili gerekse bunun ötesindeki paylaşımları rol oynayabilir. Firmalar, satış stratejilerinin bir parçası olarak, satın almacıları etkileme ve müşterilerle uzun vadeli ilişkiler kurma umuduyla uzun yıllardır satış elemanlarının temsil, ağırlama, eğlence ve hediye verme gibi faaliyetlerde kullanmaları için bütçe ayırmaktadırlar (Oakley vd, 2021). Satın almacılar sağlanan hediyeler ve menfaatler arasında ajandalar, not defterleri, kalemler, anahtarlıklar, kahve kupaları ve giyim eşyaları, yemekler, eğlence, spor veya kültürel etkinlik biletleri, seyahatler ve hatta nakit para gibi unsurlar sayılabilir. Bu tür "hediyeler" karşılığında, satıcı kendisine daha yakın ve ayrıcalıklı bir yaklaşım bekleyebilir. Bu beklentinin temelinde sosyal mübadele teorisi (Blau, 1964; Homans, 1961) ve karşılıklılık unsuru yer almaktadır. Müşterilere sunulan küçük hediyeler, eğlence ve ağırlama gibi "hizmetlerin", satın almacılarla duygusal bağlar kurmak, onlarda şükran ve borçluluk duygusu yaratmak ve nihayet satın alma kararlarını etkilemek amacıyla taktiksel bir araç olarak kullanılması oldukça yaygındır (Oakley vd., 2021). Ancak bu tür uygulamalar aynı zamanda endüstriyel pazarlamada etik açıdan en fazla sorgulanan konular arasındadır (Cooper vd., 1997; Kitson ve Campbell, 1996; Mellahi ve Wood, 2003). Hediyeler ve diğer menfaatler, tedarikçiler ve ticari müşterileri arasındaki ilişkiyi geliştirmenin bir yolu olarak genellikle işletmeler arası bağlamda sağlanır. Bunun nedeni ilişki pazarlamanın ayrıcalıklı muamele vermeyi ve almayı arzu edilen bir davranış olarak görmesidir, ancak aynı zamanda hediye vermek ve çeşitli menfaatler sağlamak, etik açıdan en sorunlu konulardan biri olarak görülür (Fritzsche, 2005; Kitson ve Campbell, 1996; Turner, Taylor, & Hartley, 1994). Buradaki temel mesele, işletmeler arasındaki ilişkiyi geliştirmeyi amaçlayan "kabul edilebilir" nitelikteki uygulamalar ile alıcılar üzerinde karar alma süreçlerinde taraflı davranışları yönünde baskı oluşturan "kabul edilemez" uygulamalar arasında ayırım yapabilmektir (Mellahi & Wood, 2003). Bu bağlamda satışçı ve satın almacı ilişkisinde eğlence, ağırlama ve hediye kavramlarının daha yakından incelenmesi faydalı olacaktır.

4.1. Eğlence ve Ağırlama

Günümüzde satış ekipleri ve satın almacılar arasında ilişkilerin kurulması veya geliştirilmesi aşamalarında eğlence ve ağırlama olarak nitelendirilen uygulamalara sıklıkla rastlanmaktadır. Müşteri eğlencesi, güçlü bir müşteri-tedarikçi ilişkisi yaratmak ve sürdürmek için bir strateji olarak kullanılan bir çeşit "sosyalleşme davranışı" olarak tanımlanabilir (Geiger ve Turley, 2004 s.264). İşletmeler müşteri ağırlama giderlerini genellikle "seyahat ve eğlence" başlığı altında bütçelendirirler. En yaygın biçimleri arasında öğlen ve akşam yemekleri, kahvaltılar, kokteyller, eğlence veya spor etkinlikleri, balık tutma, kamp veya av gezileri veya diğer geziler gibi ortak faaliyetler sayılabilir (Dempsey, Bushman, & Plank, 1980; Forker & Janson, 1990). Pek çok satışçı, endüstriyel pazarlarda alıcı-satıcı ilişkisinin ekonomik ve rasyonel temellerine rağmen, ofis dışında müşterileri ağırlamanın, uzun vadeli faydaları olan ilişkiler kurmak ve güven oluşturmak için etkili bir yaklaşım olduğunu düşünmektedir (Hite ve Bellizzi, 1987; Geiger & Turley, 2003). Kaynakların sınırlı olduğundan hareketle, satış

elemanlarının satın almacılar için bir eğlence etkinliği düzenlemesi ve kendisinin de buna katılması durumunda bu etkinliğin sembolik değerinden öte; harcanan zaman ve emekten dolayı satın almacılar şükran ve borçlanma duygusu ile hareket edebilirler (Dorsch ve Kelly 1994). Bu borçluluk, yapılan iyiliğin algılanan maliyeti ile karşılık verme durumunu doğurabilir. Bir satıcının bakış açısından, potansiyel bir müşteriyle ara sıra öğle yemeğinde buluşmanın etik açıdan bir sakıncası olmayabilir. Bu tür etkinlikler için bir uzantısı olarak görülebilir ve ofis toplantılarının dikkat dağıtıcı unsurlarından bazılarını ortadan kaldırabilir (McCracken ve Callahan 1996). Ancak bir satın almacının bakış açısından, belirli bir satıcıdan sürekli olarak yemek ve eğlence kabul etmek, uzun vadede alıcının müzakere gücünü aşındırabilecek uygunsuz bir davranış olarak algılanabilir. (Oakley vd., 2021). Dolayısıyla satıcıların ve satın almacıların müşteri eğlencesine bakışı farklı olabilir.

4.2. Hediye Verme

Bireyler hediye alışverişinde bulunduğu sosyal bağlar güçlenir ve bir karşılıklılık yaratılır. Genelde insanlar hediye vermekte bir sakınca görmezler ve hediyeler düzenli bir sosyal ilişkinin parçası olarak değiş tokuş edilir (Graycar, 2016:1). Hediye her zaman fiziksel özelliklere sahip bir nesne olması gerekmez (Larsen ve Watson, 2001: 889), değeri olan hemen hemen her şey hediye edilebilir. Hem büyük hem de küçük hediyeler, çoğu endüstriyel pazarda uzunca bir süredir belirli ürünleri tanıtmak ve marka bilinirliği sağlamak için kullanılmaktadır (Shaughnessy ve diğerleri, 1994:567). Kalem ve not defterleri gibi tipik olarak ürün adlarıyla süslenmiş hediyelere "hatırlatıcı öğeler" denir ancak bunların satın almacıyı etkileme potansiyeli taşıyan bir reklam olmanın ötesine geçer. Küçük hediyeler, kapıların açılmasında ve satış temsilcileri ile satın almacılar arasında daha dostça, daha işbirlikçi ilişkilerin geliştirilmesinde önemli bir rol oynar (Katz, Caplan, vd., 2003:2). Kurulan bu ilişkilerin geliştirilmesinde tekrar tekrar aynı türde hediyelerin verilmesi yeterli olmadığı noktada hediyelerin şekli ve miktarı değişebilir. Bu nedenle, endüstriyel pazarlarda özellikle satın almacıların hediye alması konusu bazı şirketlerin etik politikaları ve kurallarına konu olmaktadır. Bu şirketler, hediye bir çıkar çatışması olarak kabul eder ve kalem, not defteri ve kahve gibi küçük hediyelerin değiş tokuşuna açıkça izin verirken büyük hediyelerin değiş tokuşunu yasaklayan sınırlar belirlerler. Buna rağmen çoğu şirkette bahse konu etik politikalarla ilgili ne sözlü ne de yazılı bir çalışma bulunmaktadır. Şirket kuralları içerisinde etik politikaların bulunmaması, hediye satın almacının kararlarını bir şekilde etkileyebileceğini göstermektedir (Katz, Caplan, vd., 2003:2). Hediye konusu, genellikle belirli sınırlar dahilinde kabul edilebilir olarak değerlendirilirken, bazı durumlarda hediye ve rüşvet birbirine karışabilmektedir. İş dünyasında hediye ve ağırlama gibi uygulamalar yaygın olmakla birlikte, bu konuda hediye ve rüşvet arasındaki çizgiyi çekmek her zaman kolay değildir (Shaw ve Barry, 2004). Örneğin Fritzsche (2005), satın almacıyı etkilemek amacıyla verilen her hediye rüşvet olduğunu ve rüşvetin etik dışı bir uygulama olduğunu iddia etmektedir. Bu konuda karar verirken kullanılacak yaklaşımlardan biri, işletmenin bu konudaki politikalarına atıfta bulunmaktır. Hediyelerin ve menfaatlerin hangi koşullar altında kabul edilebileceğini açıkça belirten bir yönerge veya politika varsa, bu yönergelerin ihlali tartışmasız etik dışı davranış olarak kabul edilmelidir (Fisher, 2007). Satın almacılar, örgütün bu konudaki yönergelerini ihlal etmedikleri sürece, bu hediyeleri kabul etmelerinde bir sorun yoktur. Sonuç olarak alıcı ve satıcı arasındaki ilişki güçlenirse, her iki kuruluş da bundan fayda sağlayacaktır. Başka bir bakış açısı ise hediye, doğrudan satın almacının kişisel kullanımına yönelik olması ya da örgüte fayda sağlaması arasında bir ayrım yapmaktadır. Bu durumda dahi, hediyein büyüklüğü ve parasal değerinin, bir çıkar çatışması yaratma potansiyeli taşıması söz konusu olabilir. Bir alıcının bir hediyeyi kabul etmesi veya bir satıcıdan menfaat sağlaması, tarafsız bir üçüncü kişi tarafından alıcının sağlıklı karar vermesini tehlikeye atacak şekilde değerlendiriliyorsa, bu bir çıkar çatışması yaratır ve bu hediyeyi kabul etmek yanlıştır. Alıcılar, çıkar çatışması yaratabilecek hediyeleri veya menfaatleri kabul ettiğinde, muhakemeleri tehlikeye girer ve satın alma kararı verirken temsil ettikleri örgütün çıkarlarına en uygun şekilde hareket etmiyor olabilirler (Fisher, 2007). Bu nedenle endüstriyel pazarlarda hediye verme konusu da kritik konulardan biridir.

Sonuç olarak, endüstriyel pazarlarda eğlence, ağırlama ve hediye verme gibi davranışların satın almacılar ve satıcılar tarafından nasıl algılandığı ve nasıl değerlendirildiğini anlamak için daha fazla araştırma yapılması gereklidir. Bu çerçevede, bir sonraki bölümde bu konuda Kocaeli ilinde yapılan keşifsel bir araştırma ile ilgili bilgiler verilmiş, araştırmanın yöntemi ve elde edilen bulgular açıklanmıştır.

5. YÖNTEM

5.1. Araştırmanın Amacı ve Modeli

Bu araştırmanın amacı, endüstriyel pazarlamada temsil harcamaları olarak adlandırılan hediye ve ağırlama gibi uygulamaların, satıcı-satın almacı ilişkisini nasıl etkilediği ve satın alma kararlarına nasıl yansıdığını irdelemektir.

Araştırmada cevap aranan temel problem, eğlence, ağırlama ve hediye verme davranışlarının satın almacılar ve satışçılar tarafından nasıl algılandığı ve etik açıdan ne şekilde değerlendirildiğidir. Araştırmanın kapsamı Kocaeli ilinde faaliyet gösteren ve endüstriyel ürünlerin alım satımını gerçekleştiren işletmelerde görevli satışçılar ve satın almacılarla sınırlandırılmıştır.

Araştırma nitel desende oluşturulmuş keşifsel bir çalışmadır. Dolayısıyla bu çalışma geniş bir örneklemden toplanan veriler üzerinde hipotez testleri yapmak, istatistiksel analizler gerçekleştirmek ve konuyu bir sonuca bağlamaktan ziyade, konu ile ilgili fikirlerin, görüşlerin ve ön bilgilerin toplanması, problemin daha net bir şekilde tanımlanması ve ileride yapılacak nicel araştırmalar için bir ön çalışma olması amacıyla gerçekleştirilmiştir. Bu kapsamda Kocaeli ili organize sanayi bölgelerinde faaliyet gösteren on farklı firmada satış ve satın alma birimlerinde çalışan personel ve yöneticilerden derinlemesine mülakat yöntemi ile veri toplanmıştır. Mülakat formundaki açık uçlu sorulara verilen yanıtlar özetlenmiş, kapalı uçlu sorulardan elde edilen veriler SPSS programı yardımıyla frekans analizine tabi tutulmuştur. Elde edilen sonuçlara ilişkin değerlendirmeler araştırmanın bulguları kısmında verilmiştir.

5.2. Örneklem ve Veri Toplama Süreci

Araştırma kapsamında incelenen işletmeler ve katılımcılar, tesadüfi olmayan örneklem yöntemlerinden “amaçlı örneklem” ile belirlenmiştir. Örneklem belirlenirken, araştırmanın amacına uygun verileri sağlayacak kişilere ulaşılması amaçlanmıştır. Araştırmaya katılmayı kabul eden 8 satış görevlisi ve 8 satın almacı ile yüz yüze görüşmeler gerçekleştirilmiş ve yarı yapılandırılmış bir soru formu yardımıyla mülakatlar gerçekleştirilmiştir.

Veriler Şubat-Mart 2023 tarihleri arasında toplanmış ve görüşmeler ortalama 30 dakika sürmüştür (minimum 20 maksimum 60 dakika). Yarı yapılandırılmış mülakat formu üç bölümden oluşmaktadır. İlk bölümde katılımcıların demografik özelliklerine ilişkin sorular yer almaktadır. İkinci bölümde katılımcıların satışçı ve satın almacı ilişkilerinde hediye ve eğlence konusundaki düşüncelerini öğrenmeye yönelik altı adet açık uçlu soru yer almaktadır. Üçüncü bölümde ise, yine satışçı ve satın almacı arasındaki ilişkide gündeme gelebilecek hediye, eğlence ve ağırlama ile ilgili 15 farklı duruma ilişkin etik algılamaları sorgulanmıştır. Bu bölümdeki sorular kapalı uçlu olarak hazırlanmış, Likert tipi 5 aralıklı (1= Hiç Etik Değil ve 5= Etik Açıdan Uygun) bir ölçekte cevaplar alınmıştır.

Katılımcılara ilişkin temel özellikler Tablo 1’de görülmektedir. Buna göre katılımcıların 11 tanesi erkektir, yaş ortalamaları 36,56 (ss.7,54), sektörde çalışma süresi ortalaması 14,63 yıl (ss. 7,75), mevcut işyerindeki görev süresi ortalaması 12,19 yıl (ss. 6,63) ve işletmedeki çalışan sayısı ortalaması 114,63 kişidir (ss. 157,13).

Tablo 1: Katılımcılara İlişkin Temel Özellikler

Katılımcı	Yaşı	Cinsiyeti	Medeni Durumu	Eğitim Düzeyi	Sektörde Görev Süresi	Mevcut İşindeki Görev Süresi	Çalışan Sayısı
Satın Almacı 1	46	Erkek	Evli	Lisans	20	15	40
Satın Almacı 2	35	Erkek	Evli	Lisans	6	7	400
Satın Almacı 3	22	Erkek	Bekar	Lisans	1	1	400
Satın Almacı 4	41	Kadın	Evli	Lisans	17	17	450
Satın Almacı 5	40	Erkek	Evli	Lise	14	12	12
Satın Almacı 6	43	Erkek	Evli	Lisans	20	20	10
Satın Almacı 7	37	Erkek	Bekar	Lisans Üstü	8	8	22
Satın Almacı 8	41	Erkek	Evli	Lisans	16	16	15
Satışçı 1	35	Kadın	Bekar	Lisans	6	4	65
Satışçı 2	43	Erkek	Evli	Lisans	11	7	128
Satışçı 3	52	Erkek	Evli	Lisans	30	20	150
Satışçı 4	42	Kadın	Evli	Lisans	17	17	4
Satışçı 5	44	Kadın	Evli	Lisans	24	11	12
Satışçı 6	45	Erkek	Evli	Lisans	20	13	110
Satışçı 7	42	Kadın	Evli	Lisans Üstü	18	18	3
Satışçı 8	25	Erkek	Bekar	Lisans	6	4	13

5.3. Verilerin Analizi

Araştırma kapsamında katılımcılara 6 adet açık uçlu soru sorulmuş ve bu konudaki değerlendirmeleri alınmıştır. Bu sorulara verilen yanıtların satış görevlileri ve satın almacılar için ayrı ayrı dökümü aşağıda çıkarılmıştır.

SORU 1: Çalıştığınız kurumda satış politikaları içinde yazılı etik kriterler bulunmakta mıdır? Var ise kısaca bu kriterler hakkında bilgi verebilir misiniz?

Bu soruya satışçıların 3 tanesi, satın almacıların ise 5 tanesi “hayır yok” cevabını vermiştir.

Var diyen satışçıların cevapları şu şekildedir:

- Doğru satıcı, doğru fiyat, doğru ürün şeklinde kriterler belirlenmiştir.
- Kurumunda satış ve satın alma politikaları yazılı etik kriterler çerçevesinde yapılmaktadır.
- Müşteri zararına sebebiyet vermeme, kurum zararına sebebiyet vermeme, müşteriler arasında gereksiz rekabet yaratmama, adil davranma, müşteriye sunulan hizmetin/malın ihtiyacına uygun, anlaşılır olması ve maliyetinin net aktarılması gibi kriterler bulunmaktadır.
- Temsil ve harcamayla ilgili limitler ve kurallar bulunmaktadır. Yapılan harcamalar faturalı olmak zorundadır ve ay sonunda birim yöneticisine raporlanmak zorundadır
- Ürün hakkında detay bilgi verilmesi, satın alanın yazılı talimatının ya da onayının olması, verimli ve uygun fiyat tercihi gibi kriterler bulunmaktadır.

Var diyen satın almacıların cevapları ise şu şekildedir:

- Etik davranış ve yolsuzluğu engellemeye yönelik kriterler bulunmaktadır.
- Maddi değeri olan herhangi bir ürün veya hizmet hediye olarak kabul edilemez.
- İnternet sitemizde grup tarafından belirlenen etik davranış ilkeleri ve yolsuzluğu engelleme prosedürlerimiz bulunmaktadır.

SORU 2: Çalıştığınız kurumda satış/satın alma politikaları içinde yazılı olmayan etik kriterler bulunmakta mıdır? Var ise kısaca bu kriterler hakkında bilgi verebilir misiniz?

Bu soruya satışçıların 7 tanesi, satın almacıların ise 4 tanesi “hayır yok” cevabını vermiştir.

Var diyen satışçıların cevapları şu şekildedir:

- Çalışma düzenimizi etkileyecek düzeyde ilişkiler ve anlaşmalar üst yönetim onayına tabidir. Habersiz yapılan işlemler disiplin cezası doğurabilir.

Satın almacıların cevapları ise şu şekildedir:

- Firmalara karşı mesafemiz şirket duruşumuz yazılı olmasa da bellidir, sadece şirket menfaatine yönelik hareket edilir, sistemimiz ve denetim süreçlerimiz de vardır.
- Kayıt dışı satın alma/satış yapılmamaktadır.
- Kurum çalışanları ile ilgili ikili ilişkiler satın alma politikalarını etkilemez.
- Tedarikçiler ile iş yeri ve mesai saati dışında görüşmek uygun değildir.

SORU 3: Şirketinizde satış faaliyetleri için tarafınıza tanımlanmış bir temsil harcama limiti bulunmakta mıdır? Var ise bu limitin kapsamı ve kullanılış şekli hakkında bilgi verebilir misiniz?

Bu soruya satışçıların 2 tanesi, satın almacıların ise 6 tanesi “hayır yok” cevabını vermiştir.

Var diyen satışçıların cevapları şu şekildedir:

- Harcama limitlerimizi çoğunlukla yeni müşteriler için kullanıyoruz. Zaman zaman mevcut müşteri ilişkilerinde bozulma olduğunda da bu limitleri kullanabiliyoruz.
- Bu bütçeyi hem mevcut hem yeni müşteriler için kullanıyoruz.
- Her ikisi içinde kullanıyoruz. Bunun kararı pazarlamacı tarafından verilir

- İlgili limit hem yeni hem de potansiyeli yüksek mevcut müşteriler için kullanılmaktadır. Kurumun ilan ettiği tutarlar aşılmadan kurallara uygun olarak kullanılmaktadır.
- Bu limiti genellikle müşterilerle yemek için kullanıyoruz. Daha çok mevcut müşteriler için kullanıyorum. Personel motivasyonu, ekip ruhu için yemekler, iş toplantılarında müşteriye hediye almak için açılış veya etkinliklerde çiçek, çikolata vb. göndermek için de kullanıyorum.
- Şirket seyahatlerinde yemek ve konaklama, temsil ağırlama harcamalarında kullanılmaktadır. Yeni müşteriler için daha çok kullanılıyor. Mevcut müşteriler için de bir miktar kullanılıyor.

Var diyen satın almacıların cevapları ise şu şekildedir:

- Her bölgenin toplam iş temsili harcama limitleri bulunur. Yeni eski olarak bir ayrım bulunmamaktadır. Satış pazarlama stratejilerine göre yönetilir.
- Temsil harcamaları yapılmaktadır. Ancak limit dahilinde değildir. Daha çok yeni müşteriler için kullanılmaktadır.

SORU 4: Genel olarak satış görevlisinin, müşterisi olan şirketteki satın alma sorumlusuna hediye vermesi hakkında neler düşünüyorsunuz?

Bu soruya satışçıların cevapları şu şekildedir:

- Belirli bir sınır ve firmanın çizdiği/belirlediği tutarlar dahilinde kabul edilebilir.
- Belirli limitler dahilinde, şirket kurallarına uygun olduğu sürece uygun olduğunu düşünüyorum.
- Fazla abartılmadığı sürece normal görüyorum. Sonuçta satış ve satın almayı insanlar yönetiyor. İnsanlar arasında zamanla ilişkiler ilerleyebiliyor, samimiyet artabiliyor.
- Genelde pek etik bulmuyorum.
- Gönüllü hoş ettiğini düşünüyorum.
- İş yerinde kullanabileceği değeri makul seviyedeki hediyeler kabul edilebilir.
- Pahalı olmayan küçük hediyeler verilebilir. İş yerinde kullanılmak üzere ofis malzemeleri hediye edilebilir.
- Şirket politikası doğrultusunda belirlenen limitler dahilinde kalındığı sürece sorun yaratmayacaktır.

Satın almacıların cevapları ise şu şekildedir:

- Aşırı kişisel olmayan ofis kullanımına yönelik hediyeler, promosyon kabul edilebilir.
- Bence olması gereken bir şey. Bu satın almacıyı memnun eder.
- Bu hediyeler, pahalı olmamak kaydı ve verilen hediyein niteliğinin ofis içi kullanıma yönelik ürünler olması halinde uygundur. Ancak hediyein pahalı olması veya lüks şahsi eşyalar, müşteri tarafından ticari ilişki harici bir beklenti yaratacağı ihtimali ile uygun değildir.
- Çok ufak olmakla beraber nazik ve kibar hediyelerde bir sakınca yoktur.
- Kişisel kullanıma yönelik ürünleri hediye etmeyi etik dışı buluyorum
- Masa süs, ofis gereci ya da promosyon kabul edilebilir. Ancak pahalı ve kişisel hediyeleri etik bulmuyorum.
- Satın alma kararında bu hediyelerin bir etkisi yok ve zaten çalışılan, ihale şartlarına uygun bir firma ise değeri düşük jestler verilmesinde sakınca görmüyorum. Ancak bu jestlerin sayısı çok minimal olmalı (ziyarete gelindiğinde bir ikram veya kalem, defter vs. verilebilir; ancak bu senede veya birkaç senede bir kez yapılmalı) ve pahalı olmayan hediyeler olmalı. Bununla birlikte ihale şartlarına uygun olmayan, çalışılmayan bir firmadan gelecek logolu ajanda vs. harici hediyeler kabul edilmeyerek, firma bu konuda bilgilendirmeli, uygun bir dille geri çevrilmeli diye düşünüyorum.
- Şirket amacına uygun olmayan hediyeler verilmesini doğru bulmuyorum.

SORU 5: Genel olarak satış görevlisinin, müşterisi olan şirketteki satın alma sorumlusuyla birlikte eğlenceli aktiviteler gerçekleştirmesi hakkında neler düşünüyorsunuz?

Bu soruya satışçıların cevapları şu şekildedir:

- Abartılmadığı sürece ve olay iş ilişkisinden öteye taşınmadığı sürece normal karşılarım.
- Aradaki bağın güçlenmesini sağlar.
- Bunu da normal görüyorum. Gerçek hayata baktığımızda karşılaştığımız durumlardır.
- Çalışma saatleri dışında bu tür etkileşimleri etik bulmuyorum.
- Etik olmamakla birlikte nadiren olabilir.
- Genelde etik bulmuyorum.
- Hiç etik değil.
- Profesyonel hayatlarını, işlerini ve kararlarını etkilemediği sürece bu tür aktiviteler yapılabilir.

Satın almacıların cevapları ise şu şekildedir:

- Belirli bir proje ya da iş konuşulan iş yemekleri dışında birebir yapılan organizasyonları etik bulmuyorum.
- Çok etik olmamakla birlikte Türkiye'de ikili ilişkiler satışın ve satın almanın önüne geçebilecek haksız defansları önleyebilir.
- Müşteri ile kurulacak ilişki samimi düzeyde olmalı ancak iki taraf arasında da belirgin profesyonel bir çizgi yer almalıdır. Bu çizgi, ticari kurallarda ve etik ilkelerde taviz vermenin de önüne geçecektir. Bu sebeple birlikte eğlenceli aktiviteler gerçekleştirmesi uygun değildir.
- Organizasyon iş için düzenlenir ise katılmakta sakınca yoktur.
- Pek sıcak bakmasam da çok nadir zamanlarda yapılabilir
- Sonraki satış ve satın alımlarda şirket çıkarlarının ikinci plana bırakılmasına yol açabileceğini düşünüyorum.
- Tedarikçilerimiz ile ilişkilerimiz profesyonel ilişki ötesine geçmemelidir. İş ve arkadaşlık çizgisi ise her iki taraf için de net olmalıdır.
- Yani olabilir. Bir bekar için sıkıntı yok. Ama evliler için sıkıntı olabilir.

SORU 6: Sizce bir şekilde hediye alan veya ağırlama, eğlence gibi teklifleri kabul eden bir satın almacının, satış personeliyle ilişkisi bundan nasıl etkilenir?

Bu soruya satışçıların cevapları şu şekildedir:

- Artı yönde pekişir.
- En nihayetinde çıkar ilişkisi doğacaktır. Satın almacı ister istemez satış personeline karşı bakış açısında tarafsızlığını yitirebilir.
- İş ilişkisinin olumlu yönde etkilediğini söyleyebilirim.
- Kurumun belirlediği limitlerin aşıldığı bir süreçte, her iki tarafın kararlarının kurum iş ilişkilerindeki kararlara sağlıklı ve uzun vadeli süreçte verimsiz olacağını düşünüyorum. İş ilişkisi içerisinde etik bulmuyorum.
- Satın almacı bu süreci kendi yönetmelidir. İş yapış şekline uygun bulmadığı hediye veya ilişkiyi kendisi engelleyebilir. Sonrasında sorun çıkaracak bir durumu baştan engelleyebilir.
- Satışçı yürütmekte olduğu pazarlama faaliyetleri kapsamında satın almacısının satın alma ya da pazarlık yapma kararlarını etkilemeye çalışır. Temsil ve ağırlama bütçeleri de satışçılara bu yüzden verilir. Bu harcamaları kullanırken asıl amacımız satış performansımızı yükseltmektir. Satın almacıyla kurduğumuz diyaloglarda bunu hissettirmemeye çalışırız. Satışçının amacını anlarsa iş ilişkimiz olumsuz etkilenebilir.
- Tercihlerinde veya kararlarında teklifi yapan kişiye pozitif ayrımcılık yapılabilir.

- Yapılan işlerde, onaylarda daha esnek davranılmasına yol açabilir.

Satın almacıların cevapları ise şu şekildedir:

- Direkt etkilenir. Verilecek kararlar taviz içerecektir.
- Etik anlayışı olan bir satın almacı, objektif kararlar vermesinin zorlaşacağını bildiği için buna karşı önlemler alacaktır.
- İlişkilerin iyi yönde artacağını düşünüyorum. Ancak daha sonrasında karar alma ve satın alma sürecinin yönetilmesinde şirket çıkarından çok satış personelinin çıkarları göz önünde bulundurulacaktır.
- Kişinin işe profesyonel bakışı ile alakalı olarak negatif etkilenemeyebilir. Satış ve satın almanın odağında ürün, tedarik, hizmet süreci objektif kalabilir.
- Öncelikle satın almacı kabul ettiği hediyeler ile satıcı karşısında satış anlaşması tarafında bazı maddi faydalarla işin yürüyebileceğine dair bir imaj oluşturmamalıdır. Satın alma kararının bu gibi hediyelerle etkilenmeyeceğini satışçıya yansıtmalıdır. Süreç profesyonel ve şirket yararına uygun ilerlemelidir. Aksi takdirde kişisel çıkarlar şirket çıkarlarının önüne geçecektir.
- Pozitif bir etkisi olacak gibi dursa da iş ilişkilerine ayrımcılık olarak yansır. Çok yakınlık kurulan iş ilişkilerinde istemsiz şekilde öncelikli bir davranış tetiklenir.
- Satış personeli satın almacıya kolayca her malı verebileceğine inanır. Ama satın almacı profesyonelse kendine belirli bir çizgi çeker, o çizgiyi asla aşmaz ve kendini kullandırmaz.
- Vereceği kararlarda objektifliğini kaybetmesine sebep olabilir.

Açık uçlu sorulara ilaveten, görüşmenin son bölümünde katılımcılardan satışçı ve satın almacılar arasındaki ilişkilerde karşılaşılabilecek muhtemel çeşitli davranışları etik açıdan ne şekilde değerlendirdikleri sorgulanmıştır. Bu bölümdeki 15 soru, kapalı uçlu sorular şeklinde hazırlanmış ve Likert tipi 5 aralıklı bir ölçek üzerinde “1= Hiç Etik Bulmuyorum” ve “5= Etik Açıdan Uygun Buluyorum” şeklinde cevaplanmıştır. Bu bölümdeki sorulara verilen yanıtların aritmetik ortalamaları, satışçılar ve satın almacılar için ayrı ayrı hesaplanarak Tablo 2’de sunulmuştur.

Tablo 2: Satışçılar ve Satın Almacıların Etik Açıdan Sorgulanabilir Uygulamalara Bakışı

Satış görevlisinin, müşterisi olan şirketteki satın alma sorumlusuna yönelik aşağıdaki davranışlarını etik açıdan nasıl değerlendirirsiniz?	Yanıtların Ortalaması*		Fark (A-B)
	Satışçı (A)	Satın Almacı (B)	
Pahalı olmayan küçük hediyeler vermesi	4,13	3,75	0,38
İşyerinde kullanmak üzere ofis malzemeleri hediye etmesi	4,25	4,13	0,12
Yılbaşı, bayram gibi özel günlerde ajanda, kalem, çakmak gibi eşantıyon ürünler getirmesi	4,5	4,75	-0,25
Doğum günü, anneler günü vb özel günlerde kutlama mesajı göndermesi veya araması	4,5	4,25	0,25
Tatil çeki önermesi	2,38	1,63	0,75
Maç veya konser gibi etkinliklere ilişkin özel davetler önermesi	2,63	2,63	0
Hafta sonu popüler bir SPA/dinlenme merkezinde diğer aile üyeleriyle birlikte konaklaması	1,63	1,75	-0,12
Çalışma saatleri dışında birlikte bir eğlence mekanına gitmeyi önermesi	2,25	2	0,25
Değeri 500 TL den daha pahalı olan bir hediye vermesi	2,5	2,13	0,37
Kahvaltı ya da öğlen yemeğinde ağırlaması	4,13	4	0,13
Akşam yemeğinde ağırlaması	3,63	3,25	0,38
Satın almacının eşi ya da çocuklarına vermesi için hediyeler sunması	1,75	1,88	-0,13
Pahalı ve lüks bir restoranda yemek ikram etmesi	2,63	2,25	0,38
Yerel bir spor müsabakasına iki kişilik bilet sağlaması	3,5	1,88	1,62
Değeri 1000 TL den daha pahalı olan bir hediye vermesi	2,38	1,75	0,63
GENEL	3,12	2,80	0,32

*1= Hiç Etik Değil, 5= Etik Açıdan Uygun

Tabloda görüldüğü gibi hem satışçılar hem de satın almacılar tarafından etik açıdan en problemli algılanan uygulamalar “hafta sonu popüler bir SPA/dinlenme merkezinde diğer aile üyeleriyle birlikte konaklaması” ve “satın almacının eşi ya da çocuklarına vermesi için hediyeler sunması” şeklindedir. Etik açıdan en kabul edilebilir uygulamalar ise “yılbaşı, bayram gibi özel günlerde ajanda, kalem, çakmak gibi eşantıyon ürünler getirmesi” ve “doğum günü, anneler günü vb. özel günlerde kutlama mesajı göndermesi veya araması” şeklindedir.

Orta nokta olan 3 puandan daha yüksek bir değer alan, yani etik açıdan sorunlu görülmeyen uygulamalar “yerel bir spor müsabakasına iki kişilik bilet sağlaması”, “akşam yemeğinde ağırlaması”, “pahalı olmayan küçük hediyeler vermesi”, “kahvaltı ya da öğlen yemeğinde ağırlaması”, “işyerinde kullanmak üzere ofis malzemeleri hediye etmesi”, “yılbaşı, bayram gibi özel günlerde ajanda, kalem, çakmak gibi eşantıyon ürünler getirmesi” ve “doğum günü, anneler günü gibi özel günlerde kutlama mesajı göndermesi veya araması” şeklinde sıralanabilir.

Orta nokta olan 3 puandan daha düşük bir değer alan, yani etik açıdan sorunlu görülen uygulamalar ise “hafta sonu popüler bir SPA/dinlenme merkezinde diğer aile üyeleriyle birlikte konaklaması”, “satın almacının eşi ya da çocuklarına vermesi için hediyeler sunması”, “çalışma saatleri dışında birlikte bir eğlence mekanına gitmeyi önermesi”, “tatil çeki önermesi”, “değeri 1000 TL den daha pahalı olan bir hediye vermesi”, “değeri 500 TL den daha pahalı olan bir hediye vermesi”, “maç veya konser gibi etkinliklere ilişkin özel davetler önermesi” ve “pahalı ve lüks bir restoranda yemek ikram etmesi” şeklinde sıralanabilir.

Genel olarak satışıçılar bu 15 uygulamanın etik açıdan değerlendirmesine 3,12 ortalama puan verirken, satın almacılar 2,80 puan vermiştir. Satın almacıların değerlendirmeleri genel olarak satışıçıların değerlendirmelerinden daha düşük ortalama değerler (etik açıdan daha az kabul edilebilir) almış olmakla birlikte, sadece 3 uygulamada satın almacıların etik algılamaları satışıçılardan daha yüksek ortalamalar almıştır. Bunlar “yılbaşı, bayram gibi özel günlerde ajanda, kalem, çakmak gibi eşantıyon ürünler getirmesi”, “hafta sonu popüler bir SPA/dinlenme merkezinde diğer aile üyeleriyle birlikte konaklaması” ve “satın almacının eşi ya da çocuklarına vermesi için hediyeler sunması” şeklindedir. Alıcı ve satıcıların etik algılamaları arasında en büyük farklılığa (1,62 puan) konu olan uygulama ise “yerel bir spor müsabakasına iki kişilik bilet sağlaması”dır. Görüldüğü gibi satışıçılar ve satın almacıların etik açıdan sorgulanabilir uygulamalara bakışları arasında bazı farklılıklar mevcuttur.

6. SONUÇ VE ÖNERİLER

Bu araştırmada endüstriyel pazarlamada yaygın olarak kullanılan hediye ve ağırlama gibi uygulamaların, satıcı-satın almacılar tarafından nasıl algılandığı, bu iki taraf arasındaki ilişkiyi nasıl etkilediği ve satın alma kararlarına nasıl yansıdığı incelenmiştir. Bu çerçevede, Kocaeli ilinde faaliyet gösteren ve endüstriyel ürünlerin alım satımını gerçekleştiren işletmelerde görevli satışıçılar ve satın almacılar üzerinde mülakat yöntemiyle nitel bir araştırma gerçekleştirilmiştir.

Alıcı ve satıcıların, eğlence ağırlama ve hediye konularında etik hassasiyetlerinin farklı olup olmadığını belirlemek için altı adet açık uçlu soru ve 15 adet kapalı uçlu soru sorulmuştur. Yapılan analizler sonucunda, incelenen işletmelerin yarısında satış politikaları içinde yazılı etik kriterler bulunmadığı, yarıdan fazlasında ise satış politikaları içinde yazılı olmayan etik kriterler olmadığı belirlenmiştir. Satışıçıların görev aldığı işletmelerin büyük çoğunluğunda satış faaliyetleri için tanımlanmış bir temsil harcama bütçesi bulunduğu görülmüştür. Satışıçılar bu bütçeyi daha çok yeni müşterileri ile ilişkileri geliştirmek için kullandıklarını belirtmişlerdir.

Satışıçılar belirli bir sınırdan ve firmanın belirlediği tutarlar dahilinde satış görevlisinin, müşterisi olan şirketteki satın alma sorumlusuna hediye vermesini kabul edilebilir bulmaktadır. Satın almacılar ise sadece kişisel olmayan ofis kullanımına yönelik küçük hediyeleri kabul edilebilir bulduklarını belirtmişlerdir. Satış görevlisinin, müşterisi olan şirketteki satın alma sorumlusuyla birlikte eğlenceli aktiviteler gerçekleştirmesini satışıçıların genel olarak olağan karşıladığı ve bunun aradaki bağın güçlenmesine katkı sağladığını düşündükleri belirlenmiştir. Satın almacılar ise bu tür paylaşımları genellikle etik bulmadıklarını, bu tür uygulamaların sonraki alımlarda şirket çıkarlarının ikinci plana bırakılmasına yol açabileceğini düşünmektedir. Satışıçılara göre, kendilerinden hediye alan veya ağırlama, eğlence gibi teklifleri kabul eden bir satın almacının, satış personeliyle ilişkisi olumlu yönde etkilenmektedir. Satın almacılar ise bu tür uygulamaları kabul edenlerin, objektif kararlar vermesinin zorlaşacağını ve bunun iş ilişkilerine ayrımcılık olarak yansıtacağını düşünmektedir.

Araştırmamızın ikinci bölümünde katılımcılara, satışıçı ve satın almacılar arasındaki ilişkilerde karşılaşılabilecek muhtemel 15 farklı uygulamayı etik açıdan ne şekilde değerlendirdikleri sorgulanmıştır. Bu sorulara verilen yanıtlar, genel olarak satın almacıların bu uygulamaları satışıçılara göre etik açıdan daha az kabul edilebilir bulduklarını göstermektedir. Verilen uygulamaların 8 tanesi hem satışıçılar hem de satın almacılar tarafından etik açıdan uygun bulunmazken, kalan 7 tanesi etik açıdan uygun olarak değerlendirilmiştir. Hem satışıçılar hem de satın almacılar tarafından etik açıdan en problemli algılanan uygulamalar “hafta sonu popüler bir SPA/dinlenme merkezinde diğer aile üyeleriyle birlikte konaklaması” ve “satın almacının eşi ya da çocuklarına vermesi için hediyeler sunması” şeklindedir. Etik açıdan en kabul edilebilir bulunan uygulamalar ise “yılbaşı, bayram gibi özel günlerde ajanda, kalem, çakmak gibi eşantıyon ürünler getirmesi” ve “doğum günü, anneler

günü vb. özel günlerde kutlama mesajı göndermesi veya araması” şeklindedir. Alıcı ve satıcıların etik algılamaları arasında en büyük farklılığa konu olan uygulama ise “satışçının yerel bir spor müsabakasına iki kişilik bilet sağlaması”dır. Bu uygulama satın almacılar tarafından büyük oranda etik kurallara aykırı olarak değerlendirilmiştir. Bu araştırmanın bulguları, alıcı ve satıcıların etik davranış algılarının ve bu davranışın alıcı-satıcı ilişkilerine etkisinin farklılaştığını göstermektedir. Sonuçlara genel olarak bakıldığında, satın almacıların, etik açıdan satışçılara göre daha duyarlı olduğu anlaşılmaktadır. Bu çalışmanın sonuçları, alıcı ve satıcıların etik açıdan sorgulanabilir davranışlar sergilemesinin alıcı-satıcı ilişkisi üzerindeki etkisine göre farklılık gösterdiğini ortaya koymaktadır. Bu bulgular, literatürdeki önceki çalışmaların sonuçları ile tutarlıdır (Inks vd., 2004; Gegez, vd., 2006).

Bu bulgulara dayanarak, satışçıların, satın almacılar tarafından etik dışı olarak yorumlanabilecek davranışlardan kaçınmaları gerektiği söylenebilir. Her ne kadar eğlence, ağırlama ve hediye verme davranışı sektörde yaygın olarak kullanılsa da bu tür davranışların dozu ve sıklığına dikkat edilmesi gereklidir. Özellikle hediye verme davranışında, verilen hediyenin değerinin fazla olmaması, doğrudan satın almacının kişisel veya ailevi kullanımına yönelik olmaması dikkat edilmesi gereken noktalardır. Eğlence ve ağırlamada ise, satışçıların bu davranışı tekrarlama sıklığına dikkat etmesi önerilmektedir. Bu tür davranışların çok sık tekrarlanması, satın almacılar tarafından olumsuz değerlendirilebilir. Bu çalışmanın sonuçları, endüstriyel pazarlarda satış görevlilerinin temsil, ağırlama ve hediye verme gibi davranışlarda bulunurken dikkatli olması gerektiğini gösterse de bu hususlarda etik duyarlılığın alıcı ve satıcı arasındaki ilişkinin süresine, düzeyine ve kalitesine göre nasıl değiştiğini anlamak için başka araştırmalara da ihtiyaç olduğu açıktır.

Her çalışmada olduğu gibi bu çalışmanın da kendine özgü bazı sınırlılıkları bulunmaktadır. Bu araştırmanın en önemli kısıtı, verilerin temsil kabiliyeti sınırlı küçük bir örneklem üzerinden toplanmış olmasıdır. Gelecekte yapılacak araştırmalarda, temsil gücü yüksek ve genelleme yapmaya uygun daha büyük hacimli tesadüfi örneklemelerden veri toplanması uygun olacaktır. Ayrıca bu çalışma sadece Kocaeli ilindeki organize sanayi bölgelerinde faaliyet gösteren işletmelerde araştırmaya katılmayı kabul eden çalışanlar ile sınırlıdır. Gelecekteki araştırmalarda farklı bölgelerden ve sektörlerden veri toplanması uygun olacaktır. Araştırmanın bir başka kısıtı, sadece mülakat yöntemi kullanılarak verilerin toplanmış olmasıdır. Gelecekteki araştırmalarda odak grup çalışması gibi grup etkileşimine olanak sağlayan ve satışçılarla satın almacıların bir arada bulunduğu guruplarda karşılıklı etkileşime de imkan veren nitel yöntemlerin kullanılması uygun olacaktır. Keşifsel nitelikteki bu araştırmanın bulgularının gelecekte yapılacak nicel araştırmalar için bir başlangıç noktası olarak görülmesi ve anket ya da deneysel tasarımlar gibi yöntemlerle konunun farklı boyutlarının incelenmesi meselenin daha iyi anlaşılması açısından yararlı olacaktır.

Renewable Energy Does Create Green Work and Skills in (EU) European Union ?

Assoc.Prof.Dr,Erhan ATAY¹

¹Trakya University, Economics Dept,TURKEY, e-mail:erhanatay@trakya.edu.tr, ORCID:0000.0003.4190.3452

Abstract : There is a need to establish sustainable and supportive policies to overcome the technological, economic, regulatory and environmental barriers faced by the renewable energy sector in the world.

Therefore,the EU aims to increase the share of hydrogen as a renewable energy source in Europe's energy consumption to 13-14% in its long-term plans by 2050.In this respect, for the EU to keep up with these goals renewable energy is of great importance that it puts forward a clear strategy in the field of technology, gains competence in technologies within the scope of these strategies and becomes competitive on a global scale, and carries out applications.

Nowadays, there is a risk of entering a'long-term global recession period with a different perspective due to the inability of fossil fuels such as oil and coal and natural gas to create employment on a global scale.On the other hand,as an alternative to being on the agenda of the EU, green jobs and skills, which can be a source of employment, especially from renewable energy, will quickly take effect.

Key Words: Green economy,Renewable energy,The EU,Green Jobs.

1.INTRODUCTION

European Parliament (EP) has signed a decision banning the sale of fossil fuel-powered vehicles from 2035. This draft resolution was first approved by the governments of the EU member states in October 2022, and then submitted to the EP for approval. Following the EP's approval, governments should procedurally pass the law.On the other hand, Germany did not accept the law at the last minute. Actually, it is not German Chancellor Olaf Scholz who said no. The Liberal Democrats (FDP), junior partner of the coalition government, objected.

It is an important issue for the German automotive economy, which creates a market of 400 billion euros and employs 800 thousand people. However, a country like Germany's refusal at the last moment to an issue that has been agreed upon in the EU solely on the grounds of domestic policy may constitute a dangerous jurisprudence within the EU. The decision was an important pillar of the EU's policy to combat global climate change. It is necessary to wish that this attitude of Germany was an exception.

With the pandemic that entered our lives in the past years, all socio-economic paradigms of humanity have completely changed. From this process, all our economic activities have changed along with the world economy. In this context, especially business life has become focused on working from home and economies have begun to be unable to create new employment.

In addition to the oldest professions in the historically existing world, a new set of works have come to the fore in every age. For example, as an anecdote from the early 1900s, there was talk of a type of profession that carries people on its own horse, resembling our carriage in NYC/Manhattan in the USA.

Therefore,all drivers of energy employment poised to rise in 2022; however, turbulence in global markets will reshape which regions see investment and how much of increased economic activity flows to workers. Energy investments will accelerate and are expected to grow 8 percent to US\$2.4 trillion in 2022, but nearly half of the increase in capital expenditures is linked to higher costs. Total energy demand has also risen above pre-pandemic levels in 2021, and increased production is putting more workers into it.

While few new occupations are involved in the transition to green jobs, intense change occurs in existing occupations. Moreover, the change in the level of all qualifications in the skill profile and in all sectors requires education and training related to the needs in the labor market.

2.FUTURE OF RENEWABLE ENERGY IN THE EUROPEAN UNION (EU)

In order to benefit from the increasing interest of the public on the environment, both financial and manpower resources should be put into action for the green space strategy of the managers and their implementation. (Azzone G,1993,19).

First of all, we should not confuse renewable energy with green energy. Before resorting to risky alternatives, let's continue to use hydroelectric and geothermal resources and first develop reliable, renewable, sustainable and climate neutral technologies such as wind energy and photovoltaic. The development of offshore wind farms in this regard seems to be an important solution to compete with nuclear power plants to be dismantled. Solar power has a real future as solar parks in regions characterized by decentralized generation (through proliferation of small units) and high rates at the domestic level, especially high level of sunlight should not be taken lightly.(Fontana A,2013,12).

Solar energy is divided into two in terms of the benefit of people. One of them is the way to directly benefit from active solar energy such as heating and heating. The second is to benefit from energy sources with hidden solar energy.The energy sources that people use in this way are as follows:

- 1) Energy sources such as coal, oil, natural gas are nothing but solar energy stored years ago.
- 2) All biological mass energy sources, including wood, which is nothing but the solar energy stored throughout their lifetime or their derivatives produced by humans, are also included in plants and animals (vegetable substances, biogas, alcohol, spirit).
- 3) Hydrological power energy is the energy hidden in hydrological cycles that occur under the influence of solar energy.
- 4) Wind energy is the energy arising from the movement of air masses caused by solar energy. (Çepel N,1992,175).

Perhaps the best measure of any nation's industrialization is its energy consumption using modern forms of energy production, namely coal, oil, natural gas and HEP, but not wood. Because this is an indicator of the economic growth trend. (KennedyP, 1996, 234).

The electric car is not as “ecological” as we think in terms of energy. As a matter of fact, we witness that the situation is not in this center in Scandinavian countries such as Norway, where electricity production is predominantly hydroelectric and where the electric car is really developing. It is possible to fully justify the electric car issue for a completely different reason; it certainly brings an advantage compared to gasoline (mainly carbon dioxide) and diesel combustion engines (carcinogenic fine particles, nitrogen oxides, sulfur oxide, etc.), due to the absence of emissions in an urban environment. (Fontana A,2013,11).

On the other hand, oil and natural gas underlined the need for emergency provision arising from energy supply stocks. This issue has been an unexplored issue at EU level for a long time. Only with the 'Green Paper' of 2000 entitled 'Towards a European Energy Supply Security Strategy' how did the EU commission deal with the issue of security of energy supply at EU level? A European Energy Security and Solidarity Action Plan' adopted by the European Commission in 2008;

- i) Infrastructure needs and energy supply diversity
- ii) External energy relations
- iii) Oil and Natural Gas stocks and crisis response mechanisms
- iv) Energy efficiency
- v) The best use of EU's own energy resources. (Tagliapietri K,2017,21).

Unfortunately, the cause of environmental problems, which is one of the issues of a global day, is the industrialized Western countries, and the share of the EU as well as the USA in this cannot be denied. Later on, in order to increase economic growth and welfare in the process, it was necessary to make more production and use more energy and more economically in this context. In this sense, the enormous size of consumption expenditures with the increase in welfare brought the problem of storing wastes, especially chemical and radioactive wastes, into actuality. Today, the UN, OECD etc. international organizations, due to the fact that the sanction forces are limited, reduce the activities of the specified institutions in the environmental subject in this regard. It has advantages such as making decisions on issues with the contribution of the member states themselves. Likewise, unlike other institutions, the EU is a role model that has the power to sanction and can be more active for this reason, even for any restricted hinterland. (Mutlu A,2006,295).

Finally, on the other hand, alternative fuels, which are also counted by the European Union Commission; Electricity, Hydrogen and Bio Fuels. Hybrid vehicles provide 20% more energy conservation and emission reduction compared to other conventional vehicles. (Öztürk HH ,2021,3).

3.GREEN JOBS WORLD IN THE EUROPEAN UNION (EU)

In 1949-50, most countries returned to the pre-war productivity period, and some, especially those that remained neutral, exceeded these levels. But every year since then, manufacturing efficiency has increased, there has been an unprecedented growth in exports, full employment has been phenomenal. became the fastest growing region in the world . One of the issues that most worried Europeans was the impact of the depression after the oil crisis of the 1970s on employment. The number of job losses in western Europe in recent years has increased more than ever before in the post-1945 period. For example, in the EEC between 1978-82, it jumped from 5.9 to 10.2.(Kennedy P,1996,558).

For the automotive sectors (vehicle assembly, body fabrication, component fabrication and repairs), job creation and replacement is the dominant influence within each sector. Given the expectation that total workforce productivity in automobile manufacturing will not be significantly affected by the transition from gasoline to hydrogen vehicles, total employment in these sectors is not expected to change significantly. Some tasks in the automotive industries will remain the same, for example those related to the manufacture and assembly of certain auto parts, such as automobile wheels. But other tasks such as manufacturing and installing fuel cells, new powertrains and other related equipment will require new skills. These new jobs also mean that workers have different experience and training in the production of gasoline-powered vehicles that will use workers. (Auriemma M,2010,39).

In this perspective, the main criterion that companies give priority to is green design. It is not surprising that green design comes to the fore. Although the companies express that more emphasis is placed on green production in the Turkish Automotive Main Industry, they stated that the most important criterion is green design, which is the initial stage. Green transformation came in the second place and green production came in the third place. The others are respectively; green transportation, green purchasing and green storage. Among these criteria, the ones with high weights are concentrated in green recycling and green design. These; Using renewable energy sources, recycling end-of-life products, helping suppliers establish their own environmental management system, designing products that reduce or avoid the use of harmful products and/or production processes, reuse and recycle materials is to design the product that provides recovery and to design the product that reduces material/energy consumption. Among these criteria, the ones with low weight are concentrated in green storage. These; It has been determined as reducing product stock levels, selling excess stocks, storing raw materials/parts to be manufactured, evaluating idle equipment, and taking activities to reduce environmental impact by working with customers.(Behdioğlu S,Koca G,2018,78).

The sectoral form and educational structure of employment in Turkey is far behind the newly joined countries. Despite the weight of the pressure that immigration may create in the EU labor markets, if the legal possibility of delaying the right of free movement for ten years is taken into account, it is possible for EU countries to encounter Turkish labor pressure until 2025. It is expected that the labor shortage that aging Europe will need will be met from within the union, with the mobility to be realized in the labor markets of both the member countries and Turkey. (Gençler A, Apak S, 2003,156).

Three scenarios were designed to analyze the economic and environmental impacts of Turkey's EU membership;

1 – Labor mobility between the EU and Turkey; The standard GTAP model allows the exchange of industrial and agricultural products as well as services. In the new model, the workforce can cross borders and take part in the production process of foreign companies in different regions.

2 – Capital mobility between the EU and Turkey (combined with labor mobility). In this scenario, it is assumed that capital will be mobile between regions and the growth rates of capital returns converge in a stagnant situation.

3 – The effects of carbon reduction and factor mobility within the framework of 20-20-20 policies; This scenario is designed to analyze the effects of the EU's new energy and climate change policy on the Turkish economy in case of Turkey's accession to the EU (Aydın L,2014,503).

However, it would be unfair to attribute Germany's success to this factor alone. The famous article 66 of the "Renewable Energies Law" lies behind its success. It provides the opportunity to compete. The enviable situation is that Germany, which is not very sunny, has succeeded in ranking first in the world in photovoltaic power plants and second in wind energy after the USA. branch, and thus an employment engine. Because the land was more fertile in India, weavers and other artisans were better fed than the average European. Most importantly, unemployment rates were also lower, as they had better employment contracts and greater economic power. Even pariah farming earned more in real terms than British farm workers. (Parthasarati P, 1998, 88).

Changes in real wages move to the EU in the amount of unskilled labor, decreasing in this amount in Turkey, and an increase in the unskilled labor force in the EU. While the skilled labor force leaves Turkey, participation in the skilled labor force takes place in the EU. These changes in labor supply obviously also affect real GDP through changes in production. While real GDP decreased in Turkey, which has a loss in labor supply, there was an increase in real GDP in the EU, which experienced an increase in labor supply. Normally, the EU's labor force growth in both unskilled and skilled workers. We expect a decrease in real wages due to increase in the employment level. In the event that Turkey joins the union, the loss of labor resulting from the migration of skilled and unskilled labor to the EU leads to a loss of output in the sectors. (Aydın, L. 2014, 508).

When we look towards a sustainable world, it is expected that 178,000 new jobs will be created in the EU by 2030 by reducing and recycling municipal waste, as well as increasing the recycling of packaging waste²¹⁴. In case the circular economy is fully implemented, it is announced that annual revenues of 340-630 billion dollars can be provided to the EU. With this action plan: increase the recycling rate of municipal waste across the EU to 65% by 2030; To increase the recycling rate of packaging waste to 75% by 2030 across the EU; also setting different targets for packaging made of different materials; Again, it is aimed to reduce the landfill rate to 10% by 2030. The first Circular Economy Action Plan was a great success. Thanks to this action plan, sectors related to the circular economy provided more than 4 million jobs in 2016; cyclical activities such as repair, reuse or recycling generated €147 billion in added value and attracted €15.5 billion in investment. (IKV, 2022, 215).

Neither PV nor EVs can be considered to make much of a difference in addressing the challenges posed by the current fossil fuel war. Short-term measures to eliminate the EU's dependence on Russian oil and gas should focus on reducing demand and finding alternatives to Russian supply. This means increasing both oil and gas production elsewhere. It also means short-term measures, such as avoiding Germany's nuclear output, scheduled for December 2022, and some other drastic measures. There may be some trade-offs—for example, a short-term increase in Europe's coal-fired power plant production. On the other hand, ironically, most of the coal used in Europe also comes from Russia, which adds to the difficulty. (Wagner, G, 2022, 57).

In sum, The European Renewable Energy Council (EREC) has also suggested that the number of renewable jobs may exceed 2 million by increasing the share of renewable energy in the EU's energy consumption to 20 percent by 2020 (Erec, 2007, 12).

4. CONCLUSION

One of the most important topics among the 11 topics to be discussed at the United Nations Climate Summit COP27 in November 2022 is the annual 4 to 7 trillion dollars needed to support the green transformation of developing countries and achieve the Paris Agreement targets in the so-called "multiple crisis period". The aim was to meet the climate finance needs that will reach the future. The target is to reduce the cost of green borrowing in the upcoming period; because current financial conditions and especially interest rates may negatively affect the future of clean energy.

When we look at what will be the business lines that will come to the fore on behalf of the youth, employees with vocational training, energy, agriculture, design (designing every stage of the life cycle from packaging to waste disposal to minimize environmental damage), tourism, transportation are the sectors with the highest potential to create green jobs. between. Some professions will come to the fore in the green economy for young people as well. Renewable energy, energy efficient structures, houses, healthy public transportation, recycling systems, sustainable agriculture and forestry, ecological agriculture, research, development, informatics and technology, mechanical and technological equipment will be among the popular topics of today's world.

A green economy will include innovations in our manufacturing and service sectors. For example, in the construction industry, homes and businesses can be equipped with more efficient windows, lights, insulation,

heating and ventilation systems and appliances to reduce energy consumption and greenhouse gas effects. and increase employment opportunities and return on investment from energy savings. The transition to a green economy will require workers to acquire skills through training programs and create more jobs in education. In addition to private sector initiatives, a green economy will need government leadership to provide policies, economic incentives, subsidies and investment.(See.Edwards AR,2013,).

As a matter of fact, Turkey is in a key position for the EU in terms of energy diversity, energy security and energy supply chain. Even if some countries in the EU have difficulty accepting this issue, the EU is institutionally aware of this. The EU's partners and Turkey's neighbors are gradually accepting this as well. Moreover, this issue is based on a win-win formula for both the EU and Turkey and their partners.

Finally,today the world has been caught in a green revolution. We can clearly discern this from the fact that the EU has given some signals to return to the Paris Climate Change Charter as a result of the "European Green Consensus" on its agenda and the new US administration, which came to power in 2021, winking at "Renewable Energy".

New renewables energy production against environmental crises;Mucilage case versus Hydrogen economy

Assoc.Prof.Dr,Erhan ATAY¹

¹Trakya University,Economics Dept.Edirne,TURKEY, e-mail:erhanatay@trakya.edu.tr,
ORCID:0000.0003.4190.3452

Abstract: It is foreseen that renewable energy investments will increase in the coming years with the developing technology and increasing energy demand all over the world in the fight against global warming and climate change.

Hydrogen is an important alternative as an energy carrier with its high mass energy density and low environmental impact. Hydrogen is used in many different areas from transportation to industry, from renewable energy integration to green chemical production.

Therefore, if we take Marmara sea's recent mucilage dilemma into account, hydrogen and photocurrent can be produced using microalgae isolated from marine mucilage. In this context, mucilage should be evaluated in green energy production studies for renewable energy as biological waste.

Key words: Renewables energy,Mucilage, Hydrogen economy,Turkey,Black Sea.

1.INTRODUCTION

Today, we must turn to some new renewable energy sources such as hydrogen and understand absolutely how valuable the fossil fuels in the world cannot be renewed, Because,centuries ago, Indian chief Seattle said, "When the last river is dry, the last tree is gone, the last fish is dead, the white man will realize that money is something that cannot be eaten."

On the other hand, I think the main dilemma here lies in fossil fuels. They both run out and their more attractive and less polluting rivals such as renewable energies appear on the scene.Today, many Turkish companies trying to export, not only companies, but also "organized industrial zones" need to adapt to environmental criteria situation as soon as possible in meeting the demands of large-scale global brands, in other words "sustainable" production criteria, because the world is preparing for it.

The 21st century we live in is characterized as the hydrogen age, as it is observed that a broad consensus has been reached on it in a groundbreaking manner. However, while the past century was a carbon age across the world, it both experienced prosperity and achieved growth rates of 10% in China.

Unfortunately, humanity had to pay for this with global warming and climate crisis. Unfortunately, the concrete indicator of this phenomenon is the rain of worms from the sky in China. has been in the form.

As of today, civilized world trade is now "Environmentally Friendly".For instance,developed countries have started to shape all their production and production resources accordingly. An innovative interpretation of production without harming the world requires this.

In this regard, aiming to produce energy , such as solar , even hydrogen , it is aimed to use renewable resources and minimum carbon footprint in all of them, from energy production to product production and the production of raw materials used in this production. Those who do not recycle and reuse at a close rate and do not keep the amount of waste at the lowest level with the opportunities provided by current technologies will no longer have the opportunity to trade with developed countries.

In these days when we have to experience the dark winter of 2023, this beauty will not remain at this point; how to meet this need of agricultural areas that will need water in summer due to the absence of snow in the Taurus Mountains, as well as, for example, around Amasra in the Western Black Sea geography, this year as a result of the weather that is above seasonal normals. We can emphasize that the climate crisis has clearly come if we take into account the damage they may cause to the local people in terms of possible shelter and food supplies as a result of the bears' inability to hibernate.

Another very important issue is that it is obvious that the main subject of ecological constitutional debates in the world and in Turkey is going towards whether nature can be a subject of rights. We should add to this determination that the studies of "ecological constitution" as a branch of constitutional economics, which has become more popular in recent years, have come a long way. In any case, now that the climate crisis is

grounded to the bone, it will be inevitable for those living on earth to come to their senses and immediately turn to an ecological constitution.

2. ENVIRONMENTAL CRISE AND GREEN THEORY VERSUS RENEWABLE ENERGY RESPONSE

2.1 Environmental Crise

When we look at the source of environmental pollution, many studies have been done on this issue, and the classic determination of public administrations in the past was the declaration that it is not known where the pollution comes from. However, nowadays, we know more about the source of environmental pollution than before. One of the reasons for allocating financial resources to find an alternative energy source and to apply a cleaner method in electricity production was this type of research.

In this context, the main source of pollution is the fuels we use today. As we know, these are the products obtained from coal, natural gas, petroleum and petroleum refinery. The mentioned fuels emit smoke, soot and other harmful compounds to the atmosphere. If the power plants that produce electricity cannot benefit from their core power, they use oil, coal and natural gas. The result is the emission of sulfur into the air on a very considerable scale, which causes acid rains. Another huge pollution phenomenon is the incineration of city garbage. Another problem is the chemical compounds formed in the burning of plastic materials. (Bockris J, 1996, 19).

In addition to global warming, climate change can occur as a number of human-induced changes in the composition of the atmosphere or in the use of land, with the natural internal process and external metasori factors. They are long-term and heavily progressing changes with important local effects. (Tekeli İ, et al, 2011, 11).

2.2. Green Economy

We sincerely want to believe that an energy economy that will not pollute the air of the metropolitan cities we live in and that will not make our seas and lakes sick, especially our rivers, and that will not have long-term negative effects on the climate of the earth, can be achieved in practice. We are living in a period in which the revolution in energy, from the peasants of Lanka, to the Swiss inventors who produce very light electric cars and to the large organizations that set up wind farms on the vast plains of North America a system that is more sharing, that includes localization in its agenda and that will cause minimal damage to ecology has emerged. (Flavin C, Lenssen N, 1994, 4). In fact "green economy" was recognized as a new tradition of political research as an ambitious competitor to the most influential decision-making political traditions of the twentieth century—liberalism and socialism. (Dunne T et al. 2016, 291).

From green economy perspective, decisions and practices or their representatives do not have knowledge and input about their decisions and practices that pose ecological risks. Environmental injustice also occurs when privileged social classes and nations leave large 'ecological footprints' when they take a share beyond their equitable rights. (Wackernagel M, Rees W, 1996, 8).

It consists mainly of methane, although it is a mixture of light hydrocarbons such as methane, fuel that burns with a blue flame in the air. It gives off less carbon dioxide when burned than oil or coal; almost no fly ash, carbon monoxide and sulfur dioxide are present; and emits only small amounts of nitrous oxides. When natural gas burns in air, it produces carbon dioxide, water vapor and heat. The air has enough oxygen to complete combustion. Both carbon and hydrogen atoms in natural gas are completely oxidized when the gas is burned in air. (Pahwa KP, Pahwa KG, 2014, 11).

In sum, the story of the climate crisis has turned from hypothesis to doubt in the past few years, and then to a cold and bitter truth. We now know with certainty that the temperature rises from year to year in every continent where living things live above the earth. It means that something or someone is constantly increasing the temperature in a way which makes us human beings worry. Also, we should never forget that during the millions of years that our planet has passed, the climate conditions have changed many times. Technically, ice ages, floods and heat waves have come to life in the geological past. Again, throughout the history of the earth. There are always winners and losers. This means that while some species have disappeared, others have emerged and multiplied. However, this time everything is quite different from the situation in the past. Unfortunately, if the current tidal wave continues in this way, only polar bears will not be harmed. Because our

civilization has never come across such a rapidly or metazoan-evolving climate before. It is understood that the threat has come to a near-duty position.(Walker G, King SD,2010,14).

3.HYDROGEN ECONOMY and MUCILAGE ENERGY POSSIBILITY

Half a century ago, South African electrochemist J.O'Malley Bockris invented the modern world. He formulated the concept of the "hydrogen economy" as a sustainable industrial system that could completely replace all fossil fuels in an industrial economy. Bockris' aim was to prevent predicted runaway global warming and reduce reliance on fossil fuel reserves, two issues that were emerging at the time and have become more pressing in the intervening years. Hydrogen is the main feature, it includes solar energy as a renewable energy source, in addition to wind energy, it is through the electrolysis of water that uses it and channels green hydrogen as input.(Mathwev AJ,2022,2).

3.1.Hydrogen Energy and 21st Century's energy hydrogen era

After the second oil crisis in 1979, the demand for hydrogen and hydrogen fuel cells increased. In addition to the environmental problems such as the climate crisis caused by the carbon emission caused by the burning of fossil fuels, intensive studies are being carried out to switch to commercial use and reduce costs, as well as technology development studies.(Aydın L,2014,229).

In general, it is approximately 1.33 times more productive than petroleum-derived fuels. In this context, hydrogen means hydrogen, hydro: water, genes: creator, and it is represented by the symbol (H) as the number one element of the periodic table. (Erdener H. vd,2007,24).

Hydrogen biogas or coal etc. it is not a primary energy source, but ink from water and biomass has an extraordinary energy carrier feature. It is an energy that can be transported safely everywhere, with minimal energy loss at the same time, that we can benefit from in almost every aspect of life, from transport vehicles to heating, from industry to kitchens and bathrooms in our house. Therefore, systems in which hydrogen is used as fuel and chemical energy is directly converted into electrical energy are referred to as fuel cells in this context. On the other hand, Fuel Cell Systems fuel cell mass, fuel processor They actually consist of four different connectors, namely, current converter and conditioners and heat management system.(Barbir F,2005,5).

An approach that will be considered for the coming years is hydrogen energy in the form of renewable energy and can be dominant in the markets as a long-term low-carbon fuel. Fuel cells, which are an upper version of this, are exceptionally productive and work quietly. The eye-catching aspect of this approach is that only water is emitted from the vehicle's exhaust. As a matter of fact, the Norwegian government, which opened the first hydrogen station in August 2006, is aiming for a 580 km hydrogen corridor between Oslo and Stavanger. However, the mentioned technology is currently refraining from being economical. The main point here is to increase the efficiency of fuel cells and minimize the cost, while simultaneously is to find the appropriate way to store and distribute hydrogen. Certain giant companies such as General Motors, Chrysler, Mercedes and Toyota etc. continue their work. For example, Toyota company gives fuel cell-powered prototypes to all ministries in Japan. We should not be surprised to witness what they do. (Walker G, King SD,2010,145).

3.2 Future energy potential from Marmara Sea's Mucilage

Sulfur bacteria produced H₂ sulfide as the waste of their metabolism, making the ocean depths uninhabitable for O₂ dependent creatures. This oxygen-free bottom layer was separated from the O₂-containing upper layer by the 'Chemocline', usually a few meters below the surface. In today's world, the only large body of water in this state is the chemocline. It is the Black Sea, where it is 150-200 meters below. However, Canfield claimed that even open oceans were in this state for very long periods in the ancient past. Since he proved his claim, these seas are called Canfield oceans. Hydrogen sulfide is not only deadly to iron organisms. It is equally deadly to land animals and plants if it enters the atmosphere at sufficient density.(Dyer G,2013,234)

Biomass energy is a remarkable type of energy among the unconventional energies on earth. The IEA (International Energy Agency), headed by Dr. Fatih Birol, is an active project and, together with a strategic progress and an innovative team of technological R&D, is responsible for approximately half of the energy demand of our universe. argues that it can be supplied by converting wood into usable energy.(Fernholz K et al.,2009,3).

The mucilage phenomenon, which has been seen on the Italian coasts for many years, has also started to be seen in the Marmara Sea for the last fifteen years. Different microorganisms contribute to this organic structure. It is known that this structure, namely the mucilage aggregates, consists of diatoms, dinoflagellate cyanobacteria and bacteria..(Aksu A et al,2022,13)

The ecosystem of the Marmara Sea has undergone great changes in the last 40 years due to human pressures. Majority of these pressures are domestic, industrial, and agricultural wastes discharged into the sea. In addition to these changes, mucilage formation, which is a phenomenon that has occurred in very few regions in the world, first occurred in the Marmara Sea between 2007-2008 according to official records and disappeared. Mantıkçı et al,2022,18).

At the same time microalgae have the necessary genetic, metabolic and enzymatic characteristics to produce hydrogen (H₂) gas. Hydrogen gas is produced from eukaryotic microalgae under anaerobic conditions (either as electron donor in the CO₂ fixation process or by development in the light/dark process). During photosynthesis; microalgae convert water molecules into hydrogen and oxygen. The hydrogen ions are then converted to hydrogen gas under anaerobic conditions by the hydrogenase enzyme. (Çalışkan E, Öner B.2019,308).

In sum,states and societies that produce hydrogen at low cost from water, use it instantly without the need for storage, or at least activate hydrogen in existing natural gas systems to a certain extent,it will also open the door to the new era.In the future, researchers can conduct a studies on the impact of mucilage on the regional ecosystem in the Marmara Sea.

4. CONCLUSION

Although there is a perception among people that the stone age is not over because the stone does not run out on earth, especially in transportation and from one place to another, whether it is tourism activity or daily commuting activity, Brent oil, which is the raw material of some known fossil fuels in the transportation sector, or other types of oil. Nowadays, we observe that it is slowly starting to run out. Technological advances, which are popular in the news on one side of the coin, accelerated with innovations in an urgent way, have increased the use of energy, and it has become possible to live without access to any energy source.

In the future, widespread use of hydrogen will benefit from the application of a rigorous and comprehensive hazard analysis method as described in this section. For the effective use of hydrogen, it must be stored, transported and used in a way that does not endanger life and health, minimizes the risk of damage to property and equipment, and maintains the system or equipment.

In parallel with the European Green Agreement, China from Far Asia joined the EU's 2050 and 2053 carbon neutral targets of our country, and although it was postponed a little later, it has included in its program to realize the aforementioned target in 2060. Considering the presence of vigilant entrepreneurs from Canada and New Zealand, who sell air as clean as a can of Pepsi Cola to China for \$5 per box, it will be seen how meaningful the Green Development goal is.

Of course, as a coincidence of luck, it should be noted that the previous Republican, ultra-liberal US president pointed to this phenomenon and argued that there is no such thing as climate change. It may be necessary to read this as the internal contradictions of Western capitalism. At the 27th COP meeting, it is possible to see the innocent attitudes of the Chinese authorities explaining that they have no role in global warming.

Finally,we can benefit from Marmara Sea's mucilage problem as a new renewable energy such as hydrogen in using microalgae isolated from marine mucilage.Accordingly this opportunity should be taken into account such as Black Sea's hydrogen sulfur (H₂S) hydrogen energy potential.

The Importance of Blockchain for Businesses in Digital Transformation and A Study on Blockchain Development

Asst. Prof. Fatih Çağatay BAZ¹

¹ Osmaniye Korkut Ata University, fatihcagataybaz@osmaniye.edu.tr, ORCID: 0000 – 0002 – 6398 - 9851

Abstract: Today, developments in technology necessitate digitalization in every sector. Businesses update their existing technology infrastructures and adapt quickly to this process. The records of the securely shared decentralized data of the enterprises are realized through blockchain technology. Blockchain technology, in general, is a recording technology that does not need any center and where data is stored on the network. In this sense, blockchain technology has been developing and attracting great attention in recent years. The study was designed to investigate the features of blockchain technology and was developed to offer a series of recommendations on how this technology can be used for businesses. In this study, blockchain technology has been studied conceptually. Suggestions about its applications in business areas are presented. The study was created through the information obtained in line with the studies in the literature. Blockchain development processes for businesses are also discussed in the study. A proposal to develop an application for the infrastructure to be offered to businesses with blockchain technology has been presented. As a result, businesses need to adapt their development processes and this new technology by improving their activities in solving the problems encountered thanks to the blockchain technology. It can be stated that the research is important in terms of being a current issue and carrying suggestions for new applications for businesses.

Keywords: Blockchain, Business Management, Digital Transformation, Digital Business

1. INTRODUCTION

In the digital age, businesses benefit from the innovations of technology to increase their performance. It has become a necessity for businesses to benefit from technology in a competitive environment. Industry 4.0 is one of the technology methods using artificial intelligence, marketing methods, electronic commerce and blockchain. Especially in recent years, blockchain technology has been used in different areas in businesses.

Blockchain technology, as one of the innovations of the era, provides many benefits to organizations on the storage and transportation of any value in digital environments with its unique mechanism in its infrastructure, which first started to attract attention of digital assets called crypto money. It is a digital transformation tool that is making itself accepted in both the public and private sectors (Selimoğlu and Saldı, 2022, p. 121).

Blockchain technology provides a great opportunity for organizations to add value, develop new products and services, automate strategic decision making, and reduce intermediaries, and it offers this in new forms of formation (Canpolat et al., 2021). Blockchain technology is an application developed to provide data and transfer security. The fact that the blockchain is decentralized and distributed means that it eliminates intermediaries and brokers in transactions and that trades become public (Atılğan Yaşa, 2022, p. 616). Today, blockchain technology is used in many areas such as banking, financial technology, money transfers, creation and storage of valuable documents, e-commerce, e-notary, donation systems, cloud computing and cloud storage (Durdu and Gökçe, 2022, p. 47).

In recent years, blockchain and decentralized storage solutions have been used in many areas. Blockchain and decentralized storage solutions have brought with them decentralized applications. In addition to the data security and immutability benefits of decentralized applications, reducing the need for technological investment is seen as another advantage (Beştaş, 2022, p. 835). For blockchain or distributed ledger technology to be applied in all areas of public affairs, there is a need to develop the necessary technological infrastructures and awareness among people (Özaltın and Ersoy, 2020, p. 757).

The economic transformation provided by digital entrepreneurship, which is rapidly evolving in a different direction on a global scale, is very important for the country's economy, as it increases both economic growth and employment (Boz and Serinkan, 2022). One of the important uses of blockchain technology is “smart contracts”. Smart contracts are computer programs that can automatically fulfill the terms of the contract. It was first developed by Nick Szabo in 1997. However, it did not find use until the concept of cryptocurrencies or programmable payments emerged. Smart contracts are contracts that are automatically implemented by digital protocols (Ulucan Özkul and Alkan, 2020, p. 231).

The concept of digital transformation in businesses can be explained as the adaptation of the appropriate technology to its own system to develop a new business model or to engage in value-creating activities. However, as can be seen from the definitions of digital transformation, there is not much focus on the human factor in the process. Blockchain technology has the potential to accelerate this digital transformation process by reducing certain elements such as data management issues (Tutkunca, 2020; Massaro, 2023).

Blockchain is actively used in public institutions as well as businesses. It is seen that blockchain technology is used in public institutions to provide internal and external security and justice. In addition, it is considered that blockchain technology produces solutions in the context of the right to life, the right to health, the right to privacy and economic rights. It is stated that blockchain technology in public institutions enables the distribution of social benefits, passport transactions, realizing land registry transactions, and improving the supply chain processes between the state and its stakeholders (Baz and Irmak, 2019; Öztalın and Ersoy, 2020, p. 746; Durdu and Gökçe, 2022).

Especially with the increase in big data, it is predicted that traditional investment tools will be replaced by tools such as cryptocurrencies, and therefore, studies to be carried out in this context will be more accepted and a rapid increase in their numbers will be observed (Yıldız, 2022, p. 63).

Blockchain technology; ensuring the security and immutability of data by effectively managing the data flow, sharing large amounts of data from different parties and at the same time providing time and cost advantages in data acquisition, in the supply chain; It has been instrumental in finding important application areas in product traceability, data management and control, payments and contracts (Külahlı and Çağlıyan, 2022, p. 71).

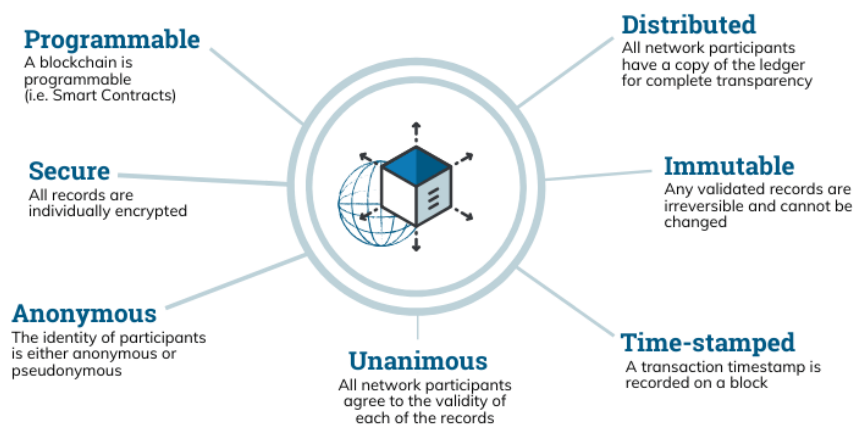

2. WHAT IS BLOCKCHAIN?

It is possible to mention five characteristic features of blockchain technology. These; The database is distributed, end-to-end connectivity, all transactions between protocols are transparent enough to be seen by everyone, the backward structure of the data stored and protocolled cumulatively in chains cannot be changed, and all kinds of information have a computable logic (Yıldırım, 2019, p. 16).

Blockchain technology is in a network structure. This network structure has a flexible technology with a very fast working, reliable and comfortable operation, which is in a distributed structure on the internet (Göktaş and Aksu, 2021, p. 285). Since this technology can list all data from past to present, it contributes to the reliability of transfers (Özkul and Baş, 2020, p. 63). Blockchain technology has the features of decentralization, transparency and immutability (Türkdoğan Görgün and Kurşun, 2021).

Figure 1: What is Blockchain?

The Properties of Distributed Ledger Technology (DLT)

© Euromoney Learning 2020

Source: euromoney.com.

The technical features of blockchain technology can be listed as follows (Kırbaç and Tektaş, 2021a, p. 5):

- ✓ Decentralized
- ✓ Distributed ledger technology
- ✓ Peer to Peer/P2P Network
- ✓ Smart contracts
- ✓ Record-keeping
- ✓ Transparency and traceability
- ✓ Data privacy and security
- ✓ Tamper resistant and immutable
- ✓ Consensus and Proof of Work/PoW
- ✓ Cryptography and hash functions

Differences are observed according to the characteristics of blockchain networks. In this sense, the differences of blockchain networks are given in Table 1.

Table 1: Comparison of Public, Concertium and Private Blockchains

	Public Blockchain	Concertium Blockchain	Private Blockchain
Settlement Providers	All Miners	Selected Nodes	Organization
Read Permissions	Open	Open or allowed	Open or allowed
centralism	No	Partially	Yes
Productivity	Low	High	High
Reconciliation Process	Without Permission	Authorized	Authorized

Source: Demirkan (2021).

The classification of blockchain systems and the differences according to their features are shown in Table 1. Blockchain systems are examined under three headings: general blockchain, concertium blockchain and private blockchain.

The network types in the blockchain protocol have been implemented with a focus on serving the purpose within the framework of sectoral requirements. These purposes are divided into different networks according to privacy, control circles and transparency demands (Demirkan, 2021, p. 40).

Figure 2: Centralized vs. Decentralized vs. Distributed Systems

Source: Kırbaç and Tektaş, (2021b)

3. HOW DOES BLOCKCHAIN WORK?

It is governed by cryptographic protocols that secure all transactions recorded on the blockchain with digital signatures. Thus, everyone on the network has a copy of the distributed ledger, but no one can modify it on their own. Because, to make changes, it is necessary to change the entire blockchain structure. Distributed ledgers make it easier for different users to track different transactions that occur simultaneously (Ulucan Özkul and Alkan, 2020).

Network technology has also laid the groundwork for blockchain, the latest system in data storage and processing. Likewise, the basic philosophy and systematics of blockchain technology are based on data and the processing of data by recording (Çaşkurlu and Arslan, 2021).

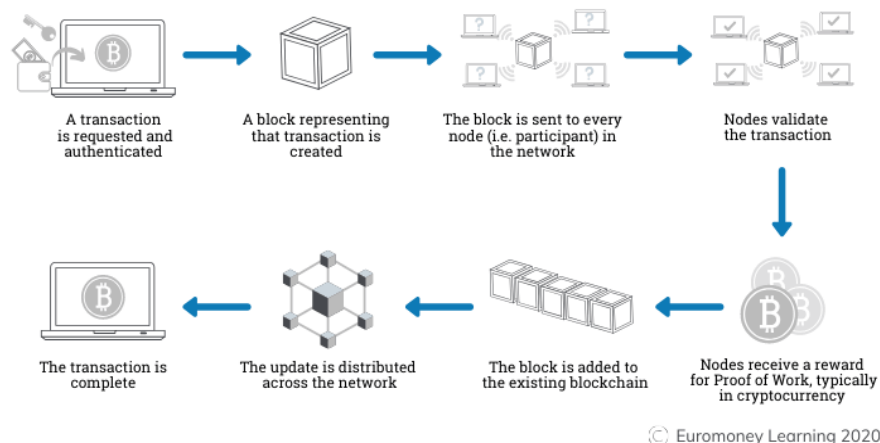

In order to add data to the middle of the blockchain, it is possible to solve the algorithm by mining activity, by computers with powerful processors, and to be approved by the common consensus of all users (Akdemir Altunbaşak, 2018, p. 362).

Key takeaways about blockchain are:

- ✓ The mathematical basis of blockchains is hashing.
- ✓ Blocks contain the hash of the previous block. In other words, it is end-to-end.
- ✓ A single change in a block will change all subsequent blocks.

Figure 3: How Does Blockchain Work?

How does a transaction get into the blockchain?

Source: euromoney.com.

In the development processes of blockchain technology

- Blockchain 1.0; crypto currencies,
- Blockchain 2.0; smart contracts supporting decentralized applications,
- Blockchain 3.0; it shows common applications in all industry and public sector (Özaltın and Ersoy, 2020, p. 751).

Implementation of blockchain technology requires a governance strategy beyond technical knowledge and design to develop technology effectively, smoothly, and reliably (Tekin Bilbil, 2019).

4. BLOCKCHAIN FOR BUSINESSES IN DIGITAL TRANSFORMATION

With the transition to digital technologies, needs and expectations have begun to change. Diversifying and increasing needs brought consumption with it. This causes changes in all processes of enterprises.

Transformation also helps progress (Şahinaslan, 2020). Developments in information technologies equalize the conditions between individuals and businesses and remove barriers to communication (Tavman, 2022, p. 37).

Businesses attach great importance to competitive advantage within the scope of sustainability. In providing competitive advantage, businesses often follow technological developments closely and successfully integrate these technologies into their systems. Businesses that are in a competitive position and create added value by responding to customer requests and needs, react, and adapt to changing environmental conditions, direct technology, act pioneering and proactively (Özel, Yılmaz and Öge, 2022).

Planned or unplanned digital transformation initiatives in businesses have gained great momentum. Especially in the studies carried out in the field of digital transformation in businesses after Covid 19, artificial intelligence, digital transformation, digitalization, robotics, digital health, innovation, tele-medicine, sustainability, blockchain, automation, internet of things, digital technologies, e-commerce, e-learning, and e-learning. - health is seen (Karaboğa and Karaboğa, 2021, p. 110).

Individuals, taxpayers, and institutions can see their records in the database and add new data to these records with this technology. In addition, users in the system can see the changes and updates in the database (Ölçer, 2019). Blockchain is slowly being integrated into insurance business models to eliminate old ways that lead to fraud, overall inefficiency, and cost (Tunca and Sezen, 2020, p.22). This is important for businesses.

When blockchain technology is combined with mobile applications on digitally advanced e-commerce platforms, it has further increased its growth target in business-to-consumer trade. By changing the brand marketing dynamics of new technologies, it has provided more personalized targets with a wide reach in increasing brand trust and increasing customer loyalty (Bayar, 2022, p. 131). In this sense, blockchain has reshaped the structures of businesses.

It is stated in research that blockchain technology has advantages for businesses. We can list the advantages of blockchain technology for businesses as follows (Ağcakaya and Kaya, 2022, p.64):

- ✓ Cannot be changed
- ✓ Transparency
- ✓ Security
- ✓ Lower costs
- ✓ High speed

5. CONCLUSION

In the digital age, businesses benefit from the innovations of technology to increase their performance. It has become a necessity for businesses to benefit from technology in a competitive environment. Industry 4.0 is one of the technology methods using artificial intelligence, marketing methods, electronic commerce and blockchain.

Studies have been carried out in different areas on blockchain. For example, blockchain and cybersecurity (Selimoğlu and Saldı, 2022). In the light of the studies, blockchain, especially when used with other technologies, offers organizations the opportunity to rethink their internal and external processes, remove inefficiencies, create transparency and a better organization in general (Canpolat et al., 2021). Value registration removes the traditional document verification challenge tied to a central authority. Since blockchain technology does not require a central authorization, it can store documents with signature and time stamp, which can be verified by any participant in the network at the discretion of the user (Atılğan Yaşa, 2022). It is expected that with the use of blockchain technology together with smart contracts, it will be able to bring solutions firstly to improve efficiency and then to ensure sustainable efficiency (Kırbaç and Tektaş, 2021). Blockchain makes new technologies more suitable for small businesses as well. Despite uncertain financial returns, small businesses are investing in fee-based technologies and platforms they deem necessary to maintain a competitive position in today's markets (Bayar, 2022).

Blockchain technology is important for adding value to businesses, developing new products and services, automating strategic decision making and reducing intermediaries. Blockchain technology is an application developed to ensure data security. In this sense, businesses must take advantage of blockchain technology for security. The decentralized and distributed nature of the blockchain eliminates middlemen and brokers for

businesses. It enables businesses to make purchases and sales open to everyone. Today, blockchain technology provides many benefits for businesses in different sectors, such as money transfers, creation, and storage of valuable documents.

Blockchain technology is a current topic. It contains many innovations for businesses. Considering that businesses that need technology will use blockchain technology in every field, it can be predicted that they will be able to use it in new studies for researchers.

Özet: Türkiye’de Kırsal Kalkınma Yatırımlarının Desteklenmesi Programı (KKYDP) 2006 yılında başlatılmış olup, halen kırsal kesimde bitkisel üretim ve hayvancılık yapan üreticileri desteklemeye devam etmektedir. Bu program sayesinde hem köyden kente göçün azaltılması, hem de kırsal sanayinin desteklenmesi hedeflenmektedir. Bu çalışmada; Manisa ilinde, Kırsal Kalkınma Yatırımlarının Desteklenmesi Programından (KKYDP) yararlanan tarımsal ürün işleyen işletmelerin durumu değerlendirilerek programın sürdürülebilirliğinin ortaya konması amaçlanmıştır. Araştırmada 2006-2017 yılları arasında KKYDP’ den yararlanan 66 işletme ile anket yapılarak aldıkları yatırım desteği ile programın devamlılığı hakkında veriler elde edilmiştir. Görüşülen işletme sahiplerinin büyük kısmının 21 yılı aşkın süredir tarımsal üretimle uğraştığı belirlenmiştir. Zeytin/zeytinyağı sektöründe çeşit artışı görülmezken, diğer sektörlerde ürün çeşidinde artış belirlenmiştir. Hibe programından memnuniyetin yüksek olduğu belirlenen araştırmada, programın devam etmesi gerektiğini düşünen işletmecilerin oranı oldukça yüksektir. Yatırımcı bireylerin %57,6’sı verilen hibe miktarını yetersiz bulsa da %95,5’i hibe programlarının devam etmesi gerektiğini belirtmiştir. Sonuç olarak; sürdürülebilir kırsal kalkınma için hibe miktarlarının yatırımcının mali durumu göz önüne alınarak dereceli verilmesi ve proje prosedürlerinin daha kolay ve anlaşılır duruma getirilmesi önemlidir. Ayrıca, programın devamlılığı Türkiye tarımı ve sanayisi için gereklilik olarak görülmelidir.

Anahtar Kelimeler: Kırsal kalkınma, tarımsal yatırımlar, Manisa, KKYDP

Evaluation of the Program of Supporting Economic Investments within the Scope of the Program of Supporting Rural Development Investments in Manisa in Terms of Enterprises Processing Agricultural Products

Abstract: The Rural Development Investments Support Program (RDISP) in Turkey was initiated in 2006 and still continues to support producers engaged in crop production and animal husbandry in rural areas. With this study, it is aimed both to reduce migration from village to city and to support rural industry. This study aims to reveal the sustainability of the program by evaluating the status of agricultural product processing enterprises benefiting from the Rural Development Investments Support Program (RDISP) in Manisa province. In the research, data were obtained about the continuity of the program with the investment support they received by conducting a survey with 66 enterprises benefiting from RDISP between the years of 2006-2017. It has been determined that most of the interviewed business owners have been dealing with agricultural production for more than 21 years. While there was no increase in variety in olive/olive oil sector, an increase in product variety was determined in other sectors. In the research it was determined that the satisfaction with the grant program was high, the rate of individuals who think that the program should continue is quite high. Although 57,6% of the investor individuals found the grant amount insufficient, 95,5% stated that the grant programs should continue. As a result; for sustainable rural development, it is important that the grant amounts are given gradually, taking into account the financial situation of the investor, and that the project procedures are made easier and more understandable. Moreover, the continuity of the program should be seen as a necessity especially for Turkish agricultural sector and industry.

Key words: Rural development, agricultural investments, Manisa, RDISP

1.GİRİŞ

Kalkınma kavramı ülkelerin gelişmişliklerinin bir göstergesidir. Bu nedenle ülkeler hem bireysel hem de toplumsal ekonomik refahın artırılması için kalkınma destekleri programlarını düzenlemekte ve uygulamaktadır. Böylece bireysel kalkınma ortaya çıkarken, toplumsal refah düzeyi de yükselmekte, ülkeler dünya genelinde gelişmişlik düzeylerini üst düzeylere çıkarabilmektedir.

Türkiye coğrafi konumu açısından dünyada stratejik öneme sahip bir ülkedir. İklim ve coğrafi koşulların uygunluğu tarımsal üretimin önemini arttırmakta, tarımın ülkenin ekonomik gelişmesinde en büyük katkırı

sağlayabilecek iş kolu olmasına neden olmaktadır. Kırsal kalkınma Türkiye'nin gerek iklimsel gerek coğrafik açıdan tarımsal üretim ve hayvancılık alanlarında ülkenin gelişmiş ülkeler arasına dahil olmasını sağlayacak en önemli anahtar olarak görülmektedir. Bu nedenle tarım ve hayvancılık alanına verilmekte olan bu desteklerin sürdürülebilir olması çok önemlidir

Kırsal kalkınma açısından en önemli teşvik politikalarından biri de çiftçilere uygun teşvik ve desteklemelerin yapılmasıdır. Bu kapsamda Türkiye'de *Kırsal Kalkınma Yatırımlarının Desteklenmesi Programı (KKYDP)* 2006 yılında başlatılmış olup, halen kırsal kesimde bitkisel üretim ve hayvancılık yapan üreticileri desteklemeye devam etmektedir. KKYDP ile 2006-2017 yılları arasında; Ekonomik Yatırımlar kapsamında 7.362 adet tarıma dayalı yatırım tesisi projesi tamamlanmış ve 1.923 milyon TL hibe ödemesi gerçekleştirilmiştir. Makine-ekipman alımlarının desteklenmesi kapsamında ise 271.654 yeni makine-ekipman alımı desteklenerek 1.144 milyon TL hibe ödemesi yapılmıştır. 2019 yılına kadar 13 etap proje kabulü gerçekleştirilmiştir. 21 Kasım 2020 tarih ve 31311 sayılı Resmi Gazete' de yayınlanan 2 adet tebliğ ile "Tarıma Dayalı Ekonomik Yatırımlar" ve "Kırsal Ekonomik Altyapı Yatırımlarına" yönelik olarak 5 yıl boyunca yürütülecek 14. etap programının ana esasları belirlenmiştir.

Bu program sayesinde hem köyden kente göçün azaltılması, hem de kırsal sanayinin desteklenmesi hedeflenmektedir (Asaoglu, 2016; Çobanoğlu vd. 2016). Bu çalışmada; Türkiye'nin en önemli tarım merkezlerinden biri olan Manisa ilinde KKYDP'den faydalanan işletmeler incelenerek, KKYDP'nin üreticilere ve işletmelere katkısının belirlenmesi ve yatırımların devamlılığının belirlenmesi amaçlanmıştır.

2. MATERYAL ve YÖNTEM

Bu araştırmanın ana materyalini, Manisa ilinde bulunan ve 2006-2017 yılları arasında KKYDP ekonomik yatırımların desteklenmesi programından yararlanan tarımsal ürün işleyen işletmelerden anket yoluyla elde edilen orijinal nitelikli veriler oluşturmaktadır. Ayrıca Manisa İl Tarım ve Orman Müdürlüğü Kırsal Kalkınma ve Örgütlenme Şube Müdürlüğünde görevli uzman kişiler ile yapılan yüz yüze görüşmelerden elde edilen bilgilerden de yararlanılmıştır. Kırsal Kalkınma Yatırımlarından yararlanan işletmelerin listesi Manisa İl Tarım ve Orman Müdürlüğü kayıtlarından elde edilmiştir. Elde edilen verilere göre 2006-2017 yılları arasında başvuru yapılan ekonomik yatırımlara ilişkin proje sayısının 819 adet olduğu, ancak tamamlanan hibeli proje sayısının 206 adet olduğu belirlenmiştir. Gerçekleşen bu ekonomik yatırımların 161'i bitkisel ürün işleme ve paketleme, 21'i hayvansal ürün işleme ve paketleme, 6'si soğuk hava deposu, 5'i alternatif enerji yatırımı, 13'ü de sulama yatırımıdır. Buradan hareketle aşağıdaki oransal örnek hacmi formülü kullanılarak görüşülecek işletme sayısı belirlenmiştir. (Newbold, 1995). % 95 güven aralığında, %10 hata payı için; $p=0.50$ alınarak örnek hacmi 66 üretici/yatırımcı olarak bulunmuştur.

$$n = \frac{Np(1-p)}{(N-1)\sigma_p^2 + p(1-p)}$$

n= Örnek hacmi

N= Ekonomik yatırım desteğinden yararlanan toplam işletme sayısı

p=Ürün işleyen işletme oranı(max, örnek hacmi için $p=0,50$ olarak alınmıştır.)

$$\sigma_{px}^2 = \text{oranın varyansı}$$

Araştırmada yatırımcıların 2019 yılına ilişkin verileri esas alınmıştır. Çalışmadan toplanan veriler, Excel programında düzenlendikten sonra SPSS istatistik programı kullanılarak analiz edilmiştir. Anket yolu ile elde edilen verilerin güvenilirliğini test etmek için "güvenilirlik analizi"nin ardından temel amaçlara yönelik analizler yapılmıştır. Anketlerden elde edilen verilerin değerlendirilmesinde tanımlayıcı istatistikler (frekans, yüzde yöntemi, ortalama ve standart sapma vb.) çizelgelerde sunulmuştur. Toplam 66 işletme 2 grup altında analiz edilmiştir. 1. grup işletmeler; zeytin ve zeytinyağı işletmeleri iken, 2. grup işletmeler diğer işletmeler başlığı altında verilmiştir. Veri setinin normal dağılışa uyup uymadığını belirlemek için Tek Örneklem Kolmogorov Smirnov Testi uygulanmıştır. Analiz sonucunda verilerden normal dağılıma uymayanlar için parametrik olmayan testler (Ki-Kare Bağımsızlık Testi, Mann Whitney-U testi ve Kruskal Wallis-H testi) kullanılmıştır(Kalaycı,2010).

Likert ölçeğine göre, tutum ölçeğinde yer alan ifadeler de 5'li ölçeğe (Tamamen katılıyorum-Katılıyorum-Kararsızım- Katılmıyorum- Tamamen katılmıyorum) göre değerlendirilmiştir.

3. Kırsal Kalkınma Yatırımlarının Desteklenmesi Programı (KKYDP)

Kırsal Kalkınma Yatırımlarının Desteklenmesi Programı, Tarım ve Orman Bakanlığı tarafından ilk defa 2006 tarihli 5488 sayılı Tarım Kanunun 19. maddesine dayandırılarak yürürlüğe girmiştir. Bu program ile birlikte kırsalda yaşayanların refah düzeyi arttırılarak köyden kente göçün önüne geçilmeye çalışılmıştır. Ayrıca bu sayede gıda güvenliğinin güçlendirilmesi planlanmıştır. 2006 yılında başlayan KKYDP, 2020 yılına kadar 14 etapta düzenlenmiştir. Başlangıçta köylerde içme suyu, kanalizasyon ve sulama gibi alt yapı projelerine destek verilmesi planlanan programa 2005'ten sonra çıkarılan yönetmeliklerle birlikte 2007 yılı itibariyle makine ekipman desteği eklenmiştir. Başlangıçta 16 pilot ilde uygulanan program 2006 yılı itibariyle bu iller program dışı bırakılmak yoluyla diğer 65 ilde de uygulanmaya başlamıştır. 2008 yılından itibaren ise 16 pilot il de programa dâhil edilerek 81 ilin tamamı hibe desteğinden yararlanmaya başlamıştır. 22.02.2016 tarih ve 29637 sayılı Resmi gazetede yayınlanan 2016-2020 yıllarını kapsayan program kapsamında sulama sistemleri ile ilgili projelerinde bu kapsamda değerlendirilmesi kararlaştırılmıştır. Program, 2006 yılından bu yana başlıca 4 yatırım alanında hibe desteği vermektedir. Bu alanlar; Sulama, Makine- ekipman, Ekonomik yatırımlar, Kırsal ekonomik altyapı yatırımları olarak sıralanabilir. 2006-2019 yılları arasında toplam 10849 projenin tamamlandığı ve toplamda 2.932.487.101,00 TL hibe ödemesinin gerçekleştiği belirlenmiştir. En fazla projenin 3618 ile bitkisel ürün işlenmesi, paketlenmesi ve depolanması alanında olduğu, buna karşın en az projenin (2 adet) el sanatları ve katma değerli ürünler alanında kabul edildiği belirtilmiştir.

4. BULGULAR ve TARTIŞMA

4.1 Üreticilerin Sosyo-Demografik Özellikleri

Üreticilerin yaş, eğitim, tarımda deneyim süresi ile bağlı olduğu kurum veya kuruluşun bitkisel veya hayvansal üretimle ilgili Kırsal Kalkınma Yatırımlarının Desteklenmesi Programı (KKYDP) programından faydalanma durumları değerlendirilmiştir. Hibe desteğinden faydalanan yatırımcıların büyük kısmının 51-60 yaş arasında olduğu (%37,9) buna karşın en az hibe desteğinden faydalanan yatırımcıların %3'lük oran ile 20-30 yaş arasındaki yatırımcılar olduğu belirlenmiştir (Tablo 4.1). Gruplar arasında anlamlı bir ilişki bulunmamıştır.

Tablo 4.1: Üreticilerin Demografik Özellikleri

Yaş	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	Oran (%)	Sayı	Oran (%)	Sayı	Oran (%)
20-30	1	3,1	1	2,9	2	3,0
31-40	3	9,4	6	17,7	9	13,6
41-50	11	34,4	10	29,4	21	31,8
51-60	13	40,6	12	35,3	25	37,9
61 ve üstü	4	12,5	5	14,7	9	13,6
Toplam	32	100,0	34	100,0	66	100,0

Yatırımcıların %42,4'ünün orta öğretim/lise mezunu olduğu, bunu %36,4 oranla üniversite mezunlarının izlediği, yatırımcıların %7,6'sının da lisansüstü mezunu olduğu belirlenmiştir. Yatırımcıların %45,6'sının bitkisel ve hayvansal üretimi 21 yıldan fazla süredir yaptığı, buna karşın 0-5 yıldır bu iş koluyla uğraşan işletmecilerde hibe desteğine başvuran yatırımcıların oranı sadece %1,5'dur. Tablo 4.2'de tarımda deneyim süresi sektörler göre karşılaştırılmıştır. Uygulanan Ki-kare testine göre $p=0,706$ olarak belirlenmiş, anlamlı bir ilişki bulunamamıştır Altıntop (2014) tarafından yapılan bir çalışmada yatırımcıların eğitim düzeyinin hibeden yararlanma oranına etki etmediği belirlenmiştir.

Tablo 4.2: Tarımda deneyim süresi (Yıl)

Yıl	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	Oran (%)	Sayı	Oran (%)	Sayı	Oran (%)
0-5 yıl	1	3,1	-	-	1	1,5
6-10 yıl	3	9,4	3	8,8	6	9,0
11-15 yıl	7	21,9	4	11,8	11	16,7
16-20 yıl	8	25,0	8	23,6	16	24,2
21 yıl ve üstü	12	37,5	18	52,9	30	45,6
Yanıtlayan	1	3,1	1	2,9	2	3,0
Toplam	32	100,0	34	100,0	66	100,0

Yatırımcıların %74,3'ünün bir tarımsal kurum veya kuruluşa üye olduğu, %25,7 sinin üye olmadığı belirlenmiştir. Yatırımcıların sosyal güvence durumu incelendiğinde, %98,5'inin sosyal güvencesi olduğu belirlenmiştir. İşletmelerin %31,8'inin en fazla Akhisar, ardından sırasıyla %12,1 ile Turgutlu ve Saruhanlı, %10,6'lık oranla Soma, %9,1 ile Salihli ve Kırkağaç, %7,6 ile Alaşehir, %3 ile Ahmetli ve son olarak %1,5'lik oranla Şehzadeler, Gördes ve Demirci ilçelerinde faaliyet gösterdiği belirlenmiştir. Zeytin-zeytinyağ işletmelerinin %46,9'u Akhisar'da konumlanmıştır. Bu ilçeyi %15,7 ile Kırkağaç ve Soma izlemektedir.

Araştırmaya katılan 66 işletmenin 32'si zeytincilik sektöründe faaliyet gösterirken, 34 işletme ise; süt ve süt ürünleri, konserve, tavukçuluk, turşuculuk, kurutulmuş ve dondurulmuş sebze ve meyve, domates, süt inekçiliği, tarımsal üretim işleme, kuru üzüm, yaş üzüm, çekirdeksiz kuru üzüm paketleme, bağcılık ve şarap üretimi, aromatik yağ üretimi, kuru domates ve soğuk hava deposu gibi birçok farklı sektörde faaliyet göstermektedir. Yatırımcıların büyük kısmının (%43,7'sinin) 17 yıl ve daha fazla süredir aynı sektörde faaliyet gösterdiği belirlenmiştir. İşletmelerin %65,2'si tüm yıl boyunca faaliyette bulunmaktadır.

Hibe desteğinden faydalanan yatırımcıların %72,8'inin limited şirket, %18,2'sinin anonim şirket, %6,1'inin gerçek kişi ve %1,5'inin kolektif şirket olduğu belirlenmiştir. Yatırımcıların %24,2'si alınan destek ile sektöre girdiğini belirtirken, %74,3'ü destekten daha önce sektörde yer aldığını ifade etmiştir.

Yatırımcıların %75,8'inin hibe desteğine 1 kez başvurduğu ortaya konulmuştur. 4 kez veya daha fazla sayıda başvuran yatırımcı sayısı 1'dir. Yatırımcıların %95,5'i hibe desteği aldıktan hemen sonra faaliyete geçtiğini belirtmiştir. Yatırımcıların birbirinden farklı etaplarda destekten faydalandığı saptanmıştır. Bazı yatırımcıların ise hibe desteğinden birden fazla faydalandığı belirlenmiştir. En fazla hibeden faydalanan etabın %15,2 ile 7. etap olduğu belirlenmiştir.

Yatırımcıların %84,8'inin hibe desteğinden sadece 1 kez, %10,6'sının 2 kez, %1,5'inin 3 kez ve %1,5'inin 4 kez veya daha fazla faydalandığı belirlenmiştir. Çalışmaya katılan yatırımcıların %15,2'lik oranla en fazla hibe desteğine 2013 yılında başvurduğu, %1,5'lik oranla en az başvuru yapılan yılların 2015 ve 2018 yılları olduğu belirlenmiştir.

Araştırmaya katılan yatırımcıların %53'ü KKYDP'ye 2011-2014 yılları arasında başvurmuştur. Ayrıca 2006'dan itibaren her yıl hibe programına başvuru yapıldığı belirlenmiştir. 64 yatırımcı %50 hibe desteği aldığını belirtmiştir. Yatırımcıların aldıkları hibe miktarlarının işletmenin gereksinimine göre değişiklikler gösterdiği anlaşılmaktadır. En düşük hibe miktarı 75000 TL, en yüksek 1.040.000 TL, ortalama 372439,99 TL'dir.

Genel itibarıyla yatırımcıların %56,1'inin(37 kişi) kapasite arttırma ve teknoloji yenileme, %36,4'ünün(24 kişi) yeni yatırım amacıyla hibe desteği aldığı belirlenmiştir(Tablo 4.3). Tamamlama yatırımı alan sadece 1 kişidir. Yatırım çeşidinin sektör bazında değişiklik gösterip göstermediği test edilmiş, anlamlı bir ilişki bulunmamıştır.

Tablo 4.3: KKYDP yatırım çeşitleri

Yatırım çeşidi	1.grup(Zeytin / Zeytinyağı)		2.Grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Yeni yatırım	13	40,6	11	32,4	24	36,4
Tamamlama yatırımı	1	3,1	-	-	1	1,5
Kapasite arttırma ve teknoloji yenileme	18	56,3	19	55,7	37	56,1
Yeni yatırım / Kapasite arttırma veya teknoloji yenileme	-	-	2	5,9	2	3,0
Yanıtlanmayan	-	-	2	5,9	2	3,0
Toplam	32	100,0	34	100,0	66	100,0

Yatırımcıların KKYDP'den ne şekilde haberdar olduğu değerlendirilmiş, buna göre yatırımcıların %84,9'unun danışmanlık firmaları, %9,1'inin internet, %4,5'inin ise Manisa İl Tarım ve Orman Müdürlüğü'nün tanıtım toplantıları sayesinde haberdar olduğu belirlenmiştir.

Yatırımcıların %90,9'unun hibe projesini danışmanlık firmalarının hazırladığı belirlenmiştir. Projeyi kendisi hazırlayan kişiler çalışmaya katılan yatırımcıların %6,1'i iken, %1,5 oranlık kısım projeyi diğer gerçek kişilerin hazırladığını belirtmiştir. Yatırımcıların %74,2'si yaptıkları yatırımda hibe kapsamı dışında ek yatırım yaptığını, %24,2'si ise herhangi bir ek yatırım yapmadığını belirtmiştir. Sektörler arasında anlamlı ilişki bulunmamıştır.

İşletmelerdeki istihdam durumunun hibe desteğinden sonra artış gösterip göstermeme durumu incelendiğinde işletmelerin %75'inde istihdamın 1-5 kişi arttığı görülmektedir (Tablo 4.4). İşletmelerin %15,2'sinde istihdam 6-10 kişi artarken, %7,6'sında istihdam 11 kişi ve üzeri artmaktadır. Sektörler arasındaki ilişki ki-kare testi ile değerlendirildiğinde gruplar arasında anlamlı bir ilişki bulunmuştur(p=0,009). Bursa ilinde yapılan bir

araştırmada KKYDP kapsamında makine ekipman desteği alan işletmelerin istihdam düzeylerinin arttığı belirlenmiştir (Çobanoğlu vd., 2016).

Konya ilindeki diğer bir araştırmada işletmelerde istihdamın %71.80 oranında arttığı, işletmelerin işledikleri tarımsal ürünleri %70-97'yi bulan oranlarda yerelden temin ettikleri görülmüştür (Akdoğan ve Gülçubuk, 2022).

Tablo 4.4: Hibe desteği sonrası istihdamın artma durumu (%)

İstihdamın artma durumu	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
1-5 kişi	30	93,8	20	58,8	50	75,7
6-10 kişi	2	6,2	8	23,6	10	15,2
11 kişi ve üstü	-	-	5	14,7	5	7,6
Yanıtlamayan	-	-	1	2,9	1	1,5
Toplam	32	100,0	34	100,0	66	100,0

Hibe desteği sonrası üretim kapasitesinde bir artış olup olmadığı incelendiğinde bireylerin %52,9'u üretim kapasitesinin %1-25 arasında arttığını belirtmiştir(Tablo 4.5). Buna karşın sadece %7,6'lık bir kısım üretim kapasitelerinin %51'in üzerinde artış olduğunu ifade etmiştir. Sektörler arasında anlamlı bir ilişki bulunmamıştır. Asoğlu ve Binici (2015) tarafından Diyarbakır ve Şanlıurfa'da yapılan araştırmada yatırımcıların %38,5'i hibe desteği sonrası işletme kapasitesinde kesinlikle artış olduğunu, %51,7'si de artış olduğu belirlenmiştir. Akdoğan ve Gülçubuk (2022) tarafından yapılan benzer bir araştırmada işletmelerin %75'inde gelir düzeylerinin beklendikleri düzeyde ya da üzerinde arttığı, %63.90'ında üretim hacimlerinin arttığı belirlenmiştir.

Tablo 4.5: Hibe desteği sonrası işletmenin üretim kapasitesinde artış durumu

Üretim kapasitesinin artma durumu	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Hiç artmadı	3	9,4	3	8,8	6	9,2
%1-25 arttı	17	53,1	18	52,9	35	52,9
%26-50 arttı	10	31,3	9	26,5	19	28,8
%51 ve üstü arttı	2	6,2	3	8,8	5	7,6
Yanıtlamayan	-	-	1	2,9	1	1,5
Toplam	32	100,0	34	100,0	66	100,0

Yatırımcıların %63,6'sı kredi kullanırken, %34,9'u kredi kullanmadığını belirtmiştir. Bu oran 1. grup işletmelerde %59.4 iken, 2.grup işletmelerde %63.6'dır. Yatırım esnasında kredi kullanmadığını belirten 24 yatırımcıya nedeni sorulduğunda yatırımcıların 20'si ihtiyacı olmadığını söylerken, 4'ü talep ettiğini ancak bankalardan gerekli desteği göremediğini belirtmiştir. Sonuçlara göre yatırımcıların neredeyse tamamı (%95,5) hibe programlarının devam etmesini düşünmektedir. Normal olmayan dağılımda yapılan analizler sonucu anlamlı ilişki bulunmamıştır. Yapılan bir çalışmada Makine ekipman desteğinden faydalanan bireylerin KKYDP'nin olumlu katkısı olduğundan dolayı devam etmesi gerektiği sonucuna ulaşılmıştır (Altıntop, 2014; Doğan Öz ve Saner, 2021).

KKYDP kapsamında hibe desteği alan yatırımcılara farklı programlara başvurup başvurmadığı sorulduğunda yatırımcıların %56,1'inin farklı programlara başvurduğu, buna karşın %42,4'ünün başka herhangi bir programa başvurmadığı belirlenmiştir. Farklı programlara başvuran yatırımcıların tercih ettikleri programlar irdelendiğinde %34,8 oranında bireyin Ekonomi Bakanlığı'nın Teşvik belgeli yatırımlarına başvurduğu belirlenmiştir. Bunu %7,6 ile Tarım ve Kırsal Kalkınmayı Destekleme Kurumu(TKDK), %6,1 ile KOSGEB ve %4,5 ile Zafer Kalkınma Ajansı izlemektedir. Yatırımcıların %42,4'ünün başka herhangi bir programa başvurmadığı da bilinmektedir. Çalışmaya katılan yatırımcılara aldıkları hibe desteği ile yaptıkları yatırımlarını halen kullanıp kullanmadıkları sorulduğunda yatırımcıların %86,4'ünün yatırımlarını sürdürdükleri belirlenmiştir.

İşletmelerdeki ürün kalitesinin hibe desteğinden sonra artıp artmadığı değerlendirildiğinde yatırımcıların %80,3'ü artış olduğunu belirtirken, %19,7'si kalitenin değişmediğini belirtmiştir(Tablo 4.6). Gruplar arasında anlamlı bir ilişki bulunmamıştır. Asoğlu ve Binici (2015) tarafından ürün kalitesinin hibe desteğinden sonra arttığını belirten yatırımcı oranının %83,3 olduğu belirlenmiştir.

Tablo 4.6: Hibe desteği sonrası ürün kalitesinde artış olma durumu (%)

Ürün kalitesinde artış olma durumu	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Evet	23	71,9	30	88,2	53	80,3
Hayır	9	28,1	4	11,8	13	19,7
Toplam	32	100,0	34	100,0	66	100,0

Hibe desteğinden sonra ürün çeşit sayısında artış olup olmadığı değerlendirildiğinde işletmelerin %51,6'sında hibe desteği aldıktan sonra ürün çeşidinin arttığı ortaya çıkmıştır(Tablo 4.7). Ki-kare testine göre gruplar arasında anlamlı bir ilişki bulunmuştur($p=0,003$). Yapılan bir çalışmada benzer şekilde hibe desteği sonrasında ürün çeşidinde artış olduğu belirlenmiştir (Asoğlu ve Binici, 2015).

Tablo 4.7: Hibeden sonra ürün çeşidinde artış olma durumu

Ürün çeşidinde artış olma durumu	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Evet	10	31,3	24	70,6	34	51,6
Hayır	22	68,7	10	29,4	32	48,4
Toplam	32	100,0	34	100,0	66	100,0

Yatırımcıların ortalama %61,95 kapasite ile çalıştığı belirlenmiştir. Bunun yanı sıra işletmelerde 1- 35 arasında çeşit ürün olduğu ve ortalama 4 çeşit ürün üretildiği hesaplanmıştır (Köse, 2021).

Hibe desteğinden sonra işletmelerin %59,1'inin ihracat miktarı değişmezken, %30,3'ünün ihracat miktarının arttığı belirlenmiştir. Yatırımcıların %9,1'i soruya cevap vermemiştir. Yatırımcılara hibe desteğinden yararlanırken herhangi bir sorunla karşılaşp karşılaşmadığı sorulduğunda; yatırımcıların %25,7'si bir sorunla karşılaşmadığını belirtirken, %65,2 oranında yatırımcılar prosedürlerde zorlandığını belirtmişlerdir. Firma sahiplerinin %7,6'sı katkı payını ödemede zorluk yaşadığını ifade etmişlerdir. Altıntop (2014) Mersin ilinde yaptığı araştırma sonucunda hibe desteği ile ilgili yatırımcıların en fazla şikayet ettiği konunun prosedürlerin zorluğu ve yatırımcı seçmede dengesiz puanlama yapılması olduğunu belirlemiş ve hibe desteğinden faydalanan yatırımcıların %98,5'si programın devam etmesi gerektiğini belirtmiştir.

Araştırmaya katılan yatırımcılara uygulanan anket çalışmasında likert ölçekli sorulara da yer verilmiştir. Kırsal kalkınma yatırım konularının yöreye uygunluğunun sorulduğu soruda %12,21'i kesinlikle katılıyorum derken, yatırımcıların %39,4'ü katılıyorum, %19,7'si kısmen katılıyorum yanıtını vermiştir.

Tablo 4.8: Yatırım konularının tarımsal potansiyel ve kırsal kalkınma için yöreye uygun ve yeterli olma durumu (%)

Karşılaşılan sorunlar	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Kesinlikle katılmıyorum	2	6,2	1	2,9	3	4,5
Kısmen katılıyorum	8	25,0	5	14,7	13	19,7
Kararsızım	4	12,5	12	35,3	16	24,2
Katılıyorum	14	43,8	12	35,3	26	39,4
Kesinlikle katılıyorum	4	12,5	4	11,8	8	12,2
Toplam	32	100,0	34	100,0	66	100,0

Hibe programından alınan desteğin ihtiyacı karşılayıp karşılamadığı sorulduğunda yatırımcıların %33,3'ünün katılıyorum yanıtını verdiği görülürken, kesinlikle katılmıyorum diyenler, yatırımcıların %7,6'sını oluşturmuştur. Bunların dışında yatırımcıların %28,8'i kararsızım yanıtını verirken, %19,7'si kısmen katılıyorum ve %10,6'sı kesinlikle katılıyorum yanıtlarını vermiştir. Yatırımcıların büyük kısmının kararsız olduğu görülmüştür. Bunun nedeninin verilen hibenin ihtiyacın en fazla %50'si olması ve yatırımcıların en az hibe kadar sermayeye ihtiyaç duymasıdır. Yatırımcıların büyük kısmının hibe dışında kredi kullanması bu durumu açıklamaktadır.

Yatırımcıların %31,8'i Tarım ve Orman Bakanlığı personelinin sorun çözmede başarılı olduğunu söylemiştir. %9,1 oranda yatırımcı ise kesinlikle katılıyorum diyerek personelin tüm sorunlarını çözdüğünü belirtmiştir. Ayrıca kısmen katılıyorum, kararsızım ve katılıyorum diyenlerin oranlarının birbirine yakın olduğu tabloda gösterilmiştir(Tablo 4.9). Gruplar arasındaki farklılık değerlendirildiğinde anlamlı bir ilişki bulunmamıştır.

Tablo 4.9: Tarım ve Orman Bak. elemanlarının sorunları anlamada ve çözüm üretmede başarılı olma durumu

Karşılaşılan sorunlar	1.grup(Zeytin / Zeytinyağı)		2. grup(Diğer sektörler)		Toplam	
	Sayı	(%)	Sayı	(%)	Sayı	(%)
Kesinlikle katılmıyorum	2	6,2	4	11,8	6	9,1
Kısmen katılıyorum	6	18,7	10	29,4	16	24,2
Kararsızım	11	34,4	6	17,7	17	25,8
Katılıyorum	8	25,0	13	38,2	21	31,8
Kesinlikle katılıyorum	5	15,7	1	2,9	6	9,1
Toplam	32	100,0	34	100,0	66	100,0

Proje değerlendirmede kullanılan puanlama tablosunun uygun yararlanıcıyı seçebilecek düzeyde olup olmamasına ilişkin düşünceler sorulduğunda yatırımcıların %31,8'i kararsız olduğunu ve %28,9'u katılıyorum şeklinde yanıt vermekte iken %22,7 gibi büyük oranda yatırımcı kısmen katıldığını belirtmiştir. Puanlama tablosunun uygun yararlanıcıyı seçebilecek düzeyde olmadığını düşünen %6 oranında yatırımcı kesinlikle katılmıyorum diye yanıt vermiştir. Puan değerlendirme tablosunun yöresel önceliklerden ziyade yatırımcının nitelik ve etkinliğine odaklanması, prosedürlere haizliğin sorgulanması puan tablosu konusundaki kararsızlığı açıklayabilir. Gruplar arasında anlamlı bir ilişki bulunmamıştır. Altıntop da (2014) bu bulguyu destekler şekilde verilere ulaşmıştır.

Yatırımcılara bürokratik işlemlerin projenin tüm aşamalarında genel olarak fazlalığı hakkındaki düşünceleri sorulduğunda çok yüksek oranda katılıyorum (%28,8) ve kesinlikle katılıyorum (%51,5) yanıtlarının alındığı belirlenmiştir. Bürokratik işlemlerin fazla olmadığını düşünen ve kesinlikle katılmıyorum yanıtını veren sadece %3 ile 2 kişidir. Normal olmayan dağılımda gruplar arasındaki farklılığın araştırıldığında ($p=0,028$) anlamlı ilişki bulunmuştur. Proje hazırlama dökümanlarının anlaşılabilirliği konusunda yatırımcıların yarıya yakını kararsızım (%43,7) yanıtını vermiştir.

Yatırımcılar genel olarak proje kapsamında gerekli izin ve ruhsatların alınmasında zorluk olduğunu belirtmiştir. Yatırımcıların %43,9'u katılıyorum yanıtını verirken %36,4'ü kesinlikle katılıyorum olarak ifade etmiştir. Yatırımcılar genel olarak proje kapsamında gerekli izin ve ruhsatların alınmasında zorluk olduğunu belirtmiştir. Yatırımcıların %43,9'u katılıyorum yanıtını verirken %36,4'ü kesinlikle katılıyorum demıştır.

Yöre ürünleri için iyi işleyen bir pazarlama sistemine sahip olması konusunda yatırımcıların büyük kısmı olumlu cevap vermiştir. Kesinlikle katılıyorum diyen %39,4 ve katılıyorum diyen %34,8'dir. Yatırımcıların sadece %4,5'i kesinlikle katılmıyorum diyerek olumsuz yanıt vermiştir. Yatırımcılar ürünleri sattıkları alıcılar ile aralarındaki güven ve işbirliği konusunda genel olarak olumlu düşündüğünü belirtmiştir. Yatırımcıların %43,9'u katılıyorum, %31,8'i kesinlikle katılıyorum demıştır. Kesinlikle katılmıyorum şeklinde yanıt verenler ise yatırımcıların %3'ü kadardır. Konya ilinde yapılan bir araştırmada KKYDP'nin ürün pazarlarına ve pazarlama kanalları etkisi yönüyle değerlendirilmesinde; işletmelerin %48.04'ü projeleri sonrasında pazarlama kanallarının değişmediğini, ancak satışlarının arttığını ve kolaylaştığını belirtmişlerdir. %26,47 oranında pazarlama kanallarının genişlediği, %21, 57 oranında pazara girişin kolaylaştığı belirtilmiştir (Akdoğan ve Gülçubuk, 2022).

SONUÇ ve ÖNERİLER

Araştırma kapsamında hibe desteği sonrası yöreye ilişkin ürünlerin satış ve pazarlama ağının yöresel anlamda geliştiği, ancak ihracat açısından yeterli gelişmenin sağlanamadığı belirlenmiştir. Bunun yanı sıra karşılıklı fayda esasına dayanan firmalar arasındaki işbirliği ve güvenin hibe desteğinden sonra arttığı da gözlenmiştir. Gerek kırsal kalkınmanın gerekse sürdürülebilirliğinin sağlanması için ihracatın artırılmasına olanak sağlayacak devlet desteklerinin verilmesi gerekmektedir.

Hibe projelerinin çok yüksek oranda danışmanlar tarafından hazırlandığı belirlenmiştir. Araştırmaya katılan yatırımcıların çok az bir kısmı projeyi kendisinin hazırladığını belirtmiştir. Ancak burada en önemli sorun bu iki grup arasında hibe projelerinden haberdar olma şekli ile ilgili önemli farklılıkların olmasıdır. Hibe projelerinden daha fazla yatırımcının haberdar olabilmesi ve daha fazla yatırımcının hibe desteğinden faydalanabilmesi için Tarım ve Orman Bakanlığı tarafından çeşitli bülten, afiş ve reklamların hazırlanması gerekmektedir. Ayrıca İlçe Tarım ve Orman Müdürlükleri tarafından yapılan bilgilendirme toplantılarının tarih ve yerinin önceden kırsal bölgelerde yaşayan üreticilere/yatırımcılara haber verilmesi gerekmektedir.

Araştırma kapsamında görüşülen 64 yatırımcının hibe desteğinden yararlandığı, ancak en çok prosedürlerde zorlandıkları belirlenmiştir. Bu yüzden programa başvuru aşamasından programın tamamlanmasına kadar geçen süre içerisinde uygulanması gereken prosedürlerin sadeleştirilmesi ve anlaşılır olması, gerek yatırımcı gerekse ilgili kamu kurumları açısından zaman, işgücü ve israfı azaltacaktır.

Proje hazırlama dökümanları çok anlaşılır değildir. Yaşamlarını tarım ve hayvancılık ile sürdüren yatırımcıların detaylı mevzuat bilgisiyle hazırlanan dökümanları irdeleyerek proje hazırlaması ve projeyi sürdürebilmesi zordur. Bazı yatırımcılar konuda uzmanlaşmış danışmanlar ile çalışırken, bazı yatırımcılar kendi başlarına projeyi hazırlamayı tercih etmektedir. Dolayısıyla proje hazırlama dökümanları daha anlaşılır ve sade olmalı, yatırımcılara proje hazırlamayla ilgili detaylı eğitim verilmelidir.

Proje kapsamında gerekli izin ve ruhsatların alınmasında zorluk yaşanmaktadır. Bu zorlukların giderilmesi için hibe desteği verecek kurum ile diğer ilgili kurum ve kuruluşlar arasında mutabakat yapılması, yatırımcıların gerekli evrakları tamamlamasına yardımcı olacak ve zamandan tasarrufu sağlayacaktır.

Proje başvuruları değerlendirilirken işletmelerin üretim alanı ve ürün çeşidinin ihracat potansiyelinin olup olmadığı proje değerlendirme kriterleri içerisinde yer almalıdır. Puanlama yapılırken bu kriterin göz önüne alınması ulusal ekonomik kalkınma açısından önemlidir.

Projelerin değerlendirme aşamasında kurulan komisyonlarda görev alan personelin üniversitelerin Ziraat fakültelerinde görev yapan akademik personelden, TÜBİTAK veya Kalkınma Ajanslarında görev yapan proje hazırlama alanında uzmanlaşmış personelden ve yörenin tarımsal ve istihdam ihtiyacını bilen ekonomistlerden ve tarım ekonomistlerinden oluşması projelerin daha objektif ve ayrıntılı değerlendirmesine olanak tanıyacaktır.

Ayrıca kırsal kesimin gelişmesi ve kalkınmasına yönelik, verilmekte olan ve/veya planlama aşamasında olan destek programlarının etki değerlendirme çalışmalarının geliştirilerek devam ettirilmesinin yatırımların sürdürülebilirliği açısından yararlı olacağı ve konu paydaşları yönünden de bilgilendirici olabileceği düşünülmektedir.

81 ilde birçok tarımsal ürün ve sektör için aynı anda ve aynı içeriğe sahip olan KKYDP programının ülkenin tarımsal gelişimine destek verdiği görülmektedir ancak özellikle stratejik ürünler başta olmak üzere ürün ve sektör bazlı, her ürünün kendine özgü hasat zamanına uygun dönemde ve sektörün ihtiyaçlarına uygun içerikte bir programa dönüştürülmesinin tarımsal sanayinin gelişmesine ve ihracat potansiyelinin artırılmasına büyük katkı yapacağı düşünülmektedir.

<https://orcid.org/0000-0002-4165-3601>

Özet: Çalışanların refahlarının sağlanması örgütsel açıdan günümüzde hayati önem arz etmektedir. Öyle ki çalışanların refahı, dahası iş tatminlerinin sağlanması örgütler için zorunludur. Ancak örgüt alanyazınında çalışanların refahlarını temsil eden konular örgüt yanlısı bir niyetle yapılmaktadır. Çünkü çalışanların refahı örgütlerin karlılığından daha önceliklidir. Böyle bir bakış açısı ile gerçekleştirilen bu araştırmanın amacı; örgüt ikliminin çalışanların iş tatminlerine etkisinin tespit edilmesidir. Araştırma bulguları çalışan odaklı örgütler için tatmin artırıcı örgüt yapılanmasının tespit edilmesi açısından önemlidir. Araştırma İstanbul ilindeki bir üretim işletmesindeki 285 çalışandan toplanan verilerle gerçekleştirilmiştir. Araştırma örnekleminin belirlenmesinde basit tesadüfi örneklem tekniği kullanılmıştır. Araştırma verileri anket formları kullanılarak toplanmıştır. Verilerin analizinde SPSS paket programı kullanılmıştır. Araştırma modelinin test edilmesinde doğrusal regresyon analizi kullanılmıştır. Bulgulara göre çalışanların örgüt iklimi algıları iş tatminlerini olumlu yönde etkilemektedir. Spesifik olarak, örgütün ödüllendirme iklimi, destek iklimi, risk-çatışmaları yönetme iklimi çalışanların iş tatminlerini pozitif yönde etkilemektedir. Ayrıca standartlarla ilgili olumsuz bir iklim hissedildiğinde çalışanların iş tatmini azalmaktadır. Genel olarak, üretim işletmelerinde çalışanların iş tatminleri örgütün ikliminden önemli düzeyde etkilenmektedir. Araştırma sonunda üretim işletmelerinde örgüt iklimi oluşturma ve çalışanların tatminini artırma yönünden yöneticilere öneriler sunulmuştur.

Anahtar Kelimeler: Örgüt İklimi, İş Tatmini, Üretim İşletmeleri

The Effect Of Organizational Climate On Job Satisfaction In Manufacturing Companies

Abstract: Ensuring the well-being of employees is vital from an organizational point of view today. So much so that employees' well-being and job satisfaction are imperative for organizations. However, in the organizational literature, the issues that represent the welfare of the employees are made with a pro-organizational intention. But, the welfare of the employees is more important than the organization's profitability. The aim of this research, which was carried out with such a point of view, is to determine the effect of organizational climate on employees' job satisfaction. Research findings are important in determining satisfaction-enhancing organizational structuring for employee-oriented organizations. The research was carried out with data collected from 285 employees in a production company in Istanbul. A simple random sampling technique was used to determine the research sample. Research data were collected using questionnaire forms. The SPSS package program was used in the analysis of the data. Linear regression analysis was used to test the research model. According to the findings, the organizational climate perceptions of the employees positively affect their job satisfaction. Specifically, the reward climate of the organization, the climate of support, and the climate of managing risk positively affect the employees' job satisfaction. In addition, when a negative climate regarding standards is felt, employees' job satisfaction decreases. In general, the organization's climate significantly affects employees' job satisfaction in manufacturing enterprises. At the end of the research, suggestions were presented to the managers in terms of creating an organizational climate in the production enterprises and increasing the satisfaction of the employees.

Keywords: Organizational Climate, Job Satisfaction, Manufacturing Companies

1. GİRİŞ

Son yıllarda yerel ve küresel ekonomilerde ekonomik düzensizlikler çalışanların refahında ve örgütlerin yapılarında değişikliklere neden olmaktadır. Özellikle Covid-19 dönemi göz önüne alındığında ekonomik olarak bazı sektörler sorunlar yaşarken bazı sektörler de genişleme (lojistik, bilişim sektörü vb.) yaşamıştır. Ancak toplumların alım güçleri ile ilişkili olarak ekonomik düzensizlikler, çalışanların refahlarını olumsuz yönde etkilemektedir. Bu gibi durumlarda firmalar açısından yapılan çalışmalar daha örgüt yanlısı olmaktadır (örn; Shen vd. 2020; Hu ve Zhang, 2021; Dovbischuk, 2022).

Türkiye’de özel sektördeki çok fazla sayıda çalışan asgari ücret sınırlarında çalışmaktadırlar (Yolvermez, 2020). Ücret açısından refah artışı genellikle kamu politikalarına bağlandığından firmalar çoğunlukla bu politikalar takip etmektedirler. Bu nedenle özellikle mavi yakalı çalışanların refahları düşük düzeyde kalmaktadır. Mavi yakalı çalışanların refahlarının nasıl incelenmesi gerektiği yeniden bir sorunsala dönüşmektedir. Eleştirel bir bakış açısı çalışan refahının öne alınması gerekmektedir.

Çalışanların örgütlerdeki refahları ile ilgili önemli çıktılardan birisi iş tatminidir. Locke (1976) iş tatminini, kişinin işinden ve iş deneyiminden kaynaklanan memnuniyet verici olumlu bir durum olarak ifade etmiştir. Bireyler işlerinden tatmin olduklarında memnuniyet verici olumlu tutumlar gösterirler. Örgütlerde iş tatminine katkı sağlayan örgütsel faktörlerden birisi ise örgütün iklimidir (örn; Pecino vd. 2019; Castro ve Matins, 2010). Örgüt iklimi Schneider (1975) tarafından örgütün yapısının çalışanlar tarafından algılanış şekli olarak tanımlanır. Çalışanlar örgütün psikolojik bileşenleri olumlu olarak algıladıklarında örgüt iklimi pozitif olarak algılanmış olacaktır.

Örgüt ikliminin çalışanların iş tatmini ile ilişkisi daha önce incelenmiş olsa da bu araştırma kapsamında yukarıda bahsedilen bakış açıları ile birlikte iş tatmini örgüt iklimi ilişkisi yeniden incelenmektedir. Böylece araştırmanın amacı örgüt ikliminin mavi yakalı çalışanların iş tatminine etkisini tespit etmek olarak belirlenmiştir. Araştırma bulguları özellikle ekonomik ve sektörel çalkantıların olduğu dönemlerde alt gelir grubunda yer alan çalışanların iş tatminlerini, diğer açısından iş hayatlarındaki refahlarına katkıda bulunmayı sağlayacak bazı faktörleri belirleme konusunda önemlidir.

Bu araştırma kapsamında ilk olarak örgüt iklimi ve iş tatmini kavramları sunulmaktadır. Sonrasında kavramlar arasındaki ilişkilerin alanyazına dayalı özeti sunulmakta ve ilişkilerden elde edilen çıkarımlara göre hipotezler oluşturulmaktadır. Daha sonra araştırmanın metodu ve bulguları hakkında bölüme yer verilmektedir. Son olarak araştırma sonucu, tartışma ve önerilerle araştırma sonlandırılmaktadır.

2. KAVRAMSAL ÇERÇEVE

2.1. Örgüt iklimi

Örgüt iklimi, örgüte kimliğini kazandıran, çalışanlar ve yöneticiler tarafından algılanan ve onların davranışını etkileyen, örgüte egemen olan özellikler dizisi olarak tanımlanabilir (Fettahlioğlu ve Tatlı, 2015). Spesifik olarak, bir iklim, “(a) örgütü diğer örgütlerden ayıran; (b) zaman içinde nispeten kalıcıdır; ve (c) organizasyondaki insanların davranışlarını etkileyen bir yapıdır”. Söz konusu yapısal açıklamaya zaman içerisinde, iklimlerin bireyler tarafından algılandığı ve doğası gereği psikolojik olduğu yönündeki genel inanç da eklenmiştir (Griffin, 2001). Schneider (1975) iklimin büyük ölçüde psikolojik doğasını vurgulayarak bir iklim tanımı yapmaktadır. Schneider (2000) iklimi, görevdeki kişilerin olaylara, uygulamalara ve ödüllendirilen, desteklenen ve beklenen davranış türlerine ilişkin algıları olarak tanımlamıştır. Bu görüşe paralel şekilde Steinke vd. (2015), iklimlerin, çalışanların kuruluşun insan kaynakları ile ilgili olarak beklenen, desteklenen ve ödüllendirilen politikalar, uygulamalar ve prosedürler hakkındaki algılarını yansıttığını savunmuştur. Örgüt iklimi, insan kaynakları yönetimi ve örgütsel davranış üzerinde önemli etkileri olan anlamlı bir yapı olarak kabul edilmektedir. Ayrıca örgüt iklimi, kurumlardaki bireysel ve grup tutum ve davranışlarının en önemli belirleyicilerinden biridir (Ahmad vd.,2018).

Örgüt ikliminin çok fazla boyutlu olarak incelenmesine rağmen bu çalışmada genel kabul görmüş iklim boyutları incelenmektedir. Standartlar boyutu “açık ve gizli hedefler ile birlikte örgütü motive ederek daha çok çalışmayı teşvik edecek yüksek performans standartları” (Aydoğan ve Dinçer, 2017), samimi çalışma ortamı (ılımlı çalışma ortamı) “amirlerin grup içerisindeki herkese yardım edebilmesi ve desteklemesi” ile ilgilidir (Doğan, 2009). Risk alma “risk almayı, işbirliğini, kaliteyi ve güvenliği destekleyen bir örgüt ikliminin yeni buluşları teşvik etme” (Keleş, 2008; Büte, 2011), ödüllendirme iklimi “çalışanların başarıları karşısında ödüllendirileceği, cezaların ve ödüllerin adil olacağı” hakkındaki görüşleridir (Büte, 2011; Çekmecelioğlu, 2008). Örgütsel destek ise “yönetimin destekleyici bir tarzı benimsemiş olması, fikir ayrılıklarında iletişimin korunduğu, çalışanların kendi işleriyle ilgili kararlara katılabildiği, sorunların çözümünde yardımın sağlandığı” bir ortamı ifade eder (Çekmecelioğlu, 2008).

2.2. İş Tatmini

İş tatmini (doymu) genel olarak kişinin işi ile ilgili genel algı ve değerlendirmesi olarak ifade edilebilir. Schneider ve Snyder (1975), iş tatminini, bir işe sahip olmanın bir sonucu olarak ortaya çıkan, mevcut koşullarının kişisel bir değerlendirmesi olduğunu ileri sürmüşlerdir. Çalışanın yaptığı iş ve çalışma ortamına ilişkin pozitif ve negatif algılarının tamamı olarak nitelendirilebilen iş tatmini iş hayatına yönelik bir kalite ölçütü olarak da ifade edilebilmektedir (Çavuş ve Develi, 2022).

Smith vd. (1969) işe ilişkin beş faktörün (işin kendisi, ücret, yükselme fırsatları, yönetim, iş arkadaşları) iş tatmininin oluşmasında etkisi olduğunu belirtmişlerdir (Gündüz Çekmecelioğlu, 2007). Çalışanlar bir işi toplum

içinde önem ve geçerliliğe sahip olması ve bireyin kişisel özelliklerine uyması durumunda (Judge ve Watanabe, 1993), çalışan sadece maddi çıkarları göz ardı etmekle kalmayıp aynı zamanda daha yüksek bir maaşlı işe tercih edebilmektedir. Ücret hemen hemen tüm meslek grupları için en önemli çalışma koşullarından biridir. Kanıtlar biraz yetersiz olsa da, bazı çalışmaların sonuçları, bazı işçi grupları için ücretin iş tatmininde önemli bir faktör olarak görülmediğini göstermektedir. Bir kişi bir kuruluş tarafından işe alınır alınmaz, yükselme ve terfi, güçlü motivasyonel teşvikler haline gelir ve ekstra örgütsel otorite ihtiyaçlarının karşılanmasının yolunu açar ve karar verme gücünü artırır (Hashemi ve Sadeqi, 2016).

2.3. Kavramlar Arası İlişkiler ve Hipotez Geliştirme

Bireyin içinde bulunduğu çok sayıda iklimden oluşan çalışma ortamı, iş tatmininin önemli bir belirleyicisi olarak tanımlanmıştır (Griffin, 2001). İş tatmini, işteki etkinlik ve başarının etkisi veya sonucudur. Organizasyondaki düşük memnuniyet, iş yürütme, devam ve moralin azalmasıyla gösterilir. Bireysel düzeyde, iş doyumsuzluğu, yüksek istifa isteği, iş stresinin artması ve çok çeşitli psikolojik ve fiziksel sorunların ortaya çıkması ile ilgilidir (Jusmin vd., 2016). Alanyazındaki çalışma sonuçları incelendiğinde iş tatmini ile örgüt iklimi arasında önemli ilişkiler tespit edilmiştir. Örneğin Pope ve Stremmel (1992) örgüt iklimi ölçümleri ile iş tatmini arasındaki ilişkiyi tespit etmek için yapmış oldukları çalışma sonucunda örgütsel iklimin ve iş tatmininin dinamik olarak ilişkili olduğu sonucuna ulaşmıştır. Bryne vd. (2000) çalışmalarında örgütsel iklim ve iş tatmini arasındaki anlamlı ilişkilerin, örgütsel yapı, destek, standartlar ve profesyonel statü hakkında olduğu belirlemişlerdir. Bhaesajsanguan (2010) Tayland'daki çalışmasında örgüt iklimi ile iş tatmini arasında pozitif bir ilişki olduğunu belirlemiştir. Ayrıca, örgütsel iklimin iş tatmini yoluyla örgütsel bağlılık ile pozitif bir ilişki olduğunu sonucuna ulaşmıştır. Doğan ve Üngüren (2012) araştırmalarında, iş tatmini ile örgüt ikliminin alt boyutları arasında pozitif yönlü ilişki olduğu bulgusuna ulaşmışlardır. Ayrıca iş tatminindeki değişimin %43,1'inin örgüt ikliminin alt boyutları ile açıklanabildiğini savunmuşlardır. Benzer şekilde Tsai (2014), örgüt ikliminin iş tatmini üzerinde önemli bir etkiye sahip olduğunu bulmuştur.

Belias vd. (2015), örgüt iklimi ile çalışanların iş tatmini arasında doğrudan bir ilişki bulmuş ve iş tatmininin boyutları bir organizasyonun bileşenleri olduğu için iş tatmininin kurum kültürünün bir değerlendirmesi olduğunu öne sürmüştür. Danish vd. (2015) araştırmalarında örgütsel iklimin örgütsel bağlılığın yanı sıra iş tatmini üzerinde de önemli bir etkiye sahip olduğu bulgusunu elde etmişlerdir. Ghavifekr ve Pillai (2016) Malezya'daki çalışmalarında okul örgüt iklimi ile öğretmenlerin iş doyumu arasında pozitif bir ilişki olduğunu sonucuna ulaşmışlardır. Hashemi ve Sadeqi (2016) İran'da gerçekleştirdikleri çalışmalarının hipotez sonuçlarına göre örgüt iklimi ile iş doyumu arasındaki ilişkiyi doğrulamışlardır. Bulgular, örgütsel iklimi olumlu hale getirmenin iş tatminini artırmaya yardımcı olduğu şeklinde yorumlanmıştır. Ahmad vd. (2018)'nin Malezya'da çalışmalarının sonucunda kişilik özelliklerinin örgütsel iklimin belirli yönleri ile iş tatmini arasındaki ilişki üzerinde düzenleyici etkileri olduğunu göstermiştir. Okoli (2018)'nin çalışmasında bulgular örgüt iklimi ile iş tatmini arasında pozitif yönde anlamlı bir ilişki olduğunu ortaya koymuştur. Sonuçlar, örgüt iklimi boyutları (liderlik tarzı ve akademik özgürlük) ile iş doyumu boyutları (idari destekten memnuniyet ve çalışma koşullarından memnuniyet) arasında anlamlı bir ilişki olduğunu göstermiştir. Bu, akademik personel arasındaki memnuniyetsizliğin sadece işlerinin kalitesini değil, aynı zamanda örgütsel iklimi de etkileyeceği anlamına gelmektedir.

Gaviria-Rivera ve López-Zapata (2019) Kolombiya'da gerçekleştirdikleri çalışmalarında, iş doyumunun örgüt iklimi ile olumlu bir ilişkiye sahip olduğunu ve her iki yapının da ekip çalışması performansını olumlu yönde etkilediğini belirlemişlerdir. Haryono vd. (2019) Malezya'daki çalışmalarında örgüt iklimi ve örgütsel adaletin, istatistik bölge koordinatörlerinin iş doyumunu önemli ölçüde etkilediğini ortaya koymuştur. Örgütsel iklimi ve iş doyumu, katılımcıların iş performansını önemli ölçüde etkilemiş ve ayrıca iş doyumu örgüt iklimi ve örgütsel adaletin katılımcıların iş performansı üzerindeki etkisinde aracılık rolü oynamıştır.

Rani vd. (2014) çalışmalarında, ilköğretim okullarının örgütsel ikliminin iş doyumu ile ihmal edilebilir düzeyde ilişkili olduğunu göstermiştir. Bu ilişki, sınıf öğretmenlerinin iş doyumunun örgüt ikliminden etkilenmediğini göstermektedir. Araştırma aynı zamanda ilkokulların örgüt iklimi ile kadın öğretmenlerin iş doyumları arasında bir ilişki olmadığını da ortaya koymaktadır. Söz konusu bulgular literatürde ağırlıklı olarak desteklenen ilişkinin aksine bulgulardır. Benzer şekilde Sunarsih (2017) çalışmasının sonuçları örgütsel iklim ve iş tatmininin çalışan performansı üzerindeki etkilerinin anlamlı olmadığını, buna karşın motivasyonun çalışan performansını önemli ölçüde etkilediğini göstermiştir.

Alanyazındaki çalışma sonuçları genel olarak incelendiğinde olumlu örgüt ikliminin çalışanların iş tatminlerini olumlu etkileyeceği görülmektedir. Mavi yakalı çalışanların olumlu örgüt iklimine bağlı olarak iş tatminlerinin artacağı çıkarımına bağlı olarak oluşturulan araştırma hipotezleri şu şekildedir;

H₁: Samimiyet iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

H₂: Risk alma iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

H₃: Yüksek standart iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

H₄: Olumlu ödüllendirme iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

H₅: Destek sağlama iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

3. ARAŞTIRMANIN METODU VE BULGULARI

3.1. Araştırmanın metodu

Verilerin analizinde SPSS 25 paket programı kullanılmıştır. Analiz sonuçlarının değerlendirilmesinde bazı kriterlere dikkat edilmiştir. Faktör ve güvenilirlik analizi sonuçlarının değerlendirilmesinde Hair vd. (2014) tarafından sunulan; *KMO örneklem yeterliği* $> 0,60/0,70$, *Bartlett's küresellik testi* $< 0,05$, *Açıklanan toplam varyans* $> 0,60$, *Faktör yükleri* $> 0,30/0,40$, *Cronbach's Alpha katsayısı* $> 0,60/0,70$ kriterleri esas alınmıştır. Normal dağılım varsayımının incelenmesinde George ve Mallery, (2010) tarafından önerildiği üzere çarpıklık ve basıklık değerinin $-1,5/1,5$ arasında olma kriteri esas alınmıştır. Korelasyon analizinin sonuçlarının değerlendirilmesinde "0= ilişki yok, 0,01-0,19=çok düşük ilişki, 0,2-0,39= düşük ilişki, 0,4-0,59= orta düzeyde ilişki, 0,60-0,79= yüksek ilişki, 0,80-0,99= çok yüksek ilişki, 1= tam ilişki" sınır değerleri kullanılmıştır (Kocaay vd. 2022).

Amaç ve önem: Son yıllarda yerel ve küresel ekonomik değişimler sabit gelirli çalışanların refahlarını etkilemeye başlamıştır. Özellikle mavi yakalı çalışanların düşük ücretlere çalışıyor olması, çalışmadan elde ettikleri tatmini olumsuz etkilemektedir. Enflasyonist ortamlarda firmalar da aynı enflasyonist ortamdan etkilenirken, aynı zamanda çalışanlarında belirli düzeyde refah elde etmelerini sağlamakla yükümlüdür. Her firma doğrudan mali refahı arttırmasa da olumlu örgüt yapıları ile iş tatminini bir nebze arttırmaya çalışabilir.

Diğer yandan örgüt alanyazınında yapılmış olan çalışmalarda ana konu iş tatmini de olsa, genellikle çalışanların tatminlerinin örgüt yanlısı çıktılarına odaklanılmaktadır. Çalışanların örgütteki refahları insani şartlarda değerlendirmek için örgüt araştırmanlarının çalışan refahına vurgu yapacak şekilde tasarlanması bir zorunluluktur. Bu noktada çalışanların işyerindeki refahlarını doğrudan etkileyen faktörlerden birisi olarak (Litwin e Streinger, 1968; Başol ve Çömlekçi, 2020) örgüt iklimi önemli hale gelmektedir. Bu nedenle araştırmanın amacı üretim işletmelerindeki mavi yakalı çalışanların algıladıkları örgüt ikliminin iş tatminine etkisini tespit etmektir. Araştırma sonucunda elde edilen bulgular, özellikle örgütsel gereklerden olan olumlu örgüt ikliminin modern dünyada çalışanların iş tatminlerini nasıl etkilemektedir sorusuna yanıt verebilme açısından önemlidir.

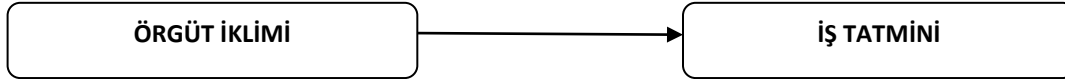

Örneklem ve örnekleme metodu: Araştırmanın evreni İstanbul ilinde üretim işletmelerinde çalışan mavi yakalı hat çalışanlarından oluşmaktadır. Araştırmanın örnekleme ise İstanbul ilindeki bir elektronik ev aletleri üretimi yapan fabrikadaki yaklaşık 600 çalışandan 285'idir. Araştırma örnekleminin belirlenmesinde basit tesadüfi örnekleme tekniği kullanılmıştır. Böylece her çalışanın araştırmaya katılımı için eşit şans oluşmuştur (Hair vd. 2014). Araştırmacılara dağıtılan 400 anket formundan 311'ine yanıt alınmıştır. Ancak 25 anket formunun uygun şekilde yanıtlanmadığı tespit edildiğinden söz konusu formlar araştırmada kullanılmamıştır. Böylece araştırmanın gerçekleşen örnekleme 285 olmuştur. Örneklem sayısının belirlenmesinde madde başına örneklem sayısı kullanılmıştır. Hair vd. (2014)'ne göre ölçüm araçlarında yer alan her madde başına en az 10 örnekleme ulaşmak elde edilen sonuçların genellenebilirliği ve analizlerin uygunluğu açısından önemlidir. Bu nedenle 24 madde için en az 240 örnekleme ulaşmak yeterli olarak görülmüştür. 285 örnekleme sayısı yeterli kabul edilmiştir.

Araştırma kapsamında ulaşılan mavi yakalı çalışanların demografik özellikleri incelendiğinde; çalışanların %59,3'ü erkeklerden, %40,7'si kadınlardan oluşmaktadır. Çalışanların %33,7'si 18-30 yaş arasında, %37,2'si 31-40 yaş arasında, %29,1'i ise 41 ve üzerindeki yaş grubundadır. Çalışanların %74,7'si evli, %25,3'ü ise bekarlardan oluşmaktadır. Çalışanların %13,7'si okur-yazar, %20'si ortaokul/lise mezunu, %47,4'ü önlisans mezunu, %18,9'u ise üniversite düzeyinde mezuniyete sahiptir. Çalışanların tamamının gelir düzeyi asgari ücret düzeyindedir (+1000 TL).

Veri toplama araçları: Araştırmada kullanılan veri toplama araçları üç bölümden oluşmaktadır. İlk bölümde örgüt iklimi ölçeği kullanılmıştır. Örgüt iklimi ölçeği Litwin ve Stringer (1968) tarafından oluşturulmuş ve Hündür (2019)'un çalışmasında kullanılmıştır. Örgüt iklimi ölçeği 19 madde ve beş boyuttan (Samimi-içten, Risk-çatışma, Standartlar, Ödüllendirme, Destek) oluşmaktadır. İş tatmininin ölçülmesinde Judge vd. (1998) tarafından oluşturulan ve Başol ve Çömlekçi (2020) tarafından beş maddelik kısa formu oluşturulan iş tatmini ölçeği kullanılmıştır. İş tatmini ölçeği tek boyuttan oluşmaktadır. Son olarak katılımcıların demografik özelliklerinin tespit edilmesi için beş tane tanımlayıcı soru sorulmuştur.

Araştırmanın modeli: Örgüt ikliminin iş tatminine etkisinin tespit edildiği bu araştırmanın kavramsal modeli Şekil 1'de yer almaktadır. Örgüt iklimi bağımsız değişken, iş tatmini ise bağımlı değişken olarak belirlenmiştir.

Şekil 1. Araştırmanın kavramsal modeli

3.2. Araştırmanın Bulguları

Araştırmanın bu bölümünde örgüt iklimi ve iş tatmini ölçeklerinin faktör ve güvenilirlik analizi sonuçları sunulmaktadır. Ayrıca ölçeklere verilen yanıtların tanımlayıcı istatistikleri ve değişkenler arasındaki ilişkiler sunulmaktadır. Son olarak regresyon analizi sonuçları sunulmaktadır.

Tablo 1. Örgüt iklimi ölçeğinin faktör ve güvenilirlik analizi sonuçları

KMO and Bartlett's Test		
KMO örneklem yeterliği ölçümü		,790
Bartlett's küresellik testi	Yaklaşık ki-kare	2878,036
	Sd.	136
	Sig.	,000
Cronbach's Alpha katsayısı		,816
Madde sayısı		17
Samimiyet		19,019
Risk alma		16,752
Standartlar		13,861
Ödüllendirme		13,476
Destek		12,775
Toplam varyans		75,884

Örgüt iklimi ölçeğinin faktör ve güvenilirlik analizi sonuçları tablo 1'de yer almaktadır. Analiz sonuçlarına göre örgüt iklimi ölçeğinin KMO değeri 0,790, Bartlett testi sonucu ($p<0,05$) anlamlı, Cronbach's Alpha katsayısı 0,816, madde sayısı 17'dir. Örgüt iklimi ölçeğinin açıklanan toplam varyansı %75,88'dir. Ayrıca örgüt iklimi ölçeğinin boyutlarının açıklama düzeyi %19,01 ile 12,77 arasında yer almaktadır. Ölçüm aracındaki "İyi işler ortaya koymak için yeterli ödüllendirme ve takdir edilme sistemi yoktur (ödüllendirme boyutu)" ve "Bu iş yerindeki çalışanlar birbirlerine yeterince güvenmemektedirler" (destek boyutu) uygun faktör dağılımı sağlamadığı ve çift faktör yüklemesi sağladığından dolayı araştırma kapsamından çıkarılmıştır. Analiz sonuçları doğrultusunda örgüt iklimi ölçeğinin araştırmada kullanılmasının uygun olduğunu ifade etmek mümkündür.

Tablo 2. İş tatmini ölçeğinin faktör ve güvenilirlik analizi sonuçları

KMO and Bartlett's Test		
KMO örneklem yeterliği ölçümü		,787
Bartlett's küresellik testi	Yaklaşık ki-kare	522,499
	Sd.	10
	Sig.	,000
Cronbach's Alpha		,821
Madde sayısı		5
Toplam varyans		59,047

İş tatmini ölçeğinin faktör ve güvenilirlik analizi sonuçları tablo 2'de yer almaktadır. Analiz sonuçlarına göre KMO değeri 0,787, Bartlett testi ($p<0,05$) anlamlı, Cronbach's Alpha katsayısı 0,821, madde sayısı beştir. Ayrıca ölçeğin açıklama düzeyi %59,04'tür. Analizler esnasında iş tatmini ölçeğinden herhangi bir madde analiz

kapsamı dışında bırakılmamıştır. Analiz sonuçları doğrultusunda iş tatmini ölçeğinin araştırmada kullanılmasının uygun olduğunu ifade etmek mümkündür.

Tablo 3. Korelasyon analizi ve tanımlayıcı istatistik sonuçları

	Ort.	Std sapma	Tatmin
Tatmin	3,9768	,69941	1
Ödüllendirme	3,6678	1,04496	$r=,256^{**}$
Samimiyet	3,3649	,97287	$r=,172^{**}$
Destek	3,2047	,99678	$r=,296^{**}$
Risk alma	3,8123	,89000	$r=,236^{**}$
Standartlar	2,3778	1,13366	$r= -,206^{**}$
** Korelasyon $p<0,01$ düzeyinde anlamlı			N:285

Tablo 3'te tanımlayıcı istatistikler ve değişkenler arası ilişkiler yer almaktadır. Analiz sonuçlarına göre çalışanların iş tatminleri yüksek düzeyde, ödüllendirme algıları orta düzeyde, samimiyet algıları orta düzeyde, destek algıları orta düzeyde, risk algıları yüksek düzeyde ve standartlarla ilgili algıları düşük düzeydedir. Çalışanların iş tatminleri ile ödüllendirme, destek ve risk algıları arasında düşük düzeyde, pozitif yönde ve $p<0,05$ düzeyinde anlamlı ilişkiler bulunmaktadır. Çalışanların iş tatminleri ile samimiyet algıları arasında düşük düzeyde, pozitif yönde ve $p<0,05$ düzeyinde anlamlı ilişki bulunmaktadır. Son olarak örgütsel standartlar ile iş tatmini arasında düşük düzeyde, negatif yönlü ve $p<0,05$ düzeyinde anlamlı ilişki bulunmaktadır. Bulgular genel olarak yorumlandığında; çalışanların iş tatminleri ile örgüt iklimi algıları arasında düşük düzeyde anlamlı ilişkiler olduğunu ifade etmek mümkündür.

Tablo 4. Regresyon analizi sonuçları

Model özeti ^b						Anova ^a
Model	R	R ²	Düzenlenmiş R ²	Tahminlerin std. hatası	Durbin-Watson	Sig.
1	,433 ^a	,188	,173	,63599	2,163	,000 ^b

Standartlar	-,128	,036	-,208		-3,587	,000

Mavi yakalı çalışanların çalıştıkları örgütteki iklimin, çalışanların iş tatminlerine etkisini tespit etmek için yapılan regresyon analizi sonuçları tablo 4'te yer almaktadır. Analiz sonuçlarına göre örgüt iklimi çalışanların işteki tatminlerinin %18,8'ini açıklamaktadır. Çalışanlar, örgütün ödüllendirme sistemini ($B=0,187$), çalışanlara desteğini ($B=0,227$), risk almayı teşvik edişini ($B=0,140$) olumlu olarak algıladığında iş tatminleri de artarken, standartları düşük olarak algıladıklarında iş tatmini azalmaktadır. Örgüt içindeki samimiyet ortamının etkisi $p<0,05$ düzeyinde anlamlı değildir. Örgüt iklimi ve iş tatmini ölçekleri arasında otokorelasyonu incelemek için kullanılan Durbin-Watson katsayısı ise $3<2,16$ (otokorelasyon yoktur) olmasından dolayı uygun olarak kabul edilmektedir.

Araştırma bulgularına göre sadece samimiyet iklimi çalışanların iş tatminleri ile ilişkili değildir. Diğer yandan yüksek standartların olmadığından çalışanların iş tatminlerinin olumsuz etkilendiği görülmektedir. Bu bulgu yüksek standartların olduğu örgütlerde iş tatminin de yüksek olacağı yönündeki motivasyonu destekler niteliktedir. Araştırma bulguları sonucunda hipotezlerin desteklenme durumu şu şekilde gerçekleşmiştir;

Hipotezler

Durum

H₁: Samimiyet iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

Desteklenmedi

H₂: Risk alma iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

Desteklendi

H₃: Yüksek standart iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

Desteklendi

H₄: Olumlu ödüllendirme iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

Desteklendi

H5: Destek sağlama iklimi çalışanların iş tatminlerini olumlu yönde etkilemektedir.

Desteklendi

SONUÇ

Olumsuz ekonomik ortamlarda çalışan mavi yakalı çalışanların örgütsel yapı içerisindeki iş tatminlerini araştırmak üzere tasarlanan bu araştırmanın amacı örgüt ikliminin iş tatminine etkisini tespit etmektir. Araştırma bulgularına göre çalışanların iş tatminleri ile örgüt iklimi algıları arasında anlamlı ilişkiler olduğu tespit edilmiştir. Ayrıca mavi yakalı çalışanların yer aldıkları örgütteki risk almayı destekleyen bir örgüt yapısının olması çalışanların iş tatminlerini olumlu yönde etkilediği tespit edilmiştir. Diğer yandan iş yerinde düşük standartların olması çalışanların iş tatminlerini azaltırken, yüksek standartların iş tatminini arttırdığı tespit edilmiştir. Örgüt ikliminin cezalardan çok ödüllere vurgu yapması çalışanların iş tatmini olumlu yönde etkilemektedir. Bununla birlikte örgüt yönetiminin çalışanlara destek sağlaması, görüşlerine önem vermesi ve kararlara katılım sağlama yönünde destek vermesi çalışanların iş tatminlerini olumlu yönde arttırmaktadır. Ancak çalışanların iş yerinde algıladıkları samimiyet ikliminin iş tatminini anlamlı şekilde etkilemediği sonucuna ulaşılmıştır. Samimiyete dair iklimin çalışanların iş tatminini etkilememesi beklenen bir sonuç değildir.

Araştırma bulguları genel olarak değerlendirildiğinde; mavi yakalı çalışanların algıladıkları örgüt ikliminin iş tatmini üzerinde önemli bir etkisi olduğunu ifade etmek mümkündür. Öyle ki elde edilen sonuç, “olumlu şekilde tasarlanmış örgüt ikliminin olumsuz ekonomik ortamlarda çalışanların işle ilgili refahlarını arttırabilir” şeklindeki temel argümanı desteklemektedir. Diğer yandan araştırma sonuçları ile alanyazındaki önceki sonuçlar genel olarak uyumludur. Alanyazındaki önceki çalışmaların önemli bir kısmı (Belias vd., 2015; Danish vd., 2015; Ghavifekr ve Pillai, 2016; Hashemi ve Sadeqi, 2016; Okoli, 2018) olumlu örgüt ikliminin çalışanların iş tatminlerini arttıracığı yönünde bulgulara sahiptir. Bazı çalışmalar ise (Sürmeli 2018; Rani vd., 2014; Sunarsih, 2017) örgüt ikliminin iş tatminini etkilemediği sonucuna ulaşmışlardır.

Araştırma sonucunda elde edilen bulgulara göre çalışanların düşük maaş kazançlarına karşılık işlerinden yüksek tatmin elde ettikleri görülmektedir. Bunun yanında çalışanların tatmin düzeylerini arttırmak için örgüt ikliminin olumlu hale getirilmesi gerektiği açıktır. Çalışanların örgüt iklimini orta düzeyde olarak değerlendirdikleri düşünüldüğünde, düşük ücret karşılığında refah seviyesini arttırıcı çalışma ortamının oluşturulması bir zorunluluk haline gelmektedir. Diğer yandan çalışanların ödüllere duyarlılığı maaşların düşüklüğünden ya da imkanların kısıtlılığından kaynaklanabileceğinden çalışanların kazançlarının da geliştirilmesi gerekecektir.

Alanyazındaki çalışma sonuçları ve bu çalışmada elde edilen sonuçlar göz önünde bulundurulduğunda, gelecekteki araştırmalara bazı öneriler sunulabilir. Bu önerilerden ilki, örgütlerde refah arttırıcı uygulamaların varlığını tespit ederek, araştırmanın tasarlanmasıdır. Böylece çalışanların hangi aktiviteler doğrultusunda örgüt iklimini olumlu olarak algıladıkları ve iş tatminlerinde artış olduğunu tespit etmek mümkün olabilir. Diğer yandan örgütün destekleyici iklimi ve ödüllendirmenin iş tatminini en çok arttıran faktörler olduğu tespit edildiğinden, mavi yakalı çalışanlar özelinde, personel güçlendirme ve psikolojik güçlendirme gibi kavramlar açısından, iş tatminin örgüt iklimine bağlı olarak nasıl değiştiği incelenebilir. Örgütler açısından bazı öneriler geliştirilebilir. Bu önerilerden ilki mavi yakalı çalışanların ödüllere ve destekleyici örgüt iklimine olan duyarlılığıdır. Çalışanların ödüllere birlikte yüksek standart hedeflerine yönlendirmek onların iş tatminini arttırabilir. Diğer yandan çalışanların refahlarının sosyal açıdan geliştirilmesi için çeşitli sosyal aktiviteler geliştirilebilir (takım oyunları, grup aktiviteleri vb.).

Özet: İletişim ve bilgi teknolojisindeki yenilikler tüketicilerin yemek hazırlama, yemek yeme ve restoranlarla ilişkilerini değiştirmiştir. Tüketicilerin yeme-içme sektöründe karşılaştığı yenilikçi uygulamalardan birisi mobil yemek sipariş uygulamalarıdır. Yemek sipariş uygulamalarıyla tüketiciler akıllı telefonlara indirilen uygulamalar üzerinden seçtiği restoranlardan yiyecek siparişinde bulunabilmektedir. Bu çalışmanın amacı tüketicilerin yemek sipariş uygulamaları memnuniyetlerini etkileyen faktörleri incelemektir. Bu amaç doğrultusunda Teknoloji Kabul Modeli genişletilerek müşterilerin memnuniyet ve ağızdan ağıza iletişim davranışları incelenmiştir. Modelde algılanan kullanım kolaylığı, algılanan kullanılabilirlik, mobil güven, çevirim içi derecelendirme, müşteri hizmetleri, müşteri memnuniyeti ve ağızdan ağıza iletişim değişkenlerine yer verilmiştir. Araştırmanın evrenini mobil yemek sipariş uygulamaları kullanıcıları oluşturmaktadır. Araştırmada katılımcılara kolayda örneklem yöntemi kullanılmış ve 477 kullanılabilir veri elde edilmiştir. Araştırmada veri toplama yöntemi olarak anket tekniği kullanılmıştır. Elde edilen analizinde yapısal eşitlik modellemesi kullanılmıştır. Araştırma sonucunda müşteri memnuniyetinin ağızdan ağıza iletişimi artıran en güçlü değişken olduğu tespit edilmiştir. Müşteri memnuniyetini pozitif ve anlamlı şekilde etkileyen değişkenler, sırasıyla, mobil güven, müşteri hizmetleri, çevirim içi derecelendirme, algılanan kullanılabilirlik ve algılanan kullanım kolaylığıdır.

Anahtar Kelimeler: Mobil Yemek Sipariş Uygulamaları, Teknoloji Kabul Modeli, Müşteri Memnuniyeti

Abstract: Innovations in information and communication technology have significantly changed how consumers engage in food preparation, dining, and restaurant-related activities. Mobile food ordering applications are an important development among the various innovative applications that have emerged in the food and beverage industry. These applications allow consumers to order food from selected restaurants using their smartphones. This study aims to explore the factors influencing consumers' satisfaction with food ordering applications. To this end, the Technology Acceptance Model has been extended to examine customer satisfaction and word-of-mouth communication behaviors. The model encompasses perceived ease of use, perceived usefulness, mobile trust, online ratings, customer service, customer satisfaction, and word-of-mouth communication variables. The study population comprises users of mobile food ordering applications. A convenience sampling method was employed, resulting in the acquisition of 421 usable data. Survey methodology was used as the data collection technique. Structural equation modeling was utilized in the obtained analysis. The study's findings indicate that customer satisfaction is the most potent variable that impacts word-of-mouth communication. The variables that positively and significantly affect customer satisfaction include mobile trust, customer service, online ratings, perceived usefulness, and perceived ease of use, respectively.

Key Words: Mobile Food Ordering Applications, Technology Acceptance Model, Customer Satisfaction

1. GİRİŞ

Mobil yemek sipariş uygulamaları (mobile food delivery applications) restoran sektörünün iş yapma biçimindeki dağıtım kanallarından birini ifade etmektedir. Restoran sektörünün müşteriye teslimat işi telefonla sipariş sistemlerinden, paket servis dağıtım hizmetlerine ve buradan da günümüzde web sayfası üzerinden veya mobil uygulamalar üzerinden sipariş vermeye kadar gelişmiştir (Su et al., 2022: 4179). Bir web sayfası veya mobil uygulama üzerinden yiyecek siparişin verilmesi olarak ifade edilebilecek yemek sipariş uygulamaları sektör içerisinde kendisine her geçen gün daha fazla yer bulmaktadır (Ramesh et al., 2021: 1). Mobil yemek sipariş uygulamaları, tüketicilerin restoranların menüleri, yorumları, derecelendirilmeleri gibi bilgilere kolayca erişmelerine, çevrimiçi ödeme, onay gibi işlemler yapabilmelerine, siparişi izleme gibi etkileşimlere olanak tanımaktadır (Kaur et al., 2021: 1132). Aynı zamanda hızlı bir biçimde akan iş ve iş dışı hayat, yoğun çalışmanın getirdiği baskı, yalnız yaşayan bireylerin artması gibi faktörler de mobil yemek sipariş uygulamalarının yaygınlaşmasında etkili olmaktadır (Chakraborty et al., 2022: 603). Beyrouthy (2023), 2022 yılında dünya

¹ Bu çalışma Ondokuz Mayıs Üniversitesi, Lisansüstü Eğitim Enstitüsü, İşletme ABD tezli yüksek programında, Doç. Dr. Murat Burucuoglu danışmanlığında Gönül Demir tarafından hazırlanan “Mobil Yemek Sipariş Uygulamalarında Müşteri Memnuniyetini Etkileyen Faktörler Üzerine Bir Araştırma” başlıklı yüksek lisans tezinden hazırlanmıştır.

² Bu çalışma için Ondokuz Mayıs Üniversitesi Sosyal ve Beşerî Bilimler Etik Kurulundan 27/11/2020 tarih, toplantı sayısı 10, karar numarası 2020/763 ile uygulama izni alınmıştır.

çapında üç milyardan fazla insan bir tür çevrimiçi yemek dağıtım hizmeti kullandığını, yaklaşık 1,2 milyar kişi market alışverişi dağıtım platformlarını kullandığını ve yaklaşık 1,8 milyar kişinin çevrimiçi yemek siparişi vermek için yemek dağıtım hizmetlerini kullandığını ifade etmektedir. Türkiye’de yemek sipariş pazarının 2023 yılı sonunda 0,69 milyar ABD dolarına ulaşması ve kullanıcı sayısının 2027 yılına kadar 37,70 milyona ulaşması tahmin edilmektedir (Statista, 2023).

Bu araştırma, tüketicilerin mobil yemek sipariş uygulamalarına yönelik davranışlarını incelemeyi amaçlamaktadır. Bu amaç doğrultusunda Davis (1986), Davis (1989) ve Davis et al. (1989) tarafından geliştirilen ve bireylerin teknoloji kabullerini inceleyen Teknoloji Kabul Model’ine (Technology Acceptance Model – TAM) dayanarak araştırma modeli oluşturulmuştur. Araştırma modeli TAM’ın algılanan kullanışlılık ve algılanan kullanım kolaylığı değişkenleri ile çevrimiçi derecelendirme, müşteri hizmetleri, mobil güven, müşteri memnuniyeti, ağızdan ağıza iletişim değişkenleri kullanılarak genişletilmiş ve kavramlar arasındaki ilişkiler incelenmiştir.

2. MATERYAL VE METOD

2.1. Araştırmada Yer Alan Kavramlar Arası İlişkiler ve Araştırma Hipotezleri

Algılanan kullanım kolaylığı, *"bir kişinin belirli bir sistemi kullanmanın zahmetsiz olacağına inanma derecesi"* (Davis, 1989: 320) olarak tanımlanırken, algılanan kullanışlılık *"bir kişinin belirli bir sistemi kullanmanın iş performansını artıracağına inanma derecesi"* olarak tanımlanmaktadır (Davis, 1989: 320). TAM’ın bireylerin teknoloji kabulündeki belirleyici değişkenleri olan algılanan kullanım kolaylığı ve algılanan kullanışlılık değişkenlerinin müşteri memnuniyeti üzerindeki etkisini inceleyen çalışmalarda Ngubelanga and Duffett (2021) mobil ticaret uygulamaları memnuniyeti üzerinde algılanan kullanım kolaylığı ve algılanan kullanışlılığın pozitif ve anlamlı bir etkisi olduğunu tespit edilmiştir. Kar (2021) mobil ödeme uygulamalarına ilişkin çalışmada kullanışlılığın müşteri memnuniyeti artıran değişkenlerden birisi olduğu sonucuna ulaşmıştır. Al Amin et al. (2021) çalışmalarında mobil market teslimat uygulamalarını kullanma niyeti üzerinde algılanan kullanışlılık ve algılanan kullanım kolaylığının pozitif ve anlamlı bir etkisi olduğunu ifade etmektedirler. Francioni et al. (2022) çevrimiçi yiyecek teslimat hizmetlerinde mobil uygulamaların kullanım kolaylığının müşterilerin gelecekte bu uygulamaları kullanmalarını artırdığı sonucuna ulaşmıştır. Nguyen et al. (2023) çalışmalarında ise algılanan kullanışlılık müşterilerin yiyecek teslimat uygulamalarını kullanmaya devam etme niyetlerini pozitif ve anlamlı şekilde etkilemektedir. Marinkovic and Kalinic (2017) mobil ticarete algılanan kullanışlılığın müşteri memnuniyetinin öncüllerinden birisi olduğunu ifade etmektedir. Kalinic et al. (2021) araştırmalarında benzer bir şekilde algılanan kullanışlılığın müşteri memnuniyetini pozitif ve anlamlı bir şekilde etkilediğini tespit etmişlerdir. Belarmino et al. (2021) çevrimiçi yemek sipariş uygulamaları üzerindeki araştırmalarında tüketicilerin Covid-19 öncesi ve sırasında algıladıkları kullanım kolaylığının müşteri memnuniyetini artırdığını tespit etmişlerdir. Choi (2020)’nin çalışmasında yemek teslimatı mobil uygulamaları memnuniyeti üzerinde algılanan kullanışlılığın pozitif ve anlamlı bir etkisi bulunurken, algılanan kullanım kolaylığının anlamlı bir etkisinin bulunmadığı ortaya konulmuştur.

Mobil ticaret ile ilgili işlemlerde diğer çevrimiçi işlemler gibi belirsizlik ve risk içerir ve bu nedenle güven, mobil kullanıcı davranışlarını kolaylaştıran önemli bir değişkendir (Zhou, 2011: 529). Marinkovic and Kalinic (2017) ve Kalinic et al. (2021)’in çalışmaları mobil güvenin mobil ticaret memnuniyetini artırdığını göstermektedir. Kar (2020)’nin çalışmasında güvenin müşteri memnuniyeti artıran önemli bileşenlerden birisi olduğu ifade edilmektedir. Koay et al. (2022) çevrimiçi yemek sipariş endüstrisinde gerçekleştirdikleri çalışmalarında güvenilirlik ve güvenlik değişkenlerinin müşteri memnuniyetini artırdığını tespit etmişlerdir. Zhao ve Bacao (2020)’nin Covid-19 pandemisinde tüketicilerin yemek teslimat uygulamalarını kullanma devamlılığını inceledikleri araştırmalarda da benzer şekilde güven müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

Müşteri derecelendirmesi, *"başka bir kitle görüşü türüdür ve gözden geçirenlerin bir ürün veya hizmetin farklı özelliklerine ilişkin ortalama değerlendirmesini"* göstermektedir (Filieri, 2015: 1264). Önceki müşterilerin vermiş olduğu puanlar ürüne ilişkin değerlendirmeleri içerdiğinden satın alma kararını etkileyebilmektedir (Aprita Sihotang et al., 2021: 603). Bu çalışmada müşteri derecelendirmesi mobil yemek sipariş uygulamaları tarafından sağlanan müşteri yorumlarından ürün bilgisi edinme, ürün özelliklerini anlama ve değerlendirme olarak tanımlanmıştır. Changchi ve Klaus (2020) yardım sever ürün değerlendirmelerinin müşterilerin ürün memnuniyetlerini artırdığını tespit etmiştir. Alalwan (2020)’nin mobil yemek teslimat uygulamaları üzerindeki araştırmasında da müşterilerin çevrimiçi derecelendirmelerinin müşteri memnuniyeti ve kullanmaya devam etme niyeti üzerinde pozitif ve anlamlı bir etkiye sahip olduğu bulgusuna ulaşılmıştır.

Müşteri hizmetleri, “bir organizasyonun müşteri beklentilerini karşılamak ve müşteri memnuniyeti sağlamak için yaptıklarının toplamı” olarak tanımlanmaktadır (Institute of Customer Service’den akt. Kursunluoglu, 2011: 52). Choi (2019) müşteri hizmetlerinin müşteri memnuniyetini pozitif ve anlamlı bir şekilde etkilediği sonucuna ulaşmıştır. Abd Ghani et al. (2017)’nin çalışmasında da müşteri hizmetlerinin müşteri memnuniyetini artırdığını tespit etmiştir.

Müşteri memnuniyeti ve olumlu ağızdan ağıza iletişim arasındaki ilişkiyi inceleyen çalışmalara bakıldığında (Kassim and Abdullah, 2010; San-Martín et al., 2015; Kalinić et al., 2019; Belanche et al., 2020; Marcos ve Coelho, 2022) müşteri memnuniyetinin tekrar kullanma ve olumlu ağızdan ağıza iletişimin önemli bir belirleyicisi olduğu, müşteri memnuniyeti arttıkça olumlu iletişimde bulunma davranışında da artış eğilimi gözlemlendiği ifade edilebilir.

Yukarıdaki çalışmalar doğrultusunda oluşturulan araştırma hipotezlerine aşağıda yer verilmiştir.

Araştırma Hipotezleri:

H₁: Algılanan kullanım kolaylığı müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

H₂: Algılanan kullanılabilirlik müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

H₃: Mobil güven müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

H₄: Çevrimiçi derecelendirme müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

H₅: Müşteri hizmetleri müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir.

H₆: Müşteri memnuniyeti ağızdan ağıza iletişimi pozitif ve anlamlı şekilde etkilemektedir.

2.2. Araştırmanın Evreni, Örneklemi, Veri Toplama Yöntemi ve Araçları

Araştırmanın evrenini Türkiye’de yaşayan, 18 yaş ve üzerinde, mobil yemek sipariş uygulamalarını deneyimlemiş tüketiciler oluşturmaktadır. Araştırma evreninden verilerin elde edilmesinde kolayda örneklem yöntemi kullanılmıştır. Verilerin toplanmasında anket tekniği kullanılmıştır. Anket formu dijital olarak hazırlanmış ve kullanıcılara dijital mecralar aracılığı ile ulaştırılmıştır. Araştırmada kolayda örneklem ve dijital mecraların seçilmesinde Covid-19 pandemisi ve kısıtlamaları belirleyici olmuştur. Anket iki bölümden oluşmaktadır. Birinci bölümde katılımcılara araştırma hakkında bilgilendirme yapılmış ve katılımcıların demografik özelliklerini belirlemeye yönelik sorular yöneltilmiştir. İkinci bölümde ise araştırma değişkenlerine ait ifadelerle katılma derecelerini belirtmeleri istenmiştir. Anket formunun oluşturulmasında Algılanan kullanım kolaylığı ve algılanan kullanılabilirlik ifadeleri Chi (2018)’in çalışmasından, ağızdan ağıza iletişim (WOM) değişkeni ifadeleri Belanche et al. (2018)’in çalışmasından, mobil güven değişkeni ifadeleri Singh and Singha (2020)’nin çalışmalarından, müşteri hizmetleri değişkeni ifadeleri Abd Ghani et al. (2017)’nin çalışmasından, müşteri memnuniyeti değişkeni ve çevrimiçi derecelendirme değişkenleri ifadeleri Alalwan (2020)’nin çalışmalarından uyarılanarak çalışmaya dahil edilmiştir. İfadelerin derecelendirilmesinde 5’li Likert kullanılmıştır (1: Kesinlikle Katılmıyorum; 5: Kesinlikle Katılıyorum). Veri toplama süreci sonunda 477 adet veri toplanmış, uygun olmayan verilerin çıkartılması sonucunda 421 adet kullanılabilir veri ile analizler gerçekleştirilmiştir.

2.3. Araştırma Verilerinin Analizi

Araştırma verilerin analizinde yapısal eşitlik modellemesi kullanılmıştır. Yapısal eşitlik modellemesi analizlerinde Anderson ve Gerbing (1988) tarafından önerilen iki adımlı yaklaşım benimsenmiştir. Birinci adımda ölçüm modeli oluşturulmuş ve değerlendirilmiştir. İkinci adımda yapısal eşitlik modellemesi analizi gerçekleştirilmiştir. Ölçüm modelinin değerlendirilmesinde yapıların güvenilirlikleri, birleşme ve ayrışma geçerliği ölçütlerine uyum değerlendirilmiştir. Yapıların güvenilirlikleri Cronbach Alpha katsayısı ile ölçülmüş ve 0,70’in üzerinde olan yapılar güvenilir kabul edilmiştir (Nunnally, 1978). Birleşme geçerliliği her bir faktörde yer alan ifadelerin birbirleriyle ve ait olduğu faktörle ilişki olmasıdır (Gürbüz, 2021: 82). Birleşme geçerliliğinin değerlendirilmesinde açıklanan ortalama varyans (average variance extracted – AVE) değerinin 0,5’den yüksek, birleşik güvenilirliğin (composite reliability – CR) değerinin 0,7’den yüksek ve CR>AVE olması beklenmektedir (Gürbüz, 2021: 81). Ayrışma geçerliliği, ölçekte yer alan ifadelerin, ölçülmeye çalışılan kavramın farklı yönlerini ele alması ve ele aldıkları bu yönleri tam olarak ölçmesini ifade etmektedir (Taşkın ve Akat, 2010: 25-26). Ayrışma geçerliliğinin değerlendirilmesinde Fornell and Larcker (1981) kriteri kullanılmıştır. Bu kriter gere AVE değerlerinin kare kökünün yapılar arası korelasyondan yüksek olması beklenmektedir. Bu çalışmada X²/df (ki-kare/serbestlik derecesi), RMSEA (The Root Mean Square Error of Approximation), GFI (Goodness of fit index), AGFI (Adjusted goodness of fit index), NFI (Normed fit index), CFI (Comparative), TLI (TuckerLewis)

uyum iyiliklerine yer verilmiştir. Bu uyum indekslerinin değer aralıkları $X^2/df < 5$, $RMSEA < 0,08$ $GFI > 0,80$, $AGFI > 0,80$, $CFI > 0,90$ $NFI > 0,90$, $TLI > 0,90$ olduğunda araştırma modelinin kabul edilebilir sınırlar içerisinde yer aldığı söylenebilir (Gürbüz ve Şahin, 2016; Gürbüz, 2021, Schermelleh-Engel et al., 2003; Etezadi and Farhoomand, 1996; Segars and Grover, 1993; Chow et al., 2001). Yapısal eşitlik modellemesi çalışmalarının ön koşullarından bir diğere ise veri setinin normal dağılım varsayımını içermesidir. Veri setinin normal dağılımın incelenmesinde çarpıklık ve basıklık değerleri kullanılmaktadır. Çarpıklık (skewness) ve basıklık (kurtosis) değerlerinin $+3$ 'den küçük olmalıdır (Gürbüz, 2021: 34).

2.4. Bulgular

Araştırmada yer alan tüketicilerin demografik özelliklerine bakıldığında katılımcıların cinsiyet dağılımında %63,7'si (n:268) kadın, %36,3'ü (n:153) erkek, yaş dağılımında %43,5'i (n:183) 18-25 yaş aralığında, %38,7'si (n:135) 26-35 yaş aralığında, %13,5'i (n:57) 36-45 yaş aralığında, %3,6'sı (n:15) 46-55 yaş aralığında, %0,7'si (n:3) 56 yaş ve üzeri yaş aralığında; medeni durum dağılımında %68,9'u (n:290) bekar, %31,1'i (n:131) evli, eğitim durumu dağılımında %1,7'si (n:7) ilk öğretim, %8,3'ü (n:35) orta öğretim, %20'si (n:84) ön lisans, %59,1'i (n: 249) lisans, %10,9'u (n:46) lisansüstü düzeyde; gelir durumu dağılımına bakıldığında %37,8'i (n: 159) 2324 TL ve altında, %16,2'si (n:68) 2325-3000 TL arasında, %11,9'u (n:50) 3001-4000 TL arasında, %13,5'i 4001-5000 TL arasında ve %20,7'si (n:87) 5001 TL ve üzerinde gelire sahiptir. Katılımcıların kullanım alışkanlıklarını öğrenmek amacıyla “Haftada kaç kez mobil yemek sipariş uygulamalarını kullanmaktasınız?” sorusu yöneltilmiştir. Katılımcıların %89,3'ü (376) haftada 1-3 kez, %6,2'si (26) haftada 4-6 kez, %2,4'ü (10) 7-10 kez ve %2,1'i (9) haftada 11 kez ve üzeri mobil yemek sipariş uygulamalarını kullanmakta olduğunu belirtmişlerdir. Katılımcıların çok büyük bir bölümünün haftada en az bir kez mobil yemek sipariş uygulamalarını kullandıkları görülmektedir.

Araştırmadaki değişkenlerin çarpıklık ve basıklık değerleri literatürdeki eşik sınırlar içerisinde kaldığından yapısal eşitlik modellemesi analizlerine geçilmiştir. Yapısal eşitlik modellemesi IBM AMOS programı üzerinden gerçekleştirilmiştir. Aşağıdaki Tablo 1 ve Tablo 2'de ölçüm modelinin birleşme ve ayrışma geçerliliği analizlerine yer verilmiştir.

Tablo 1: Birleşme Geçerliliği

Değişken	İfadeler	S.R.W.	S.E.	C.R.	C.A	A.V.E.

Koyu Değerler \sqrt{AVE} ; AVE>MSV									

Fornell and Larcker (1981) kriterine göre ayrışma geçerliliği değerlendirilmiştir. Tablo 2’den görüleceği üzere VAVE > yapılar arası korelasyon olduğundan ayrışma geçerliliğinin sağlandığı ifade edilebilir. Ölçüm modeli uyum iyilikleri X2/df: 3,664; GFI: 0,853; AGFI: 0,815; NFI: 0,941; TLI: 0,949; CFI: 0,956 ve RMSEA: 0,075 şeklindedir. Araştırma modelinin uyum iyilikleri X2/df: 3,664; GFI: 0,853; AGFI: 0,815; NFI: 0,941; TLI: 0,949; CFI: 0,956 ve RMSEA: 0,075 şeklindedir. Model uyum iyiliklerinin literatürdeki sınırlar dahilinde yer aldığı görülmektedir.

Hem birleşme hem de ayrışma geçerliliğini sağlayan ölçüm modelinden sonra değişkenler arasındaki ilişkilerin ölçüldüğü yapısal eşitlik modellemesi aşamasına geçilmiştir. Algılanan kullanım kolaylığı, algılanan kullanışlılık, mobil güven, çevrimiçi derecelendirme, müşteri hizmetleri değişkenleri müşteri memnuniyetinin yüzde 84’ünü açıklamaktadır. Müşteri memnuniyeti ise ağızdan ağıza iletişimin yüzde %74’ünü açıklamaktadır. Aşağıda yer alan Tablo 3’te hipotez testi sonuçlarına yer verilmiştir.

Tablo 3. Araştırma Modeli Hipotez Testi Sonuçları

Hipotez				Beta K.	SE	CR	P Değeri	Değerlendirme
MUM	←	AKK	H ₁	,079	,036	2,221	,026	Desteklendi.

MUM	←	CED	H ₄	,178	,041	4,348	,000	Desteklendi.
MUM	←	MUH	H ₅	,215	,050	4,317	,000	Desteklendi.
MUM	←	MOG	H ₃	,361	,051	7,039	,000	Desteklendi.
WOM	←	MUM	H ₆	,818	,034	24,204	,000	Desteklendi.

3. SONUÇ ve TARTIŞMA

Araştırma modelinin analizi sonucunda araştırma hipotezlerinin tamamının desteklendiği görülmektedir. Araştırmada değişkenler arasında en güçlü ilişki müşteri memnuniyeti ile ağızdan ağıza iletişim arasındadır. Müşteri memnuniyeti arttıkça ağızdan ağıza iletişim de artmaktadır. Müşteri memnuniyetinin ağızdan ağıza iletişimin güçlü bir belirleyicisi olduğu ifade edilebilir. Müşteri memnuniyeti üzerinde diğer değişkenlerin pozitif ve anlamlı bir etkisi olduğu görülmektedir. Müşteri memnuniyetini pozitif ve anlamlı şekilde etkileyen değişkenler sırasıyla güven, müşteri hizmetleri, algılanan kullanışlılık, çevrimiçi derecelendirme, algılanan kullanım kolaylığı şeklindedir.

Araştırma sonucunda en güçlü ilişkinin müşteri memnuniyeti ile ağızdan ağıza iletişim değişkenleri arasında olduğu bulgusuna ulaşılmıştır. Müşteri memnuniyeti ağızdan ağıza iletişimi pozitif ve anlamlı bir şekilde etkilemektedir. Müşteri memnuniyeti arttıkça tüketicilerin mobil yemek sipariş uygulamaları hakkında olumlu iletişimde bulunma davranışlarını da yükselmektedir. Benzer bulgulara literatürde Kassim and Abdullah (2010), San-Martín et al. (2015), Kalinić et al. (2019), Belanche et al. (2020), Marcos and Coelho (2022) çalışmalarında da ulaşılmıştır. Tüketiciler mobil sipariş uygulamalarını kullanmaya devam ettikçe ve beklentileri karşılandıkça bu uygulamaları başkalarına tavsiye etmeye ve avantajlarını anlatmaya eğilimli olacaklardır denilebilir.

Araştırmadaki bir diğer güçlü etki mobil güven ve müşteri memnuniyeti arasındadır. Mobil güven müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir. Mobil uygulamalar kişisel ve finansal bilgilerini koruduklarında ve işlemleri güvenle gerçekleştirdiklerinde müşterilerin mobil uygulamalara yönelik memnuniyet düzeyleri artmaktadır. Bir başka ifade ile güvenli ve güvenilir mobil uygulamalar müşterilerin beklentilerini karşılamaktadır. Kalinić et al. (2021), Kar (2020), Koay et al. (2022), Zhao and Bacao (2020)

araştırmalarında müşterilerin mobil güveni arttıkça müşteri memnuniyeti ve kullanmaya devam niyetlerinin arttığı sonucuna ulaşılmıştır.

Araştırma sonucunda mobil müşteri hizmetlerinin müşteri memnuniyetini pozitif ve anlamlı bir şekilde arttıran değişkenlerden birisi olduğu tespit edilmiştir. Choi (2019) ve Ghani et al. (2017) araştırmalarında müşteri hizmetlerinin müşteri memnuniyeti üzerinde pozitif ve anlamlı bir etkisi olduğu görülmüştür. Mobil yemek sipariş uygulamalarının işi ilk seferde doğru yapmaları, müşterilerine hızlı bir şekilde yanıt vermeleri ve yaşanan sorunlarda rehberlik etmeleri müşteri memnuniyetini arttırmaktadır.

Mobil uygulamalardaki müşteri derecelendirmeleri müşteri memnuniyetini pozitif ve anlamlı bir şekilde etkilemektedir. Diğer müşterilerin mobil sipariş uygulamalarında restoranlara veya ürünlere vermiş oldukları puanlar müşteri memnuniyetini etkilemektedir. Diğer müşterilerin verdikleri puanlar ürün hakkında bilgi edinme, ürün kalitesini değerlendirme ve ürün özelliklerini değerlendirme noktasında faydalı bulundukça müşteri beklentilerini karşılama ve dolayısıyla müşteri memnuniyetini sağlama noktasında da katkı sağlayacaktır. Alalwan (2020)'nin çalışması da benzer şekilde mobil yemek teslimat uygulamaları üzerindeki araştırmasında da müşterilerin çevrimiçi derecelendirmelerinin müşteri memnuniyetini pozitif ve anlamlı bir şekilde etkilediğini tespit etmiştir.

Teknoloji kabul modelinin değişkenlerinden algılanan kullanım kolaylığı ve algılanan kullanışlılık değişkenleri de müşteri memnuniyetini pozitif ve anlamlı şekilde etkilemektedir. Ngubelanga and Duffett (2021), Kar (2021), Al Amin et al. (2021), Francioni et al. (2022), Nguyen et al. (2023), Marinkovic and Kalinic (2017), Kalinic et al. (2021), Belarmino et al. (2021) ve Choi (2020) çalışmalarında da benzer bulgulara ulaşılmıştır. Algılanan kullanım kolaylığı değişkeninin müşteri memnuniyeti üzerindeki etkisi anlamlı olsa da etki gücü zayıf olduğu ifade edilebilir. Tüketicilerin mobil teknolojiler ve uygulamalar üzerindeki deneyimlerinin artmış olması, mobil uygulamaların günlük hayatın alışıldık bir parçası olması bu etkinin gücünün zayıf olmasına neden olmuş olabilir. Mobil uygulamaların sağlamış olduğu tüketicilere sağlamış olduğu verimlilik artışı (zaman kazanma, taşınabilir bir cihazdan işlem yapabilme, zaman ve mekândan bağımsızlık vb.) algılanan kullanışlılığın müşteri memnuniyeti üzerindeki etkisinin nispeten daha güçlü olmasının nedeni olabilir.

Konaklama İşletmelerinde Farklılık İkliminin Örgütsel Bağlılığa Etkisi

Dr. Öğr. Üyesi Gülşah GENÇER ÇELİK¹

¹Beykent Üniversitesi, Meslek Yüksek Okulu, İşletme Yönetimi Pr. gulsahg@beykent.edu.tr, ORCID: 0000-0001-8610-3673

Özet: Örgütlerde farklı bireysel özelliklere sahip çalışanlar bir arada yer almaktadır. Örgütlerin farklılık politikaları, farklılıklardan kaynaklı olarak meydana gelen ayrımcılıkları azaltmada önemlidir. Çalışanlar farklılıklarına saygı duyulduğunda bulundukları örgüte bağlılık duyabilirler. Böylece örgütlerde insan kaynağının refahı ve devamlılığı sağlanabilir. Araştırmanın amacı, konaklama sektöründe farklılık iklimi algısının çalışanların örgütsel bağlılıklarına etkisinin tespit edilmesidir. Araştırma İstanbul ilindeki konaklama sektöründe yer alan 299 çalışanın katılımı ile gerçekleştirilmiştir. Araştırma örnekleminin belirlenmesinde basit tesadüfi örnekleme tekniği kullanılmıştır. Verilerin analizinde SPSS 25 paket programı kullanılmıştır. Bulgulara göre konaklama sektöründeki farklılık iklimi algısının çalışanların örgütsel bağlılığını önemli düzeyde attırdığı tespit edilmiştir. Farklılık ikliminin örgütsel bağlılık boyutlarından duygusal bağlılık boyutu üzerindeki diğer boyutlardan daha yüksektir. Araştırma sonucunda farklılıklara özen gösteren konaklama işletmelerinde, çalışanların örgüte bağlılıklarının artacağı ifade edilebilir. Son olarak konaklama işletmelerine, ayrımcılık karşıtı prosedürler ve farklılıklara saygı duyulan bir iklim yaratmaları yönünde önerilerde bulunulmuştur.

Anahtar Kelimeler: Farklılık, Farklılık İklimi, Örgütsel Bağlılık, Konaklama İşletmeleri.

The Effect of Diversity Climate On Organizational Commitment In Hospitality Businesses

Abstract: In organizations, employees with diverse individual characteristics are located together. Diversity policies of organizations are important in reducing the discrimination that occurs due to differences. Employees can be committed to their organization when their differences are respected. Thus, the welfare and continuity of human resources in organizations can be ensured. The research aims to determine the effect of the perception of climates of diversity on the employees' organizational commitment in the accommodation sector. The research was carried out with the participation of 299 employees in the accommodation sector in Istanbul. A simple random sampling technique was used to determine the research sample. SPSS 25 package program was used in the analysis of the data. The findings determined that the perception of the climate of diversity in the hospitality sector significantly increased the employees' organizational commitment. It is higher than the other dimensions on the emotional commitment dimension of the organizational commitment dimensions of the climate of diversity. As a result of the research, the employees' commitment to the organization will increase in the hospitality firm that pays attention to the differences. Finally, suggestions were made to hospitality firms to create a climate where anti-discrimination procedures and differences are respected.

Keywords: Diversity, Climate of Diversity, Organizational Commitment, Hospitality Businesses

1. GİRİŞ

Bireylerin birbirlerinden farklı özelliklere sahip olması, dolaylı olarak firmaların da birbirlerinden farklı olmasını sağlayan bir unsurdur. Bu nedenle çalışanlar rekabet ortamında firmalar için önemli hale gelmektedir (Fettahioğlu ve Tatlı, 2015). İlk olarak ABD’de gündeme gelen farklılıkların yönetimi kavramı (Sürgevil, 2008), heterojen yapıdaki örgütleri anlatmada kullanılmaktadır. Örgütlerin heterojen yapıda olması, olası çatışma ve anti-ayrımcılık hareketlerine karşı farklılıkların yönetimini zorunlu hale getirmiştir (Balay ve Sağlam, 2004).

Kavramsal olarak farklılıkların yönetimi, örgütlerdeki farklılıkların bilincinde olup, bireysel bütünlüğe saygılı olma ve çeşitlilikleri zenginlik olarak kabul eden bir yönetim yaklaşımıdır (Özbilgin, 2005; Özbilgin ve Tatlı, 2008; Fettahioğlu ve Tatlı, 2015). Farklılıkların yönetimi ile birlikte örgütler çalışanlara ve geleceğe yönelik yatırımlar yaparlar. Farklılıkların yönetimi bireysel değerlere saygı, karşılıklı iletişime dayalı ve çeşitlilik esaslı bir yaklaşımı ifade eder (Keil vd. 2007; Uzunçarşılı ve Soydaş, 2007). Çalışanların örgütün farklılıklara saygı duyma derecesi ile ilgili paylaşılan algı ise farklılık iklimi olarak ifade edilebilir.

Örgütlerde uygulanan farklılıklarının yönetimi uygulamalarının örgütlere birçok açıdan faydası olduğu tespit edilmiştir. Örgütlerde stratejik öneme sahip olan insan kaynağından elde edilen faydanın en yükseğe çıkarılması düşüncesinde, çalışanların örgütte devamlılıklarını esas alınmaktadır. Farklılıkların yönetimi, kaliteli uygulandığında, çalışanların örgütte kalma isteğini sağlayan bir unsurdur (Bulşu ve Gümüş, 2018; Arslan ve Esatoğlu, 2017). Çalışanların örgütte devam etme niyetlerinde ise örgütsel bağlılığın önemli bir yeri bulunmaktadır. Yine araştırma sonuçları (örn; Bulşu ve Gümüş, 2018; Zincirkıran vd. 2015; Aras, 2016)

çalışanların örgüte olan bağlılıklarının örgütte devam etme niyetleri ile önemli derecede ilişkili olduğunu göstermektedir.

Örgütsel bağlılık, çalışanın bulunduğu kurumda devam etme niyeti, sadakati ve örgütle özdeşleşmesi ile ilgilidir (Meyer ve Allen, 1991;1997; Lok vd. 2005). Diğer bir tanıma göre örgütsel bağlılık çalışanların örgütün hedeflerine ulaşılmasına yardımcı etmeye kararlı olma durumudur ve çalışanların örgütle özdeşleşme, faaliyetlere katılım ve örgüte sadakatlerini içerir (Caught ve Shadur, 2000). Singh ve Onahring (2019)'a göre örgütsel bağlılık, bir çalışanın kuruluşun amaç ve değerleriyle ilgisi nedeniyle örgütte kalmaya istekli olma derecesidir. Diğer yandan örgütsel bağlılık üç yapıdan oluşmaktadır; duygusal bağlılık, devam bağlılığı ve normatif bağlılık. Duygusal bağlılık; “çalışanların, örgütlerine duygusal yakınlık hissederek, örgütle özdeşleşmelerini” ifade etmektedir (Gürbüz 2006). Devam bağlılığı “çalışanın örgütten ayrılması durumunda muhtemel kayıplarını göze alamaması ve örgütte kalmaya devam etme niyetini” ifade eder (Uyguç ve Çımrın, 2004; Meyer ve Allen, 1997). Normatif bağlılık ise “çalışanların ahlaki bir yükümlülük duygusu ile örgütlerine devam etme, örgüte bağlanma niyetlerini” ifade eder.

Alanyazında bazı araştırma sonuçları örgütlerde uygulanan farklılıkların yönetiminin çalışanların örgüte duygusal, değerler ve kazanımlar açısından bağlanacaklarını öngörmektedir (Uyguç ve Çımrın, 2004; Tatlı, 2014; Meyer ve Allen, 1997). Farklılıkların yönetimi/farklılık iklimi uygulamalarının örgütsel bağlılığa etkisini tespit eden çalışmalar olsa da, iki kavram arasındaki ilişkilerin farklı sektörlerde, farklı bakış açıları ile yeniden incelenmesin ihtiyaç bulunmaktadır. Diğer yandan farklılıkların yönetimi hakkındaki Türkçe alanyazının henüz çok geniş olmadığı düşünüldüğünde, farklılık/çeşitlilik iklimi araştırmalarının önemi artmaktadır.

Araştırmanın otel işletmelerindeki çalışanlarla gerçekleştirilmektedir. Otel işletmeleri çeşitli özelliklere sahip insanların kısa süreli konaklama için kullandıkları adreslerdir. Müşterilerin çeşitliliğine çalışan çeşitliliği ile yaklaşılması, çalışanların örgütlerine bağlılıklarını önemli hale getirmektedir. Böylece otel işletmelerindeki farklılık iklimi çalışanların çeşitliliğini sağlayacak ve onların örgütsel bağlılıklarını sağlayabilecektir. Sonuç olarak çeşitli bireysel özelliklere sahip, zengin bir çalışan ekibi ile müşterilere daha etkin bir hizmet sunulabilmektedir. Bu nedenle araştırma kapsamında, farklılıkların ikliminin örgütsel bağlılığa etkisinin tespit edilmesi amaçlanmıştır. Araştırma sonucunda elde edilecek bulgular otel işletmelerindeki çalışanların örgütte kalmalarını sağlayan olumlu çeşitlilik uygulamalarından nasıl etkilendiğini göstermesi açısından önemlidir. Ayrıca, araştırmanın farklılıkların yönetimi ve farklılık iklimi hakkındaki gelişmekte olan alanyazına da farklılıkların yönetiminin ardılları açısından katkı sunması beklenmektedir. Son olarak araştırma farklılık iklimini eşitlikçi bir yaklaşımla ele aldığından alanyazındaki benzer çalışmalardan farklılaşmaktadır.

2. KAVRAMLAR ARASI İLİŞKİLER

Farklılıkların yönetimi ile ilgili alanyazın birçok kavram üzerinden gelişmektedir. Bu kavramlar başta farklılıkların yönetimi olmak üzere, farklılık iklimi, çeşitlilik yönetimi gibi kavramlardır. Çalışanların farklılıkların yönetimi uygulamalarını algılama şekli olarak bu çalışmada farklılık iklimi kavramı üzerinden hareket edilmektedir. Ancak alanyazında henüz çok geniş bir araştırma akımına sahip olmamasından dolayı önceki araştırmalarla ilgili örnekler söz konusu kavramları içerecek şekilde geniş tutulmaktadır. Farklılıkların yönetiminin ve farklılık ikliminin çalışanların örgütsel bağlılıklarını nasıl etkilediği hakkındaki alanyazın özeti aşağıda sunulmuştur.

Bulşu ve Gümüş (2018) tarafından yapılan araştırmada otellerde uygulanan farklılıkların yönetimi uygulamalarının ve çalışan bağlılığının işten ayrılmaya etkisi tespit edilmiştir. Araştırma sonuçlarına göre farklılıkların yönetiminin örgütsel bağlılıkla olumlu ilişkilere sahip olduğu ve çalışanların işten ayrılma niyetinin farklılıkların yönetimi bağlamında azaldığı tespit edilmiştir. Ayrıca örgütsel bağlılık yüksek olduğunda çalışanların işten ayrılma niyetlerinin düşük olacağı sonucuna ulaşılmıştır.

Fettahlioğlu ve Tatlı (2015) tarafından yapılan araştırmada çalışanların farklılıkların yönetimi algılarının örgütsel bağlılığa etkisinin tespit edilmesi amaçlanmıştır. Araştırma bulgularına göre telekomünikasyon sektöründeki çalışanların farklılıkların yönetimi algısı örgütsel bağlılığı olumlu yönde etkilemektedir. Yine bulgulara göre farklılıkların yönetimi uygulamaları çalışanların devam, duygusal ve normatif bağlılıklarını arttıran bir unsurdur.

Belloda vd. (2016) tarafından yapılan araştırmada öğretmenlerin ve okul yöneticilerinin farklılıkların yönetimi algılarının onların örgütsel bağlılıklarını nasıl etkilediğinin tespit edilmesi amaçlanmıştır. Araştırma bulgularına göre farklılıkların yönetimi uygulamalarının örgütsel bağlılığı olumlu yönde etkilediği tespit edilmiştir. Ayrıca demografik özelliklerin farklılıkların yönetimi algısında anlamlı bir farklılık neden olmadığı tespit edilmiştir.

Meşe ve Bayraktar (2020) tarafından yapılan araştırmada hızlı tüketim sektöründeki beyaz yakalı çalışanların farklılıkların yönetimi algılarının örgütsel bağlılığa etkisinde örgütsel adaletin aracılık rolünün tespit edilmesi amaçlanmıştır. Araştırma sonucuna göre çalışanların olumlu farklılıkların yönetimi algısı; devam bağlılığı, duygusal bağlılığı ve normatif bağlılık üzerinde pozitif yönde etkiye sahiptir.

Kurtulmuş (2016) tarafından yapılan araştırmada öğretmenlerin farklılıkların yönetimi ile ilgili algılarının örgütsel bağlılıklarına etkisini tespit edilmesi amaçlanmıştır. Araştırma sonuçlarına göre okullarda uygulanan farklılıkların yönetimi prosedürlerinin öğretmenlerin duygusal ve normatif bağlılıklarını olumlu yönde etkilediği sonucuna ulaşılmıştır. Ayrıca farklılıkların yönetimi uygulamalarının öğretmenlerin örgütsel vatandaşlıklarını da arttırdığı sonucuna ulaşılmıştır.

Kulualp ve Demir (2020) tarafından yapılan araştırmada kimya sektöründeki çeşitlilik yönetiminin örgütsel bağlılıkla ilişkisinin tespit edilmesi amaçlanmıştır. Araştırma bulgularına göre yönetim uygulamalarının ve örgüt ortamının örgütsel bağlılığı olumlu yönde etkilediği tespit edilmiştir.

Mogoshi ve Chang (2009) tarafından yapılan araştırmada Japonya ve Kore'deki farklılıkların yönetimi uygulamalarının örgütsel bağlılığa etkisinin tespit edilmesi amaçlanmıştır. Araştırma bulgularına göre farklılıkların yönetimi uygulamalarının yeni olmasına rağmen çalışanların örgütsel bağlılıklarında anlamlı bir etkiye sahip olduğu sonucuna ulaşılmıştır.

Ateş ve Ünal (2020) tarafından yapılan araştırmada öğretmenlerin farklılıkların yönetimi, iş tatmini, örgütsel bağlılık ve algılanan destek algıları arasındaki ilişkilerin tespit edilmesi amaçlanmıştır. Araştırma sonuçlarına göre öğretmenlerin farklılıkların yönetimini olumlu şekilde algıladıklarında örgütsel destek, örgütsel bağlılık ve iş tatminlerinin olumlu şekilde etkilendiği sonucu tespit edilmiştir.

Cho ve Mor Barak (2008) tarafından yapılan araştırmada çeşitlilik, katılım, örgütsel bağlılık ve iş performansı arasındaki ilişkilerin tespit edilmesi amaçlanmıştır. Araştırma bulgularına göre erkekler, yaşlı çalışanlar ve yüksek mevkideki çalışanlar örgüte daha fazla bağlıyken, katılımın örgütsel bağlılık ve iş performansı üzerinde önemli bir etkisi olmuştur.

Yerli ve yabancı alanyazındaki çalışma sonuçları incelendiğinde çalışanların farklılıkların yönetimi, farklılık iklimi ya da çeşitlilik yönetimi hakkındaki olumlu görüşlerinin onların örgütsel bağlılıklarını olumlu yönde etkilediğini ifade etmek mümkündür. Farklı sektörler ve farklı ülkelerde yapılan araştırma sonuçlarının benzerliği de söz konusu çıkarımı destekler yapıdadır. Bu nedenle oluşturulan araştırma hipotezi şu şekildedir;

H₁: Otel işletmelerindeki farklılık iklimi, çalışanların örgütsel bağlılıklarını olumlu yönde etkilemektedir.

H_{1a}: Otel işletmelerindeki farklılık iklimi, çalışanların duygusal bağlılıklarını olumlu yönde etkilemektedir.

H_{1b}: Otel işletmelerindeki farklılık iklimi, çalışanların devam bağlılığını olumlu yönde etkilemektedir.

H_{1c}: Otel işletmelerindeki farklılık iklimi, çalışanların normatif bağlılıklarını olumlu yönde etkilemektedir.

3. ARAŞTIRMANIN METODU

Araştırmanın amacı: Araştırma otel işletmelerinde gerçekleştirilmektedir. Otel işletmelerinde kısa süreli konaklama hizmeti verilen, çeşitli özelliklerdeki müşterilere kaliteli hizmetin sunulabilmesi çalışanların devamlılığı ile sağlanabilir. Bu nedenle otel işletmelerinde çalışanların devamlılığını sağlayan faktörlerin tespit edilmesi önemli hale gelmektedir. Ancak çalışanların örgütte devam etme niyetini etkileyen ya da örgüte bağlılıklarını etkileyen çeşitlilik/farklılık iklimi faktörlerine az sayıda çalışmada odaklanılmıştır (örn; Tatlı, 2014; Fettahloğlu ve Tatlı, 2015; Mogoshi ve Chang, 2009; Cho ve Mor Barak, 2008). Farklılık iklimi, çeşitlilik yönetimi ya da farklılıkların yönetimi hakkındaki araştırmaların önemli bir kısmı eşsiz insan kaynağının örgütlere sağladığı faydalara odaklanmaktadır. Bu araştırma kapsamında çalışanların örgütte devamlılıklarını sağlayan faktörlerden birisi olarak örgütsel bağlılığın farklılık iklimi algısından nasıl etkilendiğinin tespit edilmesi amaçlanmaktadır. Araştırma bulgularının otel işletmelerindeki farklılık ikliminin çalışanların örgütsel bağlılıklarını nasıl etkilediğini tespit etmek açısından kısıtlı alanyazına katkı sunması beklenmektedir. Ayrıca çalışma, farklılık iklimini eşitlikçi bir bakış açısı ile ele almasından dolayı alanyazına katkı sunmaktadır.

Araştırmanın örnekleme ve örnekleme metodu: Araştırmanın evreni şehir otellerindeki çalışanlardan oluşmaktadır. Araştırmanın örnekleme İstanbul İli Beyoğlu İlçesindeki 12 şehir otelinin yaklaşık 700 çalışanından oluşmaktadır. Araştırmanın gerçekleştirilen örnekleme ise 299 çalışandan oluşmaktadır. Araştırmanın örnekleminin belirlenmesinde kolayda örnekleme tekniği kullanılmıştır. Kolayda örnekleme tekniğinin kullanılmasında farklılık

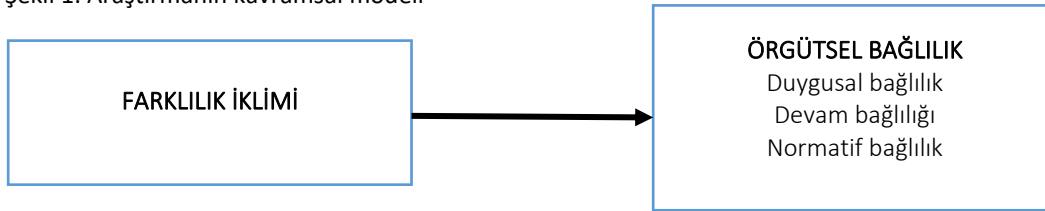

iklimi ile ilgili ifadelerin otel yöneticileri tarafından genellikle riskli olarak görülmesidir. Ayrımcılığa dair soruların yer almasından dolayı farklılık temelli çalışmalara katılıma kuşkulu yaklaşılması, izin alınması mümkün otellere ulaşılmasına ve kolayda örneklem tekniğinin seçilmesine neden olmuştur. Araştırmada örneklem sayısının belirlenmesinde ise Hair vd. (2014) tarafından belirlenen madde başına 10 örneklem önerisi esas alınmıştır. Bu nedenle ölçeklerde yer alan 23 maddeye karşılık 230 örnekleme ulaşmak yeterli olmaktadır. Bu nedenle 299 örnekleme ulaşıldığında veri toplama süreci sonlandırılmıştır.

Araştırmaya katılan otel çalışanların özellikleri incelendiğinde katılımcıların %16,7'sinin 18-24 yaş arasında, %47,5'inin 25-29 yaş arasında, %35,8'inin ise 30 yaş ve üzerinde olduğu tespit edilmiştir. Katılımcıların %54,5'i erkek, %45,5'i ise kadınlardan oluşmaktadır. Katılımcıların %31,4'ü lise, %58,9'u önlisans-lisans, %9,7'si ise lisansüstü eğitime sahip çalışanlardan oluşmaktadır. Katılımcıların %9,7'si ilk kez bir işyerinde çalışma deneyimine sahipken, %19,7'si iki, %30,8'i üç, %27,4'ü dört, %12,42'ü ise beş ve daha fazla işyerinde çalışma deneyimine sahiptir. Katılımcıların %58,9'ü üç yıl veya daha az süredir aynı otelde çalışırken, %41,1'i ise 4 yıl ve daha fazla süredir aynı otelde çalışmaktadır.

Araştırmanın veri toplama araçları: Araştırmada kullanılan anket formunda iki ölçüm aracı ve demografik özellikleri belirlemede kullanılan beş soru (yaş, cinsiyet, vb.) yer almıştır. Farklılık iklimi algısını ölçmede Özbilgin ve Tatlı (2008) tarafından oluşturulan beş maddelik ölçüm aracı kullanılmıştır. Örgütsel bağlılık ölçeği ise Allen ve Meyer (1990) tarafından geliştirilmiş ve alanyazında birçok araştırmacı tarafından kullanılmıştır (Wasti, 2000; Öngel, 2018). Örgütsel bağlılık ölçeği 18 madde ve üç boyuttan oluşmaktadır. Ölçeklere yanıt toplamada 5'li likert ölçümü kullanılmıştır. Araştırma verilerinin toplanmasında anket formları kullanılmıştır. Veriler 2022 yılının Kasım-Aralık aylarında toplanmıştır.

Araştırmanın modeli: Araştırmanın kavramsal modeli Şekil 1'de yer almaktadır. Kavramsal modelde farklılık iklimi bağımsız değişken, örgütsel bağlılık ve alt boyutları (duygusal, devam ve normatif bağlılık) ise bağımlı değişkeni ifade etmektedir.

Şekil 1. Araştırmanın kavramsal modeli

Araştırmanın analiz teknikleri: Araştırmada, otel çalışanlarından toplanan verilerin analizinde, SPSS 25 paket programı kullanılmıştır. Verilerin analizi için öncelikle faktör ve güvenilirlik analizleri yapılmıştır. Sonrasında normal dağılımın incelenmesi için çarpıklık ve basıklık değerleri incelenmiştir. Çarpıklık ve basıklık değerlerinin uygunluğuna (-1,5/1,5) istinaden Pearson korelasyon ve regresyon analizleri yapılmıştır. Söz konusu analiz sonuçlarının uygunluğunun değerlendirilmesi ve yorumlanmasında aşağıdaki sınır değerleri kullanılmıştır;

KMO örneklem yeterliği	>	0,60/0,70	(Hair vd. 2014)
Bartlett küresellik testi	<	0,05	(Hair vd. 2014)
Açıklanan toplam varyans	>	,50	Yaşlıoğlu (2017)
Cronbach's Alpha	>	0,60/0,70	(Hair vd. 2014)
Çarpıklık ve basıklık		-1,5/1,5	(George ve Mallery, 2001; Leech vd., 2005)

4. ARAŞTIRMANIN BULGULARI

Araştırmanın bu bölümünde faktör, güvenilirlik, korelasyon ve regresyon analizi sonuçları sunulmaktadır. Tablo 1'de farklılık iklimi ölçüm aracının faktör ve güvenilirlik analizi sonuçları yer almaktadır.

Tablo 1. Farklılık iklimi ölçeğinin faktör ve güvenilirlik analizi sonuçları

KMO ve Bartlett's Testi		
Kaiser-Meyer-Olkin (KMO) örneklem yeterliği ölçümü		,788
Bartlett Küresellik Testi	Ki-kare	251,661
	SD	10

	Sig.	,000
Cronbach's Alpha		,719
Madde sayısı		5
Açıklanan toplam varyans		%48,122

Tablo 1’de farklılık iklimi ölçeğinin faktör ve güvenilirlik analizi sonuçları sunulmuştur. Analiz sonuçlarına göre KMO örneklem yeterliğinin 0,788, Bartlett testinin $p<0,05$, açıklanan varyansın %48,12, Cronbach’s Alpha katsayısının 0,719 olduğu ve ölçüm aracının beş maddeden oluşmaktadır. Elde edilen bulgulara göre açıklanan varyans katsayısının sınır değerine (%50) yakın olduğu, diğer tüm değerlerin istenen düzeyde olduğu tespit edilmiştir. Analizler esnasında herhangi bir madde araştırma kapsamı dışında bırakılmamıştır. Farklılık iklimi ölçeğinin araştırmada kullanılmasının uygun olduğunu ifade etmek mümkündür.

Tablo 2. Örgütsel bağlılık ölçeğinin faktör ve güvenilirlik analizi sonuçları

KMO ve Bartlett's Testi

Kaiser-Meyer-Olkin (KMO) örneklem yeterliği ölçümü		,744
Bartlett Küresellik Testi	Ki-kare	2059,362
	SD	105
	Sig.	,000
Cronbach's Alpha		0,820
Madde sayısı		15
Açıklanan varyans		%53,803

Tablo 2’de örgütsel bağlılık ölçeğinin faktör ve güvenilirlik analizi sonuçları sunulmuştur. Analiz sonuçlarına göre KMO örneklem yeterliğinin 0,744, Bartlett testinin $p<0,05$, açıklanan varyansın %53,80, Cronbach’s Alpha katsayısının 0,820 olduğu ve ölçüm aracının 15 maddeden oluştuğu görülmektedir. Tüm değerlerin istenen düzeyde olduğu tespit edilmiştir. Analizler esnasında herhangi üç madde (*“Benim için avantajlı olsa da, işyerimden şu anda ayrılmanın doğru olmadığını hissediyorum”, “İstesem de, şu anda işyerimden ayrılmak benim için zor olurdu”, “Şu anda işyerimden ayrılmak istediğime karar versem, hayatımın çoğu alt üst olurdu”*) araştırma kapsamı dışında bırakılmıştır. Örgütsel bağlılık ölçeğinin araştırmada kullanılmasının uygun olduğunu ifade etmek mümkündür.

Tablo 3. Değişkenler arasındaki ilişkiler ve tanımlayıcı istatistikler

	\bar{x}	σ	Farklılık iklimi
Farklılık iklimi	3,6582	,88260	1
Duygusal bağlılık	3,2092	1,02800	,704**
Devam bağlılığı	3,3731	,84108	,256**
Normatif bağlılık	3,0752	,95447	,255**
Örgütsel bağlılık	3,2149	,74490	,531**

Farklılık iklimi ve örgütsel bağlılık arasındaki ilişkilerin incelenmesi için yapılan korelasyon analizi sonuçları Tablo 3’te yer almaktadır. Otel çalışanlarının farklılık iklimi algıları orta (3,65) düzeydedir. Duygusal bağlılık (3,20), devam bağlılığı (3,37) ve normatif bağlılık (3,07) ve genel örgütsel bağlılıkları ise (3,21) orta düzeydedir. Otel çalışanlarının farklılık iklimi algıları ile örgütsel bağlılıkları arasında orta düzeyde ($r=0,53$), pozitif yönde ve istatistiki olarak ($p<0,05$) anlamlı ilişki olduğu tespit edilmiştir. Farklılık iklimi algısı ile duygusal bağlılık arasında yüksek düzeyde ($r=0,70$), farklılık iklimi ile devam bağlılığı arasında düşük düzeyde ($r=0,25$) ve farklılık iklimi ile normatif bağlılık arasında düşük düzeyde ($r=0,25$) pozitif yönde ve istatistiki olarak ($p<0,05$) anlamlı ilişkiler tespit edilmiştir. Değişkenler arasındaki anlamlı ilişkilere istinaden regresyon analizine geçilmiştir.

Tablo 4. Farklılık iklimi algısının duygusal bağlılığa etkisi

Model özeti				ANOVA ^a		Katsayılar			
R	R ²	Tahminlerin std. hatası	Durbin-Watson	F	Sig.	Değişkenler	Std. olmayan katsayılar	Std katsayılar	Sig.
,704 ^a	,496	,73189	2,209	274,411	,000 ^b	Duygusal bağlılık (y)	,186		
		X=farklılıkların yönetimi				Farklılıkların yönetimi (x)	,832	,704	,000
		Y=duygusal bağlılık							

Farklılık ikliminin duygusal bağlılığı açıklama düzeyi (Tablo 4) %49,6’dır. Durbin-Watson katsayısı $2,20<3,00$ olduğundan değişkenler arasında otokorelasyon olmadığı görülmektedir. Farklılık ikliminin duygusal bağlılığı

açıklama katsayısı (B) 0,704'tür. Açıklama katsayısının pozitif olduğu görülmektedir. Bulgular ışığında H_{1a} hipotezi desteklenmiştir.

Tablo 5. Farklılık iklimi algısının devam bağlılığına etkisi

Model özeti				ANOVA ^a		Katsayılar			
R	R ²	Tahminlerin std. hatası	Durbin-Watson	F	Sig.	Değişkenler	Std. olmayan katsayılar	Std katsayılar	Sig.
,256 ^a	,066	,78226	1,384	19,183	,000 ^b	Devam bağlılığı (y)	2,563		
		X=farklılıkların yönetimi				Farklılıkların yönetimi (x)	,234	,256	,000
		Y=devam bağlılığı							

Farklılık ikliminin devam bağlılığını açıklama düzeyi (Tablo 5) %6,5'tir. Durbin-Watson katsayısı 1,38<3,00 olduğundan değişkenler arasında otokorelasyon olmadığı görülmektedir. Farklılık ikliminin devam bağlılığını açıklama katsayısı (B) 0,256'dır. Açıklama katsayısının pozitif olduğu görülmektedir. Bulgular ışığında H_{1b} hipotezi desteklenmiştir.

Tablo 6. Farklılık iklimi algısının normatif bağlılığa etkisi

Model özeti				ANOVA ^a		Katsayılar			
R	R ²	Tahminlerin std. hatası	Durbin-Watson	F	Sig.	Değişkenler	Std. olmayan katsayılar	Std katsayılar	Sig.
,255 ^a	,065	,91503	1,492	18,981	,000 ^b	Normatif bağlılık (y)	2,108		
		X=Farklılıkların yönetimi				Farklılıkların yönetimi (x)	,270	,255	,000
		Y=Normatif bağlılık							

Farklılık ikliminin normatif bağlılığı açıklama düzeyi (Tablo 6) %6,5'tir. Durbin-Watson katsayısı 1,49<3,00 olduğundan değişkenler arasında otokorelasyon olmadığı görülmektedir. Farklılık ikliminin normatif bağlılığı açıklama katsayısı (B) 0,255'tir. Açıklama katsayısının pozitif olduğu görülmektedir. Bulgular ışığında H_{1c} hipotezi desteklenmiştir. Bulgular genel olarak incelendiğinde otel çalışanların farklılık iklimini olumlu olarak algılaması onların örgüte bağlılıklarını olumlu yönde etkilemektedir. Otel çalışanlarının otelin farklılık iklimini olumlu yönde algılaması en çok duygusal bağlılık açısından olumlu etkiye sahiptir.

5. SONUÇ

Farklılık iklimi algısının çalışanların örgütsel bağlılığına etkisinin tespit edilmesi için gerçekleştirilen bu araştırma otel çalışanları ile gerçekleştirilmiştir. Araştırma sonuçlarına göre çalışanların farklılık iklimi algısının ve örgütsel bağlılıklarının orta düzeyde olduğu tespit edilmiştir. Araştırma örnekleminde yer alan otellerin yeterli düzeyde, ancak iyi şekilde farklılık iklimi oluşturmadıkları ifade edilebilir. Farklılıkların yönetimi uygulamaları düşünüldüğünde işyerinde itibar ve saygı görme, kariyer, eğitim ve terfi süreçlerinde adil davranma, karar süreçlerine katılımı adil davranışlar hem otel işletmelerinin rekabet edebilirliği açısından hem de çalışana saygı ve eşitlikçi yaklaşım açısından sağlanması gereken bir zorunluluktur. Bu nedenle firma ve çalışan yararına olacak şekilde farklılık ikliminin güçlendirilmesi gerekmektedir.

Farklılık ikliminin çalışanların örgütsel bağlılığıyla önemli düzeyde ilişkilere sahip olduğu tespit edilmiştir. Farklılık ikliminin duygusal bağlılığının yüksek düzeyde olduğu görülmektedir. Farklılık iklimi pozitif olduğunda çalışanlar eşit/adil muamele gördüklerini düşünmektedirler. Eşit muamele algısı ise çalışanların duygusal olarak işyerlerine bağlanmalarını ve örgütte devam niyeti geliştirmelerine yardımcı olmaktadır.

Çalışanların otel işletmelerinde farklılık iklimini olumlu olarak algılamaları onların devam bağlılıklarını olumlu yönde etkilemektedir. Diğer bir ifade ile otel işletmeleri çalışanlarına adil/eşit yaklaşımlar sergilediklerinde çalışanların örgütteki kazanımlarını göz önünde bulundurarak, aynı işyerinde kalma niyetleri artmaktadır.

Otel çalışanlarının farklılık iklimi algıları onların işyerlerine normatif olarak bağlılık geliştirmelerini sağlamaktadır. Otel işletmelerinde sağlanan eşit/adil süreçler karşısında çalışanlar işyerinin kendilerine yaptıkları yatırımları, sağladığı imkânları göz önüne alarak normlar geliştirmektedirler. Böylece çalışanların işyerinde kalma niyetleri artmaktadır.

Araştırmada elde edilen bulgular alanyazındaki önceki çalışma sonuçları ile benzerdir. Daha önceki çalışmalardan örnekler verilecek olursa; Tatlı (2014) tarafından yapılan araştırmada örgütsel bağlılık

geliştirmede farklılıklarının yönetimi uygulamalarının önemli düzeyde etkisi olduğu tespit edilmiştir. Benzer şekilde Kulualp ve Demir (2020) tarafından yapılan araştırmada da örgütsel bağlılığın artmasında çalışanların farklılıkları yönetimini olumlu olarak algılamasının önemli bir yeri olduğu sonucuna ulaşılmıştır. Bu araştırmamızda farklılık ikliminin çok güçlü olmamasına rağmen çalışanların örgütsel bağlılıklarının artışında önemli bir katkıya sahip olduğu görülmüştür. Benzer şekilde Mogoshi ve Chang (2009) tarafından yapılan araştırmada yönetimi uygulamalarının yeni olmasına rağmen çalışanların örgütsel bağlılıklarında önemli bir artışa neden olduğu tespit edilmiştir. Bu nedenle belirli farklılık ikliminin çalışanlar açısından önemli bir kriter olduğunu ifade etmek mümkündür.

Araştırmada elde edilen bulgular ile alanyazındaki önceki çalışma sonuçları benzerlik taşımaktadır. Ancak elde edilen bulgular Türkçe alanyazından bazı farklılıklar taşımaktadır. Bunlardan en önemlisi araştırmadaki farklılık iklimi algısının eşitlikçi bir yaklaşımı esas almasıdır. Farklılık iklimi ölçeğinin (Özbilgin ve Tatlı, 2008) içerik olarak eşitlikçi bir yaklaşımla geliştirilmiş olması çalışanların farklılık iklimi algısının eşit davranış üzerinden yorumlamasını sağlamaktadır. Bu nedenle araştırma sonuçları incelenirken söz konusu özgünlük göz ardı edilmemelidir.

Farklılık iklimi açısından otel işletmelerine sunulması gereken bazı öneriler bulunmaktadır. Eşit ya da adil uygulamalarının yaygınlaştırılması, otel işletmelerinin hem çalışanlara karşı sorumluluklarını yerine getirmeye hem de kalifiye işgücünü işletmede idame etmeye yardımcı olabilir. Diğer yandan otel işletmelerinde farklılıkların yönetimi uygulamalarının duygusal bağlılığı açık şekilde olumlu yönde etkilediği görülmektedir. Çalışanların duygusal bağlılığı örgütte devam etme açısından en saf niyeti belirteceğinden farklılık iklimini güçlü hale getirmek önemlidir. Kararların şeffaf alınması, yükselme ya da atama kriterlerinin adaylar tarafından gerçekleştirilebilir hale getirilmesi, ayrımcı davranışlardan kaçınılması önerilir.

Süt Sığırcılığında Döl Verimi Parametrelerinden Olan Servis Periyodunun İşletme Gelirine Etkisinin İncelenmesi

Hakan İMAMOĞLU¹

Prof.Dr. Duygu AKTÜRK²

¹Tarım ve Orman Bakanlığı, Balıkesir İl Tarım ve Orman Müdürlüğü, hakanimamoglu@hotmail.com, ORCID: 0000-0002-9565-7368

²Çanakkale 18 Mart Üniversitesi, Ziraat Fakültesi, Tarım Ekonomisi, ddakturk@gmail.com, ORCID: 0000-0002-5457-7687

Özet: Bu çalışmada döl verim parametrelerinden biri olan servis periyodunun optimum olarak kabul edilen değerlerden sapması durumunda; uzayan laktasyon süresince elde edilecek fazla süt geliri, gelecek laktasyondaki süt kayıpları, kuruda tutma giderleri ve buzağı kayıpları hesaplanmıştır. Kültür ırkı süt sığırlarında ırk özellikleri nedeniyle; hayvan başına yüksek olan süt verimi, üreticilerin toplam süt miktarını artırmak amacıyla rasyonlarda daha yüksek oranlarda kesif yem kullanmaları ve bilinçli olarak laktasyon süresini uzatmaları, uzatılmış laktasyon süresinde maksimum düzeyde süt almalarına karşın, buzağı gelirlerinden kayıplar meydana gelmekte ve ayrıca bozulan servis periyodları nedeniyle gelecek laktasyonlarda süt verimi azalmakta, süt inekleri ekonomik ömürlerini erken tamamlamaktadırlar. Bu çerçevenin özelinde; servis periyodunun 90 gün seviyesinden arttığı her 1 gün için meydana gelecek süt gelirleri, oluşacak buzağı kayıpları, gelecek laktasyondaki süt kayıpları ve kuruda tutma giderleri hesaplanmıştır. Servis periyodunun 1 (bir) gün gecikmesi durumunda 54,926 ₺ (2,90 \$) maddi kayıp meydana gelmiş ve bir süt ineğinin servis periyodu 90 günden 130 güne uzaması durumunda ise oluşacak maddi kaybın 2.197,04 ₺ (116,18 \$) olacağı hesaplanmıştır. Servis periyodunun 40 gün uzaması halinde meydana gelen toplam maddi kayıp ise cari fiyatlar ile 213,30 litre süte karşılık gelmektedir.

Anahtar Kelimeler: Döl verimi, Servis periyodu, Süt sığırcılığı, Ekonomik kayıp

1. GİRİŞ

Süt Sığırcılık işletmelerinde işletme karlılığını belirleyen temel gösterge döl verimidir. Ancak süt sığırcılığı işletmelerinde süt verimi temel amaç olması nedeniyle, buzağılama periyotları uzamakta ve düşük döl tutma oranları görülmeye başlamaktadır. Süt veriminin yükselmesinin artmasıyla birlikte kısa dönemde işletme karında artış olduğu düşünülmesine karşın döl verim parametrelerindeki bozulmalar uzun vade de işletme gelirlerinde azalmalar ve mali kayıpları beraberinde getirmektedir.

Süt sığırcılığında başarı, sürü yönetimine ve döl veriminin iyi kontrol edilmesine bağlıdır. Döl verim ölçütleri bakımından ırklara göre belirlenen standart değerlere ulaşamadığında işletmenin rekabet gücü ve kârlılığı azalmakta, ülke ekonomisine ve hayvancılık sektörüne olumsuz etkileri olmaktadır (Kumuk and Akbaş, 1999).

Döl veriminin anlamı; daha yüksek süt verimi, yıllara göre daha fazla buzağı üretimi ve daha yüksek bir verim için daha fazla seleksiyon olasılığı demektir. Ancak süt sığırlarında süt veriminin artırılmasına paralel olarak döl veriminde gerilemeler görülebilmektedir (Campos, Wilcox and Becerril, 1994).

Döl Verimi Ölçütleri ise İlk Kızgınlık Gösterme Yaşı, Damızlıkta İlk Kullanma Yaşı, İlk Buzağılama Yaşı, Servis Periyodu, Buzağılama Aralığı, Buzağılama Oranı, Gebelik Başına Tohumlama Sayısı, Doğum Sonrası İlk Östrüs Gösterme Zamanı, Buzağılama Sonrası İlk Tohumlama Zamanı, İlk Tohumlamada Gebelik Oranı, Toplam Gebelik Oranı ve Gebelik Süresi kriterleridir.

2. DÖL VERİM PARAMETRELERİ

2.1 . İlkine Tohumlama Yaşı: Damızlıkta kullanılan hayvanın ilk olarak aşım gördüğü tarihteki yaşıdır. (Daşkın, 2005)

2.2 Buzağılama aralığı (İki Doğum Arası Süre):İneğin canlı doğum yaptığı tarihler arasında geçen süre olarak hesaplanır. Süt inekleri için hala en geçerli döl verimi değerlendirme ölçütüdür (Ata,2013).

2.3 Buzağılama oranı: Sürüdeki toplam inek sayısına göre 1 yılda doğan buzağı oranıdır. (TİGEM, 2018)

2.4. Servis Periyodu: Buzağılama tarihi ile ineğin bir sonraki doğum için gebe kaldığı saptanan son tohumlama tarihi arasındaki süre olarak hesaplanır (Ata,2013).

2.5 Laktasyon Süresi: Meme bezinden sütün salgılanması olayı laktasyon terimi ile ifade edilir. Memeden süt gelmesi (laktasyon) doğum ile başlar (Güneş, 2011). Süt sığırlarının süt verdikleri bu döneme Laktasyon süresi adı verilir.

2.6 Kuru Dönem: Kuru dönem ineklerde laktasyonun sona ermesinden bir sonraki laktasyona kadar geçen süredir. Normal süt verimi için kuru dönemin 6-8 hafta olması gereklidir. Bazı araştırmacılar düvelerde, ineklere oranla bu sürecin biraz daha uzun tutulmasını (ineklerde 45-60 gün, düvelerde 50-70 gün) önermektedirler (Baştan, 2002).

2.7 Buzağılamadan sonraki ilk kızgınlık: Normal ve sağlıklı ineklerde buzağılamadan sonra görülen ilk kızgınlığın görüldüğü süreyi ifade eder. Normal ve sağlıklı ineklerde ilk 10 gün içinde görülebilir. (Alaçam, 1994)

2.8 Gebelik Başına Tohumlama Sayısı: Gebelik başına tohumlama sayısı ile sürünün gebelik oranı yakından ilişkilidir. İlk tohumlamada her bir ineğin gebe kalması istenir ancak bu durum pek mümkün olmamaktadır. Bu nedenle gebelik başına tohumlama sayısı 1.5 olması normal kabul edilir.(Anonim, 2022)

2.9 Gebe kalma oranı: Buzağılamadan sonraki ilk tohumlama ya da aşımında gebe kalma oranı çiftliğin dö l verimliliğini gösteren önemli bir ölçüttür. ineğin sağlığı, tohumlama zamanına bağlı olarak değişmektedir.(TİGEM, 2018)

3. SERVİS PERİYODU

Döl verimi ölçütlerinden biri olan Servis periyodu ise; ineğin buzağılama tarihinden yeniden başarılı bir gebeliğe kadarki zaman aralığı olarak ifade edilmektedir (Ata, 2013). İnekler için optimal servis periyodu 60-90 gün aralığında olduğu bildirilmektedir (Şekerden and Özkütük, 2000).

İneğin doğumdan sonra en kısa sürede gebe kalması, yılda bir defa yavru alınması hedefine ulaşılması ve işletme karlılığı bakımından önemlidir. Servis periyodunun optimum sınırlarda tutulması için, sığırların buzağılama sonrası bakım ve beslenmesine özen gösterilmeli, buzağılama sonrası uterus enfeksiyonları düşük seviyede seyretmeli, ineğin kızgınlık belirtileri takip edilmeli ve ineğin doğumdan sonra gözlenen ilk kızgınlık yerine onu izleyen ikinci kızgınlıkta tohumlanması önerilmektedir (Alpan and Aksoy, 2009). Süt sığı rı yetiştiriciliğinde yılda bir yavru alınması hedefine ulaşılması için servis periyodunun 85-115 gün aralığında olması gerekmektedir.

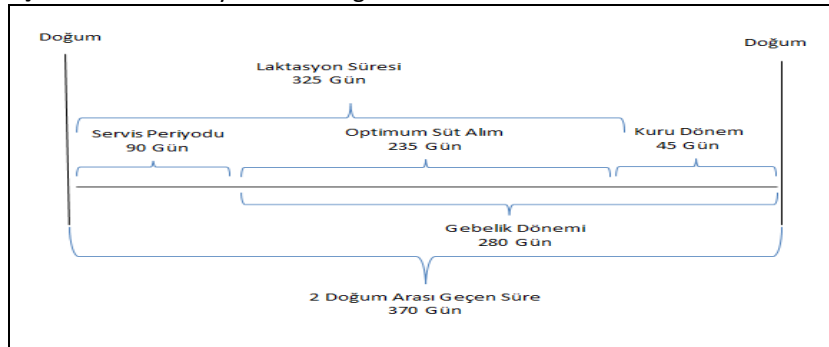

Tablo 1: Kabul Edilen Optimum Servis Periyodu Süreleri

Servis Periyodu Ortalaması (Gün)	Yorumlar
<85	Oldukça Erken
85-115	Optimum
116-130	Sürülerde hafif problem varlığı
131-145	Orta dereceli problemler
145<	Ciddi Problemler

Kaynak : Servis periyodu yorumlama yönergesi (Wattiaux, 2007)

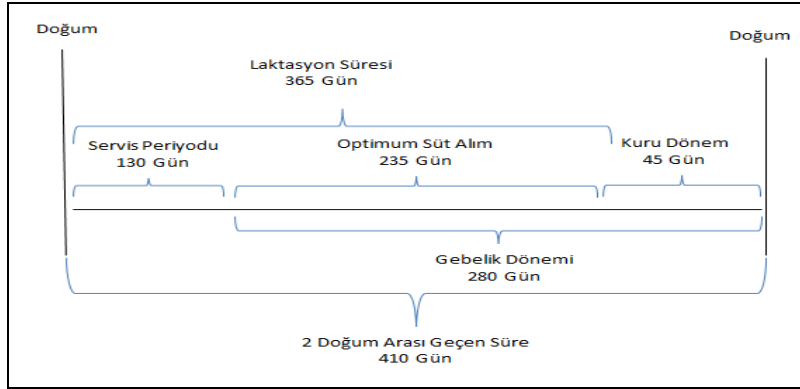

Yukarıdaki Tablo 1’de görüldüğü gibi optimum seviyede servis periyodu 85-115 gün olarak görünmektedir. Ancak özellikle süt verimi yüksek olan ırklarda bu süre bilinçli olarak artırılmakta ve süt verimi, buzağı verimine tercih edilebilmektedir. Buzağı verimi yerine süt veriminin tercih edilmesinin, karlılık açısından anlamlı olup olmadığını tespit etmek maksadıyla, diğer tüm koşulları aynı kabul ederek (süt verimini 20 kg.) servis periyodunun 90 gün seviyesinden uzaklaştığı 1 gün için oluşacak gider ve gelirler ortaya konacaktır.

Şekil 1: Servis Periyodunun 90 gün olması durumu

Servis Periyodu 90 gün olması durumunda laktasyon süresi 325 gün ve iki doğum arası geçen süre 370 gün olarak gerçekleşecektir.

Şekil 2: Servis Periyodunun 130 gün olması durumu

Servis Periyodu 130 gün olması durumunda ise laktasyon Süresi 365 gün ve iki doğum arası geçen süre 410 gün olarak gerçekleşecektir.

Servis periyodunun uzaması ile laktasyon süresi 365 gün seviyesine çıkmaktadır. 365 gün günlük ortalama 20 kg süt verimi ile toplamda $365 \times 20 = 7300$ kg süt alınmaktadır. Diğer taraftan servis periyodunu 90 gün olması halinde laktasyon süresi 325 günde kalmakta ve $325 \times 20 \text{ kg} = 6500$ kg süt alınabilmektedir. Ancak süt verimi artmasına rağmen buzağılama aralığı artmasından dolayı buzağı kaybı olmakta ve ayrıca gelecek olan laktasyon süresi uzayacağı için süt kaybı meydana gelecek ve bu sürede süt sığırları kuruda kalacaktır.

3.1. Teknik Parametreler

Kabul edilen teknik parametreler aşağıda verilmiştir;

Günlük ortalama süt verimi (lt/inek) 20 litre

Laktasyon sonu günlük süt verimi (11 lt/inek) (Esslemont and Spincer, 1993)

Kurudaki ineğin tükettiği günlük yem miktarı (10 kg/baş) (4 kg kesif yem+6 kg saman) (Tarım ve Orman Bakanlığı, 2010)

Kurudaki ineğin 1 günlük yem maliyeti $= (4 \times 7,5) + (6 \times 4,5) = 30,00 + 27,00 = 57,00$ lira

Ayrıca, ineğin 1 günlük uzayan laktasyonunun 0,6 gününü laktasyonda, 0,4 gününü ise kuru dönemde geçirdiği kabul edilmiş ve hesaplamalar buna göre yapılmıştır. (Esslemont and Spincer, 1993)

3.2. Finansal Parametreler (Mart 2023 cari fiyatlarıyla)

Kabul edilen finansal parametreler aşağıda verilmiştir;

Süt satış fiyatı (TL/lt) 10,30 ₺

Süt yemi fiyatı (TL/kg) 7,5 ₺

Saman fiyatı (TL/kg) 4,5 ₺

Süt-yem paritesi (TL) 1.26 (1 lt. süt fiyatı-1 lt. süt üretimi için yapılan yem masrafı) (Ulusal Süt Konseyi, 2022)

Buzağı değeri (TL/baş) 7.000 ₺

1 dolar 18,91 ₺ (07.03.2023 Günü Saat 15:30'da Belirlenen Gösterge Niteliğindeki Türkiye Cumhuriyet Merkez Bankası Kurları)

3.3 Hesaplamalar

Servis periyodunun ideal ve kabul edilebilir düzeyden uzaklaşması halinde ; laktasyon süresinin uzayacağı ve bu uzayan laktasyonda fazladan günlük (11 lt/baş) (Esslemont and Spincer, 1993) süt elde edileceği, gelecek laktasyona geç girmesi nedeniyle 1 günlük (20 lt./baş) kaybının olacağı, daha erken kuruya gireceği için kuruda tutma giderleri oluşacağı ve ayrıca buzağılama aralığı uzayacağı içinde buzağıdan kayıpların oluşacağı düşünülmüştür. Süt sığırının servis periyodundaki 1 günlük gecikmenin 0,6 gününü laktasyonda ,0,4 gününü ise kuruda geçirdiği (Esslemont and Spincer, 1993) varsayımından hareketle hesaplamalar yapılmıştır.

Servis periyodunun bir gün gecikmesi ile sütten ve buzağıdan oluşabilecek kayıplar Tablo 2’de verilmiştir.

Tablo 2 : Servis Periyodunun 1 Gün Gecikmesinin Maliyeti (Mart 2023 cari fiyatlarıyla).

Maliyet Unsurları	Değer ₺	Açıklama
a) Uzayan laktasyon süresinde elde edilecek fazla süt değeri	0,6x11x1,26=8,316	(0.6 gün X laktasyon sonu süt verimi X süt yem paritesi)
b) Gelecek laktasyondaki süt kaybı	20x1,26=25,2	(Ortalama süt verimi X süt yem paritesi)
c)Kuruda tutma giderleri	0,4x57,00=18,872	(0.4 gün X (kurudaki ineğin günlük toplam gideri))
d)Buzağı kaybı	7000/365=19,17	(Buzağı değeri/365 gün

(Yalçın, 2000)

Servis Periyodunun 1 gün uzamasının maliyeti= (b+c+d)-(a)

Servis Periyodunun 1 gün uzamasının maliyeti= (25,2+18,872+19,17)-(8,316)=54,926 ₺ (2,90 \$)

Servis periyodu bir gün uzadığı durumda 54,926 ₺ = 2,90 \$ kayıp meydana gelecektir. Yani Servis Periyodu 90 günden 130 güne çıkar ise için 40 * 54,926 =2,197,04 lira maddi kayıp oluşacaktır. Bu da 213,30 litre süte karşılık gelmektedir. (116,18 \$ = 2.197,04 ₺)

Servis periyodu 90 gün tutulması ile iki buzağılama arasında geçen sürenin 370 gün olmasının bir diğer avantajı ise elde edilen süt veriminin 305 günde en verimli düzeyde olması, buzağılamanın her yıl aynı zamanda olması ve doğan buzağların aynı grupta yetiştirilmesine olanak vermesi sayılabilir. Laktasyon süresinin normale göre daha uzun sürede olması buzağılama aralığının ve kuru periyodun uzamasına neden olmaktadır. Laktasyon süresinin uzaması bir laktasyondaki süt verimini arttırmakta, fakat laktasyonun başlangıcında süt verimi daha yüksek olduğu için bu artışa rağmen yıllık süt verimini düşürmektedir. (Topaloğlu and Güneş, 2004)

4. SONUÇ

Yapılan çalışmada görüldüğü üzere sadece süt verimine odaklanarak üretim yapılması, döl verim parametrelerinin bozulmalarına sebebiyet vermekte ve uzun dönemde buzağı ve süt kayıpları meydana gelmektedir.

Çalışmada döl verim parametrelerinde servis periyodunun, kabul görmüş ortalama değerden bir gün sapmasında 54,926 ₺ (2,90 \$) maddi kayıp meydana gelmekte ve bu maddi kayıp cari fiyatlar ile 5,33 litre süte tekabül etmektedir. Bu nedenle süt sığırıcılığı işletmelerinde süt verimi yanında, buzağı geliri de göz ardı edilmemeli ve üretimin sürdürülebilmesi açısından servis periyodu da dahil olmak üzere tüm döl verim parametreleri takip edilmeli ve kabul görmüş optimum değerle seviyelerinde tutulmaya çalışılmalıdır.

ORCID: 0000-0003-1305-9557

Özet: Tarih boyunca çeşitli salgın hastalıklarda görüldüğü gibi, 2020 – 2021 yıllarında hüküm süren Covid-19 pandemisi de insanların hayatlarında ve tercihlerinde büyük değişimlere sebep olmuştur. Bu değişimlerden biri de hiç kuşkusuz mobilya ve dekorasyon tercihleri alanında olmuştur. Bu tercihlerde meydana gelen değişimler sonucu “pandemi trendleri” ortaya çıkmıştır. Bu çalışmada Covid-19 pandemisinin mobilya ve ev dekorasyonunda pazar trendlerine olan etkisi incelenmiştir. Pandemi trendlerinin tüketiciye ne kadar yansıdığı araştırılmıştır. Çalışmada online anket yöntemi kullanılmış, toplamda 206 kişilik bir katılımcı kitlesine ulaşılmıştır. Çalışmanın bulgularını elde etmek için farklılık analizlerinden faydalanılmış, bağımsız örneklem T testi gibi istatistiksel teknikler kullanılmıştır. Hipotezlerin test edilmesi sonucunda, tüketicilerin pandemi trendlerine karşı ilgisinin ve beğenisinin olduğu, fakat bu trendlerin satın alma davranışlarına anlamlı bir derecede yansımadağı ortaya çıkmıştır.

Anahtar Kelimeler: Pandemi Trendleri, Mobilya Tercihleri, Covid-19 Yaşam Tarzı

The Impact of The Covid-19 Pandemic On Market Trends In Home Decoration and Furniture Selection

Abstract: As seen in various epidemics throughout history, the Covid-19 pandemic, which prevailed in 2020-2021, has also caused great changes in people's lives and preferences. One of these changes has undoubtedly been in the field of furniture and decoration preferences. As a result of the changes in these preferences, "pandemic trends" have emerged. In this study, the effect of the Covid-19 pandemic on market trends in furniture and home decoration was examined. It has been researched how much the pandemic trends are reflected on the consumer. The online survey method was used in the study, and a total of 206 participants were reached. In order to obtain the findings of the study, difference analyzes were used and statistical techniques such as independent sample t-test were used. As a result of testing the hypotheses, it has been revealed that consumers have an interest and appreciation for pandemic trends, but these trends are not reflected in their purchasing behaviors at a significant level.

Keywords: Pandemic Trends, Furniture Preferences, Covid-19 Lifestyle

1. GİRİŞ

İnsanlık, tarih boyunca, birçok çeşitli salgın hastalıkla boğuşmuş ve çok büyük nüfus kayıpları yaşamıştır. Bunlardan biri de 2019 yılı sonlarında ortaya çıkan Covid-19 veya diğer bir isimle koronavirüs pandemisi. “Pandemi süreci” olarak adlandırılabilir 2020 ve 2021 yıllarında yoğun olarak kendini hissettiren Covid-19, insanların hayatlarında büyük değişimlere sebep olmuştur. Yaşam tarzları, ekonomik durumlar ve insan psikolojisi değişmiş, günlük rutinler sekteye uğramış, sosyal izolasyon ve kısıtlamalar sebebiyle ihtiyaçlar ve bazı alışkanlıklar farklılaşmıştır.

Bu durum doğal olarak insanların mobilya ve dekorasyon alanlarındaki tercihlerine de yansımıştır. Değişen ihtiyaçlar ve psikolojik olarak da Covid-19’dan etkilenme sebebi ile “pandemi trendi” olarak adlandırılabilir bazı dekorasyon trendleri ortaya çıkmıştır. Bu trendlere göre mobilyalar renk, doku, kullanılan malzeme ve onlardan beklenen işlev bakımından pandemi öncesindeki yıllarda süregelen mobilya ve dekorasyon trendlerinden farklılaşmaktadır. Bu çalışmanın amacı, Covid-19 pandemisinin ev dekorasyonu ve mobilya seçimi alanında pazar trendlerine olan etkisini ölçmek ve bu trendlerin tüketiciye ne kadar yansıdığını araştırmaktır.

2. PANDEMİ İLE BİRLİKTE DEĞİŞEN VE GELİŞEN MOBİLYA VE DEKORASYON TRENDLERİ

Pandeminin hayatı birçok alanda değiştirmesiyle günlük rutinler ve çalışma alışkanlıkları da değişmiştir. Bu durum yaşam tarzlarına ve ev içi beklentilerine de yansımıştır. Özellikle evde daha fazla vakit geçirmekle, ev içi yaşam konusunda değişen ihtiyaçlar oluşmuş ve evde huzurlu ve rahat vakit geçirmek için ev ortamını yeniden

düzenleme isteği doğmuştur. Ev ortamını oluşturan en önemli faktör, aynı evin paylaşıldığı insanlar kadar evin nasıl dekore edildiği, rahatlık, konfor ve ihtiyaçları tatmin etmek için ne tür mobilyalar kullanıldığıdır. Covid-19 ile evlerden dekorasyon ve mobilya anlamında hem fonksiyon hem de estetik bağlamda beklentiler değişmiştir. Bu durum, 2020 – 2021 yıllarını kapsayan, pandemi trendleri olarak adlandırılabilir mobilya ve dekorasyon alanında yeni oluşan trendleri meydana getirmiştir.

Covid-19'un neden olduğu temassız ortamın sebep olduğu yaşam tarzı değişikliği, insanları uzun süre evde kalmaya ve yeni bir ev hayatı planlamaya yöneltmiştir, bu durum da ev eşyalarına ve ev dekorasyonuna olan ilgilerini arttırmıştır (Koo ve Youn, 2021, s. 82).

Pandemiyle birlikte çalışma, eğitim, egzersiz, hobiler, sosyalleşme gibi birçok faaliyeti evlere taşımak ve daha fazla evde vakit geçirme durumlarına bağlı olarak farklı mobilyalara ihtiyaç duyulmuştur. Örneğin, bu süreçte insanların evden çalışmaya başlaması, öğrencilerin evden eğitim görmesi durumlarına bağlı olarak bazı tür mobilya ve dekorasyon öğelerinin satışında belirgin bir artış meydana gelmiştir.

IKEA icra kurulu Başkanı Jesper Brodin bir röportajında (Chaudhuri, 2020), dünyadaki tüketim eğilimlerinin pandemi boyunca benzer olduğunu belirtmiş, alışveriş yapanların pandemi başlarında masalar, ofis koltukları ve pişirme ekipmanları satın aldığını, ilginin daha sonra raflar ve sepetler gibi ev organizasyonu öğelerine yöneldiğini açıklamıştır. Mutfaklara olan talebin de yüksek olduğunu ve insanların bu tür dekorasyonları evlerine entegre etmek için evde geçirilen zamandan faydalandıklarını da belirtmiştir. Ayrıca IKEA, çevrimiçi satışların %60 arttığını ve şirketin toplam gelirinin bir yıl önce %11'i iken 2020'de %18'ini oluşturduğunu açıklamıştır.

İnsanların mağazaların kapanması sebebiyle, biraz da mecbur kaldıklarından dolayı mobilya ve dekorasyon alışverişlerini internet aracılığıyla yaptıkları bilinen bir gerçektir. Marketing Türkiye Dergisinin yaptığı bir araştırmaya (Marketing Türkiye, 2021) göre, mobilya konusunda internet alışverişi, pandemiden önce en az tercih edilen kanal iken, pandemiyle birlikte %37 ile en çok tercih edilen ikinci alışveriş kanalı olmuştur.

Ayrıca ekonomik daralma ve evde geçirilen vaktin artması sebebiyle insanlar ikinci. el alışverişe yönelmiş, mobilyalarını tamir etmeye veya yeniden değerlendirmeye önem vermişlerdir. Amerika'daki yerel alıcılar ve satıcılar için en büyük mobil pazar yeri olan OfferUp'un yayınlamış olduğu, "2021 Yeniden Ticaret Raporu: Mobilya ve Ev Eşyaları" raporuna göre (OfferUp, 2021), Amerikalıların %48'i pandemi sonrası dönemde ikinci el satış yoluyla bir ürün satın almıştır.

Bunların dışında pandemi ile doğaya dönüş, wabi-sabi, kendin yap uygulamaları gibi trendlerin yanı sıra geri dönüştürme gibi çevre bilinci içeren dekorasyonların trend olduğu iddia edilmektedir. Covid-19 ile mobilya malzemesi seçiminden renk seçimine kadar yumuşak tonlar, doğal malzemeler gibi kullanımların trend olduğu söylenmektedir. 2019 öncesi revaçta olan minimalizmin yerini maximalizme bıraktığı, daha fazla kişisellik ve manevi anlamı olan objelerin tıpkı wabi-sabi akımında olduğu gibi dekorasyona dahil edilmesi söz konusu olmaktadır.

2.1. Pandemi Öncesi Trendler Ve Eğilimler

Pandeminin etkisi ile dekorasyon ve mobilya alanındaki farklılaşmaları yaşamadan önce minimalizm, modernlik, keskin ve parlak dekorasyon öğelerinin revaçta olduğu genel olarak bilinmektedir.

Evin her yerinde koyu ve iddialı renkler, 'smokin' denilen siyah ve beyaz kontrast renklerin hâkim olduğu mutfaklar ve cam, çelik gibi parlak ve keskin malzemelerin kullanıldığı separatörler, 2018 yılının trend unsuru olmuşlardır (McDonough, 2018)

2018 yılına bakıldığında zaman, modern ve şık mobilyaların ön planda olduğu görülmektedir. Bunun yanı sıra toprak renkler, siyahın ve grinin çeşitli tonlarının cesur biçimde dekorasyonlarda kullanılacağı ve pirinç kaplama ile kombinleneceği görülmektedir. Pirinç kaplamalar şık, keskin, modern dünyanın ışıklarının ve parlaklığının bir yansıması olarak evlerin her odasında modernlik hissettiren birer dekorasyon unsuru olarak göze çarpmaktadır (Dekopasaj, 2018)

Pandemi öncesinde, 2010'larda popüler olan minimalizmden farklı olarak, pandemideki yeni trendler, bu estetiğin daha sıcak, daha samimi bir tekrarına doğru bir evrimleşmektedir (Moore-Brennan, 2021).

2.2. Pandemi Trendleri

2.2.1. Evden Çalışma

Davranışsal ve sosyal değişikliklere ek olarak, evden çalışma, Covid-19 salgını sırasında çalışmak için daha fazla fiziksel alana duyulan ihtiyacı da vurgulamıştır. İnsanların evden çalışmaya geçtiklerinde göz önüne alınması gereken nokta, tüm çalışanların evlerinde özel olarak ayrılmış iş istasyonlarına erişimin olmamasıdır; bu durum, örneğin okullarda yüz yüze eğitimin kısıtlanması sebebiyle uzaktan eğitim görmek zorunda olan çocuklara, yemek masası gibi yerlerde geçici çalışma alanları kurmak gerekliliğine veya evde halihazırda bulunan bir çalışma alanında iş istasyonlarının paylaşılmasına sebep olabilmektedir. Mutfak tezgâhları, kanepeler, sehpa ve yataklar gibi alanlar gün boyunca çeşitli çalışma aktiviteleri için kullanılabilir (Xiao vd, 2021, s. 182). Çalışma ve eğitim görme faaliyetlerinin evden devam etmek zorunda olması durumu, insanlarda mahremiyet ihtiyacının artmasını, bu sebeple de çalışma ve eğitim görme için belirlenmiş alanlar kurgulanması gerekliliğini gün yüzüne çıkarmaktadır. Evden çalışmanın yeni bir trend olması, çalışma masası, sandalyesi, aydınlatması gibi çeşitli çalışma istasyonu mobilyalarına olan ilgiyi ve eğilimi arttırmaktadır.

2.2.2. Doğaya Dönüş

Geçmiş yıllardaki grinin popülerliğiyle moda olan soğuk renk paletlerinin aksine, son yıllarda pandemi ile ev sektöründe sıcak renkler eğilimi süregelmektedir. Buzlu tonlar yerini daha sıcak, daha parlak renklere bırakırken kahverengiler sıcak yeni nötr renk hale gelmiş ve yeşilin tüm tonlarının ev dekorasyonu için büyük talep gördüğü belirtilmiştir. Mekanlarda bej, toprak tonları, krem, yosun yeşili gibi sıcak ve doğayı çağrıştıran renklerin popüler olduğu anlaşılmaktadır (Bringle, 2021).

Pandeminin rahat ve konforlu bir yuva yaratma arzusunun arttırmasıyla yumuşak, pelüş kumaşlarla yapılan mobilya ve ev eşyalarında bir artış meydana gelmiştir. The Edited adlı araştırma platformu tarafından yapılan bir araştırma raporuna göre, doğal bir his veren çok dokulu ve buklet kumaşlara yapılan harcamaların pandemiyle birlikte yüzde 66 arttığını bulunmuştur (Bringle, 2021).

EDDA Mimarlık'tan iç mimar Eda Tahmaz, 2021 yılında doğal malzemeden yapılmış el yapımı aksesuarlar, eski ve manevi açıdan önem arz eden parçaların popüler olduğunu belirtmiştir (Ekoyapı, 2021).

ADND mimarlık – iç mimarlık firmasının kurucu ortağı Shobhan Kothari'ye göre insanlar pandemi sürecinde çevre dostu malzeme ve ürünleri benimseyerek sürdürülebilir yaşama önem vereceklerdir. Yerel zanaatkarlık popülerlik kazanacak ve doğal olarak iyi aydınlatılmayan veya gerekli havalandırmanın sağlanmadığı mekanlar fikir olarak rafla kaldırılacaktır. Tasarım ve dekorasyonun artık tek alan - tek işlev şeklinde olmayacağı, pandemi sonrası alanların gelişen bir amacı olacağı ve mekân tasarımının akışkanlığının teşvik edileceğini belirtmiştir (Mahimkar, 2021).

2.2.3. “Wabi-Sabi” veya “Imperfection”

Japon estetik anlayışında kusurların kabul edilmesi anlayışı üzerine kurgulanmış bir felsefe olan wabi-sabi, Budist öğretilerden türemiş ve kusurlu, kalıcı ve eksik bir estetik bakış açısı olarak ifade edilmektedir (Davies, 2016 akt. Göksel ve Erbay, 2021, s. 931). Ayrıca hiçbir şeyin sonsuza kadar sürmediği, hiçbir şeyin bitmediği ve hiçbir şeyin mükemmel olmadığı şeklinde 3 ilkedен oluşan bir Japon felsefesi olarak da tanımlanmaktadır (Tsaknaki ve Fernaeus, 2016 akt. Göksel ve Erbay, 2021, s. 931). Asimetrik, dingin ve uyumlu olmayı öne çıkaran bir felsefesi vardır. Bir el işçiliğindeki doğal kusurlar ve asimetrinin estetiği wabi, üzerinden yıllar geçmiş ve yılların yıpratmış nesnelerin estetiğine yapılan atıf sabi olarak tanımlanabilir (Göksel ve Erbay, 2021, s. 931).

Wabi-sabi, ilham kaynağı olarak doğayı benimsediği için renk skalasında yapay renklere yer vermemekte ve ham malzemelerin kullanıldığı rüstik stil gibi, doğal malzeme öğelerini içerisinde barındırabilmektedir. Kullanılan malzemelerin doğal yönlerinin, kusurlarının gizlenmek yerine ortaya çıkarılması, nesnelere yaşanmışlık ve manevi anlam katan çatlaklar, aşınmalar, lekeler, yıpranmalar gibi izleri göz önüne sermek, wabi sabi stilinde önem arz etmektedir. Bu stilde her şeyin tek parça veya takım halinde olması ve birbiriyle çok fazla uyumlu olması gerekmemekte, uyum algısı kullanıcı inisiyatifine bırakılmaktadır. Hasarlı eşyalar bu stilde atılmaz ve elden çıkarılmaz, tamir edilip kullanılmaya devam edilir ve taşıdığı yaşanmışlıkla daha kıymetli hale gelir (Yurtgün ve Erdoğan, 2019, s. 91-93).

Ev tasarım, inşaat ve peyzaj firması ALLPRACE tasarımcısı Shanty Wijaya, Wabi-sabi'nin popülerliğini, 2020'nin benzeri görülmemiş zorluklarla dolu bir yıl olmasına bağlamıştır.

Pandemideki karantinaların tutumları ve hayata bakış açılarını değiştirmesi ve evlerde çok zaman geçirmek; değişimin, hayattaki tek sabit şey olduğunu ve bundan zevk alabilmek için onu kucaklamak gerekliliğini fark etmeye yol açtığını belirtmiştir. Wijaya, wabi-sabi'yi oluşturan ilkelerin dekorasyonda yankı uyandırdığını, çünkü doğa ile bağ kurmayı ve basit zevkleri takdir etmeyi teşvik etmesiyle, endişeli zihinlerimize bir huzur ve sükûnet duygusu aşıladığını belirtmiştir (Dyas, 2021).

2.2.4. Hijyenik Alanlar

Covid-19 pandemisinden bu yana tüketiciler, öncekine nazaran daha çok sağlık ve güvenlik odaklı hale gelmişlerdir. Virüslerin, temizlik, hijyen, güvenlik ve sağlığın korunması konusunda geçmişten günümüze belirleyici faktör olmasına rağmen, mevcut tüketiciler Covid-19 nedeniyle bu alanda daha güçlü bilinç sahibi olmuşlardır (Lee & Kang, 2021 akt. Koo ve Youn, 2021, s. 82).

Mobilya sektörüne yönelik yapılan bir araştırmada (Marketing Türkiye, 2021), hijyen faktörünün ve hijyenik dekorasyon ve mobilyalara olan ilginin, Covid-19 ile önem kazandığını ifade edilmiştir. Yapılan araştırma neticesinde, özellikle orta yaşlı ev kadınları tarafından silinebilir döşeme yüzeyleri istenmektedir (Marketing Türkiye, 2021)

Hijyen alanında pandemi ile özellikle virüslerin temas yoluyla bulaşabilmesi ve yüzeylerde belirli bir zaman aralığında yaşamını sürdürmeye devam edebilmesi sebebiyle, yüzeyinde virüs tutmayan, antiviral ve anti bakteriyel malzemelerin inovatif bağlamda geliştirilmesine yönelik birçok çalışma yapılmıştır. Bunlardan biri, Boyteks Tekstil firmasına ait antiviral kumaş çalışmasıdır. VGuard adı verilen projede, yüksek aktiviteli antiviral partiküller kullanılarak virüsün çevresindeki protein ve yağ çeperlerinin zarar görmesi sağlanarak virüsün etkinliğini yitirmesi hedeflenmekte, böylece yayılmasının ve bu yüzeylerde tutunmasının önüne geçilmektedir. VGuard, özellikle yatak kumaşları için üretilmiş olsa da maske, kıyafet gibi tekstil ürünlerinde de kullanılabilmektedir (Buz, 2020).

2.2.5. Do-It-Yourself (DIY)

Do-It-Yourself, kısaca DIY, Türkçe'de "Kendin Yap" anlamına gelmekte ve kişilerin kimi eşyaları veya objeleri kendi başlarına üretmesi, üzerinde değişiklik yapması veya onarması anlamına gelir. Ek olarak doğal ortamdan alınan materyaller, ham veya işlenmiş malzeme veya parçaları kullanarak nesneleri inşa etme, değiştirme veya dönüştürme aktiviteleri olarak da tanımlanır (Enes, 2022, s. 396). 20. yüzyılın başlarında ev alanındaki bakım ve tamirat aktiviteleri ile alakalı görülmekte ve DIY, 1950'lerde genellikle ev ile ilgili, yaratıcı, düşük bütçeli ve keyif verici küçük el işleri ve birtakım nesneler inşa etme faaliyetlerine olan ilgiyi ifade etmektedir (McKellar ve Sparke, 2016, s.179 akt. Enes, 2022, s. 396).

The Freedonia Group tarafından Amerika'da Aralık 2020'de yapılan ulusal bir araştırmaya göre, tüketicilerin %39'u pandemi ile ilişkili değişiklikler nedeniyle ev geliştirme projeleri üstlendiğini bildirmiştir. Freedonia Group, pandemi kaynaklı ev geliştirme faaliyetleriyle ilgili olarak önemli bir satış artışı görülen birkaç kilit pazar kaydetmiştir. Bunlardan bazıları dış mekân aydınlatma, çim ve bahçe bakımı, ev boyası ve elektrikli aletler olarak belirtilmiştir (Schmidt, 2021).

Dyo Genel Müdürü Mehmet Mutlu Uysal'ın belirttiği üzere, hobi boyaları segmentinin bir önceki yıla göre yaklaşık 2 katı kadar büyümesi ve 2020 sonrasında satışların hızla artması; pandemi dönemindeki evde kalma gerekliliğinden doğan vaktin DIY segmentinin büyümesinde etkili olmasının bir getirisi olduğunu belirtmiştir (Gergin, 2022).

3. ARAŞTIRMANIN YÖNTEMİ

Araştırmanın amaçlarına ulaşmak için, veri toplama yöntemi olarak anket tercih edilmiştir. Anket, online olarak gerçekleştirilmiştir. Araştırmaya toplan 206 kişi katılmıştır.

Anketin ilk bölümünü katılımcıların demografik özelliklerini belirlemeye yönelik ifadeler oluşturmaktadır. İkinci bölümde, karşılaştırmalı bir analiz yapabilmek adına katılımcı kitlesini 2 gruba ayırmaya yönelik bir soru bulunmaktadır. Sonraki bölümde pazar trendlerinde tasarım anlamındaki eğilimi anlamak için bir takım yargı cümleleri ve bir görsel verilmiştir. Sonraki bölümde pandemi ile ilgili yaşam tarzı değişikliklerini anlamak için sorular bulunmaktadır. Son olarak da pandemi sürecinde mobilya ve dekorasyon öğesi satın alma davranışlarını ölçen bir soru seti bulunmaktadır. Bu soru seti, mobilya ve dekorasyon sektöründeki uzman kişilerin görüşleri

alınarak ve pandemi trendlerindeki literatür taramasında sıklıkla geçen, sıcaklık, doğallık gibi anahtar kelimeler baz alınarak hazırlanmıştır.

Anket yayınlanmadan önce 5 kullanıcıya ön test yapılarak soruların tutarlılığı, anlaşılabilirliği, yargı cümlelerinin net olup olmaması ve gözden kaçan herhangi bir yer olup olmadığı kontrol edilmiştir. Ardından veriler internet ortamından toplanmış, düzenlenmiş ve SPSS programı ile analiz edilmiştir.

3.1. Araştırmanın Süreci

Anketin ikinci bölümünde, katılımcı kitlesini 2 gruba ayırmaya yönelik doğum yılının son rakamının tek veya çift olması sorusu bulunmaktadır. Bu soruda amaç, seçimlerine göre katılımcılara farklı görsel göstererek aynı yargı cümlelerinden oluşan soru setini karşılırlarına çıkarmak ve böylece karşılaştırma yapabilmektir. Doğum yılının son rakamının tek veya çift olması, demografik açıdan nüfus içerisinde alınacak bir örneklem içerisinde yaklaşık olarak eşite yakın dağılacığı için, katılımcı kitlesi hemen hemen eşit sayıdaki 2 gruba bölünmüş olacak ve sağlıklı bir değerlendirme yapılabilecektir.

Seçimine göre katılımcı farklı görselin fakat aynı soru setinin bulunduğu bölüme gitmektedir. Doğum tarihinin son rakamı tek ise göreceği resim, pandemi öncesi dekorasyon stilini yansıtarak kurgulanmış bir evden çalışma alanı olacaktır. Soru seti ise, 5’li likert ölçeğinde tasarlanmış, resmin katılımcılar üzerinde yarattığı duyguları ve algıları anlamaya yönelik sorulardır.

Katılımcının doğum yılının son rakamı çift ise göreceği resim, pandemi sürecinde trend olduğu iddia edilen tasarım stilini yansıtan bir evden çalışma alanı olacaktır. Soru seti ise, diğer görselinki ile aynıdır.

Resim 1: Pandemi öncesi trend
(Blanchfield, 2020).

Resim 2: Pandemi dönemi
(Deskardcor, 2022).

Resim 1, genel görünüş ve tarz itibarıyla minimalist bir stildedir. Hâkim olan renkler beyaz ve grinin soğuk tonları olup, mobilyalarda parlak ayaklar, çalışma masasının üstünde ise çok az nesne bulunup tamamen görev odaklı bir izlenim hakimdir. Kurgulanan çalışma ortamı sade, şık ve pek fazla kişiselleştirilmiş öğe barındırmayan bir ortamdır. Resim, pandemiden önceki yıllarda trend olmuş dekorasyon konseptlerinden öğeler barındırmakta ve pandemi süresince hâkim olduğu iddia edilen trendlerin tam tersi olacak şekildedir.

Resim 2’deki konsept, tam anlamıyla pandemi sürecindeki trendleri yansıtmaktadır. Doğal ve sıcak renk tonları, aydınlık ortam, ciddiyyetten ve odaklılıktan çok ev hissi veren rahat ve samimi ortam, kişisel öğeler, dekoratif objeler ve doğallığa vurgu yapan kullanılan bitkilerle pandemi trendlerini başarılı şekilde gözler önüne sermektedir.

Bu iki görselin seçilmesindeki bir diğer sebep, ikisinde de aynı çalışma istasyonunun kullanılmış olmasıdır. Kullanılan çalışma masası IKEA’nın LAGKAPTEN/MITTBÄCK adlı ürünüdür (IKEA, 2022). İki görselde de aynı ürünün kullanılıp farklı konseptler kullanılması, bilinçli bir seçimdir. Çünkü böylece katılımcının mobilya zevkünden doğabilecek değişkenlik sabit tutularak verilerin isabetliliği sağlama alınmak istenmiştir.

Her iki görselin altında da aynı soru seti bulunmaktadır. Bu sorular genel olarak görsellerin katılımcılara neler hissettirdiği, nasıl duygular uyandırdığı ve neler düşündüğünü ölçmeye yönelik olup, görselle ilgili bir yargı cümlesi içeren, katılımcıdan da bu yargıya ne kadar katıldığını 1 ve 5 arası likert ölçeği ile derecelendirmesini isteyen bir yapıdadır. Soru setinin 6. ve 21. Soruları, kontrol soruları olup soruları okumadan rastgele işaretleme yapan katılımcıları ayıklamak içindir. Bu bölümün amacı genel olarak katılımcının pandemi öncesi ve pandemi sırasındaki trendden hangisine eğilimi olduğunu keşfedilmesidir. Böylelikle pandemi trendlerinin tüketiciye yansıyor yansımadığı anlaşılabilecektir.

Anketin bir sonraki bölümünde, katılımcılara pandemi dönemindeki yaşam tarzları ve bu dönemdeki mobilya satın alma tercihleri hakkında çoktan seçmeli sorular sorulmuştur. Bu bölümün son sorusu, bu dönemde mobilya satın alıp almadıkları veya planlayıp planlamadıklarıdır. Eğer satın almış veya planlamışlarsa, bir sonraki soru setine ilerleyebilmektedirler. Son soru setinde ise pandemi döneminde mobilya satın alan veya almayı planlayan katılımcıların bu tercihlerini ne yönde ve nasıl yaptıklarına dair sorular bulunmaktadır.

3.2.2. Araştırmada Kullanılan Analiz Yöntemleri

Anketten elde edilecek verilerin değerlendirilmesinde farklılık analizi kullanılmıştır. Anketteki 2 ayrı bağımsız değişkene (doğum yılı son rakamı tek olanlar – pandemi öncesi görseli ve doğum yılı son rakamı çift olanlar – pandemi süreci görseli) yönelik verilen yargı cümlelerinin cevaplarının sayısal değerinin ortalamalarına bakarak, istatistiksel olarak anlamlı bir fark olup olmadığını incelemek amacıyla bağımsız örneklem t-testi kullanılmıştır.

3.2.3. Araştırmanın Hipotezleri

Pandemi dönemindeki mobilya ve dekorasyon trendlerini anlayabilmek adına, literatürde pandemi sürecindeki mobilya ve dekorasyon trendlerine atıfta bulunan çalışmalar göz önüne alınarak aşağıdaki hipotezler hazırlanmıştır.

H1 – “Bu alanda çalışmak isterim yargısı” pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H2 – “Eğer evim için düşünseydim, bu çalışma alanına benzer bir konseptte çalışma alanı kurgulardım” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H3 – “Bu alanda verimli çalışacağımı hissediyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H4 – “Bu çalışma alanında konforlu hissedirim” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H5 – “Bu çalışma alanı bana sıcaklık duygusu çağrıştırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H6 – “Bu çalışma alanında sakinlik hissedirim” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H7 – “Bu çalışma alanı bana doğallık hissini çağrıştırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H8 – “Bu çalışma alanı bana özgürlük hissini çağrıştırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H9 – “Bu çalışma alanında huzurlu hissedirim” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H10 – “Bu çalışma alanı samimi hissettiriyor yargısı” pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H11 – “Bu çalışma alanı bana güven hissini çağrıştırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H12 – “Bu çalışma alanı ciddiyet hissettiriyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H13 – “Bu çalışma alanını estetik buluyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H14 – “Bu çalışma alanının fonksiyonel olduğunu düşünüyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H15 – “Bu çalışma alanını ilham verici buluyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H16 – “Bu çalışma alanının sade ve yalın olduğunu düşünüyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H17 – “Bu çalışma alanının dinamik olduğunu düşünüyorum” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H18 – “Bu çalışma alanı bana mükemmeliyetçilik hissini çağırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H19 – “Bu çalışma alanına hâkim olan renkler bana iyi hissettiriyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H20 – “Bu çalışma alanı bende çalışma isteği uyandırıyor” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

H21 – “İmkânım olsa, bu görseldeki konsepti satın almak isterdim” yargısı pandemi öncesi ve pandemi dönemine göre farklılaşmaktadır.

4. ARAŞTIRMANIN BULGULARI

Bu başlık altında araştırmaya katılan kişilerin demografik özelliklerinden, hipotezlerin testinden ve diğer bulgulardan bahsedilecektir.

4.1. Araştırmaya Katılanların Demografik Özellikleri

Araştırmaya katılanların %51’i erkek ve %49’u kadındır. Araştırmaya katılanların büyük bir çoğunluğu (%69) 25-44 yaş aralığındadır. Katılımcıların %82’si üniversite ve üzeri düzeyde eğitime sahiptir. Tam zamanlı ofis çalışanı ve memur meslek grubuna sahip olanların oranı %53,4’tür. Geriye kalanların meslek grupları ise işçi, iş yeri sahibi, emekli ve ev hanımlarından oluşmaktadır. Araştırmaya katılanların gelir ortalamaları 12814 TL dir.

4.2. Pandemi Dönemine İlişkin Yaşam Koşulları ve Mobilya Satın Alma Davranışları

Katılımcıların büyük çoğunluğu, %42’lik bir oran ile pandemi döneminde evlerinde 4 veya daha fazla kişi ile yaşadığını belirtmiştir.

Pandemi döneminde katılımcıların %76,7’si evden çalışan veya eğitim gören en az 1 kişinin evde bulunduğunu belirtmiştir.

Pandemi döneminde, katılımcıların %43,7’si modern, fonksiyonel ve şık mobilyaları tercih ederken, %36,9’u minimalist, sade ve işlevsel mobilyaları tercih etmiştir.

Bu dönemde, katılımcıların %50’si mobilya satın alma davranışını internet üzerinden gerçekleştirme eğilimindeyken, %47,2’si mobilya mağazalarından satın almayı tercih etmiştir.

Pandemi döneminde insanların satın aldıkları ürünleri incelediğimizde (katılımcılara birden fazla seçenek seçme imkanı verilmiştir) yoğunluğun %47,6’lık bir oranla raf, dolap ve düzenleyici eşyalarda olduğu görülebilir. Bunu %41,9’luk bir oranla dekoratif objeler, biblolar ve bitkiler kategorisi izlemektedir. Üçüncü olarak, eğilimin %41’lik bir oranla çalışma masası ve sandalyesi kategorisine yoğunlaştığı söylenebilir.

Bu dönemde katılımcılar %70,5’lik bir yüzde ile değişen ve yeni oluşan ihtiyaçları sebebiyle alışveriş yaptıklarını belirtmişlerdir. Bunu, %23,8’lik bir oranla eski görünümünden sıkılmaları ve yaşam tarzlarının değişmesi izlemiştir.

Pandemi sürecinde katılımcılar mobilya ve dekorasyon öğesi satın alırken hangi kriterin daha etkili olduğu sorusuna (katılımcılara birden fazla seçenek seçme imkanı verilmiştir), birinci sırada, kullanma amaçlarını tam olarak karşılama (%67,6) cevabı verilmiştir. İkinci sırada evlerine uyum sağlaması kriteri (%64,8) ve üçüncü olarak da tarz, stil, tasarım ve renk (%62,9) kriterleri izlemiştir.

4.3. Hipotezlerin Testi

Pandemi öncesi örnek mobilya ürünü inceleyenler ile pandemi sonrası örnek mobilya ürününü inceleyenler arasında anlamlı bir fark olup olmadığı, araştırmada kullanılan ifadelerin karşılaştırılmaları incelenmiştir. Bu amaca ulaşmak için bağımsız örneklem t testi kullanılmıştır. Analiz sonuçları aşağıdaki tabloda sunulmuştur.

Tablo 1: Hipotezlerin Testi (Bağımsız Örneklem T Testi)

Hipotez		Levene Varyans Eşitliği Testi		Bağımsız Örneklem T Testi			Ortalamalar	
		F	Anlamlılık	t	SD	Anlamlılık	Pandemi Öncesi (N= 96)	Pandemi Sonrası (N= 110)
H1	Bu alanda çalışmak isterim.	3,517	0,062	-0,199	204	0,842	4,14	4,16
H2	Eğer evim için düşünseydim bu çalışma alanına benzer bir konseptte çalışma alanı kurgulardım.	0,444	0,506	-0,706	204	0,481	3,89	4,00
H3	Bu alanda verimli çalışacağımı hissediyorum.	5,492	0,020	-0,420	203,559	0,675	4,01	4,07
H4	Bu çalışma alanında konforlu hissederim.	0,006	0,941	-1,018	204	0,310	3,78	3,95
H5	Bu çalışma alanı bana sıcaklık duygusu çağrıştırıyor.	10,406	0,001	-4,770	187,114	0,000	3,29	4,15
H6	Bu çalışma alanında sakinlik hissederim.	1,276	0,260	-1,825	204	0,069	4,03	4,28
H7	Bu çalışma alanı bana doğallık hissini çağrıştırıyor.	2,693	0,102	-5,472	204	0,000	3,17	4,07
H8	Bu çalışma alanı bana özgürlük hissini çağrıştırıyor.	0,000	0,994	-2,931	204	0,004	3,27	3,79
H9	Bu çalışma alanında huzurlu hissederim.	0,228	0,634	-2,924	204	0,004	3,68	4,14
H10	Bu çalışma alanı samimi hissettiriyor.	5,308	0,022	-3,853	194,757	0,000	3,34	3,98
H11	Bu çalışma alanı bana güven hissini çağrıştırıyor.	1,061	0,304	-2,522	204	0,012	3,53	3,92
H12	Bu çalışma alanı ciddiye hissettiriyor.	3,121	0,079	5,242	203,962	0,000	3,93	3,09
H13	Bu çalışma alanını estetik buluyorum.	0,649	0,421	-3,168	204	0,002	3,88	4,35
H14	Bu çalışma alanının fonksiyonel olduğunu düşünüyorum.	3,526	0,062	1,139	204	0,256	3,81	3,63
H15	Bu çalışma alanını ilham verici buluyorum.	0,189	0,664	-2,962	204	0,003	3,19	3,69
H16	Bu çalışma alanının sade ve yalın olduğunu düşünüyorum.	9,767	0,002	1,527	191,857	0,128	4,42	4,21
H17	Bu çalışma alanının dinamik olduğunu düşünüyorum.	0,015	0,902	0,343	204	0,732	3,39	3,33
H18	Bu çalışma alanı bana mükemmeliyetçilik hissini çağrıştırıyor.	0,705	0,402	1,637	204	0,103	3,54	3,24
H19	Bu çalışma alanına hakim olan renkler bana iyi hissettiriyor.	4,524	0,035	-3,510	191,232	0,001	3,63	4,18
H20	Bu çalışma alanı bende çalışma isteği uyandırıyor.	3,577	0,060	-1,904	204	0,058	3,69	3,99
H21	İmkanım olsa, bu görseldeki konsepti satın almak isterdim.	0,129	0,720	-1,330	204	0,185	3,42	3,67

Pandemi öncesi ve pandemi sonrası mobilya trendlerinin karşılaştırıldığı analiz sonuçlarına göre, anlamlılık düzeyi 0,05'in altında olan yargılarda anlamlı farklılık olduğu tespit edilmiştir. Bu bilgiden hareketle; H5, H7, H8, H9, H10, H11, H12, H13, H15 ve H19 hipotezleri desteklemiş ve diğer hipotezler reddedilmiştir.

Desteklenen hipotezler için pandemi öncesi ve pandemi sonrası ortalamalar karşılaştırıldığında; “Bu çalışma alanı bana sıcaklık duygusu çağrıştırıyor”, “Bu çalışma alanı bana doğallık hissini çağrıştırıyor”, “Bu çalışma alanı bana özgürlük hissini çağrıştırıyor”, “Bu çalışma alanında huzurlu hissederim”, “Bu çalışma alanı samimi hissettiriyor”, “Bu çalışma alanı bana güven hissini çağrıştırıyor”, “Bu çalışma alanını estetik buluyorum”, Bu çalışma alanını ilham verici buluyorum” ve “Bu çalışma alanına hakim olan renkler bana iyi hissettiriyor” yargılarına yönelik olarak pandemi sonrası trendlerin daha fazla

tercih edildiği görülmektedir. Sadece, “Bu çalışma alanı ciddiye hissettiriyor” ifadesinde pandemi öncesi trend daha fazla beğenilmiştir.

5. SONUÇ

Bu çalışmada pandemi öncesi mobilya trendleri ile pandemi sonrası trendlere yönelik katılımcıların değerlendirmeleri çeşitli yargılar kullanılarak incelenmiştir. İki dönem arasında trendlerde farklılık olup olmadığı bu yargılar dikkate alınarak analiz edilmiştir. Yapılan analizler neticesinde 10 yargıda anlamlı fark olduğu tespit edilmiştir. Geriye kalan 11 yargıda ise, iki döneme ilişkin değerlendirmelerde herhangi bir farklılık bulunmamıştır.

Pandemi sürecindeki mobilya konsepti, katılımcılara diğer konseptte oranla daha fazla sıcaklık, doğallık, özgürlük, huzur, samimiyet ve güven duygusu vermiştir. Buna ek olarak, pandemi dönemi konsepti daha estetik ve ilham verici bulunmuş ve bu konseptte hâkim olan renkler katılımcılara daha iyi hissettirmiştir. Öte yandan pandemi öncesi konsepti, katılımcılara göre anlamlı seviyede daha fazla ciddiye hissettirmiştir. Önemli tasarım dergileri ile karşılaştırma yapıldığında, bu dergilerde iddia edilen doğal malzemeler, sıcak renk tonları, bitki kullanımı gibi trend unsurlarının dekorasyonda kullanılması, gerçekten de kullanıcılarda sıcaklık, özgürlük, doğallık, huzur ve samimiyet duyguları uyandırmış, kullanıcılara iyi hissettirmiş ve bu konsept diğerine göre daha estetik bulunmuştur. Bunun sonucunda katılımcıların algısal olarak gerçekten de doğaya özlem duydukları, özgürlük hissi aradıkları, evde geçirdikleri zamanda huzur ve samimiyet hissedip “ev gibi” hissini aradıkları, özetle pandemi trendlerine yöneldiklerini görmek mümkündür.

Çalışmanın diğer bulguları incelendiğinde büyük çoğunluğun modern fonksiyonel ve şık mobilyaları, ikinci olarak da minimalist, sade ve işlevsel mobilyaları tercih ettiği görülmektedir. Büyük çoğunluk, pandeminin olmadığı 2010’lu yıllarda popüler olduğu iddia edilen modern ve minimal mobilya tarzını seçmiştir. Pandemi trendlerinden doğala dönüş bakış açısını yansıtan rustik, eskitme mobilyalara olan eğilim çok azdır. Bu durum pandemi trendlerinin mobilya tarzı seçimi alanında tüketiciye tam olarak yansımadağını göstermektedir.

Katılımcıların yarısı, pandemi döneminde internetten mobilya ve dekorasyon ögesi satın almayı tercih etmişlerdir. Bunu %42,7 ile mağazadan almak isteyenler izlemiştir. İnternet alışverişinde artış olması, literatürde bu konuda ortaya koyulmuş olan çalışmalar, bu araştırma sonucunu destekler niteliktedir. Pandemi her şeyin temassız ve dijital hale gelmesi, şüphesiz ki mobilya satın alma alanında da tüketicilerin tercihlerini değiştirmiştir. Bunun yanı sıra pandemi sürecinde popüler olduğu iddia edilen ikinci el satın almalar, DIY uygulamaları, tamirat – tadilat gibi akımların revaçta olduğuna dair önemli bir bulguya ulaşılamamıştır.

Katılımcılar bu dönemde en çok raf, dolap, düzenleyici eşyalar satın almış, bunu ufak dekoratif objeler ve bitkiler izlemiş, hemen hemen aynı oranda ise ofis masaları ve sandalyeleri yer almıştır. Bu istatistik, IKEA tarafından ortaya konulan verileri destekler niteliktedir (Chaudhuri, 2020). İnsanların gerçekten de evden çalışma ve eğitim görmeye geçmesi ile evden çalışma trendine yönelik ihtiyaçlarının oluştuğu ve evlerini kişiselleştirmeye önem verdikleri söylenebilir.

Katılımcıların bu dönemde en belirgin mobilya alma sebepleri, değişen veya yeni ortaya çıkan ihtiyaçlarını gidermektir. Bunu, yaşam tarzlarının değişmesi ve eski görünümünden sıkılmaları izlemektedir. Bu 3 madde de aslında pandemi ile evlere kapanmanın mobilya ve dekorasyon satın alma motivasyonlarına nasıl etki ettiğini açıkça göstermektedir. Pandemi insanların evleri ile ilgili değişiklik yapma eğilimi içerisinde oldukları, evden çalışma gibi konularda yeni ihtiyaçlarının ortaya çıktığı literatür araştırmasından bilinmektedir. Araştırma sonuçları da bunu destekler niteliktedir. İnsanlar bu süreçte mobilya satın alımı yaparken kullanma amaçlarını tam olarak karşılamasını, yani işlevselliği ve fonksiyonelliği ön planda tutmuşlardır. Bunu, evlerine uyum sağlaması ve mobilyanın tarzı ve stili izlemektedir. Pandemi ile birçok alanda trend olan hijyen eğilimi, tüketicinin mobilya seçim kriterlerinde dördüncü sırada yer almıştır. Bu sebeple hijyen eğilimi ve ilgisinin pandemi ile bir trend olup olmadığını söylemek mümkün değildir. Bunun, ancak geçmiş yıllara ait bir araştırma verisi olduğu taktirde karşılaştırma yapılarak bir trend olduğunu söylemek mümkün olabilir.

Elde edilen sonuçlar, bulgular ve yapılan analizler sonucunda, pandemi şartlarının insanlar için yeni ihtiyaçlar ve gereksinimler oluşturmalarının yanı sıra, mobilya ve dekorasyon ögesi seçiminde pandemi trendleri olarak adlandırılabilir görsel, tasarımsal ve işlevsel olgulara eğilimleri olduğunu söylemek mümkündür. Her ne kadar pandemi trendleri tüketici için anlam ifade etse ve algısı o yönde olsa da bunun satın alma niyetlerine tam olarak yansımadağı ortaya çıkmaktadır. Bu çalışma, tasarımcılar, mimarlar, pazarlamacılar ve sektörün önde gelen mobilya ve dekorasyon firmaları için, tüketici algısını anlamak, günün trendlerini ortaya koymak ve gelecekteki trendlerin neler olabileceğini analiz etmek adına faydalı olabilir. Belli aralıklarla bunun gibi

çalışmaların geliştirilmesi ve periyodik olarak tekrarlanması, tasarımcılar, pazarlamacılar ve sektörün önde gelen paydaşları için yol haritası olacak, ayrıca bu çalışmanın kapsamı genişletilerek ve geliştirilerek literatüre daha fazla katkı sağlayabilecektir.

Effects of Brand and Advertising Strategies on Global Marketing

Assist. Prof.Hasan Selçuk ETİ¹

¹Tekirdağ Namık Kemal Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme, hseti@nku.edu.tr, ORCID: 0000-0002-3792-697X

Özet: With the globalizing world and the development of technology, communication between continents has changed and it has become easy. Along with this changing and developing condition, companies are also looking new ways to survive in this market environment where competition is increasing, to make a difference between the product variety and to stand out and to ensure their continuity. As a result of this search, the concept of branding emerges. Branding; means the integrity of a product with its name, symbol, colors, design, value and function. In this market environment where product diversity and similar products increase, businesses need to follow a different way than their competitors in order to survive. In order to create and maintain customer satisfaction and customer loyalty in the product that consumers choose and use within this wide range of products, businesses need to stand out with their brand and advertising strategies that they create.

Anahtar Kelimeler: Global Marketing, Brand, Advertisement. Advertisement Strategy

INTRODUCTION

With the rapid development of globalization, transportation, communication and communication sectors are also showing rapid development. Since the 80s, the concept of brand has started to stand out and its meaning has expanded even more today. Now the concept of a brand is no longer just a logo, sign or color, but can be considered as a promise that businesses make to their consumers.

With the rapid increase in competition in the evolving and developing markets with the concept of globalization, the number of goods and services bought and sold has also increased significantly, which has led to the need to distinguish products from each other. Manufacturers have resorted to branding in order to both keep the level of quality they offer to the consumer at a certain level and to distinguish their products from other products on the market. Consumers who do not have the opportunity to try the products for the first time in any way when purchasing, have been informed about these brands promoted by advertising or other means of communication (Bishkin, 2004).

The brand encourages the consumer to buy a product and plays a role in direct marketing activities. But he does it in a different way. A brand does not explicitly say "buy me". On the contrary, "This is what I am. If you love me, you can buy, support and recommend me to your friends. " (Heaton, 2011).

With the brand being the most important factor in marketing communication, it serves as a guide for understanding the purpose of business goals. It ensures that a marketing plan is organized in accordance with these goals and the overall strategy is fulfilled (Laura, 2017).

Branding is the management process of a brand. Branding also needs to be managed effectively in order to achieve a good result in this process. In the globalized market environment, companies need to apply a correct strategy in order to survive, not to lag behind and to develop.

Advertising is a tool by which businesses can clearly and clearly communicate their identity, brands that they have created to consumers. Even if it is not the marketing of a product, all stages support each other. In order for the manufactured product to attract the attention of consumers, brand promotion must be done in a good way. Advertising can be considered as a complement to the products that businesses produce.

In this study, it was examined how branding and advertising strategies are handled together, what kind of benefits they have from a marketing point of view.

1. THE CONCEPT OF GLOBALIZATION AND ITS DEVELOPMENT

1.1 Definition of the Concept of Globalization

Globalization; economic, political and cultural meaning is also a phenomenon that combines different and opposing thoughts that have led to an inevitable standardization with advanced technologies by ensuring international trade, especially since the 1980s.

With the concept of globalization, national culture and borders have been weakened; economically, culturally and politically. Technological developments and developments in the communication sector have initiated a process of change that is effective worldwide (Aktan & Vural).

“When attention is paid to the definitions of globalization, it is seen that more economically based definitions and perspectives are used to explain the process. However, the socio-cultural and political dimensions of the process should not be ignored in the Deciphering of globalization (Çetin, 2008).”

With globalization, changes and differences are occurring in the world. Societies, people, cultures, political systems and economies have been greatly affected and continue to be affected in this process along with globalization. For this reason, definitions related to globalization are made by looking at the changes taking place in these areas from different angles.

1.2 History of the Concept of Globalization

The development of globalization has taken place in three stages. the first globalization in the 1490s, the second globalization in the 1890s, and today it can be said as the third globalization in the 1990s. Communication plays an important role for the third period of globalization, which began in 1968 and continues today.

“It was during this period that information and communication technologies came to an important position, a consumption-oriented society emerged instead of a production society, and multinational enterprises had important roles in the market. Global organizations such as the World Trade Organization, the International Monetary Fund, the International Chamber of Commerce, the World Economic Forum and the World Bank have emerged. In addition to these formations, international agreements have started to be made again, and international agreements have gained importance. Globalization is not a completed process yet, it continues its formation and development (Çakmak, 2014).”

“Today, when the third phase of globalization is taking place, the attack of multinational companies in the 70s has gained momentum with the inventions that will be experienced in communication technologies in the 80s, while in the 90s it has caused the West countries to see themselves as unbeatable. In this third stage, where the results are characterized as ‘globalization’, the Western world has passed from land occupation to cultural occupation with the communication power it holds, and the whole world has started the process of “sameness”, which has led to the reaction of opponents of globalization in particular (Tokat, 2014).”

Table 1: Three Stages of Globalization

	The First Wave of Globalization	The Second Wave of Globalization	The Third Wave of Globalization
Driving Force	Developments in maritime, Mercantilism	Requirements of industrialization	Multinational companies in the 1970s, The communication revolution in the 1980s, The lack of rivals of western countries in the 1990s
Method	First discoveries and then Post Military Occupation	First the missionaries, then the explorers, then the trade companies finally invaded.	Cultural-Ideological influence. Thus, every part of the country (economic, political, social) is automatically affected.
Justification	Bringing the religion of God to the pagans	Racist theories like 'white man's burden' 'civilizing duty'	"The highest level of civilization" "The will of the international community" "The secret hand of the market" "Globalization is in the common interest of all"
Result	Colonialism	Imperialism	Globalization

Reference: (Oran)

Held explains that culture, justice, environment, finance, economy and all areas of life while emphasizing that the perception of dependence is formed by deepening rapidly and deepening and he explains globalization with four transformations (Yildiz, 2007):

- * Decoupling of social, political and economic events between political borders and continents
- * Intensification of trade, finance, investment and cultural movements with these effects
- * Developments in communication and transportation accelerate the dissemination of capital, goods, ideas and information
- * The fact that an event that takes place anywhere in the world can become a global event due to the ease of transmission and transportation (Yildiz, 2007).

2. GLOBAL MARKETING AND ADVERTISING

2.1 Global Marketing

2.1.1 Definition of Global Marketing

Global marketing is the marketing of goods and services outside the borders of a country (Karafakioğlu, 1997). According to a deeper definition, it can also be defined as ‘determining the wishes and needs of customers, providing products and services that will provide marketing superiority to the business, providing information about products and services, and making international exchanges through one or more ways of entering foreign Markets’ (Bradley, 2002). Global marketing is the realization of marketing functions that are taking place in local or regional markets in global markets. The marketing mix that emerges in this way should be supported according to the countries in which it operates (Kozlu, 2003). In a different definition, global marketing is a planning and implementation process applied in many countries in relation to the creation, development, pricing and distribution of goods, services and ideas in order to realize the differences that will enable reaching business goals (Tenekecioğlu, 2002).

According to another definition, global marketing is the effort of a business to create what all consumers might want by considering them, and to better meet the demands and needs of its consumers, both from competitors in the domestic market and from competitors in the foreign market. This means that functions such as market intelligence, product development, pricing, distribution, promotion are performed within the country, in addition to exporting them to several countries (Tek, 1999).

Global market means all markets outside the borders of the country. This concept covers multiple different markets. Each of these markets should be considered and studied separately. Each different market structure can be completely different in terms of demographic, economic and behavioral aspects. (Tavukçuoğlu, 2006).

2.1.2 The Importance of Global Marketing

Technological developments are spreading rapidly all over the world with the help of developments in the communication sector, and it has been possible for countries that are slower in terms of technology development to transfer technology from countries that are developing faster. All these changes also lead businesses to think more globally and constitute a driving force for them to move towards global marketing (Cengiz, 2007).

2.1.3. Ways of Entering Global Markets

When businesses operating globally or locally decide to open up to foreign markets, it is undoubtedly what will happen in the process that comes before them. There are some basic forms of globalization for this (Engil, 2010). It is an issue that should be decided by the business how to follow the path to enter the global markets. Two aspects need to be decided upon entering global markets (Altınbaşak & Akyol, 2008).

1-Which are the target country markets?

2-Which methods will be used to enter the market of the determined country?

There are internal and external factors to consider when entering a new market. These are shown in table 2 below.

Table 2: Factors to be considered when entering global markets

INTERNAL FACTORS	EXTERNAL FACTORS
Business purpose	Risk
Need for control	Laws and regulations
Size of business, internal resources, assets and capabilities	Competitive environment
International experience	Local structure
Flexibility	

Reference: (İnal, Yağcı, & Kılıç, 2014).

According to the degree of risk that it may face in marketing, the company selects and applies one or more of the following ways of opening up to foreign markets. "These are;

1-Export

i-Indirect export

ii-Direct export

2-Licensing

3-Making a joint venture

4-There are four types of direct investment decision-making in foreign countries (Engil, 2010)."

2.2 The Concept of Global Advertising

2.2.1 Global Advertising Definition

The globalized market has also caused the globalization of advertising together. The purpose of global advertising strategies is to create the same location and the same advertising strategy for the product, no matter where the product is produced or sold. However, as it starts to expand to different markets by crossing local borders, it requires taking into account many factors such as geographical and climatic changes, as well as different legal regulations, language, culture, understanding and attitude.

The idea that different nations can merge with each other as a result of cultural rapprochement in the world by the advocates of globalization can be seen as a result of global advertising. The fact that the products produced based on the common needs of people are presented at the common denominator and that the presentation can be understood by different cultural selves shows that globalization finds an echo, whether liked or not (Tokat, 2014).

"The supporters of globalization are united on the view that success in international markets will be possible with the introduction of international brands to the markets. Such an application leads to the conclusion that standardized brands are marketed, the same advertising strategy, the same themes, slogans, jingles are designed at the center of certain multinational advertising agencies and published in all countries of the world

Recently, with the increase in competition and competition, businesses have started to give importance to cultural values in their advertising strategies. In the global market network, it is seen that cultural characteristics such as religion, language, belief, habits, customs and traditions are taken into account in order to increase market share and gain competitive advantage, and the messages given in the advertisements are designed accordingly.

One of the most used methods in brand communication tools is advertising. It is delivered to the consumer through means such as television, radio, billboard, print media. By repeating the desired message frequently, it is tried to ensure that it is placed in the consumer's mind and that their preferences are converted into purchasing actions (Çolak, 2014). "Since advertising content will cause the formation of brand value and image in consumers, it is important that the information transmitted in the ads is consistent with the situation they will encounter when buying (Çolak, 2014)". A high-quality and good advertisement will positively affect the consumer's thoughts about the brand and add value to the brand (Çolak, 2014).

2.2.2 Advertising Strategies of Global Brands

There are two alternative ways for global enterprises to measure their advertising strategies. The first one is "glaucal ads" using local or regional icons prepared for different countries, the second one is "global ads"

prepared with the idea that the world has a single center and the countries have similar characteristics (Tokat, 2014).

The reason why advertising appears as an important factor of the global Market is the increase in consumers' loyalty to that product or brand, thus making it effective in the loyalty and continuity of the targeted customer target group (Tokat, 2014).

2.2.3 Target Audience in Global Advertising

While the target consumer audience is covered in a national way, all the differences that may occur in the correct form of the desired message to be given in the advertisement should be taken into account and acted on a common denominator. Importance should be given to the elements of cultural indicators that may create selectivity in perception, including symbols, colors and writing format.

Advertising is also a more dynamic and interactive process than communication is thought. The message that the consumer extracts from this communication process is shaped by the prejudices he has, causing him to form an opinion about the product (Jones, 2004).

2.2.4 Purpose in Global Advertising

The life of products and services that start as soon as they enter the Market, the period of development, maturity and decline also ends. Marketing objectives, competition, product variety, price and distribution activities, as well as in the field of promotion, are related to the stage of life of the product in the field of promotion. The element that determines the purpose of the advertisement can also be explained by this stage (Tokat, 2014).

Table 3: Life Stages of the Products

	Market Entry	Growth	Maturity	Regression
Marketing Tools	To realize	Emphasizing the difference	Maintaining brand dominance	give up the product, reduce the cost
Rivalry	None	Increasing	Too much	Declining
Product	One	Many kinds	Full product lineup	Best sellers
Price	Market penetration	Increasing market share	At levels that maintain market share and profit	At profitable levels
Promotion	Information, training	Emphasizing competitive differences	Reminder, guide	Minimal attachment
Distribution	Annoyed	To many points	At the highest level	To several points

Reference: (Tokat, 2014)

3. BRAND CONCEPT AND BRANDING

3.1 Definition of the Brand Concept

3.1.1 Brand Description

According to the definition of the American Marketing Association (AMA) association, a brand is all of the characteristics such as a seller's name, term, design, symbol in a way that distinguishes its goods or services from others (Özbek, 2018).

According to Cemalcılar, the concept of brand, which has a broad meaning, covers everything that determines the product except the form and packaging of the product (Cemalcılar, 1994). According to Aaker; "A brand that is beyond being a name and logo is the promise of a business to give the customer what the brand symbolizes not only in functional, but also in emotional and social areas (Aaker, 2014)." If we consider the brand definition in more detail; "provided that it allows distinguishing the goods or services of one business from the goods or services of another business; it includes all kinds of signs, including two-person names, in particular words, shapes, letters, numbers, the shape or packaging of goods, which can be displayed by drawing or expressed in a similar way, published and reproduced by printing, for example."The brand should make a promise to consumers, make them buy and use it again and make them recommend this brand to their surroundings (Ayhan, 2012).

The importance of the brand can be examined from the point of view of consumer, manufacturer and retailer (Hisrich & Peters, 1991).

"1-Importance from the manufacturer's point of view;

- Helps to create a brand image.
- * Reduces price comparison.
- * Allows the expansion of the product line.
- * Protects the Market.

2-Importance for consumers;

- * Determining the product.
- * Quality determination and communication.
- * Determines new presentations.

3-Importance for stakeholders;

- * Central purchase for the retail chain.
- Being noticed at the point of sale.
- * Brand perception."

Figure 1: Example Brand Logos

3.1.2 Basic Concepts of the Brand

3.1.2.1 Brand Personality

A brand is given a personality by manufacturers as a marketing strategy, followed by a formation as a brand personality. The personality created by the manufacturers, that is, the consumer is enabled to find characteristics from himself in the brand personality, creating a connection between the brand personality and the consumer by exhibiting a unique style Decently. In this way, all of the features that the manufacturer wants to transfer to the consumer by using the marketing strategy cover the brand personality (Aktuğlu & Temel, 2006). "Brand personality is shaped by applications such as product-related features, product category associations, brand name, symbol, logo, advertising style, price and distribution channel. Brand personality is a

bond formed between the brand and the consumer and a feature that the consumer can easily Decipher and express a brand. Brand personality consists of a combination of functional support and symbolic values of the brand. Brand personality affects how people feel about the brand, not their thoughts about what the brand is or what it does (Karaduman, 2017)".

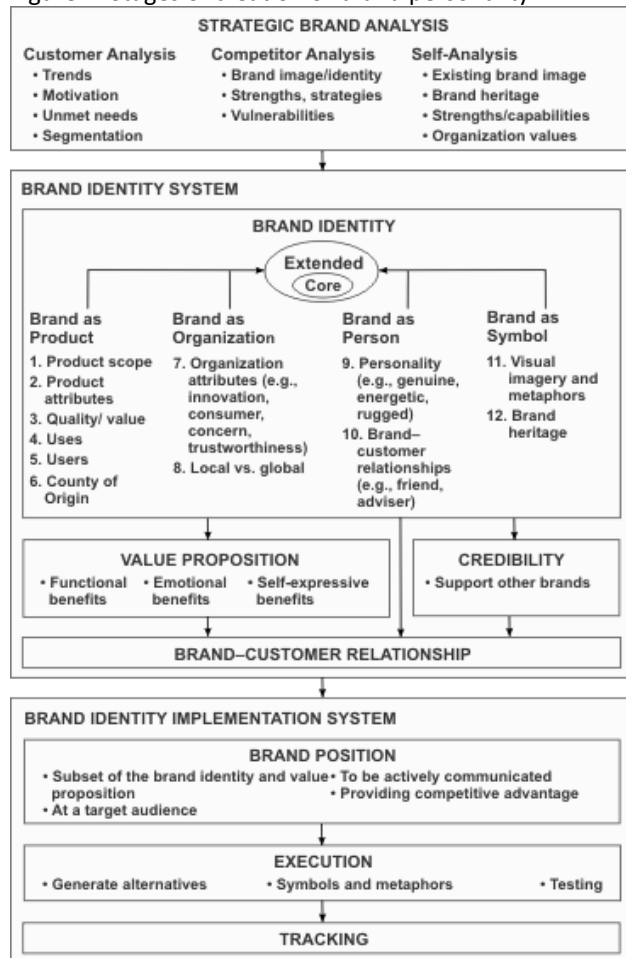

The stages of creating a brand personality are shown as follows (Aaker, 1996)

3.1.2.2 Brand Value

Brand value can be said in the form of" the total value of a brand as a separable asset when it is sold or displayed in the inventory" (Özkaya, 2002).

Brands are seen as an important financial asset in business financial statements. In this context, its value is a determining factor for investors, buyers and shareholders. Therefore, brand value should be taken into account in terms of a financial value, especially if a company buys another brand (Uztuğ, 1997).

Figure 2: Stages of creation of brand personality

Reference: Aaker (1996)

3.1.2.3 Brand Image

The famous advertiser David Ogilvy stated a brand in the 1950s as the consumer's opinion about the product, but in fact he said the definition of brand image (Öztürk O. C., 2014). Brand image can be defined in a very general sense as "the meaning that consumers identify with the product or the sum of what consumers understand from the product" (Akkaya, 1999).

Brand image is what consumers understand as a result of their experience and knowledge about the brand. In short, it is how and in what way consumers perceive the brand (Vanauken, 2003). The brand image consists of all the beliefs about the characteristics of the brand and what they evoke. "Accordingly, the brand image in the mind of a customer is created with four types of resources. Experience is the acquisition of information about the characteristics and credibility of the brand with its previous use. Personal resources are brand

characteristics and associations transmitted by friends, colleagues and others who are seen using the product. The commercial source, on the other hand, is explained by the transmission of brand characteristics and value to others by advertising, shelving, packaging and sales staff (Tavukçuoğlu, 2006)."

Various elements are used to create a good brand image (Yılmaz, 2011);

- Marketing mix elements;
 - ✓ Finished product,
 - ✓ Price,
 - ✓ Promotion
- Integrated marketing communication,
 - ✓ Visual elements;
 - ✓ Colors,
 - ✓ Design,
- Auditory elements;
- Other elements;
 - ✓ Smell,
 - ✓ Taste,
 - ✓ Touch.

3.1.2.4 Brand Loyalty

The term brand loyalty is seen as the result of the consumer's belief and trust in the brand.. When creating brand loyalty, the needs of the consumer are taken into account and the product is delivered to the consumer in a way that can meet the needs (Ak, 2009). Brand loyalty is the long-term repetition of continuous purchasing. In other words, brand loyalty; "A product/service that is preferred by influencing the re-purchase of the same brand or brand set is the determination to purchase again in the future, despite situational effects and competitors' marketing activities aimed at negatively affecting this loyalty (Tek & Özgül, 2005)."

There must be a few conditions to be able to say that there is brand loyalty (Ak, 2009);

"* Brand loyalty is not accidental.

- It is a behavioral reaction. However, there is an effect on their cognitive processes.
- It occurs during a certain period of time.
- * The decision-making is carried out by a unit.
- There must be one or more brand options."

When measuring brand loyalty, there are various types of loyalty from the point of view of consumers. These types of loyalty are shown below (Ak, 2009);

- a. Long-Term Loyalty: Refers to buying only one brand and using it for the long term.
- b. Short-Term Loyalty: Refers to the long-term or short-term use of more than one brand despite the purchase.
- c. Variable Loyalty: refers to the sale of various brands, one after the other
- d. Picky When Shopping: Usually, buying during shopping requires a choice between limited brands. Dec.
- e. Price-Oriented Purchase: Buying multiple brands basically refers to buying generic or special brands.
- f. Light Usage: They are ranked as those who buy very little and other buyers whose purchasing pattern is immeasurable.

Figure 3: Elements of Brand Loyalty

Reference: (Elitok, 2003)

3.2 The Concept of Branding

Branding is the process of recognizing, naming and accepting a newly released product by the market in which it is presented. It doesn't matter if the brand is good or bad. The important thing is to know that brand. In this way, the product becomes a brand (Engil, 2010). "With branding, the brand becomes more valuable than the physical goods of the business. This is where the concept of brand equity emerges. Brand equity emerges as a factor that has a great impact on emphasizing the importance of the brand. (Işgör, 2001)."

3.2.1 Factors Affecting Branding

3.2.1.1 Strategy

Brand strategies There is great importance in branding, including in the process of launching innovations and new products. This concept has recently been called innovation and it has been accepted that innovations can only be successful with effective brand strategies. At the same time, it should be remembered that the fact that new brands are different from other brands is a factor in their success (Alkin, Bulu, & Kaya, 2007). It is important for enterprises to create successful brands in order to be advantageous in the competitive environment of the sector. When companies are able to produce strong, well-known brands, they can have a chance to gain a competitive advantage in their own fields (Öztürk S. A., 1998).

Positioning the brand in a different place from its competitors in terms of customers is another way to create a successful brand. Consumer's expectations for the brand should be determined in the face of competitors. The most important factor to keep the quality of products and services above and to ensure the formation of a quality brand is formed by analyzing customer demands correctly (Quick & Orel, 2008).

3.2.1.2 Leadership

The marketing goals and strategies of the businesses first shape the life cycles of the brands. Brand creation, management and withdrawal from the market are realized with marketing tools. Bringing profit and value to the company in the category in which the brand competes is the first goal in creating and managing a brand. This goal can be achieved by ensuring that the brand is indispensable for the consumer, and as a result, by becoming the leader of the market by taking a step forward in the competitive environment. (Özbek, 2018).

3.2.1.3 Creativity

At the stage of creating the brand of a product, the environment and competitors should be analyzed well first. After the necessary Market researches are carried out, the enterprises that are trying to bring their brand to the forefront make promises that they can make a difference with their brand in the sector. In today's world, it

is known how difficult the creativity factor is to create a difference and maintain its continuity at the same time (Özbek, 2018).

Businesses and advertisers, who creatively create their strategies by taking into account the frequency of use of advertising tools by the target consumer audience, are now taking this issue more into account. Today's consumer audience, which benefits from all areas of technology, provides the flow of information in this way. This situation has made it mandatory for businesses to use these advertising tools when creating their corporate image. It is seen that the correct strategies identified, original, interesting, attention-gathering, creative works and quality works performed, as well as advertisements presented to the consumer affect the consumer's purchasing behavior (Öztürk S. A., 1998).

CONCLUSION

In this research, the terms of global marketing, branding and branding, advertising strategies were reviewed and briefly informed about these terms. According to the information obtained as a result of the research;

Before going to the globalization stage, businesses first need to pay attention to some points in order to reach the consumer in their local market, to create a strong brand and to maintain it successfully. The identity of the brand should be created first, and then invested in the brand. Another important point is to manage the branding process in a way that will protect and strengthen the brand after investing in branding. Reaching a large number of consumers is an important issue in terms of brand identity and awareness. It can be said that competition will increase as the business expands from the local market to the global markets. The best way to distinguish a product from competing products is through branding and branding. The brand becomes the identity of the business. In order to cope with this intense competition environment in local and global markets, it is necessary to distinguish the product from similar products in the eyes of the consumer. This distinction also occurs with the brand.

It is necessary to establish the brand in global markets and to maintain and develop this position until it has a good place in the market. In these conditions, in order to maintain their position in the market, to adapt to the existing competition, and not to lose their reputation in the eyes of consumers, businesses should give importance to R&D studies, they should implement strategies that can continuously increase brand quality and maintain brand loyalty.

“Success for the brand, which finds itself in foreign markets, is to stand out from the competitors, which are very well known on a local or global scale, and to create loyal consumers. It also means a higher level of reputation in the eyes of consumers in the local market. As a result, it should not be forgotten that while marketing activities to the brand increase the brand value, it also increases the company value (Öztürk O. C., 2014).

Elma Ekonomisi ve Pazarlaması

Prof.Dr. Hasan VURAL

¹Bursa Uludağ Üniversitesi Ziraat Fakültesi, hvural@uludag.edu.tr

1. Giriş

Dünya üzerinde çok geniş yayılma alanı gösteren ve değişik ekolojilerde üretimi yapılabilen bir meyve türü de elmadır. Elmanın anavatanı Anadolu'yu da içine alan Güney Kafkaslardır. Ekolojik şartların uygunluğu ve gen merkezi olması nedeniyle elma, yurdumuzun hemen her yerinde çok eski yıllardan beri yetiştirilmektedir. Kültür elması günümüzde kuzey ve güney yarım kürenin hemen bütün ılıman bölgelerine yayılmıştır. Kuzey Amerika, Güney Amerika, Yeni Zelanda ve Avustralya'da elma kültürü yeni olmakla birlikte, buralar en ileri düzeyde elma yetiştiriciliğinin yapıldığı yerlerdir. Avrupa'da kültür elması; İskandinavya'nın güneyine kadar çıkmakta, Akdeniz kıyılarında ancak yüksek yerlerde yetiştirilebilmekte, Kuzey Afrika'da Fas'ta önemli ölçüde üretilmektedir. Ayrıca doğu ve batı Hindistan'da, tropik Amerika'nın dağlık yerlerinde de elma yetiştirilmektedir. Bugün dünyadaki elma çeşitlerinin sayısı 10.000'i aşmış olup, Türkiye'de bu sayı 500 civarındadır.

Elmanın eski bir kültür bitkisi olması, Türkiye'nin birçok bölgesinde ticari anlamda yetiştiriciliğinin yapılması ve dünyada önemli bir ticari mal olması nedeniyle elma üreticilerinin pazarlama etkinliğinin belirlenmesi önem taşımaktadır. Türkiye, elmanın anavatanlarından birisi olmasına rağmen ticari anlamda yetiştiriciliği yapılan çeşitlerin sayısı azdır. Her yıl çok sayıda yeni elma çeşidi geliştiriliyor olsa da üreticilerin bunları benimsemesi zaman almaktadır. Dünyadaki elma üretiminin hala yaklaşık %19'unu Red Delicious, %17'sini ise Golden Delicious çeşitlerinin oluşturması buna en güzel örnektir.

2.Dünya'da Elma Üretim ve Tüketim Durumu

Dünya elma üretim alanı 1998 yılında 5.8 milyon hektar iken, 2006 yılında dünya elma üretim alanı 4.7 milyon hektara düşmüştür. Üretim miktarlarına yıllar itibarıyla bakıldığında, 1998 yılında 56 milyon ton, 2000 yılında 59 milyon ton ve 2006 yılı itibarıyla 63 milyon ton elma üretimi gerçekleştirilmiştir. Elma verimi yıllara göre değişmekle beraber ortalama 11.4 ton/ha'dır. Üretim artışının sıra dünya nüfus artışına bağlı olarak da elma tüketiminde de artışlar olmaktadır. 1998 yılında 49 milyon ton elma tüketilirken, 2000 yılında 50 milyon ton, 2006 yılında ise bu miktar 56 milyon tona ulaşmıştır (Çizelge 1).

Çizelge 1. Dünya Elma Verileri (bin ton)

	2016/17	2017/18	2018/19	2019/20 ³	2020/21 ⁴	Değişim (%) ⁵
Alan ¹ (bin ha)	4.862	4.621	4.645	4.717	-	1,6

İthalat ²	6.255	6.064	5.795	5.943	5.223	-12,1
İhracat ²	6.674	6.473	5.904	5.884	5.257	-10,7

Kaynak: ¹/FAO, ²/USDA (Erişim: 14/06/2021), ³/ Tahmin, ⁴ /Projeksiyon, ⁵/ Verisi bulunan son iki pazarlama yılının değişimini göstermektedir.

Dünya elma üretiminin %72'si on ülke tarafından gerçekleştirilmektedir. Çin ve ABD elma üretiminde ilk sırayı alırken, İran üçüncü, Türkiye ise 2.5 milyon tonla dördüncü sırada yer almaktadır. Bu ülkeleri sırasıyla İtalya, Fransa, Polonya, Rusya, Almanya ve Hindistan takip etmektedir. Güney yarım kürede yer alıp elma üretiminde mevsimsel farklılıkta avantaj sağlayan Arjantin, Şili, Brezilya ve Yeni Zelanda dünya elma üretiminde önemli ülkeler arasında yer almaktadır. Verim bakımından incelediğimizde ülkemiz 23.2 (ton/ha) verim ile dünya ortalamasının üzerinde yer almaktadır. Çin'in üretim bakımından ilk sırada yer alması üretim alanının fazla olmasından ileri gelmektedir.

Çizelge 2. Dünya'da Elma Üreten Önemli Ülkeler

ÜLKELER	ÜRETİM ALANI (bin ha)	ÜRETİM MİKTARI (ton)	VERİM (ton/ha)

3.Dünya’da Elma İhracat ve İthalat Durumu

Dünya genelinde hemen hemen tüm insanların damak tadı ve gelir seviyelerine uygun bir meyve türüdür. Bu sebeplerden kendine geniş bir ticaret alanı bulmuştur. Dünya üzerinde ticareti en fazla yapılan ve tüketici talebinin hızlı değişim gösterdiği meyvedir. Bu talebin karşılanması yoğun yetiştiricilikle üretimlerini gerçekleştiren dünya ülkeleri için hiç de zor olmamaktadır [3]. Dünya elma ihracatında ABD 1.717.190 ton ile ilk sırayı alırken bu ülkeyi sırası ile Çin, Şili, İtalya ve Fransa izlemektedir. Türkiye üretim miktarı bakımından dördüncü sırada olmakla birlikte, dünya ülkeleri arasında ihracat miktarı çok azdır. Oysa elma üretiminde önemli paya sahip ülkelerin çoğu ihracat açısından da ilk sırada yer almaktadır.

Çizelge 3. Dünya Elma İhracatı ve Başlıca İhracatçı Ülkeler (ton)

Ülkeler	2002	2003	2004	2005	2006
ABD	1.447.385	1.482.504	1.643.901	1.766.200	1.717.190
Fransa	766.992	803.778	628.017	654.074	683.351

Kaynak. Food Agricultural Organization, 2006

Dünya elma ithalatı 2006 yılında 6.967.882 ton olarak gerçekleşmiştir. Dünya ithalatının %46.40’ı sekiz ülke tarafından gerçekleştirilmiştir. En önemli ithalatçı ülkeler sırası ile ABD, Rusya, Almanya, Meksika ve İspanya’dır [2].

4.Türkiye’de Elma Üretim ve Tüketim Durumu

Türkiye’de meyve üretimi; halkın beslenmesi, meyve işleyen sanayilere hammadde temin etmesi ve dış ticarete konu olması yönünden önemli bir üretim faaliyeti durumundadır. Türkiye’de tarım alanlarının %6’sı meyve-zeytin-bağ alanı olarak değerlendirilmekte ve yılda yaklaşık 14 milyon ton meyve üretimi gerçekleştirilmektedir. Bu üretimin % 24’ünü yumuşak çekirdekli meyveler, yumuşak çekirdekli meyve üretiminin ise % 84’ünü elma üretimi oluşturmaktadır. Türkiye’de 1998 yılından 2007 yılına kadar meyve veren elma ağacı sayısı %19,8, meyve vermeyen ağaç sayısı ise %47 artış göstermiştir. Aynı yıllarda ağaç başına verim ise %14,7 azalmıştır [5].

Çizelge 4. Türkiye Elma Verileri (bin ton)

5. Türkiye’de Elma İhracat ve İthalat Durumu

Türkiye’de üretilen elmanın ancak %0.3’ü ihracata konu olmaktadır. Dünyada elma üretiminde 4. sırada yer alan bir ülke olarak üretim miktarı içinde ihracat oranının düşük olması nedeniyle elma üretiminin gereği gibi değerlendirilemediği söylenebilir [6]. Türkiye elma ithalatı çok az olup yıllara göre farklılıklar göstermektedir. 2006 yılı itibarıyla gerçekleşen elma ithalatı miktarı olarak 5.644 ton değer olarak ise 4.975.000 \$’dır.

Çizelge 7 ve 8’de görüldüğü üzere Türkiye elma ithalat ve ihracatta dalgalanmalar gözlemlenmektedir. Türkiye elma ihracatında karşılaşılan en önemli sorunlardan bir tanesi aynı kalitede, belirli standartta ürün elde edilememesidir. Türkiye’de gerçekleştirilen ihracat ve ithalatın dünya ortalamasının çok altında olduğu verilerden de açık bir şekilde anlaşılmaktadır. Çizelge 7’de 8’den elde edilen veriler ile yapılan projeksiyonla elma ihracat durumunda değişiklik olmayacağı tahmin edilmektedir.

Çizelge 6. Yıllar İtibarıyla Türkiye’de Elma İhracat Durumu

YILLAR	Miktar (ton)	Değer (1.000 \$)
2000	12.896	5.394
2001	21.124	7.534
2002	14.504	5.891
2003	19.442	9.879
2004	20.023	9.950
2005	29.043	11.960
2006	8.586	3.024

Çizelge 7. Yıllar İtibarıyla Türkiye’de Elma İthalat Durumu

Yıllar	Miktar (ton)	Değer (1.000 \$)
2000	3.416	1.265
2001	1.426	574
2002	3.189	1.250
2003	2.866	1.370
2004	2.465	1.544
2005	4.021	3.007
2006	5.644	4.975

6. PAZARLAMA YAPISI

Türkiye’de meyve ve sebzelerde hasat sonrasında genel olarak oluşan ve %30-40’lara varan kayıplar üretim, derim, depolama öncesi işlemler, depolama, taşıma, ambalajlama ve pazara sunma aşamalarındaki kayıpların

tümünü kapsamaktadır. Bu açıdan bakıldığında 2,5 milyon ton dolayında olan elma üretiminin yaklaşık 750 bin tonunun sofralarımıza ulaşamadığı düşünülebilir. Bahçede üretim aşamasından tüketimin son aşamasına kadar alınan gerekli önlemlerle bu kayıplar en aza indirilerek en yüksek kaliteye ulaşılmalıdır [7].

Türkiye’de yaklaşık toplam 1.5 milyon ton kapasitedeki depo varlığından bahsedilmektedir. Bu depoların çoğu özellikle belediyelerle bazı yerel birliklere ait olup çok amaçlı olarak (peynir, çeşitli gıda, meyve, sebze) kullanılmaktadır [8]. Meyve deposu olarak kullanılan depoların oranı düşük olup; aynı depolama mevsiminde elma, armut, ayva, turuncgiller gibi çeşitli meyveler birlikte muhafaza edilmektedir. Soğuk depolardaki sorunlar, inşaat dâhil olmak üzere, çok yönlüdür.

Depolamada kısaca değinilen bu sorunlar ve mevcut depo varlığı ele alındığında Türkiye’de üretilen elmanın yarısı depoya girememekte ve adi (kara) depo dediğimiz soğutmasız kapalı mekânlarda (mağara, bodrum, kiler vb) muhafaza edilmektedir. Bu durum elmanın kalitesini kaybetmesine neden olmakta ve yaklaşık Ocak-Şubat ayları sonrasında büyük ölçüde yaşlanmış (kepeklenmiş- unlanmış) elmaların iç pazarda satılmasını zorunlu kılmaktadır. Bu gibi elmalar marketlerde aynı anda dış ülkelerden ithal edilen “Kontrollü Atmosferli” depolarda saklanmış, yüksek kaliteli aynı çeşitlere kıyasla 1/3 düşük fiyatla zor alıcı bulmaktadır [9].

Ülkemizde üretilen elmanın bir kısmı hasattan hemen sonra pazara arz edilirken, bir kısmı da depolanarak değişik dönemlerde tüketiciye sunulmaktadır. Her iki durumda da pazarlama aşamasında değişik kanallar devreye girmekte ve üreticiden tüketici sofrasına gelinceye kadar pazarlama marjları nedeniyle fiyatlar artmaktadır [10].

Elma pazarlamasında dağıtım kanalları;

A) Sofralık

1.Taze Piyasada Tüketilenler

-Semt Pazarları ve manavlar

-Zincir Marketler

2. İhracat Pazarlarına Sevk Edilenler (İhracat)

B) Sanayi Tipi

1.Meyve Suyu

2.Şarap

3.Sirke

4.Reçel, marmelat

5.Elma Şekeri

6.Aroma, esans ve kozmetik

7.Dondurulmuş gıda

Ürün Kaynakları göz önüne alındığında;

A) Yerli Üretim

1.Yerli Çeşitler

2.Yeni Çeşitler

B) İthalat (yurt dışında üretilen çeşitler)

Yıllar		Verilen Destek (TL/kg)

Arpa Üretim ve Pazarlama Yapısı

Prof.Dr. Hasan VURAL¹

Bülent ALBAYRAK

¹Bursa Uludağ Üniversitesi Ziraat Fakültesi, hvural@uludag.edu.tr

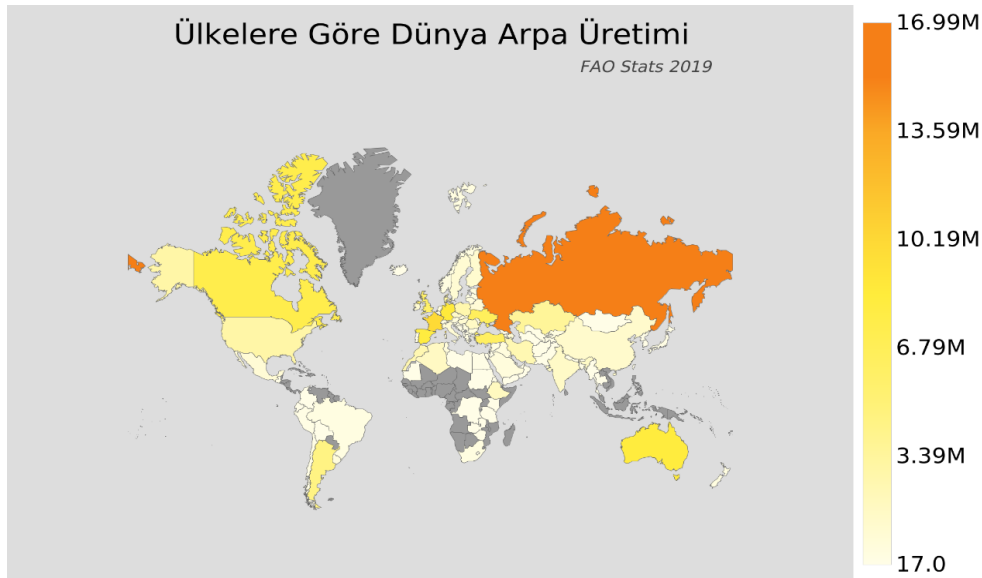

1. GİRİŞ

Türkiye'nin önemli tarım ürünleri arasında arpa çeşidi de bulunmaktadır. Buğday, çeltik ve mısırdan sonra dünya tahıl üretimi içerisinde dördüncü sırada gelen arpa; dünya ekonomisinin olduğu kadar, Türkiye'nin bitkisel üretimi, hayvan beslenmesi, tarıma dayalı sanayi, insan gıdası ve biyoyakıt alanlarında oldukça önemli yer tutan bir tarımsal üründür. Arpa alımı yapan tüccar ve karma yem fabrikalarının; arpanın fiyatına çok etki edecek kadar özellik aramaması, sadece hektolitreye, temizlik ve rutubet kriterinin ön plana çıkması kalite ve çeşit değerlerinin henüz fiyata etki etmemesinden dolayı üreticilerin sadece yüksek verimli arpaları tercih etmesi ve böylece kalite değerlerinin önemsizleştirilmesi arpanın zayıf yönlerinin en başında yer almaktadır. Arpa'nın yapısında % 9 - 13 ham protein, % 67 kadar karbonhidrat bulunur. Serin iklim tahılları içerisinde buğdaydan sonra en çok ekimi yapılandır. Arpanın başlıca kullanım alanı hayvan yemi ve malt sanayiidir. Önemli bir hayvan yemi olup, yem olarak değeri mısırın % 95'i kadardır

Ülkemizde yetiştirilen başlıca arpa çeşitleri şunlardır:

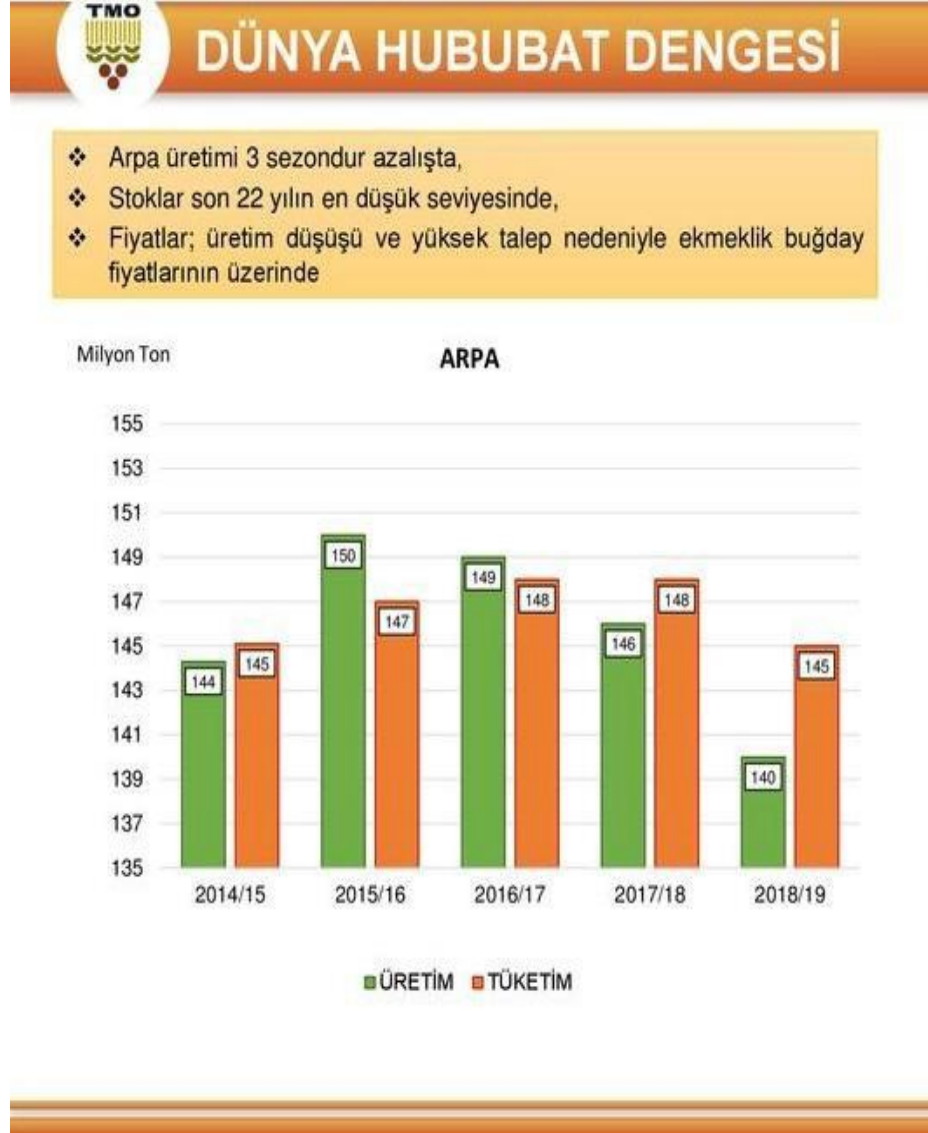

- Erginel 90
- Bilgi 91
- Kalaycı 97
- Çıldır 02
- İnce 04
- Özdemir 05
- Keser
- Ünver
- Sabribey
- Yüksel

DÜNYADA ARPA ÜRETİM HARİTASI

2. Türkiye Ve Dünyada Arpa Arz-Talep/İhracat Ve İthalatı

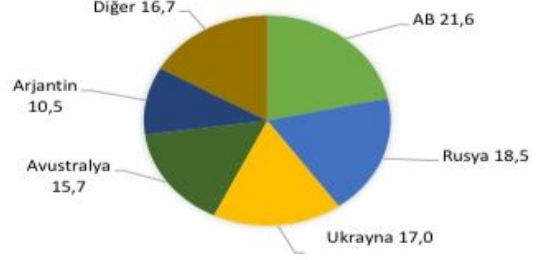

- Rusya Federasyonu, yılda 16.991.907 ton üretimle dünyanın en büyük arpa üreticisidir.
- Fransa 11.193.034 ton yıllık üretimiyle ikinci sırada geliyor.
- Yılda 9.583.600 ton üretimle Almanya, üçüncü büyük arpa üreticisidir.
- ton üretimiyle Türkiye 8 olarak sıralanmıştır.

3. Türkiye'de Arpa Üretimine Verilen Destek

TÜİK verilerine göre 2020 yılı Aralık ayında 1,43 TL/kg olan arpa üretici fiyatı bir önceki aya göre %2,1, önceki yılın aynı ayına göre %22,2 oranında artmıştır. 2020 yılı üretici fiyatı ise 2019 yılına göre %18,6 oranında artarak 1,27 TL/kg olmuştur. TMO arpa alım fiyatı 2016 ve 2017 yılında açıklanmamış, 2018'de 0,83 TL/kg, 2019'da 1,10 TL/kg, 2020'de ise 1,275 TL/kg olarak gerçekleşmiştir. Borsa fiyatlarında TMO verileri dikkate alınmış olup, 2020 yılı Kasım ayında 1,71 TL/kg olan arpa fiyatı bir önceki aya göre %9, önceki yılın aynı ayına göre ise %31,5 oranında artmıştır. Serbest piyasa fiyatlarında TMO verileri değerlendirilmiş olup 2020 Kasım ayında arpa fiyatı 1,60 TL/kg olup önceki aya göre yaklaşık %10, önceki yılın aynı ayına göre %22 oranında artmıştır. 2020 yılı ortalaması 1,36 TL/kg olan arpa serbest piyasa fiyatı ise 2019'a göre yaklaşık %14 artmıştır. Arpa Serbest Piyasa fiyatı 1.631 TL/ton, borsa fiyatı ise 1.758 TL/ton olarak 2020 yılı aralık ayında en yüksek değerine ulaşmıştır.

4. Arpa Pazarlaması

Ülkemizin tarım ürünlerinin pazarlama yapısının özellikleri arpa içinde benzeridir. Arpa hayvan yetiştiriciliğinde yem ihtiyacını karşılamada, malt sanayide kullanımında, ekiliş alanı ve ticaret verileri açısından en önde gelen hububatlardan birisidir. Ayrıca insan gıdası olarak az miktar tüketildiği de bilinmektedir. Dünyada arpanın üretimi ve ekim alanı değerlendirildiğinde son yıllarda AB ilk Rusya ikinci sıradadır. USDA verilerine göre 2020/21 sezonunda bir önceki sezona göre; arpa tüketiminin %1,2 oranında, üretiminin %0,4 oranında artacağı, ekim alanının ise %0,6 oranında azalacağı öngörülmüştür. Söz konusu azalışta Kanada ve Ukrayna'da üretimin bir önceki yıla göre azalması etkili olacaktır. Tüketimdeki artışın en büyük sebebi büyüyen hayvancılıktır. Son iki yıl değişiminde ithalatta %6,7 ihracatta ise %2,6 oranda bir artış meydana gelmiştir.

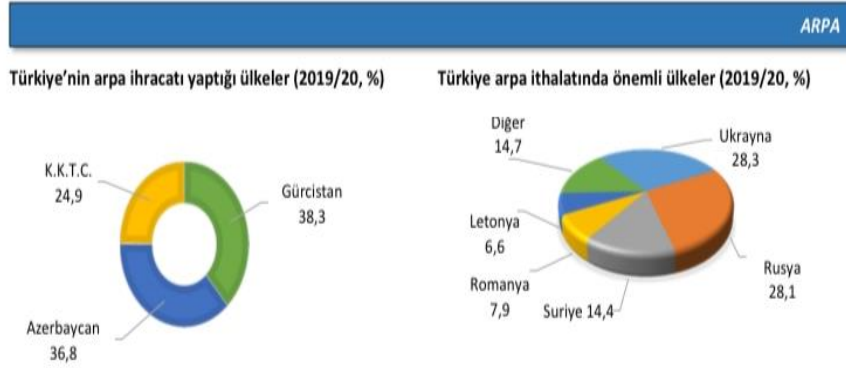

TÜİK Dış Ticaret 2019/20 piyasa dönemi (Haziran –Mayıs) verilerine göre Türkiye'nin arpa ihracatı 344,8 ton gerçekleşmiştir. İhracat Gürcistan ile 132 ton, Azerbaycan ile 127 ton, Kuzey Kıbrıs Türk Cumhuriyeti ile 85,8 ton yapılmıştır. TÜİK Dış Ticaret 2019/20 piyasa dönemi verilerine göre Türkiye'nin arpa ithalatı bir önceki piyasa dönemine göre %217 oranında artarak 887,9 bin tona ulaşmıştır. Arpa ithalatının %28,3'ü Ukrayna, %28,1'i Rusya, %14,4'ü Suriye, %7,9'u Romanya, %6,6'sı Letonya ile gerçekleştirilmiştir.

TÜİK verilerine göre 2020 yılı Aralık ayında 1,43 TL/kg olan arpa üretici fiyatı bir önceki aya göre %2,1, önceki yılın aynı ayına göre %22,2 oranında artmıştır. 2020 yılı üretici fiyatı ise 2019 yılına göre %18,6 oranında artarak 1,27 TL/kg olmuştur. TMO arpa alım fiyatı 2016 ve 2017 yılında açıklanmamış, 2018'de 0,83 TL/kg, 2019'da 1,10 TL/kg, 2020'de ise 1,275 TL/kg olarak gerçekleşmiştir. Borsa fiyatlarında TMO verileri dikkate alınmış olup, 2020 yılı Kasım ayında 1,71 TL/kg olan arpa fiyatı bir önceki aya göre %9, önceki yılın aynı ayına göre ise %31,5 oranında artmıştır. Serbest piyasa fiyatlarında TMO verileri değerlendirilmiş olup 2020 Kasım ayında arpa fiyatı 1,60 TL/kg olup önceki aya göre yaklaşık %10, önceki yılın aynı ayına göre %22 oranında artmıştır. 2020 yılı ortalaması 1,36 TL/kg olan arpa serbest piyasa fiyatı ise 2019'a göre yaklaşık %14 artmıştır. Arpa Serbest Piyasa fiyatı 1.631 TL/ton, borsa fiyatı ise 1.758 TL/ton olarak 2020 yılı aralık ayında en yüksek değerine ulaşmıştır.

3. Ürün Piyasa Özellikleri

Dünya tahıl piyasa ve ticareti raporuna göre Rusya 2020 yılı Aralık ayında, yüksek yurt içi fiyatlara yanıt olarak belirli tahıllarda ticareti kısıtlayıcı önlemler açıklamıştır. Bu yeni tedbirler arasında buğday, arpa, çavdar ve mısır da dâhil belirli tahıllara 17,5 milyon tonluk bir ihracat kotası getirilmesi yer almaktadır. AB Tarım Gıda Ticaretinin İzlenmesi Raporuna göre ihracatın bir önceki yıla göre azalmasında Avrupa'da alkollü içkiler ihracatında yaşanan zorluklar etkili olmuştur. Ayrıca rapora göre arpa, en çok kazandıran ihracat ürünlerinde buğday, sakatat eti ve bebek mamasından sonra gelmektedir. Türkiye, bölgedeki yemlik tahıl ticareti için önemli bir aktarma noktası haline gelmiştir. Türkiye'de arpa ekilişi, alan büyüklüğü bakımından buğdaydan sonra ikinci sırayı alır. Bölge düzeyinde en çok İç Anadolu Bölgesi'nde yetiştirilmektedir. Yaygın olarak malt sanayi ve kaba yem ihtiyacını karşılamada kullanılmaktadır. Arpa, hayvan yemi uygulamalarında önemli ölçüde kullanılan diğer bazı bitkilere ikame olarak üretilebilmektedir. Arpaya bu avantajı sağlayan etkenlerden biri iklimsel isteklerinin geniş bir yelpazede yer almasıdır. TÜİK Bitkisel Üretim İstatistikleri, 2020'e göre arpa üretimi bir önceki yıla göre %9,2 oranında artarak 8,3 milyon ton olmuştur. Türkiye'de arpa tüketiminin yıllar içerisinde büyüyen yem sanayi talepleri, buğday yetiştirme maliyetlerinin artması gibi nedenlerden dolayı arttığı gözlemlenmiştir. Yurtiçi sertifikalı tohum kullanım desteğinin 2020'de 16 TL/da'a yükseltilmesiyle arpa üretiminin artacağı ve bu durumun ihracatta önemli bir etki yaratacağı düşünülmektedir. Atıl tarım arazilerine dair yapılan ve devam eden çalışmalar, sulama ve arazi toplulaştırma yatırımları ile kuraklık riskine karşı verimde, sertifikalı tohum desteğinin artırılması ile arpa talebine paralel olarak üretimde bir artış gerçekleşmesi beklenmektedir. Arpa

verimini kısıtlayan kuraklığa karşı devam eden sulama ve toplulaştırma yatırımları önem taşımaktadır. COVID-19 salgını sürecinde Türkiye’de üreticiler yasaklardan muaf sayılarak arpa üretimi devam etmiştir. Üreticilere resmi kurumlara uzaktan başvuru seçeneği sunulmuştur. Arpa Girdi Pariteleri 2020 yılında 2019 yılına göre 1 kg arpa ile alınabilen gübre, mazot miktarlarında artış olmuş, 1 kg arpa ile alınabilen tohum miktarı değişmemiştir.

Türk-Alman Yazınının Avusturya'daki Ustası Kundeyt Şurdum'un şiirlerinde Yabancı ve Yabancılık İzleği

Prof. Dr. Hikmet ASUTAY¹

¹Prof. Dr. Trakya Üniversitesi, Trakya Üniversitesi Eğitim Fakültesi Yabancı Diller Eğitimi Bölümü Alman Dili Eğitimi Anabilim Dalı, Edirne. asutay@trakya.edu.tr. ORCID-ID NO: 0000-0002-0533-7708

Abstract: Türkiye'den Almanya, Avusturya ve diğer Avrupa ülkelerine altmışlı yıllarda başlayan göç bugün için altmışıncı yılını doldurmuştur. Bu büyük ekonomik göçün Avusturya ayağında pek çok sanatçı, yazar şair gibi Kundeyt Şurdum da, 1971 yılında Avusturya'ya göç etmiştir. Hayata gözlerini yumduğu 2016 yılına kadar da yeni vatani Avusturya'da yaşamıştır. Gurbetçi kuşağın edebiyat dünyasındaki önemli temsilcileri arasında yer alan sanatçı, Türk-Alman yazınının Avusturyalı sanatçısı olarak tarihteki yerini almıştır. Eserlerinde grubetçi insanlarımıza hem yaşamlarında hem de edebiyatta tercüman olmuş, yabancı ve yabancılık izleğini çokça kaleme almış usta bir şairdir. Bu çalışmada da ölümünden sonar toplu eser olarak tüm yapıtlarının toplandığı "Hier endet die Fremde" adlı eserindeyabancılık izleğinin izleri araştırılmış, kendi yaşamından biyografik unsurlarla beslemiş olduğu şiir dizeleri konu edinmiştir. Sonuç olarak birinci kuşak Avusturya'da yaşayan Türk şairi K. Şurdum, üç kuşak boyu gelişen Türk-Alman yazınının şahidi ve temsilcilerinden biri olmuş, almış olduğu ödüllerle de bunu kanıtlamıştır.

Key Words: Türk Alman edebiyatı, şair, Avusturya Yazını Kundeyt Şurdum, göç

The Theme of Foreigner and Foreigner in the poems of Kundeyt Şurdum, the Master of Turkish-German Literature in Austria

Abstract: Migration from Turkey to Germany, Austria and other European countries that started in the sixties has now completed its sixtieth year. Kundeyt Şurdum, like many artists, writers and poets, immigrated to Austria in 1971 on the Austrian part of this great economic migration. He lived in his new homeland, Austria, until 2016, when he passed away. The artist, who is among the important representatives of the expatriate generation in the world of literature, took his place in history as an Austrian artist of Turkish-German literature. He is a master poet who has been an interpreter for our migrant people in his works, both in their lives and in literature, and has written the theme of foreignness and foreignness a lot. In this study, the traces of the theme of foreignness were investigated in his work titled "Hier endet die Fremde", in which all his works were collected as a collective work after his death, and the lines of poetry that he fed with biographical elements from his own life were the subject. As a result, the Turkish poet K. Şurdum, who lived in the first generation Austria, became one of the witnesses and representatives of the Turkish-German literature that developed for three generations, and proved this with the awards he received.

Key Words: Turkish German literature, poet, Austrian Literature, Kundeyt Şurdum, immigration

1. GİRİŞ

Johann Peter Hebel edebiyat ödülünün kendisine verildiği gün yaptığı konuşmada Kundeyt Şurdum, yirmibeş yıl aradan sonra hala yabancı bir ülkede, o yabancının dilinde şiirler yazıp yabancı olarak yaşamaya devam ettiğinden ironik bir şekilde söz eder. Avusturya'da Almanca şiir yazıp yirmibeş yıldır yaşıyor olmak ve hala yabancı olmak tamamen ironik bir durumdur aslında. Oysa yirmibeş yıl, bir insanın asıl memleketine yabancılaşması için yeterli bir süredir. Elbette kimliği, Türk varlığı değişmez ancak kendine yurt edindiği ve çeyrek yüzyıldır yaşadığı bir yerde yabancı olma hissi, yaşadığı toplumda dil ve kültür açısından tam olarak içselleşmeyen ya da o toplum tarafından kabullenemeyen bir şeylerin var olduğuna dair işaretlerin bulunduğu gerçeğini yansıtmaktadır. Üstelik o kültürün en yüksek değerdeki edebiyat ödüllerinden birini almış olmasına rağmen.

Şair ve yazar Kundeyt Şurdum'un (1937–2016)¹ yaşam öyküsü aslında Avrupa'da özellikle Almanya ve Avusturya'da yaşayan gurbetçilerimizin de yaşam öykülerine bir tür gönderme yapmış, onların yabancılık

¹ Kundeyt Şurdum, 17 Şubat 1937'de Konya'da Çerkez bir ailede dünyaya gelmiş ve 21 Nisan 2016 tarihinde Avusturya'da Feldkirch'de hayata gözlerini yummuştur. Çerkes dernekleri Federasyonunun resmi web sitesinde kendisinin yaşam öyküsüne yer verilmiştir. Sayfada belirtildiği üzere; "uzun süredir tedavi gördüğü hastalığına bağlı olarak 21 Nisan 2016 gecesi Avusturya'da hayata gözlerini yuman Şurdum, Türkiye'ye getirilerek 23 Nisan 2016 günü İstanbul Üsküdar'da Karacaahmet Şakirin Camii'nde kılınan ikinci ve cenaze namazlarını müteakip Kanlıca'daki ebedi istirahatgahına tevdi edildi" (<https://cerkesfed.org/sanatedebiyat/kundeyt-surдум/>).

hislerine tercüman olmuştur. Sanatçı, İstanbul'da St. Georg Avusturya lisesini bitirdikten sonra İstanbul Üniversitesi Edebiyat Fakültesi Alman Dili ve Edebiyatı Bölümünü bitirdi². Üniversite eğitiminin ardından serbest çevirmenlik, yayın müdürlüğü yaptı. 1971 yılında Avusturya'ya göç etti ve Voralberg eyaletine yerleşerek hem öğretmenlik, hem yeminli tercümanlık yaptı. Voralberg radyosunda otuz yılı aşkın süre haftada birkaç akşam Türkçe yayınlar hazırlayıp sundu. Ingeborg Bachmann ve Paul Celan gibi Almanca yazan şair ve yazarlardan çeviriler yaptı. Almanca olarak kaleme aldığı şiirleri ile Türk Alman yazınında tanındı ve Avusturya yazını içerisinde anılmaya başladı. Böylelikle Türk ve Avusturya toplumları arasında dostluk, kültür ve sanat köprüsü oluşturulmasına büyük katkılar sundu. "BİZ" isimli bir Türkçe dergiyi 1983'te yayına başlattı ve 20 yıl süreyle genel yayın yönetmenliğini yaptı. 1988 yılında Feldkirch'de bulunan Sosyal Hizmetler Kurumu (IFS)'de Türk göçmenlere hizmet vererek onların sorunlarına yardımcı oldu³.

Çerkez kökenli olduğu için Çerkez kültürüne de katkıları çok olmuştur şairin. Çerkes Dernekleri Federasyonunun resmi web sitesinde kendisine sayfa ayrılmıştır. Orada da belirtildiği üzere "Voralberg'deki birçok Türk gencini eğiten Şurdum, ORF televizyonunca "20. Yüzyıla Damgasını Vuranlar" adlı programda "Asrın adamları" arasında gösterilmiş, 1988'de "Unter Einem Geliehenen Himmel" (ödünç gökyüzü altında) isimli şiir kitabı ile Voralberg Eyaleti Onur Ödülü'ne layık görülmüştür. 1996 da Almanya'nın Baden-Württemberg Eyaleti Bilim, Sanat, Kültür ve Araştırma Bakanlığı tarafından, "Alman kökenli olmadığı halde Almanca'yı bu kadar mükemmel kullanan bir şair" olarak, devlet adamlarının ve ünlü sanatçıların katıldığı büyük bir törenle Almanya'nın 2. derecede en nitelikli edebiyat ödülü olan Johann-Peter-Hebel Ödülü ile onurlandırılmış, 2003 yılında da Voralberg Eyaleti Büyük Ödülü'ne layık görülmüştür. Sanatçının başlıca eserleri şunlardır:

- Unter Einem Geliehenen Himmel (Ödünç Alınmış Gökyüzü'nün Altında) -1988
- Landlos (Vatansız) -1991
- Kein Tag Geht Spurlos Vorbei: Gedichte (Gün Geçmiyor İz Bırakmadan: Şiirler) – 2001

Şair Kundeyt Şurdum'un Almanca'dan dilimize kazandırdığı pek çok çeviri eser bulunmaktadır, bunlar;

Şair Kundeyt Şurdum üzerine Türkçe ve Almanca olarak pek çok inceleme ve araştırmalar da yer almaktadır⁴.

2. Avusturya’da Oluşan Türk Göç Kültürü

Yakın tarihimizde 1961 yılında Almanya’ya başlayan işçi göçü dalgası Avrupa’daki diğer ülkelere de yönelmiş, altmışlı yıllarda Almanya’ya olduğu gibi Avusturya’ya da gurbetçilerimiz göç etmeye başlamışlardır. Böylelikle Almanya’daki Türk göç kültürünün çok yakın bir benzeri de Avusturya’da, Hollanda’da ve Fransa’da da oluşmaya başlamış, Alman dili bağlamında ise dil ve kültür benzerliği açısından Almanya ve Avusturya çok benzer olarak karşılaştırılmaktadır. Sonuç olarak hangi ülke olursa olsun, göçmenin yaşantıları, hisleri, kısaca kaderi aynı olmuştur; yeni yurt edinmek ve yabancı olmak. Yabancı olmak kader olmuştur bir bakıma. Üstelik bu yabancı olmak, kısaca yabancılaşma duygusu hem kendine karşı, hem yeni vatanında oluşturduğu yeni yaşam biçiminin en karakteristik özelliği olmuştur.

Almanya gibi Avusturya da ikinci dünya savaşından sonra hızlı bir kalkınma sürecine girer. Bechter’in de (2022:379-392) belirttiği gibi altmışlı yılların başında Avusturya’da işsizlik sorunu bulunmamakta, tam tersine iş gücünden fazla iş mevcut olduğundan, işgücü ihtiyacı bulunmaktadır. O yüzden Almanya gibi Avusturya’da başta İspanya, İtalya gibi Avrupa ülkelerinden olmak üzere eski Yugoslavya, Yunanistan ve Türkiye’den iş gücü talebinde bulunur. Yazarın aktardığına göre şair Kundeyt Şurdum’un yurt edindiği Vorarlberg eyaletinde 1973 yılı itibarıyla çoğunluğu Türk ve eski Yugoslavya vatandaşları olan 24.000 yabancı işçi sayılmıştır.

Göçmen sanatçılar açısından değerlendirildiğinde ise Türk-Alman yazınında temel olarak üç kuşak olduğu görülür. Dördüncü kuşaktan itibaren ise artık göç sonrası dönem olarak söz etmek gerekir. Bu bağlamda sanatçı Kundeyt Şurdum, birinci kuşak Türk-Alman yazın grubuna girmektedir. Gerek yaşam öyküsü ve göç ettiği dönem açısından ve gerekse eserlerinin içerdiği yabancılik konusu gereği, birinci kuşak sanatçılarımızdan olduğu söylenebilir. Bu bakımdan K. Şurdum ve diğer birinci kuşak Türk Alman şair ve yazarların genel olarak eserlerinde yabancılik konusunun ele alındığı görülür. Bu yabancılik duygusu ilk anlarda, yani ilk olarak yazılan eserlerde yabancı olan ile ilk karşılaşmalardır. Daha sonra iletişim ve dilsizlik sorunlarının yarattığı bir yabancılik söz konusudur. İlerleyen zaman içerisinde ise yabancı olmak giderek yabancılaşmaya döner. Bu yabancılaşma süreci göçmenin hem kendi köklerine, kendisine, hem de içinde bulunduğu koşullara karşı gelişen bir süreçtir. Türk-Alman yazını bağlamında Kundeyt Şurdum özelinde bakılacak olursa, Avusturya’daki Türk-Alman yazının en önemli temsilcisi olma özelliğinin yanı sıra, baştan sona birinci kuşak özelliklerini de devam ettirmiş, bu özellikleri korumayı başarmış ve üstelik Almanca yazmış bir şair ile karşı karşıya kalındığı görülebilir. Bu açıdan bakıldığında Almanya’da Yüksel Pazarkaya ne ise, Avusturya’da Kundeyt Şurdum odur, denebilir.

3. Kundeyt Şurdum’un Eserlerinde Yabancılik İzleği

Şair Kundeyt Şurdum’un 2016 yılında vefatından sonra 2022 yılında tüm şiirlerinin yer aldığı toplu eserler niteliğinde Claudio Bechter’in derlediği bir kitap çıkarılır; “Kundeyt Şurdum – Hier endet die Fremde” (Bechter, Cl.: 2022). “Burada biter yabancılik”, şeklinde çevrilebilir. Bu toplu eser (456 sayfa) derlemesi içinde alt başlıklar halinde yer alan bölümlerde şairin konuşmaları, şiir kitapları, şiir-fotoğraf albümü, radyo oyunları, düz yazıları ve en sonda da ekler bölümü bulunmaktadır. Ek bölümünde derlemeciye ait bir son söz, şairin tarihsel yaşam öyküsü, yorum ve diğer bilgiler yer almaktadır.

Yabancılik izleği açısından değerlendirildiğinde, Kundeyt Şurdum’un tüm eserlerinde bu anlamda bir yabancılik kavramı gözlemlenir. Bu konuda Ahmet Cemal, 15.3.1992 tarihli Cumhuriyet gazetesinde çıkan bir yazısında şunları belirtmiştir:

“1971’den bu yana Vorarlberg bölgesinde yaşayan sanatçı, şiirlerin yanı sıra radyo oyunları ve anlatılar da kaleme almış. Başarıları, Vorarlberg eyalet hükümetinin sanat ödülü ile değerlendirilmiş. Almanca şiirlerini toplayan “Ödünç Bir Gökyüzü Altında” adlı kitabı, Almanya’daki ünlü Piper Yayınevi tarafından yayınlanmış. Avusturyalı fotoğraf sanatçısı Nikolaus Walter’in resimlerine eşlik eden şiirlerinde Kundeyt Şurdum, kendisine bütünüyle yabancı bir kültür ortamıyla ilk kez karşılaşan bireyin öyküsünü ucuz yakınmalara kaçmaksızın, adeta fotoğraf çekmek için kalemini kullanan biri gibi sergiliyor” (Cemal, A. 1992: <https://egazete.cumhuriyet.com.tr/ara/2>).

⁴ Bunlardan bazıları, örnek olarak; Meral Oralış, “Oğlunun Vatanında Yaşayan Bir Yabancı: Kundeyt Şurdum”, Hürriyet Gösteri, S. 143 (1992), s. 31-32., Ali Gültekin, Kültürler Arasında Dolaşan Üç Türk Şairi: Kundeyt Şurdum, Nevfel Cumart ve Yüksel Kocadoru’nun Şiirleri, Eskişehir Osmangazi Üniversitesi Yayınları- 2004, Walter Fink, Sein Himmel war geliehen, Vorarlbergernachrichten, 23.04.2016

Daha sonra Şurdum'un bir şiirine yer vererek yabancılık konusu örneklenmektedir:

*"Ben mi bıraktım ülkemi,
yoksa ülkem mi bıraktı beni?
Orada yitirdiklerim,
buradaki önyargıdan daha çok acı veriyor bana,
Çocuklarımızın başına gelmeyecek bu
belki zamanla"*

bir başka şiiri de şu şekildedir:

*"Babamın dağlarını tanımıyorum,
Annemin türküleri de yabancı bana,
Çok kez nereden geldiğimi bilmek istiyorlar
Yanıldıklarını vurmamak için yüzlerine
Adını söylüyorum babamın ülkesinin"*

gibi dizeler, yabancı ortamda verilen bir yaşama savaşının hüznünü, Anadolu insanının kendini her zaman ele vermeyen duyarlılığıyla yansıtmaktadır. Yine A. Cemal'in yazısında belirttiği üzere Bremen Üniversitesi öğretim üyelerinden Kurt Greussing, resimlerle şiirleri bir araya getiren sergi kataloğundaki yazısında bir Avusturyalı gözüyle konuk işçi sorununa yaklaşırken, çoğu kez özeleştiren de kaçınmıyor: "Yabancıların tam entegresi... Bunun ilk adımları elbet başta göç edilen ülkelerin, yani bizlerin politikası tarafından atılabilir... Başlangıçta birbirine yabancı iki halkın kaynaşabilmesi ancak karşılıklı çabalarla gerçekleştirilebilir. Önce biz buralıların kafamızda kalıplaşmış olan yerli-yabancı ayrımını gözden geçirmemiz zorunludur. Başka deyişle, başkalarından "ne çok başka", "ne de daha iyi" olmadığımızın bilincine varmamız şarttır..."(a.g.e.)

"Yabancı Vatan" sergisi, bütün yapısıyla Türkiye dışındaki "öteki Türkler"e yakılmış bir ağıt değil; umarsız bir kadercı tutumun yansıtılması da değil. Belki bir kökten kopuşun, çıkış yolunu "ötelere" aramanın, kimi zaman "Amerika'daki zengin amca" gibi geri dönme düşlerinin, kimi zaman da önce kafalarda gerçekleşmiş bir göç olgusunun sancılı ve gerçekçi öyküsü Cemal, A: a.g.e.). Şairin dediği gibi:

*"Galip olarak dönmeyeceğiz geri,
benzersiz bir seferdi çünkü bizimkisi.
Geleceğe bakmak,
günlük ekmeğimizi görmek istemiştik...
Elbette iyi olmak dileğindeydik,
onun için yasak olmayan bir mutluluk aradık
olduk konuk işçi..."(a.g.e)*

Bir başka şiirinde ise şair, yabancı izleğini, çıkış noktası olan "konuk işçi" temasından ele almaktadır. Konuk işçi teması Almancada her zaman için öteki olan, yabancı olanı çağrıştırmaktadır. Almanya'da da olsa, kendi kültürü içinde birlikte yaşadığı komşusu da olsa ona göre konuktur ve yabancısıdır. Bu bakımdan yabancılık izleği Almanya ve Avusturya'da aynı özelliklere sahip olduğu söylenebilir, örneğin;

*"Im ersetn Jahr Gastarbeiter, im zweiten
Jahr Gastarbeiter,
Im dritten Jahr Gastarbeiter,
Mit schwarzem Schnurrbart,
Gastarbeiter,
Mit gebücktem Rücken,*

Gastarbeiter “ (s.182)

Konuk işçinin Almanya ve Avusturya’daki gelişim sürecinin şiirsel bir dille bu kadar kısa ama bu kadar özlü ifade edildiği nadir şiirlerdendir. Hep konuk işçi olarak kaldılar, yıllar geçti hep eleştirildiler farklılıklarıyla. Son zamanlarında dahi konuk işçi olarak anılmaya devam ettiler, artık bükülmüş belleriyle. Bu çarpıcı imgelem ile konuk işçilerin durumu ve uğraşları, kaderleri de özetlenir gibi verilmiştir. Elbette belirtmek gerekir ki şair Kundeyt Şurdum, “konuk işçi edebiyatı” tanımlamalarına hep karşı çıkmıştır. Bu tanımın edebiyatçıları sınırlandıracağı, oysa ki üzerine yazacak, çiyecek çok farklı konuların olduğunu ve bu edebiyatçıların çok farklı konularda da söyleyecek sözlerinin bulunduğunu belirtir. Nitekim Türk-Alman şair ve yazarlar sadece kendi durumlarını ya da göç ile ilgili koşullar üzerine yazmamış, içinde yaşadıkları toplum ve kültürlerin, yani hem Alman ya da Avusturya, hem de Türk kültürü içinde yaşanan zaman ve koşullara göre yazılarını yazmış, sosyal, kültürel ve siyasi gündemlerle ilgili olarak da eserler vermişlerdir.

4. SONUÇ

Geçtiğimiz yıllarda Almanya ve Avusturya’ya göç sürecinin altmışıncı yılı kutlanmış idi. 1961’de başlayan bu süreç bugün artık göç sonrası dönem olarak anılmaktadır ve dördüncü kuşak söz konusudur. Kundeyt Şurdum ve akranları, bu sürecin, altmış yıldır devam eden bu dönemin belleğidir, denebilir. Bu bellekler sayesinde bir zamanlar bir grup insanla başlayan ve sonrasında milyonları bulan sayılarla insanların kendi ailelerinden, çocuklarından ayrılarak daha iyi koşulları sağlamak için Avrupa’ya göç ettikleri dönemin hikâyesinden haberdar olabiliyoruz. Bu bellekler sayesinde iki kültür arasında kalmışlığın, gurbetçiliğin ne demek olduğunu bir nebze de olsa onların gözünden görüp anlayabiliyoruz. Türk ve Alman ya da Avusturyalı her bir kültürün bu belleklere birlikte sahip çıkması, vefakâr ve cefakâr gurbetçilerimize bir vefa borcu olarak görülmeli ve eserleriyle daima hatırlanmalıdır.

Özet: Literatürde ekonomik büyümeye etki eden faktörler çok geniş bir yelpazede ampirik çalışmalar çerçevesinde ele alınmaktadır. Mevcut tartışılan bu faktörlere ilaveten bir ülkenin hukuk sisteminin bütünlüğü de o ülkede gerçekleşen ekonomik büyüme üzerinde anlamlı ve belirleyici bir yol oynayabilir. Bu bağlamda bu çalışma hukuk sistemi bütünlüğünün ekonomik büyüme üzerindeki etkisini ampirik olarak irdelemektedir. Çalışmanın hipotezi bir ülkede hukuk sistemi bütünlüğü arttıkça ekonomik büyümenin de artacağı savını öne sürmektedir. Çalışmada 161 ülkeye ait 2000-2018 yıllarını kapsayan dengesiz panel veri seti kullanılarak söz konusu hipotezin geçerliliği test edilmektedir. Bağımlı değişken olarak iki farklı büyüme indikatörü ve dört kontrol değişkeni (yatırım, ihracat, enflasyon, yabancı sermaye yatırımı) kullanılarak analizler gerçekleştirilmiştir. Yapılan tekli ve çoklu panel regresyon analizleri sonrasında elde edilen bulgulara göre; bir ülkede hukuk sisteminin bütünlüğü arttıkça o ülkenin ekonomik büyüme hızının da arttığı ve bu ilişkinin istatistiksel olarak anlamlı olduğu tüm modellerde görülmüştür. Ayrıca ihracat ve yatırımların ekonomik büyüme üzerinde pozitif anlamlı etkisi olduğu ve enflasyonun da negatif anlamlı bir etkiye sahip olduğu tespit edilmiştir.

Anahtar Kelimeler: Ekonomik Büyüme, Hukuk Sisteminin Bütünlüğü, Panel Analiz

1. GİRİŞ

İnsanların kurallara, belli bir sisteme ihtiyacı var mıdır? Bu sorunun cevabını başka bir soruyla cevaplayabiliriz. Dünyada bir düzen varsa, insan da bu dünyanın bir parçası ise, insanların belli kurallarla dengeyi bozmayacak şekilde yaşaması gerekli değil midir?

İnsanlar sosyal canlılardır bu yüzden topluluk halinde yaşarlar. İnsanların bireysel ve toplumsal yaşamlarında bazı ihtiyaçları vardır. İnsanlar bu ihtiyaçlarını giderirken belli kurallar ve yaptırımlar içerisinde olmalıdır. Kurallar ve yaptırımlar hukukun bir parçasıdır. Hukuk; devlet bireylerin ortak çıkarlarını gözeterek toplumsal düzeni sağlamak amacıyla yaptırımlarla desteklenen kurallar bütününe denir. Hukuk kuralları her ülkede farklılık gösterebileceği gibi bir ülkenin hukuk kuralları da zaman içerisinde değişebilir. Ama temel amacı toplumsal düzeni sağlamaktır ve bu değişmez.

Bireylerin beslenme, sağlık, barınma, eğitim gibi pek çok ihtiyaçları vardır. Ekonomi; bireylerin sonsuz olan bu ihtiyaçlarını, sınırlı kaynaklarla giderilmesini araştıran bir bilim dalıdır. Üretim, gelir, ticaret, tüketim, büyüme gibi birçok toplumu ilgilendiren konularla ilgilenir. Büyüme de ekonominin önemli bir alt dalıdır. Bir ülkenin sınırları içerisinde, bir yıl sürecinde üretim hacmindeki reel artışa ekonomik büyüme denir. Ekonomik büyüme ölçülebilir ve sayısal verilerle ifade edilebilir. Büyümenin olabilmesi için üretim hacmindeki artışın istikrarlı olması gereklidir ve büyüme uzun vadeli dinamik bir veridir. İşgücü, girişimcilik, eğitim, doğal kaynaklar, teknoloji, coğrafya, bilimdeki ilerlemeler, sermaye, sosyal ve siyasi faktörler gibi pek çok faktör ekonomik büyümeyi etkiler.

Hukuk ve ekonomik büyümenin ortak amacı bireylerin ve toplumun ihtiyaçlarını karşılamaktır. Bu sebeple hukuk sistemi ve ekonomik büyüme birbirleriyle etkileşim halindedir. İnsanlar, yaşama, düşünce özgürlüğü, beslenme, eğitim, mülkiyet edinme, kanunlar karşısında eşit olma gibi ihtiyaçlara yani haklara sahiptirler. Devlet kanunlarla bu hakları korur ve geliştirirse ülke teknolojisinin, bilimin, sanatın, tarımın vb. birçok faktörün doğrudan ve dolaylı olarak ilerlemesini sağlar, bu faktörlerdeki ilerlemeler de ekonomik büyümeye olumlu yönde etki eder. Kısacası bir hukuk kuralı ekonomik büyümeyi doğrudan etkileyebileceği gibi bireyleri etkileyecek kararlar alınması da ekonomik büyümeyi doğrudan veya dolaylı yoldan etkileyebilir.

Bir ülkenin hukuk sistemi bütünlüğü ne kadar iyi olursa ülkenin güvenilirlik indeksi o kadar yüksek olur. Ülkenin güvenilirlik indeksinin yüksek olması başka ülkelerin yatırımlarını kendi ülkesine çekmesini sağlar, uluslararası

* *Bu çalışma Bilecik Şeyh Edebali Üniversitesi, Lisansüstü Eğitim Enstitüsü, İktisat Anabilim Dalı, Tezli Yüksek Lisans programında Prof.Dr. Jülide Yalçinkaya Koyuncu danışmanlığında yürütülen Gül Şafak'a ait yüksek lisans tezinin bir kısmından türetilmiştir.

ticaretini geliştirir, istihdam alanı genişler ve bu etmenlerdeki ilerlemeler milli gelirin artmasına yani ekonominin büyümesine sebep olmaktadır.

Hukukta ki ilerlemeler ekonomik büyümeyi olumlu etkilediği gibi ekonomik büyümedeki artış hukuk sistemine pozitif yönde etki eder. Hukuk sisteminin devletin üzerinde bir maliyeti vardır. Çünkü hukuk sisteminin gelişmesinde ve uygulanmasında kaynak gereklidir. Devlet bütçesinden bu maliyeti karşılamak için belli bir pay ayırır. Ekonominin büyümesi devletin gelirini arttırdığından dolayı hukuk sistemine ayrılan payın yüzdesi artar. Ekonomik büyümenin gerçekleşmesi kişi başına düşen geliri artırır. Bunun sonucu da yoksulluktan kaynaklanan suçların azalmasına neden olur. Bu da ekonomik büyümenin hukuk sistemine olumlu etkisinden biridir.

F. R. De Chateaubriand'ın bir sözü "Adalet, halkın gıdasıdır. İnsan ona daima muhtaçtır." Ludwig von Mises'in bir sözü ise "Ekonomi, somut maddelerin konusu değildir. Ekonominin konusu, insanlar ve insanların anlamları ile hareketleri üzerinedir." Bu iki kişinin söylediği sözlerde adaletin yani hukukun ve ekonominin ortak noktası insandır. Bu sebeple ekonominin alt dalları ve hukukun alt dalları da birbirlerini etkiler.

Hukuk kuralları geliştirilse de ve yeni kurallar getirilse de uygulamada ve yaptırımda yetersiz kalınması fazla bir değişime sebep olmaz yani hukukta ve ekonomik büyümede ilerleme sağlanmış sayılmaz. Çünkü hukuk ve ekonomik büyüme arasındaki ilişki aynı yönde dönen dişli çarklar gibidir. Birinin olumlu yönde etkilenmesi diğersini de olumlu yönde etkiler.

Bu çalışma hukuk sistemi bütünlüğünün ekonomik büyüme üzerinde etkisini ampirik boyutta ele almaktadır. Elde edilen bulgular hukuk sistemi bütünlüğünün ekonomik büyümeyi pozitif yönde istatistiksel olarak anlamlı bir biçimde etkilediğini ortaya koymaktadır. Çalışmanın takip eden kısmı literatür taramasını içermekte, daha sonra data ve metodoloji açıklanmakta, data ve metodoloji kısmını tahmin sonuçlarının tartışıldığı kısım izlemekte ve en son olarak sonuç bölümü yer almaktadır.

2. LİTERATÜR

Sugianto vd. (2020: 92), yasaların insanların rasyonel davranışlarını etkilediğini belirtmiştir. Yasal normlar stratejik eylemleri kavramada, tasarlamada ve uygulamada önemli olduğunu dile getirmiştir. Hukuk ekonomik verimliliğe destek olan toplumsal araçlardan birisidir. Hukukçular da ekonomistler gibi verimlilik faktörüne önem verdiğine değinmiştir. Hukukçular, hukukun üstünlüğünün gelişiminde verimlilik faktörünü kullandıklarından bahseder. Ekonomideki verimliliğin hukuka yön verdiğini ve bir model olduğunu savunur.

Ekonomistler, mülkiyet ve anlaşma haklarının ekonomik gelişmenin temelini oluşturduğunu anlatırlar, bu sebeple hukukun üstünlüğüne ve bütünlüğüne önem verdikleri fikrine varmışlardır. Çalışmanın sonucu olarak, bir ülke için, hukuk ne kadar önem kazanırsa, ilerlerse ülkenin ekonomik durumu da bu ilerlemeyi gösterir.

Zenginer(2022: 327), bütün hukuk normlarını dolaylı veya dolaysız olarak ekonomiyi reaksiyona sokmakta olduğu görüşündedir. Hukukun ulusal düzeni sağladığını savunur. Bu düzenin sağlanması için hedeflenen amaçlar ve bu amaçları gerçekleştirmek için uygulanan yöntemler arasında ekonominin bir köprü vazifesi yaptığını savunur. Oluşan bu köprü sayesinde ekonomi bilimindeki fiyat kuramı, kar maksimizasyonu, faaliyet ve üretim analizi, rasyonellik gibi görüşlerin hukuk bilimini nasıl etkilediğini incelemiştir.

Yaptığı çalışma, bir hukuk normunun oluşumundan ve uygulamaya konulmasından sonra toplumda meydana getirdiği etkileri hakkında bilgi verir. Hukuk normunu belirleyenlerinde belli bir sınırları olduğundan ve normun hedefleri olması gerekliliğinden bahseder. Kişiler belirlenen norma uymadığı zaman yaptırım gücünden dolayı bir maliyetinin ortaya çıkacağını ve bu maliyetin hesaplanmasında ekonomiden yararlanılacağını belirtir. Bunun da hukuk ve ekonomi analizini gösterdiğini savunur. Yani ekonomi ve hukukun ortak noktalarının yapılaşmasında eşitlik, hürriyet, tarafsızlık, doğruluk, sosyal ve ekonomik refah gibi ana aktörlerin olumlu olacak şekilde birbirleriyle ilişki içerisinde olması gerektiğini çalışmada anlatmıştır.

Haggard vd. (2008: 206), yaptıkları çalışmada, iktisadi büyümenin ve hukukun birbiri ile olan etkileşimine yönelik çalışmaların arttığını vurgulamıştır. Hem akademik çalışmaların hem de akademiden dışındaki çalışmaların iktisadi büyüme ve hukuk arasındaki ilişkiyi geliştirdiğini açıklamıştır. Milletlerarası finans ve milli yardım kurumları da ekonomik büyümenin artmasına neden olduğunu belirtir. Yoksulluk seviyesinin düşürülmesi için fikirler geliştirilirken ve kurallar getirilirken hukukun üstünlüğünden yararlanıldığını belirtir. Ayrıca yoksulluk seviyesinin düşürülmesi konusunda kararlar alınırken hukukun üstünlüğü ile ilişki kurularak alındığından bahseder. Bu kararlara yönelik çalışmaların yapılmaya başlandığını ve hedeflerinde öncelikli olarak yer aldığını belirtir.

Stolper vd. (2007), hukukun üstünlüğünün ve bütünlüğünün iktisadi büyümeyi etkileyen kilit bir unsur olduğu fikrindedir. İş letme ve girişimciliğin birlikte hareketi sonucu yerli ve yabancı yatırımları teşvik edeceğini açıklamıştır. Buna ilave olarak, kanunlara ve bunların yaptırımından dolayı güvenin ortaya çıkacağına, istihdam alanı oluşturacağına ve uzun dönemde refah seviyesinin yükseleceğine değinir. Özel kesimlerde, devlette ve bireylerde hukukun giderek önem kazandığını belirtir. Şeffaf, yalın, anlaşılır ve eşit olacak şekilde uygulanan kanunların, küçük, büyük tüketici ve üreticilerin yararına olacağını savunur. İlâveten ülkenin küresel ekonomik sistemde ilerlemesini sağladığını ve ülkeye yatırımlar çektiğini dile getirmiştir.

Haggard (2010: 2-3,22-23), yayınladığı çalışmanın ilk bölümünde, iktisadi büyüme ve hukukun üstünlüğünün, birbirlerine olan etkilerinin ana nedenlerini belirtmektedir. İkinci ve üçüncü bölümünde, hukukun üstünlüğünün farklı değişkenlerle ilişkilerini ampirik çalışmasıyla açıklamaktadır. Dördüncü ve beşinci bölümde ise iktisadi büyüme ile ilgili ampirik çalışmasını anlatmaktadır. Sonuç olarak hukukun üstünlüğünün iktisadi büyümenin etkili bir belirleyicisi olduğu kanısına varmıştır.

Baykal (2008: 76-78), ekonomik yapının etkin bir şekilde çalışabilmesi için iyi bir hukuk sisteminin gerekli olduğunu belirtir. Hukukun, ekonomi piyasasının ilerlemesini ve sistemli işlemlerini sağlayan yasal bir etmen olduğunu açıklar. Güçlü bir ekonomi politikası için bütün kaynakların etkin olarak kullanılması, fiyatların dengede tutulması ve ulusal gelirin artmasını sağlayacak hukuki planların olması gerekliliğini savunur.

Gürpınar (2008: 161,164), makalesinde, hukuk normlarının ekonomik hareketleri biçimlendirdiğinden ve ekonomik incelemelerin hakimler, hukukçular için öneminden bahsetmektedir. Ekonomik faaliyetlerin üretimden tüketime geçişine kadar bireylerin birbiri ile ilişkisinden doğan durumun bir parçası olduğunu, hukukun oluşan bu ilişkiyi düzeltmesi gerektiğini savunur. Hukukun, ekonomi kurallarının tersine bir etki yaratmasını değil, kendi sınırları çerçevesinde ve belirli düzeltmeler yaparak olumsuzlukları hafifletmesi gerektiği belirtir.

Mackaay (1999: 92-93), yaptığı araştırmada, hukuku daha kolay kavrayabilmek için ekonomik terimleri uygulama düşüncesinin 1950'li yılların sonlarına kadar dayanan bir geçmişi olduğundan bahseder. Aynı zamanda hukuk ve ekonomi arasındaki ilişkiyi incelemek için yapılan günümüz çalışmaları ile geçmiş zamandaki çalışmaları kıyaslayarak anlatmaktadır. Ekonomide sorunlara neden olan kaynakların bulunması ve sorunların giderilmesi için bu kaynaklara müdahale edilmesi gerektiğini savunur. Bu sorunlar çözülmeden hukuk ve ekonominin ilerlemesinin olamayacağından bahseder.

3. DATA ve METODOLOJİ

Bu çalışmada 161 ülkeye ait 2000-2018 yıllarını kapsayan dengesiz panel veri seti kullanılarak hukuk sistemi bütünlüğünün ekonomik büyüme üzerindeki etkisini ampirik olarak analiz etmektedir. Literatürde ekonomik büyümenin belirleyicileri üzerine yapılmış çok sayıda ampirik çalışma olup mevcut bu belirleyicilerin yanında bir ülkenin hukuk sisteminin bütünlüğü de o ülkede gerçekleşen ekonomik büyüme üzerinde anlamlı ve belirleyici bir yol oynayabilir. Bu bağlamda çalışmanın hipotezi bir ülkede hukuk sistemi bütünlüğü arttıkça ekonomik büyümenin de artacağı savını öne sürmektedir. Çalışmada bağımlı değişken olarak iki farklı büyüme göstergesi ve dört kontrol değişkeni (yatırım (YATIRIM), ihracat (İHRACAT), enflasyon (ENFLASYON), yabancı sermaye yatırımı (YSY) değişkenleri) kullanılarak analizler gerçekleştirilmiştir. Büyüme değişkeni olarak GSYİH büyüme oranı (BÜYÜME1) ve kişi başı milli gelir büyüme hızı (BÜYÜME2) kullanılmıştır. Yatırım değişkeni olarak brüt sermaye formasyonunun milli gelir içindeki payı, ihracat değişkeni olarak mal ve hizmet ihracatının milli gelir içindeki payı, yabancı sermaye değişkeni olarak net yabancı sermaye girişleri, enflasyon değişkeni olarak da tüketici fiyat indeksi kullanılmıştır. Yatırım, ihracat ve yabancı sermaye yatırımlarının ekonomik büyümeyi pozitif yönde etkilemesi beklenirken enflasyonun negatif yönde etkilemesi beklenmektedir. Yatırım düzeyindeki artış üretim kapasitesini arttırarak, ihracat ve yabancı sermaye yatırımları üretimi arttırarak ekonomik büyümeyi olumlu yönde etkilemesi beklenir iken enflasyon iktisadi ve politik istikrarsızlık göstergesi olarak ekonomik büyümeyi olumsuz yönde etkilemesi beklenir. Diğer taraftan Hukuk sisteminin bütünlüğü hukuk sistemine olan güveni arttırmak suretiyle ilgili ülkede yapılan yatırım düzeyini arttırabilir ve nihayetinde buda üretim kapasitesini artırarak ekonomik büyümeyi tetikleyebilir. Hukuk sistemi bütünlüğüne ait veriler hariç diğer tüm veriler WDI (World Development Indicators) veritabanından alınmıştır. Hukuk sistemi bütünlüğüne (HUKUK) ait veriler Fraser Institute veritabanından alınmıştır. Analizlerde tüm değişkenlerin doğal logaritmik değerleri kullanılmıştır.

Bu bağlamda aşağıdaki tekli ve çoklu sabit etki modelleri (FEM) oluşturulup tahmin edilmiştir:

$$BÜYÜME1_{it} = \beta_0 + \beta_1 HUKUK + u_{it} \quad (1.A)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + u_{it} \quad (1.B)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \theta_2 YATIRIM + \theta_3 İHRACAT + \theta_4 ENFLASYON + \theta_5 YSY + u_{it} \quad (2.A)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \theta_2 YATIRIM + \theta_3 İHRACAT + \theta_4 ENFLASYON + \theta_5 YSY + u_{it} \quad (2.B)$$

Ayrıca bu bağlamda aşağıdaki tekli ve çoklu rastsal etki modelleri (REM) oluşturulup tahmin edilmiştir:

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \varepsilon_i + u_{it} \quad (3.A)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \varepsilon_i + u_{it} \quad (3.B)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \theta_2 YATIRIM + \theta_3 İHRACAT + \theta_4 ENFLASYON + \theta_5 YSY + \varepsilon_i + u_{it} \quad (4.A)$$

$$BÜYÜME_{it} = \theta_0 + \theta_1 HUKUK + \theta_2 YATIRIM + \theta_3 İHRACAT + \theta_4 ENFLASYON + \theta_5 YSY + \varepsilon_i + u_{it} \quad (4.B)$$

yukarıda eşitliklerde it alt indisi $i.ci$ ülkenin t yılındaki gözlem değerini temsil etmektedir. θ_{0i} notasyonu regresyon modelinde açıkça göz önünde bulundurulmayan ülke spesifik faktörleri temsil etmektedir. ε_i notasyonu zamana karşı değişmeyen stokastik unsur olup regresyon modelinde açıkça göz önünde bulundurulmayan ülke spesifik faktörleri temsil etmektedir. u_{it} notasyonu regresyon modelinin hata terimini temsil etmektedir.

3.1. Tahmin Sonuçları

Tablo 1’de BÜYÜME1 bağımlı değişkeninin kullanıldığı tekli regresyon modeline ait tahmin sonuçları yer almaktadır. HUKUK değişkenine ait katsayı pozitif ve istatistiksel olarak anlamlıdır. Hukuk sisteminin bütünlüğünde meydana gelecek olan %1’lik bir artış ilgili ülkenin ekonomik büyümesinin %0.083806 artmasına sebebiyet vermektedir. R-kare değerine göre Hukuk sisteminin bütünlüğü tek başına ekonomik büyüme gözlem değerlerindeki değişimin %10.97’lik kısmını açıklamakta, F-testi sonuçlarına göre tahmin edilen model istatistiksel olarak anlamlıdır, Hausman test sonuçları FEM modelinin en uygun model olduğunu göstermektedir.

Tablo 1: BÜYÜME1 Tekli Modeli için Tahmin Sonuçları

	Katsayı	t-ist.	P-değeri
C	4.068007	94.97110	0.0000
HUKUK	0.083806	3.479867	0.0005
Yıl sayısı	19		
Ülke sayısı	161		
Gözlem sayısı	3036		
R-Kare	0.109721		
Düz. R-Kare	0.059848		
F-istatistik	2.200006		
P-değeri(F-istatistik)	0.0000		
Hausman Test-ist.	16.507917		
P-değeri(Hausman Test)	0.0000		
Seçilen Model	FEM		

Tablo 2’de BÜYÜME2 bağımlı değişkeninin kullanıldığı tekli regresyon modeline ait tahmin sonuçları raporlanmıştır. HUKUK değişkenine ait katsayı pozitif ve istatistiksel olarak anlamlıdır. Hukuk sisteminin bütünlüğünde meydana gelecek olan %1’lik bir artış ilgili ülkenin ekonomik büyümesinde %0.083579 artışa yol açmaktadır. R-kare değerine göre Hukuk sisteminin bütünlüğü tek başına ekonomik büyüme gözlem değerlerindeki değişimin %11.89’lik kısmını açıklamakta olduğu, F-testi sonuçlarına göre tahmin edilen model istatistiksel olarak anlamlı olduğu, Hausman test sonuçları FEM modelinin en uygun model olduğu görülmektedir.

Tablo 2: BÜYÜME2 Tekli Modeli için Tahmin Sonuçları

4. SONUÇ

Bu çalışmanın amacı bir ülkede yer alan hukuk sistemi bütünlüğünün ekonomik büyümeyi nasıl etkilediğini ampirik boyutta irdelemektir. Çalışmada 161 ülkeye ait 2000-2018 yıllarını kapsayan dengesiz panel veri seti kullanılmıştır. Literatürde ekonomik büyümeye etki eden faktörler detaylı olarak ele alınmış olmasına rağmen hukuk sistemi bütünlüğü boyutunda yapılmış bir çalışmaya rastlanılmamıştır. Bu bağlamda çalışmanın hipotezi bir ülkede hukuk sistemi bütünlüğü arttıkça ekonomik büyümenin de artacağı iddiasını ortaya koymaktadır. Çalışmada bağımlı değişken olarak iki farklı büyüme göstergesi ve dört kontrol değişkeni kullanılarak analizler yürütülmüştür. Yapılan tekli ve çoklu panel regresyon analizleri sonrasında elde edilen bulgulara göre; bir ülkede hukuk sisteminin bütünlüğü arttıkça o ülkenin ekonomik büyüme hızının da arttığı ve bu ilişkinin istatistiksel olarak anlamlı olduğu tüm modellerde gözlemlenmiştir. Diğer bir ifadeyle, her iki çoklu regresyon modelinde, hukuk sisteminin bütünlüğünde meydana gelecek olan %1'lik bir artış ilgili ülkenin ekonomik büyümesinde yaklaşık olarak %0.06'lık bir artışa yol açmaktadır. Ayrıca ihracat ve yatırımların ilgili ülkenin ekonomik büyümesi üzerinde pozitif anlamlı etkiye sahip olduğu ve enflasyonun da negatif anlamlı bir etkiye sahip olduğu görülmüştür.

Özet: Sürdürülebilir kalkınma gelecek kuşakların ihtiyaçlarını karşılayabilme olanağından ödün vermeksizin günümüz kuşaklarının ihtiyaçlarını karşılayabilecek bir kalkınma modeli olarak tanımlanabilmektedir. Dünyada her geçen gün artan nüfus, şehirleşme ve endüstrileşme gibi faktörler insanlığın enerji ihtiyacı her geçen gün artırmaktadır. Bundan dolayı enerji, sürdürülebilir kalkınmanın başlıca araştırma konularından biridir ve insanlığın ihtiyaç duyduğu enerjinin ekonomik ve çevresel kirlilik oluşturmada, güvenli ve temiz kaynaklardan sağlanabilmesi için yenilenebilir enerji kavramı öne çıkmıştır. Enerji, uluslararası sürdürülebilir kalkınma gündeminin ana konuları arasında en önemlisidir. Sürdürülebilir kalkınmanın gerçekleştirilmesinde enerji önemli bir girdi olup, sanayi ve tarım ve hizmet sektörlerinin en önemli parametresidir. Sanayi Devrimi'nden sonra fosil kaynaklı enerji kullanımı dünya ekosistemlerinde önemli boyutta tahribata neden olmuştur. Bu nedenle son dönemlerde dünyada olduğu gibi Türkiye'de de yenilenebilir enerji kaynaklarına yapılan yatırımlar artmıştır. Bu çalışmada Türkiye'de sürdürülebilir kalkınma ve yenilenebilir enerji kaynakları hakkında bilgi verilmiştir, daha sonra Türkiye'de yenilenebilir enerji kaynakları olan rüzgar enerjisi, güneş enerjisi, hidroelektrik enerji, biyokütle enerjisi ve jeotermal enerji ve bunların Türkiye'deki potansiyelleri incelenmiştir. Sonuçta Türkiye'nin yenilenebilir enerji kurulu gücü yıllar içinde arttığı, 2015 yılında yenilenebilir enerji kaynaklarına dayalı kurulu gücü 31,6 GW iken 2020 yılında 46,9 GW'a ulaştığı, 2015-2020 yılları arasında yenilenebilir enerji kaynaklarına dayalı kurulu güç yaklaşık %48 oranında arttığı, bu artışında en büyük pay %1951 oranındaki artışa güneş enerji santrallerinden kaynaklandığı anlaşılmıştır.

Anahtar Kelimeler: Sürdürülebilir Kalkınma, Yenilenebilir Enerji, Çevre

Abstract: Sustainable development can be defined as meeting the needs of today's people without compromising the ability of future generations to meet their own needs. Due to the increasing population, urbanization and industrialization in the world, the energy need of humanity is gradually increasing. Therefore, energy is one of the main research topics of sustainable development and the concept of renewable energy has come to the fore in order to provide the energy needed by humanity from safe, clean resources economically and without harming the environment. Energy is the most important among the main topics of the international sustainable development agenda. After the Industrial Revolution, the use of fossil-based energy caused significant damage to the world's ecosystems. For this reason, investments in renewable energy sources have increased in Turkey, as in the world, recently. In this study, it was aimed to give information about sustainable development and renewable energy sources in Turkey. For this purpose, firstly, information was given about sustainability and sustainable development. Later, renewable energy sources in Turkey such as wind energy, solar energy, hydroelectric energy, biomass energy, and geothermal energy and their potentials in Turkey were examined. As a result, Turkey's renewable energy installed power has increased over the years, while its installed power based on renewable energy sources was 31.6 GW in 2015, it reached 46.9 GW in 2020. It has been understood that the biggest share of this increase is solar power plants with an increase of 1951%.

Keywords: Sustainable development, Renewable energy, Environment

1.GİRİŞ

Sürdürülebilirlik kavramı, insanlar, çevre ve şimdiki nesillerin gelecek nesillere karşı sorumlulukları arasındaki ilişkiyi tanımlamak için kullanılmaktadır. Sürdürülebilir kalkınma, yaşam kalitesini düşürmeden, düşünme şeklinin değiştirilmesi gerektiğini belirtmektedir. Bu değişimin özünde ise bir tüketim toplumu olmamak ve dayanışma içinde olan çevre yönetimi, sosyal sorumluluk ve ekonomik çözümler yer almaktadır. Genel bir ifade ile sürdürülebilir kalkınma, gelecek nesilleri kendi ihtiyaçlarını karşılayabilme durumundan mahrum etmemek şartıyla, bugünün ihtiyaçlarını karşılamaktır (Özmehmet, 2008).

Ekonomik, sosyal ve çevresel olarak üç boyutta ele alınan sürdürülebilir kalkınma, birbirini bütünleyen bu boyutlar arasında denge kurma zorunluluğunu ve ilişkiyi anlatmaktadır. Yani sürdürülebilir kalkınmayı sağlayabilmek için sorunlara ekonomik, sosyal ve çevresel açıdan bir bütün olarak yaklaşılmalıdır. Enerji, kalkınmanın temel girdisi olarak kabul edilmektedir. Bu nedenle sürdürülebilir kalkınmanın sağlanması için yaşam standartlarının iyileştirilmesinde gerekli olan, nüfusun artışı ve ekonomideki gelişme nedeniyle sürekli artan enerji gereksiniminin karşılanması gerekmektedir. (Seydioğulları, 2013). Kalkınmada sürdürülebilirlik ve doğadaki dengenin korunması için enerjiyi güvenilir, sürekliliği olan, temiz, kalitesi yüksek, ucuz ve yerli olan yenilenebilir enerji kaynaklarından elde etmek ve etkin şekilde kullanmak büyük öneme sahiptir. Yenilenebilir enerji kaynaklarının kullanımını yaygınlaştırmak ve enerji üretiminde kullanılan teknolojileri geliştirmeye yönelik teşvik edici politikalara pek çok ülke öncelik vermektedir (Oskay, 2014).

Ülkelerin sosyal ve ekonomik gelişmişlik düzeyinin oluşması, insanların temel gereksinimlerinin karşılanması ve ekonomik faaliyetlerin gerçekleştirilmesi için enerji, önemli bir ögedir. Günümüzde enerjiye olan talep artan nüfus ve teknolojik gelişmeler gibi etkenler nedeniyle artmaktadır. Talepteki artış sebebiyle sınırlı miktarda olan fosil kaynaklarının gelecekte yetmeyeceği görüşü, enerjide büyük ölçüde dışa bağımlı olunması, stratejik kaynakların olduğu bölgelerdeki siyasi istikrarsızlıklar, enerjide meydana gelen arzdaki güvenilirlik meselesi ve küresel boyutta olumsuzluklara yol açan iklim değişikliği vb. faktörler enerjinin önemini yükseltmiştir (Öymen ve Ömeroğlu, 2020). Avrupa Konseyi tarafından açıklanan sürdürülebilir kalkınma hedefleri arasında elektrik enerjisinin yenilenebilir kaynaklardan üretilme kapasitesinin 2010 yılına kadar %22 seviyesine yükseltilmesi planlanmış ancak bu gerçekleşmemiştir. Daha sonra Avrupa 2020 Stratejisi hedefleri belirlenmiş ve Avrupa Birliği'nin, çevrenin korunması ve iklim değişikliğiyle mücadele için Avrupa Birliğindeki toplam enerji tüketiminin %20'sinin yenilenebilir enerji kaynaklarından elde edilmesi hedeflenmiştir (Yaman ve Gül, 2018).

Bu çalışmada Türkiye'de sürdürülebilir kalkınma ve enerji konuları incelenmiş ve bu konuda yenilenebilir enerji kaynaklarının önemi ile ilgili bilgi verilmiştir.

2. SÜRDÜRÜLEBİLİRLİK

Sürdürülebilirlik, ekonomik faaliyetlerin çevreye etkilerini tüm açılardan ele alan, yenilenebilen ya da değiştirilebilen yani tükenmeyen kaynakların kullanımına dayalı ekonomik kalkınma olarak tanımlanmaktadır (Gedik, 2020). Çevresel tahribat oluştuktan sonra harekete geçmek sürdürülebilir kalkınma anlayışı ile uyusmamaktadır. Sürdürülebilir kalkınma fikri herhangi bir değer kaybına uğratılmaksızın atalarımızdan kalan doğal mirasın, gelecek nesillere devredilmesi temeline dayanmaktadır (Muşmul ve Yaman, 2018).

Sürdürülebilirlikle ilgili ilk bilimsel çalışmalar doğal kaynakların kullanımı ve bu kaynakların yaşam kalitesi üzerindeki etkisine yoğunlaşmıştır. Devamında bu konudaki çalışmalar asıl hedef kitlesi olan gelecek nesillerin çevre, ekonomi ve sosyal konularla olan ilişkilerine yönelmiştir (Gedik, 2020). Sürdürülebilirlik 19. yüzyıl başlarında tarım, orman ve balıkçılık gibi yenilenebilir kaynaklar alanında kullanılmaya başlanmıştır. 1960'larda ne olursa olsun kalkınma düşüncesinin çevreye olan zararı ortaya çıkmaya başlamıştır. 1962'de, "Sessiz Bahar" isimli eserinde Rachel Carson böceklerle karşı zirai ilaçların çevreye olan zararlı etkilerini incelemiş ve bu etkilerin hayvanlar ve insanlar üzerindeki olumsuz etkilerine dikkat çekmiştir (Tıraş, 2012). Stockholm'de 1972 yılında gerçekleştirilen Birleşmiş Milletler Çevre Konferansı, çevresel olarak sürdürülebilir küresel bir ekonominin mümkün kılınması konusunda dönüm noktası olmuştur. Dünyada bir çevrecilik hareketi oluşması ve çevrenin korunması için yasal düzenlemelerin yapılması Stockholm Konferansından sonra başlamıştır (Muşmul ve Yaman, 2018).

3. SÜRDÜRÜLEBİLİR KALKINMA

Sürdürülebilir kalkınma fikrine ilk olarak Thomas Robert Malthus, 1798'de yayınlanan "Nüfus Hakkında Bir Deneme" adlı eserinde yer vermiştir. Malthus, nüfusun geometrik bir dizi halinde artarken yiyecek arzının aritmetik olarak artacağını ve bunun neticesinde kitlesel açlığın ortaya çıkacağını ifade etmiştir. David Ricardo ise, sabit arazi arzından dolayı ekonomik büyümenin bir sınırının olacağını ve böylece insan nüfusu arttıkça tarımsal gıda talebinin de artacağını, gıda fiyatlarının yükseleceğini belirtmiştir (Bayraktutan ve Uçak, 2011).

Sürdürülebilir kalkınma, ekonomik kalkınmanın çevreyi tüketmekle değil, yenilemekle sağlanabileceği görüşünü benimsemiştir. Bu anlayışın, kalkınma ekonomisinde yerini alması, çevresel sorunlarının ekonomik yönlerinin ayrıca bir önem kazanmasını sağlamıştır (Muşmul ve Yaman, 2018). Sürdürülebilir kalkınmanın temel amacı, doğal kaynakların korunarak geliştirilmesidir. Çevreci kalkınma felsefesinin temeli, sürekli bir şekilde kaynakların korunarak değerlendirilmesi, özellikle de yenilenebilir kaynakların kendini yenileme sınırı içerisinde kalkınmaya destek olabilmeleridir (Ay ve Kılıç, 2020).

Sürdürülebilir kalkınma, insan ihtiyaçlarını karşılamak, çevresel sınırlara saygılı olmak ve sosyal eşitliği sağlamak olmak üzere üç ahlaki zorunluluğa dayanmaktadır. Sürdürülebilirlik, çevresel, sosyal ve ekonomik olmak üzere üç sütundan oluşan üçlü alt çizgiye atıfta bulunmaktadır. Sürdürülebilirliğin en çok karşılaşılan tanımı, sürdürülebilir kalkınmaya odaklanan, bugünün ihtiyaçlarını karşılarken gelecek nesillerin ihtiyaçlarını karşılayabilme yeteneğinden taviz verilmeyen bir gelişmedir (Gedik, 2020). Bu tanımdan da anlaşıldığı gibi çevrenin korunması ile birlikte ekonomik kalkınmayı da içeren sürdürülebilir kalkınma, günümüz ve gelecek için ekonomik, çevresel ve sosyal açıdan bolluk demektir. Sürdürülebilir kalkınma Birleşmiş Milletler Dünya Çevre ve Kalkınma Komisyonu'nca 1987'de açıklanan "Ortak Geleceğimiz Raporu"nda günümüz neslinin ihtiyaçlarını karşılayabilmesini, gelecek nesillerin ihtiyaçlarını karşılayabilme imkanını tehlikeye atmadan sağlayan bir

kalkınma olarak tanımlanmıştır. Yapılan tanımda, iki önemli noktayı ihtiyaçlar ve sınırlamalar oluşturmaktadır. Sürdürülebilir kalkınma hem günümüzün ve geleceğin nesilleri arasında bir eşitlik düşüncesini hem de kaynakların korunması ve geliştirilmesi düşüncesini kapsamaktadır (Dinçer, 2019, Bayraktutan ve Uçak, 2011, Ay ve Kılıç, 2020).

4. TÜRKİYE’DE YENİLENEBİLİR ENERJİ KAYNAKLARI

Türkiye’de yıllar içinde artan enerji talebini karşılamak için fosil kaynaklar yoğun olarak kullanılmaktadır. Fosil yakıt kullanımı nedeniyle atmosferde CO₂ gazı birikmekte ve iklim değişikliği meydana gelmektedir. Bunun sonucu olarak buzullar erimekte, verimli araziler azalmakta, bazı canlı türlerinin nesli tükenmekte ve doğanın dengesinin bozulmasıyla insan sağlığı zarar görmektedir. Fosil kaynaklar yerine yenilenebilir enerji kaynaklarının tercih edilmesi iklim değişikliği ile mücadelede en önemli koşullarından biridir (Evli 2018; Öymen ve Ömeroğlu, 2020).

Yenilenebilir enerji kaynakları doğal işlemler sonucu oluşan, kendilerini doğal şekilde yenileyebilen, kullanıldıkça tükenmeyen kaynaklar olarak tanımlanabilmektedir. Yenilenebilir enerji kaynakları güneş enerjisi, biyoenerji, rüzgar enerjisi, jeotermal enerji, hidroelektrik enerjiden oluşur (Çukurçayır ve Sağır, 2008; Kaya, 2013; Evli, 2018; Parmaksız, 2020; Bekar, 2020). Yenilenebilir enerji kaynakları, çevresel etkilerinin az olması ve yenilenebilir oluşlarının yanı sıra işletme ve bakım harcamalarının düşük ve ulusal oluşları, güvenilir enerji sağlamaları sebebiyle dünya ve ülkemiz açısından oldukça önemli bir konumdadır (Külekçi, 2009).

Türkiye’nin yenilenebilir enerji kurulu gücü devamlı olarak artış göstermektedir. 2013 yılında yenilenebilir enerji kaynaklarına dayalı kurulu gücü 25,6 GW olup, yıllık ortalama %10 artışla 2020 yılı Eylül itibarıyla yaklaşık olarak 47 GW’a ulaşmıştır. 2013 2020 Eylül ayı arasında yenilenebilir enerji kaynaklarına dayalı kurulu güç artışında en büyük pay 7,5 GW’lık artışla hidroelektrik enerji santrallerinin olmuştur. Bunu güneş enerji santralleri 6,4 GW’lık, rüzgar enerji santralleri 5,3 GW’lık, jeotermal enerji santralleri 1,2 GW’lık ve biyokütle enerji santralleri 1 GW’lık artış ile izlemiştir (TSKB, 2020).

Türkiye’nin resmi enerji politikası, 2023 yılına kadar dış kaynaklara olan bağımlılığın azaltılıp, doğal kaynaklara harcanan maliyetin düşürülerek iç kaynaklardan en üst düzeyde faydalanmaktır. Bu çerçevede hedeflenen 2023’de toplam elektrik üretiminin %30 oranındaki kısmının yenilenebilir kaynaklardan sağlanmasıdır (Yılmaz ve Öziç , 2018).

4.1. Güneş Enerjisi

Güneş enerjisi potansiyel kapasitesi yeterli düzeyde kullanılamayan en büyük enerji kaynağıdır (Çukurçayır ve Sağır, 2008; Evli, 2018; Parmaksız, 2020). Güneş enerjisi, güneşin yaydığı ve atmosferi geçerek yeryüzüne gelen ısınma etkisidir. Dünyaya ulaşan bu enerjinin günümüz enerji tüketiminin yüzlerce katı olduğu iddia edilmektedir (Çukurçayır ve Sağır, 2008; Batı, 2013).

Güneş enerjisi, sera gazı emisyonunun sıfır olması ve zehirli kimyasal madde salınımına yol açmaması nedeniyle fosil yakıtlara ve diğer karbon temelli enerji kaynaklarına kıyasla çevre açısından avantajlıdır (Parmaksız, 2020). Güneş enerji ile büyük boyutlarda elektrik enerjisi üretebilmek için büyük araziler gerekmektedir. Ayrıca elektrik enerjisi üretimi için, üretim yapılacak alanın verimliliği önemlidir. Dünya üzerinde belli alanlar güneş ışınlarını daha fazla alabildiğinden bu anlamda verimli kabul edilmektedir (Çepik, 2015).

Güneş enerjisinin kullanımı 1970 sonrası artmış ve son yıllarda bu artış hızlanmıştır. 1970 sonlarında ABD’nin California-Mojave çölünde kurulan 19 MW lık santral, dünyadaki ilk güneş santralidir. 1883 yılında güneş enerjisinden yararlanarak elektrik enerjisi üretimi keşfedilmiştir. İlk güneş pilinin satışı ise 1956 yılında başlanmıştır. Maliyetlerin de düşmesi ile 1990’lı yıllarda kullanım alanı artmıştır (Çepik, 2015). Güneş enerjisinden elektrik üretimini sağlayan teknolojiler, termal ve fotovoltaik olarak ikiye ayrılmaktadır. Termal teknolojilerin prensibi, bir taşıyıcı sıvının (genellikle suyun) ısınmasına dayanmaktadır. Sıcak sıvı, sıcak su ısıtmasındaki gibi doğrudan ya da elektrik üretimi gibi başka bir işlem için dolaylı olarak kullanılabilir (Parmaksız, 2020). Güneş sistemlerinin ilk zamanlarda kurulum maliyetleri yüksek olsa da yeni nesil teknolojiler ile maliyetleri azalırken verimlilikleri artmıştır (Batı, 2013).

Türkiye Haziran 2022 verilerine göre 8.275 MW güneş enerji santrali kurulu gücüne sahiptir. Tablo 1’de bazı ülkelerin güneş enerji santrali kurulu gücü verilmiştir.

Tablo 1. Ülkelerin Güneş Enerji Santrali Kurulu Gücü (<https://www.enerjiatlası.com/>)

S.	Ülke	Güncelleme	Kurulu Güç (MW)
1	Çin	Aralık 2020	254.355
2	Amerika Birleşik Devletleri	Aralık 2020	75.572
3	Japonya	Aralık 2020	67.000
4	Almanya	Aralık 2020	53.783
5	Hindistan	Aralık 2020	39.211
6	İtalya	Aralık 2020	21.600
7	Avusturalya	Aralık 2020	17.627
8	Vietnam	Aralık 2020	16.504
9	Güney Kore	Aralık 2020	14.575

19	Meksika	Aralık 2020	5.644
20	Ukrayna	Aralık 2020	5.360

4.2. Rüzgar Enerjisi

Kaynağı rüzgâr olan kinetik enerjinin elektrik enerjisine çevrilmesi yoluyla Rüzgâr Enerjisi elde edilmektedir (Parmaksız, 2020; Önal, 2020). Rüzgâr enerjisi, güneş radyasyonunun yer yüzeyini farklı düzeyde ısıtması sonucunda oluşmaktadır. Yer yüzeyinin farklı düzeyde ısınması, hava sıcaklığının, neminin ve basıncının farklılığına, meydana gelen bu basınç farklılığı da hava hareketine neden olmaktadır. Rüzgar, güneş enerjisinin dolaylı bir ürünü olup, güneş ışınları var olduğu sürece oluşacaktır. Yeryüzüne ulaşan güneş enerjisinin yaklaşık olarak %2'si rüzgâr enerjisine çevrilmektedir. (Batı, 2013).

Bir bölgede bulunan potansiyel rüzgâr enerjisinden yararlanmak için rüzgar türbinleri tasarlanmaktadır. Aerodinamik modelleme ile en uygun kule yüksekliği, kanat sayısı, kanat şekli ve kontrol sistemleri belirlenmektedir (Parmaksız, 2020). Rüzgâr enerjisi çevreye zarar vermeyen, yenilenebilir özellikte, yüksek potansiyele sahip bir enerji kaynağıdır. Ancak oluşturduğu gürültü, kuşlar için tehlikeli olması, televizyon ve radyo yayınlarıyla etkileşim gibi dezavantajları da vardır (Önal, 2020). Türkiye'nin toplam karasal rüzgar enerji santrali potansiyelinin 48.000 MW olduğu tahmin edilmekte olup deniz üstüne kurulacak rüzgar potansiyelinin ise 17.393 MW olduğu hesaplanmıştır. Son verilere göre Türkiye'de 42 ilde kurulu olan rüzgar enerji santrallerinden elde edilen enerji 11.322 MW'tır (www.enerjiatlası.com).

4.3. Biyokütle Enerjisi

Biyokütle, bitki ya da hayvanlardan sağlanan, yenilenebilir özellikte, fosil kaynaklı olmayan organik kökenli madde kalıntısıdır. Karada ve suda yetişen bitkiler, hayvansal atıklar, otsu ve odunsu yapıdaki enerji bitkileri, şehirlerin ve sanayilerin organik atıkları biyokütle örnekleridir. Biyokütleden biyoyakıt üretimi, sürdürülebilir tarımın yapıldığı her yerde mümkündür. Biyokütlenin tekrar oluşması uzun sürdüğünden, yenilenebilir özelliğe sahip olmasına rağmen sera gazı ürettiğinden yeşil enerji kapsamına girememektedir. Bu durum, biyokütlenin yenilenebilir enerji kaynakları içerisindeki değerini düşürmektedir (Önal, 2020).

Haziran 2022 yılı verilerine göre Türkiye'de bulunan biyokütle ve benzeri enerji santrallerinin toplam kurulu gücü 2.172 MW'dır. 2021 yılında biyokütle enerji santrallerinden ise 7.600 gWh elektrik üretimi yapılmıştır (www.enerji.gov.tr, aa.com.tr).

4.4. Hidroelektrik Enerjisi

Başka bir yenilenebilir enerji kaynağı da hidroelektrik enerjisidir. Günümüzde küresel ölçekte elektrik üretmek için en fazla kullanılan enerji kaynağıdır. Ancak, genellikle yeni tesisler kurulurken çevreye olan olumsuz etkileri yeterince dikkate alınmamaktadır. Son yüzyılda, barajların, yapay göllerinin ve santrallerin yapılması yerel ekosistemlerde önemli değişimlere yol açmıştır. Büyük barajların yapımı için, alan sınırlı olduğundan, mikro ve küçük ölçekli hidroelektrik santrallerinin sayısı artmıştır (Parmaksız 2020). Türkiye’de halen 708 adet hidroelektrik santrali mevcut olup kurulu güç 1.555 MW olup 2021 yılında bu santralleri ile 55.695.231.650 kWh elektrik üretilmiştir (www.enerjiatlası.com)

4.5. Jeotermal Enerji

Dünyanın doğal ısısından kaynaklanan jeotermal enerji, tüm ülkelerin sahip olduğu enerji kaynağı durumundadır. Yüzyıllar boyunca kullanılan jeotermal enerji, günümüzde esas olarak elektrik enerjisi üretiminde kullanılmaktadır. Elektrik enerjisi dışında alternatif kaynaklarının geliştirilmesini teşvik eden, fosil ve nükleer yakıt kullanımını azaltmayı amaçlayan pek çok ülke ekonomisinde, mekan ve endüstriyel ısıtma gibi amaçlarla jeotermal enerjinin kullanımı da önem kazanmıştır (Parmaksız, 2020). Türkiye’de bulunan jeotermal enerji santralleri sayısı 63 olup toplam kurulu gücü 1.679 MW, 2021 yılı verilerine göre üretilen elektrik miktarı 10.770.879.810 kWh (enerjiatlası.com).

5.SONUÇ

Sürdürülebilir kalkınma için günümüz toplumlarının ihtiyaçlarının çevreyi koruyarak karşılanması ve bu çevrenin gelecekte dünya üzerinde var olacak toplumlar için yeterli ve sağlıklı bir şekilde bırakılmalıdır. Kalkınma için de enerji gerekmektedir. Enerji olmadan üretim yapılması mümkün değildir. Sürdürülebilir bir kalkınma için sürdürülebilir enerji geçişini gerçekleştirilmelidir. Dünya nüfusunun hızla bir şekilde artışı beraberinde daha fazla enerji ihtiyacını da getirmiştir. Çevreye zarar vermeden enerji ihtiyacının karşılanmasının yolu yenilenebilir enerji kaynaklarının kullanımından geçmektedir. Yenilenebilir enerji kaynakları kendilerini yenileyebildiklerinden tükenmez enerji kaynaklarıdır. Yapılan çalışmalarda, yenilenebilir enerji kaynaklarının kullanımının, enerji maliyetlerini düşürdüğü, fosil yakıtların aksine çevreye ve dolayısıyla insan sağlığına önemli bir tehdit oluşturmadığı görülmüştür.

Türkiye yenilenebilir enerji kaynaklarının çeşitliliği ve potansiyeli açısından zengindir. Bu nedenle yenilenebilir ve çevreye zararı olmayan enerji kaynaklarına daha fazla yönelmek gerekmektedir. Özellikle yenilenebilir enerji kaynaklarından hidroelektrik ve rüzgar enerjisi açısından ülkemiz önemli bir kaynaktır. Elektrik enerjisi üretiminde rüzgar enerjisinden daha fazla yararlanılması gerekmektedir. Türkiye coğrafi konumu nedeniyle jeotermal enerji açısından iyi bir potansiyele sahip olup bu enerjinin özellikle ısıtma için kullanım oranı artırılmalıdır. Sürdürülebilir bir kalkınma dolayısıyla sürdürülebilir enerji için ülkemizde yenilenebilir enerji kaynaklarına yapılan yatırımların daha fazla artırılması, kullanımlarının teşvik edilmesi ve sürekli geliştirilmesi gerekmektedir.

Sonuç olarak çevrenin ve çevresel kaynakların sürdürülebilir bir biçimde yönetilebilmesi için yasal düzenlemeler ve bu düzenlemeleri uygulayacak kurum ve sistemlere ihtiyaç duyulmaktadır bu da kalkınma ve çevrenin sürdürülebilirliğinin sağlanabilmesi için kurumsal yapının güçlendirilmesi ve gerekli teşviklerin daha da yaygınlaştırılması gerekmektedir.

Özet: Ticaretin başlangıcından bu yana insanlar hem paralarını hem mallarını garanti altına almak istemişlerdir. Günümüzün en dinamik ve değişken sektörlerinden birisi olan sigortacılık sektörü, gelişmiş ülkelerde çok büyük ekonomik paya sahiptir. Gelişmemiş ve gelişmekte olan ülkelerde ise henüz tam olarak sektör bilinci oturmamıştır. Dünya genelinde önemli bir konuma sahip olan bu sektörün ekonomik dengelerin ve finansal teknolojilerin değişmesi ile birlikte sürekli kendini güncellediği görülmektedir. Bu çalışmada sigorta sektörüne etkileri olan finansal teknolojilerden bahsedilerek etkilerinin mevcut ve gelecekteki durumu tartışılarak sektörün önümüzdeki yıllarda pazar paylarının analizi yapılmıştır.

Anahtar Kelimeler: Finansal Piyasalar, Sigortacılık, Sigorta Sektörü, Finansal Teknolojiler

Abstract: Since the beginning of trade, people have wanted to guarantee both their Money and their goods. The insurance sector, which is one of the most dynamic and volatile sectors of today, has a huge economic share in developed countries. In under developed and developing countries, however, sector awareness has not yet been fully established. It is seen that this sector, which has an important position in the world, is constantly updating itself with the change of economic balance and Financial technologies. In this study, Financial Technologies that have effects on the insurance sector are mentioned and the current and future status of their effects are discussed and the market shares of the sector in the coming years are analyzed

Keywords: Financial Markets, Insurance, Insurance Industry, Financial Technologies

GİRİŞ

Sigortacılık sektörü geçmişten günümüze kadar uzanan bireylerin kendilerini yaşanacak zararlardan dolayı garantiye almasıyla ortaya çıkan dünya ekonomisinde önemli bir paya sahip olan büyük bir sektördür.

Doğal afet, kazalar, yangın gibi olaylarda zararları karşılamada önemli bir mekanizma olarak genel bir anlam ile bilinmektedir. Ekonomik boyutuyla birlikte sosyal ve psikolojik boyutlara da sahip olan geniş çaplı bir sektördür. Bu sektör içerisinde bulunan ürünler zamanla değişkenlik göstermektedir. Özellikle bireylerin ihtiyaçlarına göre şekillenen sigorta ürünleri, teknolojinin gelişmesiyle birlikte farklı bir boyuta ulaşmıştır. Finansal teknolojilerin artmasıyla sektörde gelişmeler gözlemlenmiştir. Bu değişim ve gelişim süreci, sigorta şirketlerinde ortaya çıkan çok üst boyuttaki verilerin kayıt altına alınması, saklanması, sınıflandırılması, uygun formata dönüştürülmesi ve aynı zamanda kullanıcılarına iletilmesi gerekliliğini ortaya çıkarmıştır. Büyük verilerin yönetiminin, ülkelerin kalkınması için tutarlı ve etkin para politikalarının hem kontrolü hem de uygulanması açısından çok önemli olduğu kabul edilmektedir.

Bununla beraber sigortacılık sektöründeki gelişmeler mevzuat çalışmalarının da tekrar gözden geçirilmesini gerektirmiştir. Sektörde kaçınılmaz dijitalleşme sürecinin öne çıktığı ve mevzuatın da buna uygun bir şekilde uygulanması gerektiği sektör paydaşlarının ortak düşünce olarak belirlenmiştir.

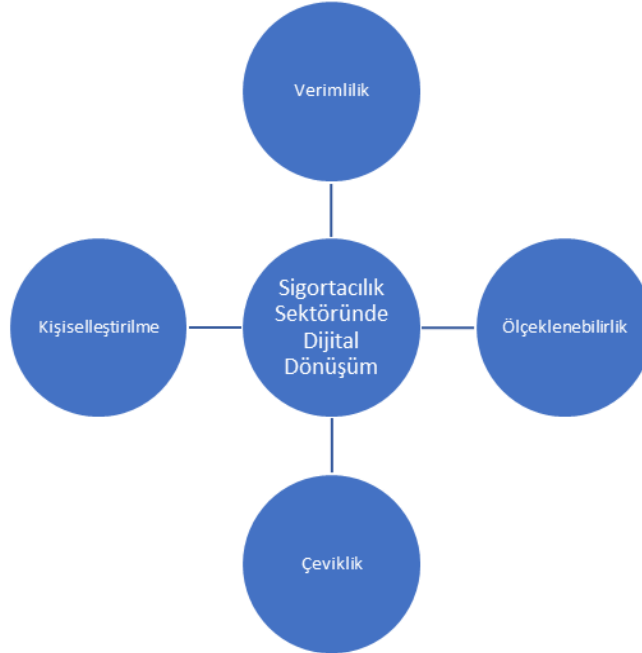

1. FİNANSAL TEKNOLOJİLERİN SİGORTACILIK SEKTÖRÜ ÜZERİNDEKİ ETKİSİ

1.1. Sigortacılık Sektöründe Dijital Dönüşüm

Günümüzde sigortacılık sektöründe çalışanlar, müşterilerin taleplerine ayak uydurmak için operasyonlarının çeşitli yönlerini dijitalleştirmek zorunda kalmışlardır. Günümüz pazarında rekabetçi kalmak isteyen herhangi bir işletme, bir şeye ihtiyaç duydukları yerde ve zamanda müşterileriyle aynı dili konuşmalıdır. Yapay zekâ, makine öğrenimi, tahmine dayalı analitik, mobil hizmet, canlı sohbet tarafından desteklenen sigortacılığın dijital dönüşümü, sigorta şirketlerinin tam da bunu yapmasına olanak tanırken sektörü önümüzdeki yıllarda da değiştirmeye devam edecek gibi gözükmektedir (Aytekin, 2018, s. 17-22).

Sigortacılığın dijital dönüşümünün sektörü nasıl değiştirdiğine dair sayısız örnekler vardır. İşlemlerin kolaylaşması, müşteri etkileşimlerinin dijitalleşmesi gibi birçok faktör bulunmaktadır. Ancak dijital dönüşümün sigortacılık üzerindeki etkisi dört faydada özetlenebilir:

Şekil 1. Sigortacılık Sektöründe Dijital Dönüşüm

Verimlilik, dijital dönüşümün sigortacılık üzerindeki ilk ve en belirgin etkisi, sağladığı verimlilik. Öncelikle yapay zekâ ve ilgili makine öğrenimi ve tahmine dayalı analitik teknolojileri tarafından desteklenen sigorta operasyonlarının neredeyse her yönü hız için optimize edilmiştir. Talepler bir uygulama aracılığıyla anında işlenebilir ve makine öğrenimi yetenekleriyle poliçe yazımı daha kısa sürede yapılabilir. Dijital dönüşüm, canlı sohbet ve dijital asistanların müşterilere en önemli ihtiyaç anlarında yardımcı olduğu müşteri hizmetlerini de hızlandırmaktadır.

Kişiselleştirilme, günümüzde müşteriler, istedikleri yerde ve zamanda hizmet ve ilgi beklemektedir. Aynı zamanda kendi ihtiyaçlarına uygun olmasını da bekliyorlar ve kişiselleştirme artık tüm endüstrilerde statüko haline geldi. Dijital dönüşüm, sigorta şirketlerini ihtiyaç duydukları araçlarla güçlendiriyor müşterilere kaynaklarını fazla tüketmeden mükemmel hizmet vermektir. Yapay zekâ ve makine öğrenimi, hem müşteriler hem de araçlar için sorunsuz, kişiselleştirilmiş bir deneyim yaratır. Müşteriler bir uygulama aracılığıyla faturaları ödeyebilir, poliçeleri görüntüleyebilir ve talepte bulunabilir ve komisyoncular tüm bilgileri tek bir sistem altında kendi uçlarında alabilir ve işleyebilir. Artık telefonda beklemek, talebinizin alınıp alınmadığını ve işleme alınıp alınmadığını merak etmek yok; dijital teknolojiler müşterilere anında geri bildirim sağlıyor ve acentaların işlerini daha verimli ve etkili bir şekilde yapmalarına yardımcı oluyor. Sigortacılıkta dijital dönüşüm, pazarlama çabalarının kişiselleştirilmesine de yardımcı oluyor. Sağlam veri analitiği ve yapay zekâ sistemleri, gerçekten etkileyebilecekleri kitlelere ulaşmak için sosyal medyanın gücünü kullanarak sigortacılar için pazarlama çabalarını özelleştirebilir ve hedefleyebilir.

Ölçeklenebilirlik, sigorta sektörünün dijital dönüşümü, aynı zamanda operasyonların hem ön hem de arka ucunda daha çevik ve ölçeklenebilir hale gelmesine yardımcı olmaktadır. Sigorta tarihsel olarak biraz "hantal" olsa da, günümüz teknolojisi onu mevcut taleplere göre esnek hale getirdi. Müşteriye dönük cephede, sigortacılar bugün self servis panoları ve uygulamaları aracılığıyla her yerde hizmet sunuyor ve IoT özellikli cihazlar ve hatta giyilebilir cihazlar aracılığıyla müşterilerden değerli veriler toplayabiliyor. Arka uçta, bu teknoloji toplanır ve komisyoncuların ve sigortacıların yüklenim, poliçeler, yeni ürün teklifleri ve daha fazlası hakkında daha doğru kararlar almasına yardımcı olur.

Çeviklik, dijital dönüşüm aynı zamanda sigorta şirketlerinin "geleceğe hazır" olmasına da yardımcı oluyor çünkü bu teknolojiler şüphesiz gelişmeye devam edecek ve önümüzdeki yıllarda daha gelişmiş fırsatlar yaratmaktadır. Yapay zekâ, makine öğrenimi, blockchain verileri, veri analitiği ve tahmine dayalı analitik tarafından atılan temel, sigorta şirketlerinin büyümesine ve yeni sigorta teknolojileri ve yetenekleriyle uyum sağlamasına yardımcı olmaktadır.

Bu teknolojiler, sigorta sektörü için buzdağının sadece görünen kısmıdır. Dijital bir geleceğe hazırlanmak için bugün sigortacılar dijital dönüşüm araçlarını benimsemeli ve operasyonlarının tüm alanlarını optimize etmenin yaratıcı yollarını bulmalıdır.

1.2. Sigortacılık Sektöründe Kullanılan Teknolojiler

Gelişmiş sigorta teknolojisinde kullanılan belli başlı ürünler bulunmaktadır. Bu ürünler sektördeki işleri kolaylaştırdığı gibi her iki taraf için de daha faydalı ve anlaşılır bir hale sokmaktadır. Bu teknolojileri şu şekilde sıralayabiliriz (Bilgel, 2020, s. 13-18);

1. Tahmin Analitiği,
2. Yapay Zekâ,
3. Makine Öğrenimi,
4. IoT,
5. Insurtech,
6. Sosyal Medya Verileri,
7. Telematik,
8. Chatbot,
9. Drone,

Tahmine dayalı analitik, birçok sigorta şirketi tarafından müşteri davranışını anlamalarına ve tahmin etmelerine yardımcı olacak çeşitli verileri toplamak için kullanılır. Ancak, verilerin doğruluğunu artırmak için kullanılabileceği yeni yollar vardır. 2021'de sigorta şirketleri tahmine dayalı analitiği aşağıdakiler için kullanabilir:

- ❖ Fiyatlandırma ve risk seçimi,
- ❖ İptal riski taşıyan müşterilerin belirlenmesi,
- ❖ Dolandırıcılık riskini belirleme,
- ❖ Talepleri önceliklendirme,
- ❖ Aykırı iddiaları belirleme,
- ❖ Eğilimleri tahmin etmek,

Tahmine dayalı modelleme taktiklerini benimsemenin, birçok sigorta şirketi için gelirleri ve doğruluğu artırdığı da kanıtlanmıştır. Ayrıca tahmine dayalı analitiği kullanan sigorta şirketlerinin doğrudan yazılı primlerini, aynı dönemdeki %18'lik pazar ortalamasına kıyasla %53 artırdıklarını da kayıtlara geçmiştir.

Yapay zekânın (AI) kullanımı, AI özellikli cihazların dünyanın her yerindeki evlerde yaygınlaşmasıyla hızla genişledi. Bir DeloitteDigitalraporu, 2017 itibarıyla yalnızca ABD'de 35,6 milyondan fazla kişinin sesle etkinleştirilen yapay zekâ asistanlarına sahip olduğunu ve bu teknolojilere yapılan dünya çapındaki harcamanın 2020'de 47 milyar dolara ulaşmasının beklendiğini belirtti. Ek olarak, yapay zekâ ile sigortacılar hasar geri dönüş döngülerini iyileştirebilir ve sigortalama sürecini temelden değiştirebilir. AI ayrıca sigorta şirketlerinin verilere daha hızlı erişmesini sağlar ve insan unsurunun ortadan kaldırılması, daha kısa sürelerde daha doğru raporlamaya yol açabilir.

Makine öğrenimi, teknik olarak yapay zekânın bir dalıdır, ancak daha spesifik. Makine öğrenimi, sürekli denetimimiz olmadan verileri işlemek ve kendi başlarına öğrenmek için makineler yapabileceğimiz fikrine dayanır. Makine öğrenimi yalnızca talep işlemeyi iyileştirmekle kalmaz, aynı zamanda otomatikleştirebilir. Dosyalar dijital olduğunda ve bulut aracılığıyla erişildiklerinde, önceden programlanmış algoritmalar kullanılarak

analiz edilebilirler, işlem hızı ve doğruluğu iyileştirilir. Bu otomatik inceleme, iddialardan daha fazlasını etkileyebilir: politika yönetimi ve risk değerlendirmesi için de kullanılabilir.

IoT, Tüketicilerin çoğu, sigorta poliçelerinden tasarruf etmek anlamına geliyorsa ekstra kişisel bilgileri paylaşmaya isteklidir ve Nesnelerin İnterneti (IoT) bu veri paylaşımının çoğunu otomatikleştirebilir. Sigortacılar, oranları daha iyi belirlemek, riski azaltmak ve hatta kayıpları en baştan önlemek için akıllı evlerin çeşitli bileşenleri, otomobil sensörleri ve giyilebilir teknolojiler gibi IoT cihazlarından gelen verileri kullanabilir.

Insurtech veya daha spesifik olarak insurtech şirketleri - hem müşteriler hem de sigortacılar için maliyetleri azaltmak, operasyonel verimliliği artırmak ve tüm müşteri deneyimini iyileştirmek için en son sigorta teknolojilerinden yararlanır. Bu, yıllardır kullanımda olan dijital sigorta tekliflerine benziyor gibi görünse de, insurtech bu yetenekleri bir sonraki seviyeye taşıyor. Insurtech yatırımı 2018'de yaklaşık 4,9 milyar dolara ulaştı, çünkü "Insurtech gerçek zamanlı ve tahmine dayalı verilerin yakalanması ve ortaya çıkan riske yanıt veren sigorta ürünlerinin geliştirilmesini teşvik etmek için kullanılma şeklini değiştiriyor, özelleştirilmiş kapsam ve fiyatlandırma çözümlerine olanak tanıyor.

Sosyal medya analitiği ve sigorta endüstrisindeki rolü, pazarlama stratejilerinin ve akıllı reklamların ötesine geçiyor. Sosyal medya verilerinin madenciliği, sigortacılar için risk değerlendirmesini geliştiriyor, dolandırıcılık tespit yeteneklerini güçlendiriyor ve tamamen yeni müşteri deneyimleri sağlıyor. Sigorta teknolojisi, dolandırıcılığı araştırmak için sosyal medyadan da yararlanabilir. Sigortacılar, sigortalıların sosyal faaliyetlerine bakabilir ve herhangi bir tutarsızlık arayarak bunu talep kayıtlarıyla karşılaştırabilir.

Otomatik telematik özelliklerinden etkilenmeye devam edecektir. Sigorta teknolojisinde, telematiği arabanız için giyilebilir teknoloji olarak düşünün. Arabalar artık hız, konum, kazalar ve daha fazlası hakkındaki veriler gibi çeşitli göstergeleri ölçen ve tümü politika priminizin belirlenmesine yardımcı olmak için analitik yazılımıyla izlenen ve işlenen izleme cihazlarıyla donatılabilir. Telematiğin faydaları hem sigortacılar hem de sigortalılar için sayısızdır. Bunlar:

- ❖ Daha iyi müşteri alışkanlıklarını teşvik eder,
- ❖ Sigortacılar için daha düşük hasar maliyetleri,
- ❖ Taşıyıcıdan müşteri ilişkilerine reaktiften proaktifte geçiş,

Bazı tahminlere göre, 2025 yılına kadar tüm müşteri etkileşimlerinin %95'i chatbot'lar tarafından desteklenecek. Yapay zekâ ve makine öğreniminden yararlanan sohbet robotları, müşterilerle sorunsuz bir şekilde etkileşim kurarak bir kuruluştaki herkese zaman kazandırabilir ve nihayetinde sigorta şirketlerinin paradan tasarruf etmesini sağlayabilir. Bir bot, daha karmaşık vakalar için insan müdahalesini ayırarak bir müşteriyi bir politika uygulaması veya talep süreci boyunca yönlendirebilir.

Dronesigortacılık sektöründe de vazgeçilmez bir teknoloji haline gelmiştir. İnsansız insansız hava araçları, 2021'de taşıyıcılar tarafından daha fazla kullanılacak bir sigorta teknolojisi aracıdır. Sigorta yaşam döngüsünün birçok aşamasında kullanılabilirler. Bir poliçe düzenlemeden önce riski hesaplamak için veri toplamak, önleyici bakıma yardımcı olmak ve bir kaybın ardından hasarı değerlendirmek gibi ana faaliyetler bulunmaktadır.

1.3. Finansal Teknolojilerin Sigortacılık Sektöründeki Geleceği

Geçtiğimiz yıllarda ivmesini arttıran gelişimler, neredeyse her sektörü etkileyen temel teknoloji trendlerinin ortaya çıkışına tanık olmuştur. Çok sayıda teknolojik gelişme ve değişim, ürünleri ve hizmetleri yeniden şekillendirmektedir.

Sigortacılık sektörü de bu teknolojik gelişmelerden oldukça yararlanmıştır. Özellikle yapay zekânın gelişimi ile birlikte sigortacılık sektöründe oldukça faydalı işlevleri oluşmuştur. Yapay zeka sektöre daha derinden entegre edildikçe, çalışanlar değişen iş ortamına yanıt verecek şekilde konumlandırılmalıdır. Sigorta yöneticileri, bu değişime katkıda bulunacak faktörleri ve yapay zekânın talepleri, dağıtımı, sigortalıyı ve fiyatlandırmayı nasıl yeniden şekillendireceğini anlamalıdır. Bu anlayışla, geleceğin sigortacılık sektöründe başarılı oyuncular olmak için gereken beceri ve yetenekleri geliştirmeye, gelişen teknolojileri benimsemeye ve kültür ve bakış açısını oluşturma şart olmuştur. Yapay zekânın altında yatan teknolojiler, hâlihazırda işletmelerde, evlerde ve araçlarda kullanılıyor. COVID-19'dan kaynaklanan kısıtlamalar, sigortacılar için dijitalleşmeyi önemli ölçüde hızlandırarak yapay zekânın benimsenmesi için zaman çizelgelerini değiştirdi. Kuruluşlar, neredeyse bir gecede

uzak iş gücüne uyum sağlamak, dağıtımı desteklemek için dijital yeteneklerini genişletmek ve çevrimiçi kanallarını yükseltmek zorunda kalmıştır.

Pandemi sırasında çoğu kuruluş muhtemelen yapay zekâya büyük yatırım yapmamış olsa da, dijital teknolojilere artan vurgu ve değişimi benimsemeye yönelik daha fazla isteklilik, onları yapay zekâyı operasyonlarına dâhil etme konusunda daha iyi bir konuma getirecektir. Endüstriyel ortamlarda, sensörlü ekipmanlar bir süredir bulunuyor, ancak önümüzdeki yıllarda bağlı tüketici cihazlarının sayısında büyük bir artış görülmeye beklenmektedir. Mevcut cihazların (arabalar, kondisyon takip cihazları, ev yardımcıları, akıllı telefonlar ve akıllı saatler gibi) penetrasyonu, giyim, gözlük, ev aletleri, tıbbi cihazlar ve ayakkabılar gibi büyüyen yeni kategorilerle birlikte hızla artmaya devam edecektir. Sonuç olarak, bu cihazlar tarafından oluşturulan yeni veri datası, operatörlerin müşterilerini daha derinlemesine anlamalarına olanak tanıyarak yeni ürün kategorileri, daha kişiselleştirilmiş fiyatlandırma ve giderek daha fazla gerçek zamanlı hizmet sunumu ile sonuçlanması beklenmektedir.

Robotik alanında son zamanlarda pek çok heyecan verici başarı görüldü ve bu yenilik, insanların çevrelerindeki dünyayla nasıl etkileşimde bulunduklarını değiştirmeye devam edecektir. Üç boyutlu baskı olarak da bilinen eklemeli imalat, geleceğin imalat ve ticari sigorta ürünlerini kökten yeniden şekillendirecektir. 2025 yılına kadar, üç boyutlu baskılı binalar yaygınlaşacak ve taşıyıcıların bu gelişmenin risk değerlendirmelerini nasıl değiştirdiğini değerlendirmesi gerekecektir. Ayrıca programlanabilir, otonom droneler; otonom tarım ekipmanı ve geliştirilmiş cerrahi robotların tümü önümüzdeki on yılda ticari olarak geçerli olacaktır. 2030'a kadar, standart araçların çok daha büyük bir oranı kendi kendine sürüş gibi otonom özelliklere sahip olacaktır. Taşıyıcıların, günlük yaşamda ve endüstriler genelinde robot teknolojisinin artan varlığının risk havuzlarını nasıl değiştireceğini anlaması gerekecektir. Veriler her yerde bulunur hale geldikçe, verilerin sektörler arasında paylaşılabilmesini ve kullanılmasını sağlamak için açık kaynaklı protokoller ortaya çıkacaktır. Çeşitli kamu ve özel kuruluşlar, ortak bir düzenleyici ve siber güvenlik çerçevesi altında birden fazla kullanım durumu için veri paylaşmak üzere ekosistemler oluşturmak üzere bir araya gelecektir. Örneğin, giyilebilir veriler doğrudan sigorta şirketlerine taşınabilir ve bağlantılı ev ve otomobil verileri Amazon, Apple, Google ve çeşitli tüketici cihazı üreticileri aracılığıyla kullanılabilir hale getirilebilecektir (Bilgel, 2020, s. 15-22).

Yapay zekâ ve ilgili teknolojileri, dağıtımdan sigortalamaya ve fiyatlandırmadan hasar taleplerine kadar sigorta endüstrisinin tüm yönleri üzerinde sismik bir etkiye sahip olacaktır. Gelişmiş teknolojiler ve veriler, poliçelerin neredeyse gerçek zamanlı olarak fiyatlandırılması, satın alınması ve bağlanmasıyla, dağıtımı ve sigortalamayı zaten etkilemektedir. Sigorta satın alma deneyimini daha hızlı, sigortacı ve müşteri tarafında daha az aktif katılım ile gerçekleştirmeyi teknoloji ile birlikte hedeflemektedir. Yapay zekâ risk profilleri oluşturmasıyla bireysel davranış hakkında yeterli bilgi toplarken, bir otomobil, ticari veya hayat poliçesinin satın alınmasını tamamlamak için döngü süreleri dakikalara, hatta saniyelere inmesi hedeflenmektedir.

Otomobil ve ev operatörleri bir süredir anında fiyat tekliflerini etkinleştirdiler, ancak telematik ve ev içi Nesnelerin İnterneti (IoT) cihazları çoğaldıkça ve fiyatlandırma algoritmaları olgunlaştıkça daha geniş bir müşteri yelpazesine anında poliçe düzenleme yeteneklerini geliştirmeye devam edeceklerdir. Birçok sigorta kuruluşları basitleştirilmiş ihraç ürünleriyle deneyler yapıyor, ancak bunlar deneme aşamasında kalmaktadır.

Blockchain tarafından etkinleştirilen akıllı sözleşmeler, bir müşterinin finansal hesabından ödemeleri anında yetkilendirmesidir. Bununla birlikte, sözleşme işleme ve ödeme doğrulaması ortadan kaldırılır veya kolaylaştırılır, bu da sigortacılar için müşteri edinme maliyetlerini azaltır. Drone'lar, Nesnelerin İnterneti ve diğer mevcut verilerin kombinasyonu yapay zekâ tabanlı bilişsel modellerin proaktif olarak bağlanabilir bir fiyat teklifi oluşturması için yeterli bilgi sağladığından, ticari sigortanın satın alınması da benzer şekilde hızlandırılır.

Aktif acenteler emekliye ayrıldıkça kalan acenteler üretkenliği artırmak için büyük ölçüde teknolojiye yöneleceklerdir. Araçların rolü, süreç kolaylaştırıcılarına ve ürün geliştirmeye dönüşecektir. Geleceğin acentesi, neredeyse tüm teminat türlerini satabilir ve müşterilerin deneyimleri, sağlık, yaşam, hareketlilik, kişisel mülk ve konut kapsamındaki teminat portföylerini yönetmelerine yardımcı olarak değer katmaktadır. Temsilciler, görevlerini optimize etmek için akıllı kişisel asistanları ve müşteriler için potansiyel fırsatlar bulmak üzere yapay zekâ özellikli botları kullanmaktadır. Bu araçlar, araçların önemli ölçüde daha geniş bir müşteri tabanını desteklemesine yardımcı olurken, müşteri etkileşimlerini daha kısa ve daha anlamlı hale getirmektedir.

Sigortalamanın büyük bir kısmı otomatikleştirildiğinden ve teknoloji yığını içinde oluşturulmuş makine ve derin öğrenme modellerinin bir kombinasyonu tarafından desteklendiğinden, sigortalama süreci birkaç saniyeye indirilmesi ilerleyen yıllarda hedeflenmektedir. Bu modeller, dâhili verilerin yanı sıra uygulama programlama arayüzleri ve dış veri ve analitik sağlayıcıları aracılığıyla erişilen geniş bir dış veri kümesi tarafından

desteklenmektedir. Ana hat taşıyıcıları, reasürörler, ürün üreticileri ve ürün dağıtıcıları tarafından sağlanan cihazlardan toplanan bilgiler, çeşitli veri havuzlarında ve veri akışlarında toplanmaktadır. Sigorta şirketlerinin sigortalama ve fiyatlandırma ile ilgili ön kararlar vermesini sağlar. Düzenleyiciler, bir puanın izlenebilirliğini belirlemek için şeffaf bir yöntem gerektiren bir görev olan yapay zekâ özellikli, makine öğrenimi tabanlı modelleri incelemektedir. Veri kullanımının pazarlama ve yüklenim için uygun olduğunu doğrulamak için düzenleyiciler, model girdilerinin bir kombinasyonunu değerlendirilir.

Bazı segmentlerde fiyat rekabeti yoğunlaşır ve çok ince marjlar norm haline gelirken, diğer segmentlerde benzersiz sigorta teklifleri marj genişlemesine ve farklılaşmasına olanak tanır. Değişimin benimsendiği yetki alanlarında, inovasyonun fiyatlandırılması hızlıdır. Fiyatlandırma, kullanıma ve dinamik, veri açısından zengin bir risk değerlendirmesine dayalı olarak gerçek zamanlı olarak sunulur ve tüketicilere eylemlerinin kapsamı, sigortalabilirliği ve fiyatlandırmayı nasıl etkilediği konusunda karar verme yetkisi verir.

Sektördeki teknolojik değişimlere yönetim kurulu üyeleri ve müşteri deneyimi ekipleri, yapay zekâ ile ilgili bu teknolojiler hakkında derin bir anlayış oluşturmak için zaman ve kaynak yatırımı yapmalıdır. Bu çabanın bir kısmı, kesintinin nerede ve ne zaman meydana gelebileceğini ve bunun belirli iş kolları için ne anlama geldiğini anlamak ve vurgulamak için hipoteze dayalı senaryoların araştırılmasını gerektirecektir. Örneğin, sigorta şirketlerinin, işin farklı bölümlerindeki sınırlı ölçekli IoT pilot projelerinden çok fazla öngörü elde etmesi pek olası değildir. Bunun yerine, bir amaç doğrultusunda ve kuruluşlarının IoT ekosistemine geniş ölçekte nasıl katılabileceğini anlayarak ilerlemeleri gerekir.

Veriler, herhangi bir kuruluş için hızla en değerli varlıklardan biri haline geliyor. Sigorta sektörü de farklı değil: taşıyıcıların riski nasıl tanımladığı, ölçtüğü, yerleştirdiği ve yönettiği, bir poliçenin yaşam döngüsü boyunca elde ettikleri verilerin hacmine ve kalitesine bağlıdır. Çoğu AI teknolojisi, çeşitli kaynaklardan yüksek hacimli verilere sahip olduklarında en iyi performansı gösterecektir. Bu nedenle taşıyıcılar, hem iç hem de dış verilerle ilgili olarak iyi yapılandırılmış ve eyleme geçirilebilir bir strateji geliştirmelidir. Dâhili verilerin, yeni analitik öngörülerinin ve yeteneklerinin çevik gelişimini etkinleştirecek ve destekleyecek şekilde düzenlenmesi gerekecektir. Harici verilerle, taşıyıcılar dâhili veri kümelerini zenginleştiren ve tamamlayan verilere erişimi güvence altına almaya odaklanmalıdır. Asıl zorluk, uygun maliyetli bir şekilde erişim elde etmek olacaktır. Dış veri ekosistemi genişlemeye devam ettikçe, büyük olasılıkla oldukça parçalı kalacak ve bu da yüksek kaliteli verileri makul bir maliyetle tanımlamayı oldukça zorlaştıracaktır. Genel olarak, veri stratejisinin, dış verilere erişim sağlamanın ve güvenli hale getirmenin çeşitli yollarını ve ayrıca bu verileri dâhili kaynaklarla birleştirmenin yollarını içermesi gerekecektir (Danacı, 2020, s. 5-12)

Önümüzdeki on yılda teknolojilerdeki hızlı gelişmeler, sigorta endüstrisinde yıkıcı değişikliklere yol açacaktır. Yapay zekâ tabanlı sigortanın kazananları, yenilikçi ürünler oluşturmak için yeni teknolojileri kullanan, yeni veri kaynaklarından bilişsel öğrenme içgörülerinden yararlanan, süreçleri kolaylaştıran ve maliyetleri düşüren ve kişiselleştirme ve dinamik uyum için müşteri beklentilerini aşan taşıyıcılar olacaktır. En önemlisi, mevcut işleri için bir tehdit olarak görmek yerine yıkıcı teknolojilerden fırsatlar yaratmaya odaklanan bir zihniyeti benimseyen firmalar, 2030'da sigorta sektöründe başarılı olacaklardır.

Sigorta işletmelerinin tasarruflarının verimli yatırım alanlarına aktarmaları, tasarruf hacminin büyütülmesi kadar önem arz etmektedir. Şirketler, etkin yatırım alanları belirleyerek elinde bulundurdıkları fonları bu alana aktararak profesyonel fon yöneticileri tarafından yönetilmesi gerekmektedir (Uralcan, 2011:246).

Ülkemizdeki sigorta şirketlerinin aşağıdaki önemli hususlara uymaları günümüz koşullarında gerekli görülmektedir;

- ❖ Sigorta sektöründe stratejik hedefler belirlenmelidir,
- ❖ Özkaynak yetersizliğine sahip olan sigorta şirketlerinin birleşmeleri sağlanmalıdır,
- ❖ Sigorta sektöründe Ar-Ge uygulamalarına önem verilmelidir,
- ❖ Günümüz teknolojisinde müşterilerin istek ve beklentilerine önem verilmelidir,
- ❖ Sigortacılık sektörüne bakışın değiştirilmesi gerekmektedir,
- ❖ Sigortacılık bilincinin eğitimle sağlanması ve eğitimin tabana yayılması,
- ❖ Sigortacılık sektöründe faaliyet gösteren sigorta şirket sayısının artırılması gerekmektedir,
- ❖ Sigortacılık alanında kural ve usulleri standartlaştırmak ve kolaylaştırmak gerekmektedir,

- ❖ Bankalar tarafından ihtiyacı olan sigorta şirketlerine ucuz ve uzun vadeli krediler sağlanmalıdır,
- ❖ Ülkemizde reasürans şirketlerinin sayısının artırılması amaçlanmalıdır,
- ❖ Yabancı sermayeli sigorta şirket sayısının artırılması sonucunda sektörün daha rekabetçi bir yapıya kavuşturulması amaçlanmalıdır.

2. METODOLOJİ VE SEKTÖDEKİ ÖRNEKLER

2.1. Yöntem

Hazırlanan bu bilimsel makalede belirli teknik özellikler ve hazırlama yöntemleri kullanılmıştır. Bu yöntemler sayısal verilere ve literatürde bulunan kaynaklara dayanmaktadır. Araştırma sonucu ulaşılan veriler ile birlikte bilimsel bir makale çıkarılmıştır. Bu makalede içerisinde çeşitli dijital kanallarda bulunan haber yazıları, makaleler ve dergi yazıları kaynak olarak alınmıştır.

2.2. Veri Toplama Aracı

Bu çalışma içerisinde belirli veri toplama araçları kullanılmıştır. Bunları şu şekilde sıralayabiliriz:

- ❖ Gözlem,
- ❖ Anket,
- ❖ Doküman/kayıt incelemesi,
- ❖ Örnek olay incelemesi gibi çeşitli yollara başvurularda bilimsel makale formatında hazırlanmıştır.

2.3. Araştırmanın Kısıtları

Bu bilimsel araştırma sırasında belirli kısıtlar ele alınmıştır. Bu bilimsel makalede giriş, gelişme ve sonuç bölümleri ayrı başlıklar halinde hazırlanırken konu içeriği de formata uygun bir şekilde hazırlanmıştır.

2.4. Sektördeki Teknoloji Örnekleri

Gelişmiş sigorta teknolojisi, hem taşıyıcılar hem de sigortalılar için mülkiyet ve kaza endüstrisinin ayrılmaz bir parçasıdır. Sigorta fiyatları almak bir düğmeyi tıklamak kadar kolay olurken, sigorta kapsamını yönetmek genellikle bir mobil uygulama aracılığıyla gerçekleştirilebilir hale gelmiştir (Aksoy, 2019, s. 16-22).

Teknolojik gelişmeleri bünyesinde bulunduran ve kullanan bazı firmaları şu şekilde sıralayabiliriz:

Dünyanın en büyük sigorta şirketlerinden birisi olan Kroodle, sosyal medya teknolojisini oldukça aktif kullanmaktadır. Müşterilerle etkileşim süreçleri tamamen sosyal medya aracılığıyla gerçekleştirilir. Müşteriler, Facebook kimlik bilgilerini kullanarak oturum açar ve bir Facebook uygulaması aracılığıyla hak talebinde bulunur, fiyat teklifi alır ve diğer hizmetleri talep eder. Sigorta teknolojisi, dolandırıcılığı araştırmak için sosyal medyadan da yararlanabilir. Sigortacılar, sigortalıların sosyal faaliyetlerine bakabilir ve herhangi bir tutarsızlık arayarak bunu talep kayıtlarıyla karşılaştırabilir.

Allianz Sigorta, ChatBot teknolojisini ilk kullanan sigorta kuruluşlarından birisidir. Bazı tahminlere göre, 2025 yılına kadar tüm müşteri etkileşimlerinin %95'i chatbotlar tarafından desteklenecek.

Yapay zekâ ve makine öğreniminden yararlanan sohbet robotları, müşterilerle sorunsuz bir şekilde etkileşim kurarak bir kuruluştaki herkese zaman kazandırabilir ve nihayetinde sigorta şirketlerinin paradan tasarruf etmesini sağlayabilir. Bir bot, daha karmaşık vakalar için insan müdahalesini ayırarak bir müşteriyi bir politika uygulaması veya talep süreci boyunca yönlendirebilir (Ömürbek, 2020, s. 12-15).

Axa Sigorta, Drone teknolojisini en aktif kullanan firmalar arasında gelmektedir. İnsansız hava araçları, 2021'de taşıyıcılar tarafından daha fazla kullanılacak bir sigorta teknolojisi aracıdır. Sigorta yaşam döngüsünün birçok aşamasında kullanılabilirler. Bir poliçe düzenlemeden önce riski hesaplamak için veri toplamak, önleyici bakıma yardımcı olmak ve bir kayıbın ardından hasarı değerlendirmek için oldukça faydalı bir teknolojidir. Evlerde risk

ve hasar değerlendirmesine yardımcı olmak için harika bir örnektir. Bu dronlar, çatı incelemeleri ve diğer değerlendirmeleri gerçekleştirir ve dronlar, verilerini analiz için buluta iletir. Bu, sigorta endüstrisinde birlikte çalışan IoT ve diğer teknolojilerin bir başka örneğidir.

MetLife Sigorta kuruluşu telematik teknolojisini en çok kullanan firmalar arasında gelmektedir. Telesekreter olarak çalışan sayısı diğer firmalara göre oldukça azdır. Hızlı iletişim ve sonuç sunarak müşterinin taleplerini daha doğru anlayıp sınıflandırmaya yardımcı olmaktadır (Gülençer, 2020, s. 16-19).

BerkshireHathaway sigorta şirketinin aktüerleri, şirketin primleri etkili bir şekilde belirleyebilmesi için riski matematiksel olarak ölçmede uzmanlaşmıştır. Büyük verinin ve veri analitiğinin yükselişi, aktüerlerin şirketin potansiyel finansal sonuçlarını etkileyen istatistiksel eğilimleri daha kesin bir şekilde analiz etmesini sağlamaktadır.

Veri odaklı sigorta sektörü, tahmine dayalı analitiği şu amaçlarla kullanabilir:

- ❖ Mevcut ve gelecekteki işletme sigortası ihtiyaçlarını belirleyin,
- ❖ Farklı iş kolları veya sektörler için risk faktörlerini tahmin edin,
- ❖ Potansiyel ticari müşteri sigortası iptal riskine ilişkin görünürlük elde edin,
- ❖ Talep türleri arasındaki kalıpları tanıma,
- ❖ Trend analizine dayalı yeni müşteri fırsatları bulun.

Örneğin, geçen yıl boyunca fidye yazılımı saldırılarındaki artış, birçok sigortacının tahmine dayalı analitiği kullanarak gelecekteki eğilimleri ölçebildikleri için primleri artırmasına veya yeni istisnalar hazırlamasına neden olmuştur (Gülençer, 2020, s. 19-22).

Kaiser Foundation Group of HealthPlans sigorta şirketi blockchain teknolojisini aktif olarak kullanmaktadır. Blockchain, her bir veri "bloğunu" bir saat ve tarih damgası atayarak hassas bilgilerin korunmasına yardımcı olan, eşler arası, dağıtılmış bir kayıt defteridir. Daha sonra her güncelleme yapıldığında yeni bloklar ekler. Blockchain, sigortacılara verileri koruma ve üzerinde yapılan değişiklikleri izleme yolu sunarak tüketici güveni oluşturur. Bu, gizliliği ve kullanılabilirliği korumanın bir yolunu sunarken veri bütünlüğünü sağlar.

SONUÇ ve DEĞERLENDİRME

Küreselleşmede yeni bir döneme girilmekte olup, ekonomideki değişim şiddetli olacağı görülmektedir. Öte yandan, gelişmekte olan pazarlar, yeni teknolojilere erişim mesafesi ve aynı zamanda bilgi gibi daha birçok zorlukla karşı karşıyadır. Piyasalar, yıkıcı veya dönüştürücü zorluklara hazır olmalıdır; yalnızca bu değişime ayak uyduracak ülkeler, kuruluşlar veya toplumlar endüstri 4.0'ın fırsatlarını yakalayabileceklerdir.

Finansal teknoloji (Fintech), finansal hizmetlerin sunumunu ve kullanımını iyileştirmeyi ve otomatikleştirmeyi amaçlayan yeni teknolojiyi tanımlamak için kullanılır. Fintech özünde, bilgisayarlarda ve giderek artan bir şekilde akıllı telefonlarda kullanılan özel yazılım ve algoritmaları kullanarak şirketlerin, işletme sahiplerinin ve tüketicilerin finansal operasyonlarını, süreçlerini ve yaşamlarını daha iyi yönetmelerine yardımcı olmak için kullanılır. Yazılım çözümlerinin sektördeki uygulamaları, finansal teknoloji (Fintech) firmalarının yenilikçi çözümler geliştirmesini sağlamıştır. Örneğin, çevrimiçi ödeme sistemlerinin, daha iyi risk yönetiminin, siber güvenlik çözümlerinin, gelişmiş analitiklerin, daha iyi işbirliği için bulut süreçlerinin vs. gelişmesine yol açmıştır. Bunların finansal hizmetlerin gelişmesi için çok önemli olduğu kanıtlanmıştır. Bu nedenle, Fintech'in ortaya koyduğu zorlukları ele almak için etkili düzenleyici çerçevelerin geliştirilmesini sağlamak için uluslararası işbirliği şarttır.

Gerek yapay zekâ, gerek nesnelerin interneti olarak sigortacılık sektöründe birçok teknolojik gelişmeler görülmektedir. Bunların zamanla artacağı görülmekte olup, firmaların bu gelişmelere daha fazla ayak uyduracağı düşünülmektedir. Bu proje içerisinde de finansal teknolojik gelişmelerden bahsedilip, sigortacılık sektöründe etkileri ele alınmış olup, literatüre destek olarak araştırılmıştır.

Sonuç olarak, Türk Sigortacılık sektörünün Avrupa Birliği ülkelerindeki sigortacılık sektörü gibi olabilmesi için yani gelişme gösterebilmesi için gayri safi yurtiçi hâsıla içerisindeki %1,3 payının artırılmasıyla mümkün olacaktır. Ülkemizdeki sigortacılık sisteminin Avrupa Birliği'ndeki birçok ülkeye oranla daha az gelişmesindeki en temel sorunlardan bir taneside toplumumuzda sigorta bilincinin yeterince yerleşmemiş olmasıdır (Akin, 2011: 185).

Özet: Küreselleşme ile birlikte değişen toplum yapısında teknolojinin, kullanılabilir, erişilebilir ve toplumsal-çevresel açıdan faydalı olması önem arz etmektedir. Ekonomi, işletme, birey üçgeninde davranış ve tutumlar üzerinde çok yönlü değişimler yaşanmasına neden olan dönüşümler (pandemi, doğal afetler vb.gibi) hem arz hem de talep yönlü daralmalara neden olmaktadır. Yeni konjonktür yapısında dijitalleşmenin ve teknolojinin etkisiyle ortaya çıkan ikiz dönüşüm, ekonomik ve sosyal faaliyetleri destekleyerek sürdürülebilirliği sağlamaktadır. Ekonomilerin uluslararası piyasalardaki rekabet gücünü ve etkinliğini artırmasının yolu, teknolojinin kullanılabilirliğinin etkin ve verimli olmasından geçmektedir. Yeşil politikaların gözetilerek, teknolojik gelişmelerinin kullanımıyla birlikte üretim hacmi ve çıktı büyüklüğünün artış göstermesi, sürdürülebilirlik hedeflerine ulaşılmasını hızlandırmaktadır. Ekonomik büyüme ile teknoloji düzeyi arasındaki dinamik yapı ülkeler için bir ölçüt olarak değerlendirilmektedir. İhracata yönelik sanayileşme stratejilerini benimsemeye çalışan gelişmekte olan ülkelerde, teknolojik gelişmelere yönelik yatırımlara teşvik verilmesiyle sürdürülebilir bir büyüme sağlanabilmektedir. Uzun vadeli bir strateji olarak ortaya çıkan büyüme politikalarının ise teknoloji faaliyetlerini ve yatırımlarını desteklemesi gerekmektedir. Teknoloji sürecinde yaşanan olumlu ilerlemeler/yenilikler, muhtemel çıktının potansiyelinin artmasına, toplam verimliliğin sağlanmasına ve toplam üretim hacminde iyileşmeler yaşanmasına olanak sağlamaktadır. Çalışma kapsamında, teknoloji endeksi ve çıktı büyüklüğü etkileşiminin modellenerek tahmin edilmesi amaçlanmaktadır.

Anahtar Kelimeler: Teknoloji Endeksi, Çıktı Büyüklüğü, Oynaklık Modelleri

The Effect of Output Growth and Index Return Uncertainty on the Technology Index

Abstract: In a society that is changing with globalization, it is important that technology is usable, accessible and socially and environmentally beneficial. Transformations that cause multifaceted changes in behavior and attitudes in the triangle of economy, business, and individuals (pandemics, natural disasters, etc.as such) causes both supply-side and demand-side contractions. The twin transformation, which has emerged with the effect of digitalization and technology in the new conjuncture structure, provides sustainability by supporting economic and social activities. The way for economies to increase their competitiveness and efficiency in international markets is through the effective and efficient availability of technology. Taking into account green policies, increasing the production volume and output size with the use of technological developments accelerates the achievement of sustainability goals. The dynamic structure between economic growth and technology level is considered as a criterion for countries. In developing countries that are trying to adopt export-oriented industrialization strategies, sustainable growth can be achieved by encouraging investments in technological developments. Growth policies that emerge as a long-term strategy should support technology activities and investments. Positive advances / innovations in the technology process allow increasing the potential of the possible output, ensuring total efficiency and improving the total production volume. Within the scope of the study, it is aimed to estimate the interaction of technology index and output size by modeling.

Key Words: Technology Index, Output Growth, Volatility Models

1. GİRİŞ

Gelişmiş ekonomilerde, iktisadi kalkınmanın sürdürülebilir ve verimli olması, ilgili ülkenin teknolojik gelişmelere yön vermesi, teknolojik gelişmenin efektif kullanılmasına ve dönüşümlerinin bütününe eşzamanlı bir şekilde gerçekleşmesine bağlı olmaktadır. İnovasyon ve teknolojik gelişmişliğin hedeflendiği ve inovasyon kümelerinin/gruplarının kurulmasının, geliştirilmesinin, uygulanmasının ve yaygınlaştırılmasının teşvik edilmesini amaçlandığı ekonomilerde, birey-makine etkileşiminin birlikteliği önem arz etmektedir. Dijitalleşme ile birlikte iletişim kanalları ve bilgi paylaşım ağları genişlerken, ekonomiler-işletmeler açısından iktisadi ilerlemelerin karar alma süreçlerinde daralmalar yaşanmaktadır. Belirli bir süreç kapsamında ekonomik yapıda üretilen mal ve hizmetlerin bütününe ifade eden çıktı büyüklüğündeki belirsizlikler, ülkelerin kalkınma hedeflerine ulaşma konusunda önemli bir yer kaplamaktadır. Son dönemlerde yaşanan ve toplumsal dönüşüme neden olan olaylar (deprem, Covid-19 vb. gibi) sonucunda dijital dönüşüm süreci hızlanmaktadır. Yaşanan toplumsal dönüşümlerle birlikte birey-işletme-ekonomi üçgeninde davranış ve tutumlarda da değişimler

görülmektedir. Ek olarak, ilgili üçgen yapının, dijitalleşme kapsamında gerçekleşen dönüşümü anlamak ve yönetmek zorunluluğunun gerekliliği de ortaya çıkmaktayken, doğal kaynak kullanımının aşırılığının engellenmesi ve çevresel sürdürülebilirliğin sağlanması da önem arz etmektedir. Bu kapsamda, ilgili üçgen yapının faaliyetlerini gerçekleştirirken, dijitalleşme ve sürdürülebilirlik (insan-ekonomi-çevre bağlamında) kavramlarını eşzamanlı olarak gözetmesi ve yürütmesi durumunda, çıktı büyüklüğündeki belirsizlik minimize edilmektedir. İkiz dönüşüm çerçevesinde, ekonomi politikalarının şekillendirilmesinde çıktı belirsizliğinin teknoloji arz ve talep performans üzerindeki etkisinin değerlendirilmesi gerekmektedir. Bu nedenle arz ve talep yönlü daralmaların bulunduğu, dijitalleşme ve sürdürülebilirlik sürecinde mesafe alan ve gelişen ülkeler sınıfında yer alan Türkiye ekonomisindeki çıktı büyüklüğü belirsizliğinin teknoloji endeksi üzerindeki etkisinin ortaya çıkarılması önem arz etmektedir. Çalışma kapsamında, ikiz dönüşüm çerçevesinde teknoloji endeksi ile çıktı büyüklüğü belirsizliğinin arasındaki oynaklık düzeyinin modellenerek, ilgili değişkenlerin etkileşiminin belirlenmesi amaçlanmaktadır. Çalışmanın ilk bölümünde, ikiz dönüşüm, teknoloji endeksi ve çıktı büyüklüğü hakkında kavramsal bilgi verilmekte, ikinci bölümünde, kullanılan modelleme metodolojisine yönelik teorik bilgi verilmekte, sonrasında modele ait bulgular belirlenerek sonuç ve önerilere değinilmektedir.

2. KAVRAMSAL ÇERÇEVE

Son dönemlerde yaşanan toplumsal dönüşümler, mevcut trendleri hızlandırmanın yanı sıra inovatif fikirlerin ortaya çıkarılması açısından teknolojiye olan talep üzerinde de önemi bir etkiye sahip olmaktadır. Eğitim, istihdam vb.gibi alanlarda uzaktan erişimin yaygınlaşması sonucunda, gerçekleşmesi muhtemel toplumsal dönüşümlerde, teknolojinin öneminin giderek daha merkezi bir rol oynamasının gelecekte de devam etmesi muhtemel olmaktadır. Yazılımsal ve donanımsal faaliyette bulunan işletmelerin borsadaki performansının bir ölçüsü olan teknoloji endeksi, ilgili işletmelerin hisse senedi fiyatlarının ağırlık ortalaması alınarak hesaplanmaktadır. Yükselen bir teknoloji endeksi, teknoloji sektörüne yönelik olumlu düşüncüyü gösterebilirken, düşen bir endeks, sektörün gelecekteki büyüme beklentileriyle ilgili endişeleri gösterebilmektedir. Teknolojik gelişme, yeni mal, hizmet ve süreçler oluşturması nedeniyle istihdam yaratabilmesi, görev ve yükümlüklerin dijitalize edilerek verimliliğin artırılması sonucunda maliyet tasarrufunun sağlanması, yeni sektörler yaratması, uluslararası piyasalarda rekabet edilebilirliğinin sağlanması, bilgiye erişimin hızlanması, vb.gibi konular açısından ekonomik büyüme üzerinde kritik bir rol oynamaktadır. Teknolojiye yatırım yapan ülkelerin uzun vadede ekonomik büyümeye ulaşmaları beklenmektedir (Yakışık ve Çetin, 2014).

Belirli bir süreç içerisinde üretilen mal ve hizmet düzeyini ifade eden çıktı büyüklüğünün boyutu, ülkenin Gayri Safi Yurtiçi Hasılası (GSYİH) veya Gayri Safi Milli Hasıla (GSMH) kullanılarak ölçülmektedir. Artış gösteren bir çıktı büyüklüğü, ekonominin genişlediğini ve daha fazla mal ve hizmet ürettiğini göstermekte ve bu nedenle yeni istihdam olanaklarının yaratılmasına ve toplumsal refah seviyesinin artmasına yol açmaktadır. Politik süreçlerden, teknolojik gelişmelerden ve tüketici talebindeki oynaklıklardan etkilenen çıktı büyüklüğü, bir ekonominin sürdürülebilir büyümesinin önemli bir göstergesi olarak kabul edilmektedir.

Toplumsal açıdan dijital dönüşümü sürdürülebilir olmasını ifade eden ikiz dönüşümün, ilk aşaması, sürdürülebilirliği teşvik etmek için dijital teknolojilerin kullanılmasını içerirken, ikinci dönüşüm, dijital dönüşümün kendisinin sürdürülebilir olmasını sağlamayı içermektedir. İlk aşamada, enerji tüketimini optimize edilmesi ve kaynak verimliliğini artırılması için veri analitiği ve yapay zekanın kullanılması, paylaşım ekonomisini teşvik eden veya fiziksel ulaşım ihtiyacını azaltan üretim-tüketim modellerinin yaygınlaşması hedeflenmektedir. İkinci aşamada ise, dijital dönüşümün sürdürülebilir olması, dijital altyapının çevresel etkilerinin azaltılması ve dijital ekonomide sosyal kapsayıcılığın teşvik edilmesi amaçlanmaktadır. İkiz dönüşüm, dijital teknolojilerin sürdürülebilirliğinin gelişmesine olanak sağlayabilirken, azalmasına da olanak sağlayabilmektedir. İkiz dönüşüm, dijital teknolojilerin sürdürülebilirliği destekleyecek şekilde kullanımını teşvik ederek ve dijital dönüşümün sürdürülebilir olmasını sağlayarak, dijitalleşmenin daha sürdürülebilir bir geleceğe katkıda bulunmasına yardımcı olmaktadır (Sarıkaya, 2022).

Solow (1956), teknolojik ilerleme verimlilikte artış yol açarak ekonomik kalkınmanın sağlanacağını ifade etmektedir. Teknolojik ilerleme, sadece ekonomik büyümenin bir sonucu değil, aynı zamanda itici gücü de olmaktadır. Arrow (1962), üretim yöntem ve tekniklerindeki gelişmenin zamanla öğrenme deneyimi yoluyla geldiğini ve sonuçta üretkenliği ve ekonomik büyümeyi artırdığını varsayarak teknolojinin önemini vurgulamaktadır. Ek olarak, Conlisk (1969), Shell ve Stiglitz (1967), Uzawa (1965), Phelps (1966) ve DeLoo ve Soete (1999), çalışmalarında teknolojik ilerlemenin ekonomik kalkınmayı hızlandırmasının muhtemel olduğunu belirtmektedir. Cukierman ve Meltzer (1986), piyasalarda yaşanması muhtemel negatif yönlü oynaklıkların,

ekonomik büyümeyi olumsuz yönde etkilediğini savunmaktadır. Ek olarak, Friedman(1977), piyasa oynaklıkları ile büyümenin eşzamanlı gerçekleşmesi durumunda ekonomide yaşanan belirsizlikler nedeniyle büyümenin yavaşladığını belirtmektedir. Schreyer (1999), 1990-1996 dönemleri arasında G7 ülkelerine (Almanya, Amerika Birleşik Devletleri, Birleşik Krallık, İtalya, Fransa, Japonya ve Kanada) yönelik yaptığı çalışmada, teknolojik ilerlemenin, etki düzeyi ülkeden ülkeye farklı olmak üzere, ekonomik verimliliğin sağlanmasına katkıda bulunduğunu belirtmektedir. Oliner ve Sichel (2000), 1973-1999 dönemleri arasında ABD ekonomisine yönelik yaptığı çalışmada, dijital enstrüman yatırımlarının ekonomik büyüme, işgücü verimliliği üzerinde pozitif yönlü bir etkisinin olduğunu ifade etmektedir. Daveri (2000), 1992-1997 dönemleri kapsamında, OECD ve Avrupa Birliği ülkelerine yönelik yaptığı ve dijital enstrümanlarının gelişiminin ekonomik büyüme üzerine olan etkisini amaçladığı çalışmada, endüstrisi gelişmiş ülkeler ile gelişmemiş ülkeler arasında katkı düzeyinde değişim olduğunu vurgulamaktadır. Kraemer ve Dedrick (2001), 1985-1995 dönemleri arasında çeşitli ülkeler grubuna yönelik yaptığı çalışmada, dijital teknoloji enstrümanlarında büyüme ile arasında pozitif yönlü bir ilişki olduğunu belirtirken, büyümenin verimli bir şekilde olmadığını ifade etmektedir. Zhang ve Chen (2019), iktisadi yapının dijitalleşmesi ve dijital argümanlarının yaygınlaşmasının, ekonomik yapının kalkınmasını hızlandırmasının ve ulusal toplam faktör verimliliğinin artış yaşanmasının muhtemel olacağını vurgulamaktadır.

Konu ilgili literatür incelendiğinde, genellikle teknolojik ilerleme ile çıktı büyüklüğü arasında bir etkileşim olduğu belirlenmektedir. Çalışma kapsamında, ikiz dönüşüm kavramı çerçevesinde Türkiye'nin dijitalleşme ve sürdürülebilirliğinin birlikte hareket edilebilirlik durumu ve muhtemel şokların dönemsel açıdan farklılık gösterip göstermediği belirlenerek, literatüre katkı yapılması hedeflenmektedir.

3. EKONOMETRİK YÖNTEM

Bir zaman serisinin herhangi bir gözlem değerini, serinin geçmişteki gözlem değerleri ile hata payının doğrusal bir bileşimi olarak ifade edilen otoregresif süreç (AR) modelleri aracılığıyla, ilgili zaman serisinin geçmiş dönem değerleri kullanılarak, gelecekte alması muhtemel değerlere yönelik bilgi edinilebilmektedir. Y_t , serinin bugünkü değerini, $(Y_{t-1}, Y_{t-2}, \dots, Y_{t-p})$ serinin gecikmeli değerlerini, $\phi_1, \phi_2, \dots, \phi_p$ sürecin bilinmeyen parametrelerini ve δ sürecin ortalamasına yönelik bir sabit değerini göstermek ve $i = 1, 2, 3 \dots T$ olmak üzere AR(p) süreci;

$$Y_t = \delta + \phi_1 Y_{t-1} + \phi_2 Y_{t-2} \dots + \phi_p Y_{t-p} + e_t \quad (1)$$

şeklinde ifade edilmektedir. AR sürecine yönelik mertebenin (p değeri) belirlenmesinde, Y_t değerinin kendi gecikmeli değerleri ile açıklanması nedeniyle kısmi otokorelasyon katsayılarından faydalanılmaktadır (Enders, 2004).

Y_t değeri rassal değişken olan hata terimlerinin şimdiki ve geçmiş dönemlerdeki değerinin ağırlıklı ortalaması olarak ifade edilen hareketli ortalamalar (MA) süreci, durağan bir seri olarak bilinmektedir. Hata terimlerinin $(e_t, e_{t-1}, \dots, e_{t-q})$ sıfır ortalama, sabit varyans ve korelasyonsuz olduğu, $\theta_1, \theta_2, \dots, \theta_p$ bilinmeyen parametrelerin olduğu ve μ , sürecin ortalamasıyla ilgili bir sabit değerin olduğu MA(q) süreci;

$$Y_t = \mu + e_t + \theta_1 e_{t-1} + \theta_2 e_{t-2} + \dots + \theta_q e_{t-q} \quad (2)$$

şeklinde belirlenmektedir. Hareketli ortalama sürecinin mertebesinin belirlenmesinde otokorelasyon katsayılarından yararlanılmaktadır (Franses, ve Van Dijk, 2000).

Bir zaman serisinin herhangi bir dönemine ait değeri, daha önceki belli sayıda gözlem değerinin ve hata terimlerinin bir bileşimi olan otoregresif hareketli ortalama (ARMA (p, q)) süreci, hem AR sürecini hem de MA sürecinin özelliklerini taşımaktadır. Etkin bir tahmin için parametre sayısının fazla olması gerektiğinden ARMA modelleri fazlalıkla tercih edilmektedir. ARMA modeli $p + q$ adet parametre içermekte, ARMA(p, q) şeklinde ifade edilmektedir. $q=0$ olması durumunda; süreç AR(p), $p=0$ olması durumunda; süreç MA(q) sürecine dönüşmektedir. δ , Y_t 'nin ortalaması ile ilgili bir sabit değer ve hata terimleri $(e_t, e_{t-1}, \dots, e_{t-q})$ sıfır ortalama, sabit varyans ve korelasyonsuz olmak üzere ARMA (p, q) süreci,

$$Y_t = \delta + \phi_1 Y_{t-1} + \dots + \phi_p Y_{t-p} + e_t + \theta_1 e_{t-1} + \dots + \theta_q e_{t-q} \quad (3)$$

şeklinde ifade edilmektedir. ARMA(p, q) süreci; AR(p) ve MA(q) unsurlarıyla birlikte durağanlık ve çevrilebilirlik koşullarını da birleştirmektedir (Patterson, 2001).

AR(p), MA(q), ve ARMA(p, q) süreçleri durağan serilere uygulanırken, iktisadi/finansal zaman serilerinin kendi ortalamalarına dönüş eğilimi gösterememesi nedeniyle sürecin durağanlaştırılması gerekmektedir. Durağan olmayan bir ARMA (p, q) sürecinin, durağanlaştırılması sonucunda ARIMA(p, d, q) süreci oluşmaktadır. d, serinin kaçınıcı dereceden farkının alınarak durağan hale geldiğini göstermektedir (Tsay, 2010.).

Finansal serilerim zaman içerisinde birlikte hareket etmesinin muhtemel olması nedeniyle ilgili serilerin ikinci momentlerinin (varyanslarının) bağımlılıklarının tahmin edilmesi ve öngörülmesi önem arz etmektedir. Engle(1982), ortalama için geleneksel zaman serisi araçlarından olan ARMA modelini genişleterek finansal zaman serilerinde oynaklığın modellenmesi için ARCH (otoregresif koşullu değişen varyans) modelini sunmaktadır. Finansal/İktisadi zaman serilerindeki oynaklığın değişimini açıklamak, öngörmek, oynaklığı belirlemek için kullanılan ARCH modelleri, oynaklıkların dinamik evrimini temsil etmek için kullanılan ekonometrik modellerin ana sınıflarından birini oluşturmaktadır. Robinson(2003), koşullu dinamik oynaklıkları test etmek için uzun hafıza koşullu varyans sınıfından olan ARCH süreçlerini ortaya koymaktadır. Birden fazla oynaklık modelinin temelini oluşturan ARCH modelinin temel amaçları arasında, serideki şokların kümelenme etkisini ve etkilerin sürekliliğini hesaplanması yer almaktadır.

ARCH modeli, zaman serisinin varyansının, geçmiş dönem varyanslarına bağlı olan bir fonksiyonu olarak ifade edilen ve ARCH süreci, geçmiş dönem hata karelerinin doğrusal bir fonksiyonu olarak hesaplanan, koşullu sıfır ortalama ve koşullu varyansa sahip bir stokastik süreç olarak tanımlanmaktadır (Engle, 1982). $\{z_t\}$, sıfır ortalama ve varyansı bire eşit olan, bağımsız-özdeş dağılan rassal değişkenler dizisi ve zaman(t) periyodunun geri dönüşü için koşullu ortalama ve zamanla değişen koşullu varyans σ_t^2 olmak üzere ARCH(q) modeli,

$$\varepsilon_t = z_t \sigma_t; z_t \sim N(0,1) \quad (4)$$

$$h_t^2 = \omega + \sum_{i=1}^q a_i \varepsilon_{t-i}^2 \quad (5)$$

şeklinde tanımlanmaktadır. ε_t 'nin koşullu varyansı $t - i$ 'de meydana gelen şokun karesinin artan bir fonksiyonu olarak belirtilmektedir. Ek olarak ARCH modeli, volatilité/oynaklık kümelenmesini belirleyebilmesi nedeniyle ε_{t-i}^2 'in büyüklüğü arttıkça, σ_t^2 ve buna bağlı olarak ε_t 'nin büyüklüğü de artmaktadır.

ARCH modeli, bir zaman serisindeki hata varyansı otoregresif (AR) bir modeli izlediğinde kullanılması uygunken, hata varyansı için bir otoregresif hareketli ortalama (ARMA) modeli bulunması durumunda, model geliştirilmiş bir otoregresif koşullu heteroskedastisite (GARCH) modelinin kullanılarak tahmin edilmesi gerekmektedir. ARCH modelindeki koşullu varyans denkleminde gecikmeli varyans değişkenleri eklenmesiyle elde edilen Genelleştirilmiş Otoregresif Koşullu Değişen Varyans Modeli (GARCH(p, q)) modeli,

$$h_t^2 = \omega + \sum_{i=1}^q a_i \varepsilon_{t-i}^2 + \sum_{j=1}^p \beta_j h_{t-j}^2 \quad (6)$$

şeklinde belirlenmektedir. GARCH modeli, tahmin edilen parametre sayısının azaltılmasına izin vermesi nedeniyle tahmin edilmesi gereken parametre sayısı ARCH (q) modelinden genellikle daha az olmaktadır (Bollerslev, 1986). GARCH modeli, eşit büyüklükteki negatif ve pozitif şokların koşullu varyans üzerinde aynı etkilere sahip olduğunu varsaymaktadır (Rahmani, 2016). Bollerslev(1986), riskin daha iyi ölçülebilmesi için ARCH modelinin geliştirilmiş hali olan ve oynaklık tahmininde daha başarılı sonuçlar veren GARCH modelini önermektedir. ARCH ve GARCH modellerinde şokların mutlak değerleri dikkate alınması nedeniyle negatif bir şokun oynaklık üzerindeki etkisi aynı büyüklükte bir pozitif şok ile aynı olmaktadır. Asimetrik oynaklık modelleri kullanılarak pozitif-negatif şokların oynaklık üzerindeki etkisi incelenebilmektedir (Verbeek,2001). β parametresi oynaklık kalıcılığını, α parametresi ARCH etkisini ve γ işaret etkisini (asimetri) göstermek üzere, Nelson (1991) tarafından geliştirilen asimetrik oynaklık modellerinden üssel EGARCH (1,1) modeli;

$$\log h_t^2 = \omega + \beta \log h_{t-1}^2 + \gamma \frac{u_{t-1}}{h_{t-1}} + \rho \frac{|u_{t-1}|}{h_{t-1}} \quad (7)$$

şeklinde ifade edilmektedir. $\gamma \neq 0$ olması durumunda model, asimetrik olmaktadır. Logaritmik dönüşümünün alınması nedeniyle varyans her zaman pozitif tanımlı olmaktadır. Zakoian (1994) tarafından tanımlanan Eşik değerli ARCH (TARCH) modelinde, koşullu varyans yerine koşullu standart sapma kullanılmaktadır. TARCH modeli için koşullu varyans modeli;

$$h_t^2 = \omega + \alpha \varepsilon_{t-1}^2 + \eta \varepsilon_{t-1}^2 d_{t-1} + \beta h_{t-1}^2 \quad (8)$$

şeklinde belirlenmektedir. Ding vd, (1993) tarafından tanımlanan ve asimetrik bir model olan PARCH modeli;

$$h_t^\delta = \omega + \sum_{i=1}^q a_i f_i(\varepsilon_{t-i}) + \sum_{j=1}^p \beta_j h_{t-j}^\delta \quad (9)$$

Şeklinde ifade edilmektedir. Eşitlik 9.'da $f_i(\varepsilon_{t-i}) \equiv (|\varepsilon_{t-i}| - \kappa_i \varepsilon_{t-i})^\delta, i = \overline{1, q}$ olmak üzere a_i , standart ARCH terimini, β_j , standart GARCH terimini, κ_i , $(|\kappa_i| < 1)$ olmak üzere kaldıraç parametresini ve $\delta > 0$ olmak üzere δ , PARCH parametresini belirtmektedir. Ek olarak, koşullu varyans denklemindeki parametrelere göre bazı kısıtlamaların ($\omega > 0, a_i \geq 0$ ve $\beta_j \geq 0$) getirilmesi gerekmektedir. $\delta = 1$ koşullu standart sapmanın tahmin edilmesine olanak sağlarken, $\delta = 2$ olması durumunda klasik GARCH modeline dönüşmektedir.

4. ÇIKTI ve ENDEKS GETİRİ BELİRSİZLİĞİNİN TEKNOLOJİ ENDEKSİNE ETKİLERİNİN BELİRLENMESİ

Çıktı ve endeks getirisi belirsizliğinin Türkiye için teknoloji endeksi değişkeni üzerine etkisini incelemek amacıyla 1.10.2000-1-12-2022 dönemlerine ait aylık veriler kullanılmakta ve ilgili veriler, Türkiye Cumhuriyet Merkez Bankası (TCMB) elektronik veri dağıtım sisteminden (EVDS) elde edilmektedir. İlgili değişkenlere ait tanımlayıcı istatistikler Tablo 1.'de yer almaktadır.

Tablo 1. Değişkenlere İlişkin Tanımlayıcı İstatistikler

TEKNO	Borsa İstanbul'da İşlem Gören Teknoloji Firmalarının Endeksi					
GDP	Gayri Safi Yurt içi Hasıla					
	Gözlem	Ortalama	Standart Sapma	Minimum Değer	Maksimum Değer	Jarque-Bera
TEKNO	267	0.020772	0.113993	-0.347083	0.432648	25.304*
GDP	267	0.018118	0.038826	-0.069601	0.121605	5.077*

*, %1 anlamlılık düzeyini ifade etmektedir.

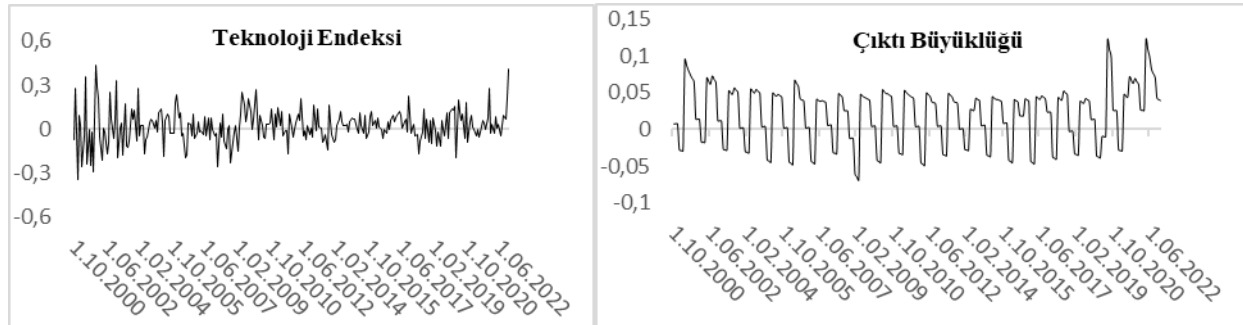

Tablo 1.'de bulunan değerler incelendiğinde, değişkenlere ait normallik sınamasına ait yapılan Jarque- Bera testi sonucunda, değişkenlerin normal dağılıma uygun olmadığı tespit edilmektedir. Çalışma kapsamında kullanılan değişkenlerin düzeyde üstel bir artış-azalış gösteren serilerde ortaya çıkan aşırı değişimin dengelenebilmesi, doğrusal bir formda ifade edilebilmesi ve değişkenlerin rassal dağılım gösterebilmesi amacıyla değişim oranları formları alınarak analiz sürecine dahil edilmektedir. Düzenlenmiş değişkenlerin durağanlık sınamalarına yönelik olarak Augmented Dickey-Fuller (ADF), Kwiatkowski-Phillips-Schmidt-Shin (KPSS) ve Phillips-Perron (PP) birim kök testleri uygulanarak sonuçlar Tablo 2.'de yer almaktadır.

Tablo 2. Durağanlık Testi Sonuçları

Değişkenler		ADF Test İstatistikleri	PP Test İstatistikleri	KPSS Test İstatistikleri
TEKNO	Düzye Değerleri	-12.20344*	-16.14977*	0.03657*
GDP	Düzye Değerleri	-0.96559	-7.10529*	0.17937
	Birinci Fark	-5.78201*		0.02781**
	Değerleri			

Tablo 1.'de yer alan ve tüm değişkenler için verilen ADF, KPSS ve PP durağanlık test sonuçları genel olarak değerlendirildiğinde teknoloji endeksinin düzeyde durağan olduğu belirlenirken, gayri safi yurt içi hasıla değişkeninin düzeyde durağan olmadığı elde edilmektedir. Şekil 1.'de değişkenlere ilişkin zaman serisi grafiği yer almaktadır.

Şekil 1. Değişkenlere İlişkin Zaman Serisi Grafikleri

İlgili değişkenlerin zaman yolu grafiği incelendiğinde, serilerin ortalama etrafında bir dağılım sergilediği görülmektedir. $TEKNO_t$, Borsa İstanbul'da işlem gören teknoloji endeksinin, ÇIKTI_t , çıktı büyüklüğü belirsizliğini göstermek üzere üssel otoregresif koşullu heteroskedastisite (EGARCH) modeli,

$$TEKNO_t = a_0 + \sum_{i=1}^p a_{1i} TEKNO_{t-i} + \sum_{i=0}^p a_{2i} ÇIKTI_{t-i} + a_3 \sqrt{h_{TEKNO_{t-1}}} + \varepsilon_{1t} \quad (12)$$

şeklinde ifade edilirken, çıktı büyüklüğü belirsizliğine ilişkin varyans denklemi Eşitlik 12.'de tahmin edilmektedir. Modele ilişkin ortalama denkleme karar verilmesi için Schwarz kriteri (SC), Hannan ve Quinn(HQ) , Akaike bilgi kriteri(AIC) ve son tahmin hata (FPE) kriterine ilişkin gecikme uzunlukları hesaplanmış ve en uygun gecikme uzunluğu iki (2) olarak belirlenmektedir.

Tablo 3. Model Tahmin Sonuçları

ARCH LM Testi					
F-istatistiği	1.370				
Olasılık Değeri	0.012				
Ortalama Denklem Tahmini	I	II	III	IV	V
a_0	-0.0594	0.0431	0.0526*	0.0412	0.0671*
a_{11}	-0.0241	0.0785	0.0935	0.0773	0.0661
a_{12}	0.0701	0.1153	0.1133	0.1153	0.1543**
a_{20}	-0.1876	-0.2975	-0.2865	-0.1903	-0.3381
a_{21}	0.4006	0.4057	0.4256	0.4208	0.5536**
a_{22}	-0.35	-0.3241	-0.3832*	-0.3508	-0.4286**
a_3	0.7595***	-0.2139	-0.3031	-0.1903	-0.4529*
Varyans Denkem Tahminleri	ARCH	GARCH	PARCH	TARCH	EGARCH
ω	0.0008*	0.0003*	0.0067	0.0048*	-0.0765*
α	0.2968*	0.0153	0.0100	0.0254	
β		0.9315*	0.9602	0.9310*	0.9730*
γ					0.0559***
δ			0.6602		
ρ					-0.0724**
η				-0.0126	
ξ			-0.9824		

*, %1, **, %5 ve ***, %10 anlamlılık düzeyini ifade etmektedir.

Tablo 3.'de yer alan sonuçlar, çıktı büyüklüğü ve endeks getiri belirsizliğinin teknoloji endeksi üzerine etkisini belirlemek amacıyla kurgulanan modelde değişen varyansın varlığı ARCH-LM testi sonuçları doğrultusunda belirlendiğini göstermektedir. Varyans denklemlerine yönelik sonuçları genel olarak incelendiğinde, EGARCH modeline ait tahminler kabul görmektedir. Asimetrik etkisini de belirleyebilen EGARCH modellemesine ait γ katsayısının sıfırdan farklı ve istatistiksel olarak olması nedeniyle değişkenler arasında asimetrik bir etkinin varlığından söz edilebilmektedir. Bu durum, ρ (rho) parametresinin negatif ve istatistiksel olarak anlamlı olması nedeniyle meydana gelen negatif şoklar, pozitif şoklardan daha fazla etki meydana getirmektedir. Bu kapsamda, Model V.'e ilişkin ortalama denklem ele alındığında, teknoloji endeksi ve çıktı büyüklüğü değişkenlerinin gecikmeli değerlerinin teknoloji endeksine istatistiksel olarak anlamlı ve pozitif yönde etkilerken, teknoloji endeksi getiri belirsizliğinin teknoloji endeksi üzerinde negatif ve istatistiksel olarak anlamlı etkisi olduğu görülmektedir.

5. SONUÇ

Toplumsal açıdan dijital dönüşümün sürdürülebilir olması için dijital teknolojilerin kullanılabilirliğinin artırılması önem arz etmektedir. Çalışma kapsamında, belirsizliğinin etkisinin asimetrik modellerle ele alınması gerekliliği ortaya konulmaktadır. Son dönemlerde ihracata yönelik büyüme politikasını tercih eden Türkiye'de, dijital gelişmelere yapılan yatırımın sürdürülebilir kalkınma/büyüme için uzun vadeli bir etkisi beklenmektedir. Bu nedenle dijitalleşme ve enstrümanlarının ikiz dönüşüm çerçevesinde ele alınarak, dijital teknolojilerin sürdürülebilirliği destekleyecek şekilde kullanımının teşvik edilmesi ve büyüme politikalarının teknoloji faaliyetlerini ve yatırımlarını desteklemesi gerekmektedir. Bu durumda dijitalleşmenin daha sürdürülebilir bir geleceğe katkıda bulunmasına muhtemel olmaktadır

Özet: Hızlı teknolojik yenilikler ile birlikte dijitalleşen çağda; nesnelerin interneti, bulut bilişim, blok zinciri, büyük veri ve yapay zekâ gibi birçok teknolojiyi barındıran dönüşüm hem iş süreçlerinde hem de sosyal yapı üstünde köklü değişiklikleri neden olmaktadır. Bireylerin İnternete erişim sağlayabilecekleri araçların kullanımını gerekli kılan dijital vatandaşlık; bilinçli ve güvenli İnternet kullanımını, çevrimiçi ortamlarda başkalarının haklarına saygı göstermeyi ve e-Devlet başta olmak üzere ticaret, bankacılık, sağlık ve eğitim gibi dijital hizmetlerin kullanımında karşılaştığı (şahit olduğu) hukuksuzluğu şikâyet edebilme bilincinin yanı sıra bilgi-iletişim teknolojileri okuryazarlığını, çevrimiçi güvenliğini ve özel/halka açık bilgilerin ayırt edilmesi becerilerini gerekli kılmaktadır. Devletlerin kamu politikalarının dijitalleşme odaklı olarak geliştirmeleri, özellikle pandemi döneminin de etkisiyle, dijital vatandaşlık kavramının önemini arttırmaktadır. Dijital vatandaşlığın önem kazanması ile dijital vatandaşlık ile ilgili pek çok araştırma yapılmakla birlikte, araştırmaların dijital vatandaşlık eğitiminin kurgulanma biçiminin belirlenmesi ile ilgili olduğu tespit edilmektedir. Diğer taraftan, dijital vatandaşlığın alanının genişlemesi ile yeni ve farklı ihtiyaçlar ortaya çıkmaktadır. “Dijital yaratıcılık, dijital girişimcilik, dijital empati ve dijital saldırganlık” faktörlerinin dijital vatandaşlık araştırmaları içinde incelenmesi ve dijital farkındalığın dijital vatandaşlık ile bağının ortaya konulması gerekliliğinden ötürü, dijital vatandaşlık kavramının faktörleri dijital vatandaşlığın anlaşılması ve gelişimi için yeterli görülmemektedir. Devletin dijitalleşme ve dijital dönüşüm politikalarının dijital vatandaşlığın gelişimine ve yönetimine dâhil edilmesi gerekmektedir. Bu çerçeveden ele alındığında, dijital vatandaşlığın sadece eğitimsel bir problem olmamasından dolayı ders programı oluşturma bu amacı karşılamadığı ve dijital vatandaşlığın geliştirilmesinde bir yönetim politikası oluşturulması ihtiyacı/gerekliliği ortaya çıkmaktadır. Dijital vatandaşlığın tanımında, eğitimi, uygulanması, sosyal-ekonomik-kültürel-hukuki gelişimi bir bütün olarak ele alınması gerektiğinden, dijital devlet politikası kapsamında “dijital vatandaşlık yönetim modeline” ihtiyaç duyulmaktadır. Bu çalışmada; dijital vatandaşlık yönetim modeli ortaya konulması için yeni bir dijital vatandaşlık ölçeğinin oluşturulması amaçlanmaktadır. Bu amaç doğrultusunda; dijital okuryazarlık, dijital hukuk, dijital haklar ve sorumluluk, dijital iletişim, dijital güvenlik, dijital ticaret, dijital katılım, dijital etik, dijital sağlık, dijital yaratıcılık, dijital girişimcilik, dijital empati ve dijital saldırganlık faktörlerinin dijital vatandaşlık boyutuna odaklanılmaktadır.

Anahtar Kelimeler: Dijital Vatandaşlık, e-Devlet, Dijital Hukuk, Ölçek Geliştirme, Yönetim Modeli Geliştirme

Abstract: The transformation through rapid technological innovations, which includes various technologies such as internet of things, cloud computing, blockchain, big data and artificial intelligence, causes profound changes in both business processes and social structure in the digitalizing era. Digital citizenship, which necessitates the use of tools through which individuals can access the Internet, requires the conscious and safe use of the Internet, respecting the rights of others in online platforms, and the awareness of being able to complain about the unlawfulness encountered (witnessed) in the use of digital services such as e-Government, commercial affairs, banking, health and education. It also entails ICT literacy, online security, and ability to distinguish between private and publicly available information. The development of public policies by governments with a focus on digitalization have increased the importance of the concept of digital citizenship, especially with the effect of the pandemic period. Since the concept of digital citizenship has gained prominence, a great amount of studies were implemented on this subject. When these studies were analyzed, it was detected that the researches were mostly related to the determination of the way of constructing digital citizenship education. On the other hand, with the expansion of the field of digital citizenship, new and different needs have emerged. The factors of the concept of digital citizenship are not considered sufficient for the understanding and development of digital citizenship, due to the necessity of examining the factors of "digital creativity, digital entrepreneurship, digital empathy and digital aggression" within digital citizenship studies and revealing the link between digital awareness and digital citizenship. The digitalization and digital transformation policies of the governments need to be included in the development and management of digital citizenship. When considered from this perspective, since digital citizenship is not only an educational problem, creating a curriculum does not meet this purpose and the need/necessity of establishing a management policy in the development of digital citizenship emerges. A "digital citizenship management model" is needed within the scope of digital state policy, since its education, implementation, social-economic-cultural-legal development should be considered as a whole in terms of the definition of digital citizenship. In this project, it is aimed to create a new digital citizenship scale in order to present a digital citizenship management model. In accordance with this purpose; digital literacy, digital law, digital rights and responsibilities, digital communication, digital security, digital commerce, digital

¹ Bu çalışma Trakya Üniversitesi Bilimsel Araştırma Birimi tarafından desteklenen “Dijital Vatandaşlık Ölçek Geliştirme: Türkiye ve Kosova Pilot Uygulaması” adlı proje kapsamında yapılmıştır.

participation, digital ethics, digital health, digital creativity, digital entrepreneurship, digital empathy and digital aggression factors are focused on within the framework of digital citizenship aspect.

Keywords: Digital Citizenship, e-Government, Digital Law, Scale Development, Management Model Development

1. GİRİŞ

İnsan hayatının olmazsa olmazı haline gelen Bilgi ve iletişim teknolojisi (BİT) insanları, hayatı ve içinde bulunduğumuz çağı tamamen değiştirmektedir. Bu değişimler ile bilgi arama, paylaşma, iletişim, erişim, hukuk, tüketim ve eğlence için dijital teknolojiler etkin bir şekilde kullanılmaktadır. Bilgi ve iletişim teknolojileri ile değişen çağ, bireylerin özelliklerinin ve buna bağlı olarak da toplumun özelliklerinin değiş tokuşuna yol açmaktadır. Dijital teknolojiler ile birlikte vatandaşlık kavramı genişlemektedir. Dijital vatandaşlığın farklı kavramsallaştırmaları, dijital vatandaşlık için gerekli yeterlilikler veya dijital alanlara katılım fırsatları gibi belirli yönleri vurgulamaktadır (Chen vd.,2021).

Dijital araçların yaygın olarak kullanıldığı dijital çağ, dijital toplumdan dijital vatandaşlar yaratma çabasıdır. Dijital vatandaş genel olarak “interneti düzenli ve etkin kullananlar” olarak tanımlanmaktadır (Mossberger, Tolbert ve McNeal, 2011). Dijital vatandaş, teknoloji ile ilgili insani, kültürel ve toplumsal sorunları anlamak, yasal ve etik davranışlar uygulamak; bilgi ve teknolojinin güvenli, yasal ve sorumlu kullanımını savunmak ve uygulamak; iş birliğini, öğrenmeyi ve üretkenliği destekleyen teknolojiyi kullanmaya karşı olumlu bir tutum sergilemek; yaşam boyu öğrenme için kişisel sorumluluk göstermek ve dijital vatandaşlık için liderlik sergilemektir (Ribble, 2008).Tüm dünyayı etkisi altına alan COVID-19 göstermiştir ki dijital vatandaşlığın öğrenilmesi ve öğretilmesi gerekmektedir (Öztürk,2021). Güvenli ve sorumlu çevrimiçi iletişim ve iş birliği, dijital vatandaşlık kavramını ön plana çıkarmıştır (Ribble, Bailey ve Ross, 2004).

Günlük hayatta dijital araçların kullanımının her geçen gün artmasıyla; bireyler gelişen bilgi ve iletişim teknolojilerini (BİT); bilgi, iletişim, hukuk, sağlık, eğitim, güvenlik, eğlence ve kamu hizmeti alımı için etkin bir şekilde kullanılmaktadırlar. BİT’lerin yoğun kullanımı toplumun özelliklerini etkileyerek dijitalleşen toplum yapısını ortaya çıkartmaktadır. Dijital toplumda yaratılan dijital kültür ise dijital vatandaşları ortaya çıkartmaktadır. Dijital vatandaşlık algısından, teknoloji ile ilgili insani, kültürel ve toplumsal sorunları anlama, yasal ve etik davranışları uygulama; bilgi ve teknolojinin güvenli, yasal ve sorumlu kullanımını savunmak ve uygulamak; iş birliğini, öğrenmeyi ve üretkenliği destekleyen teknolojiyi kullanmaya yönelik olumlu bir tutum sergilemek; yaşam boyu öğrenme için kişisel sorumluluk göstermek ve dijital vatandaşlık için liderlik sergilemek gibi bazı özelliklere sahip olması anlaşılmaktadır. Devletler, bireyleri aktif dijital vatandaşlar olarak güçlendirmek ve dijital farkındalığı arttırmak için eğitimle ilgili bazı girişimlerde bulunmakla birlikte diğer eylem planlarını göz ardı etmektedir.

Öğrencilere sadece bir ülke vatandaşı olmak yerine kişisel ve akademik yaşamlarında çevrimiçi dünyayı nasıl yönlendirecekleri konusunda rehberlik eden doğru ve sorumlu teknoloji kullanımına yönelik kurallara dijital vatandaşlık denir. Eğitmek, güçlendirmek ve korumak temel hedeflerine dayanan dijital vatandaşlık, ülkelerin sürdürülebilir kalkınma ve kamu/özel sektör hizmetlerinin dijitalleşme süreçlerinde önem arz etmektedir. Dijital vatandaşlığı oluşturan genel kabul görmüş dokuz davranış alanı “Dijital Okuryazarlık, Dijital Hukuk, Dijital Haklar ve Sorumluluk, Dijital İletişim, Dijital Güvenlik, Dijital Ticaret, Dijital katılım, Dijital Etik ve Dijital Sağlık” şeklinde ele alınmaktadır (Ribble ve Bailey,2007). Dijital vatandaşlık üzerine bir literatür oluşturulması ve dijital vatandaşlık eğitimindeki uygulamalarının zorluklarının araştırılması için 2016 yılında Eğitim Politikası ve Uygulaması Yönlendirme Komitesi (Steering Committee for Education Policy and Practice) Dijital Vatandaşlık Eğitimi Uzman Grubu kurulmuştur. 2016-2021 dönemlerinde Dijital Vatandaşlık Eğitimi Uzman Grubu raporlarında, dijital vatandaşlık gelişimi ile ilgili bireylerin farkındalık ve kaynak eksikliği olduğu ortaya konmaktadır.

2.DİJİTAL VATANDAŞLIK BİLEŞENLERİ

Dijital vatandaş kavramı devlet politikalarını da içerdiğinden artan öneme sahiptir. Dijital vatandaşlık, teknoloji kullanımında sorumlu davranış kuralları, dijital katılım, dijital ticaret, dijital iletişim, dijital okuryazarlık, dijital etik, dijital hukuk, dijital haklar, dijital sağlık ve dijital güvenlikten oluşan ve Şekil 1.’de dijital vatandaşlık bileşenleri olarak gösterilen dokuz unsuru içinde barındırmaktadır (Ribble ve Bailey, 2007). Dijital vatandaşlık ile ilgili yapılan diğer tanımlar incelendiğinde bu tanımların ortak noktalarının dijital vatandaşların yasalara uygun etik davranışlarda bulunarak teknolojinin güvenli ve sorumlu kullanımı konusunda özenli davranmaları ile ilgili olduğu tespit edilmektedir.

Şekil 1. Dijital vatandaşlık bileşenleri

Öğrenme ve Performans	Ortam ve Davranış Biçimi	Günlük Yaşam
<ul style="list-style-type: none">· Dijital katılım· Dijital iletişim· Dijital Okuryazarlık	<ul style="list-style-type: none">· Dijital Güvenlik· Dijital Etik· Dijital Hak ve Sorumluluklar	<ul style="list-style-type: none">· Dijital Hukuk· Dijital Sağlık ve Zindelik· Dijital Ticaret

Kaynak: Ribble ve Bailey, 2007

Dijital katılım, topluma tam elektronik katılımı ifade etmektedir. Vatandaşlar BİT'leri kullanarak kamu hizmetlerine çevrimiçi erişerek daha hızlı ve verimli kamu hizmeti almakta, politika ve kanun yapıcılara sosyal medya üzerinden taleplerini, şikayetlerini ve görüşlerini iletmektedir. Dijital katılımde ortaya çıkan eşitsizlikleri ortadan kaldırmak için yürütülen politikalar ülkelerin gelişmişlik seviyelerini gösterdiğinden devlet vatandaşlarına İnternet erişimini eşit olarak sağlamakla yükümlüdür. Dijital katılım ile dijital okuryazarlık arasında bağlantı vardır. Bu nedenle bazı araştırmacılar bu iki faktörü tek faktör olarak değerlendirirken bazıları sadece aralarındaki etkiden bahsetmektedir. Ayaz (2021), dijital katılım ile dijital okuryazarlığı tek faktör olarak değerlendirmektedir. Yalçinkaya ve Cıbaroğlu (2019) ise dijital katılımın dijital okuryazarlığı direk etkileyeceğini ifade etmektedir. Dijital katılım ve dijital okuryazarlık arasındaki bağ dijital çağda daha belirgin bir hal almaktadır. Farklı faktörler olsalar da biri diğerini etkilediğinden birlikte düşünölmeleri gerekmektedir. Dijital iletişim, Elektronik bilgi alışverişidir. Bilginin BİT'ler aracılığı ile hızlı ve büyük kitlelere ulaşması devlet-vatandaş iletişiminin dijital ortama aktarılmasına ve sürdürölmesine neden olmaktadır. Dijital iletişim araçları; kısa mesaj gönderme, e-posta kullanma, anlık mesajlaşma, çevrimiçi oyunda yazılı sohbet, video sohbet, blog yazan ve yorum yapan, twitter ve diğer sosyal medya araçlarını kullanımı olarak sınıflandırılmaktadır. Sakallı ve Bahadıroğlu (2018), dijital iletişimde duygu ikonlarının da yerini aldığını ifade etmektedir. Budak (2022), dijital iletişimin ülke imajını şekillendirdiğini belirtmektedir. Örneğin; Belediye başkanına ya da belediyeye sosyal medya üzerinden mesaj atarak mahalledeki yolun bozuk olduğunu ve yapılmasını istemek ya da bir kamu görevlisinin sosyal medya üzerinden bazı olaylar ve durumlar ile ilgili görüş bildirmesi ve vatandaşların bu yoruma cevap verebilmesi. Dijital okuryazarlık, Sürekli öğrenmeyi gerekli kılan teknoloji ve teknoloji kullanımı hakkında öğretme ve öğrenme sürecidir. Teknoloji öğrenimi hiç bitmeyen bir süreçtir. Gilster (1997), dijital okuryazarlık kavramını; teknoloji araçlarına erişim ve kullanma becerisi, dijital içerikleri yorumlama becerisi ve dijital teknoloji yaratma becerisi olarak üç ilkeye dayandırmaktadır.

Onursoy (2018), dijital mecralarda doğru ile yanlışın ayırt edilememesinin dijital okuryazarlık becerilerini, dijital çağda tutunabilme becerisini ve teknoloji adaptasyonunu riske attığını ifade etmektedir. Kul (2020), dijital okuryazarlık ile günlük İnternet kullanımı arasında ilişki olduğunu ifade etmektedir. Dijital okuryazarlık dijital vatandaşlık içinde belirtilen dokuz faktörün hepsi ile bağlantılıdır. Dijital okuryazarlık zayıf kalır ise dijital vatandaşlık gelişimi istenildiği doğrultuda gerçekleşmemektedir. Dijital güvenlik, güvenliği garanti altına almak için elektronik önlemler alınmasıdır. Çubukçu ve Bayzan (2013), dijital güvenliğin dijital teknoloji araçlarını kullanım sırasında bilgi güvenliğinin sağlanması olduğunu belirtmektedir. Elçi ve Sarı (2016), dijital güvenliğin en iyi algılama alanının sosyal medya araçları kullanımı olduğunu çünkü sosyal medyanın dijital güvenlikle yakın ilişkili olduğunu ifade etmektedir. Yılmaz ve diğ. (2015), İnternet ve teknolojinin günlük hızlı gelişimi ve kullanımının artması ile dijital güvenlik sorununun ortaya çıktığını ifade etmektedir. Sosyal medya üzerinde şifre oluşturma ve koruma eylemleri kişilerin dijital güvenlik algılarının oluşmasına ve bu konuda dikkatli olmaları gerektiğini bilmelerine neden olmaktadır. Sosyal medya hesapları, banka hesapları ve e-Devlet şifrelerinin önemini kavrayan bireyler şifreleme ve dijital güvenlik konusunda daha dikkatli olmaktadır. Dijital güvenlik bilinci küçük yaşlarda sosyal medya kullanmaya başlayan bireyler tarafından da öğrenilmekte ve bu konuda toplumda bilinç düzeyi sürekli artmaktadır.

Dijital etik, elektronik davranış veya prosedür standartları. Etik kavramının gelişimi toplum, kültür, yaşam tarzı ve kişilik özelliklerine göre farklılık göstermektedir. Genel kabul gören etik tanımları olsa da etik kavramı herkes için aynı şeyi ifade etmemektedir. Etik kavramının bu doğası etik davranış ilkelerinin tam olarak belirlenmesinde zorluğa neden olmaktadır. Etik kavramının davranış, düşünce ve muhakeme yeteneği olması dijital ortamda tanımlanmasını ve uygulanmasını zorlaştırmaktadır. Bayrak (2017), dijital etik kavramının çeşitli etkenlere göre değiştiğini fakat kavramı belirlemede çeşitli gözlem metotlarının belirleyici olduğunu ifade etmektedir. Çubukçu ve Bayzan (2013), dijital araçları etik kullanmanın doğru kullanmak kadar önemli olduğunu, başkalarının hak ve özgürlüklerine saygılı olunmasının dijital ortamda da önemli olduğunu, kışkırtıcı ve saldırgan yaklaşımlardan kaçınılması gerektiğini ifade etmektedir. Özcan (2021), dijital etiğin insan hayatının günlük yaşamının bir parçası

haline geldiğini ve dijital ortamda iyi niyetin devamlılığı için dikkat edilmesi gereken davranış, düşünce biçimleri ve insani değerleri geliştirerek ilerletecek bir sistem olduğunu belirtmektedir. Dijital haklar ve sorumluluklar, dijital dünyada herkese tanınan bu özgürlüklerdir. Dijital etik kavramı ile doğrudan ilişkili olan bu faktör kişilerin dijital ortamda birbirlerinin haklarına saygılı olarak sorumluluk sahibi olmaları ile gerçekleşebilmektedir. Günümüz teknolojileri ile bilgi, fotoğraf, video vb. kişisel verilerimiz dijital ortamda yer almakta, kötü niyetle ele geçirilerek kullanılabilir. Bunu engellemenin yollarından biri dijital ortamda hak ve sorumlulukların farkında olmaktır. Görmez (2016), dijital hak ve sorumlulukların dijital ortamdaki özgürlükler olduğunu ifade etmektedir. Dijital hukuk, dijital ortamdaki eylemler ve eylemler için hukuki sorumluluğu ifade etmektedir. Ünal (2017), dijital ortamda, dijital teknolojilerin ve İnternetin kullanımında kuralların yasalar tarafından yaptırıma bağlı olmasının dijital hukuk kapsamında olduğunu belirtmektedir. Dere ve Yavuzay (2019), bireylerin dijital ortamda yasal hak ve kısıtlamalar olduğunu bilmeleri gerektiğini vurgulamaktadır. Dijital hukukun gelişmesi ile dijital ortamda yaşanan etik dışı eylemlerin ortadan kaldırılması mümkün olmaktadır. Buda dijital devletin hedeflediği vatandaş katılımı artabilmektedir. Dijital sağlık, dijital teknoloji dünyasında fiziksel ve psikolojik iyilik halidir. Dijital ortamda bireylerin ifade ettikleri düşünceler ve paylaşımları sonucunda ortaya çıkacak etkiler bireyin sağlığını direk olarak etkileyebilmektedir. Bunun farkında olunması hak ve sorumlulukların bilinmesi ile mümkün olabilecektir. Dijital sağlığın korunması dijital etiğin ve dijital hukukun gelişmesi ile mümkün olabilmektedir. Dijital ticaret, eşya alım satımının dijital ortamda yapılmasıdır. Dijital ortamda ticaret hayatımıza e-ticaret olarak girmiştir. E-Ticaretin gelişimi dijital ortamda ürün/hizmet alma ya da satma yeterliliğini beraberinde getirmiştir. Dijital ticareti alım/satım ve tüketici hakları çerçevesinde değerlendirmek ve geliştirmek dijital hukukun gelişimine katkı sağlamaktadır.

Dijital vatandaşlık için yukarıda açıklamaları verilen dokuz unsur birbiri ile bağlı faktörlerdir. Fakat günümüzde bu faktörler dijital vatandaşlık kavramının değişen doğası nedeniyle yetersiz kalmaktadır. Çalışma kapsamında oluşturulacak ölçekte dijital farkındalık için kullanılacak diğer faktörler olan; dijital girişimcilik, dijital empati, dijital yaratıcılık, dijital saldırganlık faktörleridir. Dijital girişimcilik, yeni bir girişimcilik faaliyeti olarak kabul edilmekle birlikte dijital ortamda bireylerin yapmış oldukları tüm girişimleri ifade etmektedir. Farklı tanımlamaları yapılan dijital girişimcilik kavramı, BİT kaynaklı fırsat arayışı, tüm ticaret faaliyetlerinin dijital ortamda yapılması, tüm iş faaliyetlerinin İnternet kullanılarak yapılması, ticaretin dijital dönüşümü veya dijital teknolojiler ile girişimciliğin bir araya gelmesi olarak tanımlanabilmektedir. Dijital girişimcilik genel olarak pazarda, üretim ve depolamada kolaylık; dağıtımda hız; mekânın dijitalleşmesi; zayıf örgütsel bağlılık; BİT yoğun kullanımı ve iş birliğine dayalı esnek organizasyona sahip oluşumdur (Kişi,2018).Dijital empati, dijital ortamda başkalarının duygu ve düşüncelerini anlayabilme bilinci ve yeteneğinde olmaktır. Dijital hak ve sorumluluklardan farkı duyguların ve bilinç durumunun ortaya çıkmasıdır. İnsan davranışı olarak dijital empati dijital ortamda çok önemli bir kavramdır. Okay ve Bal (2021), teknoloji tasarımı empatinin temel ilkelerinin kullanılmasının dijital empati olduğunu ifade etmektedir. Dijital yaratıcılık, fikirlerin dijital ortamda görünür hale getirilmesi ya da dijital ortama aktarılmasıdır. Lee (2012), dijital yaratıcılığı geniş anlamda dijital teknolojiler tarafından yönlendirilen tüm yaratıcılık biçimleri olarak tanımaktadır. Hoffmann ve diğ.(2016) ise dijital yaratıcılığın teknik beceri ve bilgi gerektirdiğini ifade etmektedir. Dijital saldırganlık, dijital ortamda bir kişi ya da kuruma ait fotoğraf, yorum, bilgi vb. bir paylaşım karşı etik ve hukuk kurallarına aykırı hareket etmektir. Dijital saldırganlık dijital ortamda en sık nefret söylemi olarak ortaya çıkmaktadır. Belli bir kişi ya da grup hedef alınabileceği gibi bir kültür ya da ülke de hedef alınabilir. Dijital saldırganlık dijital hak ve sorumlulukların farkında olduğu halde, dijital empati yapılmayarak dijital etik kurallara uyulmamasıdır.

Dijital vatandaşlık ile ilgili literatür incelendiğinde çalışmaların Ribble ve Bailey (2007) yöntemi temel alınarak yapıldığı gözlemlenmektedir. Bu yöntemde; dijital katılım, dijital ticaret, dijital iletişim, dijital okuryazarlık, dijital etik, dijital hukuk, dijital haklar, dijital sağlık ve dijital güvenlik faktörleri ele alınmaktadır. Teknoloji ve kullanımı hakkında bilgi sahibi olunmasını gösteren dijital okuryazarlık, dijital vatandaşların teknoloji kullanımı için ortaya koydukları davranış biçimlerinin şekillenmesinde etkisi olmaktadır. Teknoloji, bilgi yükleme-indirme-bulma ve bilgiye erişme sürecini kolaylaştırdığından, İnternet üzerinde bulunan bilgilerin yasal ve yasadışı kullanımının farkındalığının yanı sıra dijital hukuk; dijital vatandaşlar için teknoloji ile ilgili eylemler için elektronik sorumluluğu ifade etmekte ve şekillenmektedir. Dijital hak ve sorumluluklar, dijital dünyada dijital vatandaşlara/tüm kullanıcılara tanınan gereklilikler ve özgürlükleri ifade eden dijital haklar ve sorumluluklar; dijital vatandaşların bulundukları ortam ve hayatları üzerinde etkilidir. Yanlış bilgi paylaşımı neticesinde yanlış yönlendirmelerden dolayı ortaya çıkabilecek yasadışı durumları önleyen dijital iletişim; dijital vatandaşlar arasında elektronik bilgi alışverişi ve öğrenme sürecini sağlamaktadır. Dijital vatandaşlara verileri, dosyaları ve yazılımları korumayı sağlayan dijital güvenlik; bulunulan ortamlarda güvenliği sağlanması ve elektronik önlemler alınması üzerinde etkilidir. Malların elektronik olarak alınıp satılmasını ve akıllı tüketimi ifade eden dijital ticaret; ekonominin canlandırılması üzerinde etkilidir. Toplumun tam elektronik katılımı ve iletişimi olarak

ortaya çıkan dijital katılım ve elektronik davranış veya prosedür standartlarını gösteren dijital etik, dijital vatandaşların teknolojinin kullanım biçiminin uygunluğunu sorgulamaktadır. Dijital teknolojinin fiziksel ve psikolojik iyi oluşu olan dijital sağlık; İnternet bağımlılığı ve davranış biçimleri üzerinde etkilidir.

Mossberger, Tolbert, ve McNeal (2008), dijital vatandaşların teknolojiyi sıklıkla kullanan, teknolojiyi vatandaşlık görevlerini yerine getirmek ve iş yerinde ekonomik kazanç sağlamak için kullanan kişiler olduklarını; Robles (2009), siyasal veya sosyal haklarının tamamını veya bir kısmını internet üzerinden, bağımsız olarak veya sanal bir topluluğa üyeliği yoluyla kullanan, başka bir topluluğa veya devlete ait olan veya olmayan kişiler, vatandaşlar olduklarını; Ohler (2010) ise dijital çağ için karakter eğitimi alan kişiler olduklarını ifade etmektedirler. Richards (2010), dijital vatandaşlığın teknoloji ile öğrenmeye yönelik iyi bir tutumun sürdürülmesi olduğunu ifade ederken, 21. yüzyıl için dijital vatandaşlık hedeflerini; eğitmek, güçlendirmek ve korumak olarak açıklayan Avrupa Konseyi (2011), dijital vatandaşlığın teknolojiyi yetkin bir şekilde kullanma yeteneği olduğunu ifade etmektedir. Çubukçu ve Bayzan (2013), tüm dünyada dijital teknoloji kullanımının olması nedeniyle dijital vatandaşların eşit hak ve sorumluluklara sahip olabileceğini ifade etmektedir. İşman ve Güngören (2014), dijital vatandaşlık kavramını İnternetin düzenli ve etkin şekilde kullanılması olarak tanımlarken; Choi (2016), dijital vatandaşlığı “İnternetin güvenli ve sorumlu kullanımını gerektiren bir etik olarak; İnternete erişim imkânı, İnternet hizmetlerini kullanmak için gereken bilgi ve beceriler ve çevrim içi içeriğin güvenilirliği ve kalitesinin eleştirel değerlendirmesi ile ilgili dijital okuryazarlık olarak; mikro ve makro düzeylerde katılım olarak ve kritik bir direniş olarak” dört kavram altında tanımlamaktadır. Babović ve diğ. (2017) , birey ve topluluk arasında sanal/dijital alanda somutlaşan yeni bir bağlantı türü ve geleneksel vatandaşlık uygulamalarına bir ek ve bir uzantı olarak tanımlamaktadır.

Hintz ve diğ. (2017), dijital vatandaşlığın kısmen yasalarla kısmen de veri toplama ve analiz etme yoluyla inşa edildiğini belirterek, dijital vatandaşlığın teknolojik, politik ve sosyal bağlamlara bağlı olduğunu ve vatandaşların İnternet’e güvenerek hareket edip etkileşimde bulunduklarını bu yüzden altyapının dijital vatandaşlık fırsatlarını arttırabilir ya da azaltabilir bir unsur olduğunu ifade etmektedirler. Emejulu ve McGregor (2019), dijital vatandaşlığı, sosyal adalete bağlı bireylerin, grupların alternatif ve özgürleştirici teknolojiler ve teknolojik uygulamalar inşa etmek için bilinçli olarak harekete geçtiği bir süreç olarak tanımlamaktadırlar. Avrupa Konseyi (2019), dijital vatandaşın yaşam boyu öğrenme sürecine dahil olan, sürekli olarak insan haklarını ve onurunu savunmaya kararlı ve yaşam boyu öğrenen bireyler olduğunu ifade etmektedir. Konsey dijital vatandaşlığın, “erişim ve dahil etme, öğrenme ve yaratıcılık, medya ve bilgi okuryazarlığını kapsayan çevrimiçi alan”, “etik ve empati, sağlık ve esenlik, e-varlık ve iletişimi kapsayan çevrimiçi refah” ve “dijital bağlamda karmaşık ve çeşitli toplumlardaki vatandaşların hakları ve sorumluluklarıyla ilgili dört yeterliliği ifade etmektedir: Aktif katılım, haklar ve sorumluluklar, gizlilik ve güvenlik, tüketici farkındalığını kapsayan çevrimiçi haklar” olmak üzere üç kümeye ayrılan toplamda “10 dijital alan”dan oluştuğunu ifade etmektedir. Metin ve Cin (2021), geleneksel vatandaşlık anlayışı ile dijital vatandaşlığı ayırmamak gerektiğini ifade ederek, sosyal bilgiler öğretmen adayları için bir yeterlilik ölçeği geliştirmektedir. Öztürk (2021), dijital vatandaşlık ile ilgili araştırmaların kavramsal ve yöntemsel eğilimlerinin eksik olduğunu belirtmektedir. Avcı ve diğ. (2021), dijital vatandaşlık algısının belirlenmesi ile ilgili eksiklikleri ortaya koymaktadır. Koç ve Koç (2021), dijital vatandaşlığı dokuz unsur çerçevesinde değerlendirerek Türkiye’de dijital vatandaşlık ve dijital medya okuryazarlığının ön plana çıkartılması gerektiğini vurgulamaktadır. Çatlı ve Keskin (2021) ise dijital vatandaşlık ile ilgili hukuki düzenlemelerin yapılmasını vurgulamaktadır. Boschele (2021), teknoloji tarafından yönetilecek dijital vatandaşlar ile politika ilişkisini vurgulamaktadır. Karakuş ve Turan (2022), siber zorbalık ve dijital vatandaşlık arasında anlamlı bir ilişki tespit etmektedir.

Literatür taramasında da görüldüğü gibi dijital vatandaşlık Ribble ve Bailey’in dijital vatandaşlığı oluşturan dokuz unsuru üstüne kurgulanmaktadır. Yapılan araştırmaların hiçbirinde dijital vatandaşlık yönetim modeli oluşturulmamış ve bu eksiklik tartışılmamıştır. Bu çalışma, “Dijital Vatandaşlık Ölçek Geliştirme: Türkiye ve Kosova Pilot Uygulaması” adlı çalışma konusu kapsamında gerçekleştirilecek yeni ölçek çalışması ve daha önce literatürde bulunmayan bir yönetim modelinin ortaya konması ile diğer çalışmalardan ayrılmaktadır.

3.SONUÇ

Dijital çağ ile birlikte vatandaşlık kavramı BİT’ni ve dijital araçları içerecek şekilde genişlemektedir. Çalışma kapsamında hedef gruba yapılan anket çalışması göstermektedir ki hukuk fakültesi ve adalet öğrencileri dijital vatandaşlık konusunda öğrenmeye açıktırlar ve dijital ortamdaki sorumluluklarının büyük kısmının bilincindedirler. Yapılan araştırma sonucunda; kamu hizmetlerinin kullanımı, sosyal medya üzerinden siyasetçilere ve kamu kurumlarına atılan mesajların dijital vatandaşlık olarak görüldüğü belirlenmiştir.

Öğrencilerin dijital dünyaya tam olarak dahil olabilmeleri ve dijital vatandaşlar haline gelmeleri önemlidir. Bu nedenle okullarda dijital vatandaşlık eğitimi verilmelidir. Dijital vatandaşlık eğitimi, çocukların ve tüm vatandaşların dijital teknolojiye erişmesine hem öğrenmede özerk olma hem de dijital topluma aktif olarak katılma becerileri geliştirmesine izin vermektir. Bu eğitim, internette insan haklarına, demokrasiye ve hukukun üstünlüğüne saygı gösterirken, demokratik hak ve sorumluluklarını çevrimiçi olarak yerine getirmelerini sağlayacak bilgi, beceri ve yeteneklerden oluşmaktadır. Dijital vatandaşlık eğitiminin üç seviyesi vardır (Devrièsère,2019): dijital uçurumla mücadele, haklar ve sorumluluklar ve güvenilir bilgi arayışı, "dijital vatandaşlığı" kişisel ve toplumsal düzeylerde düzenleyen ilkelerdir: problem çözme, iletişim, kişinin vatandaşlığını açık ve güvenli bir ortamda geliştirme olasılığıdır. Bu seviyelerin okullarda verilen dijital vatandaşlık eğitimi ile gerçekleştirilmesi önemlidir. Dijital vatandaşlık bireysel çabanın dışında devlet politikası olarak uygulanması gereken bir konudur.

ORCID: 0000-0001-5321-0413

Özet: Oryantasyon eğitimi, insan kaynakları yönetimi işlevlerinden biri olan eğitim ve geliştirme faaliyetleri kapsamında gerçekleştirilen, bir kurumda işe yeni başlayan çalışanların işe alıştırılması ve onların elde tutulması için atılan önemli adımlardan birisidir. Özel sektör, kamu ya da sivil toplum kuruluşları ayrımı olmaksızın oryantasyon eğitimlerinden kuruluşlar, örgüt misyonunun desteklenmesi ve yapılan faaliyetlerde etkinliğinin artırılması gibi birçok anlamda fayda görmektedir. Sivil toplum kuruluşlarında kurumun özellikle gönüllülerle kuracağı ilişkinin sağlıklı bir temele dayanması için oryantasyon eğitime gerekli önemin verilmesi ve sistematik yaklaşılması gereklidir. Oryantasyon eğitimi aslında işe alım süreci ile birlikte başlayan, gönüllülerin görevlerinde başarılı olması için özellikle kurumu anlamaya odaklanan ve işin niteliğine göre o kuruma özgü bilgileri içeren bir eğitim sürecidir. Gönüllüleri kendi çalışacakları hedef kitlelerinin potansiyel gerçeklerine hazırlaması ve sivil toplum kuruluşlarıyla daha güçlü bir bağ kurulmasını sağlaması bakımından faydaları bulunmaktadır. Bir oryantasyon eğitiminin etkin yürütülmesi için ise bu eğitimin üç noktaya odaklanması gerekmektedir. Bunlar gönüllülerin kuruluşun misyonunu, vizyonunu ve amacını anlamasına yardımcı olmak, gönüllülerin kuruluşla çalışırken başarılı olması için ihtiyaç duyacağı yönetim veya prosedür bilgisini aktarmak ve örgüt kültürünün gönüllüler tarafından daha iyi anlaşılmasını sağlamak için onlara destek olmaktır. Oryantasyonun bu üç yönünü de içeren sistematik bir yaklaşım ile gönüllülerin görevlerinde başarılı olmaları için gereken desteği alma olasılığı daha da yükselecek, iş gücü devir oranının azaltılmasına ve dolayısıyla örgütsel verimliliğin artırılmasına da destek olunacaktır.

Anahtar Kelimeler: Sivil Toplum Kuruluşları, İnsan Kaynakları Yönetimi, Oryantasyon Eğitimi

Orientation Training in Non-Governmental Organizations

Abstract: Orientation training, within the scope of the training and development activities which is one of the human resources management functions, is one of the important steps of accustoming and retaining new employees in an institution. Regardless of the sector that an organization operating such as private, public or non-governmental sector, organizations benefit from orientation trainings in many ways such as supporting the mission of the organization and increasing the effectiveness of the activities. Orientation training should be given the necessary importance and a systematic approach is required in order for the institution to establish a healthy relationship with the volunteers. Orientation training is actually a training process that focuses on understanding the institution and includes information specific to that institution, according to the nature of the job, in order for the volunteers to be successful in their duties which starts with the recruitment process. It has benefits in terms of preparing volunteers for the potential realities of their target audiences and establishing a stronger bond with non-governmental organizations. In order for an orientation training to be carried out effectively, this training should focus on three points. These are to help volunteers understand the mission, vision and purpose of the organization, to convey the management or procedural knowledge that volunteers will need to be successful in working with the organization and to support volunteers to better understand the organizational culture. With a systematic approach that includes these three aspects of orientation, the probability of volunteers to receive the psychological and informational support they need to be successful in their duties will increase and it will also be supported to reduce the turnover rate and thus increase organizational productivity.

Key Words: Non-Governmental Organizations, Human Resources Management, Orientation Training

1. GİRİŞ

Oryantasyon, özel bir eğitim biçimidir. Oryantasyon eğitimi, gönüllülerin sivil toplum kuruluşlarına etkin bir biçimde uyum göstermesini sağlamak ve onları elde tutmak için kritik bir adımdır. İş performansına olan etkisi önemlidir ancak genellikle hafife alınmaktadır. Buna karşın kurumsal örgütler oryantasyon planlamasını ciddiye almakta ve etkin bir biçimde uygulanan oryantasyon eğitiminin yeni çalışanların kuruma uyum sağlaması bakımından kritik bir önemi olduğunun farkındadır. Oryantasyon eğitiminin, yeni gelenlerin hoş karşılanması ve yetiştirilmesi anlamında faydaları bulunmaktadır. Bu eğitim yeni çalışanların hızlı bir biçimde örgüte kazandırılmasına destek olmaktadır. Kurumların yaptıkları yatırımların geri dönüşünün, genellikle işe yeni başlayanların kaliteli bir sivil toplum hizmeti sunmasıyla ilgili olduğu ve gönüllü ve çalışanların yaptıkları işin önemine ilişkin anlayışı ve farkındalığı ilk olarak bu eğitimle kazandıkları düşünüldüğünde oryantasyon eğitiminin önemi ortaya çıkmaktadır. Bir kuruma iş başvurusunda bulunanlar, genellikle o kurumun örgüt kültürü ve diğer örgütsel özellikleri hakkında yetersiz bir bilgi ile o işe başvurmaktadır. Bu durum başvuranlarda psikolojik bir belirsizlik yaratmaktadır. Bu nedenle, işe başvurular ilerde yaşayabilecekleri sorunları da

düşünerek bu kararlarını genelde sorgulamaktadır. Kurumların da kendi bünyelerinde işe yeni başlayan çalışanların bu kararlarını olumlu bir biçimde karşıladıklarını göstermeleri gerekmektedir. Bu bağlamda onlara destek olmaları şarttır (Daly, 2015: 120). Oryantasyon eğitimi de bunun yollarından biridir. Çalışanların elde tutulması konusu tüm kurumlar açısından özellikle sivil toplum kuruluşları açısından önemlidir. Kötü ilk izlenimler çalışanların kurumdaki erken ayrılmasına neden olabilmektedir. Kurumun çalışanları kolay kaybetmesi bir maliyet kaybı olarak da değerlendirilmelidir. Oryantasyon eğitimi için sarf edilen zaman, emek ve benzeri kaynaklar bu maliyetler içerisinde yer almaktadır. Dolayısıyla bu konuyu ciddiye almak kurumlar açısından önemli ve gereklidir. Etkin bir oryantasyon eğitimi kurumlara birçok fayda sağlamaktadır. Bu faydalar yeni başlayanlar için olumlu bir ilk izlenim oluşturmaları, işle ilgili stresin üstesinden gelmesi, çalışanların aidiyet duygusunu arttırması, yapılacak faaliyetin hem kuruluşla hem de diğer departmanların işlevleriyle ilişkisinin kurulması dolayısıyla daha etkili sonuçlar almaya destek olması, iş tatmininin arttırılması, insan kaynakları temin seçim faaliyetine destek olarak işe alıma olumlu katkısı olması, örgütün misyon, vizyon, politika, prosedür ve ilkelerinin benimsenmesi vb. (Daly, 2015: 121) ve dolayısıyla kurumun verimliliğinin yükseltilmesi olarak sayılabilir. Oryantasyon eğitiminin tanımı, önemi ve kapsamının tanımlanmasından önce eğitim, geliştirme ve yetiştirme kavramlarının incelenmesi konunun genel çerçevesinin çizilmesi bakımından önem ifade etmektedir.

2. EĞİTİM, GELİŞTİRME VE YETİŞTİRME

Eğitim bir çalışanın işini yapabilmesi için ihtiyaç duyduğu bilgi, beceri, yetenek ve davranışların dolayısıyla yetkinliklerin kazandırılma süreci olarak tanımlanabilir (Gürbüz, 2017: 173). Eğitim kurumlar açısından daha önceden belirlenen amaçlara göre, çalışan davranışlarında istendik sonuçlar elde etme sürecidir. Eğitimde amaç, kazandırılan bu yetkinliklerle çalışanların yapacakları işi daha etkin gerçekleştirmesini sağlamaktır. Eğitim hem kurum içinde hem de dışında gerçekleştirilebilecek programlarla ya da kişinin kendi kendine tecrübe etmesi yoluyla tutum ve davranışlarını değiştirdiği bir değişim sürecidir. Bu süreç farklı biçim, kapsam ve zaman boyutlarında oluşabilmektedir. Kurum içinde veya dışında, formal, belli bir derece kazandıran veya kazandırmayan, kurum içinde farklı bölüm ya da birimde çalışmak yoluyla deneyimle kazanılan ya da kendi kendine kazanılan bir biçimde hayat boyu devam etmektedir (Koçel, 2013: 77).

Geliştirme ise gelecek odaklı olup çalışanların gelecekte alabileceği görevlerle ilgilidir. Bu anlamda geliştirme, herhangi bir işte çalışan personelin gelecekte ihtiyacı olacak yetkinliklerin kendisine kazandırılmasıdır. Geliştirme kişisel gelişime odaklanmakta çalışanların gelecekte alacağı sorumlulukları göz önünde tutmaktadır (Gürbüz, 2017: 173). Geliştirme çalışmaları teknik beceri ve yeteneklerin geliştirilmesi, beşeri yeteneğin geliştirilmesi ve kavramsal becerilerin geliştirilmesi olacak biçimde, bir kurum içinde alt, orta veya üst düzey gruplara uygulanabilmektedir. Eğitim, kurumların rekabet gücünü arttırmak için tercih edilen bir insan kaynakları (İK) işlevidir. Eğitim ve geliştirme olmaksızın, çalışanlardan üstün performans beklemek olanaksızdır (Uyargil vd., 2013: 164). Yetiştirme ise belirli kademedeki işleri yapabilmek için gereksinim duyulan bilgi, beceri, yetenek ve davranışların çalışanlara kazandırılmasıdır. Örneğin terfi edecek bir çalışana o pozisyonun gerektirdiği yetkinlikleri aktarmak yetiştirme değildir. İş hayatında karşılaşılan yönetici geliştirme, yönetim geliştirme vb. uygulamalar bu anlamdaki yetiştirme programlarıdır. Eğitim kavramı hem geliştirmeyi hem de yetiştirmeyi kapsadığından daha geniş anlamlıdır (Koçel, 2013: 78).

Eğitim ve geliştirme faaliyetlerinin örgütler için farklı faydaları bulunmaktadır. Bunlardan ilki çalışanların bağlılığının yükselmesi ve motivasyonunun artmasıdır. Özellikle çalışanlara kendilerini geliştirmeleri anlamında fırsatlar tanımak, güncel çalışma ortamı için önemli bir özelliktir. Bu tarz fırsatlar sağlanması çalışanların o kurumu pozitif algılamalarını sağlayacak ve eğitim imkânları arttıkça bağlılıkları da artacaktır (Bartlett, 2001: 335). Bu durum diğer faktörler olan performansın artmasına ve iş gücü devir oranının ve devamsızlığında azalmasını sağlayacaktır (Gürbüz, 2017: 174). Eğitim ve geliştirmenin bir diğer faydası da çalışanların yaptıkları işleri daha etkin ve verimli yapmaları olarak söylenebilir. Eğitim ve geliştirme faaliyetleri doğal olarak çalışanların bilgi ve becerilerini geliştirecek bunun sonucunda da çalışanların performansı yükselecek ve daha verimli olacaklardır (Arthur Jr. vd., 2003: 234). Eğitim ve geliştirme çalışmaları ayrıca bir örgütün amaç ve hedeflerine daha kolay ulaşmasına da destek olmaktadır. Kurumun misyon ve vizyon tanımlarına göre oluşturulan amaç ve hedefler ve stratejiler ve bunlara ulaşılması için hangi eğitim faaliyetlerinin gerçekleştirileceği yapılacak çeşitli analizlerle ortaya çıkmaktadır. Örneğin rekabet stratejilerinden biri olan farklılaşmayı tercih eden bir kurum çalışanlarını yenilikçi ürün ve hizmetler geliştirmeleri noktasında geliştirecek bir eğitim anlayışına uygun eğitim planı yapacaktır.

3. ORYANTASYON EĞİTİMİ

Oryantasyon eğitimi, bir eğitim türüdür. Bu eğitim herhangi bir kurumda işe yeni başlayacak çalışanlar ya da aynı kurum içerisinde farklı bir işi yapacak kişiler için uygulanan bir eğitim faaliyetidir (Uyargil vd., 2013: 197). Oryantasyon, bir kuruma yeni başlayan bireylere tanıtıcı bilgilerin verildiği toplantılar veya etkinlikler olarak tanımlanabilir (Fader, 2010: 96). Bir diğer tanıma göre ise yeni bir çalışanın işine hazırlanması ve onun desteklenmesi sürecidir. Özellikle, çalışanların yapacakları işle ilgili bilgi sahibi olmasını sağlamak oryantasyon eğitiminin amaçlarından biridir. Çalışanlardan bir işin yapılması istenildiğinde, çalışanların o işle ilgili kendilerinden ne beklenildiğini ve ilgili görevleri nasıl yerine getireceklerini tam olarak bildiklerinde daha başarılı olacakları yadsınamaz bir gerçektir (Connors, 2012: 227). Bu anlamda işyeri hazırlığı, ilk eğitim, mentorluk ve yeni kişinin kuruluşa daha başarılı bir şekilde geçiş yapması, pozisyonun ve kurumun uzun vadeli olumlu bir şekilde takdir edilmesi olasılığının artırması için ihtiyaç duyduğu diğer her türlü maddi ve manevi desteği içermektedir (Berman vd., 2021: 817). Oryantasyonun farklı bir tanımı ise bir duruma veya çevreye aşina olma ve ona uyum sağlamaktır (Cascio, 2010: 344). Sonuçta oryantasyon işe yeni başlayan çalışanların kuruma ve gerçekleştirecekleri işe alıştırılması için yapılan faaliyetlerin tümüdür. Burada ana hedef yeni başlayanlarla kurum arasında norm ve değerler anlamında bir birlik oluşturmak ve sosyalizasyonu sağlamaktır (Gürbüz, 2017: 173).

Sosyalizasyon kavramı oryantasyon kavramı ile yakından alakalıdır. Sonuçta her iki kavram da çalışanların yaptıkları işe ve kuruma uyum sağlaması gerektiğini vurgulamaktadır. Ancak sosyalizasyon daha uzun süreli ve geniş kapsamlıdır. Özellikle örgüt kültürüne uyum sağlamak açısından diğer yönetici ve meslektaşların yeni çalışanlara aktarımlarını içermektedir. Bu süreç, çalışanların yeni bir kuruma başladıklarında taşıdığı çeşitli endişelerin giderilmesi için önem ifade etmektedir. Kurumlar yeni çalışanlarının bu endişelerini gidermek için oryantasyon eğitimleri düzenlemektedir. Bu bağlamda oryantasyon eğitimleri çalışanların yaşaması olası şokları da azaltması bakımından faydalı olmaktadır. Etkin uygulanan bir oryantasyon eğitimi kurumun rekabet gücüne de katkı sağlayıp karlılığını da arttıracaktır (Gürbüz, 2017: 177).

Sivil toplum kuruluşları (STK) doğaları gereği bünyelerinde nicelik olarak azımsanamayacak oranda gönüllü iş gücü barındırmaktadır. Bir gönüllülük faaliyetine yeni başlayan gönüllüler yeterli ve ilgili yönlendirme almadıklarında o kurumdaki faaliyetlerinden kısa sürede memnuniyetsiz olabilmekte ve gönüllülük deneyimini bırakabilmektedir. Bu bağlamda oryantasyon eğitiminde STK'lar, bir yandan kurum kültürleri ve operasyonel uygulamalar hakkında ayrıntıları paylaşırken öte yandan da gönüllülerin o kurumda hoş karşılandıklarını da kendilerine hissettirmenin bir başlangıcı olarak oryantasyon eğitimlerini kullanmaktadır. Oryantasyon sürecinin etkin sürdürülmesi gönüllülerin kurum içerisindeki diğer süreçleri de daha rahat geçirmesini sağlayacaktır (Güngör ve Çölgeçen, 2013: 176). Ayrıca bu eğitim, gönüllüler ile kuruluş arasında geliştirilecek ilişkiyi netleştirme noktasında da adımlar atıldığı bir ortamdır. Amaç, çalışanların yeni işlerinde karşılaşacakları zorluklara karşı bireysel olarak işe hazır olma durumunu arttırmaktır (Daly, 2015: 120). Oryantasyon gönüllüler için ileride uygulanabilecek eğitim ihtiyaçlarının da belirlenmesine destek olacak bir faaliyettir. Oryantasyon, gönüllülerin gözlem sürecinin de başlangıcıdır. Gönüllüler bu süreçte kurumu anlamaya odaklanır. Ayrıca, uygun oryantasyon eğitimi de risk yönetiminde önemli bir adımdır. Bir anlamda oryantasyon kişinin örgüt içerisindeki yönünü öğrenme sürecidir. Uygun yere ve faaliyete yönlendirilmeyen bir kişi, basitçe söylemek gerekirse kurumlar için bir kayıptır. Kurumlar, gönüllüleri etkin bir biçimde yönlendirerek yeni gönüllülerin olumlu bir gönüllülük deneyimi yaşamasına destek olmalıdır. Bu da kurum hakkında oluşacak ilk izlenimin olumlu olması yönünde önemli bir aşamadır. Ayrıca bu süreç, gönüllülerin diğer kurum çalışanları ve yöneticileri ile etkileşim kurması ve ileride daha farklı görevlere yönlendirilmesi için bir fırsat olacaktır (Güngör ve Çölgeçen, 2013: 177).

3.1. Oryantasyon Eğitiminin Önemi

Oryantasyon hakkında değerlendirmeler yapılırken bu eğitimin işe alım sürecinin neresinde olduğu da sorulan sorular arasındadır. Bazı kuruluşlarda gönüllülerin bulunması ve işe yerleştirilmesi süreci gönüllülerin oryantasyonu tamamlanana kadar sonuçlanmamaktadır. Bu durumda oryantasyon süreci, özellikle insan kaynakları departmanının potansiyel gönüllüleri değerlendirme fırsatını da içermektedir. Gönüllülerin zamanında işe/faaliyete gelip gelmediği, iletişim becerilerinin çeşitli görevler için uygun olup olmadığı ve uygun yetkinliklere sahip olup olmadığı gibi durumlar da oryantasyon süreci içerisinde değerlendirilebilmektedir. Bu da bir bireyin bir kuruluşa veya ilgili departmana ne kadar uyumlu olduğunun karar verilmesi anlamında fayda sağlamaktadır.

Bazı kuruluşlarda ise gönüllülerin başvuru ve tarama süreçleri tamamlanana ve gönüllünün çalışması için bir birime veya departmana yerleştirilene kadar oryantasyon planlanmaz. Bu durum, farklı bölümler veya birimler

için çok özel bilgilerin olduğu kuruluşlar için geçerli olabilir. Bu da gönüllünün görevini tam olarak nerede yapacağını anlayarak programa girmesi ve oryantasyon deneyimini çalışanların ihtiyaçlarına daha iyi uyum sağlayacak biçimde uyarlanması noktasında bir avantaj yaratmaktadır (Connors, 2012: 228). Potansiyel gönüllüler ise enformel olarak kuruluşun paydaşlarıyla etkileşim kurarak kurum kültürü hakkında bilgi edinir, kurumun üyelerini nasıl desteklediğini görür ve personelin kurumdan ne derece memnun olduklarına dair genel bir fikir edinir. Formel oryantasyon deneyimleri, potansiyel gönüllülere temel operasyonel kültür ve uygulamalarının yanı sıra kuruluşun tarihi, amacı, misyonu ve finansmanı hakkında temel bilgiler sağlamaktadır.

Oryantasyon eğitiminin öncelikli önemi kurumun misyon, vizyon ve politikaları hakkında bilgi paylaşmaktır. Oryantasyon programları, gönüllülerin görevlerinin bütüncül bir biçimde kurumsal amaç ve hedeflere nasıl katkıda bulunduğunu anlamalarına destek olup, verilen işi başarma kapasitelerini de geliştirerek daha rahat ve kendinden emin hissetmelerine destek olmaktadır. Oryantasyon ayrıca yapılacak iş için gönüllüleri motive etmek adına bir fırsattır. Gönüllülerin ilgili STK'da gönüllü çalışmak için doğru kararı verdiklerini teyit etmelerine de destek olmaktadır. Bunlara ek olarak oryantasyon eğitimi hem gönüllüler hem de çalışanların ileride yaşayacakları problemleri azaltarak kurumsal etkinliği de attırmaktadır ve örgüte bağlılığı da olumlu yönde etkilemektedir (Connors, 2012: 229). Yapılan bazı araştırmalarda, İK planlaması ve oryantasyon eğitimi çalışmalarının gönüllüleri elde tutmaya olumlu etkisi olduğu, kurumda formal görevde olan gönüllülerin kurumla daha az sorun yaşadığı ve özellikle STK'ların yönetim kurulunda bulunan gönüllülerin elde tutulması açısından önem ifade ettiği bulunmuştur (Newton vd., 2014: 515). Ayrıca oryantasyon eğitimi, çalışanların örgüt kültürüne uyumunu arttırarak kurum ve çalışan arasında oluşacak ilişkiyi de güçlendirmektedir (Parsehyan, 2017: 141). Yapılan bazı araştırmalarda oryantasyonu önemseyen kurumların çalışanları tarafından daha güvenilir olduğu tespit edilmiştir. Araştırmaya göre demografik faktörlere göre bir farklılık bulunmaksızın hemen hemen tüm katılımcılar kuruma güvenmek için 'Dürüst ve Hakkaniyeti İşleyişe Sahip', 'Huzurlu ve Adil bir Ortama Sahip', 'Bağlılık Yaratan', 'Objektif Performans Değerlendirmesi Yapan' ve 'İşe Alım ve Oryantasyonu Önemseyen' öncellerini ilk sıralarda gerekli görmektedirler (İslamoğlu vd., 2007: 124). Verilere bakıldığında oryantasyon eğitiminin yadsınamaz bir önemde olduğunun katılımcılar tarafından da belirtildiği görülmektedir.

Türkiye'de yapılan bir araştırmada, Türkiye'deki sivil toplum kuruluşlarının oryantasyon eğitimi uygulama oranının %83 olduğu tespit edilmiştir. Bazı STK'lar gönüllere özel bir program uygularken diğerleri de iş başı eğitimine benzer programlarla bu ihtiyacı çözmeye çalışmaktadır. Bazı STK'ların, gönüllülere bir ay gibi bir zaman zarfında ofis çalışmalarında görev vermeyi oryantasyon olarak algıladıkları görülmektedir (UNV ve GSM, 2013: 30). Ancak oryantasyon eğitimi gerçekleştirmeyen bazı STK'ların olduğu, sadece yüzeysel bir bilgilendirmeyle gönüllüleri işlerine yönlendirdikleri de tespit edilmiştir. Bu STK'ların karşılıklı yapılan bir taahhütname ile görev ve sorumlulukları ilgili gönüllülere aktarıldığı görülmüştür. Bu durum ise özellikle küçük ölçekli STK'ların oryantasyon eğitimi ile ilgili kendilerini geliştirmeleri gerektiğini göstermektedir (TÜSEV, 2012: 5). Ayrıca Universitas Sosyal Araştırmalar Merkezi'nin yaptığı araştırmaya göre (2020) gönüllülerin iş tanımlarının net olmaması ve oryantasyon süreçlerinin gerçekleştirilmemesi ve sigorta konusu Türkiye'de STK'larda iyileştirmeye dönük ihtiyaçlar arasında gösterilmiştir. Oryantasyon eğitimi gerçekleştirmeyen kurumlar yeni gönüllülerin ortam içerisinde gözlem yaparak ya da sorular sorarak kuruma adapte olmasını beklemektedir. Burada inisiyatifi gönüllülere bırakmak bir dizi riski de beraberinde getirmektedir. Bunlardan birisi gönüllülerin kendilerinden ne beklenildiğini tam olarak kavrayamaması ve kurumu tam olarak benimseyememesidir. Diğer bir risk ise gönüllülerin performanslarını istenen düzeyde gerçekleştirememesidir. Faaliyete yeni başlayanların soru sormak vb. anlamda çekingen olduğu değerlendirildiğinde, bilgiyi net olarak alamayan gönüllülerin ileride yapacakları hatalar çeşitli maliyetleri de beraberinde getirecektir. Ayrıca yeni başlayanları sadece eski bir çalışanın koçluğuna bırakmak gönüllünün bakış açısını daraltması bakımından, sadece kurumla ilgili video gösterimi yapmak da sosyalizasyonu azaltması bakımından yeterli değildir (Messmer, 2007: 145).

3.2. Oryantasyon Eğitiminde Süre ve Ele Alınması Gereken Konular

Oryantasyon eğitimi bir kurumda tüm düzeylerde uygulanabilmekte, bazen her yeni başlayanı aynı sürede ya da çalışacak yere göre farklı sürelerde ve farklı biçimlerde uygulanabilmektedir (Uyargil vd., 2013: 197). Oryantasyon eğitimleri kurumun büyüklüğüne ve işin karmaşıklığına bağlı olarak, bir gün, birkaç gün, bir hafta hatta birkaç aya kadar sürebilmektedir. Genel olarak, bir işin kabulü ile gerçek başlangıç tarihi arasında bir süre geçecektir. Bazı kurumlar bu süreyi oryantasyon sürecini başlatmak için kullanmaktadır (Cascio, 2010: 314).

Oryantasyon eğitiminde ele alınması gereken konuların başında doğal olarak gönüllülerin eğitim ihtiyacının giderilmesine yönelik çalışmalar yer almaktadır. Eğitim, planlanmış önemli konular, mentorluk programları ve çalışanların kurum veya departman hakkında soru sorabilecekleri etkileşimli toplantılarla ilgili konuları

kapsamaktadır (Messmer, 2007: 144). Örneğin, İstanbul'da kültür ve sanat alanında faaliyetler yürüten bir STK olan İstanbul Kültür ve Sanat Vakfı bünyesinde düzenlediği oryantasyon programlarını saha personeline yönelik ve kadrolu personele yönelik olmak üzere iki farklı bölümde yönetmektedir. İki gün süren etkinlikte görev tanımları gözden geçirilmekte ve katılımcılara vakfın genel yapısı ve birlikte çalışacakları yöneticiler tanıtılmaktadır. Ayrıca insan kaynakları departmanı tarafından işin nasıl yürütüldüğü konusunda saha personeline de eğitim verilmektedir. Öte yandan, kadrolu personele oryantasyon sürecinde kurum ve kendi departmanları ile ilgili detaylar tanıtılmaktadır. Meslektaşlarıyla tanıştıktan sonra resmi olarak göreve başlamakta ve ilk hafta İKSV'de her departman yöneticisiyle ikişer saat çalışmaktadır (Parsehyan, 2017: 147). Süreç öncelikle adayları seçerken başlamakta ve bu da oryantasyon sürecini olumlu etkilemektedir. Oryantasyon programları ile işe yeni başlayan çalışanlara, kurumun fiziki ortamı ve faaliyetleri tanıtılmakta, görev ve sorumlulukları aktarılmaktadır (Parsehyan, 2017: 142). TEMA Vakfı ise il temsilcileri ve ilçe sorumlularını gönüllülük sürecine başlamadan önce bir oryantasyon eğitime almaktadır. Gönüllü oryantasyonu, gönüllüye verilecek görevler dışında yeni gönüllülerin ihtiyacı olacak ve onlara kurum hakkında genel bilgilerin verildiği, kurumun ilkeleri, prosedürleri, gönüllülerin hakları ve sorumlulukları hakkında çeşitli konuları kapsamaktadır (UNV, GSM, 2013: 88).

Oryantasyon eğitiminde yapılacak sınıf eğitimine ek olarak kurumun ilgili departmanları ziyaret edilerek örgütsel yapının daha sağlıklı anlaşılması da bir yöntem olarak kullanılabilir. Günümüzde internet üzerinden veya uzaktan oryantasyon eğitimleri de gerçekleştirilmektedir. Kitlelere hızlı ulaşması ve maliyeti düşük olması bakımında avantajlı olan bu yöntemin dezavantajının ise özellikle STK'lar gibi sosyal yönelimi daha fazla olan kurumlarda, yeni gelenlerin geri bildirim alma ve diğerlerinden bilgi edinme, ilişkiler kurma ve sosyalleşme özelliklerini zayıflatması olduğu ifade edilebilir.

Yapılacak faaliyetlerin aslında üç farklı noktaya ulaşması gerekmektedir. Bunlardan birincisi amaç yönelimi ki bu da gönüllülerin kuruluşun misyonunu, vizyonunu ve amacını anlamasında onlara destek olunması anlamına gelmektedir. Oryantasyonun bu aşamasında yer alan bilgiler, kuruluşun geçmişini, hizmet verilen hedef kitleyi veya kurumun sunduğu çalışmalar hakkındaki bilgileri ve başarılı bir şekilde hizmet vermeye devam etmesi için gerekli olan gelecek planlarını içermelidir. Amaç yönelimi uygulamaları gönüllülerin duygusal bağlılığını artıracak faktörlerden biridir. Bir diğer konu sistem oryantasyonu olarak ifade edilebilecek gönüllünün kuruluşla çalışırken başarılı olması için ihtiyaç duyacağı yönetim veya prosedür bilgisidir. Bu bölüm sarf malzemelerinin nerede saklandığından telefonların nasıl yanıtlanacağına kadar her şeyi içermektedir. Görev tanımlarının gözden geçirilmesi, evrakların nasıl kayıt altına alınacağı, risk yönetimi, kurum politika ve standartları hakkında gerekli bilgilerin verilmesi de bu bölümde yer alır. Son olarak ele alınması gereken konu ise sosyal yönelim olarak ifade edilebilecek, gönüllülerin örgüt kültürünü benimsemesini sağlayacak çalışmalardır. Bunlar içerisinde kurumda yönetici pozisyonunda olanların kim olduğunu öğrenmek ve diğer gönüllülerle ve çalışanlarla tanışmayı da içeren tüm sosyalizasyon faaliyetleri yer almaktadır. Bunlara ek olarak kurumun örgüt kültürünü yansıtan giyim kodunu da içine alan, kuruma özgü gelenek, görenek ve anlayış biçimleri de sosyal yönelimi açıklamaktadır (Connors, 2012: 231). Kurumdan kuruma farklılık göstermekle birlikte aşağıdaki tabloda tipik bir oryantasyon eğitiminde olması gereken konular ve yapılması gerekenler yer almaktadır (Tablo 1).

Tablo 1: Oryantasyon Eğitiminde Bulunması Gereken Konular

Konu	Yapılması Gerekenler
Açılış Konuşmaları	<i>İlgili eğitmen ve/veya departman yöneticisi tarafından oryantasyon eğitimi açılışı yapılır</i>
Giriş / Ice Breaker (Ortamı yumuşatma)	Katılımcıları arasında etkileşimi sağlamak için tasarlanmış kaynaştırma aktiviteleri katılımcıların yaşına uygun etkinlikler yapılır
Kurumun Vizyon ve Misyonu	Kurumun vizyon ve misyon politikaları bölüm ve birim bazında paylaşılır
Kurumun Amacı	Kuruluşun amacı ve gönüllülerin kuruluşun stratejik amaçlarına/hedeflerine nasıl uyum sağlayacağı belirtilir
Kurumun Tarihçesi	Gönüllülere kuruluş tarihi hakkında kısa ancak kapsamlı bilgi verilir
Müşteriler	Gönüllülere kurumun müşterileri (hizmet verilen kitle) hakkında bilgi verilir

Organizasyon Şeması	Kurumun yöneticilerinin de ismi olan bir organizasyon şeması verilir
Zaman Çizelgeleri ve Takvim	Gönüllülerle etkinliklerin güncel zaman çizelgeleri ve takvimleri paylaşılır
Prosedürler, Politikalar, Yönergeler, Kurallar	Politikaların, prosedürlerin, yönergelerin ve kuralların basılı bir kopyası verilip gerektiğinde nasıl ulaşılabileceği bilgisi paylaşılır
El Kitabı	Formları, prosedürleri, politikaları vb. özetleyen bir el kitabının veya kılavuzun basılı veya dijital kopyasına nasıl erişilebileceği iletilir
Kurumun Fiziksel Olarak Gezilmesi	İşe yeni başlayanlarla kurumun gezilmesi sağlanır
Diğer Eğitimler	Diğer eğitimler için plan yapılır
Sorular ve Yanıtlar	Eğitime katılanların soruları yanıtlanır daha sonra ulaşabilecekleri iletişim bilgileri verilir
İkramlar ve Sosyal Network	Oryantasyon eğitimi boyunca sunulacak yiyecekler sıcak bir ortamın oluşması katılımcıların kaynaşmasına destek olur

Kaynak: Connors (2012: 230).

3.3. Oryantasyon Eğitiminde İnsan Kaynakları Departmanı ve Diğer Yöneticilerin Rolü

İnsan kaynakları departmanının oryantasyonla ilgili bazı temel sorumlulukları bulunmaktadır. Eğitimin tasarlanması, uygulanması, organize edilmesi, katılımcıların davet edilmesi bunlardan bazılarıdır. Eğitimler boyunca kolaylaştırıcı rolü üstlenmek ayrıca İK'nın bir diğer görevidir. Oryantasyon eğitiminde öncelikle insan kaynakları departmanı olmak üzere, kurumun büyüklüğüne göre varsa eğitim müdürlüğü ve diğer yöneticiler de etkin rol oynamaktadır. Diğer yöneticilerin özellikle tepe yönetimin oryantasyon eğitimine desteği önem ifade etmektedir. Bu destek eğitimin tasarımından başlamak üzere, eğitime katılma vb. biçimlerde olabilmektedir. Diğer yöneticilerin kuruma yeni başlayan gönüllülerden ne beklediklerini onlar faaliyetlerine başlamadan önce bu eğitimlerde ifade etmeleri ve eğitimlerin etkinliğinden emin olmaları ileride yaşanabilecek sorunların önüne geçilmesi açısından da önemlidir (Lawson, 2015: 5). Burada insan kaynaklarının özellikle yeni yöneticilere tavsiye, rehberlik ve koordinasyon görevi de bulunmaktadır. Bu noktada İK, hem yeni gönüllüler, hem yöneticiler hem de kurum için etkin rol oynayarak katma değer yaratmaktadır. Yeni gönüllüleri işe alma konusunda oluşturulan politikalar ve prosedürleri, yöneticilere aktarmak, çalışanların ve gönüllülerin birbirleriyle nasıl etkileşime gireceğini belirlemek de İK'nın görevleri arasındadır. Yöneticilerin politika ve prosedürlere bağlı kalmalarının önemini anlamalarını sağlamak da İK'nın bir diğer görevidir. Ayrıca, yeni gönüllülerin ilk günlerinde herhangi bir endişesini gidermek veya sorusunu yanıtlamak da İK için önem ifade etmektedir (Messmer, 2007: 145). Ayrıca eğitimden sonra ki süreçte İK, faaliyete yeni başlayan gönüllülerle görüşerek işle ilgili herhangi bir desteğe ihtiyaçları olup olmadığı noktasında geri bildirim olarak sürecin etkinliğini arttırabilir.

Bazı kurumlarda özellikle küçük ve orta ölçekli kurumlarda İK departmanı bulunmamaktadır. Dolayısıyla insan kaynakları yönetimi işlevlerine yönelik uygulamalar ya direk tepe yönetim tarafından ya da kurumun görevlendireceği diğer yöneticiler tarafından gerçekleştirilmektedir. Bu bağlamda oryantasyon eğitiminin etkinliği ile ilgili ortaya çıkabilecek sorunlar önceden planlanıp gerekli önlemler alınmalıdır. Gerekirse konu ile ilgili uzmanlardan ya da danışmanlık firmalarından destek almak sürecin etkin yönetilmesini sağlayacaktır.

3.4. Oryantasyon Eğitiminin Değerlendirilmesi

Oryantasyon eğitiminin değerlendirilmesi, yapılan eğitimle ulaşılmak istenen sonuçlara ulaşıp ulaşılmadığının ölçülmesi anlamına gelmektedir. Değerlendirmenin amacı çalışanların eğitim öncesi ve sonrası performanslarının karşılaştırılarak, ulaşılan performans seviyesinin tespit edilmesi ve eğitim sonuçlarının belirlenmesidir. Bu bağlamda dört temel sorunun yanıtlanması gerekmektedir; Eğitim sonucunda çalışanların bilgi, beceri ve yeteneklerinde bir değişim oldu mu? Eğer olmuşsa bu, eğitimle ilgili midir? Bu değişimin kurum amaçlarına pozitif bir etkisi var mıdır? Bu programı diğer gönüllülere de uygulasak aynı değişim gerçekleşir mi? (Uyargil vd., 2013: 190). Değerlendirme yapılırken neyin değerlendirileceğini açığa çıkarmak önem ifade etmektedir. Aynı zamanda değerlendirmeyi yapan STK'nın kendi sektörünü ve değerlendirme amacını da iyi belirlemesi gerekmektedir. Bunun için gerekli bilgiler toplanmalı ve gruplandırılmalıdır (Tüzüner, 2011: 236).

Eğitimin değerlendirilmesi için farklı yöntemler kullanılabilmektedir. Eğitim değerlendirme ile ilgili literatürde genel olarak kabul edilen çalışmalardan birisi Kirkpatrick'in dört düzey çalışmasıdır (Kirkpatrick ve Kirkpatrick, 2006: 21). Bunlar tepki, öğrenme, davranış ve sonuç düzeyleri olarak belirtilebilir. Tepki düzeyinde eğitime katılanların oryantasyon eğitimine verdikleri tepki yani eğitimden memnuniyeti ölçülmeye çalışılır. Eğitime katılanların ilgisi ve isteği zayıfsa eğitimden sağlayacakları fayda azalacak ve eğitim sorgulanacaktır. Eğitimin başarıya ulaşmaması çeşitli maliyetleri de beraberinde getirecektir. Eğitim sonucunda pozitif bir tepki alınması gereklidir. Bu düzey kullanım kolaylığı sebebiyle en çok tercih edilen düzeydir. Fakat geçerlilik konusunda zayıftır (Gürbüz, 2017: 191). İkincisi öğrenme düzeyidir. Öğrenme, katılımcıların programa katılmanın bir sonucu olarak tutumlarını değiştirme, bilgiyi geliştirme ve/veya beceriyi artırma derecesi olarak tanımlanabilir. Çalışanlarda çeşitlilik/farklılık gibi konuları ele alan programlar, öncelikle tutumları değiştirmeyi amaçlamaktadır. Teknik programlar becerileri geliştirmeyi amaçlar. Liderlik, motivasyon ve iletişim gibi konulardaki programların bilgi, tutum ve becerileri geliştirmesi beklenir. Öğrenmeyi değerlendirmek için belirli hedefler belirlenmelidir. Üçüncü düzey davranış düzeyidir. Davranış, katılımcının eğitim programına katılması nedeniyle davranışlarında meydana gelen değişikliğin derecesi olarak tanımlanabilir (Kirkpatrick ve Kirkpatrick, 2006: 22). Burada, eğitim programına katılanlarda ne gibi davranış değişikliği olduğuna bakılır. Dördüncü düzey ise sonuç kriteridir. Sonuçlar, katılımcıların programa katılmaları nedeniyle ortaya çıkan nihai sonuçlar olarak tanımlanabilir. Nihai sonuçlar arasında artan üretim, iyileştirilmiş kalite, düşen maliyetler, azalan iş kazaları, düşen iş gücü devir oranı, artan satışlar, artan ciro veya daha yüksek karlar yer alabilir. Bazı eğitim programlarının gerçekleştirilmesinin nedeninin bu sonuçlar olduğunu kabul etmek önemlidir. Bu nedenle, programın nihai hedeflerinin bu terimlerle belirtilmesi gerekmektedir.

Oryantasyon programının başarısı için kurumların hedeflerine ulaşip ulaşmadığının ve gelecekteki iyileştirmelerin belirlenmesi için programın yılda en az bir kez gözden geçirilmesi gerekmektedir. Bu kapsamda programa dâhil olan herkesten samimi ve kapsamlı bir geri bildirim alınması gereklidir. Bu tür bir geri bildirimi sağlamanın birkaç yolu vardır. Çalışanlarla ve yöneticilerle kurumdaki ilk yıllarından sonra yuvarlak masa toplantıları yoluyla görüşmeler ve tüm yeni işe alımları toplu olarak kapsayan anketler yapmak bunlardan bir kaçısı olarak sayılabilir (Cascio, 2010: 317).

4. SONUÇ

Eğitim kişinin yaşamı boyunca devam eden bir süreçtir. Hem çalışanların hem de gönüllülerin örgütün amaç ve hedefleri doğrultusunda işe yönelik davranışlarını değiştirme anlamına gelmektedir. Davranış değişikliğinden beklenen ise işlerin daha verimli bir biçimde yerine getirilmesidir. Geliştirme ise geleceğe yönelik olarak yapılan eğitim faaliyetleridir. Bir kurum içerisinde tüm düzeylerde uygulanabilecek onları geleceğe hazırlamak için yapılan çalışmalardır. Eğitim ve geliştirme çalışmaları ile hem kurumun rekabet gücü hem de çalışanların bağlılığı ve motivasyonu artacaktır. Oryantasyon eğitimi sivil toplum kuruluşlarının işe yeni başlayan çalışanları ve gönüllüleri için uyguladıkları öncelikle işle ilgili bilgi eksikliğinin giderildiği, onlara çeşitli becerilerin kazandırıldığı, işe ve kuruma ilk hazırlıkların yapıldığı bir eğitimidir. Kurum tarafından verilen çeşitli maddi ya da manevi tüm desteklerin yanında örgüt kültürüne uyumun ve sosyalizasyonun sağlanması da eğitimin amaçlarından biridir. STK'lar kar amacı gütmeyen kuruluşlar olduğundan çalışmalarının büyük bir bölümünü gönüllülerin desteğiyle gerçekleştirmektedir. Oryantasyon eğitimleri gönüllülerin kurumla bir yandan pozitif bir bağ kurmasını sağlayacak diğer yandan onları faaliyetlere daha fazla motive ettiği için iş gücü devir oranını da düşürecektir. Gönüllüler eğitimle kurumu daha iyi tanıyacağından kendilerine daha uygun faaliyetleri seçebilecekler ve daha verimli olabileceklerdir. Oryantasyonla aynı zamanda eğitim ihtiyacının da belirlenmesi sağlanacaktır. Oryantasyon süreci gönüllülerin bulunması, işe yerleştirilmesi arasında geçen tüm süreçleri kapsamaktadır. Bu süreçte hem gönüllüler hem de kurum karşılıklı bir değerlendirme yaparak iş ilişkisinin devam edip etmeyeceğine karar vermektedir. Eğitimin temel amacı kurumun misyon, vizyon ve politikaları hakkında bilgi vermektir. Oryantasyon eğitimi ayrıca gönüllülerin kurumu benimsemesini sağlayarak onların elde tutulmasına da destek olacaktır. Gönüllüler kendilerine değer verildiğini düşündüklerinden dolayı karşılıklı bir güven ortamı da oluşacaktır. Türkiye'de STK'ların genel olarak oryantasyon eğitimi uyguladığı ancak hem yöntem olarak hem de anlayış olarak bu uygulamanın geliştirilmesi gerektiği görülmektedir. Oryantasyon eğitiminin süresi çeşitli durumlara göre değişebilmektedir. Genel olarak bir ya da iki gün olarak uygulanmaktadır. Ancak bazı kuruluşların daha uzun süreli uygulamalar yaptığı da görülmektedir. Saha ziyaretlerinin de yapıldığı bazı uygulamalar da bulunmaktadır. Eğitimde kurumun vizyon, misyon ve amaçları, politika ve prosedürler, organizasyon şeması ve yapılacak işe yönelik bilgiler aktarılmaktadır. Bu sürecin etkin yürütülmesi için hem İK departmanı hem de diğer yöneticilere çeşitli görevler düşmektedir. Özellikle tepe yönetimin desteği önemlidir. İK'nın temel olarak eğitim tasarımının yapılması, uygulanması, organize edilmesi,

katılımcıların davet edilmesi ve diğer yöneticilere rehberlik görevleri bulunmaktadır. Diğer yöneticiler ise kendi departmanlarını ilgilendiren konularda eğitimlere katılarak ya da bizzat eğitim vererek sürece destek olmalıdır. Her kurumda İK departmanı olmadığı göz önüne alındığında bu görevler tepe yönetime ve diğer yöneticilere düşmektedir. Son olarak verilen eğitimin ölçülmesi ve arzu edilen sonuca ulaşım ulaşıldığının belirlenmesi gerekmektedir. Bu bağlamda öncelikle katılımcıların eğitimden memnun olup olmadığı verilen tepkiye göre ölçülmeli eksikler varsa tamamlanmalıdır. Öğrenme boyutunda bilgi eksiklerinin giderildiği, yeni becerilerin kazanılıp kazanılmadığı ve bunların davranışlarına aktarılıp aktarılmadığı ölçülmeye çalışılır. Oryantasyon eğitiminin uzun vadede örgütün başarısına nasıl katkı yaptığı konusunun da zaman içerisinde ölçülmesi gerekmektedir. Oryantasyon eğitiminin STK'larda sistematik bir biçimde uygulanmasının kurumun başarısında etkisi olduğu gerçeği her zaman göz önünde tutulmalıdır. Bu durum her ne kadar zor olsa da oryantasyon eğitiminin etkilediği tüm paydaşlardan geri bildirim alınarak süreç daha da etkin hale getirilmelidir.

Özet: Milli gelir dağılımının adaletsiz olması dünya genelinde olduğu gibi Türkiye’de de önemli ekonomik sorunlar arasında yer almaktadır. Ülkelerin beklenen hayat standartlarını yakalama isteğini gerçekleştirebilmesi için öncelikle elde edilen gelirin toplum içerisinde adaletli bir şekilde paylaşımının sağlanması gerekmektedir. Gelir dağılımı ve refah düzeyi göstergeleri bu paylaşımın ne kadar adaletli olduğunu ortaya koyan göstergelerdir.

Ülke içerisinde milli gelirin dağılımı hanehalkının tasarruflarına ve özellikle harcamalarına doğrudan etki edebilmektedir. Bu harcamalar içerisinde tüketiciler tarafından satın alınan mal ve hizmetler yer almaktadır. Hanehalkının harcamaları içerisinde yer alan tüketim malları ve hizmet fiyatlarının zaman içerisindeki değişimi de önemli bir konudur. Bu değişim içerisinde fiyatlar genel düzeyinin sürekli bir artış içerisinde olması ise enflasyonun oluşmasına zemin hazırlamaktadır. Bu kapsamda milli gelirin toplum içerisinde adil bir şekilde dağılmasının yanında düşük oranlı enflasyonun geçerli olabileceği bir ekonomi politikasının benimsenmesi de oldukça önemlidir. Bu durum ekonomide istikrarın sağlanabilmesi ve bu istikrarın sürdürülebilmesine temel oluşturabilecektir.

Ekonomik yapı içerisinde meydana gelen gelişmelerde enflasyonun ve gelir dağılımının adaletli olmasının rolü oldukça büyüktür. Bu kapsamda enflasyonun göstergelerinden biri olan Tüketici Fiyat Endeksi (TÜFE) ve kişi başına düşen Gayri Safi Yurt İçi Hasıla (GSYİH)’nın incelenmesi önem arz etmektedir. GSYİH verileri Dünya Bankası’ndan alınmıştır. Mal ve hizmetlere ilişkin fiyatlar genel düzeyinde zaman içinde meydana gelen değişimi ölçen TÜFE ise Türkiye Cumhuriyeti Merkez Bankası (TCMB) bünyesinde olan Elektronik Veri Dağıtım Sistemi (EVDS)’nden elde edilmiştir. Çalışmada enflasyonun gelir dağılımı üzerindeki etkisinin araştırılması için EVIEWS istatistik paket programı ile regresyon analizi yapılarak bir regresyon modeli oluşturulmuştur. Oluşturulan model için katsayı tahminleri yapılmıştır. Bu çalışmada, güvenilir tahminler verdiğinden dolayı katsayılar En Küçük Kareler Yöntemi (EKK) ile tahmin edilmektedir.

Anahtar Kelimeler: hanehalkı, gelir, gelir eşitsizliği, enflasyon

An Investigation On The Effect Of Inflation On Income Inequality In Turkey

Abstract: The unequal distribution of national income is among the important economic problems in Turkey as well as in the rest of the world. In order for countries to realize their desire to achieve the expected life standards, it is necessary to ensure that the income obtained is shared in a fair way within the society. Income distribution and welfare level indicators are indicators that reveal how fair this distribution is.

The distribution of national income within the country can directly affect the savings and especially the expenditures of the households. These expenditures include goods and services purchased by consumers. The change in the prices of consumption goods and services, which are included in household expenditures, over time is also an important issue. The fact that the general level of prices is constantly increasing within this change paves the way for the formation of inflation. In this context, it is very important to adopt an economic policy in which low inflation can be valid, as well as a fair distribution of national income within the society. This situation will be the basis for ensuring and maintaining stability in the economy.

Inflation and the fairness of income distribution play a significant role in the developments in the economic structure. In this context, it is important to examine the Consumer Price Index (CPI), which is one of the indicators of inflation, and the Gross Domestic Product (GDP) per capita. GDP data were obtained from the World Bank. The CPI, which measures the change in the general level of prices for goods and services over time, was obtained from the Electronic Data Distribution System (EVDS) within the body of the Central Bank of the Republic of Turkey (CBRT). In the study, a regression model was created by performing regression analysis with the EVIEWS statistical package program to investigate the effect of inflation

on income distribution. Parameter estimations were made for the created model. In this study, the parameters are estimated by the Least Squares Method (Least Squares) since it gives reliable estimates.

Key Words: household, income, income inequality, inflation

1. GİRİŞ

İçinde bulunulan çağın ekonomik olarak belirleyici sorunlarından biri gelir eşitsizliğidir. Bu durum birçok ülke için sorun teşkil etmektedir. Eşitlik bir ülke içerisinde yaşayan toplumlar ve hanehalkları için adalet kadar önemli bir kavramdır. Eşitsizliğin gün geçtikçe artış göstermesi ekonomik istikrar ve büyüme üzerinde önemli derecede olumsuz bir etki oluşturabilmektedir. Küresel çapta ekonomik krizlerin yaşanması enflasyon ve artan gelir adaletsizliği sorunlarına olan dikkati artırmıştır. Yaşanan küresel ekonomik krizler toplumun daha düşük gelirle yaşamını sürdürmeye çalışan kesimlerine sağlanan finansal araçların sorgulanmasına neden olmuştur. Özellikle gelişmekte olan ülkeler gelişmiş ülkelerin büyüme trendini yakalamaya çalışmaktadır. Bu çerçevede gelir dağılımının adaletli ve enflasyonun düşük seviyelerde istikrarlı olması ülkelerin en önemli hedefleri haline gelmiştir.

Gelir eşitsizliği ile mücadele gelişmiş bir finansal sistemin önemli bir aracı olarak görülmektedir. Bu eşitsizliği etkileyen makroekonomik faktörlerin belirlenmesi ve buna uygun bir gelir dağılımı politikası oluşturulması araştırma yapılan konular arasında yer almaktadır. Gelir eşitsizliğini etkileyen faktörlerden birisi de enflasyondur. Enflasyon genel anlamda mal ve hizmet fiyatlarının artış göstermesi olarak ifade edilmektedir. Mal ve hizmet fiyatları zaman içerisinde değişkenlik gösterebilir. Bu kapsamda enflasyon sadece bir malın ya da bir hizmetin fiyatının tek başına artması değil fiyatlar genel seviyesinde sürekli bir artışın meydana gelmesidir. Enflasyon genellikle gelir seviyesi düşük olan kesimin alım gücünü olumsuz yönde etkileyebilmektedir. Ayrıca finansal piyasalarda geliri alt gelir gruplarından üst gelir gruplarına doğru yönlendirdiği de söylenebilmektedir. Bu duruma incelenen ülkenin gelişmişlik düzeyi, ele alınan dönem, enflasyonun artış hızı gibi faktörler de etki edebilmektedir.

2. GELİR EŞİTSİZLİĞİ KAVRAMI VE EKONOMİK AÇIDAN ÖNEMİ

Gelir dağılımı, birey ya da sosyal topluluklara milli gelirden düşen payı ifade eden kavramdır. Bir ülke ekonomisinde cari dönemde üretilen milli gelirin bireyler veya hanehalkları, bölgeler, üretim faktörleri ve sektörler arasındaki paylaşımı da gelir dağılımı olarak tanımlanmaktadır. Toplum içerisinde gelirin nasıl ve ne şekilde dağıtılacağı sorusu bölüşüm ilişkisi ile ilgilidir. Milli gelirin bireyler veya hanehalkları, toplumsal gruplar ve üretim faktörleri arasındaki paylaşım tarzını ifade eden sosyal ilişkilere bölüşüm ilişkisi adı verilmektedir. Bölüşüm ilişkisi sayısal bir gösterge ile ifade edilememektedir. Gelir dağılımı ise bölüşüm ilişkisine bağlı olarak gerçekleşen sayısal bir göstergedir. Yani bölüşüm ilişkisinin soyut, gelir dağılımının somut bir kavram olduğu söylenebilmektedir (Çabaş, 2022: 41). Bir ülke içerisinde en önemli toplumsal amaçlardan biri sosyal ve ekonomik açıdan düzenin sağlanması ve bunun sürdürülebilmesidir. Gelir dağılımının adaletli olması ve asgari gelir düzeyinin belli bir seviyenin altına düşmemesi bu amacın gerçekleştirilmesine bağlıdır. Toplumun ekonomik ve sosyal bakımdan refah içerisinde olması gelirin adaletli bir şekilde dağılmasını zorunlu kılmaktadır. Gelir dağılımında adil bir paylaşım kendiliğinden gerçekleşemeyeceği için bu dağılıma devletin de müdahale etmesi gerekmektedir (Akyürek, 2008: 7).

Farklı insanlara farklı şekilde davranmaya eşitsizlik adı verilir. Eşitsizlik, gerek gelirden, gerekse tüketimde ya da bir toplumun tutumlarındaki farklılıklarında olsun, bir paylaşım dengesizliği olarak kavramsal çerçevede incelenebilir (Doğanoğlu ve Gülcü, 2001: 47). Gelir eşitsizliği ise bir toplumda yer alan gelir gruplarının milli gelirden aldığı pay arasındaki orantısızlık ya da farklılık olarak açıklanmaktadır (Erikli ve Yücel, 2019: 245). Birçok ülkenin ve özellikle de gelişmekte olan ülkelerin son yıllarda ekonomik anlamda gelişme kaydetmesine rağmen 1980'lerin başından itibaren gelir eşitsizliği çoğu ülkede artış göstermiş ya da en iyi ihtimalle durağan şekilde seyretmiştir (Oktay, 2020: 8). Gelir eşitsizliğini ölçmek için birçok farklı yöntem bulunmaktadır. Bu yöntemlerden en sık kullanılanlar Lorenz eğrisi, Gini katsayısı ve Palma rasyosudur. Bu yöntemlere kıyasla Robin Hood endeksi, Theil endeksi, Atkinson endeksi, Genelleştirilmiş Entropi endeksi gibi yöntemler de gelir eşitsizliğini ölçmek için kullanılmakta fakat daha az tercih edilmektedir. Gelir eşitsizliğini ölçme metodları yaygın bir şekilde “normatif” ve “objektif” ölçütler olarak ikiye ayrılmaktadır. Gelir eşitsizliğinin objektif ölçütleri Lorenz eğrisi ve Gini katsayısıdır. Normatif ölçütleri ise yüksek düzeyde seyreden gelir dağılımı adaletsizliklerinin daha düşük düzeyli sosyal refaha denk geldiğini vurgulayan Atkinson ve Dalton endeksleridir (Doğan, 2022: 122).

3. GELİR DAĞILIMINI ETKİLEYEN MAKROİKTİSADİ FAKTÖRLER

Bir ülkenin sosyal, ekonomik ve politik yapısı birlikte incelendiğinde karşılıklı olarak birbirleri ile ilişkili olan ve birbirlerinden keskin çizgilerle ayrılması mümkün olmayan iç içe geçmiş bir yapı ortaya çıkmaktadır. Bu çerçevede gelir dağılımına etki eden faktörlerin her ülke için ayrı ayrı incelenmesi gerekmektedir. Ekonomik büyümenin bazı ülke ekonomilerinde gelir dağılımı üzerinde pozitif yönde bir etki yaratabilmesi, bazılarında ise gelir dağılımı üzerinde negatif yönde bir etki yaratabilmesi bu duruma verilebilecek örnekler arasındadır. Zaman içerisinde ülkedeki söz konusu etkiler değişkenlik gösterebilmektedir. Ayrıca bazı faktörlerin gelir dağılımı ile olan ilişkilerinde sebep mi yoksa sonuç mu olduğu üzerinde sıkça tartışılan konular arasında yer almaktadır. Enflasyon, ekonomik büyüme, küreselleşme, vergi politikası ve faiz konuları gibi birçok faktör gelir dağılımına etki etmektedir. Gelir dağılımına etkilerinin yanı sıra bu faktörler kendi aralarında da bir etkileşim içerisindeyler (Bükey ve Çetin, 2017: 104).

4. ENFLASYON KAVRAMI

Enflasyon günlük hayatta sıkça karşılaşılan bir terim olup, mal ve hizmet fiyatlarının artması şeklinde ifade edilebilmektedir. Mal ve hizmetlerin fiyatları zaman içerisinde değişkenlik (artma-azalma) gösterebilir. Enflasyon yalnızca belirli bir malın ya da hizmetin fiyatının tek başına artması değil fiyatlar genel düzeyinin sürekli bir artış göstermesidir. Bir başka ifade ile yalnızca bazı malların fiyatlarının sürekli artması veya tüm malların fiyatlarının bir kere artması enflasyon değildir (TCMB, 2004: 3). Talep, maliyet, para arzı ve beklentiler enflasyonun sebepleridir. Parasal gelirlerin reel gelirden yüksek olması ve cari fiyat düzeyinde toplam talebin toplam arzdan fazla olması enflasyonun oluşmasına yol açan ekonomik durumlardır (Bükey ve Çetin, 2017: 106).

Talep ve arz arasında ortaya çıkan dengesizlik önemli makroekonomik göstergeler biri olan enflasyonun oluşmasına yol açmaktadır. Fiyat istikrarının bozulma çeşitlerinden bir tanesi de oluşan bu dengesizliktir. Enflasyon temelde, yaşandığı ülke ekonomilerinde paranın satın alma gücünün düşmesi anlamına gelmektedir. Diğer bir deyişle hanehalkının sıklıkla tükettiği mal ve hizmetlerden oluşan sepetin fiyatının artmasıdır. Fiyatlar genel düzeyinin artması ile ekonomideki tüm mal ve hizmet fiyatlarının artacağı şeklindeki bir düşünce doğru değildir. Çünkü enflasyonda sürekli artışlar yaşandığı dönemlerde dahi bazı mal ve hizmet fiyatları sabit kalmaktadır. Hatta bazıları mal ve hizmetlerin fiyatları bu dönemde azalabilmektedir (Düldül, 2021: 17).

4.1. Enflasyonun Ölçülmesi

Belirli bir dönemde satın alma gücünde meydana gelen değişimlerin ölçülmesi ve fiyatlarda yaşanan değişimlerin zaman ve mekan göz önünde bulundurularak tespit edilmesi enflasyonun ölçülmesi anlamına gelmektedir. Bu bakımdan fiyat artışları sonucunda yapılan parasal işlemlerin, mal ve hizmet hareketleri üzerinde ne tür bir etkiye sahip olduğunu hesaplamak için fiyat endeksleme yöntemi kullanılmaktadır. Endeks hesaplamalarında hangi endeks seçilmiş ise ona göre belirlenen mal grupları sepete eklenmektedir. Bu mal gruplarının değişim maliyetleri dönemsel olarak izlenmektedir. Hesaplama yapmak için kullanılan bu endeksler Tüketici Fiyat Endeksi (TÜFE), Üretici Fiyat Endeksi (ÜFE) ve Gayri Safi Yurtiçi Hasıla (GSYİH) Deflatörü olarak üç başlık altında incelenmektedir (Aydın, 2022: 8)

4.2. Enflasyon Türleri

Enflasyon, fiyatlar genel düzeyindeki sürekli ve yüksek oranlı fiyat artışları olarak tanımlanmakta ve farklı şekillerde sınıflandırılmaktadır. Para ve mal piyasasında meydana gelebilecek olası dengesizlikler, yurtiçi ve yurtdışı kaynaklı etkenler enflasyon üzerinde etkili olabilmektedir. Bu nedenle enflasyon türleri genel olarak çıkış nedenlerine ve artış hızına göre ayrı başlıklar altında ele alınmaktadır. Enflasyon fiyatların artış hızına ve kaynaklarına göre iki kısımda incelenmektedir. İlmimli enflasyon, yüksek enflasyon ve hiperenflasyon fiyatların artış hızına göre; talep, maliyet ve yapısal enflasyon ise kaynaklarına göre enflasyon türleri içerisinde yer almaktadır.

4.2.1. Fiyatların Artış Hızına Göre Enflasyon Türleri

Enflasyon fiyatların artış hızına göre genel olarak ılımlı enflasyon, yüksek enflasyon ve hiperenflasyon olmak üzere üç başlık altında ele alınmaktadır.

4.2.1.1. İlimli Enflasyon

Düşük enflasyon, yıllık olarak tek haneli yani %10'un altında kalan enflasyon olup, fiyatlar genel seviyesinin yavaş bir şekilde yükselmesi olarak tanımlanmaktadır. Bu enflasyon türü düşük oranlı fiyat yükselmeleri durumunu içerdiği için paraya duyulan güveni azaltmaz. Böylece hanehalkları tasarruflarına herhangi bir zarar gelmeyeceğini düşünürler. Bu durum tasarruflarını bankada tutmalarına teşvik edici olmaktadır (Karakaya, 2019: 15). Düşük enflasyon istenilen bir durumdur. Bu enflasyon ortamında ekonomik birimler geleceği daha güvenle bakıp bu doğrultuda yatırımlarına daha iyi yön verebilmektedirler (Akyürek, 2008: 7).

4.2.1.2. Yüksek Enflasyon

Yüksek enflasyonda fiyat artış oranları üç haneli rakamlara ulaşmakta ve bu artışlar yıllık %100 ve %200 oranlarına çıkmaktadır. Sözleşmelerin enflasyona endekslenmesi veya dolar gibi yabancı paraya bağlı olması, paranın hızla değer kaybediyor olması ve faiz oranlarının yükselmesi durumu yaşanırken aynı anda yatırımların düşmesi gibi yüksek enflasyonun birtakım ayırt edici özellikleri bulunmaktadır. Üreticilerin ve hanehalkının ulusal para birimine güveninin kalmadığı bir enflasyon türüdür. Ayrıca yüksek enflasyon şartlarında kredi vadeleri ve sözleşme süreleri kısalmaktadır (Akin, 2022: 13).

4.2.1.3. Hiperenflasyon

Hiperenflasyon, fiyatlar genel seviyesindeki aylık %50 ve daha fazla orandaki artışlar olarak tanımlanmaktadır. Oldukça hızlı ve kontrol dışı gelişen bir enflasyon çeşididir Bu enflasyon türü çoğunlukla banknot hacminin denetimsiz bir biçimde arttırılması ile ortaya çıkmaktadır. Ayrıca hiperenflasyonda oranlar değişken bir yapıdadır yani neredeyse günün her saatinde paranın değeri değişebilmekte ve para talebi oldukça azalarak sıfıra inmektedir. Bu durum kişileri yerli para yerine döviz ya da altın almaya teşvik etmektedir (Yurtkur ve Can, 2019: 68).

4.2.2. Kaynaklarına Göre Enflasyon Türleri

Enflasyon kaynaklarına göre genel olarak talep enflasyonu, maliyet enflasyonu ve yapısal enflasyon olmak üzere üç başlık altında ele alınmaktadır.

4.2.2.1. Talep Enflasyonu

Bir ekonomik yapı içerisinde bireyler, ihtiyaçlarını gidermek için mal ve hizmet satın alırlar. Ancak bazı durumlarda bireylerin talep ettikleri mal ve hizmetlerin toplamı karşılanamaz hale gelmektedir. Bu durumun nedeni ise ekonomide toplam talebin, arz edilen mal ve hizmetlerin toplamından daha fazla olmasıdır. Talep enflasyonu, toplam arzın toplam talebi karşılayamaması sonucunda meydana gelmektedir. Başka bir ifadeyle talep enflasyonu, ekonomi içerisindeki mal ve hizmet arzı arasındaki dengenin bozulması neticesinde toplam talebin sürekli artış göstermesi ve bu talebin piyasadaki arz tarafından karşılanamaması durumunda fiyatlarda yükselme meydana gelmesi sonucunda oluşmaktadır. Özel sektör tasarruflarıyla kamu sektöründeki açıkların karşılanamaması durumunda fiyatlar genel seviyesinde bir yükselme meydana gelmekte ve bu durum da yine talep enflasyonuna yol açmaktadır (Yurtkur ve Can, 2019: 65-66)

4.2.2.2. Maliyet Enflasyonu

Maliyet enflasyonu, üretimde girdi olarak kullanılan mal ve hizmetlerin fiyatlarının artış göstermesi neticesinde, bu girdiler kullanılarak üretilen mal ve hizmetlerin fiyatlarının da sürekli bir artış sürecine girmesi ile oluşmaktadır. Ücret artışı-enflasyon-yeniden ücret artışı talebi şeklindeki bir döngü maliyet enflasyonunda dikkat çeken bir durumdur. Enflasyonist bir etki oluşturma potansiyeli yüksek olan girdiler arasında arazi (toprak), hammaddeler, işgücü ve ithal girdiler yer almaktadır. (Uysal, 2007: 24). Üretilen mal ve hizmetlerin maliyetini emek, sermaye ve doğal kaynaklar gibi üretim faktörleri belirlemektedir. Fiyat artışlarına paralel olarak maliyetlerin fiyatları da artmakta ve bu durum toplam arzın azalmasına yol açmaktadır (Karakaya, 2019: 17).

4.2.2.3. Yapısal Enflasyon

Yapısal enflasyon, ekonomide fiyatlar genel seviyesinin piyasa tarafından belirlenemediği durumlarda meydana gelmektedir. Fiyat enflasyonu olarak da adlandırılmaktadır. Fiyatlar genel seviyesini belirleyen birçok etken söz konusudur. Piyasanın mevcut koşullarına ve devletin izlediği sosyoekonomik politikalarına göre birtakım malların fiyatları değişim gösterebilmektedir (Aydın, 2022: 13). Özellikle oligopol ve monopol piyasalarda, fiyatları belirleme gücü malları üreten firmaların elindedir. Bu durum firmaların amaçlarına göre şekillenmekte yani amaçları ön plana çıkmaktadır. Devlet üretimi arttırmak ve üreticiyi korumak amacıyla sosyal ve siyasi baskılar neticesinde mal ve hizmetlerin fiyatlarını piyasa fiyatlarının üstünde belirleyebilmektedir. Böylece üreticiler ürünlerini piyasa fiyatının üzerinde bir değerde sattıkları için yüksek bir kar sağlamaktadır. Ekonomide meydana gelen yüksek faiz, teknoloji yetersizliği, eksik rekabet piyasaları, kronik bütçe açıkları ve tarım ürünlerinin fiyatlarına yönelik yapılan devlet müdahaleleri gibi yapısal sorunların ortaya çıkardığı bir enflasyon türüdür (Akın, 2022: 11).

5. VERİ SETİ VE YÖNTEM

Çalışmada 2003-2021 dönemini kapsayan kişi başına düşen GSYİH (cari ABD doları) ve enflasyonun göstergelerinden biri olan TÜFE yıllık verileri kullanılmaktadır. GSYİH verileri Dünya Bankası'ndan, TÜFE ise TCMB bünyesinde olan EVDS'den elde edilmektedir. Enflasyonun kişi başına düşen GSYİH üzerindeki etkisinin araştırılması için EViews istatistik paket programından yararlanılmaktadır. İlk olarak regresyon analizinin varsayımı olan verilerin normal dağılıma sahip olup olmadığı test edilmekte ve verilerin normal dağılıma sahip olduğu belirlendikten sonra regresyon analizi yapılarak bir regresyon modeli oluşturulmaktadır. Bağımlı değişken ile bağımsız değişken(ler) arasındaki ilişkiyi matematiksel modellerle açıklayarak bağıntı(lar) bulunması regresyon çözümlemesinin genel tanımıdır. Bir bağımlı ve bir bağımsız değişkenin olduğu doğrusal regresyon çözümlemesine basit regresyon çözümlemesi adı verilmektedir (Alpar, 2017: 395). Oluşturulan model için parametre tahminleri yapılmakta ve güvenilir tahminler verdiğinden dolayı parametreler En Küçük Kareler Yöntemi (EKK) ile tahmin edilmektedir. Modelde bağımlı değişken kişi başına düşen GSYİH, bağımsız değişken ise enflasyondur.

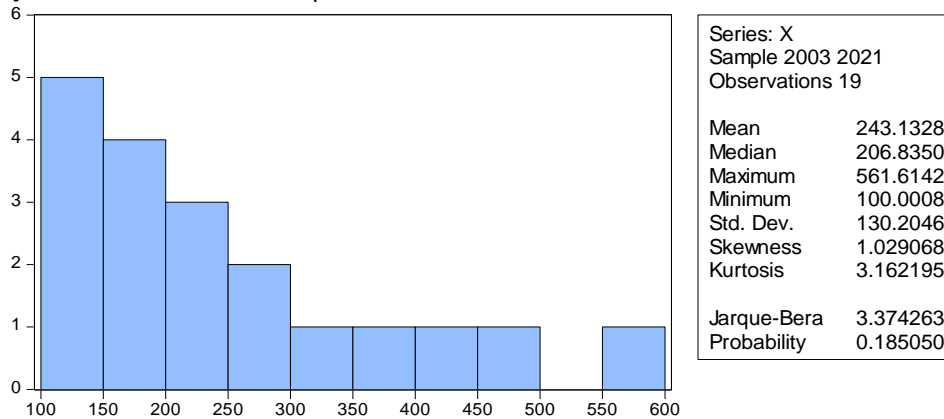

6. BULGULAR

Regresyon analizi için değişkenlere ait verilerin normal dağılıma sahip olup olmadığı belirlenmelidir. Bu kapsamda regresyon analizine geçmeden önce ilk olarak kişi başına düşen GSYİH ve TÜFE verilerinin dağılımları Jarque- Bera Testi ile incelenmektedir. Normal dağılımın tespiti için hipotez testleri kurulmuştur. Ayrıca veri dağılımlarının görsel olarak tespit edilebilmesi için histogram grafikleri de oluşturulmuştur.

H₀: Veriler normal dağılım göstermektedir.

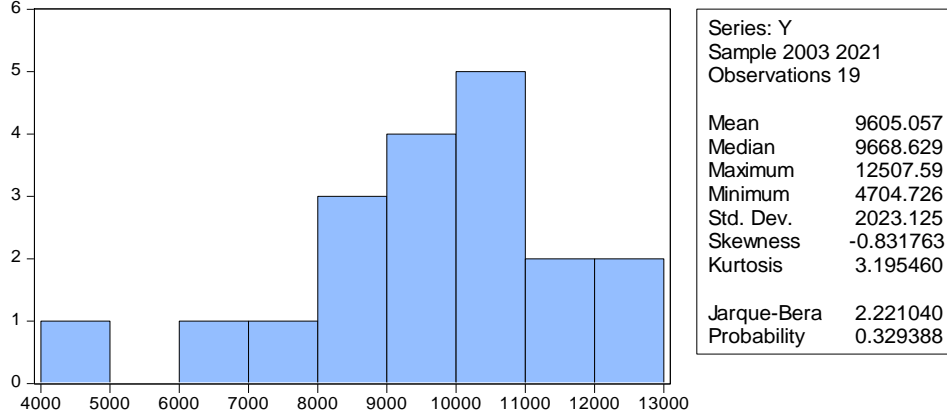

H₁: Veriler normal dağılım göstermemektedir

Şekil 1: TÜFE Verilerinin Jarque- Bera Testi

Şekil 1'deki histogram grafiği incelendiğinde enflasyonun göstergelerinden biri olan TÜFE verilerinin normal dağılıma sahip olduğu görülmektedir. Jarque- Bera testi sonucunda verilerin ortalaması 243.132, maksimum değeri 561.614 ve minimum değeri ise 100.000'dir. Jarque- Bera test istatistiği 3.37 ve olasılık değeri ise 0.18 olarak hesaplanmıştır. %5 önem düzeyinde olasılık değeri (prob=0.18) 0.05'ten büyük olduğu için ($p=0.05<0.18$) veriler normal dağılıma sahiptir. Bu durumda H_0 hipotezi kabul edilip, H_1 hipotezi red edilmektedir.

Şekil 2: Kişi Başına Düşen GSYİH (cari ABD doları) Verilerinin Jarque- Bera Testi

Şekil 2'deki histogram grafiği incelendiğinde kişi başına düşen GSYİH verilerinin normal dağılıma sahip olduğu görülmektedir. Jarque- Bera testi sonucunda verilerin ortalaması 9605.057, maksimum değeri 12507.59, ve minimum değeri ise 4704.726'dır. Jarque- Bera test istatistiği 2.22 ve olasılık değeri ise 0.32 olarak hesaplanmıştır. %5 önem düzeyinde olasılık değeri (prob=0.32) $p=0.05$ 'ten büyük olduğu için ($p=0.05<0.32$) veriler normal dağılıma sahiptir. Bu durumda H_0 hipotezi kabul edilip, H_1 hipotezi red edilmektedir.

Oluşturulan model;

$$y = \beta_0 + \beta_1 x + \varepsilon_t$$

Modelde;

y : Kişi başına düşen GSYİH-bağımlı değişken

β_0 : Sabit katsayı

β_1 : Bağımsız değişkenin katsayısı

x : Enflasyon (TÜFE)-bağımsız değişken

ε_t : Hata terimidir.

Tablo 1: Regresyon Analizi Sonuçları

Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	7.937594	0.561259	14.14249	0.0000
LNx	0.224783	0.104095	2.159393	0.0454
R-squared	0.215251	Mean dependent var		9.144505
Adjusted R-squared	0.169089	S.D. dependent var		0.245163
S.E. of regression	0.223477	Akaike info criterion		-0.059716
Sum squared resid	0.849014	Schwarz criterion		0.039699
Log likelihood	2.567298	Hannan-Quinn criter.		-0.042891
F-statistic	4.662980	Durbin-Watson stat		0.296574
Prob(F-statistic)	0.045400			

Tablo 1'de sabit katsayısının standart hatası 0.56, t istatistik değeri 14.14, katsayısı 7.93 ($\beta_0=7.93$) ve olasılık değeri 0.00 ($p=0.00$) olarak hesaplanmıştır. Bağımsız değişkenin standart hatası 0.10, t istatistik değeri 2.15, katsayısı 0.22 ($\beta_1=0.22$) ve olasılık değeri 0.04 ($p=0.04$) olarak hesaplanmıştır. Olasılık değerleri $p=0.05$ değerinden küçük ($0.00<0.05$ ve $0.04<0.05$) olduğu için sabit katsayı ve bağımsız değişkenin katsayısının istatistiksel olarak anlamlı olduğu gözlemlenmektedir. Ayrıca t istatistik değeri ne kadar yüksek olursa olasılık değeri (prob. değeri) 0'a yaklaşacak ve bulunan katsayı anlamlı olacaktır. Bağımsız değişkenin bağımlı değişkeni açıklama gücünü gösteren R-kare istatistiği ise %21'dir. Enflasyonda meydana gelen %1'lik bir değişim kişi başına düşen GSYİH'yı %0.22 oranında etkilemektedir.

$$y = \beta_0 + \beta_1 x + \varepsilon_t$$

$$\beta_0=7.93$$

$$\beta_1=0.22$$

$y = 7.93 + 0.22x + \varepsilon_t$ şeklinde model oluşturulacaktır.

7. SONUÇ

Gelir dağılımı, birey ya da sosyal topluluklara milli gelirden düşen payı ifade etmektedir. Bu dağılımda meydana gelen adaletsizlik bireylerin sosyal ve ekonomik anlamda yaşam standartlarını olumsuz yönde etkileyebilmektedir. Bir ülkedeki bireylerin ya da hanehalkının refah ve huzuru büyük ölçüde gelirin adil bir şekilde dağılımı ile gerçekleşmektedir. Gelir eşitsizliğinin yüksek seviyelerde seyretmesi ya da zaman içerisinde sürekli artış göstermesi bir ülkenin ekonomik problemlerinin başında yer almakta ve bu durum hem ekonominin gelişmesini hem de ekonomik istikrarın sağlanmasını engelleyebilmektedir.

Gelir dağılımına etki eden çok sayıda ekonomik faktör söz konusudur. Enflasyon bu faktörler arasında oldukça önemli bir paya sahiptir. Küresel çapta ekonomik krizlerin meydana gelmesi enflasyon ve artan gelir adaletsizliği sorunlarına olan dikkati artırmıştır. Fiyatlar genel düzeyinin sürekli bir artış göstermesi olarak ifade edilen enflasyon gelir dağılımını önemli ölçüde etkileyebilmektedir. Enflasyonun oluşmasına zemin hazırlayan birtakım ekonomik durumlar söz konusudur. Parasal gelirlerin reel gelirden yüksek olması ve cari fiyat düzeyinde toplam talebin toplam arzdan fazla olması enflasyonun oluşmasına yol açmaktadır.

Çalışmada enflasyonun kişi başına düşen GSYİH üzerindeki etkisini belirlemek amacıyla regresyon analizi yapılarak bir regresyon modeli oluşturulmuştur. Oluşturulan model için güvenilir tahminler verdiğinden dolayı En Küçük Kareler Yöntemi ile katsayı tahminleri yapılmıştır. Analiz sonucunda bağımsız değişkenin katsayısı ve sabit katsayısının anlamlı olduğu ($p=0.00<0.05$ ve $p=0.04<0.05$) sonucuna ulaşılmıştır. Böylece $\beta_0=7.93$ ve $\beta_1=0.22$ katsayıları kullanılarak regresyon modeli ($y = 7.93 + 0.22x + \varepsilon_t$) oluşturulmuştur. Modelde kişi başına düşen GSYİH bağımlı değişken ve enflasyon ise bağımsız değişkendir. Böylece enflasyonda meydana gelen %1'lik bir değişim kişi başına düşen GSYİH'ı % 0.22 oranında etkilemektedir. Bağımsız değişkenin bağımlı değişkeni açıklama gücü ise %21'dir

Özet: Hanehalkı, iktisadi konularda ülkeler için belirleyici bir role sahiptir. Bu iktisadi konular arasında hanehalkının gelirleri, birikimleri, yatırımları ve harcamaları yer almaktadır. Hanehalkı gelirlerinin dağılımı ve kullanım şekli milli gelire ve milli tasarruflara önemli ölçüde etki etmektedir. Bu çerçevede ele alınması gereken önemli hususlardan biri gelir dağılımı ve gelir dağılımında meydana gelen eşitsizliktir. Belirli bir orandaki nüfus diliminin milli gelirden aldığı pay ile yine aynı orandaki başka bir nüfus diliminin milli gelirden aldığı pay arasında meydana gelen farklılık sonucunda gelir dağılımında eşitsizlik ortaya çıkmaktadır. Bu durum dünya genelinde yaygın olarak gözlemlenmektedir. Gelir dağılımı eşitsizliği sadece gelişmemiş veya az gelişmiş ülkelerle sınırlı kalmayıp gelişmiş ülkelerin de sıkça karşılaştığı iktisadi sorunlarından biridir.

Literatürde hanehalkı yaşam düzeyleri, refah seviyeleri, gelir dağılımları ve eşitsizliği ile ilgili birçok araştırma yer almaktadır. Bu çalışmada hanehalkı kullanılabilir gelir dağılımı ve gelir eşitsizliğinin istatistiksel ölçümü olan Gini katsayısı ile Türkiye için yıllar bazında değerlendirmeler yapılmıştır. 2006-2021 yıllarını kapsayacak şekilde Türkiye İstatistik Kurumu (TÜİK)'dan elde edilmiş olan veriler üzerinde çalışılmıştır.

Gini katsayısı bir istatistiksel dağılım ölçüsü olup genellikle gelir dağılımını ölçmek, ekonomik eşitsizliği ve refahın dağılımını incelemek için kullanılmaktadır. 0 ile 1 arasında değerler olarak 0'a yaklaşması gelir eşitsizliğinin azaldığını, 1'e yaklaşması ise gelir eşitsizliğinin arttığını göstermektedir. Çalışmada Gini katsayısının ülke genelinde yıllar bazında nasıl bir düzeyde seyrettiği tablo ve grafiklerle incelenmiştir. Grafikler SPSS (Statistical Package for the Social Sciences) programı ile oluşturulmuştur. Bunun yanı sıra Türkiye'deki hanehalkı sayılarının ve hanehalkı kullanılabilir gelirin dağılımlarının da yıllar içerisindeki değişimleri aynı şekilde tablo ve grafiklerle incelenmiş ve hanehalklarının gelir düzeyleri ve dolayısıyla refah seviyeleri hakkında çıkarımlarda bulunulmuştur.

Anahtar Kelimeler: hanehalkı, gelir, gelir dağılımı, gelir eşitsizliği

Examining The Distribution of Household Usable Income and Income Inequality by Years: The Example of Turkey

Abstract: Households have a decisive role for countries in economic matters. These economic issues include household income, savings, investments and expenditures. The distribution of household incomes and the way they are used have a significant impact on national income and national savings. One of the important issues to be addressed in this framework is income distribution and inequality in income distribution. As a result of the difference between the share of a certain population segment from the national income and the share of another population segment at the same rate from the national income, inequality in income distribution arises. This situation is widely observed around the world. It is not only limited to underdeveloped or underdeveloped countries, but also one of the economic problems that developed countries frequently encounter.

In the literature, there are many studies on household life levels, welfare levels, income distribution and inequality. In this study, household disposable income distribution and gini coefficients, which are the statistical measurement of income inequality, are evaluated together and interpretations are made for Turkey on a yearly basis. The data is obtained from the Turkish Statistical Institute (TUIK), covering the years 2006-2021.

The Gini coefficient is a statistical measure of distribution and is generally used to measure income distribution, examine economic inequality and the distribution of wealth. If it takes values between 0 and 1, it shows that income inequality decreases, and if it approaches 1, it shows that income inequality increases. In the study, the level of the Gini coefficient across the country on a yearly basis is examined with tables and graphs. The graphics are created with the SPSS package program. In addition to this, the changes in the number of households and the distribution of disposable income in Turkey

over the years are also analyzed with tables and graphs, so inferences are made about the income levels of the households and therefore their living levels.

Key Words: household, income, income distribution, income inequality

1.GİRİŞ

Ekonomik büyüme ile yakından ilişkili olan faktörlerden biri gelir eşitsizliğidir. Bu kapsamda ekonomik büyüme, gelir dağılımı ve gelir eşitsizliği arasındaki ilişkiler birçok araştırmacı tarafından uzun yıllar boyunca üzerinde çalışmalar yapılan bir konudur. Gelir dağılımında meydana gelebilecek eşitsizliklerin oluşmasını en aza indirmek ekonomik yöntemlerin görevleri arasında yer almaktadır. Gelir eşitsizliği gibi önemli bir ekonomik problemi azaltabilmek için hanehalkının yeterli gelire sahip olması yani elde edilen milli gelirin adaletli bir biçimde dağıtılması önem arz etmektedir. Bu durum ülke içerisinde yaşayan hanehalkının refah düzeylerinin yükselmesini ve yaşam standartlarının iyi seviyelere çıkmasını sağlayacaktır.

Gelir eşitsizliği belli bir orandaki nüfus diliminin milli gelirden aldığı pay ile yine aynı orandaki başka bir nüfus diliminin milli gelirden aldığı pay arasında meydana gelen farklılık sonucu ortaya çıkmaktadır. Bu eşitsizlik sadece gelişmemiş ya da az gelişmiş ülkelerin değil, gelişmiş ülkelerin de yaşadığı ekonomik problemler arasında yer almaktadır. Yirmi birinci yüzyılda dünya genelinde bu problemle mücadele edilmekte ve birtakım önlemler alınmaktadır. Çünkü gelir dağılımında meydana gelebilecek eşitsizlik ekonominin yanında sosyal olarak da toplumda sorunların oluşmasına zemin hazırlayabilmektedir.

Ekonomi içerisinde gelir eşitsizliğinin ölçümü için Lorenz eğrisi, Gini katsayısı, yüzdelik dilimleme yöntemi, değişim aralığı ve değişim katsayısı gibi birçok teknik dikkate alınmaktadır. Literatürde yaygın olarak kullanılan ölçütlerden biri ise Gini katsayısıdır. Bu katsayı bir istatistiksel dağılım ölçüsü olup genellikle gelir dağılımını ölçmek, ekonomik eşitsizliği ve refahın dağılımını incelemek için kullanılmaktadır. 0 ile 1 arasında değerler alarak 0'a yaklaşması gelir eşitsizliğinin azaldığını, 1'e yaklaşması ise gelir eşitsizliğinin arttığını göstermektedir.

2. GELİR DAĞILIMI VE İLGİLİ TEMEL KAVRAMLAR

Belirli bir dönemde elde edilen milli gelirin o ülke içerisinde yer alan bireyler, hanehalkları, toplumsal gruplar, bölgeler veya üretim faktör sahipleri arasında paylaştırılmasına gelir dağılımı adı verilmektedir (Elveren, 2013: 36). Gelir dağılımı ile ilgili temel kavramları bireysel veya hanehalkları gelir dağılımı, ülkedeki coğrafi bölgeler arasındaki dağılımı dikkate alan bölgesel gelir dağılımı, üretim faktörleri arasındaki dağılımı dikkate alan fonksiyonel gelir dağılımı, sektörler arasındaki dağılımı dikkate alan sektörel gelir dağılımı ve gelirin yeniden (ikincil) dağılımı olacak şekilde beş farklı başlıkta açıklamak mümkündür.

2.1. Bireysel Gelir Dağılımı (Hanehalkı Gelir Dağılımı)

Bireysel gelir dağılımı gelirin toplumu meydana getiren birey veya hanehalkları arasındaki dağılımını göstermektedir. Bu gelir dağılımı türünde bireyin ya da hanehalkının ne kadar gelir elde ettiği önemli bir faktördür. Ancak gelirden aldığı payın kar, faiz, ücret veya rant gibi belirli isimler altında elde etmesinin pek bir önemi yoktur. Bunlardan hepsine sahip olunabileceği gibi sadece birine de sahip olunabilmektedir (Çalışkan, 2010: 93).

Bireysel gelir dağılımıyla ilgili inceleme ve hesaplamalarda birim olarak aile esas alınmaktadır. Yine inceleme ve hesaplamalar yapılırken sabit bir yıl ve sabit bir para değeri dikkate alınmaktadır. Bireysel gelir dağılımını incelerken dikkat edilecek unsurlar şu şekildedir (Karaca, 2022: 11):

- Tüketici karar birimi tespit edilmesi
- Ekonomide mevcut işsizlerin hesaba dahil edilmesi

2.2. Fonksiyonel Gelir Dağılımı

Fonksiyonel gelir dağılımı gelirin sosyal sınıflar ve sosyo-ekonomik gruplar arasındaki dağılımını göstermekte olup ve üretim süreci sonucunda ortaya çıkan gelirin bu sürece katılan girişim, emek sermaye ve toprak gibi faktörler arasındaki paylaşımını da ifade etmektedir. Burada emek ve emek dışı gelirler söz konusudur ve kendi içerisinde alt gruplara ayrılmaktadır. Bu alt gruplar emek gelirlerinde ücret ve maaş iken, emek dışı gelirlerde ise kâr, faiz gibi alt gruplardır (Çelik, 2004: 59). Fonksiyonel gelir dağılımı, üretim sürecinde yer alan üretim faktörlerinin dağılımını ortaya koymanın yanı sıra, sosyal sınıfların kendi içerisindeki muhtemel farklılıklarını da açıklamaktadır. Fakat bu gelir dağılım türü bu durumu açıklamakta bazen yetersiz kalmaktadır. Çünkü

toplumdaki farklı sosyo-ekonomik gruplar birden fazla gelir elde etmektedir. Toplumsal sınıflar ve bu sınıfların gelirden aldıkları paylar birbirleri ile örtüştüğü için gelir dağılımı ile ilgili yapılan ilk çalışmalarda bu yaklaşım kullanılmıştır. Ancak son zamanlarda ortaya çıkan yeni durumları açıklamak konusunda fonksiyonel gelir dağılımı yeterli değildir (Güç, 2022: 20).

2.3. Bölgesel Gelir Dağılımı

Bölgesel gelir dağılımı ülkenin az gelişmiş ve gelişmiş bölgeleri arasındaki farklılıkları ve gelirin ülkedeki farklı bölgelerde yaşayan kişilere göre dağılımını göstermektedir. Bu dağılım bölgeler arasındaki gelir farklılıklarının araştırılmasının yanında bölgelerin sosyolojik açıdan yorumlanmasına da zemin oluşturabilmektedir. Böylece bölgeler arasında meydana gelebilecek dengesizliklerin önüne geçilebilmektedir. Özellikle gelişmekte olan ülkeler açısından bu dengesizliklerin giderilmesi büyük önem arz etmektedir. Çünkü bölgesel gelir dağılımının bölgeler arasında gösterdiği farklılıklar birçok problemi de beraberinde getirmektedir. Göç, çarpık kentleşme ve artan alt yapı talebi bu problemlerin ilk sıralarında yer almaktadır (Tayyar, 2011: 8-9).

2.4. Sektörel Gelir Dağılımı

Sektörel gelir dağılımı bir ülke ekonomisinde yer alan tarım, sanayi ve hizmet sektörlerinin milli gelirden aldığı payı göstermektedir. Sanayileşme ve sanayileşme oranının gayrisafi yurtiçi hasıla içerisindeki payı bir ülkenin gelişmişlik düzeyinin göstergeleri içerisinde yer almaktadır. Bu kapsamda sanayileşmesini tamamlayan bir ülke gelişmiş bir ülke kategorisinde değerlendirilebilmektedir. Kalkınma sürecinde genel olarak sanayi sektöründe yaşanan olumlu gelişmeleri tarım ve hizmet sektörleri de takip etmektedir (Boz, 2023: 36). Sektörel gelir dağılımında birinci olarak üretim sektörleri arasında dağıtılan milli gelir, ikinci olarak ise kamu sektörü ile özel sektör arasında dağıtılan milli gelir şeklinde iki farklı tanımlama söz konusu olmaktadır. İkinci şekildeki tanımlama ekonomik düzenin özelliklerini ve devletin ekonomiye müdahale etme derecesini ortaya koymaktadır. Özellikle gelişmekte olan ülkeler açısından sektörel paylaşım oldukça önemli bir husustur. Bunun nedeni sektörel paylaşım ile ilgili sağlam ve düzgün veriler, ekonominin gelişme tarzını net bir şekilde ortaya koymakta ve bu konuda alınabilecek önlemler için yol gösterici olmaktadır (Kubar, 2011: 230).

2.5. Gelirin Yeniden (İkincil) Dağılımı

Gelirin yeniden dağılımı, devletin bireylerin üretimden elde ettikleri ilk gelir ile nihâi gelirleri arasında fark oluşturması durumudur. Bu kapsamda devletin elde ettiği her gelir, yaptığı her harcama ve aldığı her karar gelir dağılımına bir müdahale olarak nitelendirilmektedir (Çalışkan, 2010: 94). Kendi kendine işleyen devlet müdahalesinin olmadığı piyasa ekonomilerinde gelirin adil bir biçimde dağıtılması beklenmeyen bir durumdur. Mülkiyet dağılımı üretim, tüketim ve paylaşım dengelerinin fiyat mekanizmasına ve piyasa koşullarına göre belirlendiği ekonomilerde farklı olmaktadır. Kişilerin üretim faktörlerine sahip olma mertebeleri ve üretim faktörlerine olan talebin birbirinden farklılık göstermesi de gelirin eşit olmayan bir şekilde dağılımına zemin hazırlamaktadır. Tüm bu sebeplerden dolayı hükümetler maliye politikası araçları ile kamu harcamalarının yararlarının yoksullara ve vergi yükünün zenginlere yönelik olmasını sağlayarak gelirin ikincil dağılımını daha adaletli bir hale getirmeyi hedeflemektedir. Devletin gelir dağılımı fonksiyonu esas olarak ikincil düzeyde ortaya çıkmaktadır. Buradaki ikincil düzey piyasa gelir dağılımı meydana geldikten sonraki süreçtir. İkincil gelir dağılımı, sübvansiyon ve vergi gibi araçlar kullanılarak hükümetlerin geliri yeniden dağıtmasıdır (Akbulut, 2020: 140).

3. BİREYSEL GELİR EŞİTSİZLİĞİNİN ÖLÇÜLMESİ

Bir ülkede gelir dağılımında meydana gelen değişiklikleri incelemek ve yoksullarla zenginler arasındaki farka dikkat çekerek devleti gelir eşitsizliğini azaltacak politika uygulamalarına teşvik etmek amacıyla gelir eşitsizliği ortaya koyulmaktadır. Bunun yanında diğer ülkeler karşısındaki durumu değerlendirmek için de gelir eşitsizliği üzerinde durulmaktadır. Gelir eşitsizliğini belirlemek için Lorenz eğrisi, Gini katsayısı, yüzdelik dilimleme yöntemi, değişim aralığı ve değişim katsayısı gibi ölçme teknikleri kullanılmaktadır. Fakat literatürde en sık kullanılan yöntemler Lorenz eğrisi, Gini katsayısı ve yüzdelik dilimleme yöntemidir (Çalışkan, 2010:97).

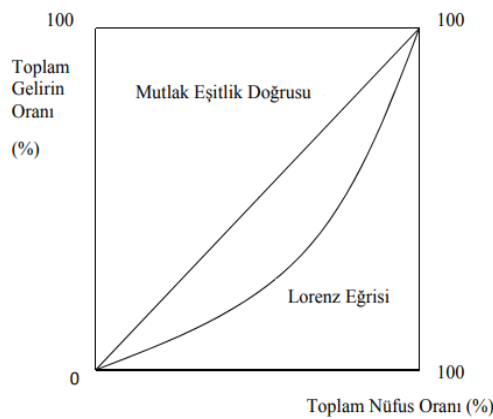

3.1. Lorenz Eğrisi

Gelir dağılımı, bir ülkenin milli gelirinin sosyal sınıflar arasında (bireyler, hanehalkları, toplumsal gruplar, bölgeler vb.) nasıl paylaşıldığını göstermektedir. Matematiksel olarak gelir dağılımını gösteren birçok yöntem

bulunmaktadır. Lorenz eğrisi gelir dağılımını grafiklerle göstermekte olup bu yöntemler içerisinde yaygın bir şekilde kullanılanlardan biridir (Peçe, Ceyhan ve Akpolat, 2016: 138). Amerikalı istatistikçi Max Otto Lorenz tarafından geliştirilmiş ve genel anlamda gelirin paylaşım şeklini göstermektedir (Topuz, 2013: 4).

Toplum aldığı gelir bakımından beş eşit yüzdelik dilime ayrılmaktadır. Lorenz eğrisi ise bu beş eşit yüzdelik dilimlere denk gelen paylar sayesinde oluşturulmaktadır. Gelirin paylaşım şeklinin eğrisel olarak gösterilmesidir. Gelir dağılımında meydana gelen eşitsizliği, yatay ekseninde nüfusun birikimli yüzde oranlarıyla ve dikey ekseninde ise bu nüfusun elde ettiği gelirin birikimli yüzde oranlarıyla gösteren diyagramdır. Yani ülkedeki toplam gelirin ne kadarını kaç kişinin aldığını yüzde olarak göstermektedir. Toplumda herkesin gelirden eşit derecede pay aldığını ifade etmek için Lorenz eğrisi tam eşitlik doğrusu adını almakta ve bu durumda gelir dağılımında bir eşitlik söz konusu olmaktadır. Kişiler arasında gelir eşit olarak paylaştırılmış ise Lorenz eğrisi mutlak eşitlik doğrusu ile çıkışarak 45 derecelik doğru şeklini alacaktır. Fakat kişiler arasında gelir paylaşımında bir eşitsizlik söz konusu olduğunda ise Lorenz eğrisi mutlak eşitlik doğrusundan uzaklaşmaya başlayarak daha çukur bir şekil alacaktır (Tayyar, 2011: 11-12).

Şekil 1: Lorenz Eğrisi

Kaynak: Topuz S. G., (2013: 5).

3.2. Gini Katsayısı

Gini katsayısı, 1912 yılında İtalyan iktisatçı Corrado Gini tarafından Lorenz eğrisi baz alınarak geliştirilmiştir. Ülkelerdeki gelir dağılımındaki eşitsizliğin ölçülmesinde ve ülkelerin karşılaştırılmasında sıklıkla kullanılmaktadır (Süleymanlı, 2022: 47). Gini katsayısı gelir dağılımının adaletli olup olmadığını veya gelir eşitsizliğini ölçmede yaygın olarak kullanılan yöntemlerden biri olup 0 ile 1 arasında değer almaktadır. Bu katsayı 1'e yaklaştığında yoksul ve zengin arasındaki gelir dağılımı adaletsizliği artarken, 0'a yaklaştığında ise gelir dağılımı adaletsizliği azalmaktadır. Başka bir ifadeyle "1" bireyler arasındaki gelir dağılımında mutlak eşitsizlik, "0" ise mutlak eşitlik anlamına gelmektedir. Böylece gelir dağılımında adil bir paylaşımın sağlanması açısından istenilen, Gini katsayısının her zaman küçük olması yani "0" a yakın olmasıdır (Yar, 2015: 14). Gini katsayısı farklı gelir gruplarının milli gelirden aldıkları paya göre şekillenen Lorenz eğrisinden esas olarak hesaplanmaktadır ancak Lorenz eğrilerine göre iktisadi analizlerde daha basit, anlamlı ve pratik kullanıma olanağına sahiptir. Bunun nedeni matematiksel bir kavram olma özelliği taşımasıdır (Peçe vd., 2016: 138).

3.3. Yüzde Paylar Analiz Yöntemi

Yüzde paylar analiz yöntemi, gelir dağılımında meydana gelen adaletsizliğin zaman içerisindeki değişimini gözlemlemede tercih edilen bir ölçüm yöntemidir. Çoğunlukla bir yıl içerisinde elde edilen gayri safi yurt içi hasıladan pay alan bütün birey ve hanehalkı gelirleri, en düşük gelir düzeyinden en yüksek gelir düzeyine doğru sıralanmaktadır. Bu sıralama %20, %10, %5 ya da %1'lik olmak üzere eşit yüzdelik dilimlere ayrılarak yapılmaktadır. Her gelir grubu bir dilim ile temsil edilmekte olup her bir grubun toplam gelirden aldığı pay ölçülmektedir. Gelir dağılımı ile ilgili elde edilen sonuçlara göre, gelir grupları içerisinde en üst seviyede yer alan yüzdelik kısmın, en alt seviyede yer alan yüzdelik kısımdan kaç kat fazla pay aldığı görülmektedir. Böylece gelir eşitsizliği ile ilgili bilgiler elde edilmektedir. Yöntem bu yönüyle ülkeler arası gelir eşitsizliği karşılaştırmalarında oldukça fazla ilgi görmektedir (Türk, 2022: 45-46). En zengin kesim ile en yoksul kesimin gelirden aldığı payların

değişiminde bir oran ortaya çıkmaktadır. Bu oranın büyük çıkması eşitsizliğin yüksek seviyelere, küçük çıkması ise eşitsizliğin düşük seviyelere doğru seyrettiğini göstermektedir. Burada asıl amaç en zengin ile en yoksul arasındaki farkı yorumlamaktır (Tayyar, 2011: 11).

4. TÜRKİYE’DE HANEHALKI SAYILARI

Tablo 1 Türkiye’de 2006-2021 yılları arasındaki dönemde hanehalkı sayılarını göstermektedir. Veriler TÜİK’ten elde edilmiştir. Buradaki hanehalkları sadece eşler ve çocukların olduğu çekirdek ailelerden oluşmaktadır. Bu veriler doğrultusunda SPSS programı ile Şekil 2 ve Şekil 3’deki grafikler oluşturulmuştur.

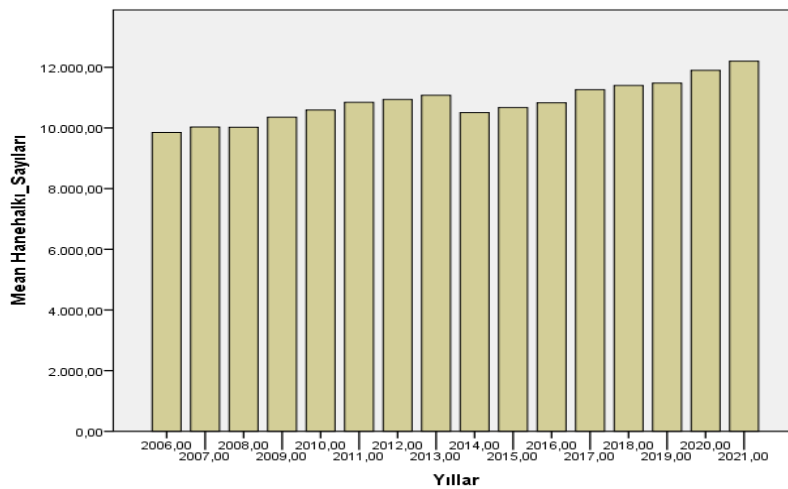

Tablo 1: Türkiye’deki Hanehalkı Sayıları

Yıllar	Hanehalkı Sayılar (bin)
2006	9.851
2007	10.031
2008	10.022
2009	10.352
2010	10.591
2011	10.842
2012	10.939
2013	11.076
2014	10.503
2015	10.672
2016	10.826
2017	11.259
2018	11.400
2019	11.479
2020	11.899
2021	12.199

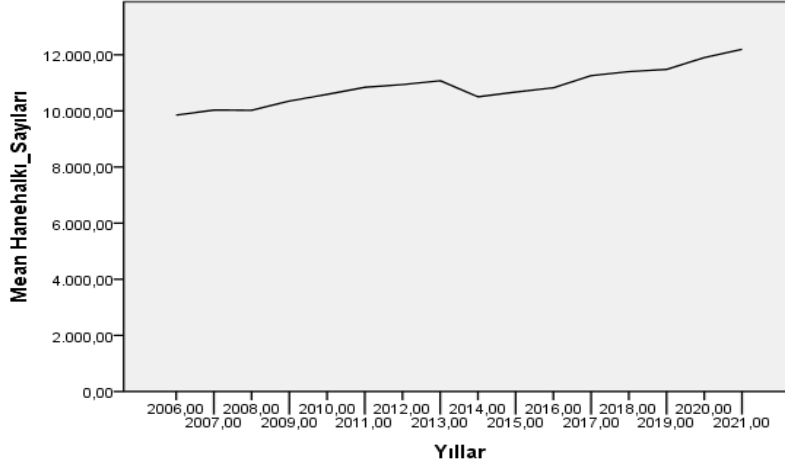

Kaynak: TÜİK, 2006-2021 Yılları Arası Eş ve Çocuklardan Oluşan Çekirdek Aile Hanehalkı Sayıları (<https://www.tuik.gov.tr/>)

Tablo 1 incelendiğinde Türkiye genelinde sadece eşler ve çocuklardan oluşan çekirdek ailelerdeki en düşük sayı 9.851 ile 2006 yılındadır. İlerleyen yıllarda bu sayılarda düzenli bir şekilde artış gözlemlenmesine de genel olarak yıllar bazında bir artış olduğu görülmektedir. 2021 yılı ise en yüksek aile sayısının olduğu yıldır.

Şekil 2: 2006-2021 Yıllarındaki Hanehalkı Sayıları-Sütun Grafiği

Şekil 3: 2006-2021 Yıllarındaki Hanehalkı Sayıları-Çizgi Grafiği

Şekil 2 ve Şekil 3’deki grafikler incelendiğinde 2007-2016 yılları arasında eşler ve çocuklardan oluşan hanehalkı sayıları birbirine yakın seviyelerdedir. Bu yıllar arasında sadece 2013 yılında bir artış meydana gelmiştir. Genel olarak ise bu sayıların 2014 yılından 2021 yılına kadar bir artış trendinde olduğu görülmektedir. Ayrıca hanehalkı sayılarının en düşük olduğu yıl 2006 yılı olup en yüksek olduğu yıl ise 2021 yılıdır.

5. TÜRKİYE’DE HANEHALKI KULLANILABİLİR GELİRİN DAĞILIMI

Tablo 2 Türkiye’de 2006-2021 yılları arasındaki dönemde hanehalkı kullanılabılır gelirin dağılımını göstermektedir. Veriler TÜİK’ten elde edilmiştir. Buradaki hanehalkı kullanılabılır gelirin dağılımı ortalama Türk Lirası (TL) olarak gösterilmektedir. Hanehalkı tipi ise çekirdek aile şeklindedir. Bu veriler doğrultusunda SPSS paket programı ile Şekil 2 ve Şekil 3’deki grafikler oluşturulmuştur.

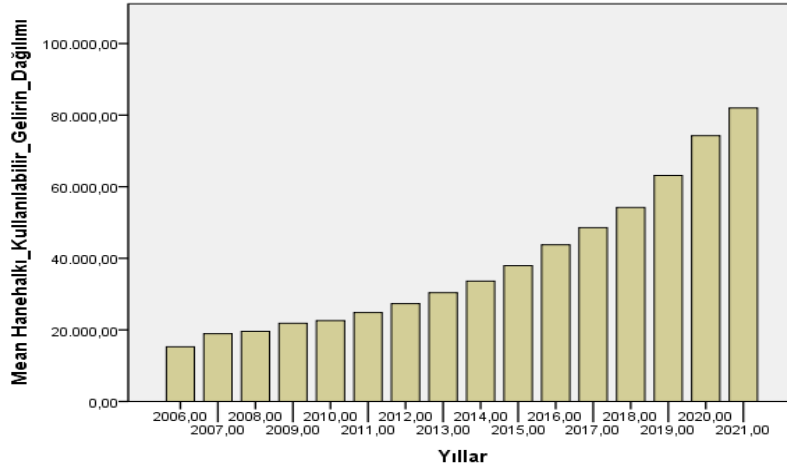

Tablo 2: Türkiye’deki Hanehalkı Kullanılabılır Gelirin Dağılımı

Yıllar	Yıllık Hanehalkı Kullanılabılır Gelirin Dağılımı (ortalama TL)
2006	15283
2007	18942
2008	19599
2009	21830
2010	22574
2011	24830
2012	27340
2013	30389
2014	33616
2015	37930
2016	43777
2017	48557
2018	54179
2019	63129
2020	74274
2021	81999

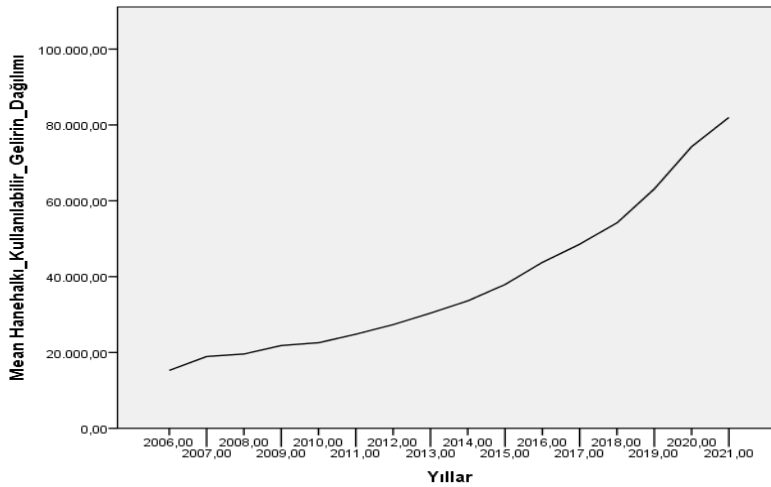

Kaynak: TÜİK, 2006-2021 Yılları Arası Yıllık Hanehalkı Kullanılabılır Gelir Dağılımı (<https://www.tuik.gov.tr/>)

Tablo 2 incelendiğinde Türkiye genelinde sadece eşler ve çocuklardan oluşan çekirdek ailelerdeki yıllık hanehalkı kullanılabılır gelirin en düşük olduğu yıl ortalama 15283 TL ile 2006 yılıdır. 2006’dan 2021 yılına doğru ilerledikçe yıllık ortalama gelirden düzenli bir şekilde artış olduğu görülmektedir. 2021 yılı itibarıyla ise ortalama gelir 81999 seviyelerine ulaşmıştır.

Şekil 4: 2006-2021 Yıllarındaki Hanehalkı Kullanılabilir Gelirin Dağılımı-Sütun Grafiği

Şekil 5: 2006-2021 Yıllarındaki Hanehalkı Kullanılabilir Gelirin Dağılımı-Çizgi Grafiği

Şekil 4 ve Şekil 5’deki grafikler incelendiğinde hanehalkı kullanılabilir gelirin dağılımı (ortalama, TL) yıllar bazında sürekli bir artış trendi içerisinde. 2015 yılından sonra daha belirgin artışlar olduğu görülmektedir. En belirgin artış ise 2019 yılından 2020 yılına doğru geçen sürede ortaya çıkmıştır.

6. GİNİ KATSAYISININ YILLAR İÇERİSİNDEKİ DEĞİŞİMİ

Gelir eşitsizliği ülkelerin sıklıkla karşılaştığı ekonomik sorunlar arasında yer almakta ve bu ekonomik sorundan diğer ülkeler gibi Türkiye de oldukça fazla etkilenmektedir. Gelir eşitsizliğinin belirlenmesinde en yaygın olarak kullanılan ölçütlerden biri Gini katsayısıdır. Tablo 3 Türkiye’de 2006-2021 yılları arasındaki dönemde Gini katsayısının yıllara göre dağılımını göstermektedir. Veriler TÜİK’ten elde edilmiştir. Bu veriler doğrultusunda SPSS paket programı ile Şekil 6 ve Şekil 7’deki grafikler oluşturulmuştur.

Tablo 3: Türkiye’de Yıllar Bazında Gini Katsayıları

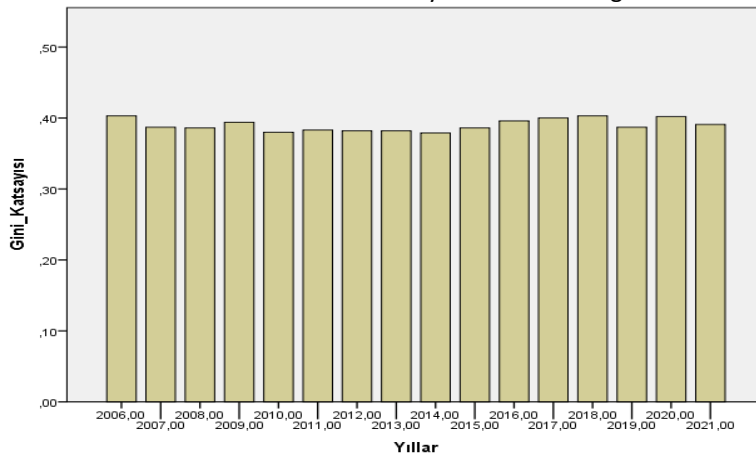

Yıllar	Gini Katsayısı
2006	0,403
2007	0,387
2008	0,386
2009	0,394
2010	0,38
2011	0,383
2012	0,382

2013	0,382
2014	0,379
2015	0,386
2016	0,396
2017	0,4
2018	0,403
2019	0,387
2020	0,402
2021	0,391

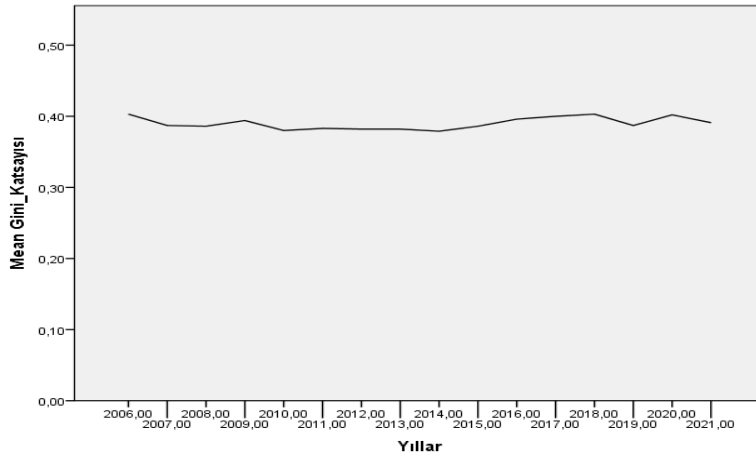

Kaynak: TÜİK, 2006-2021 Yılları Arası Gini Katsayıları (<https://www.tuik.gov.tr/>)

Tablo 3 incelendiğinde Türkiye’de yıllar bazında Gini katsayısının en düşük olduğu yıl 0,379 ile 2014 yılıdır. En yüksek olduğu yıllar ise 0,403 ile 2006 ve 2018 yıllarıdır. Yıllar geneline bakıldığında Gini katsayılarının 0,38-0,40 düzeylerinde seyrettiği görülmektedir.

Şekil 6: 2006-2021 Yıllarındaki Gini Katsayıları-Sütun Grafiği

Şekil 7: 2006-2021 Yıllarındaki Gini Katsayıları-Çizgi Grafiği

Şekil 6 ve Şekil 7’deki grafikler incelendiğinde Türkiye’de 2006-2021 yılları arasında diğer yıllara kıyasla Gini katsayısının en düşük olduğu yıl 2014 yılıdır. 2006 ve 2018 yıllarında ise yine diğer yıllara kıyasla katsayılar bir yükselme olduğu gözlemlenmektedir. Genellikle 2006-2021 yıllarında Gini katsayısının 0,37-0,40 seviyelerinde olduğu görülmektedir. Gini katsayısı 0 ile 1 arasında değerler alıp, gelir eşitsizliği 0’a yaklaştığında azalırken, 1’e yaklaştığında artmaktadır. Bu durumda gelir dağılımındaki adaletsizliğin diğer yıllara kıyasla 2014 yılında en düşük, 2006 ve 2018 yıllarında ise en yüksek seviyelerde olduğu görülmektedir.

7. SONUÇ

Gelir eşitsizliği ülkelerin sıklıkla karşılaştığı ekonomik problemler arasında yer almaktadır. Bu durum sadece az gelişmiş ve gelişmekte olan ülkelerin değil gelişmiş ülkelerin de karşılaştığı ekonomik bir sorundur. Gelirin bireyler, hanehalkları, gruplar, bölgeler ve üretim faktörleri arasındaki dağılımında oluşan bu adaletsizlik gelir eşitsizliğinin artmasına yol açarak ülkelerin refah seviyelerine ve kalkınma derecelerine doğrudan etki edebilmektedir.

Bir ülkede gelir dağılımının adil olmaması zaman içerisinde gelir eşitsizliğinin giderek artmasına yol açmaktadır. Toplum içerisinde bir kesimin yaşam düzeyi oldukça yüksek seviyelerde seyrederken, diğer kesimin yaşam düzeyinin düşük seviyelerde seyretmesi gelir eşitsizliğinin ortaya çıkardığı sonuçlardan biridir. Bu durum bireyleri sadece ekonomik olarak etkilemekle sınırlı kalmayıp sosyal hayatları içerisindeki dengeleri de olumsuz yönde etkileyebilmektedir. Dünya genelinde yaygın olarak gözlemlenen bu ekonomik sorundan diğer ülkeler gibi Türkiye de etkilenmektedir.

Gelir eşitsizliğini belirlemek için Lorenz eğrisi, Gini katsayısı, yüzde paylar analiz yöntemi gibi ölçme teknikleri kullanılmaktadır. Gini katsayısı gelir eşitsizliğini ölçmede yaygın olarak kullanılan yöntemlerden biri olup, 0 ile 1 arasında değer almaktadır. Katsayı 1'e yaklaştığında yoksul ve zengin arasındaki gelir dağılımı adaletsizliği artarken, 0'a yaklaştığında ise gelir dağılımı adaletsizliği azalmaktadır. Bu çalışmada Gini katsayılarının Türkiye'de yıllar bazında nasıl bir düzeyde seyrettiği tablo ve grafiklerle incelenmiştir. Bununla birlikte hanehalkı sayıları ve hanehalkı kullanılabilir gelirleri yine tablo ve grafiklerle ele alınmıştır. Türkiye'de 2006-2021 yılları arasında diğer yıllara kıyasla Gini katsayısının en düşük olduğu yıl 2014 yılıdır. 2006 ve 2018 yıllarında ise yine diğer yıllara kıyasla katsayılar da bir yükselme meydana gelmiştir. Böylece bu yıllarda ülke ekonomisinde gelir eşitsizliği bir sorun olarak daha fazla boy göstermiştir. 2014 yılında ise Gini katsayısı 0'a biraz daha yaklaştığı için diğer yıllara kıyasla bu dönemde gelir eşitsizliğinin daha düşük olduğu söylenebilmektedir. Bahsi geçen bu 16 yıllık dönemde Gini katsayısı 0,37-0,40 seviyelerindedir. Böylece Türkiye'de genel olarak gelir eşitsizliğinin 2006 yılından 2021 yılına kadar çok düşük seviyelerde olmadığını söylemek mümkündür.

Rumeli ve Balkanlardan Türkiye Cumhuriyetine yapılan Göçler ve Bu Göçlere İlişkin 2020 yılı Nüfus Büyüme Tahminleri (Demografik Tahminler)

Prof. Dr. Necdet TEKİN¹

¹Emekli Öğretim Üyesi (Matematik-İstatistik), necdettekin@yahoo.com, ORCID: TK475486

Özet: Çalışmada, 1923 yılı öncesi ve sonrası istatistiksel yöntemler kullanılarak Yugoslavya, Yunanistan, Bulgaristan ve Romanya'dan gelen göçmenlerin sayılarına ilişkin nüfus tahmininin yapılması amaçlanmıştır. Araştırmada, Rumeli ve Balkanlardan Türkiye'ye göç eden göçmen nüfusun yıllar bazında artışının yıllık nüfus artış oranları kullanılarak beklenen değeri hesaplanmıştır.

Göçmen sayısı bakımından yerli ve yabancı tarihçiler arasında veya göç edilen ülke (devlet kayıtları veya o ülkenin tarihçileri) ile Türkiye'deki kayıtlar arasında ciddi sayısal farklılıklarla karşılaşmıştır. Bu farklılıkların kabul edilebilir düzeyde olmadığı durumlarda, göçmen sayılarındaki büyük değişkenlik, kaynağın güvenilirliği açısından dikkate alınmamıştır.

Göçmen sayıları belirli yıllar arasındaki göç miktarı olarak verilmektedir. Örneğin, bazı veriler farklı kaynaklarda (1935-49) arası göçmen sayısı ve (1940-1950 arası göçmen sayısı) iç içe geçmiş olarak verilmektedir. Bu zorluk değerlendirilerek hata payı azaltılmış ve yıllık göçmen sayısı tarafımızca hesaplanmıştır. Yıllar aralığında verilen göçmen sayısı yıllara eşit dağıtılarak kullanılmıştır.

Araştırmada öncelikle 1923'ten önce gelenlerin ham verileri, hiç bir değişiklik yapılmadan sıfır büyüme hızı ile 1923'e getirilmiş; bu verilere "Model A" uygulanarak minimum büyüme tahminleri hesaplanmıştır. Daha sonra, 1923'ten önce gelenlerin verilerine yıllık bazda, her bir veri için TÜİK tarafından verilen "En Küçük Büyüme Oranı" olan yıllık %055'lik büyüme oranı uygulanarak 1923'e getirilmiş; sonra bu verilere de Model A uygulanarak maksimum büyüme tahminleri hesaplanmıştır.

Yapılan araştırma sonucunda; 2020 yılı için, Rumeli ve Balkanlardan Türkiye'ye (Anadolu'ya) gelen göçmenlerin toplam nüfus sayısının en fazla 31.911.878, en az 27.641.388 olabileceği tahmin edilmiştir.

1. GİRİŞ

Bu istatistiksel çalışma, RUBASAM (Rumeli Balkan Stratejik Araştırmalar Merkezi) adına yapılan bir nüfus tahmin araştırmasıdır. Rumeli ve Balkanlardan Anadolu (Türkiye) topraklarına 1923 Cumhuriyet öncesi ve sonrası yapılan göçlerdeki göçmen sayılarının 2020 yılına kadar ulaştığı büyümenin tahminini (Kestirimini) amaçlamaktadır.

Bu araştırma aynı zamanda; belli yıllarda Türkiye sınırları içine göç eden nüfusun, istenen yıllarda, ulaşabileceği nüfus sayısının beklenen değerinin (büyümesinin) hesaplanması ve bulunmasını da içerir.

Bu çalışma, yıl bazında hazırlanan göçmen sayısı dizilerine, o yıla ilişkin nüfus büyüme oranlarının "Kümülatif" yığılımlı olarak uygulandığı bir *Nüfus Tahmin Modeli (Demografi)* çalışmasıdır. Çalışmamız üç bölümden oluşmaktadır.

- Birinci bölümde 1923 yılı ve sonrası tahminler yapılmıştır.
- İkinci bölümde 1923 öncesi (Osmanlı Dönemi) tahminler yapılmıştır.
- Üçüncü bölümde ise; 1923 öncesi ve sonrası tahminler birleştirilerek toplam tahminler hesaplanmıştır.

2. ULUS DEVLET YARATMAK

Kurtuluş Savaşından sonra Genç Cumhuriyet, pek çok sorunla karşı karşıya kaldı. Bu sorunlardan en önemlisi bir "**Ulus - Devlet**" yaratmaktı.

1923 öncesi 1877-1878 Rus Savaşı, 1912-1913 Balkan Harbi, 1914-1918 Birinci Dünya Savaşı gibi pek çok savaşlar sonucunda Rumeli ve Balkanlardaki SOYKIRIMDAN kurtulabilen Türk nüfusu, perişan halde ya göç etmiş ya da durum düzeler inancı ile bu diyarlarda kalmayı tercih etmiştir.

Kurtuluş Savaşı sonunda kurulan Yeni Türkiye Cumhuriyeti, Anadolu'nun nüfusunun alabildiğine azalmış durumu ile karşılaştı. Dahası, Anadolu'nun nüfusu yorgun, yaşlı ve çeşitli hastalıklardan dolayı da üretken olmaktan çok uzaktı.

Ülkenin geleceği için nüfusa ihtiyaç vardı.

Cumhuriyeti kuranlar, bu ilkedan hareketle Türk Soylu olmak, Türklük Bilinci taşımak ve Türk Kültürüne bağlı olmak şartıyla Balkanlar'dan ve Rumeli'den göçleri özellikle desteklediler ve özendirdiler.

Bu koşulları taşıyanlar nereden gelirlerse gelsinler, Türkiye'ye "GÖÇMEN" olarak kabul edilecekler, desteklenecekler ve "EŞİT VATANDAŞ" olarak saygı görecektlerdi.

Balkanlar'da ve Rumeli' de yeni kurulmuş devletlerin Milliyetçilik hareketleri yoluyla, Türk ve Müslümanlara uyguladıkları yok etme ve yıllarca yaşadıkları topraklardan sürme baskıları da yeni Cumhuriyete Ulus -Devlet oluşturmada yardımcı oldu.

Başta Mustafa Kemal Atatürk olmak üzere, Türkiye Cumhuriyetini kuranlar Anadolu'ya seyahatlerinde (Gezilerindeki Beyanatlarında) Türkiye'ye Türk göçlerini desteklemek ve kolaylaştırmak için yurt çapında konuşmalar yaptılar ve TBMM de göçleri destekleyen önemli yasalar çıkardılar.

Anadolu'ya göçler konusunda Atatürk, Türkiye Cumhuriyeti Hükümeti'nin göçlere ilişkin demografik beklenti ve niyetlerini;

*" Memleketin Nüfusu şayan-ı teessüf bir derecededir. Zannederim ki bütün Anadolu halkı sekiz milyonu geçmez.... Şimdi biz bunu telafi etmek istiyoruz.. hudud-u milliye haricinde kalan aynı ırk ve harstan olan anası da getirmek ve onlara da müreffeh bir hayat sağlamak lazımdır... * "...Eğer*

Rusya'dan da getirmek mümkün olursa oradan da getireceğiz..... "Fakat bence Garbi Trakya'dan Kâmilan Türkleri nakletmek lazımdır.()*

İfadeleri ile Genç Cumhuriyetin "ULUS-DEVLET " olma ve "ULUS – YARATMA " hedefini ortaya koymuştur. Bu politikaların sonucunda 1923 ve sonrasında Balkanlar ve Rumeli'den Anadolu'ya Türk göçleri hızlanmıştır.

(*) Mustafa Kemal Atatürk'ün 1923 yılında yaptığı İzmit ve Eskişehir Nutuklarından (1),(2)

3. ARAŞTIRMA VE ADIMLARI

Çalışmamız 1923 yılı ve sonraki yıllarda Yugoslavya, Yunanistan, Bulgaristan ve Romanya'dan gelen göçmen sayıları üzerine istatistik yöntemler kullanılarak yapılan bir *Nüfus Tahmin (Demografi Modeli)* çalışmasıdır.

Çalışmamızda, göçlerin siyasi ve insani nedenleri ile savaş sonrası oluşan ortamlar, Devletlerarası ikili göç anlaşmaları, tek taraflı göçe zorunlu tutulmalar, kıyımlar ve tarihsel gelişmeler gibi konular üzerinde durulmamıştır.

- **İlk aşamada:** 1923 yılı esas alınarak 2019 yılı dahil (varsa) her yıl için; Türkiye'ye gelen göçmenlerin sayıları, ilgili kaynaklardan (kitap, makale, Sunum, yabancı arşiv bilgileri, TBMM ve Kurumların Arşiv kayıtları vs.)den alınmıştır. (Tablo:1,Tablo2,Tablo:3,Tablo:4 verileri birer istatistik serileri olarak değerlendirilecektir.)
- **İkinci aşamada:** Kaynaklarda yıl bazında verilmeyip "Yıl Aralıkları" şeklinde verilen göçmen sayıları, "Göç edenlerin sayısı aralıktaki yıl sayısına bölünerek "Yıl başına düşen göçmen sayıları " tarafımızdan hesaplanmıştır.
- **Üçüncü aşamada;** Kaynaklara göre Türkiye'ye gelen Göç'ün gelişi ve Göçmenlerin kaydı " Bir yılda tamamlandığı" ya da "En fazla bir buçuk yılda tamamlandığı" belirtilen göçlerin işlemleri tamamlandığı " yıl" içinde olduğu kabul edilerek değerlendirilmiştir.
- **Dördüncü aşamada:** Göç veren ülkelerdeki problemlerden dolayı, bazı yıllarda Türkiye'ye gelen göçmenler, yıl bazında çok düşük sayılarda olmuş, bu sayılar duruma göre ya aynen alınmış ya da toplamda 100 göçmeni geçmeyecek şekilde birleştirilmiş, elde edilen göçmen sayısı "bir yıla atanmış" ve o yılın göçmen sayısı olarak değerlendirilmiştir.

4. SAYISAL VERİLERİN OLUŞTURULMASI

Araştırmamızda sadece karşılaştığımız zorlukları değil, zorlukları nasıl giderdiğimizi ya da gideremediğimizi de paylaşmak isteriz.

- İstatistik araştırmalarda en kıymetli şey; sayısal veriler ve onların doğruluk dereceleridir. Sayısal veri dizilerinin (setlerinin/serilerinin) doğruluğu tartışılır ise, kuracağınız model ve yapılacak hesaplamalar ne kadar iyi olursa olsun araştırma istenen sonuçları vermez, alınan sonuçların (tahminlerin) hata payı tartışılır olur.
- Göçmen sayıları konusunda, Yerli ve Yabancı Tarihçilerin arasında veya göçü veren ülke (devlet kayıtları ya da o ülkenin tarihçilerinde) ile Türkiye'deki kayıtlar arasında ciddi sayısal farklılıklarla karşılaşmıştır. Bu farklılıkların kabul edilir oranda olmaması durumlarında, kaynak güvenilirliğine bakılarak, büyük farklılık gösteren göçmen sayılarını dikkate almadık.
- Göçmen sayıları genellikle belli yıllar arasında gelen göçlerin miktarları olarak verilmiştir. Örneğin bazı veriler farklı kaynaklarda (1935-49 arası göçmen sayısı) ile (1940-1950 arası göçmen sayısı) gibi iç içe geçmiş şekilde verilmiştir. Bu zorluk değerlendirilerek, hata payı indirgenmiş ve yıllık göçmen sayıları tarafımızdan hesaplanmıştır.
- Yıllar aralığında verilen göçmen sayıları yıllara eşit dağıtılarak kullanılmıştır.

(*) Tarafımızdan yapılan "Kabuller" tablolarında koyu (bold) olarak belirtilmiştir.

Göçmen Sayılarına İlişkin Tablolar

Tablo 1: 1923-2020 Döneminde Yugoslavya-Makedonya'dan Gelen Göçmenler

Yugoslavya'dan Gelen Göçmenler		Yugoslavya'dan Gelen Göçmenler	
Yıllar		Yıllar	
1923	11.130	1970	11.291
1924	11.130	1971	2.754
1925	11.130	1972	1.156

1938	20.542	1978	35
1939	27.769	1989	225.863
1940	17.004	1990	52.643
1941	13.803	1991	17.950
1942	2.672	1992	3.092
1943	1.145	1994	438

Tablo 3: 1923-2020 Döneminde Romanya’dan Gelen Göçmenler

Yıl	Romanya’dan Gelen Göçmenler
1923	10.000
1925	18.000
1926	26.000
1930	7.321
1936	61.570

1991	15.000
Tablo 4: 1923-2020 Döneminde Yunanistan'dan Gelen Göçmenler (Mübadele)	
Yıl	Yunanistan'dan Gelen Göçmenler
1923	60.000
1924	196.000
1925	200.000
1934	10.000
1935	10.000
1937	11.788
1941	30.000

5. HESAPLAMALARDA KULLANILAN YÖNTEM

Kullanılan Yöntem: Her bir yıla atanan göçmen sayısı, hiçbir değişiklik yapılmadan ilk (n=0) yıl için BAĞIMSIZ GÖÇMEN NÜFUS'u olarak alınmıştır.

İlk yılın BAĞIMSIZ GÖÇMEN NÜFUS SAYISI ait olduğu yılın BÜYÜME ORANI (HIZI) ile çarpılarak YILLIK BAĞIMSIZ GÖÇMEN SAYISI ARTIŞI bulunmuştur.

Bu artış miktarı ilk yıldaki BAĞIMSIZ GÖÇMEN NÜFUSU'NA EKLENEREK,

İKİNCİ YILIN GÖÇMEN SAYISI hesaplanmıştır. Aynı işlem tekrar ikinci yıl için yapılarak üçüncü yıl tahmini, üçüncü yıla uygulanarak dördüncü yıl tahmini,..... 2019 yılına da uygulanarak da 2020 yılı Kümülatif Büyüme Tahmini hesaplanmıştır.

Matematiksel olarak;

N(n): n. Yıldaki Göçmen Nüfusu

H(n): n. Yıldaki Nüfus Artışını (%)

M(n)=	N(n)	x	H(n)
N(n+i)=	N(n)	+	M(n)
n=			0,1,2,3,.....n
i= 1,2,3,.....			

6. BÜYÜME MODELLERİ

Bu Demografi Çalışmamızda Model A ile adlandıracağımız model esas model olarak alınmıştır. Model A, 1923 sonrasına ilişkin (koşulları ve matematiksel yapısını bir önceki sayfada verdiğimiz) göçmen sayılarını (dizilerini) kullanarak tahminler yaptığımız modeldir.

Modellerimizde, 1927 yılından sonraki Yıllık Büyüme Hızları (Oranları) TÜİK'in verdiği değerler esas alınarak kullanılmıştır. (Tablo: 5)

1923 yılında Türkiye'nin nüfus sayısına ait net bir bilgiye ulaşılammıştır. Çünkü Cumhuriyetin ilk nüfus sayımı 1927 yılında yapılmıştır.

Ancak, başta Mustafa Kemal Atatürk olmak üzere, devlet yöneticilerinin konuşmalarında, Basında, TBMM konuşma tutanaklarında, Nutuk'ta, 1923 yılındaki nüfusun SEKİZ MİLYON olduğu belirtilmektedir.

Biz de çalışmamızda 1923 Yılı Türkiye'nin Nüfus Miktarını Sekiz Milyon olarak aldık.

Bilindiği gibi Türkiye Cumhuriyeti 1927 yılında ilk nüfus sayımını gerçekleştirmiştir.

1927 Nüfus sayımında Türkiye'nin Nüfusu: 13 milyon 648 bin 270 olarak bulunmuştur. 1923 yılı Türkiye'nin nüfusu ile 1927 yılı Türkiye'nin nüfusu arasındaki fark;

5 milyon 648 bin 270 tir.

Bu fark sadece dört yılda oluşmuş bir nüfus farkıdır. Yıl başına oluşan ortalama nüfus artışı: 1milyon 412 bin 068 dir.

1923 dâhil 1927 yılının sonuna kadar, Balkan ve Rumeli'den göçlerin dışında da Genç Türkiye Cumhuriyetine yoğun göçlerin olduğunu biliyoruz. Araştırmamız sadece Rumeli ve Balkanlar'dan gelen göçmenlerle ilgili olduğundan, diğer göçlerin nerelerden ve ne kadar göçmen sayısını içerdikleri araştırmamızın alanı dışında tutulmuştur.

TÜİK (1923-1927 dâhil) arasındaki yıllara ilişkin büyüme oranlarını verememektedir. Bu durum araştırmamız için BÜYÜK BİR PROBLEM oluşturmuştur.

Bu problemi gidermek için, (1923-1927 dâhil) sadece bu aralıktaki DÖRT YIL İÇİN FARKLI BİR büyüme oranı kullanmayı düşündük. Bu nedenle TÜİK'in yıllık büyüme oranı hesaplama yöntemini kullanarak 1923-1927 yılı aralığındaki yıllar için büyüme oranını biz hesapladık. Hesabımız sonucunda bu yıllara ilişkin nüfusun YILLIK BÜYÜME ORANINI %14. 287 olarak bulduk. **Bu oran yıllık Nüfus Büyümesi için kullanılamaz.**

Bu YÜKSEK BÜYÜME HIZI bilgisinden hareketle, 1923-1927 aralığındaki büyümenin “kabul edilebilir” yıllık nüfus büyümesinden gelmediği ortaya çıktı.

Bu aralıkta Yeni Cumhuriyete büyük göçler gelmişti. Demografi biliminde bu oranda nüfus artış hızı yoktur. Biz de bu büyüme hızlarını modelimizde kullanmadık.

Modelimiz, yıllık göçmen sayıları dizisi ve *Yıllık Büyüme Hızlarına* dayanan bir modeldir. 1923-1927 aralığı için, TÜİK'in Türkiye için hesapladığı Büyüme Hızları içerisindeki en büyük büyüme oranını (%3.06)'yı - sadece bu aralıktaki dört yıl için - Modelimizde kullanmaya karar verdik. 1923-1927 arası yıllar için %3.06 yı, diğer yıllar için TÜİK'in verdiği resmi büyüme hızlarını modelimizde MODEL (A)'da kullandık.

Model A'nın çıktıları için ayrıntılı bilgi için (<https://www.rubasam.com/wp-content/uploads/2022/05/3.06-LI-MODEL-GOCLER-DEMOGRAFI.xlsx>) linkindeki dosyaya bakınız.

Ayrıca Model A'nın seçilmiş bazı yıllar için (örnek çıktıları) Tablo: 6 da verilmiştir.

7. 1923 YILI ÖNCESİ BALKANLAR VE RUMELİ 'DEN (ANADOLU'YA) TÜRKİYE'YE GÖÇLERDEKİ GÖÇMEN SAYILARININ TAHMİNLERİ (*)

Rumeli'den Gelen Göçmen Sayıları (Tahmini) :

1919-1923 68.875 (1)

1913-1923 200.000, (4)

1912-1923 (sancaktan) 97.000 (2)

Bosna, Sancak, Makedonya'dan Toplam 365.875 Göçmen

1879-1918 (Boşnak Göçü) 120.000-150.000 (2),(3)

1912-1913 Balkan Savaşı sonrası 65.000 Yunanistan'dan (3)

Rumeli'den 1923 (Cumhuriyet) öncesi gelen göçmenlerin tahmini **Toplam Sayısı: 580.875**

Balkanlar'dan Gelen Göçmen Sayıları (Tahmini):

1812 Romanya'dan 200.000 göçmen. (5)

1893-1902 Anlaşma ile Bulgaristan'dan 124.500 göçmen. (6)

1912-1913 Balkan Savaşlarından sonra Balkanlardan 640.000 Göçmen (7)

1878-1879 Osmanlı Rus Savaşından sonra Anadolu'ya 845.861 /850.000 göçmen. (8)

1806-1812 Balkanlardan 140.000 Türk İstanbul yolu ile ANADOLU'ya (9)

Balkanlar'dan 1923 (Cumhuriyet) öncesi gelen göçmenlerin

Toplam Sayısı: 1.954.500

Rumeli ve Balkanlar'dan gelen Toplam Tahmini Göçmen Sayısı:

580.873 +1.954.500 = 2milyon 535 bin 373

1923 öncesi yıllara yönelik Göçmen Sayıları dizisi (dizileri) maalesef sağlıklı bir şekilde oluşturulamamıştır. Hatta yerli ve yabancı Tarihçiler 1923 öncesi Anadolu'ya gelen Göçmenlerin "Kesin Sayısı" bilinmemektedir demektedir (3).

1923 öncesi Göçmen sayıları için, Tarihçilerin Rumeli ve Balkan ülkeleri (Yugoslavya- Kosova, Bosna, Sancak, Makedonya- Bulgaristan, Yunanistan ve Romanya) için verdiği; Anadolu'ya Gelen Göçlerdeki Göçmen sayıları taranmış, "ortak ve kabul edilebilir " minimum değerler tespit edilmeye çalışılmıştır.

Birinci olarak "Ortak ve kabul edilebilir" minimum göçmen sayılarına, hiçbir işlem yapılmaksızın (ham olarak) , 1923 yılında Türkiye'ye giriş yaptıkları kabul edilmiştir. (Yani; Cumhuriyet Öncesi Anadolu'ya geldiği tahmin edilen göçmen sayılarına, önceki yıllar için, bir büyüme hızı ile değerlendirme yapılmamıştır.)

Bu göçmen sayıları 1923 yılından itibaren ilk dört yıl için (%3.06) büyüme hızı ile 1928-2020 için de TÜİK'in Resmi yıllık büyüme hızları kullanılmış ve böylece 1923 Sonrası (Cumhuriyet Döneminde) Türkiye'ye (Anadolu Topraklarına gelen) Göçmen sayısının Kümülatif (Yığılımlı) Büyüme tahminleri hesaplanmıştır. Bu ANA MODELİMİZİ;

(A) olarak adlandırmıştık.

Balkanlar ve Rumeli'den 1923 öncesi (Cumhuriyet Öncesi- Osmanlı Döneminde) Anadolu topraklarına göç edenlerin ham verilerini kullanarak 2020 yılı için büyüme tahminlerini de (A1) Olarak adlandırdık. Buna göre;

1923 sonrası gelen göçmenlerin 2020 için (Minimum) büyüme tahmini:

Model (A) =8 Milyon. 464 bin 016

1923 Öncesi gelen Göçmenlerin 2020 için ham verilerle yapılan (minimum) büyüme tahmini: Model (A1) =19 Milyon 177 Bin 372

Bu iki değer Toplamı: 2020 için Balkan ve Rumeli'den Türkiye'ye gelen Göçmenlerin Toplam sayısının (minimum) tahminini verecektir. Bu da;

(A)+(A1) =27 milyon 641 bin 388 minimum Toplam Göçmen sayısı olarak hesaplanmıştır.

Aynı şekilde, kaynaklardan maksimum değerler için MODELİMİZ (A2) dir.

MODEL (A2) için;

1923 öncesi gelenlerin ham verilerini, göçün başladığı yılı esas alarak her bir veri için yıllar bazında TÜİK' in verdiği "en küçük büyüme hızı" olan %05,5 (binde 5,5) yıllık büyüme hızı ile 1923 yılına kadar yıllar bazında hesapladık.

MODEL (A2) de 2023 yılına kadar Türkiye'ye (Anadolu'ya) giriş yapan (gelen) Toplam (Maksimum) göçmen sayısı;

Rumeli'den: 644 Bin 671

Balkanlar'dan: 2 Milyon 547 Bin 563

TOPLAM: 3 Milyon 192 Bin 234

olarak hesaplanmıştır. (bkz: <https://www.rubasam.com/wp-content/uploads/2022/05/Cumhuriyet-Oncesi-Gocmen-Sayilari-055-Buyume-hizi-ile.xlsx>)

1923 sonrası gelen göçmenlerin 2020 için büyüme tahmini ise,

(A) = 8 Milyon. 464 Bin 016

1923 öncesi gelen göçmenlerin 2020 yılı için Maksimum büyüme tahmini MODEL A (%3.06) kullanılarak; (A2) = 23 Milyon 447 Bin 862 hesaplanmıştır.

Bu iki değer Toplamı: 2020 yılı için Balkanlar ve Rumeli'den Türkiye'ye gelen Göçmenlerin sayısının Toplam Maksimum tahminini ise;

(A) +(A2) = 31 milyon 911 Bin 878 olarak hesaplanmıştır.

Bu bölümü, kısaca özetleyecek olursak;

Rumeli ve Balkanlardan Türkiye'ye (Anadolu Topraklarına) Göç eden göçmenlerin 2020 yılı için;

Toplam Minimum Göçmen Sayısı Tahmini: 27 milyon 641 bin 388 kişi,

Toplam Maksimum Göçmen Sayısı Tahmini; 31 Milyon 911 Bin 568 olarak bulunmuştur.

Tablo 5: Türkiye Nüfusu ve Nüfus Artış Oranları (%)

Yıl	Türkiye Nüfusu	Türkiye Yıllık Nüfus Artış (%) (TÜİK Resmi Büyüme Hızları)
1923	8.000.000	-
1927	13.648.270	-
1935	16.158.018	2,29
1940	17.820.950	2,05

8. SONUÇ

Araştırmamızda, uzun ve karışık gibi algılanabilecek aşamaları ve vardığımız sonuçları özetlersek; Rumeli ve Balkanlardan Türkiye'ye (Anadolu'ya) gelen Göçmenlerin 2020 yılı için Ulaşabileceği Toplam Nüfus sayısı;

Maksimum t-yaklaşık – 32 milyon,

Minimum yaklaşık – 27 milyon 650 bindir.

Kısaca;

- Rumeli’den Anadolu’ya Göçlerin Demografik Analizlerinde ilk yaptığımız; 1923 Cumhuriyet döneminde Anadolu’ya yapılan göçlerin 1920 yılı için “Yıllar Bazında” büyüme tahminleridir. Bakınız : (<https://www.rubasam.com/wp-content/uploads/2022/05/3.06-LI-MODEL-GOCLER-DEMOGRAFI.xlsx>)
- İkinci olarak, 1923 öncesi (Osmanlı Döneminde) Anadolu topraklarına olan (bulabildiğimiz kadar) göçlerin göçmen sayılarının 1923’e kadar olan büyüme tahminleridir. Bakınız : (<https://www.rubasam.com/wp-content/uploads/2022/05/Cumhuriyet-Oncesi-Gocmen-Sayilari-055-Buyume-hizi-ile.xlsx>)
- Üçüncü adımda ise, 1923 öncesi göçmen sayıları için, Model A(2) kullanılarak 2020 yılı için Kümülatif Büyüme tahminlerinin hesaplanmasıdır.
- Son adımda da 1923 öncesi ve 1923 sonrası bulunan tahmin değerlerinin toplanması ile Rumeli ve Balkanlar’dan Anadolu’ya Göçmen olarak gelenlerin Toplam olarak ulaşacağı Maksimum ve Minimum sayılarının bulunmasıdır.

Göçmen sayılarının ve yıllarının doğrulukla bulunamaması, istatistiki sayı dizilerinin düzenlenmesi, tespiti ve Göçmen sayıları konusunda çelişkili bilgilerin olması bizi kısıtlamıştır.

Modelimiz Matematiksel ve İstatistiksel olarak basit ve sadece iki değişkenli bir büyüme modelidir.

Birinci değişkenimiz, “Nüfusun Yıllar Bazında Büyüme Hızlarıdır “ ; bu veriler de TÜİK’ten alınmış Resmi verilerdir.

İkinci değişkenimiz ise; Yıl bazında (tespit edebildiğimiz, bulabildiğimiz) göçmen sayılarından oluşan istatistik sayı dizileridir.

Bilimsel Model Çalışmalarında bazen araştırmacılar bazı kabuller yapmak zorunda kalırlar.

Biz de Modelimizde kullandığımız verilerin düzenlenmesinde ve büyüme hızlarının bilinmediği (TÜİK tarafından verilmediği) Göçmenlerin göç işlemini tamamladığı yılların tespit edilemediği gibi bazı durumlar için mutlaka nedenini de açıklayarak bazı kabuller yaptık. Bu bilimsel Model kullanmanın doğal sonucudur.

Her İstatistik araştırmasında olduğu gibi, çıktıların (çeşitli nedenler oluşan) hata payları da vardır. Bizim çalışmamızda modelden kaynaklanan hata payı oldukça küçüktür (% 01). Bu da sayıların altı basamaktan sonrasının yuvarlanmasından oluşan hata payıdır.

Hata varsa; verilerin net olarak kaynaklarda bulunamaması ya da net olarak tespit edilememesinden oluşmuştur. Bunu da ölçümlemek, ya da kestirmek bu çalışmamızda mümkün olmamıştır.

Çalıştığımız tarihsel dönemler, göçlerin olağan üstü koşulları, savaşlar, sürgünler, kıyımlar ve ölümlerin yoğun olduğu dönemlerdir. Göçmen kayıtlarının zorlukla tutulabildiği ya da tutulmuş kayıtlara günümüzde ulaşamadığı dönemlerdir. Savaşlar sonunda kurulan yeni devletlerin kendi çıkarları için giden göçmen sayılarının çok abartıldığı ya da göçmenlerin yollarda yok olduğu dönemlerdedir.

Bütün bu zorluklar karşısında yapılan çalışmanın bilim merakı ile yapılmıştır. Yeni kayıtlar bulundukça araştırmacılar gerçeğe daha yakın sonuçlara ulaşabileceklerdir.

Kısa Gıda Tedarik Zincirlerinin Avantajları: Gelişmelerini Kısıtlayan Faktörler ve Öneriler

Prof. Dr. Nevin DEMİRBAŞ¹

¹ EÜ, Ziraat Fakültesi, Tarım Ekonomisi Bölümü, nevin.demirbas@ege.edu.tr, ORCID: 0000-0002-0541-1437

Özet: Küresel düzeyde etkileri tartışmasız olan COVID-19 Pandemisi ve ardından Ukrayna-Rusya Savaşı sırasında tarım ve gıda ürünlerinin nihai tüketicilere ulaştırılmasındaki darboğazlar, kısa gıda tedarik zincirlerinin önemine dikkat çekmeyi başarmıştır. Kısa gıda tedarik zincirleri üreticiler, işleyiciler ve tüketiciler arasındaki yakın coğrafi ve sosyal ilişkilerin yanı sıra yerel ekonomik iş birliği ve kalkınma faaliyetlerinde bulunan sınırlı sayıda ekonomik operatörü içeren bir tedarik zinciri modelidir. Bu tür gıda tedarik zincirleri küçük üreticilere ve sonuç olarak yerel topluluklara birçok ekonomik, sosyal, çevresel, sağlık ve kültürel avantajlar sağlamaktadır. Kısa gıda tedarik zincirlerinin çiftçiler tarafından yapılan “doğrudan satışlar”, “topluluk destekli tarım”, “kendin topla” ve “kutu sistemi” gibi farklı uygulama şekilleri bulunmaktadır. Birincil üreticilerin ve nihai tüketicilerin ihtiyaçlarını bütünlleştirerek, ara maliyetleri en aza indirmek amacıyla, etkili pazar erişimini sağlamak için birçok ülkede kısa gıda tedarik zincirleri uygulama örnekleri çoğalmaktadır. Nitekim, söz konusu yöntemlerin ve/veya benzerlerinin kullanılabilirliği kısa gıda tedarik zincirleri Avrupa Birliği'nde (AB) rekabet edebilirliği geliştirmeye yönelik Ortak Tarım Politikası yaklaşımlarından biri olarak kabul görmektedir. Üreticiler, tüketiciler ve kırsal alan açısından ekonomik, sosyal ve çevresel avantajları itibarıyla desteklenen ve diğer birçok ülke tarafından da teşvik edilen kısa gıda tedarik zincirlerinin bazı dezavantajlarının olduğu da tartışılmaktadır. Yapılan literatür araştırması tüketiciler açısından güvenilir çiftçi bulmada yaşanan zorluk, ürün çeşitliliğinde sınırlılık ve yüksek fiyatlar gibi unsurların üreticilerden doğrudan gıda tedarik etmenin önündeki engellerden bazıları olduğunu ortaya koymaktadır. Bu çalışmanın amacı, kısa gıda tedarik zincirlerinin avantajları ile bu tür gıda tedarik zincirlerinin gelişmelerinin önünde duran kısıtları değerlendirmek ve bu kısıtları aşmaya yönelik önerileri irdelemektir.

Anahtar Kelimeler: Kısa Gıda Tedarik Zincirleri, Alternatif Gıda Sistemleri, Yerel Gıda Sistemleri, Alternatif Gıda Ağları

Advantages of Short Food Supply Chains: Factors Restricting Their Development and Recommendations

Abstract: The bottlenecks in the delivery of agricultural and food products to final consumers during the COVID-19 Pandemic, whose effects are undisputed at the global level, and then the Ukraine-Russia War, have managed to draw attention to the importance of short food supply chains. Short food supply chains are a supply chain model that includes close geographical and social relationships between producers, processors and consumers, as well as a limited number of economic operators engaged in local economic cooperation and development activities. Such food supply chains provide many economic, social, environmental, health and cultural advantages to small producers and ultimately to local communities. There are different forms of short food supply chains, such as direct sales by farmers, “community-supported agriculture”, “U-Pick It” and “box schemes”. Application examples of short food supply chains are increasing in many countries to ensure effective market access by integrating the needs of primary producers and final consumers, minimizing intermediate costs. As a matter of fact, short food supply chains in which these methods and/or similar ones can be used are accepted as one of the Common Agricultural Policy approaches to improve competitiveness in the European Union (EU). It is also discussed that there are some disadvantages of short food supply chains, which are supported by economic, social and environmental benefits for producers, consumers and rural areas and encouraged by many other countries. Research shows that the difficulties in finding reliable farmer for consumers, limited product variety and high prices are some of the barriers to direct food supply from producers. The aim of this study is to evaluate the advantages of short food supply chains and the factors that limit the development of such food supply chains and to examine suggestions for these constraints.

Keywords: Short Food Supply Chains, Alternative Food Systems, Local Food Systems, Alternative Food Networks

1. GİRİŞ

Tekrarlanan finansal krizler, COVID-19 Pandemisi, tarım ürünleri ticaretini etkileyen savaşlar ve afetler, küresel uzun gıda tedarik zincirlerinin risklerini ve kırılganlıklarını çok net bir şekilde ortaya koymuştur. Dünyanın dört bir yanındaki hükümetler, gıda güvencesi için gıda tedarik zincirlerinin sürdürülebilirliği konusunda önlemler almaya çalışmaktadır. Gıda tedarik zincirlerinin halkalarını oluşturan tarımsal işletmeler (üreticiler), işleme birimleri, nakliyeciler, depolama hizmetleri ve perakende aşamalarında istihdam edilen işgücünün hareketliliği başta olmak üzere, diğer lojistik kısıtlar (FAO, 2020) gıda arzının nihai tüketicilere akışını zorlayabilmektedir. Son 15 yılda yaşanan küresel ve bölgesel darboğazlar hükümetleri ve bu arada birçok uluslararası kuruluşu gıda

tedarik zincirlerinin kırılganlığına karşı çözümler aramaya, prensipler belirlemeye ve alternatif gıda tedarik zincirlerini değerlendirmeye yönelmiştir. Bu arada tüketiciler küresel tarım-gıda sistemini sorgulamaya başlarken, üreticiler ise gelir baskısı nedeniyle tarımsal faaliyetlerini sürdürmede zorlanmaya başlamıştır. Çeşitli nedenlerle ortaya çıkan darboğazlar küresel ya da ulusal uzun gıda tedarik zincirlerine alternatif gıda sistem ve ağlarının ortaya çıkmasını desteklemiştir. Aslında, gıda güvenliği kaygısının motive ettiği organik gıda hareketi, yerel ve kısa gıda ağlarının gelişimini ve böylece Kısa Gıda Tedarik Zincirleri'ni (KGTZ) alternatif bir gıda tedarik zinciri modeli olarak gündeme taşıyalı uzun bir zaman olmuştur.

Uluslararası literatürde KGTZ'lerin ortak bir tanımı bulunmamakla birlikte, kavramın ortak bileşenlerini vurgulayan bir yaklaşımın ve kapsamın genel olarak kabul edildiği görülmektedir (Paciarotti and Torregiani, 2021; Benos et al., 2022; Tanasă et al., 2022). AB mevzuatında KGTZ'ler "iş birliğine, yerel ekonomik kalkınmaya ve üreticiler (çiftçiler), işleyiciler ve tüketiciler arasındaki yakın coğrafi ve sosyal ilişkilere kendini adanmış sınırlı sayıda ekonomik operatörü içeren bir tedarik zinciri" olarak tanımlanmaktadır (Official Journal, 2013). Bu tanım üye devletlerin kendi iç hukuklarında bazı esnekliklere göre ele alınarak uygulama prensipleri oluşturulabilse de söz konusu tanımın genel hatlarıyla KGTZ'lerin birçok bileşenini kapsadığı belirtilebilir.

KGTZ'leri tanımlayan en önemli unsur, araçların asgari düzeyde olması veya ideal olarak olmamasıdır (Kneafsey et al., 2013). Çiftçi pazarları, yol kenarı satışları, topluluk destekli tarım, kendin topla, kutu sistemi ile eve teslimatlar ve kooperatif mağazaları dahil olmak üzere çeşitli KGTZ türleri vardır. Literatürde bu tür perakende formatları (ör. çiftçi pazarları ve üreticiden doğrudan alımlar) alternatif gıda ağları, alternatif dağıtım kanalları veya alternatif gıda kanalları olarak da anılmaktadır (Mundler and Laughrea, 2016; Sellitto et al., 2018; Reina-Usuga et al., 2022; Tiganis et al., 2023).

Üretici ile nihai tüketici arasındaki mesafenin kısalığı KGTZ'lerin en belirgin tanımlayıcılarından biridir (Florış and Schwarcz, 2018). Bu yakınlık, siyasi sınırlar açısından, yani bölgeler veya ülkeler açısından veya kilometre cinsinden ölçülebilmektedir. Bununla birlikte, üreticiler ve tüketiciler arasındaki mesafe açık bir şekilde tanımlanmamıştır. Ancak bir bölgenin morfolojik ve demografik özelliklerinin yanı sıra zincire dahil olan aktörlerin ve onların amaçlarının bir fonksiyonu olarak değerlendirilmektedir. Fiziki mesafe 30 ila 100 km arasında değişebilmekte ve üst sınırlar daha yüksek de olabilmektedir. Örneğin İngiltere'de 160 km, İsveç'te 250 km ve ABD'de 644 km'ye kadar çıkabilmektedir (Paciarotti and Torregiani, 2021). Fransız KGTZ'lerinde kat edilen ortalama mesafe 70 km ve standart sapma ise 109 km'dir (Loiseau et al, 2020). Gerçekten de KGTZ'ler, özellikle lojistik maliyetlerin düşürülmesi, belirli bir alanda çiftçiler arasında iş birliğinin sağlanması, AB mevzuatında olduğu gibi "yatay ve dikey ortaklar" olarak iş birliklerinin veya ağların oluşumunun teşvik edilmesi rolü ile ilişkili olarak kabul edilmektedir. Bu nedenle, KGTZ'lerde faaliyet gösteren işletmelerin bir ağ içinde olduğu kabul edilmekte ve yerel bir alandaki küçük işletmeleri birbirine bağlayan bir ilişkinin ekonomik olduğu kadar sosyal ve çevresel açıdan da olumlu sonuçlar üretmesi anlamına gelmektedir (Canfora, 2016).

Alternatif gıda ağlarından biri olarak kabul edilen KGTZ'ler uzun gıda tedarik zincirlerinin dezavantajlarına karşılık olarak ele alındığında sağladıkları avantajlar ortak bazı paydalarda birleştirilebilmektedir.

2. KISA GIDA TEDARİK ZİNCİRLERİNİN AVANTAJLARI

Özellikle COVID_19 Pandemisi'nden kaynaklanan ve gıda tedarik zincirine özgü şoklar, emek yoğun halkalardan geriye veya ileriye doğru bağlantılar yoluyla hızla diğer pazarlara yayıldığından gıda tedarik zincirlerini ağır bir şekilde etkilemiştir (Barrett et al., 2022). KGTZ'leri de kapsayan alternatif gıda ağları geleneksel gıda üretim ve tüketim modelinin alternatifi olarak öne sürülse de bu zincirlerdeki uygulama ve hizmetler geleneksel gıda sistemlerine karşıt olarak değil, daha çok bundan kaynaklanan olumsuz sonuçlara farklı bir tepki olarak gelişmiştir (Schneider et al., 2016). Buradan hareketle, KGTZ'lerin sürdürülebilir yerel kalkınma ve sürdürülebilir tarım açısından sağladığı faydalar olarak değerlendirilebilecek avantajları ise genel hatlarıyla ekonomik, sosyal ve çevresel nitelik taşımaktadır. Bu avantajlar daha açık bir şekilde çiftçi gelirlerini artırmak, çiftçileri tüketicilerle daha iyi buluşturmak ve araçları azaltmak, güvenli ve kaliteli yerel gıda arzı için toplumsal talebin karşılanması (gıda güvenliği ve gıda güvencesi) ve tarımın çevre üzerindeki etkisinin azaltılması olarak ifade edilebilmektedir (Popa, 2022; Reina-Usuga et al., 2022). Bu çalışmada bu avantajlar üç ana başlık altında incelenmiştir.

2.1. Ekonomik ve Sosyal Avantajlar: Çiftçi Refahı

Geleneksel gıda sistemlerindeki paydaşlarla karşılaştırıldığında, küçük çiftçilerin genellikle üretim, işleme, lojistik ve pazarlama yatırımları için yeterli kaynağa sahip olmadığı görülmektedir. Bu nedenle, KGTZ'ler, gıda

tedarik zinciri boyunca çiftçilerin ürünleri üzerindeki kontrolünü yeniden değerlendirmenin bir yolunu temsil edebileceği gibi, daha yüksek pazar payları, nihai tüketicilerle doğrudan temas kurmanın getirdiği sosyal etkileşim ve ölçek büyütme için de fırsatlar sunabilmektedir.

Çiftçiler için beklenen faydalar hem ekonomik hem de sosyal olabilmektedir. KGTZ'ler kısaca, üretici ve tüketici arasındaki araçların azaltıldığı yerel bir satış sistemidir (Mundler and Laughrea, 2016). KGTZ'ler içinde faaliyet gösteren işletmelerde, ara marjlar kaldırılarak ve gecikmiş ödemelerden kaçınılarak üreticilerin gelirleri güvence altına alınabilmektedir (Falguieres et al., 2015). Ekonomik olarak, KGTZ'ler katma değerini yeniden ve daha iyi dağıtılmasına izin vererek, aracı sayısını azaltarak, çeşitlendirerek, fiyatların daha iyi kontrol edilmesini sağlayarak ve tüketicilerle daha az asimetrik ilişkileri garanti ederek çiftçileri piyasa risklerine karşı daha az duyarlı hale getirmektedir. Sinerji etkileri ve ağ dışsallıkları, literatürde tanımlanan başka bir ekonomik fayda türüdür. Kısa tedarik zincirlerinden elde edilebilecek daha yüksek kârlar göz önüne alındığında, çiftçilerin daha dirençli olmalarına ve zorlu ekonomik kriz dönemlerinde (Tanasă et al., 2022) ve/veya ekonomik süreçleri olumsuz etkileyen pandemi, savaş ve afet gibi ani gelişen darboğazlara direnebilmelerine yardımcı olabilmektedir.

Sosyal açıdan, elde edilen faydalar açısından KGTZ'lerin, çiftçilerin sosyal ve profesyonel olarak tanınmasını teşvik ettiği ve hatta savunmasız veya marjinalleştirilmiş çiftçiler için bir tür sosyal ve profesyonel yeniden bütünleşmeye izin verdiği, adil ticaret ilkelerine yönelik pazar ilişkileri yoluyla küçük çiftliklere gelişme fırsatları sunduğu değerlendirilmektedir. Bu arada KGTZ'ler çiftçilerin yeni beceriler geliştirmesini de destekleyebilmektedir (Mundler and Laughrea, 2016). Bununla birlikte, KGTZ'ler yoluyla elde edilebilen kültürel değişiklikler dahil tüm çiftçi çabalarına rağmen, ana motivasyonun hala ekonomik olarak ulaşım maliyetlerini azaltmak ve GTZ operasyonlarına ağır harcamalar getiren araçları ortadan kaldırmak olduğu sonucuna vurgu yapan araştırmalar da bulunmaktadır (Sellitto et al., 2018). Aslında alternatif bir gıda ağı olarak KGTZ'lerin çiftçi refahını sağlama ana değişkeni ekseninde ekonomik fayda yaratırken, sosyal açıdan türev faydalar yaratması da mümkün olabilmektedir.

2.2. Yerel Kalkınma

Giderek küreselleşen bir ekonomide, çeşitli yerel ve bölgesel sistemler için kendilerine dinamizm ve rekabet gücü garanti edebilecek konumlandırma stratejilerinin geliştirilmesi zorunluluk haline gelmiştir. Özellikle tarımsal faaliyetin ana geçim kaynağını oluşturan kırsal alanlar için, bölgelerin ekonomik kalkınmasını garanti altına almak amacıyla, yerel ve yüksek kaliteli tarımsal ürünlerin arttırılması gerekliliği ortadadır. KGTZ'ler, bu üretimlerin ticarileştirilmesini sağlayan, tarımsal üreticilere yeterli geliri, tüketicilerin taleplerini karşılayacak yüksek üretim standardını ve daha genel olarak kırsal alanların rekabetçi gelişimini garanti eden bir araç olarak giderek daha fazla ele alınmaktadır (De Fazio, 2016). Çünkü, KGTZ'ler, yerel/bölgesel kalkınmayı teşvik ederken, üreticilere adil fiyatlar ve pazarlık gücü sunarak ekonomik ve sosyal sürdürülebilirliğe de katkıda bulunmaktadır (Tiganis et al., 2023). KGTZ'ler özellikle gıda pazarlama maliyetini düşürme olasılığı ve üretici ile tüketici arasında doğrudan bir ilişki oluşturma yeteneği açısından, önemli bir yerel ve kırsal kalkınma bileşeni olarak değerlendirilmektedir. Aslında yerel düzeyde sosyal bağlantılar yoluyla referans bölgedeki ekonomik büyümeyi teşvik etmekte (Zirham and Palomba, 2016) ve böylece yerel topluluklara da fayda sağlayabilmektedir (Van der Ploeg et al., 2012). Kısaca KGTZ'lerde para dolaşımının yerel kalması gerçeğinin neden olduğu bir çarpan etkisinin varlığından söz edilebilmektedir.

Yerel ekonomiler için sağlanan avantajlar hem ücretli hem de aile emeği olmak üzere küçük çiftlikler tarafından arazi kullanımı, kırsal alanların canlandırılması, yerel gıda üretiminin teşvik edilmesi ve kırsaldan göçün önlenmesi gibi fonksiyonların yaratılmasıyla bağlantılıdır. Nitekim, hektar cinsinden tarım işletmelerinin büyüklüğünü KGTZ'lere katılımı ile ilişkilendiren bazı araştırmalar hem ABD'de hem de Fransa'da küçük işletmelerin orta ve büyük tarım işletmelerine göre doğrudan satışlarla daha fazla ilgilendiğini göstermektedir (Mundler and Laughrea, 2016). Bu durum, KGTZ'lerin daha çok küçük ölçekli tarım işletmeleri için avantajlar sağladığını ortaya koymaktadır. Küçük işletmelerin gıda sistemi içinde sürdürülebilirliği ise toplum refahı ve gıda güvenliği açısından son derece önemli olarak değerlendirilmektedir.

2.3. Toplum Refahı ve Gıda Güvenliği

Toplum refahı, yerel kaynakların inşasından çok bir atmosfere atıfta bulunması bakımından yerel kalkınmadan farklıdır. Toplum refahı, çiftçiler ve nüfusun geri kalanı arasındaki yakınlaşmanın, KGTZ'ler etrafında gıda güvenliği, sağlık ve tüketiciye bilgi akışı ve tüketici güveni oluşturma gibi unsurlar itibarıyla ortaya çıkmaktadır.

Toplum refahı, KGTZ'lerdeki ekonomik ilişkilerin güven ve karşılıklılık yoluyla nasıl kurulduğunu ortaya koymak için ele alınan bir kavramdır. Sosyal sermaye, yerel topluluklarda hem çiftçileri hem de çiftçi olmayanları, kırsal ya da kentsel, yeni temeller üzerinde birleştiren yeni ağların yaratılması yoluyla geliştirmektedir. KGTZ'ler kaliteli ürünleri (tazelik, geleneksel karakter veya üretim yöntemleri açısından) tüketiciler için uygun fiyatlarla erişilebilir hale getirmektedir (Mundler and Laughrea, 2016). Tüketicilerin yaşanan çevresel kaygılar nedeniyle giderek daha fazla besleyici, taze, lezzetli ve güvenli gıda temini arayışında olduğu bilinmektedir. Bu süreçte, KGTZ'ler daha sağlıklı ve sürdürülebilir gıda tüketimi ile gıda israfının azaltılmasında önemli bir etkiye sahip olabilmektedir. KGTZ'ler aynı zamanda, gıda ve kaynağına ilişkin bazı etik yönler veya bilgi akışı sağlama etkinliği açısından da yüksek performanslı olarak değerlendirilmektedir (Tanasă et al., 2022).

Gıda güvenliği ve kalitesi, özellikle doğası gereği üretim sürecinden oldukça uzak olan ve giderek gıda üzerindeki kontrolünü kaybeden kentsel alanlarda yaşayan tüketiciler için tamamen kontrol dışı bir alanı temsil etmektedir. Gıda tedarik zinciri boyunca gıda güvenliği riski arttığında, tüketici güvenindeki erozyon da artmaktadır. Bu nedenle gıdaya yönelik tüketici güvenini yeniden inşa etme ve güçlendirme ihtiyacı, pazarlama alanındaki ana zorluklardan biri haline gelmiştir. Tüketici güveni, özellikle KGTZ'ler söz konusu olduğunda bu sorunun çözülmesinde kilit bir rol oynayabilmektedir. Çünkü güven ilişkisi tedarik zinciri üzerindeki hem bilgi hem de kontrol kaybının üstesinden gelebilmekte ve gıda seçimlerini yönlendirebilmektedir. Çiftçiler ve tüketiciler arasındaki doğrudan etkileşimin ve tekrarlanan karşılaşmaların tüketicilere çiftçilerle paylaşılan bir bilgi birikimi ve karşılıklı anlayış üzerine kurulu bir güven duygusu sağlayabilmektedir. Ayrıca, gelişen güvene dayalı bu ilişki bilgi asimetrisini azaltarak güven, sadakat ve üreticiler ile tüketiciler arasında yeni sağlam ilişkileri de teşvik edebilmektedir (Giampietri et al., 2018). Bu nedenle, KGTZ'lerin doğası gereği bir belgelendirme sistemiyle tanımlanamayan güvenilirlik özelliklerine sahip olduğu ve sosyal olarak oluşturulmuş bir dizi gıda kalitesi kriterinden oluştuğu ve çiftçiler ile tüketiciler arasındaki yüz yüze iletişimden kaynaklanan bu kriterlerin, yerel kırsal toplulukların desteklenmesini ve çevrenin korunmasını sağladığı belirtilmektedir (Migliore, et al., 2015). Ancak, KGTZ'ler aracılığıyla pazarlanan “sertifikalı organik ürünler” ile “coğrafi işaretli” yerel ürünlerin bu değerlendirmenin dışında tutulması gerektiğini destekleyecek kadar çok literatür olduğu da göz ardı edilmemelidir (Kayacan ve Demirbaş, 2021; Demirbaş, 2022a; Demirbaş, 2022b).

2.4 Çevresel Koruma ve Sürdürülebilirlik

KGTZ'ler genellikle küresel gıda zincirlerinden daha sürdürülebilir olarak kabul edilmektedir. Bu tür zincirlerin çevre, toplum ve bireyler (tüketiciler, çiftçiler) için, örneğin gıda millerini ve karbon emisyonlarını azaltarak fayda sağladığı belirtilmektedir (Benos et al., 2022; Doernberg et al., 2022). Gerçekten de tüketicilerin yerel ürünleri satın alma motivasyonları üzerine yapılan araştırmalar, çevresel kaygıların oynadığı kritik rolü vurgulamaktadır (Demirbaş, 2022a). Yine, çevresel sürdürülebilirlik çiftçileri doğrudan satışı benimsemeye iten sebeplerden biri olarak gösterilmektedir (Paciaroni and Torregiani, 2021). KGTZ'ler mevsimlik ürünlerin tüketimini mümkün kıldığı, gıda millerini azalttığı ve tüketicilerle devam eden etkileşimler nedeniyle gelişmiş tarımsal uygulamaları motive ettiği (Lioutas and Charatsari, 2020) için çevresel koruma ve sürdürülebilirlik açısından avantajlar sağlayabilmektedir. Beklenen etkiler, biyoçeşitlilik, kimyasal girdilerin azaltılmış kullanımı, paketlenme ve atığın azaltılmasıdır (Mundler and Laughrea, 2016). Çevre koruma ve sürdürülebilirlik açısından KGTZ'lerin küçük çiftçileri döngüsel ekonomiye özgü daha sürdürülebilir ve çevre dostu üretim sistemlerini benimsemeye teşvik ettiği, geleneksel tarım uygulamalarının iyileştirilmesine ve çevre üzerinde sürdürülebilir etkisi olan yerel tarım sistemlerinin teşvik edilmesine katkıda bulunduğu ve biyolojik çeşitlilik üzerinde olumlu etkileri olduğu da belirtilmektedir (Tanasă et al., 2022). Nitekim, çevresel hedeflere ulaşmadaki rolü dikkate alınarak, KGTZ'lere olan ilgi AB mevzuatında ve bazı üye ülkelerin ulusal mevzuatında da artmakta (Canfora, 2016) ve mevzuat ile bu tür zincirler teşvik edilmektedir.

Bu bölümde KGTZ'lerin avantajları ayrı ayrı değerlendirilmesine rağmen, tüm bu faydaların birbirine bağlı ve etkileşimli süreçler olduğu göz önünde bulundurulmalıdır. Örneğin, çiftçiler için tarımsal gelirlerdeki artışın yerel ekonomi üzerinde de etkileri olacağı açıktır. Bunun gibi, sürdürülebilir tarım uygulamalarının, yaşam ortamının kalitesi, çiftçi ve toprak sağlığı ile bölge sakinlerinin bir arada yaşaması açısından toplum refahı üzerinde olumlu bir etkiye sahip olabilmesi gibi birbirini harekete geçiren ve kapsayan çoklu avantajlar söz konusu olabilmektedir.

3. KISA GIDA TEDARİK ZİNCİRLERİNİN GELİŞMELERİNİ KISITLAYAN FAKTÖRLER ve ELEŞTİRİLER

Gıda zincirlerinin sürdürülebilirliği tüketicilerin, politika yapımcıların, araştırmacıların, gıda üreticilerinin ve tedarikçilerinin giderek daha fazla ilgilendiği bir konudur. Bu ilgi, küreselleşmiş gıda zincirlerine bir alternatif

olarak KGTZ'lerin önemli ölçüde gelişmesiyle de doğrulanmaktadır. Farklı ülkelerde ve aynı ülkenin farklı bölgelerinde birbirinden çok farklı yapılanmış KGTZ'ler bulunabilmektedir. Doğal olarak her bir KGTZ'nin kendine özgü kısıtları olabileceği açıktır. Farklı KGTZ'ler itibarıyla farklılaşmakla birlikte, genel olarak KGTZ'lerin gelişmelerini kısıtlayan faktörler ana başlıklar halinde aşağıda sıralanmıştır. Bunlar:

- Yüksek fiyatlar nedeniyle niş pazar,
- Sınırlı çeşit ve miktarda ürün,
- Kamu kurumlarına yeterli kalite ve miktarda ürün temininde yaşanan sorunlar,
- Organizasyon ve koordinasyon zorlukları,
- Yüksek lojistik ve nakliye maliyetleri,
- Küçük ölçekli tarım işletmeleri nedeniyle ölçek ekonomisi uygulamada yaşanan zorluklar,
- Tüketicilerin satış noktalarına ulaşımında yaşanan sorunlar ve
- Pazarlama ile iletişim için sınırlı kaynaklar (bütçe ve beceri) (Paciarotti and Torregiani, 2021) olarak özetlenebilir.

KGTZ'lere yönelik önemli kritiklerden biri, tüketicilerin yerel gıda ürünlerini satın alırken iş birliği yapmakta zorlanması ile ilgilidir (Popa, 2022). Burada temel sorun, “güvenilir bir çiftçi” bulmanın güçlüğüdür. Kırsal alan ile kentsel alan arasındaki kopukluk ve araçların gıda tedarik zincirinde işgal ettiği alan, tüketici ve üreticinin birbirini tanımasına engel olmaktadır. Tüketiciler KGTZ'ler aracılığıyla gıda satın almak isterlerse, kime başvuracaklarını bilememektedir. O nedenle KGTZ'lerin gelişimini sınırlayan ana engellerden biri olarak tüketiciler için alışverişte yaşanan sıkıntı gösterilmektedir. Ayrıca, dışarıdan bakıldığında daha ucuz görünse de doğrudan üreticilerden gıda satın almanın daha pahalı olduğu belirtilmektedir. Bu durum ister istemez daha yüksek gelir dilimlerindeki daha yüksek satın alma gücüne sahip tüketicilere yönelik niş pazarları oluşturabilmektedir. Bununla birlikte, tüketiciler açısından fiyat unsurundan ziyade, zaman veya rahatlık eksikliğinin KGTZ'lerin gelişimi açısından daha öncelikli kısıtlar olduğu da vurgulanmaktadır. Ek olarak, uygun lojistik düzenlemelerin olmamasının, sadece tüketicilere sunulan rahatlığı azaltmakla ve fiyatları yükseltmekle kalmadığı, aynı zamanda KGTZ'lerin çevresel sürdürülebilirlik konusunda daha iyi performans göstermesini engellediği de ifade edilmektedir (González-Azcárate et al., 2021). Bu değerlendirmelere rağmen, KGTZ'lerin çevresel performanslarını ölçen çok az araştırma bulunduğu vurgulanmalıdır (Loiseau et al., 2020).

KGTZ'lere yönelik diğer potansiyel eleştiriler teslimat hizmetleri, ücretsiz deneme fırsatı, kalite sertifikaları ve paketleme olarak gösterilmiştir (Tiganis et al., 2023). Bu kısıtların, özellikle alıcılar otel, restoran ve catering (HoReCa) gibi yüksek miktarda ürüne ihtiyaç duyan işletmeler ile yine okullar ve hastaneler gibi kamu kurumları olduğunda daha belirgin hale geldiği bildirilmektedir (Renkema and Hilletoft, 2022).

Konu ile ilgili literatür KGTZ'lerin, daha geniş bölgesel ekonomiler için mutlaka pozitif çarpan etkileri sunmadığı, bu ağlara dahil olan birçok çiftçinin bu faaliyetleri gelirlerini sürdürmek için yetersiz bulunduğu, dolayısıyla faaliyetlerine devam edebilmek için devlet desteğinin gerekli olduğuna yer vermektedir (Tregear, 2011). KGTZ'lere ana eleştiri, kamuoyunda ve bilimsel tartışmalarda KGTZ'lerin veya yerel gıda sistemlerinin kendiliğinden ekonomik, sosyal ve çevresel olarak arzu edilen sonuçlar ürettiğini ve bu nedenle doğası gereği iyi veya sürdürülebilir olduğunu varsayma eğiliminden kaynaklanmaktadır. Çünkü bu tür tedarik zincirlerinin çevresel, ekonomik ve sosyal etkileri hakkındaki iddialar zengin literatüre rağmen sahadan elde edilen verilerle nadiren kanıtlanmıştır. Pek çok ampirik çalışma, yalnızca bir veya birkaç belirli KGTZ tipine ve çevresel sürdürülebilirlik ve tüketici perspektifinin veya sürdürülebilir tüketimin entegrasyonundaki eksiklik gibi belirli sürdürülebilirlik yönlerine odaklanmaktadır (Doernberg et al., 2022). Bu nedenle, KGTZ'lerin ekolojik olarak olumlu katkılar sağladığı varsayımının yaygın bir yanılgı olabileceği dile getirilmektedir. Nitekim, çeşitli örneklerde KGTZ üreticileri, ürünleri doğrudan tüketicilere, mağazalara ve uzman perakendecilere kendileri teslim etmeye çalışmaktadır. Bu uygulama, ürün miktarı ve çeşit azlığı dikkate alındığında birim ürün başına taşıma maliyeti ile karbon emisyonu artışına neden olabilmektedir. Aynı sorun tüketici açısından “kendin topl” uygulaması için de söz konusudur. Ek olarak üreticiler, zaman açısından da yüksek maliyetler ve özel ekipman eksikliği (örneğin, daha küçük veya soğutulmuş araçlar) konusunda da kısıtlarla karşı karşıya kalabilmektedir (Aggestam et al., 2017). KGTZ'lerle ilgili her bir özel uygulamaya ilişkin yeterli saha araştırması bulunmamakla birlikte, konuya ilişkin bazı öneriler de geliştirilebilir.

4. KONUYA İLİŞKİN ÖNERİLER VE SONUÇ

KGTZ'lerin gelişimini kısıtlayan en önemli faktörler, bu tür tedarik zincirlerinde lojistik düzenleme zorluğu, yüksek fiyat, gıda güvenliği ve ürün çeşitliliği açısından sınırlılık şeklinde ele alınabilmektedir. KGTZ'lerde gıda toplama/dağıtım aşamalarında çevresel olarak sürdürülebilir seçimler yapmak, konumu optimize etmek, dağıtım rotasını iyileştirmek ve arzı yeniden yapılandırmak önemli çabalar gerektirmektedir. Bunlara ek olarak, çiftçilerin yenilikçi dağıtım sistemlerine, dikey ve yatay iş birliğine açık bir yaklaşım benimsemeleri gerekmektedir. Örneğin, üreticilerin gıda merkezleri kurmak için iş birliği yapması, lojistik sorunların üstesinden gelmesine ve ayrıca çeşitlilik sınırlaması veya kamu kurumlarına tedarik sorunları gibi KGTZ'lerin diğer zayıflıklarının üstesinden gelmesinde çözüm olabilir. Yine, KGTZ'leri tercih eden bölge üreticileri ürünlerini satabilecekleri yerel çiftçi marketleri ya da ürün teslim evleri gibi seçenekleri birlikte değerlendirebilir. Bu aşamada daha fazla üreticiyi bu zincirler aracılığıyla iş birliği yapmaya ve bu iş birliği sonucu ortaya çıkan daha fazla gıda ürününün satışı için ise, bu zincirlere yönelik tüketici talebini artırmaya dönük stratejiler oluşturulması önemlidir. Doğrudan satın almaların pazar payını artırmak için pazarlama stratejileri ve politikaları, bu zincirlerin lojistik dezavantajlarını ele almalı, kolaylıklarını artırmalı ve tüketiciler ile üreticiler arasındaki buluşma noktalarını kolaylaştırmalıdır. Bu çerçevede üreticilerin bireysel olarak ya da bir araya gelerek online satış mecraları oluşturmaları KGTZ'lerin bazı lojistik ve pazarlama engellerini aşmak için güçlü bir araç olarak kullanılabilir. Nitekim COVID_19 Pandemisi sürecinde Türkiye'de de bölgesel özellikli ürün üreten bazı tarım işletmeleri online ürün pazarlama seçeneğini kullanmış ve zaman içinde ürünlerini işleyerek katma değerli gıda üretimlerini ve satışlarını artırmaya devam etmiştir.

KGTZ'lerde kalite kontrolünün olmaması, lojistik engellerden sonra potansiyel tüketiciler için önemli engellerden biri olarak değerlendirilmektedir. Bu bağlamda, yerel yönetimler ve/veya ülkelerin tarım ve gıdadan sorumlu kamu kurumları ve taşra teşkilatları tarafından, küçük üreticilere yönelik hijyen ve sağlık standartları ile ilgili uygulamalar konusunda eğitim ve bilgi güncelleme politikaları izlenebilir. AB'de olduğu gibi KGTZ'lerle ilgili mevzuat oluşturma ve üretici destek mekanizmaları ile tüketici açısından bu tür zincirlere ilişkin gıda güvenliği kaygıları sistem dahilinde çözülebilir.

KGTZ'lerin farklı tipleri açısından, bazen çiftçilerin birlikte hareket etmesi kadar, üretim miktarına bağlı olarak, bazı pazarlama fonksiyonlarının az sayıda aracı tarafından yapılması da lojistik ya da ürün çeşitliliği gibi kısıtlara çözüm getirebilir. Hatta az sayıda aracı (1-2) ile gıda güvenliği açısından üretici eğitimi ve bilgi akışı daha kolay sağlanabilir. Özellikle alıcılar nihai bireysel tüketici yerine, HoReCa sektöründe faaliyet gösteren işletmeler olduğunda az sayıda aracı seçeneği daha etkin bir çözüm olarak tercih edilebilir.

Küçük ve orta ölçekli tarım ve gıda üreticileri, tüketicilerin taleplerine daha kolay uyum sağlayabildikleri için KGTZ'lere yönelik süregelen paradigma değişiminden daha fazla yararlanmaktadır. Bu nedenle, KGTZ'ler bu tür üreticiler için tercih edilen alternatif gıda ağları olarak örneklenmekle birlikte, büyük ölçekli üreticilerin de bu modellerden yararlanabileceği değerlendirilmektedir. Ancak, özellikle büyük ölçekli işletmeler, KGTZ'lerin taleplerine uyum sağlamaya çalışırken, daha yoğun iş yükü ve daha fazla sorumluluk nedeniyle, tedarik zinciri boyunca tüketiciler ve diğer potansiyel aktörlerle daha yakın ilişkiler sürdürmekte zorlanabilmektedir. Bu nedenle büyük ölçekli işletmeler için karma iş modelleri önerilebilir. Fazla üretimin bölge içinde sınırlı tüketiciyle değerlendirilmesindeki kısıt; online ticaret, doğrudan satışlar, çiftçi marketleri ya da az sayıdaki aracı ile daha uzak mesafelerde ürün pazarlama ile aşılabılır. Üretimin ölçeği büyüdükçe alternatif gıda ağları ile geleneksel gıda sistemleri birlikte ve iç içe çalıştırılabilir. Zaten, doğası gereği, KGTZ'ler geleneksel gıda sistemlerinin yerini alabilecek bir model olmaktan ziyade, bilinçli tüketicilerin talebine cevap verdiği ölçüde alternatif ve tamamlayıcı niteliğini geliştirebilmektedir.

Sonuç olarak, KGTZ'lerin oluşumunu ve gelişimini teşvik etmek ve potansiyel avantajlarından yararlanabilmek için; kamu politikaları, zincir paydaşları arasında etkin iş birliği bağlantıları, üretim için bilgi akışı ve destek, bilgilendirilmiş bir sivil toplum ile başarılı iletişim ve telekomünikasyon altyapısı gibi faktörlerin ayrı ayrı ya da bütünsel olarak etkin bir şekilde kullanımı önerilmektedir.

Abstract: Today, organizations have started to provide many different services in many areas to survive in challenging competitive conditions. In biology science, an invasive species is a species that naturally enters an ecosystem other than the one in which they live, where it multiplies excessively and affects the entire ecosystem. It is possible to see similar behaviour examples of invasive species in nature in management science. This study is carried out to determine whether invasive species existing in nature are also present in the organizational ecosystem. In the research, using a conceptual method, invasive species in biology were adapted to the organization in a metaphorical way. As a result of the research, it has been observed that organizations under destructive competition conditions have increased rapidly by entering different fields and sectors in order to increase their market shares, survive and gain sustainable competitive advantage. These organizations, which serve in different sectors, are superior in competition, more durable than other organizations, more fertile and more dominant and predatory than other species. Examples of these types are found in many industries. Chain markets entering the ecosystem and destroying local neighbourhood grocers, butchers, greengrocers, wholesalers and suppliers are examples of invasive organization types. In the maritime sector, shipowners also provide services such as line management, port management, railway, ship ownership, transportation, logistics services, and storage. Examples of many invasive types can be given as maritime agencies also doing customs work, main maritime agencies bypassing shipping and freight brokers and eliminating them with the services they provide and not giving them a chance to survive, the concept of port-based logistics and many similar invasive types.

Keywords: Invasive Species, Invasive Organizations, Organizational fertility, Competition, Maritime Industry

1. INTRODUCTION

Invasive Species is a term used in Biology for species that naturally enter an ecosystem other than the one they live in and overgrow there and affect the entire ecosystem (Göncelioğlu, 2015). Invasive species are more resistant, more dominant, more fertile and predatory than other species. For example, the jellyfish of the *Chrysaora hysoscella* species overgrows as an invasive species, taking over the ecosystem in which it is located. Invasion behavior observed in nature can also be observed in the organizational ecosystem. For example, while chain markets multiply rapidly with their strong capital structure, physical capacity, product variety (butcher, greengrocer, stationery, etc.), logistics, marketing, stock and other advantages, they destroy many businesses such as grocers, butchers, greengrocers, stationery in the places they open. It would be correct to call organizations that have high fertility by nature, grow rapidly, are dominant, durable, easily dominate the market and take over the ecosystem they are in, as "Invasive Organizations". In this context, it is important for management sciences to understand the strategies and behavior patterns of invading organizations that do not give other organizations a chance to survive. The main purpose of this research is to determine theoretically whether the invasive species discussed in biology are also encountered in the organizational ecosystem of management science.

2. CONCEPTUAL FRAMEWORK

2.1. Invasive Species in Biological Science

Invasive species are species introduced into a new environment with adverse ecological, economic or social impacts (Mooney, 2001). Invasive (exotic) species are new species that are not native to a particular ecosystem but come to a region intentionally or unintentionally in unpredictable ways and times. The spread of invasive species takes place in the form of displacement of species by the ballast waters of ships, human-made and changes in ecosystems. As awareness of the effects of invasive species increases and globalization increases the ways and pace of invasions, these adverse effects are increasingly recognized in both the ecological and economic literature (Seebens et al., 2018; Smith et al., 2018). Humanity's increasing mobility has radically increased the rate at which various creatures move from one ecosystem to another. Examples of invasive species are pufferfish, lionfish, grass carp, jellyfish, Killer Algae (*Caulerpa taxifolia*), Mozambique tilapia

(*Oreochromis mossambicus*), Japanese creeper (*Pueraria montana* var *lobata*). As exotic species invade natural communities (bio-invasion), native species that cannot cope with this spread are threatened with extinction. The damages that can be caused by invasive species that come to the ecosystem to which they do not belong and manage to live and even establish colonies can be summarized in three main sections (Özdemir, & Ceylan, 2007):

Ecological: Situations where invasive species affect and reduce the biodiversity and ecological distributions of native species. Studies show that every week, sometimes even every day, invasive species occupy an area in the world.

Economic: Fish resources, coastal industry, tourism, and other commercial activities are interrupted by invasive species. For example, the "mnemiopsis" type jellyfish that came to the Black Sea by ships caused approximately 1 billion dollars of damage to our fisheries.

Human Health: Toxic organisms, disease germs and pathogens spread through ballast waters, causing sickness and even death in humans.

Invasive species are divided into two. The first group is those who spread from their natural habitats to new environments and adapt to the environment, reproduce, reproduce, and feed on the eggs and larvae of other species, or those who put pressure on native species and take them under their protection or destroy them. The second group is; they are defined as the species that find suitable environmental conditions in the area where they have just settled, multiply for a moment, reproduce in rapid numbers, and then disappear after being unable to dominate and pressure. For example, if we give an example of a jellyfish species, *Mnemiopsis leidyi* jellyfish species, which is one of the invasive species that are transported to a different ecosystem from the ecosystem they are in with the ballast water of the ships, found suitable food and environment in the Black Sea ecosystem and spread very quickly, consuming the anchovy eggs and larvae in the environment, causing the anchovy stock to collapse. Then again, another *Borea ovata* jellyfish species comes with the ballast water of the ships, which eats the newly arrived jellyfish (*Mnemiopsis leidyi*), which causes great damage to the environment, and starts to multiply rapidly in the environment. After spending a certain amount of time in their new ecosystems, they cannot hold on. They lose their competitiveness and lose their dominant species (Özdemir, & Ceylan, 2007).

2.2. Types of Invasive Organizations in Management Science

2.2.1. Types of Invasive Organizations in the Maritime Industry

Shipping organizations, agencies, forwarders, brokers, port management or a wide variety of companies that provide all kinds of services to ships are among the main companies that contribute to the maritime economy (Corbett & Winebrake, 2008). The maritime industry is very dynamic and has a wide range of maritime businesses it serves. It is possible to come across invasive organization types in the maritime sector, where competition is quite intense. In addition to the areas where the ship agents provide their main services, the customs clearance of the customers or, on the contrary, the agency services of the customs consultancy firms can be examples of invasive species. Therefore, these types of companies enter into two different service areas and provide services outside of their main business, and they also become partners in the services of other companies and get a share of the pie. When a job is taken from one of the clients, the other job is sometimes given free of charge. Again, in the maritime industry, the main agents devouring forwarders, that is, freight brokers, can be given as an example of invasive organization types. Forwarder organizations have a high amount of guarantee against relatively cheap freight from ship lines and provide freight to their customers at reasonable prices compared to the line. Shipowners, that is, lines, give prices directly to forwarder customers, of which they have all the information, and invade the forwarder's market.

Another example is the concept of port-based logistics (third / fourth party logistics). The main activity of the ports is to handle ships. However, today, ports try to collect all logistics activities as much as possible, as well as ship unloading and loading activities. Many service items that can be provided by different organizations in the logistics sector such as cargo storage, port-customer-port cargo transportation, distribution, stock tracking, packaging, labelling, and empty container storage have entered the field of activity of ports. In fact, security services have now begun to be provided within the ports themselves, and specialist security firms have been excluded from service. All these service items can actually be performed by different businesses. Due to faster service and less cost, ports provide a competitive advantage and do not leave a chance for other organizations to survive. Although this example means providing integrated service, it is also an example of invasive species encountered in the maritime industry. Integrated services provide many advantages to customers, but the side

effect is the monopolization of service providers. It is obvious that at the end of the monopolization process, it will always reflect negatively on the customers.

Other example is that the shipyard-owning organizations that manufacture marine vehicles including tugboats are granted pilotage and tugboat organization authorization. Owning a tugboat is an issue with high investment and operating costs as well as supply difficulties. Producer organizations use their tugboats with cheaper costs to obtain organizational permit, have a competitive advantage and increase their profitability without having difficulty in supply.

It is also seen that shipowner organizations attack and enter other business lines in the maritime industry. The cargo carried by the shipowner arrives at the port owned by the same shipowner, and land transportation is provided by his own logistics and transportation organization. It is not allowed to transport the cargo with different organizations. Such global lines have started to pool when it comes to logistics services such as ship ownership, line management, port management, rail and road transport, and warehousing. They also invade all other links of the supply chain. They do not give small businesses a chance to survive in the supply chain or force them, push them to downsize, and eventually incorporate other organizations that cannot compete or force them to close.

2.2.2. Types of Invasive Organizations in the General Management Industry

Businesses such as grocers, butchers, greengrocers, delicatessens, patisseries, and stationery have been meeting the basic needs of people in their regions and neighbourhoods for centuries. However, in the last 20-30 years, super, hyper etc. market chains have butchers and grocery stores, and sell delicatessen, pastry, stationery, and textile products. In addition, unlike the grocery stores, the advantage of large space and parking, discounted campaigns, credit card instalments and home delivery services affect the customers of grocery stores and other small businesses, rendering them dysfunctional in the market. For example, between 2010 and 2017, the number of grocery stores (neighbourhood convenience stores) in Turkey decreased from 240 thousand to 162 thousand, while the number of grocery chains increased by 285% (URL-1).

Similarly, restaurants have been serving for centuries in places such as neighbourhoods or industries, with menus suitable for the taste and culinary culture of the society and region they are in. However, the cultural changes that have emerged with the globalization trends in recent years have changed many habits and deeply shaken the eating habits of the societies. In addition, with the increase in competition and speed, especially in metropolitan cities, people have had to spend their time on the road or at work instead of sitting in a restaurant while moving from place to place. For such reasons, restaurants and cafes providing fast-food service have emerged. These places, which offer global cuisine products such as hamburgers, coffee, etc. to people, are taking the place of traditional restaurants with an increasing momentum. These fast-food chains are invading the market by using various forms such as shopping malls, airports, underpasses, road stops, street-side kiosks, boutique cafes in the neighbourhood, etc., and also by using proactive methods such as takeaway. They also invade places that restaurants cannot easily enter, occupying their space and eliminating them in the market.

3. RESEARCH METHOD

This research was handled with a descriptive review model. In this context, the related concepts of biological science and management science were handled comparatively and the definitions in biology were adapted to management science. Then, through this conceptual model developed, the types of invasive organizations that emerged in industries such as maritime, food, education and textiles were revealed and conceptually discussed.

4. FINDINGS AND DISCUSSION

The findings obtained within the scope of this research show that invasive organizations as a concept enter into different disciplines other than biology. It has been determined that invasive organization types cause significant negative effects on ecosystems and organizations that are economically weaker than themselves. The causes of death of organizations that lost their ability to fight against invading organizations over time and had to end their lives after a while can be listed as not being able to find resources, not providing customer satisfaction, and being economically weak. In this study, it has been observed that organizations serving in different sectors (such as maritime, food, etc.) enter different regions in parallel with the business services they

serve and grow in the ecosystem there. For example, supermarket chains do not give them a chance to live by invading the markets of grocers, greengrocers, butchers and stationery with the butchers, greengrocers, textiles, stationery and cosmetics they contain.

It is the act of purchasing stocks of a business, which is referred to as "takeover tactics" in the financial management literature, in order to have a say in control and management over the company, without the wishes of the management or shareholders of another organization (Dağlı & Ayaydın, 2012). The terms merger, acquisition, takeover, acquisition are intertwined terms. The terms buy or take over mean that one organization takes control of another organization. A takeover is the purchase of shares of an organization against the will of another organization's management or shareholders in order to gain control and ownership over the organization (Dickerson et al., 2002). In mergers, one or more organizations come together under the umbrella of a single organization of their own accord (Kwoka and Pollitt: 2010: 645-646; Sinkovics et al., 2011: 27-30; Furfine and Rosen, 2011: 832- 834). There are two party organizations in the takeover attempts. The first party is the target organization whose control is sought or seized. The second party is the receiving organization attempting to take over the target organization. The "Diversification" strategy in marketing is that the organization enters new markets with new products. It is a suitable strategy if there is nothing left to do in the current market, if the growth limits have been reached, if the organization does not have the opportunity to grow further in the market, or if there are opportunities to be evaluated in other industries. For example, the energy sector has become an investment area with a bright future all over the world. This situation has led large companies (Koç, Zorlu, etc.) in our country, which is full of opportunities, to enter the sector even though they did not have previous investments and experience in this field. But diversification is risky compared to other strategies. There are markets and products for which the firm is not experienced. For this, the firm itself, its resources, competitors, etc. should be evaluated well (Türk, 2020).

However, the examples of invasive organization types in the management literature are the organizations that invade the market of the companies that provide different services in the same industry, which are already invested, and the companies that are economically weaker than themselves, serving in the same industry, as invasive organization types. It invades the market by establishing organizations that provide different services in the same industry and creating new formations within the ecosystem.

Invasive Organizations' Invasion Methods can be classified as follows:

- a-) With their strong capital structure, they do not provide the small organizations a chance to compete by supplying the product on a high scale at low cost.
- b-) They use advertising, promotion, discount campaign, marketing and branding weapons.
- c-) By using strategies such as home delivery, package service, online sales, installments, car raffle, member card, they surround all the growth and survival paths of their competitors.
- d-) They gain superiority by using the parking lot, large sales area, shelf design, and effective employee selection.
- e-) With their network and network structure, they can be easily organized and influence political mechanisms, professional chambers, and other stakeholders.
- f-) They can manage customer analysis and expectations using scientific knowledge.
- g-) With the advantage of revealing their own product brands and having logistics, they can make product management more effective.

5. CONCLUSION AND RECOMMENDATIONS

Within the scope of this study, it is discussed whether invasive species in the biology science also exist in the ecosystem of the organizations. Living things in nature develop harmonious or invasive behaviour patterns or relationships to survive. It is possible to observe that there are similar behaviours in the ecosystem of the organizations, which maintains its existence in interaction with its environment like other living things. It has been observed that organizations trying to survive today, where competition, uncertainty, chaos, and the violence of change are increasing, invade the markets of other organizations. In this context, it has been seen that in order to take place in different regions, they weaken the power of other species in that region and cause their extinction. One of the most important factors causing this extinction is the capital strength and

capacity size of the invasive species. Thanks to this power, it has been determined that large organizations destroy their small ones almost like an invasive species.

The concept of "Types of Invasive Organizations", which has not yet entered the management literature and has not yet been the subject of studies, will be discussed and understood with a holistic perspective by other researchers.

Özet: Son yıllarda dünyada özellikle gelişmiş ülkelerde insanlar, sağlıklı beslenmeye özen göstermekte ve geleneksel gıda tüketim alışkanlıklarında rasyonel değişiklikler yapmaktadırlar. Özellikle dengeli ve yeterli beslenmede günlük protein kaynağı olan hayvansal gıdaların tüketimine ağırlık verilmektedir. Bu gıdalar içerisinde balık; kırmızı et ve tavuk etinden sonra en önemli protein kaynaklarından biri olarak öne çıkmaktadır. Kırmızı ete göre daha ucuz, daha yağsız olması protein ve dengeli beslenmede önemli bir kaynağı olması balık tüketiminin önemini artırmaktadır. Dünya ticaretinde giderek artan bir eğilim gösteren su ürünleri sektörü ülkelerin ekonomilerinde önemli bir pay almaktadır. Bu bakımdan, sektörün gelişmesi tüketimin artmasına bağlı olacaktır. Türkiye’de 2019 yılında kişi başı su ürünleri tüketimi yıllık 6,3 kg iken dünya ortalaması 22 kg’dır. Üç tarafı denizlerle çevrili olan Türkiye için bu tüketim miktarı oldukça düşüktür. Bölgelerin coğrafi özellikleri balık tüketimini etkileyeceğinden bu değişimi ortaya koymak amacıyla araştırma kapsamına Doğu Anadolu bölgesinde TRA1 bölgesinde bulunan iller dâhil edilmiştir. Bu araştırma; Erzurum, Erzincan ve Bayburt illerini kapsayan TRA1 bölgesinde il merkezlerinde yaşayan hanehalklarının balık tüketim tercihlerinin belirlenmesi amacı ile yapılmıştır. Hayvancılığın ağırlıklı olarak yapıldığı araştırma bölgesinde kırmızı et tüketimi gıda tüketim deseninde ilk sırada yer almaktadır. Hanelerin balık tüketim profilini hangi faktörlerin etkilediği bu araştırmanın sorusunu oluşturmaktadır. Örneklem büyüklüğü 400 hane olarak elde edilmiş ve yüzyüze yapılan anket görüşmeleri sonucunda birincil veriler elde edilmiştir. Elde edilen veriden istatistiksel analizler yapılarak balık tüketimini etkileyen faktörler ortaya konulmuştur.

Anahtar Kelimeler: Balık tüketimi, TRA1 bölgesi, Tüketici Davranışları

Determination of Fish Consumption Behaviors of Households in Erzurum, Erzincan and Bayburt Provinces in TRA1 Region

Abstract: In recent years, people in the world, especially in developed countries, pay attention to healthy nutrition and make rational changes in their traditional food consumption habits. Particular attention is paid to the consumption of animal foods, which are a daily protein source, in a balanced and adequate diet. Fish in these foods; It stands out as one of the most important protein sources after beef and chicken meat. The fact that it is cheaper and less fatless than red meat and is an important source of protein and balanced nutrition increases the importance of fish consumption. The aquaculture sector, which has an increasing trend in world trade, takes an important share in the economies of countries. In this respect, the development of the sector will depend on the increase in consumption. While the annual per capita consumption of fisheries products in Turkey in 2019 is 6.3 kg, the world average is 22 kg. This consumption amount is quite low for Turkey, which is surrounded by seas on three sides. Since the geographical features of the regions will affect the fish consumption, the provinces in the TRA1 region of the Eastern Anatolia region were included in the scope of the research in order to see this change. This research was conducted to determine the fish consumption preferences of the households living in the provincial centers in the TRA1 region, which includes Erzurum, Erzincan and Bayburt provinces. In the research region, where animal husbandry is predominant, red meat consumption takes the first place in the food consumption pattern. The question of this research is which factors affect the fish meat consumption profile of households. The sample size was obtained as 400 households and primary data were obtained as a result of face-to-face interviews. Statistical analyzes were made from the data obtained, and the factors affecting fish consumption were revealed.

Key Words: Fish Consumption, TRA1 Region, Consumer Behavior

1. GİRİŞ

Hanelerin gıda tüketim desenleri ekonomik, sosyal ve çevresel gibi birçok faktörden etkilenmektedir. Artan nüfusun gıda gereksinimini karşılayabilmek için son zamanlarda genetiği değiştirilmiş gıdalar ve katkı veya koruyucu ilaveli hazır gıdaların üretimi artmıştır. Bunların tüketilmesi ile birlikte kalp ve damar hastalıkları, zayıflık, sıskalık ve obezite gibi rahatsızlıklar yetersiz ve dengesiz beslenme problemlerini ortaya çıkarmaktadır. Sosyo-demografik ve ekonomik faktörlere bağlı olarak sağlıklı ve kaliteli gıdalara olan talep bu bağlamda ortaya çıkmaktadır. Tüketim kalıplarındaki en önemli değişim göstergelerinden bir tanesi gıdaların temel zorunlu ihtiyaç olarak tercih edilmesinden ziyade sağlıklı beslenme için tüketimidir. Sağlıklı ve kaliteli yaşam için protein

ağırlıklı beslenme dengeli ve yeterli beslenmenin şartı olarak karşımıza çıkmaktadır. İnsan sağlığı için yeterli ve dengeli beslenmede gerekli olan proteinlerin hayvansal kaynaklı olması gerekmektedir (Genç vd., 2020). Birleşmiş Milletler Gıda ve Tarım Örgütü'ne göre (FAO) dünyada günlük protein alınının %16.6'sı hayvansal kaynaklı gıdalardan %6.5'i ise diğer gıdalardan sağlanmaktadır. Hayvansal kaynaklı gıdalar içerisinde balık, kırmızı ete göre daha ucuz protein kaynağı olması nedeniyle sağlıklı beslenmede ihtiyaç olan protein miktarını karşılayabilmektedir. Bir porsiyon balık (150gr) bir bireyin günlük alması gereken proteinin % 50-60'lık miktarını karşılamaktadır (Wijaya ve vd., 2022). Bundan dolayı balık, dengeli ve yeterli beslenmenin önemli bir parçasını oluşturmaktadır. Son yıllarda üretim teknolojisinin artmasıyla birlikte balık ürünleri paketli bir şekilde tüketime hazır olarak raflarda yerini almıştır. Geleneksel balık tüketimi, yerini daha pratik ve kolay tüketime bırakmaya başlamıştır. Konserve balıklar, dondurulmuş balıklar, kesilmiş paketlenmiş balıklar bunlara örnektir. Günümüzde, gıda işleme teknolojisinin gelişmesiyle birlikte paketli balık ürünlerine olan talep de artmıştır. Dünyada balık tüketim tercihlerine bakıldığında hanelerin %25'i balığı geleneksel yolla tüketirken, %75'i ise işlenmiş balık tüketmektedir (Küçük vd., 2022).

Su ürünleri geçmişte olduğu gibi günümüzde önemli bir hayvansal protein kaynağı olduğu gibi ülke ekonomisinde de önemli bir konumdadır (Yücel vd., 2020). Türkiye'de su ürünleri sektörü hem denizlerden hem de iç sulardan sağlanmaktadır. Yeterli miktarda su ürünleri kaynağına sahip olsak da, dünyada su ürünleri sektöründe önde olan ülkelere göre Türkiye'de su ürünleri sektörü istenilen seviyede değildir (Tolon ve Elbek, 2016). İllerin coğrafik konumları, hane gelirleri, tüketim alışkanlıkları, kültür gibi nedenlerden dolayı su ürünleri sektöründe önemli bir gıda tüketim ürünü olan balığın tüketimi dünya ile karşılaştırıldığında oldukça geride olduğu görülmektedir (Genç ve vd., 2020). Zengin su ürünleri kaynaklarına sahip (Deniz ve Sarıözkan, 2020) bir ülke için çok değerli bir protein kaynağı olan balığın yeterli tüketilmemesi bu alanda daha fazla araştırmaya ihtiyaç olduğunu göstermektedir. Su ürünleri ülkelerin ekonomilerinde önemli bir pay almaktadır. FAO'nun 2021 yılı verilerine göre, 2018 yılında 67 milyon ton balık ve su ürünleri, uluslararası pazara konu olmuştur. Dünyada su ürünleri sektöründe en büyük üretici Çin (62,2 milyon ton) iken, bunu Endonezya (12,7 milyon ton), Hindistan (12,4 milyon ton), Vietnam (12,4 milyon ton) ve Peru (7,5 milyon ton) takip etmektedir. Üretimde birinci sırada yer alan Çin, ihracatta da ilk sırada iken, bunu Norveç, Rusya, Vietnam ve Peru izlemektedir. 2018 yılında dünyada 41,5 milyon su ürünleri ihracatının toplam değeri 167 milyar dolar olmuştur (TEPGE, 2021). Güncel verilere göre Türkiye'de 2021 yılında 295 018 ton deniz ürünleri üretimi, 471 686 ton yetiştiricilik üretimi ve 33 140 ton tatlısu üretimi gerçekleştirilmiştir (TÜİK, 2021). Türkiye'de uluslararası ticarete önemli bir pay alan su ürünleri sektörünün gelişmekte olan bir sektör olduğu anlaşılmaktadır. Son yıllarda su ürünleri yetiştiriciliğinin su ürünleri avcılığı kadar önemli bir artış sergilediği, buna paralel olarak su ürünleri ihracatında artış olduğu anlaşılmaktadır. 2019 yılı verilerine bakıldığında, ihracatın ithalattan 110 bin ton fazla olduğu elde edilen veriler arasındadır (TEPGE, 2022).

Su ürünleri üretimine yönelik gelişmeler kişi başı balık tüketimine yansımamaktadır. Oysaki üretimdeki gelişmelerin talebi etkilemesi beklenen bir durumdur ve bu önemli gıdanın tüketilmesinde başlıca rol tüketicidedir (Kaplan ve ark., 2019). FAO'ya göre Türkiye'de kişi başı ortalama tüketim 6,3 kg olmakla beraber dünyadaki kişi başı tüketime göre (22kg) oldukça düşüktür. Özellikle su ürünleri üretiminin yüksek olduğu Asya kıtasındaki ülkelerde kişi başı balık tüketiminin çok yüksek olduğu bilinmektedir. Japonya'da kişi başı 100 kg balık tüketilirken Singapur ve Malezya'da sırasıyla 80 ve 70 kg'dır (Wijaya vd., 2022). Gıda tüketim tercihlerinde birçok faktör etkili olmakta ve bu faktörler haneden haneye değişiklik göstermektedir. Tüketim tercihlerinde duyuşsal, fiziksel, psikolojik özellikler kadar alışkanlıklar etkili olabilmektedir. Bu faktörlerin balık tüketimini etkilediği ile ilgili pek çok araştırma mevcuttur (Tolon ve Elbek, 2016; Genç vd., 2020; Kaplan vd., 2019; Deniz ve Sarıözkan, 2020; Terin ve Keskin, 2021; Yücel vd., 2020; Kuşat ve Şahan, 2021; Küçük vd., 2022).

Türkiye'de kıyı şeridindeki bölgelerde balık tüketiminin diğer iç bölgelere göre daha yoğun olduğu bilinmektedir (Kuşat ve Şahan, 2021). Balık tüketiminde taze olma faktörü çok önemli bir tercih nedeni olduğundan Doğu ve Güneydoğu bölgelerinde ulaşım imkânlarının el verdiği ölçüde tüketim gerçekleşmektedir. Yücel vd.,'nin (2020) ve Terin&Keskin'in (2021) yapmış oldukları çalışmalarda ifade ettikleri gibi tüketicilerin balık tüketim alışkanlıklarını coğrafik şartlar şekillendirebilmektedir. Yıllar içerisinde ulaşımın ve gıda işleme teknolojisinin gelişmesi ile birlikte hanehalkı tüketim desende değişimden bahsetmek mümkündür. Oysaki Avrupa'da ve Asya'da hanehalkları balık tüketiminde pozitif davranış sergilemektedirler ve balık tüketimini etkileyen faktörlerin arasında bilinç düzeyi, sağlıklı gıda tüketim alışkanlığı gibi faktörler önemli olsa da düzenli olarak balık tüketim alışkanlığının ileri yaşlarda ve eğitim düzeyi yüksek olan bireylerde daha yüksek olduğu yönündedir (Ruxton, 2011). Bu bakımdan araştırma kapsamına alınan TRA1 bölgesinde hanehalklarının balık tüketim profilini ve satın alma davranışlarını ortaya koymak bu çalışmanın odak noktasını oluşturmaktadır.

Çalışmanın birinci bölümünde görüşülen tüketicilerin demografik özellikleri, ikinci bölümünde ise hanehalklarının balık eti tüketimindeki satın alma davranışları incelenmiştir.

2. MATERYAL VE YÖNTEM

Araştırmamızın birincil verisi, TRA1 bölgesinde bulunan illerin (Erzurum, Erzincan ve Bayburt) merkezlerinde yaşayan hanehalkları ile yapılan anketlerden sağlanmıştır. Çalışmada Gayeli Örneklem Yöntemi ile toplamda 400 hane ile yüz yüze görüşülmüştür. Örnek hacmi il nüfusları dikkate alarak oransal olarak dağıtılmıştır. Görüşülen haneler tesadüfi olarak seçilmiştir. Elde edilen veriler basit tanımlayıcı istatistikler ile açıklanmıştır. Verilerin istatistiksel yorumlanmasında ise non-parametrik testler kullanılmıştır.

3. ARAŞTIRMA BULGULARI

3.1. Katılımcıların Demografik Özellikleri

Erzurum, Erzincan ve Bayburt illerinde görüşülen katılımcıların %85.25'i erkek bireylerden meydana gelmektedir. Katılımcıların %61.81'inin 25 ile 45 yaş aralığında yoğunlaştığı görülmektedir. Katılımcıların %32.41'i ise 45 yaşından büyüktür. Görüşülen katılımcılar arasında evli olan bireylerin oranı ise %84 düzeyindedir.

Katılımcılar eğitim düzeyi açısından farklılık gösteren bir yapıya sahiptir. Görüşülen katılımcıların %26.32'si ilkököl, %29.32'si lise ve %21.30'u lisans mezunudur. Katılımcılar arasında kamuda memur, özel sektör çalışanı, serbest meslek, çiftçi, işçi, emekli ve diğer meslek gruplarında çalışanlar bulunmaktadır. Bunlar arasında kamuda çalışan memurlar %36.13 ile en yüksek payı alırken, bunu sırasıyla; özel sektör çalışanları (%12.98), serbest meslek sahibi olanlar (%12.72), çiftçiler (%9.41) ve emekliler (%7.38) izlemektedir.

Görüşülen katılımcılar hanehalkı büyüklüğü açısından incelendiğinde, hanehalkı büyüklüğü 4 kişiden az olan bireylerin (%68) ağırlıklı olduğu görülmektedir. Bu çalışma kapsamında görüşülen katılımcılar arasında düşük ve orta gelirli bireylerin yaygın olduğunu söyleyebiliriz. 458 US\$'dan az, 458-1371 US\$, 1372-2285 US\$ ve 2285 US\$'dan fazla aylık hanehalkı gelirine sahip olanların dağılımına bakıldığında, katılımcıların yaklaşık %65'inin 458 US\$'dan az ve 458-1371 US\$ gelir grubu aralıklarında olduğu belirlenmiştir.

Tablo 1: Katılımcıların Demografik Özellikleri

Özellikler	%	Özellikler	%
<i>Cinsiyet</i>		<i>Meslek</i>	
Kadın	14.75	Kamuda memur	36.13
Erkek	85.25	Özel sektör çalışanı	12.98
<i>Yaş (yıl)</i>		Serbest meslek	12.72
25'ten az	5.78	Çiftçi	9.41
25-45	61.81	İşçi	7.89
45'ten büyük	32.41	Emekli	7.38
<i>Medeni durum</i>		Diğer	13.49
Evli	84.00	<i>Hanehalkı büyüklüğü</i>	
Bekar	15.50	4'ten az	68.00
Boşanmış	0.50	4 ve daha fazla	32.00
<i>Eğitim düzeyi</i>		<i>Aylık hanehalkı geliri</i>	
Okur-yazar değil	2.01	458 US\$*dan az	29.57
Okur-yazar	3.01	458-1371 US\$	35.59
İlkokul	26.32	1372-2285 US\$	23.31
Lise	29.32	2285 US\$'dan fazla	11.53
Önlisans	7.27		
Lisans	21.30		
Lisansüstü	10.77		

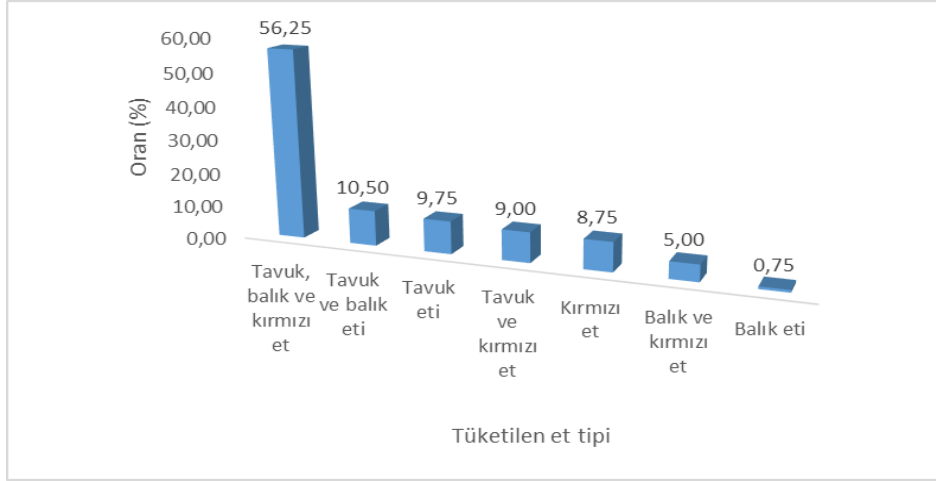

1US\$ = 2.1879 TL (2014 yılı aylık ortalama döviz kuru-Türkiye Cumhuriyet Merkez Bankası (TCMB), 2014).

3.2. Katılımcıların Et Tüketiminde Balık Etinin Yeri

Bu bölümde, görüşülen katılımcıların et tüketimi içinde balık etinin yeri incelenmiştir. Katılımcıların et tüketiminin tiplerine göre dağılımı Şekil 1'de verilmiştir. Buna göre, katılımcıların %72,50'sinin et tüketimi içinde

balık yer almaktadır. Bu sonuç, sağlıklı beslenme açısından olumlu olarak değerlendirilebilir. Et tüketimi içinde diğer et türlerine yer vermeyip, sadece balıketi tüketenlerin oranı ise oldukça az olup, bu oran %1'in altındadır.

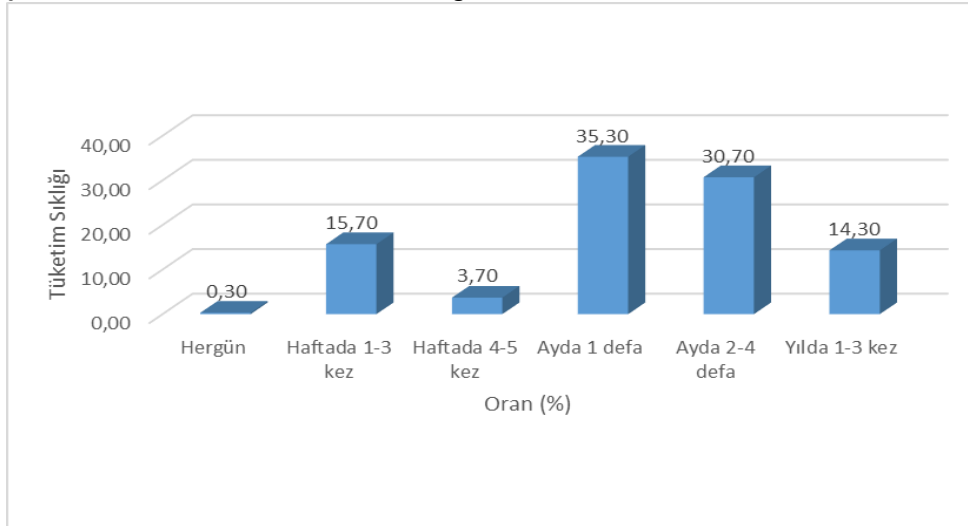

Şekil 1: Katılımcıların et tüketiminin tiplerine göre dağılımı (%)

3.3. Katılımcıların Balık Eti Satın Alma Davranışları

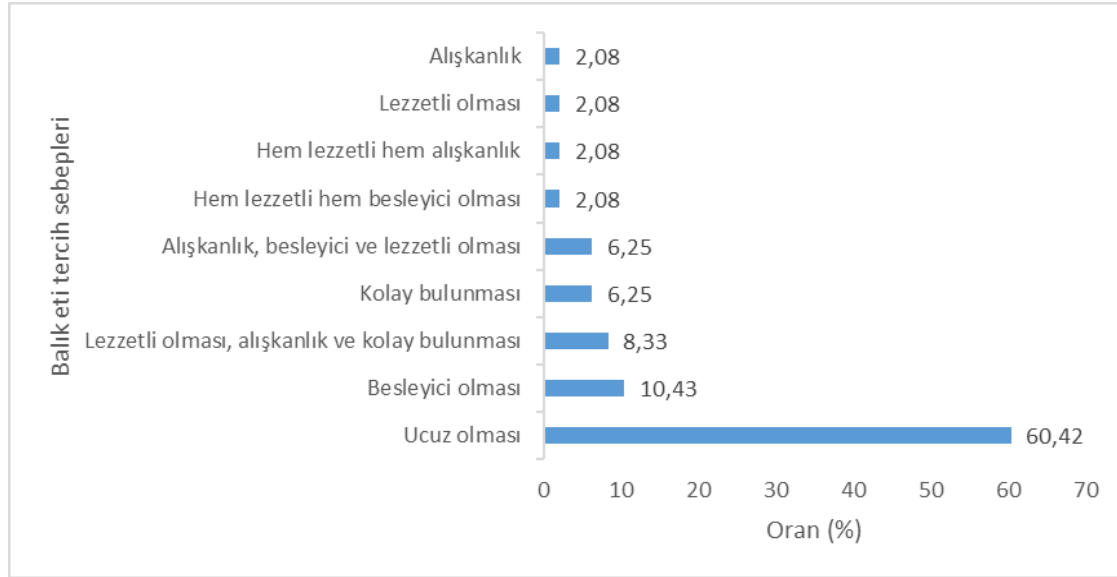

Çalışma kapsamında görüşülen katılımcıların balıketi tüketim sıklığı Şekil 2’de gösterilmiştir. Şekil 2’den de izlendiği gibi, katılımcıların tüketimi ağırlıklı olarak aylık düzeyde gerçekleşmektedir. Nitekim katılımcıların %35.30’u ayda 1 kez, %30.70’i de ayda 2-4 kez aralığında balıketi tüketmektedir. Bunun yanında, yılda 1-3 kez aralığında balık tüketenlerin oranı %14.30’dur. Bu sonuç bize anlamlı bir değerlendirme olanağı sunmaktadır. Öyle ki, görüşülen katılımcıların önemli bir kısmı balıketi tükettiğini belirtmesine rağmen, balık tüketimi sıklığının çok az olduğunu söyleyebiliriz. Her gün balıketi tüketmek çok nadir bir durumdur. Nitekim katılımcıların sadece %0.30’u her gün balıketi tükettiğini belirtmiştir. Katılımcılar arasında haftalık balıketi tüketimi çok azdır. Haftada 1-3 kez balık tüketenlerin oranı %15.70 iken, haftada 4-5 kez balık tüketenlerin oranı %3.70’tir.

Şekil 2: Katılımcıların balıketi tüketim sıklığı

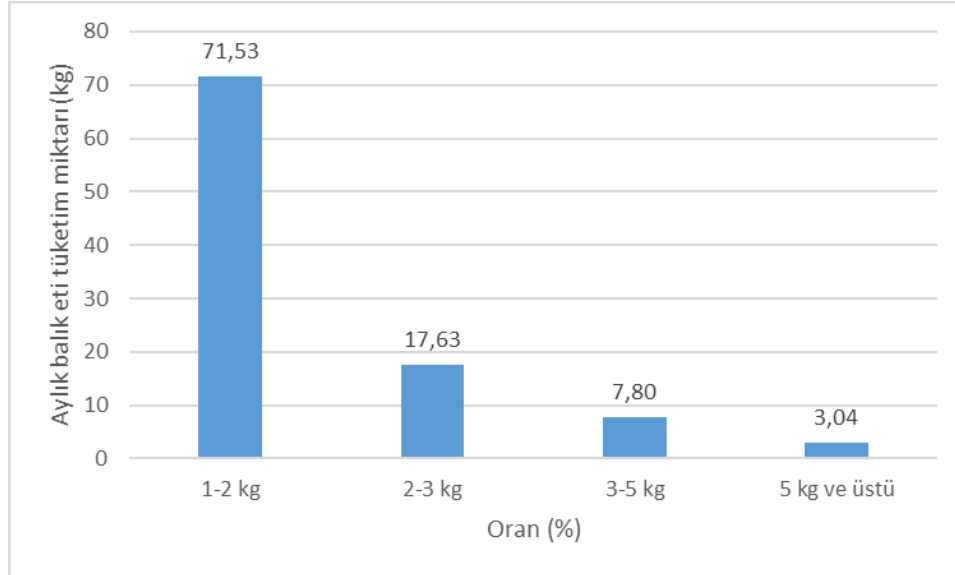

Görüşmeye katılım sağlayanların balıketi tercih etme sebepleri Şekil 3’te gösterilmiştir. Katılımcıların %60.42 gibi önemli bir kısmının balıketi tercih sebebi ürünün ucuz olmasından kaynaklanmaktadır. Katılımcıların %10.43’ünün balıketi tercih sebebinde ürünün besleyicilik özelliği önemli rol oynamaktadır. Balıketi tercih sebeplerini lezzetli olması, alışkanlık ve ürünün kolay bulunması özelliklerine dayandıran katılımcıların oranı ise %8.33’tür. Katılımcıların %6.25’i balıketi tercihlerindeki tek sebebi ürünün kolay bulunabilir olmasına bağlamışlardır. Alışkanlık, besleyicilik ve lezzetli olması katılımcıların %6.25’nin balıketi tercih sebebindeki temel faktörler olarak göze çarpmaktadır.

Şekil 3: Katılımcıların balıketi tercih sebepleri

Hanehalkı başına aylık balıketi tüketim miktarları Şekil 4'te gösterilmiştir. Şekil 4'ten anlaşıldığı üzere, hanehalkı başına aylık balıketi tüketimi 1-2 kg arasında yoğunluk kazanmaktadır. Farklı balık türlerine göre katılımcıların tüketim miktarlarının oransal dağılımına bakıldığında bu durumu görmek mümkündür (Tablo 2). Genel olarak katılımcıların %71.53'ü aylık balıketi tüketim miktarlarının 1 ile 2 kg arasında olduğunu ifade etmiştir. Katılımcıların %17.63'ü ise aylık balıketi tüketim miktarının 2-3 kg arasında olduğunu belirtmiştir. Hanehalkı başına aylık balıketi tüketimi 3-5 kg arasında olanların oranı %7.80 iken, 5 kg ve üstünde tüketimi olanların oranı %3.04'tür. Genel olarak, hanehalkı başına aylık balıketi tüketim miktarının düşük olduğunu söyleyebiliriz.

Şekil 4: Katılımcıların hanehalkı başına aylık balıketi tüketim miktarı (kg)

Tablo 2: Katılımcıların Farklı Balık Türlerine Göre Tüketim Miktarlarının Oransal Dağılımı (%)

Miktar	Çipura	Levrek	İstavrit	Hamsi	Alabalık
1-2 kg	50,00	40,00	100,00	71,30	73,77
2-3 kg	16,67	30,00	-	16,67	14,75
3-5 kg	33,33	20,00	-	7,41	8,20
5 kg ve üstü	-	10,00	-	4,63	3,28

Hanehalkı büyüklüğü ile balık eti tüketim miktarları arasındaki ilişki incelendiğinde balık eti tüketim miktarının hanehalkı büyüklüğünün artması ile birlikte artış gösterdiği görülmektedir (Tablo 3). Hanehalkı büyüklüğü 4 kişiden az olanlar ile 4 ve daha fazla kişiden oluşan iki katılımcı grubu karşılaştırıldığında, tüketim miktarı aralıklarının iki grup için benzerlik göstermediği ortaya çıkmaktadır. Aylık balık eti tüketimi 1-2 kg arasında olanların oranı hanehalkı büyüklüğü 4 kişiden az olanlarda %73.76 iken, 4 ve daha fazla kişiden oluşan grupta %53.13'tür. Diğer yandan, aylık balık eti tüketim miktarı 2-3, 3-5, 5 kg ve üstünde olanların oranı hanehalkı büyüklüğü 4 ve daha fazla kişiden oluşan grupta 4 kişiden az olan gruba göre daha yüksek bulunmuştur. Özellikle aylık balık eti tüketim miktarı 3-5 ile 5 kg ve üstünde olanların oranı açısından hanehalkı büyüklüğü 4 ve daha fazla kişiden oluşan grup lehine bir dağılım sergilemektedir. Nitekim, aylık balık eti tüketim miktarı 3-5 ile 5 kg ve üstünde olanların oranı hanehalkı büyüklüğü 4 kişiden az olanlarda sırasıyla; %6.84 ve %1.90 iken, 4 ve daha fazla kişiden oluşan grupta %15.63 ve %12.50'dir. İki hanehalkı büyüklük grubu arasında ortaya çıkan bu farklılık istatistiksel olarak anlamlı bulunmuştur.

Tablo 3: Hanehalkı Büyüklüğü ile Balık Eti Tüketim Miktarları Arasındaki İlişki

Tüketim Miktarları	Hanehalkı Büyüklüğü	
	4 ten az (%)	4 ve 4 ten fazla (%)
1-2 kg	73,76	53,13
2-3 kg	17,49	18,75
3-5 kg	6,84	15,63
5 kg ve üstü	1,90	12,50
Pearson Ki-kare (Chi-square) testi değeri	15,051	
P değeri	,002*	

* %5 önem düzeyinde istatistiksel olarak anlamlı (p-value≤ 0.05)

Aylık hanehalkı geliri ile balık eti tüketim miktarları arasındaki ilişki incelendiğinde, hanehalkı büyüklüğüne benzer şekilde, pozitif yönde bir ilişki saptanmıştır. Bu ilişki 458 US\$'dan az, 458-1371 US\$, 1372-2285 US\$ ve 2285 US\$'dan fazla aylık hanehalkı gelirin sahip olan 4 farklı gelir grubu için incelenmiştir. Bu ilişkiye göre balık eti tüketim miktarı aylık hanehalkı gelirin artması ile birlikte artış göstermektedir (Tablo 4). Aylık balık eti tüketim miktarı 1-2 kg ve 2-3 kg arasında olanların oranı en düşük gelir grubunda (%78.21) diğer üst gelir gruplarına (%73.87, %68.12, %57.14) göre daha yüksek bulunmuştur. Diğer yandan, aylık balık eti tüketim miktarı 3-5 kg, 5 kg ve üstünde olanların oranı en yüksek gelir grubunda (%22.86, %5.71) diğer alt gelir gruplarına (458-1371 US\$: %8.11, %2.70; 1372-2285 US\$: %8.70, %5.80) göre daha yüksek düzeyde çıkmıştır. Yapılan istatistiksel analiz, aylık hanehalkı geliri ile balık eti tüketim miktarları arasındaki pozitif yöndeki ilişkiyi anlamlı derecede doğrulamaktadır.

Tablo 4: Gelir Grupları ile Balık Eti Tüketim Miktarları Arasındaki İlişki

Tüketim Miktarları	Gelir Grupları (%)			
	458 US\$'dan az	458-1371 US\$	1372-2285 US\$	2285 US\$'dan fazla
1-2 kg	78,21	73,87	68,12	57,14
2-3 kg	21,79	15,32	17,39	14,29
3-5 kg	-	8,11	8,70	22,86
5 kg ve üstü	-	2,70	5,80	5,71
Pearson Ki-kare testi değeri	25,853			
P değeri	,011*			

* %5 önem düzeyinde istatistiksel olarak anlamlı (p-value≤ 0.05)

Balıklarda bulunan omega-3 yağ asitlerinin LDL kolesterol yapımını azaltarak kan trigliserit düzeyini düşürdüğü ve kalp koruyucu etkisi nedeni ile bu yağları tüketenlerde koroner kalp hastalığına bağlı ölümlerde düşüş görüldüğü belirtilmektedir (Eroğlu Samur, 2012). Buradan hareketle hanehalkında kalp-damar hastalığı olup olmama durumu ile balık eti tüketim miktarları arasındaki ilişki incelenmiştir (Tablo 5). Genel olarak, görüşülen katılımcıların %83.25'i kalp-damar hastalığının olmadığını belirtmiştir. Aylık balık eti tüketim miktarı 1-2 kg arasında olanların oranı kalp-damar hastası olmayanlarda %72.54 iken, olanlarda %67.31'dir. Diğer yandan, aylık balık eti tüketim miktarı 2-3 kg ve 3-5 kg arasında olanların oranı kalp-damar hastası olanlarda sırasıyla; %21.15 ve %11.54 iken, olmayanlarda %16.80 ve %6.97'dir. Aylık balık eti tüketim miktarı 5 kg ve üstünde olanlar ise sadece kalp-damar hastası olmayan grupta bulunmakta olup, oransal olarak düşük düzeydedir.

(%3.69). Genel olarak, kalp-damar hastalığı olanların balık eti tüketim miktarları olmayanlara göre biraz daha yüksek gibi görünmesine rağmen, yapılan istatistiksel analiz kalp-damar hastalığı olanlar ve olmayanlar arasında aylık balık eti tüketimi miktarı açısından istatistiksel olarak anlamlı bir farklılık olmadığını ortaya koymaktadır.

Tablo 5: Kalp-Damar Hastalığı Olup Olmama Durumu ile Balık Eti Tüketim Miktarları Arasındaki İlişki

Tüketim Miktarları	Kalp-Damar Hastalığı	
	Yok (%)	Var (%)
1-2 kg	72,54	67,31
2-3 kg	16,80	21,15
3-5 kg	6,97	11,54
5 kg ve üstü	3,69	-
Pearson Ki-kare testi değeri	3,697	
P değeri	,296	

4. SONUÇ

Bu çalışma, TRA1 bölgesinde yaşayan hanehalklarının balık eti satın alma davranışlarının anlaşılması açısından önemli bulgular içermektedir. Çalışma kapsamında gerçekleştirilen araştırma sonuçlarına göre, bu bölgedeki hanehalkının %72,50'sinin et tüketimi içinde balık yer almasına rağmen, tüketim ağırlıklı olarak aylık düzeyde gerçekleşmektedir. Hanehalkının önemli bir kısmının balık eti tercih sebebi ürünün ucuz olmasından kaynaklanmaktadır. Diğer yandan, hanehalkının balık eti tercih sebebinde ürünün besleyicilik özelliği daha geri planda kalmaktadır. Genel olarak, hanehalkı başına aylık balık eti tüketim miktarları düşük seviyede olup, aylık balık eti tüketimi 1-2 kg arasında yoğunlaşmaktadır. Hem hanehalkı büyüklüğü hem de aylık hanehalkı geliri ile balık eti tüketim miktarları arasında pozitif yönde ve istatistiksel olarak anlamlı bir ilişki belirlenmiştir.

OECD-FAO verilerine göre kişi başına düşen görünür balık tüketiminin canlı ağırlık eşdeğeri (LWE) açısından 2017-2019'da 20.4 kg olduğu, bu miktarın 2029'a kadar %4.7 artışla 21.4 kg olacağı tahmin edilmektedir. Balık tüketimindeki eğilimin miktar ve ürün biçimleri açısından ülkeler arasında ve ülkeler içinde farklılık göstereceği vurgulanmaktadır (OECD-FAO, 2020). Örneğin, balık tüketimi AB genelinde büyük farklılıklar göstermektedir. Balık tüketim miktarı Çekya'da kişi başına yılda 6 kg iken, Portekiz'de 59.9 kg'dır. Avrupa Birliği (AB) ortalamasında bu tüketim miktarı kişi başına yıllık yaklaşık 24 kg'dır (European Commission, 2022). Türkiye'de ise kişi başına ortalama balık tüketimi 2019'da 5.09 kg olup, bu miktar hem AB ortalamasından hem de dünya ortalaması olan 20.66 kg'dan oldukça azdır. Bu çalışmanın gerçekleştirildiği TRA1 bölgesinde aylık balık eti tüketiminin 1-2 kg arasında yoğunlaştığı göz önüne alınırsa, incelenen bu bölge açısından tüketimin yetersiz olduğu söylenebilir. Türkiye'nin farklı bölgeleri açısından balık tüketim miktarları değişkenlik gösterse de sonuç olarak bu durum mevcut görünümüyle ülke olarak dünya ortalamasının altında olduğumuz gerçeğini değiştirmemektedir. OECD-FAO (2020), kişi başına balık tüketiminin ülkeler arasında ve ülkeler içinde farklılık göstermesinin nedeninin coğrafi, ekonomik ve kültürel faktörlerden kaynaklandığı ileri sürmektedir. Coğrafi, ekonomik ve kültürel faktörlerin balık tüketimini etkilemesi elbette yadsınamaz. Ancak, üç tarafı denizlerle çevrili olan bir ülkede kişi başına balık tüketiminin dünya ortalamasının altında kalması bazı tedbirlerin alınmasını gerektirecek kadar önemli bir göstergedir. Bu kapsamda özellikle de sağlık vurgusu yapılarak balık tüketimini teşvik edecek stratejilerin belirlenmesi önemli görülmektedir.

Coğrafi İşaretlerin Yaygınlaşmasında Üretici Örgütlerinin Rolü: Kelkit İlçesi Kuru Fasulye Üreticileri Birliği Açısından Bir Değerlendirme

Dr.Öğr.Üyesi Nilgün Doğan¹

Prof.Dr. Hakan Adanacıoğlu²

¹Gümüşhane Üniversitesi / Kelkit Aydın Doğan MYO, e-mail, nilgundogan@gumushane.edu.tr ORCID: 0000 0002 7142 8296

² Ege Üniversitesi / Ziraat Fakültesi, Tarım Ekonomisi Bölümü, hakan.adanacioglu@ege.edu.tr, ORCID: 0000-0002-8439-8524

Özet: Tarımsal üretimdeki risklere karşı özellikle küçük ölçekli çiftçiler savunmasız durumdadırlar. Çiftçi gelirlerini artırmak, üretim maliyetlerini düşürmek ve tarımsal pazarlama stratejilerini geliştirmek için çeşitli üretici ya da çiftçi örgütleri ortaya çıkmıştır. Üretimin sürdürülebilirliğini sağlamada çiftçi örgütleri olumlu örnekler oluşturmaktadır. Bu bakımdan, tarımsal üretimin büyük bir çoğunluğunu oluşturan küçük ölçekli işletmelerin büyümesinde çiftçi örgütlerine ihtiyaç vardır. Özellikle Türkiye’de sanayi bakımından gelişmeye müsait olmayan bölgelerde halkın ana geçim kaynağını oluşturan tarımsal üretimin çiftçiler için sürdürülebilir olmasında çiftçi örgütleri etkin rol oynayabilmektedir. Küçük ölçekli çiftçilerin bir örgüt adı altında toplanabilmesi üretimin başarı göstergesi olarak değerlendirilebilmektedir. Tarımsal işletmelerin organizasyonel bir yapıya kavuşarak teknik ve ekonomik problemlerini çözüme kavuşturmada örgütler önemli bir misyon üstlenmektedir. Özellikle pazar değeri yüksek ürünlerin üretiminde birliklerin, örgütlerin faaliyetlerini sürdürmesi ayrı bir önem arz etmektedir. Avrupa’da ülkelerin kalkınma planlarında yer verilen üretici örgütleri, üretim sürecinin kaynak kullanımından başlayarak çıktılara kadar olan tüm süreçte ve özellikle pazarlama sürecinde çiftçinin rekabet gücünü artırıcı, çıkarlarını koruyucu örgütlenmeler ön planda tutulmaktadır. Gümüşhane ilinin bitkisel üretim deseninde kuru fasulye üretimi önemli bir yer tutmaktadır. Son yıllarda, çiftçilerin ata tohumu kullanmak yerine farklı genotiplere sahip tohumları kullanmaları tohum mirasının kaybolma tehlikesini gündeme getirmiştir. Türkiye’de üretildikleri bölgenin özelliklerini taşıyarak diğer kuru fasulyelerden coğrafi işaret tescili ile ayrılan yöre tohum kaynaklarından üretimi yapılan fasulye türleri mevcuttur. Kelkit İlçesi Kuru Fasulye Üreticileri Birliği Kelkit şeker fasulyesi yerli tohumunu korumak ve diğer fasulye tohumlarının alınmasına engel olmak amacıyla 6769 sayılı Sınai Mülkiyet Kanunu kapsamında 2020 tarihinde Kelkit kuru fasulyesini tescil ettirmiştir. Bu çalışmanın amacı, tescilli kuru fasulye üretiminin teşvik edilmesinde ve bölgede yaygınlaşmasında üretici birliğinin rolünü incelemektir.

Anahtar Kelimeler: Üretici Örgütleri, Coğrafi İşaretli Ürünler, Kelkit Kuru Fasulyesi, Gümüşhane

The Role of Producer Organizations on Geographical Indications: An Evaluation for Kelkit County Dry Bean Producers Association

Abstract: Small-scale farmers are particularly vulnerable to risks in agricultural production. Various producer organizations have emerged to increase farmer income, reduce production costs and develop agricultural marketing strategies. Farmer organizations set positive examples in ensuring the sustainability of production. In this respect, producer organizations are needed for the growth of small-scale farms, which constitute the majority of agricultural production. These organizations can play an active role in ensuring that agricultural production, which is the main source of income for the people, is sustainable for farmers, especially in regions that are not suitable for industrial development in Turkey. Gathering of small-scale farmers under the name of an organization can be evaluated as a success indicator of production. Organizations undertake an important mission in solving technical and economic problems by obtaining an organizational structure of agricultural enterprises. It is of particular importance that associations and organizations continue their activities, especially in the production of agricultural products with high market value. Producer organizations included in the development plans of countries in Europe, organizations that increase the competitive power of the farmers and protect their interests in the whole process from the use of inputs to the outputs of the production process and especially in the marketing process are prioritized. Dry bean production has an important place in the plant production pattern of Gümüşhane province. In recent years, farmers' use of seeds with different genotypes instead of using ancestral seeds has brought the danger of loss of seed heritage to the agenda. In Turkey, there are bean types produced from local seed sources, which are distinguished from other dry beans by geographical indication registration by carrying the characteristics of the region where they are produced. Kelkit County Dry Bean Producers Association registered Kelkit dry beans in 2020 within the scope of Industrial Property Law No. 6769 in order to protect the local seed of Kelkit dry bean and to prevent the purchase of other bean seeds. The aim of this study is to examine the role of the producer association in promoting the production of proprietary dry beans and spreading it in the region.

Key Words: Producer Organizations, Geographically Indicated Products, Kelkit Dry Beans, Gümüşhane

1. GİRİŞ

Türkiye'nin kuzeydoğu bölgesinde bulunan Gümüşhane ilinin toplam nüfusu 150 119 olup, 2008-2019 yılları arasında 25 477'lik nüfusu dışı göç vermiştir ve net göç hızı % 16.81 olarak kaydedilmiştir (TÜİK, 2021). Bu göç miktarı ile Türkiye'de en fazla dışı göç veren illerden bir tanesi olmakla birlikte, hane sayısı bakımından Gümüşhane ili 49 045 ile Türkiye'de en az hane sayısına sahip iller arasındadır. TÜİK verilerine bakıldığında Gümüşhane ili İstatistik Bölge Birimleri Sınıflamasında yer alan (İBBS) 26 bölgede TR90 bölgesi içerisinde bulunmaktadır. Bu bölgede yaşayanların %36.8'inin geçim kaynağını tarım sektörü oluştururken, %48.3 ve %19.5'nin geçim kaynağını sırasıyla hizmet ve sanayi sektörü oluşturmaktadır ve ilde işsizlik oranı %10'dur (TÜİK, 2021). İlin topoğrafik yapısı ve lojistik nedenlerden dolayı sanayi ve hizmet sektörü çok gelişmemiştir. Geleneksel geçim kaynağı bitkisel ve hayvansal üretim olup, günümüzde ise istenilen seviyede değildir. İlin sadece %11'lik kısmı ovalardan oluşmaktadır ve bu ovalar Kelkit, Şiran ve Köse ilçelerinde bulunmaktadır. Gümüşhane'de 149 007 hektar toplam arazi olup, bunun %22.6'sı tarım arazisi olarak ekilmektedir. Bu sorunların aksine, Gümüşhane ilinde üretilen yöreye ait ürünler, yerel ekonominin harekete geçirilmesi açısından bir avantaj olarak görülebilmektedir. Nitekim Vorotnikov vd. (2017), yaptıkları çalışmada bölgesel ekonominin gelişmesinin koşullarında, gıda pazarındaki dengeli arzlara dayalı sürdürülebilirliğin sağlanmasının yöreye ait ürünlerin üretiminin artırılmasına bağlı olduğunu vurgulamışlardır.

Ürünün sahip olduğu karakteristik özelliklerin ve kalitenin, üretildiği bölgeye has olması coğrafi işaretlerin temel özelliğini oluşturmaktadır. Yöresel ürünlerin tescillenmesi, tanıtılması ve turizm ürününe dönüştürülmesinde coğrafi işaret (Ci) bir araç görevi görmektedir (Yenipınar vd., 2014). Üretilen ürün üzerinde Ci bulunması kısmen de olsa, değişen küresel pazar koşullarında; ürünün rekabet gücü, bilinirliği, özgünlüğü artırılarak üreticiye gelir kazancı, tüketici için de ürünün belli standartlarda üretildiği garanti edilmiş olunur. Özellikle küresel rekabette ekonominin dinamiğini oluşturan fiziksel sermaye yatırımları kadar bilgiye yapılan yatırımlar önem arz etmektedir. Haliyle, gerek ulusal gerekse uluslararası ekonomilerde yöresel ürünler hakkında bilgi veren coğrafi işaretlerin önemi günden güne artmaktadır. Ci tescilleri, Türkiye'de sanayi ve hizmet sektörü bakımından gelişmeye müsait olmayan kırsal bölgelerde, tarımsal üretimde istihdam sağlamada ve bununla birlikte kırsal nüfusu korumada ayrı bir önem arz etmektedir. Bu nedenle, yöreye ait ürünlerin üretim paylarının artırılması ve Ci tescili ile desteklenmesi yöre ekonomisi için önemli bir fırsat olarak değerlendirilebilmektedir.

Gümüşhane ilinde bugüne kadar Türk Patent Enstitüsüne (TPE) müracaat edilip Ci etiketi ile tescillenen bazı yöresel gıda ürünleri mevcuttur (Gümüşhane Pestil ve Kömesi, Gümüşhane Ekmeği, Gümüşhane Şeker Fasulyesi, Kelkit Keti ve Kürtün Araköy Ekmeği). Kelkit Kuru Fasulyesi 2020 yılında Ci tescili olarak tescilli ürünler arasına girmiştir. Kelkit Kuru Fasulyesi diğer kuru fasulyelere göre yetiştirildiği bölge nedeni ile ayırt edici özelliklere sahiptir. Bu özellikleri koruma altına almak ve yöre çiftçisini ata tohumunu kullanmaya teşvik etmek için 2018 yılında Kelkit ilçesi Kuru Fasulye Üreticileri Birliği tarafından Ci tescili başvurusu yapılmış ve TPE tarafından Kelkit Kuru Fasulyesi 2020 yılında koruma altına alınmıştır.

Kırsal bölgelerdeki üreticilere alternatif gelir kaynağı sağlamak, çiftçi refahını desteklemek ve yöreye has özellikleri taşıyan yöre ürünlerinin üretimini artırmanın şartı üretimin sürdürülebilirliğinden geçmektedir. Bu noktada, Ci tescili alan ürünün tescil aşamasından sonra üretiminin Ci prosedürüne göre yapılması, piyasaya tescilli ürün olarak sunulması Ci'li ürünleri benzerlerinden ayırmak için yeterli olmaktadır. Yöre üreticisinin tescilli ürün konusundaki bilgi düzeyi, tescilli üretime katılma durumu, pazar koşulları, ürünün rekabet gücü gibi pek çok faktör Ci tescilli ürünlerin yaygınlaşmasında rol oynamaktadır. Yazıcıoğlu vd.'nin (2019) yapmış oldukları çalışmada ifade ettikleri gibi coğrafi işaretli ürün üretiminin başarılı olması; değer yaratma, Ci'li ürünlerin üretiminden tüketicinin eline geçinceye kadarki süreçte denetimin yapılması ve ürünün Ci tescili ile farklılaştırılmasına bağlıdır.

Üretici örgütleri Ci'li ürünlerin yaygınlaşmasında ve pazarlanmasında etkin rol oynayabilecek organizasyonlar olarak görülebilir. Üretici örgütleri kooperatifler, birlikler gibi oluşumlar ile üreticinin ihtiyacı olan girdi veya nakit ihtiyacını ürünlerin satılması yoluyla elde eden kolektif bir oluşumdur. Üreticiler bu oluşumlar altında özerklik elde ederek tarımsal gelirlerini artırma ve pazarda rekabet edebilme ayrıcalıklarına sahip olma beklentisi içindedir. Bu çalışmanın odak noktası, Ci tescili almış Kelkit Kuru Fasulyesi üretiminin yaygınlaşmasında Kelkit ilçesi Kuru Fasulye Üreticileri Birliğinin rolünü irdelemektir.

2. ÖRGÜTLENME KAVRAMI ve TARIMSAL ÖRGÜTLENME

Örgütlenme, aynı amaca ulaşmak için tek bir çatı altında toplanma veya organize bir şekilde toplu hareket etme olarak tanımlanabilmektedir ve ülkelerin ekonomik, sosyal ve kültürel durumları örgütlerin işlevselliğini etkileyebilmektedir. Haliyle, ekonomik ve sosyal olarak gelişmiş ülkelerde güçlü örgüt yapılarına rastlamak mümkündür. Ülkelerde örgütsel yapıların yaygın ve güçlü olması gelişmişlik düzeyi ile de bağlantılıdır (Kızılaslan

ve Doğan, 2013). Avrupa Profesyonel Tarım Örgütleri Komitesi (COPA) 1959'dan bu yana faaliyetlerini üye üretici örgütleri ile sürdürmektedir ve Avrupa Birliği (AB) ülkelerinde 50 binden fazla tarım örgütü aktif olarak çalışmaktadır.

Üretici örgütleri gönüllük esasına dayalı kurulmakta ve kamu otoriteleri tarafından kurulum ve işleyiş süreçleri takip edilmektedir. Örgütlerinin amacı, üretimden ürünün pazarlanmasına kadar olan süreçte üyelerine destek sağlamak ve bunu örgüt amacı çerçevesinde gerçekleştirmektir. Örgütlerin sağladıkları destekler değişmekle birlikte temel amaç çiftçiyi kalkındırmaktır. Avrupa'da üretici birliklerinin faaliyetleri çok kapsamlı olmakla birlikte üreticilere üretim faaliyetlerinde bilgi sağlama, pazarda rekabet edebilme ve kaynak kullanımında imkân sağlama gibi önemli görevlere sahiptirler. Günümüzde gelişmiş ülkelerin kalkınmasında, tarımsal üretimdeki gelişmişlikleri göz ardı edilemeyen bir durumdur (Kızılaslan ve Doğan, 2013). Bu nedenle, tarımsal üretimdeki başarı bir bakıma üretici örgütlerinin başarısına dayanmaktadır. Küçük ölçekli çiftçilerin üretim süreçlerinin etkinliğinde, küresel pazarda rekabet edebilmelerinde, kurumsal bir yapıya kavuşmalarında ve ürün çeşitlendirmelerinde üretici örgütlerinin etkisi kendini göstermektedir. Bununla birlikte, çiftçilere yönelik tarımsal üretim kararlarının alınmasında ve politikaların oluşturulmasında örgütlerin önemli bir yeri vardır. Avrupa'da tarım örgütlerinin geçmişi çok eskiye dayanması nedeniyle bu örgütler günümüzde güçlü yapıları ile ön plana çıkmaktadır. Örgütlenme bilinci konusunda ciddi bir tecrübeye sahip olan bu örgütler değişen pazar koşullarında çiftçilere yeterli desteği sağlayabilmektedir. Karlı vd.'nin (2018) çalışmalarında belirttikleri gibi özellikle tarımsal üretimin ekonomik kazanımlarının yüksek olduğu ülkelerde üretici örgütleri kalkınma aracı olarak kullanılmaktadırlar. Dünyada ülke ekonomilerinde önemli bir yer edinen üretici örgütleri Yeni Zelanda, Hollanda, Fransa ve Finlandiya'da Gayri Safi Yurtiçi Hasılası'nın %10'unu oluşturmaktadır (Yazıcıoğlu vd., 2019).

Türkiye gibi gelişmekte olan ülkelerde tarımsal üretimin büyük bir bölümü küçük ölçekli üreticiler tarafından gerçekleştirilmektedir. Özellikle, kırsal bölgelerde yaşayan nüfusun yoğunluğu göz önünde bulundurulduğunda kırsal nüfusa istihdam yaratmada, çiftçi gelirlerini artırmada, küçük işletmelerin tarımda verimliliğinde sağlanacak desteklere ihtiyaç olmaktadır. Bu desteklerin tarımsal örgütler tarafından organize bir şekilde yapılması üreticileri tarımsal piyasalarda koruyacak ve güçlendirecektir. Tarımdaki örgütlenme mesleki ve ekonomik örgütlenme olarak kendini göstermektedir. Ekonomik tarımsal örgütler, üreticinin ekonomik olarak desteklenebileceği kaynak sağlamada ve ürünlerin pazarlanmasında etkili olabilmektedir. Örneğin, üretici örgütleri sayesinde ürünün üretilmesinden tüketicinin kullanımına kadarki süreçte araçlar azalacak ve bu sayede üreticinin eline geçen fiyat artacaktır. Böylece, üretici piyasadaki fiyat dalgalanmalarından daha az etkilenerek ve ürününü beklenen fiyatın altında satmak zorunda kalmayacaktır. Ekonomik örgütlere kooperatif ve birlikler örnek verilebilir (Kaya ve Emeksiz, 2016). Türkiye'de Tarım ve Orman Bakanlığı'nın 1163 Sayılı Kanun ile kurulmuş olan kooperatifler tarımsal örgütler içerisinde %68.7 pay ile en yüksek orana sahip iken, bunu %22 ile Tarım Kredi Kooperatifleri ve %9.2 ile Tarım Satış Kooperatifleri takip etmektedir. Tarımsal Üretici Birlikleri ise Tarım ve Orman Bakanlığının 5200 sayılı kanunu kapsamında yer almaktadır. Mesleki örgütler olarak kamu kurumu vasfı taşıyan ziraat odaları mevcuttur. Türkiye'de 14 bin tarımsal üretici örgütü bulunmaktadır (Topuz ve Bozoğlu, 2019) ve kuruluş ve işleyiş faaliyetlerinde yasalara tabidirler.

Bu bağlamda küçük çiftçilerin örgütlenmeleri ve bir örgüt çatısı altında faaliyetlerini sürdürmeleri gerekmektedir. Araştırmalar, küçük ölçekli üreticilerin ilgili pazarlara girmeleri halinde tarım ve benzeri faaliyetlerden elde ettikleri gelirleri önemli ölçüde artırabileceklerini göstermektedir (Bikkina vd., 2018). Farklılaştırılmış ürün grubuna giren Cİ tescilli ürünlerin yaygınlaşmasında üretici örgütlerinin rolü bu çalışmada Kelkit İlçesi Kuru Fasulye Üreticileri Birliği örneği ile değerlendirilmiştir.

3. KELKİT ŞEKER FASULYESİ'NİN COĞRAFİ İŞARET TESCİLİ SÜRECİNDE KELKİT İLÇESİ KURU FASULYE ÜRETİCİLERİ BİRLİĞİ'NİN ROLÜ

Gümüşhane ilinin toplam arazi varlığının %36.23'ünü orman-fundalık alanlar oluştururken %28.43'ünü çayır ve mera alanları ve sadece %22.66'sını tarım alanları oluşturmaktadır. Toplam tarım arazisi içerisinde tarla arazisi %70.43'lük bir oranla önde iken, tarla arazilerinin %42.95'i Kelkit, %39.54'ü Köse ve %31.01'i Şiran ilçesindedir. İlin tarla bitkileri üretim miktarını bu üç ilçe karşılamaktadır. Gümüşhane ilinde 2021 Çiftçi Kayıt Sistemine (ÇKS) göre, tarımsal üretimde 4323 çiftçi kayıtlı bulunmaktadır. Bitkisel üretim desende mısır, yonca, patates, buğday, şeker pancarı ve kuru fasulye önde gelmektedir. Kuru fasulye üretimi yıllık 4 023 ton olarak kaydedilmiştir (Gümüşhane İl Tarım ve Orman Müdürlüğü, 2021).

Son yıllarda tarımsal üretimde yaşanan değişim dünyada ve Türkiye'de ata tohum mirasını korumak adına agro-ekolojik uygulamalar içerisinde yer almaktadır. Agroekolojik üretim ilkelerine göre üretim; tarımsal alanların korunmasına, üreticilerin araçlar olmadan üretmesine, doğal kaynakların rasyonel bir şekilde çevreye zarar

vermeyecek şekilde kullanılmasına, tohum mirasının korunmasına, örgütlenmeye, çiftçi refahının artırılmasına ve dayanışma ekonomisinin sağlanmasına yöneliktir. Üreticilerin ata tohumu kullanmak yerine farklı genotiplere sahip verim düzeyi yüksek tohumları kullanmaları bu tohum mirasının kaybolma tehlikesini gündeme getirmiştir. Küçük ölçekli çiftçiler tarafından yerel tohumların (önceki yıldan elinde kalan tohumlar) bir sonraki üretim döneminde kullanılması uygulamada daha pratik iken, büyük ölçekli çiftçiler için ise yeni geliştirilen tohumların kullanılması daha yaygın hale gelmiştir. Yerel tohum kaynaklarının kaybolmasında etkili olan diğer faktörler ise piyasadaki fiyat dalgalanmaları, tarım politikaları ve örgütlenme kültürünün olmayışı şeklinde sıralanabilir. Türkiye’de üretildikleri bölgenin özelliklerini taşıyarak diğer kuru fasulyelerden coğrafi işaret etiketi ile ayrılan yöre tohum kaynaklarından üretimi yapılan fasulye türleri mevcuttur. İspir fasulyesi, Çameli fasulyesi, Akkuş Şeker Fasulyesini bunlara örnek verebiliriz. Tescilli kuru fasulyelerden bir tanesi de Kelkit Şeker Fasulyesidir.

3.1. Üretici Birliğinin Kelkit Şeker Fasulyesinin Coğrafi İşaret Tescili Sürecinde Gerçekleştirdiği Faaliyetler

Kelkit şeker fasulyesi yani halk arasında “pembegöz” olarak tabir edilen yerli tohumu korumak ve üretimine teşvik etmek için 2018 yılında Kelkit İlçesi Kuru Fasulyesi Üreticileri Birliği kurulmuştur. Birlik, diğer fasulyelere göre ayırt edici özellikleri bulunan, üzerinde pembe lekeleri olan bu tohumu koruma altına almak için Türk Patent Enstitüsüne (TPE) başvurmuş ve 2020 yılında Kelkit Kuru fasulyesini tescilletmiştir. Cİ tesciline göre, yetiştiricilik yerel tohum ile yapılır ve her yıl üretici hasat sonrası elde ettiği üründen tohumluk ayırır. Tohumluk seçimi yapılırken halk deyişyle “bilya” bombeli, tombul ve 7-9 mm uzunluğundaki taneler ayıklanır. Tohumluk olarak ayrılan taneler içerisinde %20-30 oranında “pembegöz” taneler bulunur. Beyaz ve “pembegöz” taneler ile elde edilen karışım ile ekim yapılır. Ekim süreci denetime tabidir. Denetim, Kelkit İlçesi Kuru Fasulye Üreticileri Birliği koordinatörlüğünde Gümüşhane İl Tarım ve Orman Müdürlüğünden en az 1 ziraat mühendisi, Kelkit İlçe Tarım ve Orman Müdürlüğünden 2 ziraat mühendisi ile Karadeniz Tarımsal Araştırma Enstitüsü Müdürlüğünden 1 ziraat mühendisinden oluşan toplamda 4 kişilik denetim mercii tarafından yürütülür. Toprak hazırlığı, ekim, vejetasyon, hasat ve paketleme dönemi rutin kontrolleri Gümüşhane İl Tarım ve Orman Müdürlüğü ile Kelkit İlçe Tarım ve Orman Müdürlüğünden en az 3 personel ile gerçekleştirilir. Teknolojik analizlere ilişkin protein oranı ve pışme süresinin tescilde belirtilen özelliklere uygunluğunun kontrolü için denetim mercisinde yer alan Karadeniz Tarımsal Araştırma Enstitüsü Müdürlüğünden 1 ziraat mühendisi sorumlu olur. Her yıl rastgele 2 üreticiden hasat sonrası numune alınarak protein oranı ve pışme süresi denetlenir. Gerekli görülen durumlarda veya şikâyet olması halinde her zaman denetim yapılabilir. Denetimlere ilişkin veriler her yıl Türk Patent ve Marka Kurumuna raporlanır. Birlik, Cİ tescilinin sağladığı hakları kullanmakla yükümlüdür ve tescil belgesine uygun şekilde üretim sürecini gerçekleştirdiğinde ürünün pazarlanma aşamasında Cİ tescil amblemini kullanabilir.

3.2. Kelkit Şeker Fasulyesinde Coğrafi İşaret Tescilinin Alınmasının Üretici Birliğine ve Üreticilere Geri Yansımaları: Avantajlar ve Engeller

Türkiye’de 2004 yılında çıkartılan 5200 Sayılı Tarımsal Üretici Birlikleri Kanununu esas alan Kelkit İlçesi Kuru Fasulye Üreticileri Birliğinin kuruluşu, ata tohumu olan halk arasında “pembegöz” olarak tabir edilen kuru fasulyenin üretimini yaygınlaştırmak ve Cİ tescili ile ürünün marka değerini oluşturmak amacına dayanmaktadır. Birlik, kuru fasulye üretimi yapan ve tüzüklerinde verilen miktardaki kuru fasulyenin pazarlanmasına aracılık yapmayı taahhüt eden asgari sayıdaki çiftçilerin bir araya gelmesiyle Kelkit ilçe düzeyinde kurulmuştur. Birliğin amaçlarından biri de Cİ tescilli kuru fasulye üretimini sadece Kelkit ilçesinde değil, Cİ tescil belgesinde belirtildiği üzere tescilli kuru fasulye üretiminin yapılabileceği Köse ve Şiran ilçelerinde de uygulamaktır. Bu bakımdan, birliğin üretici sayısını artırması ve faaliyetlerini Kelkit dışında yürütebilmesi için kamu otoritelerinden ya da sivil toplum örgütlerinden alacakları desteklere ihtiyaçları vardır. Birlik aynı zamanda Kelkit kuru fasulyesi ile ilgili pazar araştırmasını yapmak, çiftçi üyelerine pazar bulmak, üretim sürecinde teknik bilgi sağlamak, girdi teminini sağlamak, ürün kalitesi konusunda gerekli tedbirleri almak, gerekli belgelerin kaydını tutmak ve kuru fasulyenin paketlenmesi için gerekli standartları sağlamak gibi önemli görevleri üstlenmiştir. Mevcut durumda, birliğin pazara yönelik yaşadığı en önemli problemin hasat sonrası eleme ve sınıflandırma olduğu birlik tarafından bildirilmiştir. Kuru fasulyenin tescil aldıktan sonra pazarda farklılaştırılmasına yönelik en önemli adım ürünün bir tesiste makine ile elenmesi ve sınıflandırılmasının yapılarak paketlenmesidir. Bu durum üreticiyi eleme ve sınıflandırma masraflarından kurtaracak ve pazara belli standartlarda ürün temin etmede kolaylık sağlayacaktır. Birlik, Gümüşhane Tarım ve Orman İl Müdürlüğüne başvurmuş ve %100 Doğu Anadolu Kalkınma Programı (DOKAP) destekli proje gerçekleştirilmiştir. Böylelikle, paketleme mekanizasyonunun sağlamış olacağı avantajla Cİ tescilli kuru fasulye üretiminin yaygınlaşmasında önemli bir adım atılmıştır. Birliğin faaliyetlerini etkin bir

şekilde yapabilmesi birliğin gelirin e bağı olmaktadır ve birlik gelirini sadece üyelik aidatlarından sağlamaktadır. Hâlbuki üyelere sağlanması gereken danışmanlık hizmeti ücretleri, bağış, fon ve yardımlar, reklam, tanıtım gelirleri birliğin diğ er gelirlerini oluşt urması gerekmektedir. Elde edilen bilgiye göre, birlik üyelik aidatı dışında bir gelir sağlayamamakta ve birlik üyelerinin aidat ödeme oranı düşüktür. Bu nedenle birlik, üyeleri için yapması gereken sorumlulukları yerine getirmede sermaye sıkıntısı yaşamaktadır. Birliğin faaliyetlerini kısıtlayan ve çiftçi üyelerine sağlanacak hizmetleri aksatan önemli diğ er bir faktör ise güven faktörüdür. Birliğin faaliyetlerinin başarısında çiftçi ile kurulacak güven ilişkisi kaçınılmazdır. Kelkit İlçesi Kuru Fasulye Birliği'nin sadece ilçe bazında kurulmuş olması fakat Cİ tescili belgesinde üretim alanının Şiran ve Köse ilçelerinde olması Kelkit ilçesinde yaşayan çiftçiler haricinde diğ er çiftçilerin birliğ e olan aidiyet duygularını olumsuz etkileyecektir. Birliğ e üye olma ve birlik çatısı altında birlikte hareket etme isteği gönüllük esasına dayanmaktadır. Bu nedenle, çiftçi ile birlik arasındaki güven unsurunu kuvvetlendirici önlemlerin alınması gerekmektedir.

Kelkit kuru fasulyesine birlik tarafından Cİ tescilinin alınması ile ürünün sahip olmuş olduđu ayırt edici özelliklerin korunması, kuru fasulyenin ve üretim sürecinin kontrole tabi olduđu garanti edilmiştir. Bu durum, Cİ tescil belgesine göre belli standartlarda kuru fasulye yetiştiren üreticileri yapmayan üreticiler karşısında korur niteliktedir. Mevcut pazarda fiyat bakımından daha yüksek olan Cİ tescilli ürünlerin üretiminin artması üreticinin gelirinin artmasına sebep olacaktır. Cİ tescilli ürünler tüketici nezdinde farklılaştırılmış geleneksel ürünler olduğundan ürün pazarında üreticiye avantaj sağlayacaktır. Küçük ölçekli üreticilerin yaşadığı pazar problemlerine bir noktada çözüm olacaktır. Çünkü belirli özelliklere sahip ve üretildiği bölgenin özelliklerini taşıyan ürünlerin talebini artırmada tesciller, sertifikalar ve işaretler pazarlamacılar tarafından sıklıkla kullanılmaktadır. Ayırt edici işaretlerin başında geleneksel ürünler için coğrafi işaretler gelmektedir. Ürünün üreticiler tarafından belirli bir marka ile pazara sunulması üreticiler tarafından yeterli olmazken bölgenin özelliklerini ön plana çıkaran tanımlayıcı işaretlerin varlığı ürün pazarını olumlu etkilemektedir. Bu bakımdan, kuru fasulye üreticisinin ürünün kalitesini ve farkını tüketicilere anlatmada coğrafi işaretler önemli bir tutundurma aracı olacaktır. Haliyle, tüketiciyi Cİ tescilli kuru fasulyeye yönlendirerek tescilli fasulyenin diğ er fasulyelerden farklı olduğu anlatılacaktır. Ancak, Kelkit İlçesi Kuru Fasulye Üreticileri Birliği altında üretim yapan fasulye üreticilerinin küçük ölçekli olması pazarlama maliyetlerinin karşılanmasında problemlere yol açmaktadır. Kelkit Kuru fasulyesine alınan Cİ işaret kolektif bir hak tanımaktadır. Bu nedenle, birliğin aktif olarak çalışması pazarlama faaliyetlerinde maliyetleri önemli ölçüde düşürecekği ihmal edilmemelidir. Cİ tescili ile üretici ürününü sadece Kelkit ve yakın bölgede değil farklı bölgelerde de pazara sunma imkânına kavuşacaktır. Kelkit Kuru Fasulyesi ürününün Cİ tescili ile benzerlerine göre ayırt edilmesi bölgenin gastronomi turizminde etkili olacaktır. Cİ tescilli Kelkit Kuru Fasulyesinin menşe adına sahip olması tescilde yer alan Kelkit, Köse ve Şiran ilçelerinde üretilmesi zorunluluğunu getirmektedir. Bu bakımdan Cİ tescilli kuru fasulye üretimi kırsalda istihdamın oluşturulmasına yardımcı olacaktır. Cİ tescili; üreticiye sürekli gelir sağlamada, bölgede istihdam yaratmada, üretimin belirli standartlarda yapılmasında etkili olsa da üretici birliğinin öncülüğü ve desteği ayrı bir önem taşımaktadır. Birlik üye sayısını artırdıkça, üreticilerin kuru fasulye üretim alanlarını artırma olasılığı artacaktır. Hem üreticiler hem de birliğin menfaatine bir durum oluşacaktır. Birachi vd. (2011) tarafından yapılan çalışmada ifade edildiği üzere, çiftçinin kuru fasulye üretimine daha fazla arazi tahsis etmesi, fasulye üretim miktarını ve pazarlanan miktarı artıracaktır. Birliğin üretici sayısını artırması, üreticiye hem üretim aşamasında hem de pazarlama aşamasında sağladığı faydalarla ilişkilidir. Bu bakımdan, kamu otoritelerinin, sivil toplum kurumlarının ve girişimcilerin birliğin faaliyetlerine verecekği destekler ve yardımlar önem arz etmektedir. Barjolle vd. (2017) yapmış oldukları araştırmada coğrafi işaret tescilinin korunmasında kamu otoritelerinin rolünü 5 adımda ortaya koymuşlardır. (1) Tescil dâhil olmak üzere yasal çerçevenin oluşturulması (yani, yeni Cİ başvurularının incelenmesi ve değerlendirilmesi); (2) Cİ tescilli üretimin potansiyel üreticiler tarafından benimsenmesi; (3) benimsendikten sonra mevcut Cİ tescilinin kullanımı; (4) Uygunluk değerlendirmesi; (5) Ulusal ve uluslararası düzeylerde olası suiistimallerin gözetimi dâhil olmak üzere korumanın uygulanması şeklindedir.

Kelkit İlçesi Kuru Fasulye Üreticileri Birliği'nin yeni kurulmuş olması özellikle üreticilerin Cİ tescilli kuru fasulye üretimine teşvik edilmesinde dezavantajlı bir durum olarak karşımıza çıkmaktadır. Üretici ile birlik arasında güven unsurunun oluşturulmasında birliğin pazarlama faaliyetlerinde gösterecekği destekler ön plana çıkmaktadır. Özellikle birlik yöneticileri ile üretim ve pazarlama sürecinde tüm araçlarla kurulacak diyaloglar etkin bir şekilde sürdürülmelidir. Wang vd. (2021) tarafından yapılan benzer bir çalışmada elde edilen bulguya göre; Cİ tescilinin satış fiyatları üzerinde gerçek bir etkiye sahip olması için, çiftçi örgütlerinin başkanları, toptancılar, perakendeciler ve müşteriler de dâhil edilmek üzere düzenli diyaloglar zorunludur. Coğrafi işaretli Kelkit fasulyesinin ekonomik etkisini konu alan bir projede (BAP, 2022) çiftçiler ile yapılan anket çalışmasından elde bulgulara göre, birliğ e üye olup Cİ tescili tohum ile kuru fasulye yetiştiren üreticiler, 2020 ve 2021 yılı üretim döneminde ürettikleri fasulyeyi beklenen fiyatın altında satmak zorunda kalmışlardır. İlgili üretim

dönemlerinin COVID-19 pandemi dönemine rastlaması kuru fasulye pazarını ve birliğe üye olan üreticilerin satış fiyatlarını direk etkilediği anlaşılmaktadır. Kelkit İlçesi Kuru Fasulye Üreticileri Birliği'nin üreticiler üzerindeki etkisini görmede zamana ihtiyaç olduğu açıktır. Grashuis ve Skevas (2022) tarafından yapılan araştırmada elde edilen bulgular Peru'da kahve üretimi yapan küçük ölçekli üreticilerin çiftçi birliğine üye olduktan sonra üretim miktarında, satış miktarında ve çiftçi eline geçen fiyatta ciddi artışlar olduğunu göstermektedir. Özetle, Kelkit İlçesi Kuru Fasulye Üreticileri Birliği'nin üye üreticileri üzerindeki mevcut etkisinin sadece üreticiyi birliğe üye yapıp, Cİ tescilli fasulye tohumu kullanmaya özendirmek ve üretim sürecinin birlik kontrolünde yapılması ile sınırlı kaldığı anlaşılmaktadır. Bunun yanında, birliğin aldığı finansal destekle kuru fasulye paketleme tesisini üye çiftçilerin hizmetine sunmasını çiftçilerin pazarlama maliyetlerini düşürmede ve birliğe üye olmalarında özendirici bir adım olarak değerlendirmek gerekmektedir.

4. SONUÇ

Türkiye'de yeterli sayıda tarımsal örgüt bulunmasına rağmen bunların ekonomik faaliyetlerinin gücü he zaman tartışma konusu olmuştur. Oysaki Avrupa'da tarımsal örgütler ekonomik faaliyetlerini başarıyla yürütmektedirler. Bu yüzden, Türkiye'deki tarımsal örgütler üzerinde çalışılması gereken bir konudur. Tarım sektöründe yaşanan çoğu problem üretici kaynaklı olduğundan üreticilerin bu tip oluşumlar konusundaki bilgi, deneyim ve tutumları dikkate alınması gereken konular arasındadır. Bu çalışmada ele alınan Kelkit İlçesi Kuru Fasulyesi Üreticileri Birliği 2020 yılında kurulmuştur ve birlik adına kuru fasulyeye Cİ tescili alınmıştır. Cİ tescilinin yaygınlaşması zamanla birlik faaliyetlerinin gücü üzerinde etkili olacaktır. Bu nedenle, bu yeni kolektif oluşumun kamu otoriteleri ve sivil toplum kurumları tarafından desteklenmesi önemli görülmektedir. Bu çalışmadan elde edilen sonuçlardan biri de, coğrafi tescilli kuru fasulyenin etkin bir şekilde pazarlanabilmesi için modern pazarlama stratejilerinden yararlanılması gerektiğidir. Kamu otoriteleri hem bölge hem de il özelinde pazar araştırmaları yapması ve tescilli kuru fasulyenin tanıtılmasına imkân sağlamalıdır. Kuru fasulye, bölgede ulusal ölçekte tanınma ve tüketilme potansiyeline sahip bir üründür. Yalnızca kamu spotları, fuarlara katılım gibi pazarlama teknikleri Kelkit İlçesi Kuru Fasulyesi Üreticileri Birliği için yeterli olmayacaktır. Tüketici analizleri derinlemesine yapılmalı, ürün tadımı, sosyal medya iletişim araçları gibi geleneksel pazarlama teknikleri kullanılmalıdır. Birlik, kuru fasulyenin pazarını sadece yerel pazarda değil ulusal marketler zinciri ölçeğinde genişletmelidir.

Bu çalışmada, örgütlerin genel durumu ve genel uygulamaları konusu Kelkit Kuru Fasulyesi Üreticiler Birliği üzerinden değerlendirilmiştir. Birliğin yeni kurulmuş olmasının örgütlenme yetersizliğinde temel sorun teşkil ettiği anlaşılmıştır. Sayısal olarak az sayıda üyesi olması ve üye sayısının beklenen şekilde artmaması güçlü ve etkili bir örgüt için önemli bir dezavantaj olarak karşımıza çıkmaktadır. Birlikteki gelir yetersizliği bir diğer sorun olarak ele alınmıştır. Birliğe proje bazlı finansal ve teknik desteklerin sağlanması gerekli görülmektedir. Birliğe Gümüşhane İl Tarım ve Orman Müdürlüğü tarafından sağlanan paketleme tesisi ile mekanizasyonun sağlayacağı avantaj çiftçilerin birlikte ilgili tutumlarını olumlu etkileyeceği düşünülmektedir. Ayrıca bu durum üye çiftçilerin hasat sonrası eleme ve sınıflandırma maliyetlerini önemli bir oranda düşürecek ve gelirlerini artırmalarına sebep olacaktır. Coğrafi işaret tescilli kuru fasulye üretimi her ne kadar Kelkit Şeker Fasulyesi Üreticileri Birliği koordinatörlüğünde gerçekleştirilmiş olsa bile, bunun üretim uygulamaları ile sınırlı kaldığı görülmektedir. Kelkit İlçesi Kuru Fasulye Üreticileri Birliğinin ortaya çıkan bu ürün değerini avantaja dönüştürmek için modern pazarlama tekniklerini uygulaması gerekmektedir. Bu kapsamda ürünün tutundurulması ve dağıtımında yerel kamu otoriteleri ve girişimciler ile işbirliği ortamının oluşturulması önemli görülmektedir.

The Role of Birds in Turkish Forests in Biological Control

Assoc. Prof. Nurcan Özkan¹

¹ University of Trakya, Faculty of Education, Department of Mathematics and Science Education,
nurcanozkan@hotmail.com, ORCID: 0000-0001-5045-6186

Abstract: Approximately 2 billion people in the world need forests to shelter, live, provide water and food. 3 billion people also use it as wood for heating and also for cooking. Forests operate as a valuable source of raw materials. The products of various industries, wood and non-wood product requirements are obtained from forests. In addition, products such as various fruits, medicinal plants, herbal juices, and plant oils also contribute to the forest industry. 60 million people in the world are employed in the forest industry. There are many living things that depend on organisms that cause damage to forest plants and products, which are so important. Vertebrate pressure on harmful insects takes place at extremely high rates. Among the vertebrates, birds are in the first place. Potentially insectivorous birds are accepted in the fight against insects that cause damage in forests. Birds take part in maintaining the natural balance by eating the adults, pupae, larvae and eggs of insects. In this article, information about the importance of birds in biological control of forest pests is discussed.

Key Words: Forests, Biological Control, Entomophagous Birds, Pests

Türkiye Ormanlarında Kuşların Biyolojik Mücadeledeki Rolü

Özet: Dünyada yaklaşık olarak 2 milyar kadar insan barınmak, geçinmek, su ve yiyecek sağlamak için ormanlara gereksinim duymaktadır. 3 milyar insan da ısınmak ve ayrıca yemek pişirmek amacıyla odun olarak yararlanmaktadır. Ormanlar değerli hammadde kaynağı olarak faaliyet vermektedirler. Çeşitli endüstri dalları, odun ve odun dışı ürün gereksinimleri ormanlardan elde edilmektedir. Ayrıca çeşitli meyveler, ilaç üretilen bitkiler, bitki suları, bitki yağları gibi ürünler de orman sanayine katkı sağlamaktadır. Dünyada 60 milyon insan orman endüstrisinde istihdam edilmektedir. Bu kadar önemli olan orman bitkileri ve ürünlerinde zarara sebep olan organizmalara bağlı yaşayan çok sayıda canlı mevcuttur. Zararlı böceklerle omurgalıların baskısı son derece yüksek oranlarda gerçekleşmektedir. Omurgalılarından ise kuşlar ilk sırada bulunmaktadır. Ormanlarda zararlara yol açan böcekler ile mücadelede potansiyel olarak böcekçil kuşlar kabul görmektedirler. Doğal dengenin sağlanmasında kuşlar böceklerin yetişkinleri, pupaları, larvaları ve yumurtaları yiyerek görev almaktadırlar. Bu makalede ormanlardaki zararlılar ile biyolojik mücadelesinde kuşların önemi konusunda bilgiler tartışılmaktadır.

Anahtar Kelimeler: Ormanlar, Biyolojik Mücadele, Entomofag Kuşlar, Zararlılar

1. INTRODUCTION

An important part of the terrestrial living species on earth is found in forests or live depending on forests. Forests and trees are very important parts of life on earth in maintaining biological diversity, cleaning the air and water, and meeting the basic needs of people. Forests refine water, improve climate, regulate water regime, hold soil in place and provide habitat for wildlife. The world's forests accumulate enormous amounts of carbon dioxide, twice that of the atmosphere, large enough to mitigate climate change. Trees clean the air by absorbing nitrogen oxides, sulphur dioxide, carbon monoxide, and ground surface ozone, which promotes air pollution. Forests have many activities, some of which are listed above.

Ecological balance is necessary for the life of living things on earth. As long as this balance is maintained, the living standards of living things increase. All living and non-living beings in nature directly or indirectly play an important role in maintaining the ecological balance. Birds eat some insects that damage trees in forests and prevent their numbers from increasing. Birds that feed on seeds and fruits cause the plants to multiply and spread by throwing the seeds of the plants they eat in distant places with their excrement. The preservation of ecological balance depends on the food chain that constitutes the eating habits of living things (URL 1).

One of the most well-known examples of ecological balance is that by eating some insects that damage the trees in the forest, the birds not only fill their stomachs but also protect the trees by reducing the number of that insect species. This type of life, called mutualism, is seen among most living and non-living things. Birds that feed on seeds and fruits cause the plants to multiply and spread by throwing the seeds of the plants they eat with their excrement in distant places. The preservation of ecological balance depends on the food chain that constitutes the nutritional habits of living things (Er, 2019). If we list the duties of birds, they have different duties such as maintaining the nutrient cycle, biological decomposition, pest control by eating insects,

fertilizing plants by carrying seeds, and seed separation. There are 10,660 bird species in the world (Sekercioglu, 2006). The ecology and distribution of each species differs. Their habitats, numbers and migration seasons are different from each other. Some species are found in limited numbers and in limited areas. Some species show characteristic features. Birds have a very important place for ecological balance (Kardaş and Cebe, 2021).

Birds with entomophagous character are at the forefront of organisms that have pressure on pests in the ecological balance. Birds are of great importance in maintaining the natural balance by eating the adults, pupae, larvae and eggs of harmful insects. They consume large amounts of insects, especially during their breeding season (Oğurlu, 2000). Insectivorous birds are recognized as a potential effective factor in the control of harmful insects in forests and agriculture (Hooks et al., 2003; Fayt et al., 2005; Ji et al., 2008; Van Bael et al., 2008). Therefore, bird communities contribute to the functioning of the ecosystem economically (Mols and Visser, 2002; Koh, 2008; Whelan et al., 2008). Considering that global warming is increasing day by day, there will be an increase in the number and spread of insects due to the increasing temperature. In this context, the effect of birds against harmful insects is extremely important (Netherer and Schopf, 2009; Thomson et al., 2010). As can be seen, birds as a biological control factor are of great importance for forests.

Turkey is much richer than many European countries in terms of bird existence. Turkey's bird stock consists of 469 species belonging to 70 families, including recently extinct ones. Some of the most important migration routes of the western Palearctic region pass through Turkey. Since gliding migratory birds choose certain narrow straits to avoid crossing over the seas, they can be observed from here. The most well-known of these narrow straits in Turkey is the Bosphorus. Thousands of eagles, falcons and tens of thousands of storks, which set out from Central and Eastern Europe, are observed from the ridges between Üsküdar-Çamlica and Beykoz-Toygartepe, especially during the autumn migration. After wintering in the African continent in the south, these birds migrate to the north from the Sarıyer ridge in the spring. A lesser known bottleneck, Borçka-Artvin, at the other end of Turkey, is vital to predators from Eastern Europe and the steppes of Kazakhstan. These species can be seen in dense flocks in the skies of Belen Pass (Hatay) as they emerge from the southern border. There are not only predators, but also many species of songbirds. Every year, many individuals of many species make their north-south or south-north migrations through Turkey. Almost the entire population of the Little Forest Eagle (*Aquila pomarina*) migrates over the Bosphorus. A large part of the stork (*Ciconia ciconia*) population still uses Istanbul as a migration route. Especially the migratory birds of Eastern Europe pass over Turkey intensively (Arslangündoğdu, 2014).

Birds are under protection under the Bern Convention. In the observations made, it has been determined that the birds passing over the forests in the north of Istanbul spend the night and feed there. That's why they fly lower. Although it changes according to the wind situation, their heights generally vary between 50-800 meters. On days when the wind is heavy, they generally pass lower. Significantly, especially in autumn, raptors tend to pass from the north. Living native and migratory birds are protected by the Bern Convention. According to this convention, especially gliding birds of prey and storks are included in the "Annex II Fauna Species under Strict Protection" list (Arslangündoğdu, 2014).

1.1. Birds as Ecological Actors

Birds are the most well-studied class of organisms, and there have been many studies examining their importance as a mobile link in the dynamics of natural and human-dominated ecosystems (Lundberg and Moberg, 2003; Mols and Visser, 2002). Birds provide benefits to humans by performing important ecosystem services. For example; they offer procurement services such as meat, apparel, guano (bird manure). They carry out the cleaning of carrion and waste, control of populations of invertebrate - vertebrate pests. They provide regulatory services such as pollination and plant seed distribution. Birds have prominent roles in arts and religions (Diamond and Fillion, 1987) and cultural services such as billions of dollars spent on bird watching (Sekercioglu, 2002). They provide supporting services such as the conversion of nutrients and contribution to soil formation (Heine and Speir, 1989).

2. THE ROLE AND IMPORTANCE OF BIRDS IN BIOLOGICAL CONTROL

Birds are used the most as a biological control agent among vertebrates. The most important species among birds are; titmouse and nuthatch. Birds are the most important insect-eating animals. Among these species, the cuckoo, starling, nightingale, finch, woodpecker and tit are important insectivorous birds. In order to protect

birds and ensure the continuation of their effects on insect populations, artificial nests made of wood should be hung in forests in accordance with the wishes of the birds. The purpose of these artificial nests; it is to protect the forest against insect damage by improving the breeding conditions of insectivorous birds and thus increasing their numbers. The places where the nests are used are forests where the natural nesting conditions of insect-eating birds are not sufficient (T.R. Ministry of Forestry and Water Affairs, General Directorate of Forestry, 2016).

Hanging birdhouses;

- a) The hanging height of the nests should be 3-4 m from the ground.
- b) In order for the birds to be safe, efforts should be made to hang the nests as far from the road as possible. The hanging distance of the nests should be at least 20 meters from each other.
- c) It is beneficial to hang the nests with flying holes facing east and south.
- d) Nests should generally be hung in dark, damp and cool stand parts with high cover, but in spaces where light can penetrate. It is not suitable to hang the nest on single exposed trees and in areas directly exposed to the sun. Because the offspring may die from the heat; while adults enter and leave the nest, they cannot protect themselves by escaping to the closed part of the forest when raptors attack.
- e) Signs are placed on the trunks of trees where nests are hung so that they can be easily seen with oil paint. The sign placed on the trees is useful for tracking the nests and understanding the stolen nests. Coordinate values can be obtained for tracking the hanging nests.
- f) Number of nest boxes to be hung; it varies according to tree species, stand age and whether it is under the threat of pests. In general, 5 small, 3 large bird's nests per hectare in coniferous stands, 5-10 bird's nests in leafy forests should be placed in a way to ensure homogeneous distribution.
- g) Large and small nests; it should be hung from the hanging hooks to the wet branches with a diameter of 5-10 cm on the outside of the trees, with the help of poles with a special device at the end, and should not be attached to the tree trunks.
- h) Usually a nest should be hung on each tree. However, when hanging more than one nest on large trees, care should be taken that the nests are at different heights and the flight holes are in different directions.
- i) Since the birds observe the place where they will nest for a while and settle only after they trust it should be hung in autumn if possible, and at the end of winter at the latest, in order to occupy the nest in spring (T.R. Ministry of Forestry and Water Affairs, General Directorate of Forestry, 2016).

The General Directorate of Forestry ensures that an average of 50 thousand birdhouses are built every year and hanged in the forests as part of the protection of the ecosystem and biological control against insects that harm trees. Forestry General Manager Üzmez stated that 544 thousand 526 bird nests were built throughout Turkey between 2003 and 2013, and the nests were hung in forests to ensure the protection of insectivorous birds in order to balance the populations of insect pests. In addition, activities such as feeding the birds in bad weather in winter, fighting against the enemies of beneficial birds, rejuvenating the over-branched trees, which are in the form of 'Bird Protection Trees' in the forest, in order to facilitate the nesting of birds that breed in the open are also provided.

Üzmez stated that they plan to increase their population in forests by hanging bird nests in forests, especially by nesting, settling and protecting birds that feed on insects such as titmouse, starlings and hoopoe that damage the forests. Among the main insect species that damage forests are the Italian grasshopper, the common chafer, the golden-breasted butterfly, the sponge weaver, the green oak bender, the pine bush antenna leaf bee, and the reddish yellow antennae leaf wasp. If the conditions are suitable in regions where insects increase their population, it is often noted that a parallel increase in bird species is observed (URL 4).

TOKİ bird nests have been started to be created by Erzurum Regional Directorate of Forestry in order to protect forests from harmful insects. Erzurum Regional Director of Forestry Çetiner made a statement, "Insects constitute the largest group in terms of numbers in the animal kingdom. In addition, since the reproductive energy of insects is very high, they have the power to multiply in a short time under suitable climatic conditions and destroy an entire forest. While 2,000 bird nests were built throughout the region in 2014, 500 bird nests were built in Erzurum. In 2015, while a thousand nests were considered throughout the region, 500 bird nests were designed in Erzurum. Birds, which consume insects up to several times their own weight per day, are of

great importance in the fight against forest pests. These birds have a great role in the prevention of insects that have become an epidemic” (Figure 1).

Figure 1: Birdhouses to protect forests from insects

Resource: URL 3.

The damage caused by insects to forests is at least 5 times more than the damage caused by forest fires. In this context, bird nests are hung for hunting birds struggling with pests in forests. Insect damage has an important place among the damages caused by insects, fungi and other living things in Turkey. Insects constitute the largest group in terms of numbers in the animal kingdom. In addition, insects have the power to destroy a whole forest by multiplying in a short time under suitable climatic conditions, since their reproductive energies are very high (URL 2).

Artificial nests have an important place in increasing the populations of insectivorous birds. 30-50% of hung nests are used by birds and it is an important factor in population growth (Figure 1). The preference of the nests varies according to the height, aspect, hanging positions and their usage rate decreases over time. Great tit (*Parus major*), garden red tail (*Phoenicurus phoenicurus*) are the most nested in the hanging nests. Later, it is known that Anatolian Plasterer (*Sitta krueperi*), Pine Tit (*Parus ater*), Isaac bird (*Otus scopus*) and Garden Rake (*Certhia brachydactyla*) species nest and successfully complete the hatching process (Eroğlu, 2017).

In recent years, around 60 thousand bird nests are hung annually. In order to support insectivorous birds, especially woodpeckers, dry, hollow and old trees are left in sufficient numbers to provide natural nesting in forest areas, and leafy trees with more branches, fruit trees and shrubs are allowed to grow (Eroğlu, 2017).

Among the migratory birds that choose Aras Bird Sanctuary in Iğdır as their habitat, hoopoe birds (*Upupa*) contribute to maintaining the natural balance by feeding on insects, larvae, snails and worms. Hoopoes, which migrate from Africa to Turkey in the spring and breed by incubating in the summer, are regularly observed every year at the Aras Bird Research Centre in Iğdır. There are also species that are important for the continuity of the ecosystem by feeding on insects, insects, larvae, snails and worms seen in fruit, olive groves and agricultural lands, which love open areas and short-vegetated meadows as their habitat. Hoopoes breed in the Aras River Bird Sanctuary. Since it feeds on insects, it provides an important insect control in the ecosystem (Mavzer, 2022).

Studies have shown that insectivorous birds are very effective hunters. For example, birds can reduce their populations by 20% to 100% when they feed on forest pest Lepidoptera (Crawford and Jennings, 1989; Whelan et al., 1989; Cooper and Smith, 1995; Parry et al., 1997; Tanhuanpää et al., 2001; Mols and Visser, 2002; Hooks et al., 2003). Although they prefer all life stages of their prey for food preferences, birds generally prefer large, hairless larvae or the late-stage larvae of Lepidoptera (Whelan et al., 1989; Kristin and Patocka 1997; Parry et al., 1997; Tanhuanpää et al., 2001). Due to the high rate of predators of birds, it generally helps to keep the Lepidoptera population low (Holmes, 1990; Glen, 2004; Kayahan and Karaca, 2015).

Insect control services of mostly diurnal insectivorous birds overlap and complement each other to a small extent with that of nocturnal insectivorous bats. In addition, studies show that invertebrate control by bird species also increases the effects of hunting activities of other bird (Murakami and Nakano, 2000), invertebrate and insect parasites. The high species richness of insectivorous birds also enables them to eat insects from all kinds of microhabitats and increases the probability of the emergence of highly active insectivorous bird species in any region (Perfecto et al., 2004). Reducing insects that use plants for food by birds does not always result in a reduction in plant damage. On the other hand, the disappearance of insectivorous birds from agricultural areas generally causes an increase in agricultural pests and their plant consumption, a decrease in crops and financial losses (Mols and Visser, 2002). Therefore, detailed studies are needed that will measure bird's insect control in various ecosystems and possibly show ways to increase this valuable service that is declining in many tropical regions.

Birds of prey affect prey populations even by their presence in only one area. The indirect effects of raptors by creating a "field of fear" (Brown and Kotler, 2004) may be more important than their direct effects. The perceived risk of predation affects the behaviour and activity of hunted animals, balances prey-predator dynamics, and can increase species richness in an area through competitive cohabitation. Fear of predation can limit the pest population by reducing the hunting activities of the hunted species (Brown and Kotler, 2004). The indirect protection of other birds' nests by birds of prey has also been well documented (Haemig, 2001).

2.1. Entomophagous Birds

Birds consume a lot of food due to their high metabolism. When we look at the researches carried out to date, it has been seen that a bird consumes many times its own weight in a day in their diet (Figure 2). The ratio of daily food consumption to body weight of some birds; it is 96% in Otter thrush (*Turdus philomelos*), 180% in Wren (*Troglodytes troglodytes*), 190% in Willow warbler (*Phylloscopus trochilus*) (Oğurlu 2000). Insectivorous birds show numerical and functional responses to fluctuations in larval populations (Crawford and Jennings, 1989; Patten and Burger, 1998; Jones et al., 2003; Hogstad, 2005). Although they generally live on spatial scales larger than a tree, they can congregate when prey density is high (Diaz et al., 1998; Fayt et al., 2005; Barber et al., 2008; Norris and Martin, 2008). Food-specific species such as the cuckoo (Cuculidae) can respond to numerical fluctuations of aposematic lepidopters such as *Lymantria dispar* and *Malacosoma* spp., depending on time and space. For example, if there is an epidemic in an area during their migration, they congregate in that area (Sherry, 1990; Payne, 1997; Hoyas and López, 1998; Gale et al., 2001; Barber et al., 2008). In addition, tit birds show different clustering patterns depending on the amount and availability of food in the area (Diaz et al., 1998; Pimentel and Nilsson, 2007; Forsman et al., 2009; Sekercioglu, 2006).

Figure 2: Feeding of insectivorous birds

Resource: URL 5.

2.2. Advantages of Using Birds against Harmful Insects

There are several advantages to using birds in biological control against harmful insects. Birds are economically easier to reproduce, unlike other polyphagous predators. Since the habitats of these organisms are quite large, it is easier to place them in forests of high economic importance. In addition, it is possible to increase the hatching frequency of birds 5-10 times with simple measures that can be taken in areas where pests are concentrated. When there is a decrease in the population density of the pests, there is no negative situation for the birds. When faced with such a situation, they can move to the area with a high nutrient density. In addition to all these, birds are also effective in the spread of insect diseases and thus have an indirect effect on balancing the pest population (Kayahan and Karaca, 2015; Oğurlu, 2000).

4. RESULT

Birds that feed on insects are considered as potential biological control agents especially in the control of harmful insects in forests. Studies have shown that birds can reduce their populations by up to 100% when they feed on harmful insects. As can be seen, biological control has positive effects on both agricultural and forest pests. As a matter of fact, this situation is understood from the literature review (Kayahan and Karaca, 2015).

As it is known, birds are mostly used as a biological agent against harmful insects in forest trees. Therefore, different measures should be taken to protect the bird populations. The first of these measures is the construction of bird nests. Thanks to these nests, especially migratory birds adapt easily to the area and continue their lives. In this context, care should be taken in silvicultural interventions to the forest, and this process should not be applied especially during the breeding season of birds. Considering that agricultural and forest ecosystems are intertwined in places, spraying should be avoided in areas close to these areas; Wetlands on the migration routes of birds should not be polluted or dried; Hunters should not be allowed to hunt in these areas. In addition, survey studies should be carried out in the regions where harmful insects are found in the forest areas of Turkey, and the bird fauna should be revealed. Bird fauna should be used in biological control, which is one of the important elements of integrated control by protecting and supporting them when necessary (Kayahan and Karaca, 2015).

There are various methods of combating insects that damage forests. The first of these is the protective struggle. The numerical populations of insectivorous birds feeding on insects should be increased. For this purpose, bird nests are hung in the forests as a support. These birds in the bird's nest provide protection for forest health by reducing the number of insects in the places where they are found. Under normal conditions, insectivorous birds have nests in nature. It is tried to support the birds by making a nest. In order to reduce the number of insects, the number of birds should be increased and thus the health of the birds should be supported. In this way, support is provided to create the balance of nature (URL 3).

Investigation of Biological and Biotechnical Control Methods Used in Combating Pests in Turkey Forests

Assoc. Prof. Nurcan Özkan¹

¹ University of Trakya, Faculty of Education, Department of Mathematics and Science Education,
nurcanozkan@hotmail.com, ORCID: 0000-0001-5045-6186

Abstract: Forests are habitats that contain 80% of terrestrial biological diversity and play a major role in maintaining this diversity. Forests are the fastest, cheapest, most effective and reliable means of reversing global gas emissions. 40% of the oxygen people breathe is produced in forests. Forests are living habitats with countless benefits and functions in many areas such as erosion prevention, flood and flood control, human nutrition, protection of agricultural lands, hosting wildlife, forest industry and employment of forest villagers. In the past and today, harmful organism groups that cause losses in the plants in the forests and the products obtained from these plants are being struggled. The General Directorate of Forestry carries out efforts to combat forest pests and harmful insects and other organisms that increase the population in the country's forests every year due to different reasons such as climatic, edaphic and environmental pollution. The aim of the control efforts is to keep the pest population below the level of economic damage. The aim of this study is to examine the use of biological and biotechnical methods in the fight against insect and disease agents that cause economic and ecological damage in forests within the scope of previous scientific publications.

Key Words: Forest, Natural Enemy, Biological Control, Biotechnical Methods

Türkiye Ormanlarında Zararlılarla Mücadelede Kullanılan Biyolojik ve Biyoteknik Mücadele Yöntemlerinin İncelenmesi

Özet: Ormanlar karasal biyolojik çeşitliliğinin %80'ini bünyesinde barındıran ve bu çeşitliliğin sürdürülmesinde büyük rolü olan yaşam alanlarıdır. Ormanlar küresel gaz emisyonlarının tersine çevrilmesinde en hızlı, en ucuz, en etkili ve güvenilir araçlardır. İnsanların soluduğu oksijenin %40'ı ormanlarda üretilmektedir. Ormanlar, erozyonu önleme, taşkın ve sel kontrolü, insan beslenmesi, tarım alanlarının korunması, yaban hayatına ev sahipliği, orman endüstrisi ve orman köylülerinin istihdamı gibi birçok alanda sayılamayacak kadar fayda ve fonksiyonu olan canlı yaşam alanlarıdır. Geçmişte ve günümüzde ormanlardaki bitkiler ile bu bitkilerden sağlanan ürünlerde kayıplara yol açan zararlı organizma gruplarıyla mücadele edilmektedir. Orman Genel Müdürlüğü orman zararlıları ile her yıl ülke ormanlarında iklimsel, edafik, çevresel kirlilik gibi farklı nedenlerle popülasyon artışına sahip olan zararlı böcek ve diğer organizmalar ile mücadele çalışmaları gerçekleştirmektedir. Mücadele çalışmalarının amacı ise zararlı popülasyonunu ekonomik yönden zarar seviyesinin altında tutmaktır. Bu çalışmanın amacı daha önce yapılmış olan bilimsel yayınlar kapsamında ormanlarda ekonomik ve ekolojik açıdan zararlara neden olan böcek ve hastalık etkenleri ile savaşta biyolojik ve biyoteknik yöntemlerin kullanımının irdelenmesidir.

Anahtar Kelimeler: Orman, Doğal Düşman, Biyolojik Mücadele, Biyoteknik Yöntemler

1. INTRODUCTION

1.6 billion people in the world and approximately 7 million people in Turkey depend on forests for their daily needs and livelihood. With the increasing population and urbanization, forest areas are also needed to meet the recreation needs of the urban people. Turkey has a forest area of around 21.2 million hectares. Unfortunately, nearly half (52%) of the lands that are legally considered forests are degraded, low yielding or completely inefficient as a result of irregular exploitation for hundreds of years. The remaining 48% area is only productive (FAO, 2011). The existence and continuity of these benefits of forests are threatened by various destruction factors. Among the factors that cause physical and economic damage in forests in different shapes and levels, harmful insects also have an important place (Öztürk, 2020).

In general, destruction factors, which are grouped into two groups as biotic (fire, harmful forest insects, etc.) and abiotic (storm, drought, etc.), cause significant damage in forests where they threaten their health and continuity (Baş, 1972). Especially harmful insects are among the factors that have the most destructive effect on natural forests (Ivantsova et al., 2019). The annual forest area affected by forest pests (insects and pathogens) in the USA was estimated to be approximately 45 times greater than the forest area affected by fire, and the economic impact of insect damage was estimated to be six times greater than that of fire (Dale et al., 2001).

The first methods applied by mankind in the fight against pests aimed to kill the pests directly in the shortest way. Later, practical protective methods were applied and chemical warfare methods followed. In the fight against any epidemic in the forest, the main thing should not be just to eliminate the pest. The aim is to keep the pest below the economic damage threshold. In this respect, the main aim should be to cause the least or no harm to the environment with the methods to be applied. Chemicals used in the fight against pests have a negative effect on the continuity of life in the forest. The negative effects of drugs thrown into the nature on human, plants and animals are emerging day by day and are better understood (Mol and İnaç, 1988). Therefore, the importance of biological control emerges here.

Throughout history, human beings have observed that birds feed on insects and snakes on rodents in ancient times. It is known that the ancient Egyptians domesticated cats for use against mice. As the Chinese use hunter ants in their citrus orchards, their observations and practices that form the basis of biological control should not be ignored (Uygun et al., 2010).

The main objective of the integrated struggle studies, which were initiated in 1970 for the protection of human and environmental health and sustainable agriculture, is for the producers to reach the level where they can implement integrated combat programs by training (Karaturhan, 2005). Biological and biotechnical control methods, which are among the most important components of integrated control, are the leading alternative control methods. With the biological control method, harmful organisms that cause economic losses in plant production are combated by using beneficial organisms found in nature. Biotechnical control, on the other hand, means controlling the biological and physiological behaviours in their normal course with some techniques instead of killing harmful organisms directly (Birişik et al., 2013).

Considering the technological developments in the fight against forest pests, more effective control methods are applied over time. Attention is paid to the protection of biological diversity, predatory and parasitoid insects reproduced in the laboratory environment are used in order to biologically combat harmful insects by considering the continuity of the forest ecosystem. Since chemical drugs affect the biological balance negatively, the use of chemicals with toxic effects has been prohibited since 2007. Instead, the use of biological preparations, natural organic compounds and anti-growth drugs has been adopted (Erdem and Çanakçıoğlu, 1970).

Due to developing global trade and opening new markets, pests such as insects and pathogens are transported to other regions, posing new threats to the health of forests. Habitat change and increased international pest migration, new invasive species, trade in forest plants and plant products, plant equipment, transportation vehicles, soil moves, industrial equipment and other items such as personal luggage also contribute to the spread of pests within and between countries. Pest risk management is a key function in keeping forests healthy and meeting sustainable forestry goals (URL 1).

Efforts to combat forest pests have been recorded since 1937. Between 1937 and 2003, organisms that harm forests were combated in an area of 7,967,825 hectares. Between 2003 and 2015, an average of 156,966 ha of mechanical, 158,869 ha of biotechnical and 102,205 ha of biological and biotechnical control was carried out in a total area of 483,902 ha. Fighting activities are carried out on an average of 450 thousand hectares per year against 50 species of harmful insects, plants, fungi, mites, bacteria and viruses in forests (Eroğlu, 2017).

2. DIFFERENT FIGHTING METHODS AGAINST PESTS

In pest control studies, mechanical, chemical and biotechnical control methods, especially biological control, are applied. In the Strategic Plan of the General Directorate of Forestry (2013-2017), it is aimed to realize biological, mechanical and biotechnical control at a rate of over 90% in the total combat areas (Eroğlu, 2017). Since it is out of the scope of this study, chemical control is not included and other methods are mentioned.

2.2. Biological Control

In its simplest form, it can be described as "the use of beneficial organisms found in nature in the fight against harmful organisms that cause economic losses in crop production". With this simple recipe, a wide door is opened to understand the world of living things, to solve the relationships between them, and to use these relationships for the benefit of humans and all life in the long run without interfering with their structure. As we walk through this door to the world of living things in the light of science, we should always remember that all living things have the right to exist and live, and we should show minimum respect for this.

An important milestone in the spread of biological control is the successful control of the pest by bringing *Rodolia cardinalis* from New Zealand in 1888 against mealybug, which is a major problem in citrus fields in the US state of California. After this date, very successful studies have been carried out on the release of useful substances by bringing them from the origin country. At the same time, the Russians mass-produced *Metarhizium anisopliae* against Crop Bamboo beetle in Ukraine and successfully used it in the Odessa region.

In the fight against forest pests, an integrated, biological control method suitable for nature has been adopted. For this purpose, *Rhizophagus grandis* has been produced against Giant Bark Beetle (*Dendroctonus micans*) since 1985 to be used in biological control studies. Since 2004, *Calosoma sycophanta* has been produced against Pine Processionary Beetle (*Thaumetopoea pityocampa*, *Thaumetopoea wilkinsoni*), and since 2006, *Thanasimus formicarius* has been produced against all bark beetles. Since 2007, *Rhizophagus depressus* predatory beetles and since 2014 the parasitoid *Torymus sinensis* Kamijo (Hymenoptera: Torymidae) of Chestnut Gal Bee (*Dryocosmus kuriphilus* Yasumatsu (Hymenoptera: Cynipidae)) are produced in the laboratory and given to the infected areas (Eroğlu, 2017).

Calosoma sycophanta (L.) is mass-produced in a laboratory environment in Turkey and used for biological control of Pine processionary beetle (*T. pityocampa*, *T. wilkinsoni*) and Sponge knitter (*Lymantria dispar*). The production of *C. sycophanta* was started for the first time in 2004 and it has been started to be produced in a planned manner since 2005. Currently, 260,000 predatory insects are produced annually in 33 laboratories and they are released to forests that are damaged by pine processionary beetles (URL 1).

Thanasimus formicarius L., *T. formicarius* is used in the biological control of bark beetles such as *Ips sexdentatus* (Boerner), *Pityokteines curvidens* (Germ.), and *Ips typographus* (L.) (Coleoptera: Curculionidae) in Turkey. A total of 313,903 adults of *T. formicarius*, which started to be produced in 2006 within the scope of biological control, were produced in 12 laboratories until the end of 2012 and given to forests where bark beetle damage was observed (URL 1).

Use of viruses in *Thaumetopoea pityocampa* L.: The first biological control against this insect in Turkey was made with *Calosoma sycophanta* L. (Coleoptera, Carabidae). This predator prevents the insect pest to a great extent. It is possible for this insect to be produced and left on the field and used in combat. There may also be the use of another bacterium, *Bacillus thuringiensis*. The use of *Phyrixe caudata* (Diptera, Tachinidae), an internal parasite, is also considered against this insect, which causes great damage especially in our pine forests. Since the biology and behaviour of the pest should be known very well in order to carry out biological warfare, studies were started in Antalya Forest Pest Control Group Directorate and field and laboratory observations were continued. However, due to the need for large laboratory facilities to breed this parasitic fly, warfare could not be implemented (Özkazanç, 1979).

Use of insectivorous birds: The works of hanging artificial bird nests and supporting the population increase of certain bird species were started by the General Directorate of Forestry in 1941, and 1,186,755 nests have been hanged to date. In recent years, around 60 thousand bird nests are hung annually. In order to support insectivorous birds, dry, hollow and old trees are left in sufficient numbers to provide natural nesting in forest areas, and leafy trees with more branches, fruit trees and shrubs are allowed to grow (URL 1; Eroğlu, 2017).

Artificial nests have an important place in increasing the populations of insectivorous birds. 30-50% of hung nests are used by birds and it is an important factor in population growth. The preference of the nests varies according to the height, aspect, hanging positions and their usage rate decreases over time. Great tit (*Parus major*) and garden redtail (*Phoenicurus phoenicurus*) are mostly nested in the hanging nests. There are also Anatolian Plaster (*Sitta krueperi*), Pine Tit (*Parus ater*), Isaac bird (*Otus scopus*) and Garden rake (*Certhia brachydactyla*) species and they successfully complete their incubation process.

Red forest ant (*Formica rufa* L.): All red forest ants live in colonies in nests in the form of mounds of various sizes, which they usually build from rotting but very solid cores, needles, small branches, resin and other plant materials around a resinous bottom log (Eroğlu, 2017).

It has a wide distribution extending to Marmara, Black Sea regions, Kütahya Gediz Murat Mountain and even Isparta Senarkent forests in the south. Researches and applications are carried out to benefit from *Formica rufa* group ants in biological control against harmful forest insects. As a result of these studies, it has been understood that forest ants can be taken out of their distribution areas and can adapt to the places they are taken. The transplantation of red forest ant colonies is considered as a low-cost pest control method suitable for the preservation of ecological balance (URL 1).

The red forest ant (*Formica rufa* L.) is also useful in the biological control of insects such as *Thaumetopoea pityocampa* (Den. & Schiff.), *Acleris undulana* (Wslm.), *Diprion pini*, *Neodiprion sertifer*, *Lymantria dispar* (L.), *Euproctis chrysorrhoea* (L.), which damage forests. Especially the larvae of insects are consumed as food by red forest ants and their reproduction is prevented. Transplantation is carried out to regions where pests are present but without ant populations and success rates of up to 80% are achieved in newly transferred regions (Figure 1) (Eroğlu, 2017).

Figure 1. Red forest ant (*Formica rufa* L.) nest in the forest

Source: Eroğlu, M. (2017). Forest Pest Management Lecture Note. Karadeniz Technical University, Faculty of Forestry, Department of Forestry Engineering.

Particular attention should be paid to the fact that the nests suitable for transplantation are at least of medium size (nests with a nest height between 50-75 cm). Small slots should never be touched. After the creation of the nest, perhaps the most important thing is the protection of the nest. Although it varies according to the regions, transplantation should be done in secluded places in terms of the possibility of damaging the wild animals such as pigs, foxes, marten, badger, as well as destroying the nests in order to satisfy the curiosity of people (especially shepherds and hunters). People should also be made aware of the protection of homes through local advertisements (Eroğlu, 2017).

2.2. Biotechnical Struggle

Licensed pheromones that do not harm the nature are used in biotechnical control studies. The method of mass trapping of harmful insects using pheromone traps in Turkey was started in 1982 in the forest area and successful results were obtained against bark beetles (Serez, 1987). The traps set up in these studies are checked weekly, and the caught pests are given to the predators as nutrients in the laboratories. Some of the captured predators are brought to the laboratories and used as rootstock in production studies. Every year, depending on the damage done by bark beetles in the forests of Turkey, an average of 45 thousand pheromone traps are hung and approximately 45 million harmful insects are caught and destroyed.

Insect pests are at the forefront of the biological factors that threaten the continuity of Turkey's forests. Among insect pests, the pine processionary beetle occupies an important place (Ertuğrul, 2002). The pine processionary beetle (*Thaumetopoea pityocampa* Schiff) is an insect that causes significant damage especially in the pine forests of the Mediterranean, Aegean and Marmara regions (Onaran and Kati, 2010). There is different control methods developed against this pest. One of them is the struggle with pheromone traps (Akbulut et al., 2002).

Conditions for success in combating pheromone traps: Trees exposed to *Ips typographus* damage should be removed from the area. The bark of trees with *Ips typographus* cut in the forest should be peeled outside the forest and the bark should be destroyed immediately after peeling. It is not enough to fight this harmful

species with pheromone alone! In addition to this struggle, a clean operation should be implemented in the forest. During the maintenance cuts, fallen, ruined, diseased, weak trees should be removed from the forest. It should not be forgotten that such trees left in the area serve as hatching trees for the insect. If the cut bark trees are to be transported to another place, the bark must be peeled off. Otherwise, it accelerates the spread of the insect. One of the important factors to be considered in the fight against *Ips typographus* is other insects that damage forest trees. One of the most important of these is *Dendroctonus micans*. This insect comes to the area before *Ips typographus* and damages the trees. Damaged trees attract *Ips* species (Eroğlu, 2017).

Again, the species specificity of pheromones gave rise to the idea of mass gathering and then extermination of these insects in the fight against a particular pest (Figure 2). By using pheromone traps, they can easily neutralize the pest without destroying the natural balance (Arslangündoğdu, 1999).

Figure 2: Pheromone trap in woodland

Source: URL 2.

Biotechnical control and monitoring studies: In order to monitor the population fluctuations of bark beetles, which have a very significant damage potential in the forests of our country, to take the necessary measures for the control in a timely manner and to ensure an effective control, the flight times of these insects, which may vary from year to year, should be determined exactly. Monitoring studies are carried out in a healthy way by systematically hanging pheromone traps, especially in coniferous forests, in order to determine their distribution and density in the forest and their development time (Eroğlu, 2017).

Ips typographus usually infects trees that are weakened by various factors (such as wind, frost, and other insects) with thick bark, 70 years and older, and cause their death. It is accepted as the most dangerous insect species for Artvin Spruce Forests. In the last seven years, it has caused the death of approximately one and a half million cubic meters of spruce trees. With the *Ips typographus*, which was detected in Artvin in 1984 after the old records in Turkey, it is tried to be combated with the biotechnical control methods applied in the world. The aim of the control using pheromone traps is to reduce the damage of the insect below the economic damage threshold. Distance, light, temperature, wind and relative humidity are effective in detecting pheromones. In addition to these, the concentration of the pheromone is an important criterion that changes the effect distance. The effect time of hanging preparations is 7-8 weeks on average. In the examinations, it was determined that *Ips typographus* can fly between 50 m and 45 km distances (Eroğlu, 2017).

Islet facility: *Compsilura concinnata* (Meigen), *Phryxe caudata* (Rondani) (Diptera: Tachinidae) and its predators, *Calosoma sycophanta* L. (Coleoptera: Carabidae), which are the larval parasitoids of the pine processionary beetle, are important natural enemies encountered in large numbers in nature. With the islet method, it is aimed to reduce the population of the pest by mechanical control in forest areas, and to increase the effectiveness of natural enemies at the same rate (URL 1).

Mechanical struggle: It is applied by collecting and destroying the eggs, adults and caterpillars of harmful insects, setting traps, peeling the bark of insectivorous trees, cutting and burning the diseased areas of mushroom and mistletoe pests or burying them in the ground. Within the scope of this struggle, trees that breed bark beetles such as *Ips typographus*, *Ips sexdentatus*, *Orthotomicus erosus*, *Tomicus piniperda*, *Tomicus minor*, *Orthotomicus tridentatus*, *Pityokteines curvidens*, which cause damage in coniferous forests, are cut down and the bark is stripped and the insects are destroyed.

The caterpillar sacs of the pine processionary beetle collected from the trees are collected in the islets and integrated mechanically and biologically are combated. The egg cobs of this insect are also collected and left in the forest clearings to protect and increase the density of egg parasitoids (Eroğlu, 2017).

3. BIOLOGICAL CONTROL APPLICATION METHODS

Biological control application methods are carried out in 3 different ways.

3.1. Importing and Placing New Natural Enemies

When a new pest enters a country from another country, if there are no natural enemies in the country it enters, they soon create very high populations and cause economic damage. In order to prevent this damage, natural enemies of the pest are imported from the country of origin and tried to be placed in the fauna where the pest is found. The same process is applied to economically harmful native species where native natural enemies are not effective. Since it is one of the oldest methods, it is also called "Classical Biological Control".

The most successful example for Turkey in import and placement studies can be shown as *Rodolia cardinalis* against bagged cochlea (*Icerya purchasi* Maskell) and *Eretmocerus debachi* against Laurel whitefly (*Parabemisia myricae* Kuwana). Today, there is no need for any other control method other than these natural enemies in the control of these pests (Uygun et al., 2010).

3.2. Reproduction and Release of Natural Enemies

If the natural enemies cannot reproduce by settling in the environments where they are released and cannot stay for years, if the imported natural enemy is not enough for the release, or if the natural enemies in nature are not in numbers that can suppress the pest, natural enemies are periodically produced in mass and released to the area where the pest is located at the required times and in numbers. The most commonly used biological control agents in this method are entomopathogens. Today, many entomopathogens are produced commercially in the world and are used against economically harmful species. The production of parasitoids and predators is both difficult and more expensive than entomopathogens. Despite all this, some companies and small businesses still produce and sell these natural enemies on their prey and hosts. Producing parasitoids and predators in artificial media is cheaper. However, the main problem here is to investigate whether the natural enemies produced in the artificial nutrient medium are effective in nature and to prepare the artificial nutrient medium accordingly (Uygun et al., 2010).

3.3. Protection and Support of Natural Enemies Present in Nature

This method actually constitutes the most important work in preserving the existing natural balance or re-establishing it if the balance has been disturbed. Because in nature, every pest has more than one natural enemy and pests are kept under pressure by them. If, for any reason (unconscious and frequent use of drugs, changing biotopes against natural enemies, etc.), these natural enemies are adversely affected, that is, their populations decrease, the pests that escape the pressure of natural enemies multiply in a short time, rise above the level of economic damage and cause significant damage. For this reason, ecosystem pests and beneficial should be investigated very well and all ecological demands of natural enemies, which are the main factors in keeping the pest under pressure, should be tried to be fulfilled. Biological control carried out through

the protection and support of local natural enemies gives more successful results in large areas compared to classical biological control and multi-release biological control (Uygun et al., 2010).

In the study conducted by Yanar et al. (2018), it was determined that 26% of the producers used biotechnical control methods such as biological control, 56% pheromone trap, and 74% yellow sticky trap.

4. RESULT

The emergence of all kinds of negative effects of pesticides, the abundance of natural enemies that can be used in nature and the increase in environmental awareness should be the reason for focusing on an environmentally friendly, sustainable and inexpensive method of struggle such as "Biological Control". In addition, the facilitation of international natural enemy imports and the use of modern technology in mass production of natural enemies are other reasons that require acceleration of biological control studies. Today, what is desired is not only to get plenty of products from the unit area, but also, perhaps more importantly, to produce with food safety. For this reason, in all western countries, especially in the USA, intensive studies are carried out by the state to switch to control methods where pesticides are not used or at least. For example, in the USA, it has been reported that studies are carried out rapidly to place Integrated Struggle applications in 75% of the products under the leadership of the state (U.S. Congress, 1995; Uygun et al., 2010).

It is extremely important to encourage producers to apply biological/biotechnical control, both in terms of human health and natural balance, and in order to prevent the formation of resistance against chemicals in pests and the prevention of intensive chemical use. Increasing the publication activities that provide technical information to the producers about these methods is one of the things that can be done in the short term. For the dissemination of these methods, producers should continue to be informed about these control methods and financially supported, as well as informative studies that will create a tendency for consumers to consume products produced by these methods (Sagin et al., 2020).

In most of the studies on insect damages and the effects of these damages on sustainable forest management and management activities in Turkey, it is found that insects cause or will cause significant economic losses in our forests (Sarıkaya and Avcı, 2006; Aksu et al., 2014; Toprak, 2014). However, concrete studies on how to estimate or calculate the level of these losses are very limited compared to those abroad.

Insects are one of the leading biotic factors that damage the forests of Turkey and endanger sustainable forestry. Bark beetles constitute the largest group among harmful insects that can cause individual and mass death of trees (Selmi, 1998). Bark beetles are generally known as secondary pests. Bark beetle damage increases especially in forest areas with poor growth conditions, after a primary pest attack, after drought and fire. In addition, production works in large areas, broken and overturned forest areas caused by winter damage, areas with water deficit caused by climate change and global warming, areas exposed to acid rain, etc. are factors that cause the excessive increase of bark beetles.

In order to effectively fight mealybugs, first of all, quarantine rules should be followed, initiatives should be taken to support the increase of the effects of their native natural enemies, ant control should be carried out throughout the season, the biodiversity of the living environments should be increased, and broad pesticide applications should be avoided. If the use of chemical pesticides is required in pest control, pesticides that are specific to the species and do not affect natural enemies should be selected. In the absence of effective natural enemy species in the environment, they should be brought from other regions and released to infected plants to reduce mealybug densities (Telli and Yiğit, 2019).

Fir Bark Beetles (*Pityokteines curvidens* Germ, *Pityokteines marketae* Knížek) are important pests that are common in Taurus Fir, one of the endemic trees of Turkey, and threaten this original species. Especially *Pityokteines marketae* Knížek is widespread in the Eastern Mediterranean and causes huge economic losses. It is found in all fir species in Turkey, and both pests cause the firs to dry out individually, in groups and in groups (Aytar and Hızal, 2012). Taurus Firs within the borders of three business directorates in Kahramanmaraş are attacked by fir bark beetles every year and die singly, in groups or en masse. It is tried to be prevented by biotechnical and mechanical control against this pest.

Kahramanmaraş Forest Pest Control Branch Directorate carries out cultural, mechanical, biotechnical and biological control studies against all these pests. Within the scope of biological control, *Calosoma sycophanta* L. predator insect *Thaumetopoea wilkinsoni* reproduced in Gaziantep is released into Tams fields. *Phryx caudata* (Rondani, 1859), a parasitoid of *Thaumetopoea wilkinsoni* Tams, completes its development, and islet

construction and wire cages are left in places where the pest is seen. As a biotechnical control, pheromone traps are used against various bark beetles. As a mechanical struggle, trap trees and trap woods are prepared against bark beetles, and damaged trees are removed from the area. As a cultural struggle, thinning studies are carried out in areas where fungal disease is seen (Laz, 2020).

Researches should be carried out to monitor the benefits and effectiveness of Red Forest Ant nest transplant, bird nest hanging, predator insect production and similar biological control practices and to obtain healthy information that will form the basis for future applications. Silvicultural interventions that may adversely affect the predatory species that regulate bark beetle populations should be avoided, and care should be taken to leave sufficient number of planted dry trees for woodpeckers' nests and sleeping cavities in certain areas.

Red forest ant transplantation is considered as the most suitable method of struggle for the preservation of ecological balance and at the same time it has the least financial risk. Success can be achieved in the case of choosing the right place in the transplantation and working in accordance with the technique. In addition, there is no maintenance cost other than the initial facility cost in these studies (Eroğlu, 2017).

Among the vertebrate species, birds are the leading organisms that have pressure on harmful insects. It has great importance in maintaining the natural balance by eating the adults, pupae, larvae and eggs of insects. They consume large amounts of insects, especially during their breeding season. Birds that feed on insects are considered as potential biological control agents especially in the control of harmful insects in forests. It has been found in studies that birds reduce their populations by up to 100% when they feed on harmful insects. As can be seen, biological control has positive effects on both agricultural and forest pests (Kayahan and Karaca, 2015).

In order to expand the biological control against forest damage and increase its effectiveness, ways to benefit from more predators and especially parasitoid species should be investigated and important species should be put into production or their reproduction should be supported. The sharing of knowledge and experience provided in the production studies of certain species should be expanded. According to the characteristics of the habitat in forest areas, high-risk areas that are more susceptible to bark beetle attacks with more susceptible trees should be determined as high-risk areas, as in forest fires, and areas at medium and low risk, and risk maps should be created (URL 1).

Economic Crises and The Effects on The Global Economic System

Assoc. Prof. Dr. Oğuz KAYMAKCI¹

¹Tekirdağ Namık Kemal University, Department of Economics

Abstract: Crisis can be identified as certain micro and macro recessions that occur all of a sudden unexpectedly. The reasons behind the crises are reduction of a state's international reserves, fragility of the banking system, inflation, appreciation of local currency, foreign trade deficits, expansion of loans and the following increase in supply of money. The contagious nature of crises make them quite dangerous and threatening the world. With this perspective, global system forms one of the threats.

In this study, while analyzing the dynamics of "global crises" starting from Great Depression of 1929 until today, an answer to the problematique on whether this new position of "global economic system" necessitates a new system perception or, actually, a warning mechanism that would prevent the fragility by revising the current system.

Key Words: Global Crises, Global Economic Systems

Jel Codes: F02, G00

1. INTRODUCTION

Crisis has turned into a concept which has a feature of increased incidence, as the world economy has become more global. Macro-economic imbalances, intense competition, financial deregulation, credit boom, poorly managed banks and lack of transparency have caused to banking crises.

Crises consist of different reasons. The major ones may be considered as: "Real Sector Crises", "Financial Crises", "Money (Currency or the Balance of Payments) Crisis", "Banking Crises", "External Debt Crises" and "Systematic Crisis".

2. GLOBAL CRISES

Crises are very important for the future of the global economic system. With this aspect, the major economic crises in the world from the early 1900's to the present and their typology would be enlightening to know that subject.

Actually, each economic crisis with the different typology formed on changes in the global economic system. Even according to some major economists, arguments about crises with gradually increasing the frequency, forced us to a new perception of the economic system are known facts. It's useful to mention the great crises in the world before the effects of the crisis on the global economic system

2.1 1929 World Economic Crisis

The U.S. economy had high growth rates in the 1920s. While Fordist System was raising the production, increasing revenue growth due to production increased fees and therefore consumption accordingly increased. In real estate prices and even in the stock market greater gains were observed. Briefly, in economy all the ratios and the data seemed to be in order. Nevertheless, property prices made the balloon effect and after hurricane had been lived; house prices showed a serious decline in rates.

In early 1928 the Dow-Jones Index was 191, in September 1929 of it was 382. In 1928, while value of the shares bought with loan was 5 million dollars; in September 1929, it was 850 million dollars. In this situation, R.W. Babson made a statement as "The stock market crash is inevitable and the results can be very bad". After that the authorities gave assurances but investors did not heed these words of Babson (Erdağ, 2002; 76).

However, in October 21, 1929, on Monday, Foreign investors in the U.S began to sell their stocks and in October 24, 1929, on Thursday referred as "Black Thursday", Dow-Jones index fell by 25%. The ongoing days Stock prices fell nearly to zero, for this reason people's savings melted.

Although there were any pre-indicators of the crisis which started in the U.S., firstly crisis had appeared in financial markets and then affected the real sector. When we observe the causes of the crisis, the reasons includes; U.S.'s insists on the gold standard, unfair distribution of income, imbalance of foreign trade,

companies' financial state of imbalance, giving excessive amounts of credits by banks and inexperience of bureaucrats who admin the economy (Can, 2003, 70).

The situation in Europe was as same as U.S. Some of the banks had economic difficulties in this reason both banks and companies went bankrupt. Correspondingly, a sudden drop has emerged in the total consumption and investments.

Between 1929 and 1933, GDP reduced by 1/3 (Aktan ve Şen, 2002; 5). As far as U.S.'s entered to the crisis, it caused to cutting of the loans. Hence Europe quite profoundly was affected by the situation. For instance, inflation increasing had shown per hour in Germany, 1/4 of workforce was unemployed.

2.2. The Oil Crisis (1974)

The USA's free emission because of Vietnam War and after losing confidence in the U.S. Dollar, "Bretton Woods" system collapsed. In addition, in October 6, 1973, as a result of tension between Syria and Israel, due to developed countries and U.S. had supported to Israel, oil-exporting Arab countries thereby reduced the production of oil by 5 million barrels in a day imposed an embargo on countries supporting Israel. Hereupon, price of a barrel of raw oil, was \$ 3 in 1972, reached to \$ 12 by increasing 4 times in 1974.

Meanwhile the greatest demand of Arab oil-exporting countries' funds required underdeveloped countries. However, due to economic conditions, these countries have begun not to cycle their debts. This created some supranational regulations, need for exchange of debt between countries and financial institutions in the world economy (Soyak ve Bahçekapılı, 1998, 5).

Process of recession has continued for 16 months until March 1975. In this period, the cumulative growth rate was - 3%. Oil shock affected countries which were dependent on oil in the world economy and importing of oil; and the world economy has entered stagflation. Accordingly, in the lots of countries, "moratorium" has been decelerated.

If the deep decline should be compared, after Bush government had took the ruling, it will be possible to say that it was slightly larger than the collapse of technology shares in the 2000-2003 period (Özhan, 2005, 34).

2.3. ERM Crisis

The countries in the crisis, there were low and stable inflation, increase in foreign exchange reserves and a budget surplus in general. The only problem was, raising interest rates and unemployment. The only reason of this was inadequate demand. Rising unemployment due to insufficient demand, only be resolved by expansionary monetary policies. Governments had to implement a hard monetary policy by reason of the fact but that expansionary monetary policy would lead to problems when it was implemented on fixed rate. This has led to stagnation in European countries.

ERM Crisis, while economic aggregates are running a normal course, a new type of crisis is caused by the negative expectations. EU member states participating in the European Monetary System, indexed their money to ECU over a fixed exchange rate. Speculative attacks have a major role in the European Monetary System. However much foreign exchange reserves in a country, it can not be as much as experiencing capital flows and thus capital flows may be leading to speculative attacks. Crisis in financial markets couldn't be guessed so they may be exposed speculative attacks.

After speculative attacks on Finland and Sweden had succeeded, Italian lira couldn't prevent and it devaluated of 7%. So the attention of speculators attracted to England. As a result of attacks against the British Pound, in September 16 1992 despite intensive interventions of Bank of England, interest rates in Britain rose by 5% in one day (Akdiş, 2000; 60). While some coins were faced with the devaluation, England and Italy was forced to leave the ERM and In August 1993 the ERM fluctuation limits increased from 2.25% to 15%. According to Krugman, ERM countries, which was the case of to keep currency stable, couldn't follow expansionary policies and unemployment was shaped by the result of insufficient demand, have been the main trigger for the crisis (Erkekoğlu ve Bilgili, 2005:24).

The crisis starting with the British Pound and that deeply affected to the ERM system have 4 features. These are: a) Speculation plays a major role in crises. b) In a world where capital flows are high foreign exchange reserves not a function of preventing the crisis. c) Crisis occurs unexpectedly. d) Affected by the crisis and the

countries currencies out of the band with the measures taken, brought their economies to a better position, with regard to countries trying to keep their money in the band with coercive measures (Akdiş, 2000:61).

2.4. South East Asian Crisis

High-performing Asian economies were showed unique growth rates with human and physical capital between the years of 1960-1989. In this period, Asian economies had more factor productivity than 70% of developed countries.

Of these; Japan, Korea, Hong Kong, Malaysia, Taiwan and China had the highest rates of total factor productivity in the world (World Bank, 1998:259). In Asian countries, there was; justice in income distribution, political stability, decreasing consumption and increasing savings, a growth model based on exports and technology transfer. In brief, was mentioning a complete miracle of Asia.

In Southeast Asia, the crisis described by especially ineffective distributed investments. On the other hand, signals the emergence of the crisis was formed by significantly shown current account deficit increasing figures. In Thailand while current account deficit was 5% of GDP in 1993, this rate increased to 8% in 1996. Similarly, the rate of Malaysia's current account deficit rose to 5% in 1996 (Kayacan, 1998:4).

The growing current account deficits in Asian countries, wrong investments and non-refund of loan debts, investments shift in the field of real estate and not providing returns in the short term, short-term nature of entering capital and carrying speculative attacks, China's devaluation in 1994 and loss of competitiveness of other Asian countries, sharp increases in real estate prices, fragility of the financial system, bankers' inexperience, the balloon effect in economy, lack of transparency and panic were the main causes of the Asian crisis.

Observed in the first half of 1997, bankruptcies, students' rebellions and fall of governments did not exodus of foreign capital. But, on 2 July 1997 with the devaluation of Thailand Baht, the Asian crisis erupted. The crisis quickly spread to other Asian countries. With consideration of one-fourth of the world exports was performed by Southeast Asian countries, it is exceptionally ordinary that the Asian crisis affects with jumping to other countries including Asian countries particularly.

The main reason for the crisis according to Krugman is, resources trending to non-commercial areas from commercial areas in the short term. Also Hedge funds presence in Southeast Asia is the main cause of the crisis.

2.5. Mortgage Crisis

Mortgage system is, applied since many years in the U.S. and with terms extending up to 20 - 30 years providing home ownership opportunities for a home loan system. According to this system, people who want to buy a house can receive loans from credit institutions with fixed or variable interest rates. These credits were Prime Mortgage and Subprime Mortgage. Receivers of these credits even if can't pay the loan; by selling their homes they would be able to achieve substantial gains. Organizations which provide these loans will pass loans on the market. Investors are also buying them. Because risky loans will bring more interest rate to buy them provides more returns.

The sum of mortgage market was \$ 10 trillion. 14% of the mortgage market, 1.4 trillion dollar part consists of subprime loans. Ratio of the troubled loans is 20% and in 2005 - 2006 this figure was 25% of subprime loans.

Credit crisis, began with Subprime mortgage loans, extended and affected other types of credits caused to the entire mortgage market has totally affected. Balloon increases in housing prices have caused asymmetric information in the market, has led to incorrect directing of credit users and has caused the perception of house purchase as an investment instrument (Demir, Ermişoğlu, Karabıyık and Küçük, 2008:4).

When we look at the causes of the mortgage crisis; corruption the structure of mortgage loans and problems in refund, increasing interest rates to prevent inflation and thus increasing the number of people failed to pay credits, overvaluation of the housing sector and with the rise of short-term dollar interest rates has become a balloon in the housing sector prices falling and the bubble's burst, to reduce the risk of subprime mortgage loans tightness in the securitization and due to the problems in these loans bond values fall thoroughly, funds have the feature of Hedge funds and the expansion of the credit derivative markets, credit rating agencies lowering bond values of mortgage loans because of unpaid loans, may be considered.

Mortgage crisis is, even though there is no deterioration in the macro-economic policies, the balloon consisting in the financial system, fluctuations in real estate prices and because short spread of the crisis to all world countries complies with the 3rd generation of the crisis theories. However, spillover effect has never been so effective in any crisis. For this reason even if comply with 3rd generation of the crisis theories, can't explained exactly with 3rd generation of the crisis theories. Mortgage crisis is a crisis, emerging in financial markets and quickly spread to the real sector.

3. EFFECTS OF CRISES ON THE GLOBAL ECONOMIC SYSTEM

The world economic crisis of 1929, has prepared the end of view of Classical Economics and Keynesian policies have been dominated the economy. The economy was dominated by the principle of social state. Separation of duties was made in the banking system. By bringing deposit insurance system small savings depositors was protected, public took along the power of syndicates with them against unemployment. In addition, The IMF was established in March 1946. By fixing 1 ounce of gold to 35 dollars the gold standard was abandoned.

The main reason for the crisis of 1974 was the increase of the prices and this crisis was an oil crisis. For this reason "Petro-currency" called significant funds consisting in the hands of the member countries of OPEC were offered in order to assess in many developed financial markets especially in Europe. Here is the new task of the IMF and World Bank begins. A country who wants to debt in international financial markets will pass auditing of the IMF and to the country receiving its approval countries and international banks will give debt with peace of mind. By this way it is possible to say that goes the revision of a system in this crisis.

ERM crisis, unexplainable crisis with canonical models and reveals the importance of second-generation crisis models. Unpredictable ERM Crisis affected all EU countries with the effect of infection. The feature of a new type of crisis shows another gap of the "system".

Crisis in Asia, in particular highlighted by Krugman, drawn attention to "Crony Capitalism" and heavy losses in Indonesia was described with that. Like years of Japan's bubble economy there was also a moral hazard problem for Southeast Asia; this problem is a problem, called shortly after the crony capitalism. Actually owner of a finance company mostly relatives of a government official (Krugman, 2005:94). As can be seen from here, the logic described as "crony capitalism" not just a local corruption also can be global effects.

In addition, the crisis in Asia have caused the private capital investments escape from the area, the banking sector has seen major impact. The Asian crisis spread to the whole region with domino effect quickly. This is the most important difference between the crises in Mexico.

Asian crisis is a financial crisis in a general meaning. In most Asian countries were caught in the crisis, external debt has been largely provided by non-bank private sector. Asian crisis is a financial crisis, contagion effect was observed in Asian crisis. Is a crisis, the second generation of theories remained invalid, and the third-generation theories occurred.

Mortgage crisis, for the predictability seems to fit the first-generation crisis theories. However, although closer to Krugman's theory of third-generation crisis, because of affects all the world's economies extremely severe may be expressed with a new crisis theory by accordance. This "crisis" might produce the extremely severe effects, A. Greenspan also wrote in 1980 "The Great Malaise" in his essay, was indicate that speculative attacks Might produce serious problems in the U.S. housing market.

CONCLUSION

Crises are the most important issues for both developing countries and developed countries. The most important feature of the crisis is showing an effect of infectious and contagious by time.

Analyzed in terms of the crisis theories, first-generation crisis model is a predictable crisis. Defends a fixed exchange rate system never should not apply. Second-generation models are defending the crisis can not be predictable, governments play a more active role, but after a certain period gave up fixed exchange rates advocate implementing a flexible exchange rate system model. Sometimes in countries, did not show any macro-economic corruption and while there is no risk of crisis could face with the crisis. Krugman connected it to "crony capitalism" and has revealed to theory of the third generation crisis.

1929 Economic Crisis while ending the concept of classical economics evaluate the system to Keynesian economic approach, this situation changed after the 1974 Crisis and monetarist economic policies started to be

implemented. Moreover, not only in economic and monetary systems, changes in the approaches have emerged. Then the monetary system for 100% gold (Bretton Woods) indexed to the U.S. dollar and in the 70's this situation had been changed, countries created their monetary policies independent from the gold. Strong currencies traits of being convertible in international trade, as result money regions have occurred.

Global system maintained the structure with some interventions, new supra-national institutions and approaches to today. However, like the expression of many scientists rather than revised the system also a new system could be born.

Özet: İçinde bulunduğumuz zaman dilimi, dijital devrimin küresel iletişimi yeni bir boyuta taşımaktadır. Tüketicilerin ilgilendikleri ürün ve işletmeleri internet üzerinde inceledikleri, yorumlarına ve dijital görünümüne göre değerlendirdikleri, tüketim davranışlarının bu yönde dönüşüm geçirdiğini görmekteyiz. Eski yöntem ve geleneklerden farklı olarak, bedava ve herkesin erişimine açık dijital kaynaklar sayesinde, hizmet ve ürüne erişimde bireylerin acentelerden ve tanıdıklıklardan bağımsız olarak, yurtiçi ve yurtdışı ayırımı olmadan, kişisel araştırmalarını internet üzerinden gerçekleştirdiği yeni nesil bir “küresel kurumsal iletişim” çağında olduğumuz söylenebilir. Bu nedenle küresel çapta hizmet veren firmaların hedef kitleleri ile buluştuğu ilk ortam olma özelliğini taşıyan internet siteleri ve sosyal medya hesapları, profesyonel rekabet açısından belirleyici bir konuma gelmiş bulunmaktadır. Bu bağlamda çalışmada sağlık ve dijital kurumsal iletişim çerçevesi içerisinde, Bulgaristan'da ve Türkiye'de hizmet veren özel hastanelerin masaüstü ve mobil internet siteleri ile kullandıkları sosyal medya hesapları, çok dilli erişilebilirlik, kullanım kolaylığı ve arayüz tasarımı gibi kriterler açısından incelenmiştir. Araştırmada Google arama sonuçlarına göre iki ülke için de en yüksek beğeni ve yoruma sahip ilk üç hastane tercih edilmiştir. Seçilen her internet sitesi için, belirlenmiş inceleme alanlarına göre analizler yapılarak öneriler getirilmiştir. İki ülke arasındaki kurumların benzerlik ve farklılıklarına vurgu yapılarak küresel kurumsal iletişim açısından yetkinlikleri değerlendirilmiştir.

Abstract: The time period we live in, the digital revolution takes global communication to a new dimension. We see that consumers examine the products and businesses they are interested in on the internet, evaluate them according to their comments and digital appearance, and their consumption behaviors are transformed in this direction. It can be said that, unlike the old methods and traditions, we are in a new generation "global corporate communication" era, where individuals carry out their personal research over the internet, regardless of agencies and acquaintances, without distinction between domestic and foreign, in accessing services and products, thanks to digital resources that are free and accessible to everyone. For this reason, websites and social media accounts, which are the first environment where companies serving globally, meet with their target audiences, have come to a decisive position in terms of professional competition. In this context, in this study, within the framework of health and digital corporate communication, desktop and mobile websites and social media accounts used by private hospitals in Bulgaria and Turkey were examined in terms of criteria such as multilingual accessibility, ease of use and interface design. According to the Google search results, the first three hospitals with the highest likes and comments for both countries were chosen in the study. For each selected website, analyzes were made according to the determined review areas and suggestions were made. Emphasizing the similarities and differences of the institutions between the two countries, their competencies in terms of global corporate communication were evaluated..

Key Words: Private Hospital, Website, Corporate Communication, Visual Communication

1. GİRİŞ

Günümüzde özel hastaneler, sağlık hizmetlerini sunmak için dijital kanalları aktif bir şekilde kullanmaktadır. Bu dijital kanalların başında ise web siteleri ve sosyal medya hesapları gelmektedir. Bu kanalların kullanımı, hastalarla iletişim kurmayı, hizmetlerini tanıtmayı ve markalarını güçlendirmeyi amaçlamaktadır.

Özel hastanelerin web siteleri, hastaların hastaneler hakkında bilgi edinmelerine, sağlık hizmetleri hakkında bilgi almalarına ve randevu talep etmelerine olanak tanımaktadır. Örneğin, Ceylan ve Göksu (2016), özel hastanelerin web sitelerindeki randevu sistemlerinin, hastaların zaman kaybını önlediğini ve sağlık hizmetlerine erişimlerini kolaylaştırdığını belirtmektedirler.

Sosyal medya hesapları ise hastanelerin hizmetlerini tanıtmaları ve markalarını güçlendirmeleri açısından oldukça önemlidir. İleri teknolojiler ve çözümlerle hastalarına en iyi hizmeti sunmak isteyen özel hastaneler, sosyal medya hesapları üzerinden hastalarla etkileşim kurarak, sağlık hizmetlerini tanıtmaktadırlar. Örneğin, Kocabaş ve Özkan (2019), özel hastanelerin sosyal medya hesaplarının, hastanelerin marka algısını artırdığını ve hastalarla olan iletişimi güçlendirdiğini belirtmektedirler.

Ayrıca, sosyal medya hesapları üzerinden yapılan kampanyalar da özel hastanelerin hizmetlerini tanıtmaları açısından oldukça etkilidir. Yıldırım, İsbir ve Çiftçi (2017), özel hastanelerin sosyal medya hesapları üzerinden yaptıkları kampanyaların, hastaların hastaneleri tercih etme oranlarını artırdığını ve hastanelerin marka bilinirliğini artırdığını belirtmektedirler.

Özetle özel hastaneler, web siteleri ve sosyal medya hesapları aracılığıyla hastalarla iletişim kurarak, sağlık hizmetlerini tanıtmakta ve markalarını güçlendirmektedirler. Özel hastanelerin bu dijital kanalları aktif bir şekilde kullanarak, hastalarına en iyi hizmeti sunmayı hedeflediği görülmektedir.

Dijital teknolojilerin sağlık sektöründe kullanımı, hastaların hizmetlere erişimini kolaylaştırmak ve sağlık hizmetlerinin kalitesini artırmak için önemlidir. Bu makalede, Bulgaristan ve Türkiye'deki özel hastanelerin dijital küresel erişim bağlamında incelenmesi yapılacaktır. Bu analiz, özel hastanelerin internet ve diğer dijital teknolojileri kullanma durumlarını, online sağlık hizmetlerini sunma kapasitelerini ve küresel dijital sağlık trendleri ile uyumluluklarını ele alacaktır.

2. BULGARİSTAN VE TÜRKİYE'DEKİ ÖZEL HASTANELER VE DİJİTALLEŞME

Bulgaristan ve Türkiye'deki özel hastanelerin dijital erişim durumu, ülkelerin genel internet altyapısı ve sağlık sektöründeki dijitalleşme seviyelerine bağlı olarak değişebilir. Ancak genel olarak, özel hastaneler internet ve diğer dijital teknolojileri etkin bir şekilde kullanarak hastalara daha iyi hizmet sunma amacını taşımaktadır (Bilecik, 2021). Bulgaristan'da özel hastanelerin dijital erişim durumu, ülkedeki internet altyapısının genel olarak yetersiz olması nedeniyle sınırlı olabilir. Ancak, bazı özel hastaneler online sağlık hizmetleri sunarak hastaların ihtiyaçlarına yanıt vermeye çalışmaktadır (E-Health Bulgaria, 2020).

Türkiye'de ise, özel hastaneler genel olarak internet ve diğer dijital teknolojileri aktif bir şekilde kullanmaktadır. Türkiye'deki özel hastaneler, hastaların online sağlık hizmetlerine kolayca erişebilmesini sağlamak için web siteleri ve mobil uygulamalar da dahil olmak üzere çeşitli dijital kanallar sunmaktadır (Aktas & Bicakci, 2019).

Günümüzde, hastaların çoğu internet ve mobil cihazlar aracılığıyla sağlık hizmetlerine erişebilmektedir. Bu nedenle, Bulgaristan ve Türkiye'deki özel hastaneler de online sağlık hizmetleri sunarak hastaların ihtiyaçlarına daha iyi yanıt vermektedir. Bu hizmetler arasında teletıp, dijital randevu sistemleri, online tıbbi danışmanlık, tıbbi rapor ve sonuçların dijital olarak paylaşılması, online reçete ve ilaç siparişi gibi hizmetler yer almaktadır.

Bulgaristan'da, özel hastaneler online sağlık hizmetleri sunmaya başlamış olsa da, ülkenin internet altyapısının yetersiz olması nedeniyle bu hizmetlerin yaygınlaşması zaman alabilir. Ancak, E-Health Bulgaria gibi platformlar, hastaların sağlık verilerini dijital olarak saklamalarına ve sağlık hizmetlerine daha kolay erişmelerine olanak tanıyan çözümler sunmaktadır (E-Health Bulgaria, 2020).

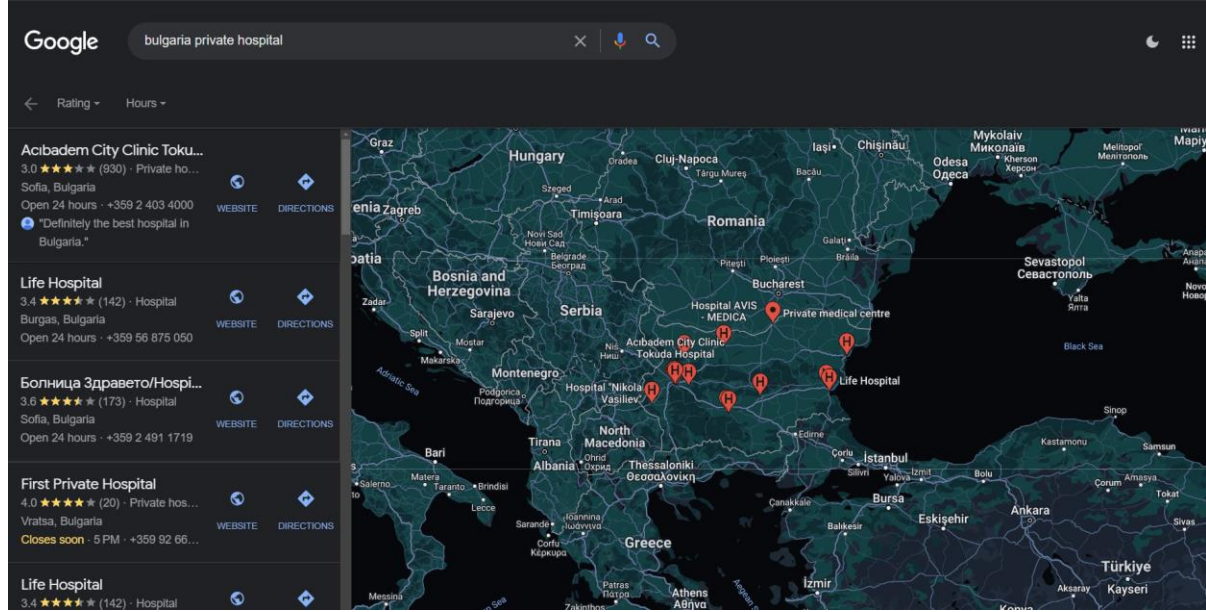

Türkiye'de ise, özel hastaneler online sağlık hizmetleri sunmaya yönelik olarak hızlı bir şekilde gelişim göstermektedir. Hastaneler, online randevu sistemleri, teletıp, tıbbi danışmanlık, reçete ve ilaç siparişi gibi hizmetleri sunarak hastaların sağlık hizmetlerine erişimini kolaylaştırmaktadır. Ayrıca, Türkiye'de faaliyet gösteren bazı teletıp platformları, hastaların tıbbi danışmanlık ve uzman görüşleri alabilmelerini sağlamaktadır (Aktas & Bicakci, 2019).

Bulgaristan ve Türkiye'deki özel hastaneler, dijitalleşme konusunda gelişmekte olan ülkeler olduğu için bu teknolojileri tam olarak benimsememiş olsalar da, önemli adımlar atmaktadırlar. Özellikle Türkiye'deki özel hastaneler, büyük veri analizi, yapay zeka ve teletıp gibi teknolojileri kullanarak hastaların sağlık hizmetlerine erişimini kolaylaştırmak için çalışmaktadır (Aktas & Bicakci, 2019).

2. YÖNTEM VE BULGULAR

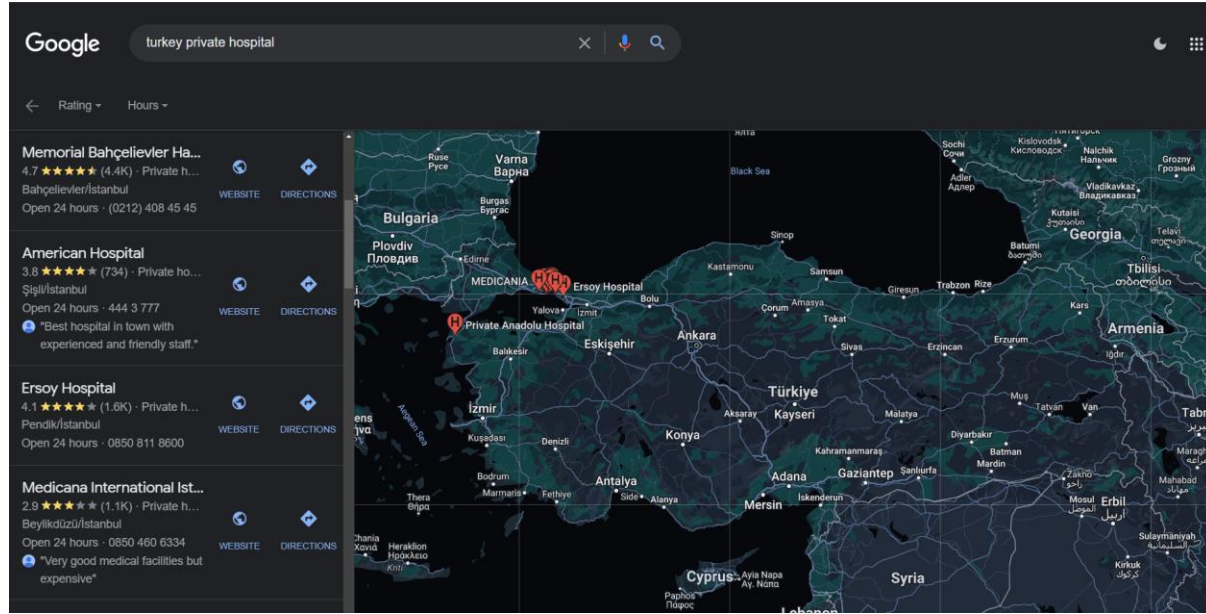

Bu çalışmada amaçlı örneklem yöntemiye göre seçilen hastanelerin internet siteleri, İngilizce dilinde erişim, iletişim bilgilerine kolay ulaşılabilirlik ve kolay kullanım olanakları açısından betimsel içerik analizi yöntemiyle incelenmiştir. Çalışmada Google Maps arayüzü üzerinde Bulgaristan ve Türkiye için ilk on önerilende yer alan, en çok yorum sayısına sahip en az üç yıldızlı üçer özel hastane tercih edilmiştir (Şekil 1 ve Şekil 2). Bu sayede bu konuda iki ülkede hizmet veren özel hastanelerin pratik bir karşılaştırılmasının yapılması sağlanmaya çalışılmıştır.

Şekil 1: Google Maps ile Bulgaristan Özel Hastaneleri Arama Sonucu Ekran Görüntüsü

2.1. Bulgaristan Özel Hastanelerin Web Sitelerinin İncelenmesi

Acıbadem City Clinic Tokuda hastanesinin internet sitesinde (Şekil 3) sağ üstte Latin alfabesi ile "BG" kısaltması (Bulgarca diline karşılık) yazılmış olup, PC üzerinden tıkladığında İngilizce ya da başka bir dile dönüşmediği görülmüştür. Akıllı cihazlardan ulaşılan mobil site versiyonunda (Şekil 4) ise aynı düğme üzerinden İngilizce ve Rusça opsiyonlarına ulaşıldığı görülmüştür.

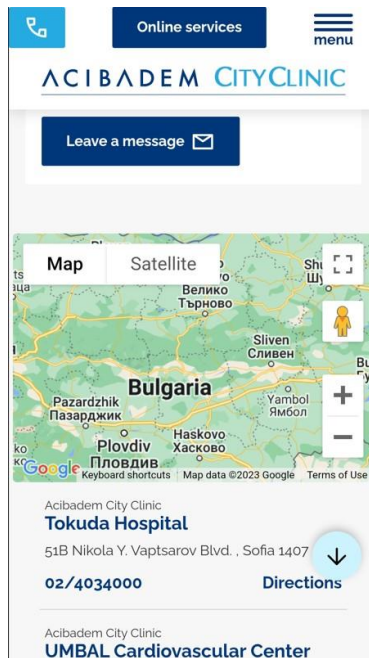

Sayfanın PC versiyonunun ayaklık kısmında ikonlarla çeşitli sosyal medya bağlantıları ve telefon numarası için bir bağlantı bulunmaktadır. Ancak bu bağlantılar henüz bir bilgiye bağlanmadığından tıkladığında boş sayfa çıkmaktadır. Mobil versiyonunda ise dinamik harita, telefon ve diğer iletişim bilgilerine ulaşılabilir. PC internet sitesi arayüzü ile mobil site arayüzünün bu derecede farklı ele alınmış olması, mobil cihazlar olmaksızın adres ve telefon bilgisine İngilizce dilinde ulaşmanın olanaksızlığı, Acıbadem City Clinic Tokuda hastanesi internet sitesinin küresel erişim açısından eksikliklerini göz önüne getirmektedir.

Şekil 3: Acibadem Bulgaristan Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://acibademcityclinic.bg/tokuda>

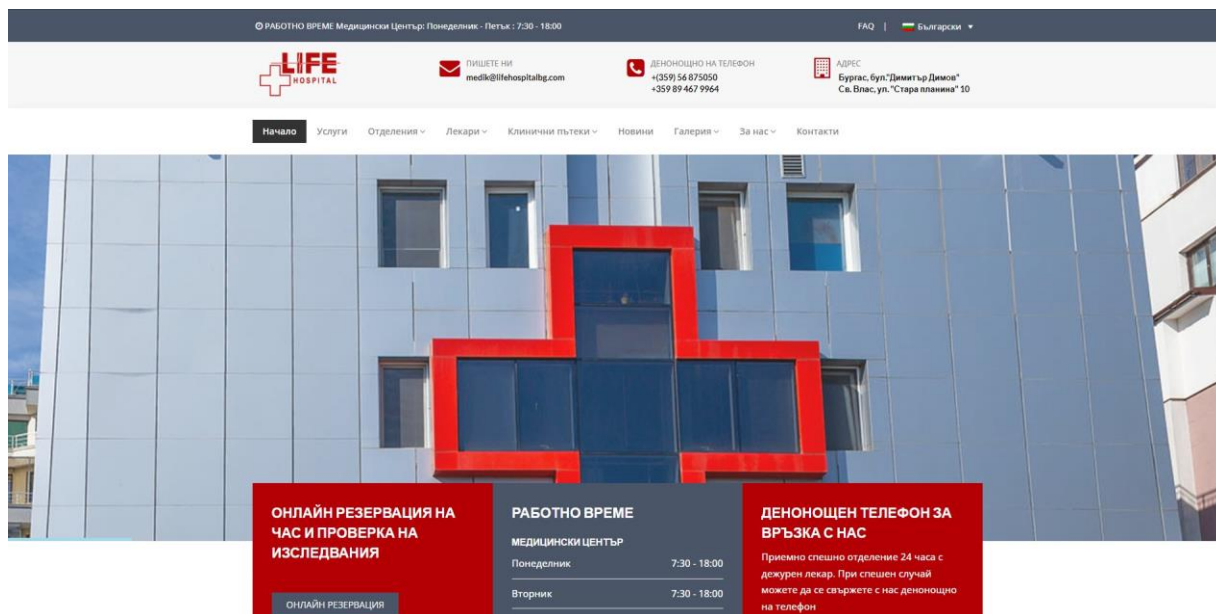

Şekil 4: Acibadem Bulgaristan Hastanesi Mobil Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://acibademcityclinic.bg/tokuda>

Life hastanesinin internet sitesinin PC ve mobil versiyonunda (Şekil.5) sağ üstte Bulgar bayraklı ikon ile dil seçenek erişiminin sağlandığı görülmektedir. Tıklandığında İngilizce dil opsiyonu sunulmuştur. Aynı zamanda telefonlar (ülke kodu ile birlikte), adres ve eposta adresi bilgileri sayfa ayaklığında değil başında gösterilmiştir. Bu sayede hızlı ve küresel erişim için kullanışlı bir site arayüzü sağlanmıştır. En temel bilgiler olan erişim ve iletişim bilgileri sade ve kolay fark edilir bir konumda ve görünürlükte sunulmuştur. Bu bağlamda Life hastanesi sitesinin küresel erişim açısından başarılı bir site tasarımı kullandığı söylenebilir.

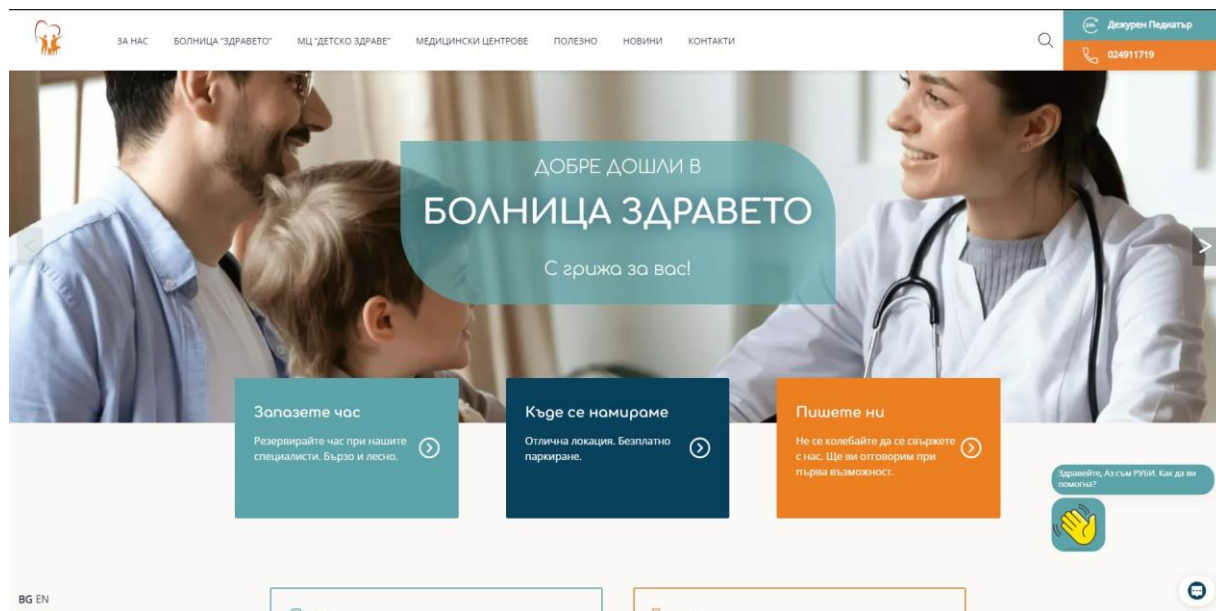

Şekil 5: Life Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.lifehospitalbg.com/>

Zdraveto hastanesinin internet sitesi arayüzünde (Şekil 6) sol altta siyah renkte "BG" ve "EN" ikonları ile Bulgarca ve İngilizce dil opsiyonları sunulmuştur. Ancak PC arayüzünde bu alanın fonu beyaz iken, mobil arayüzünde bu alanın fonu dikey akış içinde herhangi bir görsele denk gelebilmektedir. Bu nedenle ilk bakışta dil seçenekleri görülmeyebilir. Bu da küresel erişim açısından olumsuz bir etki oluşturacaktır.

Şekil 6: Zdraveto Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://zdraveto.com/>

Sol alt köşe dil seçeneklerinin yerleşimi için sorun oluşturacak bir seçim olmuştur. Başlıkta (en üstte) yer alsaydı hem PC hem mobil arayüzünde (Şekil 7) iyi çalışacak bu tasarım, halihazırda kullanılan hali ile mobil kullanıcılarına bir sorun yaratmış gibi gözükmemektedir.

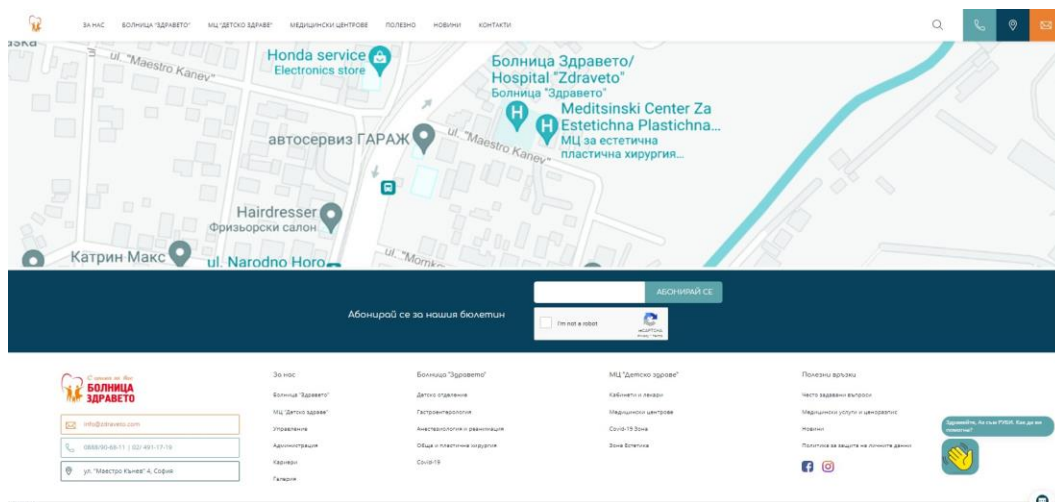

Şekil 7: Zdraveto Hastanesi Mobil Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://zdraveto.com/>

Sağ üstteki düğmeler ile telefon ve adres bilgilerine ulaşılabilen site arayüzünün ayaklık kısmında, dinamik haritaya, eposta adresine ve tekrar telefon numarası ile yazılı olarak adres bilgisine yer verilmiştir (Şekil 8). Mobil site arayüzündeki dil seçeneği konumu dışında, Zdraveto hastanesinin arayüz tasarımının küresel erişim taleplerine başarılı şekilde cevap verdiği söylenebilir.

Şekil 7: Zdraveto Hastanesi Web Sitesi Ana Ekran Görüntüsü

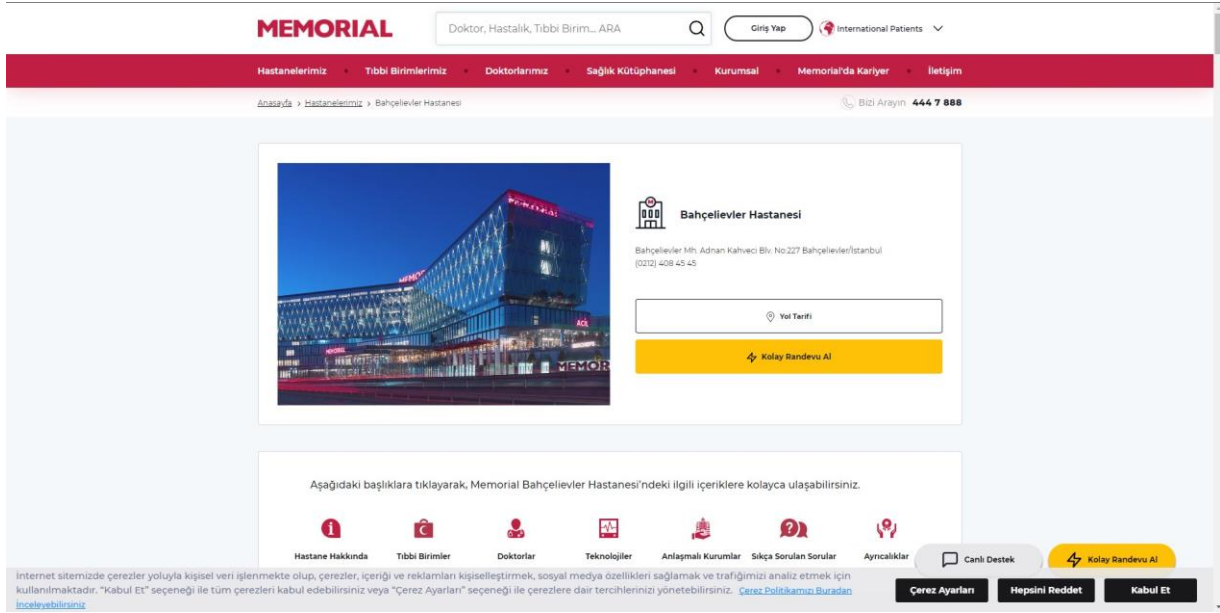

Kaynak: <https://zdraveto.com/>

2.1. Türkiye Özel Hastanelerin Web Sitelerinin İncelenmesi

Memorial Bahçelievler hastanesinin internet sitesi Memorial hastanelerinin ortak adresine yönlendirilmektedir. Burada Bahçelievler şubesinin adresi ve telefonu sayfanın üstlerinde yer almaktadır. Ancak İngilizce opsiyonu bulunmayan sitede, sağ üstte "international patients" (uluslararası hastalar) bağlantısı ile ayrı bir İngilizce yardım ekranına ulaşılabilir. Ayrıca metinsel arama barının bulunması, sözcük üzerinden hızlı site içi sorgu için faydalı bir özellik niteliğindedir.

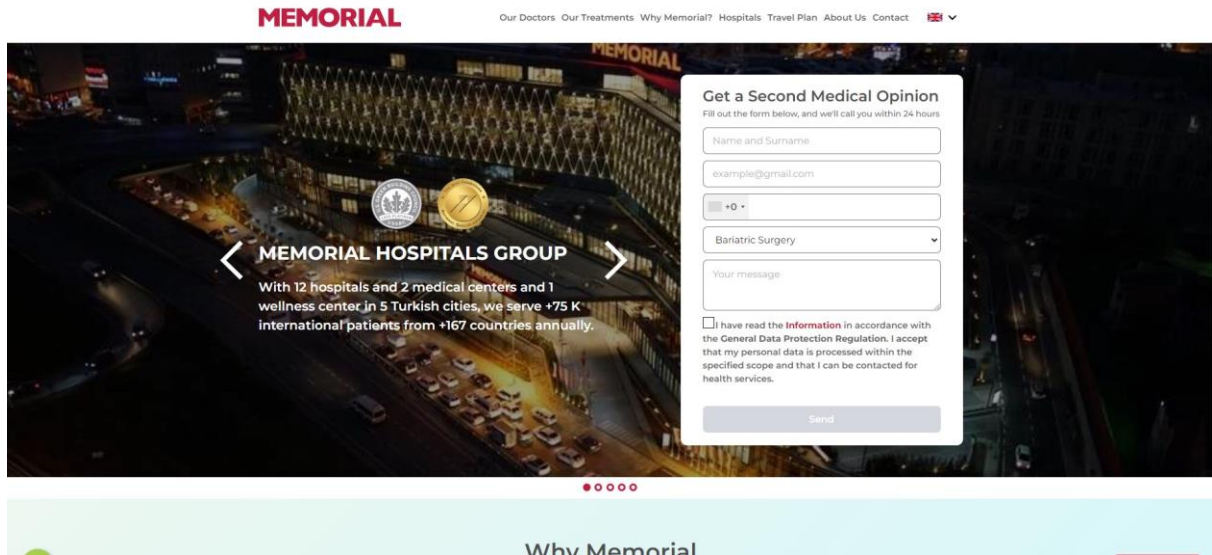

Şekil 8: Memorial Bahçelievler Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.memorial.com.tr/hastaneler-ve-tip-merkezleri/memorial-bahcelievler-hastanesi>

Ortak Memorial grup hastanelerinin hasta başvuru veri yükleme/yazma alanının olduğu bu bağlantıda, Bahçelievler şubesinin adres ve telefon bilgilerinin İngilizcesi bulunmamaktadır (Şekil 9). Halihazırdaki kullanımı ile Memorial Bahçelievler hastanesinin site arayüz tasarımının küresel erişim açısından güncel gereksinimleri karşılamadığı söylenebilir.

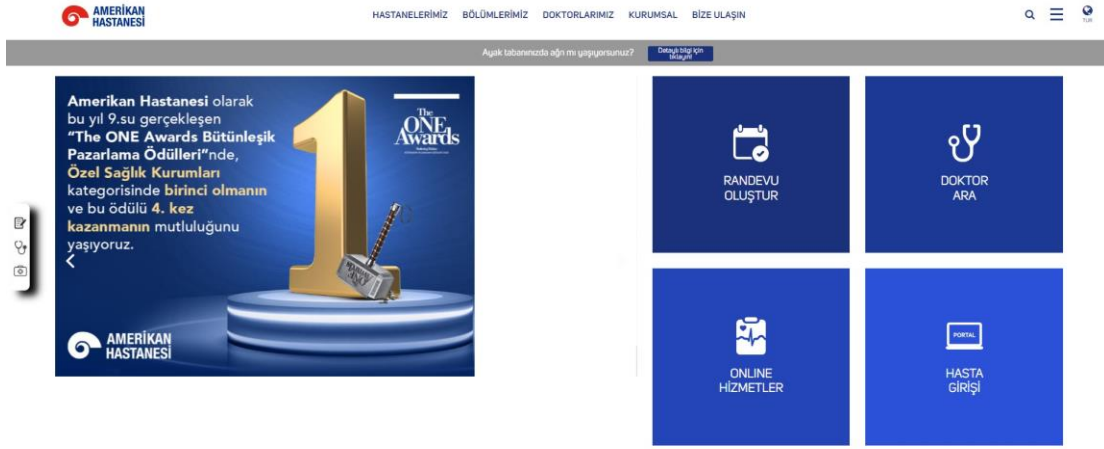

Şekil 9: Memorial Grup Hastaneleri Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.memorial.com.tr/hastaneler-ve-tip-merkezleri/memorial-bahcelievler-hastanesi>

Düşük kimlikli bir arayüz görünümüne sahip Amerikan hastanesi internet sitesinin PC ve mobil versiyonlarında, sağ üstte Türkçe ve İngilizce dil seçeneklerine ulaşılabilen bir düğme bulunmaktadır (Şekil 10).

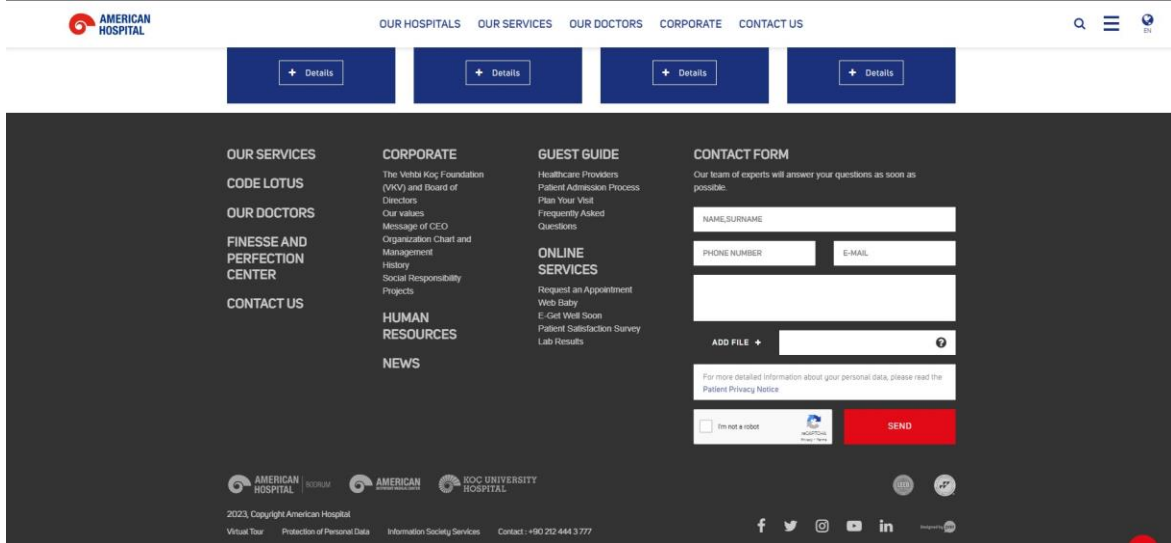

Şekil 10: Amerikan Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.amerikanhastanesi.org/>

Sayfanın ayaklık bölümünden (Şekil 11) hasta bilgileri ile başvuru mesaj alanı ve sosyal medya linklerine ulaşılabilir.

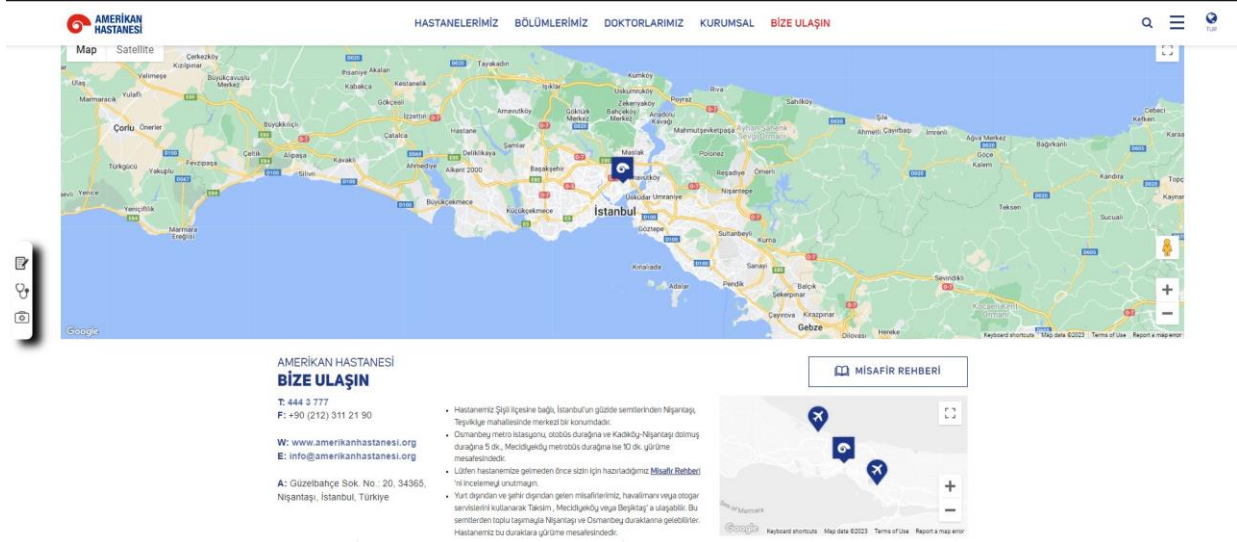

Şekil 11: Amerikan Hastanesi Web Sitesi Ayaklık (Footer) Ekran Görüntüsü

Kaynak: <https://www.amerikanhastanesi.org/>

Ancak hastane erişim ve iletişim bilgilerine ancak başlık alanındaki "bize ulaşın" düğmesi ile açılan yeni bir sayfadan ulaşılabilir (Şekil 12). Bu özelliğin diğer bazı örneklerdeki gibi anasayfadan ve site erişiminde ilk andan (en üstten) sağlanmasının, Amerikan hastanesinin küresel erişim becerisini arttıracakı görülmektedir.

Şekil 12: Amerikan Hastanesi Web Sitesi İletişim Bölümü Ekran Görüntüsü

Kaynak: <https://www.amerikanhastanesi.org/>

Ersoy hastanesinin PC ve mobil internet sitelerinde sağ en üstte önce telefon bilgisi ardından sosyal medya bağlantıları ve sonrasında Türkçe, İngilizce, Arapça ve Rusça dilleri için metinsel seçim düğmeleri konumlandırılmıştır (Şekil 13). Arapça ve Rusça dilleri büyük olasılıkla en yoğun hizmet verilen yabancı milletler olduğundan, Türkçe ve İngilizce yanında yer verilmesi, uluslararası müşteri hizmetleri açısından olumlu bir yaklaşım olarak kabul edilebilir. Yine metinsel arama barının en üstte bulunması, site içi sözcükle sorgu için yardımcı bir özelliktir.

Şekil 13: Ersoy Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.ersoyhastanesi.com.tr/ru-RU/anasayfa>

Sitenin mobil versiyonunda sağ üstteki bilgilerin ve metinsel arama barının daha büyük olarak en başta gelmesi, mobil kullanıcılarının hızlı ve kolay erişimi için yardımcı bir yerleşim olarak kabul edilebilir (Şekil 14).

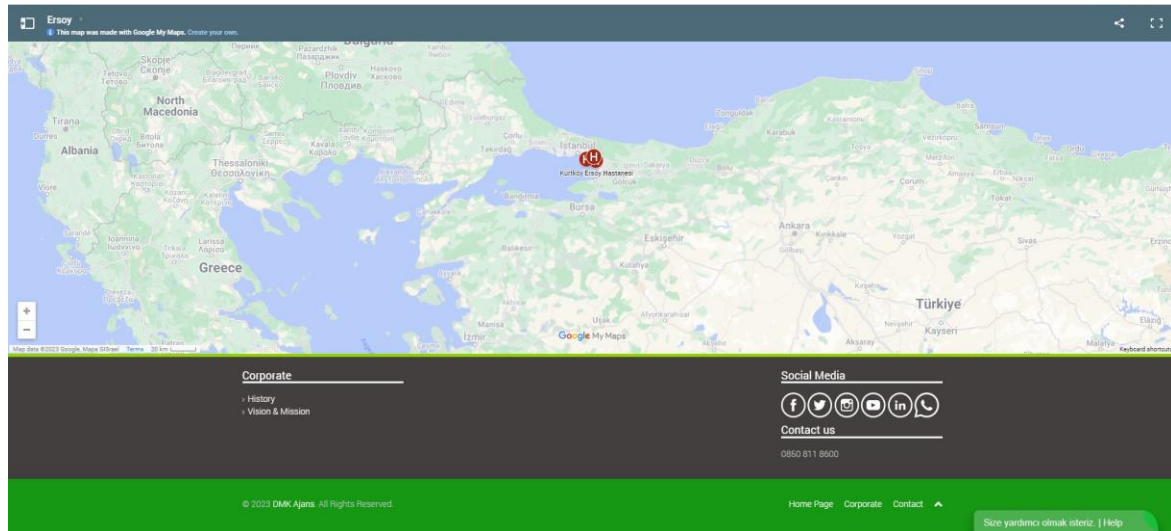

Şekil 14: Ersoy Hastanesi Web Sitesi Ana Ekran Görüntüsü

Kaynak: <https://www.ersoyhastanesi.com.tr/ru-RU/anasayfa>

Sitenin ayaklık bölümünde (Şekil 15) dinamik harita ile sosyal medya linkleri ve telefon bilgisi tekrar değerlendirilmiştir. Ersoy hastanesinin küresel erişim açısından dil, erişilebilirlik, sade ve pratik görünüm ile kolay kullanım alanlarında oldukça başarılı bir internet sitesi tasarımıa sahip olduğu görülmektedir.

Şekil 15: Ersoy Hastanesi Web Sitesi Ana Ekran Görüntüsü

<https://www.ersoyhastanesi.com.tr/ru-RU/anasayfa>

4. SONUÇ

Özel hastanelerin dijitalleşmesi, sağlık sektöründe önemli bir dönüşümü temsil etmektedir. Bu dönüşüm, hastaların sağlık hizmetlerine daha kolay erişebilmelerini, sağlık verilerinin daha iyi yönetilmesini ve sağlık hizmetlerinin daha etkili bir şekilde sunulmasını sağlamaktadır. Bu nedenle, Bulgaristan ve Türkiye gibi gelişmekte olan ülkelerde özel hastanelerin dijitalleşme sürecinde ilerlemesi, sağlık sektörünün gelişimi açısından önemlidir.

Bulgaristan ve Türkiye'deki özel hastaneler, kendi coğrafi bölgelerinde ve hizmet verdikleri hastalar için güvenilir bir sağlık hizmeti sunmaktadır. Bu nedenle, özel hastanelerin mevcut teknolojik olanakları kullanarak dijital küresel erişim konusunda daha fazla adım atmaları ve hastaların sağlık hizmetlerine daha hızlı ulaşmalarına yardımcı olmaları gerektiği açıktır.

Gerçekleştirilen çalışma ile Bulgaristan ve Türkiye'deki özel hastanelerin dijital küresel erişim bağlamında incelenerek, özel hastanelerin internet ve diğer dijital teknolojileri kullanma durumlarını, online sağlık hizmetleri sunma kapasitelerini ve küresel dijital sağlık trendleri ile uyumluluklarını ele alınmıştır. Bu analiz, Bulgaristan ve Türkiye'deki özel hastanelerin dijitalleşme konusunda gelişmekte olan ülkeler olmalarına rağmen önemli adımlar attıklarını ve hastaların sağlık hizmetlerine erişimini kolaylaştırmak için çalıştıklarını göstermektedir. Ancak, Bulgaristan'da internet altyapısının yetersiz olması, dijital sağlık hizmetlerinin yaygınlaşmasını engelleyebileceği düşünülmektedir.

Çalışma kapsamında incelenen özel hastanelerin dijital küresel erişim konusunda iyileşme sağlayabilmeleri için bazı öneriler geliştirilmiştir. Özel hastanelerin dijital erişim konusunda yatırım yapması ve daha fazla uygulama geliştirmesi gerekmektedir. Hastaların dijital erişim uygulamalarını daha fazla kullanmaları ve gelişen teknolojiyi takip etmeleri konusunda yatırımlarını güçlendirmeleri ülke ekonomisine de katkı sağlayacaktır. Hastaneler arasında dijital bilgi paylaşımı konusunda daha etkin bir işbirliği sağlanması ve uzak konumlu hastaların da sağlık hizmetlerinden yararlanmasını sağlayacak uygulamaların geliştirilmesi gerekli görülmektedir.

Renewable Energy and Sustainability in the EU

Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, rasimyilmaz@nku.edu.tr,
ORCID: 0000-0002-1084-8705

Abstract: The rise in greenhouse gas emissions, global climate change, fluctuations in energy prices, and concerns over energy security have driven the promotion and adoption of renewable energy worldwide. Renewable energy can offer numerous benefits, including reducing greenhouse gas emissions, securing energy supplies, diversifying energy sources, reducing dependency on fossil fuels, particularly oil and gas, and creating employment opportunities by generating jobs in the renewable energy and environmental sectors. Despite the upward trend in renewable energy consumption, its usage remains limited due to high costs and technological barriers in many countries. In contrast, fossil fuels continue to dominate energy production, accounting for over 81% in 2019, primarily due to their lower costs and ease of use. This analyzes the EU's history of directives on reducing greenhouse gas emissions and promoting renewable energy consumption, as well as reviewing policies related to reducing greenhouse gas emissions and promoting renewable energy consumption.

Keywords: Renewable Energy, Sustainability, Europe

1. INTRODUCTION

Renewable energy refers to energy produced from sources that are replenished naturally and can be used repeatedly without depletion. Renewable energy sources include wind power, solar power (thermal, photovoltaic and concentrated), hydro power, tidal power, geothermal energy, ambient heat captured by heat pumps, biofuels and the renewable part of waste (Eurostat, 2011).

The use of renewable energy has many potential benefits:

- a reduction in greenhouse gas emissions,
- the security of energy supplies,
- the diversification of energy supplies,
- a reduced dependency on fossil fuel markets (in particular, oil and gas),
- stimulation of employment through the creation of jobs in in environmental and renewable energy sectors (new green technologies) (Eurostat, 2021).

The rise in greenhouse gas emissions, global climate change, fluctuations in energy prices, and concerns over energy security have driven the promotion and adoption of renewable energy worldwide. Despite the upward trend in renewable energy consumption, its usage remains limited due to high costs and technological barriers in many countries. In contrast, fossil fuels continue to dominate energy production, accounting for over 81% in 2019, primarily due to their lower costs and ease of use (Nguyen and Kakinaka, 2019).

The significant increase in energy usage during the 19th century's industrialization and subsequent economic growth has resulted in environmental degradation. As a result, many countries, especially those in emerging and developing regions, have experienced a rise in greenhouse gas emissions in recent decades. Due to the negative impacts of climate change and environmental degradation on human life and economic activities, the international community has implemented coordinated actions and policies, leading to the creation of the Kyoto Protocol and the Paris Agreement.

On December 11, 1997, the United Nations Framework Convention on Climate Change (UNFCCC) was adopted in Kyoto, which is known as the Kyoto Protocol. The Kyoto Protocol came into force on February 16, 2005. The primary goal of the United Nations Framework Convention on Climate Change was to combat global warming and environmental degradation by establishing globally binding greenhouse gas (GHG) emission reduction targets and promoting clean development mechanisms. the European Community and 37 developed nations pledged to decrease their greenhouse gas (GHG) emissions to an average of five percent compared to 1990 levels during the first commitment period of 2008-2012. During the second commitment period, which took place between 2013 and 2020, the parties to the revised Kyoto Protocol pledged to lower their greenhouse gas (GHG) emissions to a minimum of 18% below 1990 levels (Omri and Nguyen, 2014).

The Paris Agreement is a legally binding international treaty that addresses climate change. It was adopted on December 12, 2015, by 196 Parties during the UN Climate Change Conference (COP21) in Paris, France. The agreement became effective on November 4, 2016. Under the Paris Agreement, each nation determines, outlines, and reports its own efforts to combat global warming. Governments have been urged or compelled to reassess their energy policies, including the makeup of their energy production and consumption and transitioning towards cleaner or renewable sources (Nguyen and Kakinaka, 2019).

The rest of this study analyzes the share of renewable energies in gross final energy consumption in the EU countries and the EU's history of directives on reducing greenhouse gas emissions and promoting renewable energy consumption, as well as reviewing policies related to reducing greenhouse gas emissions and promoting renewable energy consumption.

2. THE SHARE OF RENEWABLE ENERGIES IN GROSS FINAL ENERGY CONSUMPTION IN THE EU COUNTRIES

The share of renewable energies in gross final energy consumption in the EU reached 21.8% in 2021 whereby it more than doubled between 2004 and 2021. In the EU, the share of renewable energy in gross final energy consumption was 9.6% in 2004, increased to 14.4% in 2010, reached its pick level of 22.0% in 2020, and decreased to 21.8% in 2021 (see Figure 1). The decreased in the 2021 is attributed to the lifting of the restrictions linked to the COVID-19 pandemic (Eurostat, 2021)

Figure 1: The Share of Renewable Energies in Gross Final Energy Consumption in the EU

Share of energy from renewable sources, 2004-2021
 (% of gross final energy consumption)

Considerable differences exist in RE gross final energy consumption among the member countries. The share of renewable energies in gross final energy consumption varies among the EU countries. Among the EU Member countries, Sweden has the highest share with 62.6%, while Luxembourg has the lowest share with 11.7% in 2021. Sweden is followed by Finland with 43.1% and Latvia with 42.1%. Malta with 12.2% and Netherlands with 12.3% are also at the very end of the scale (See Figure 2).

Figure 2: The Share of Renewable Energies in Gross Final Energy Consumption in the EU Countries

3. THE EU'S HISTORY OF DIRECTIVES ON REDUCING GREENHOUSE GAS EMISSIONS AND PROMOTING RENEWABLE ENERGY CONSUMPTION

The European Commission proposed the first EU-wide energy strategy in 2007 and established the renowned 20/20/20 objective to be accomplished by 2020. This objective includes a 20% increase in energy efficiency, a 20% rise in the use of renewable energy sources in the energy mix, and a 20% reduction in greenhouse gas emissions compared to 1990 levels.

After meeting its three 2020 climate and energy objectives, the EU has now set a target of achieving a 55% net reduction in emissions by 2030, which considers carbon removals from forestry activities. The 2030 emissions reduction target lays the foundation for the EU to achieve climate neutrality by 2050, ultimately making it the first climate-neutral continent in the world (European Commission, 2020).

In pursuit of becoming the world's first climate-neutral continent by 2050, the European Commission presented the European Green Deal on 11 December 2019, which is the most comprehensive set of measures that aim to facilitate a sustainable green transition for citizens and businesses in Europe. The European Green Deal is a crucial component of the Commission's plan to achieve the United Nation's 2030 Agenda and sustainable development goals. Through the Green Deal, the Commission intends to reorient the European Semester process of macroeconomic coordination by incorporating the United Nations' sustainable development goals. The aim is to prioritize sustainability and the well-being of citizens in economic policy and to place the sustainable development goals at the core of the EU's policymaking and action (European Commission, 2020).

On 11 December 2018, the EU adopted Directive 2018/2001/EU to promote the use of energy from renewable sources, building on the 20% target for 2020. This new regulatory framework establishes a binding renewable energy target of 32% for the EU for 2030, with a revision clause that could increase it by 2023. On 14 July 2021, the Commission presented Europe's new 2030 climate targets, which includes a proposal to amend the Renewable Energy Directive, seeking to increase the current target to at least 40% renewable energy sources in the EU's overall energy mix by 2030 (European Commission, 2021).

The EU's renewable energy transition has been hastened by the Russian invasion of Ukraine. In response, the Commission released the REPowerEU plan on 18 May 2022, which aims to reduce the EU's reliance on Russian fossil fuels before 2030 by accelerating the transition to clean energy. The plan consists of three pillars: energy efficiency, clean energy production, and energy supply diversification. As part of the EU's efforts to increase renewable energy usage in various sectors such as power generation, industry, buildings, and transport, the Commission proposes to raise the target in the directive to 45% by 2030 (European Commission, 2022).

4. POLICIES AIMED AT REDUCING GREENHOUSE GAS EMISSIONS AND PROMOTING RENEWABLE ENERGY CONSUMPTION

The 2030 target of a 55 % reduction in net greenhouse gas emissions can be reached if additional efforts are made and new policies are adopted and implemented. In order to reach the ambitious target of a 55% reduction in net greenhouse gas emissions by 2030, new policies and additional efforts will be necessary. One potential approach is to implement a carbon pricing mechanism, such as a carbon tax or cap-and-trade system, which can incentivize companies and individuals to reduce their emissions by placing a financial cost on carbon pollution. According to a report by the International Monetary Fund, carbon pricing could help reduce global emissions by as much as 23% by 2030 (IMF, 2019). Other policy options include investing in renewable energy sources such as wind and solar power, increasing energy efficiency standards for buildings and appliances, and promoting the adoption of electric vehicles. A study by the European Environment Agency found that these measures could help the European Union achieve a 60% reduction in emissions by 2050 (EEA, 2019). In addition to these policies, it will also be important to prioritize international cooperation and encourage countries to work together to address the global challenge of climate change.

Likewise, multiple policies and measures have been suggested to encourage the adoption of renewable energy sources. The transition to renewable energy sources has become a global priority in recent years, and many countries have implemented support mechanisms to promote the use of renewables. A study by the International Renewable Energy Agency (IRENA) found that over 190 countries have implemented some form of policy to support renewable energy development, with the most common policies being feed-in tariffs, renewable portfolio standards, and tax incentives (IRENA, 2019). Another study by the National Renewable Energy Laboratory (NREL) in the United States found that policies such as net metering, production tax credits, and renewable energy mandates have been effective in increasing the deployment of renewable energy technologies (NREL, 2021). These support mechanisms have been critical in driving the growth of renewable energy capacity around the world and will likely continue to play a significant role in achieving a sustainable energy future.

Green certificates are another support mechanism that some countries have implemented to promote the use of renewable energy sources. Green certificates are tradeable instruments that represent proof that a certain quantity of renewable energy has been produced and fed into the grid. The certificates can be bought and sold on a market, allowing utilities and other entities to meet renewable energy targets or regulatory requirements. According to a report by the European Commission, green certificate schemes have been implemented in several European countries, including Belgium, Denmark, and Sweden (European Commission, 2021). However, the effectiveness of green certificates in promoting renewable energy development has been subject to debate, with some critics arguing that they can result in market distortions and do not necessarily guarantee increased renewable energy production (European Environment Agency, 2017). Despite this, green certificates remain a part of the policy toolkit for promoting renewable energy development in some countries.

Renewable Obligation Schemes (ROS) are another support mechanism that some countries have implemented to promote renewable energy sources. Under these schemes, energy suppliers are required to source a certain percentage of their electricity from renewable sources, or to buy Renewable Obligation Certificates (ROCs) from renewable energy generators as proof that they have met their obligations. The UK is one example of a country that has implemented an ROS, which has been successful in driving the deployment of renewable energy capacity in the country (Carbon Trust, 2021). Other countries that have implemented similar schemes include Australia, Ireland, and New Zealand (International Energy Agency, 2018). However, like other support mechanisms, the effectiveness of ROS in promoting renewable energy development has been subject to debate, with some critics arguing that the schemes can result in higher energy prices for consumers (UK Parliament, 2016). Despite this, ROS remain a part of the policy toolkit for promoting renewable energy development in some countries.

Feed-in-Tariffs (FIT) are another support mechanism that some countries have implemented to promote the use of renewable energy sources. Under FIT schemes, energy producers are paid a premium rate for the renewable energy they produce and feed into the grid. The payments are typically guaranteed over a set period of time and are designed to provide an incentive for investment in renewable energy infrastructure. Germany is one example of a country that has successfully implemented a FIT scheme, which has led to significant growth in renewable energy deployment in the country (International Energy Agency, 2019). Other countries that have implemented similar schemes include Japan, Spain, and Italy (World Bank, 2020). However, like other support mechanisms, the effectiveness of FIT schemes in promoting renewable energy development

has been subject to debate, with some critics arguing that they can result in higher energy costs for consumers (Energy Community, 2020). Despite this, FIT schemes remain a part of the policy toolkit for promoting renewable energy development in some countries.

5. CONCLUSION

This study analyzes the share of renewable energies in gross final energy consumption in the EU countries and the EU's history of directives on reducing greenhouse gas emissions and promoting renewable energy consumption, as well as reviewing policies related to reducing greenhouse gas emissions and promoting renewable energy consumption.

The 2030 target of a 55 % reduction in net greenhouse gas emissions can be reached if additional efforts are made and new policies are adopted and implemented. In order to reach the ambitious target of a 55% reduction in net greenhouse gas emissions by 2030, new policies and additional efforts will be necessary: a carbon pricing mechanism, such as a carbon tax or cap-and-trade system; investing in renewable energy sources such as wind and solar power, increasing energy efficiency standards for buildings and appliances, and promoting the adoption of electric vehicles.

Similarly, to promote the use of renewable energy sources, many policies and measures are proposed: feed-in tariffs, renewable portfolio standards, tax incentives, net metering, production tax credits, renewable energy mandates, Renewable Obligation Schemes (ROS), and green certificates.

A Paradigm Shift from a Linear Economy to the Circular Economy in the EU

Rasim YILMAZ¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, rasimyilmaz@nku.edu.tr, ORCID: 0000-0002-1084-8705

Abstract: The circular economy represents a paradigm shift in the conventional linear economic model. It involves a shift from the traditional linear model of “take-make-dispose” to the circular model of “reduce-reuse-recycle”. The circular economy is gaining momentum worldwide as a solution to the challenges of resource depletion and environmental degradation. Especially, the European Parliament has urged for action to address this practice. The focus of this article is to assess the progress made by the EU in transitioning towards a circular economy, while also examining the challenges and obstacles that hinder this transition.

Keywords: Circular Economy, Sustainable Development, Europe

1. INTRODUCTION

According to the definition of European Parliament (2023), the circular economy is a model of production and consumption. It involves sharing, leasing, reusing, repairing, refurbishing and recycling existing materials and products as long as possible (See Figure 1). In this way, the life cycle of products is extended. In practical terms, implementing a circular economy means minimizing waste by ensuring that when a product reaches the end of its useful life, its materials are reused and recycled within the economy as much as possible. This process generates additional value as these materials can be repeatedly utilized in productive ways.

Figure 1: Circular Economy

Source: <https://www.certificationeurope.com/insights/what-is-the-circular-economy-and-what-does-it-mean-for-businesses/>

The circular economy represents a departure from the conventional linear economic model. The traditional linear economic model follows a take-make-consume-throw away approach and has been in place for many decades. The linear model depends on abundant quantities of cheap, readily available materials and energy, and it incorporates planned obsolescence, whereby products are designed to have a limited lifespan to encourage repeat purchases. The linear model is premised on the concept of unlimited resource extraction, cheap production, and consumption without regard for the environment. This model has led to environmental degradation, resource depletion, and pollution of the air, water, and soil (European Parliament, 2023).

The circular economy represents a radical departure from the traditional linear economic model, which has been in place for many decades. On the other hand, the circular economy model aims to promote a sustainable future by prioritizing the efficient use of resources, reducing waste, and minimizing pollution. Thus, the circular

economy represents a paradigm shift in the conventional linear economic model. It involves a shift from the traditional linear model of “take-make-dispose” to the circular model of “reduce-reuse-recycle”.

World Economic Forum (2023) suggests that circular business models will outperform traditional linear models in eight important areas:

1. More attractive products
2. Greater customer intimacy
3. Lower costs
4. Recurrent income sources
5. Greater resilience
6. Greater product and component utility
7. Reduced production times
8. Climate and environmentally friendly (See Figure 2)

Figure 2: Eight Ways in Which the Circular Economy Outperforms Linear Business Models

Source: <https://www.weforum.org/agenda/2023/03/8-ways-the-circular-economy-outperforms-traditional-business-models/>

The circular economy is gaining popularity among businesses, policymakers, and environmentalists globally due to its potential benefits. These include reduced costs, increased competitiveness, new business opportunities, stimulation of creativity and innovation as well as environmental benefits such as reduced carbon emissions, lower resource depletion, and reduced waste (Geissdoerfer et al., 2017; Ghisellini et al., 2016). A report by the Ellen MacArthur Foundation (2019) estimates that the adoption of circular economy principles could bring annual benefits of up to \$4.5 trillion by 2030. The European Environment Agency (2016) found that a circular economy could reduce greenhouse gas emissions by up to 70% compared to the current linear economy. The circular economy can also contribute to job creation and economic growth, as highlighted by a report by the European Commission (2020a) that estimates the creation of 700,000 new jobs in the EU by 2030 through the circular economy.

The circular economy approach seeks to decouple economic growth from resource use, thereby creating a resilient and sustainable economy. Moreover, it requires the involvement of all stakeholders, including businesses, governments, and individuals, in a collaborative effort to implement sustainable practices across the value chain. As such, the circular economy represents a paradigm shift in how we think about production, consumption, and waste management, emphasizing the need for sustainable solutions to the environmental and social challenges of our time (Geissdoerfer et al., 2017; Ghisellini et al., 2016).

2. THE CIRCULAR ECONOMY AND UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS

The circular economy is closely linked to several United Nations Sustainable Development Goals (SDGs). The SDGs are a set of 17 global goals adopted by the United Nations General Assembly in 2015 as a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity by 2030. The circular economy contributes to several of these goals, including SDG 7 (Affordable and Clean Energy), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action).

One of the key SDGs linked to the circular economy is SDG 12. SDG Target 12 is part of the Sustainable Development Goals (SDGs) established by the United Nations to promote sustainable development worldwide. SDG Target 12 focuses on sustainable consumption and production patterns, which aims to promote the efficient use of resources and reduce waste and pollution (United Nations, 2023). The circular economy is viewed as a means to achieve this goal by ensuring the efficient use of resources, reducing waste, and promoting recycling and reuse (European Commission, 2020a).

In addition, the circular economy can contribute to SDG 7 by promoting the use of renewable energy sources and reducing dependence on fossil fuels, thereby helping to mitigate climate change (Ghisellini et al., 2016). Furthermore, the circular economy can also support SDG 13, which calls for urgent action to combat climate change and its impacts. A study by the European Environment Agency (2016) highlights the role of the circular economy in reducing greenhouse gas emissions and improving resource efficiency. By closing resource loops, reducing waste, and promoting recycling, the circular economy can contribute to a more sustainable and low-carbon economy.

Overall, the circular economy is closely linked to the SDGs, and the implementation of circular economy principles can help to achieve several of these goals. As noted by the European Commission (2020b), the circular economy represents a significant opportunity to drive sustainable growth and create jobs while addressing some of the world's most pressing environmental and social challenges.

3. THE CIRCULAR ECONOMY IN THE EU

The circular economy is gaining momentum worldwide as a solution to the challenges of resource depletion and environmental degradation. Especially, the European Parliament has urged for action to address this practice.

The European Union (EU) has taken a leading role in promoting the circular economy through a range of legislative measures. To support the transition to a circular economy, policymakers have developed a range of initiatives and policies. These legislative measures include the Circular Economy Package, which was adopted in 2018, and the European Green Deal, which was launched in 2019.

The Circular Economy Package includes a set of legislative proposals aimed at reducing waste, promoting resource efficiency, and creating a more circular economy. The Circular Economy Package includes a set of legislative proposals aimed at reducing waste, promoting resource efficiency, and creating a more circular economy. The package includes a revised Waste Framework Directive, which sets targets for recycling and landfilling, and introduces measures to encourage the separate collection of waste and the use of recycled materials. The package also includes measures to promote eco-design, extended producer responsibility, and the development of markets for secondary raw materials (European Commission, 2018).

In addition, the European Green Deal aims to transform the EU economy into a sustainable and resource-efficient one, with the circular economy as a key component. The Green Deal includes a range of legislative and non-legislative measures to promote the circular economy, including a Sustainable Products Initiative, a new EU Strategy for Sustainable Textiles, and a proposal for a Carbon Border Adjustment Mechanism (European Commission, 2019).

The European Union (EU) has set ambitious targets to promote the circular economy and accelerate the transition towards a more sustainable and resource-efficient economy. These targets are outlined in the Circular Economy Action Plan, which was adopted in 2020. The European Commission's Circular Economy Action Plan (2020) outlines measures to promote the circular economy, including promoting sustainable product design, supporting sustainable business models, and increasing resource efficiency.

One of the main targets of the Circular Economy Action Plan is to increase the EU's overall resource efficiency by at least 30% by 2030, compared to 2014 levels. This includes a target to increase the EU's material use

efficiency by at least 30% by 2030, as well as a target to reduce food waste by 50% by 2030 (European Commission, 2020b).

In addition, the Circular Economy Action Plan includes targets to increase the EU's recycling rate for municipal waste to 65% by 2035, and to phase out landfilling of recyclable and biodegradable waste by 2035. The plan also aims to promote the use of recycled materials in key sectors such as construction, textiles, and electronics (European Commission, 2020b).

4. BARRIERS TO THE CIRCULAR ECONOMY

Despite the growing interest and support for the circular economy, there are still several obstacles that need to be overcome in order to accelerate the transition towards a more sustainable and resource-efficient economy. These obstacles are the following:

Lack of awareness and understanding: One of the main obstacles to the circular economy is the lack of awareness and understanding among consumers, businesses, and policymakers. Many stakeholders are still not familiar with the concept of the circular economy or the potential benefits it can bring (Ellen MacArthur Foundation, 2019).

Policy and regulatory barriers: The current policy and regulatory frameworks in many countries are not conducive to the circular economy. Some regulations, such as product standards and waste management rules, can be too rigid and inflexible, which can hinder the development of new business models and innovation (European Environmental Bureau, 2019).

Limited access to finance: Another major obstacle to the circular economy is the limited availability of finance for circular business models and projects. Many investors and financial institutions are still not familiar with the circular economy and may view circular projects as too risky or uncertain (World Economic Forum, 2020).

Lack of infrastructure and capacity: The circular economy requires new infrastructure and capacity, such as recycling facilities, reverse logistics networks, and new skills and expertise. However, the development of such infrastructure and capacity can be slow and costly, especially in developing countries (United Nations, 2018).

Addressing these obstacles will require a concerted effort from all stakeholders, including policymakers, businesses, investors, and civil society organizations. However, the potential benefits of the circular economy, such as reduced resource use, increased economic competitiveness, and improved environmental outcomes, make it a worthwhile endeavor.

5. CONCLUSION

The circular economy represents a paradigm shift in the conventional linear economic model. It involves a shift from the traditional linear model of “take-make-dispose” to the circular model of “reduce-reuse-recycle”. The circular economy is gaining momentum worldwide as a solution to the challenges of resource depletion and environmental degradation. Especially, the European Parliament has urged for action to address this practice.

The circular economy is gaining popularity among businesses, policymakers, and environmentalists globally due to its potential benefits. These include reduced costs, increased competitiveness, new business opportunities, stimulation of creativity and innovation as well as environmental benefits such as reduced carbon emissions, lower resource depletion, and reduced waste.

Despite the growing interest and support for the circular economy, there are still several obstacles that need to be overcome in order to accelerate the transition towards a more sustainable and resource-efficient economy. Lack of awareness and understanding, policy and regulatory barriers, limited access to finance, lack of infrastructure and capacity are counted as the barriers to the transformation to the circular economy.

Addressing these obstacles will require a concerted effort from all stakeholders, including policymakers, businesses, investors, and civil society organizations. However, the potential benefits of the circular economy, such as reduced resource use, increased economic competitiveness, and improved environmental outcomes, make it a worthwhile endeavor.

What is the Definition of Green Growth?

Rasim Yilmaz¹

¹ Tekirdağ Namık Kemal University, Faculty of Economics and Administrative Sciences, rasimyilmaz@nku.edu.tr, ORCID: 0000-0002-1084-8705

Abstract: The concept of green growth emerged after the effects of industrialization and economic growth on the environment became apparent following the industrial revolution. Green growth refers to an approach towards economic growth that aims to be environmentally sustainable. The assumption underlying the concept of green growth is that economic growth and development can be sustained while simultaneously mitigating the negative impacts on the environment. The aim of this study is to scrutinize the definition of green growth. It is crucial to establish a clear definition of green growth because it can help in the analysis of policies. Our analysis reveals that three major international institutions - the OECD, the United Nations Environment Program (UNEP), and the World Bank - are key proponents of the green growth theory. However, each of these organizations has a different definition of green growth and has developed its own strategies and initiatives on the topic.

Keywords: Green Growth, Green Economy, Sustainable Economic Development

1. INTRODUCTION

The concept of green growth emerged after the effects of industrialization and economic growth on the environment became apparent following the industrial revolution. Green growth refers to an approach towards economic growth that aims to be environmentally sustainable. The assumption underlying the concept of green growth is that economic growth and development can be sustained while simultaneously mitigating the negative impacts on the environment (see Figure 1).

Figure 1: Green Growth Framework

Source: <https://www.oecd.org/greengrowth/green-growth-indicators/>

The term "green growth" has its roots in the Asia Pacific Region and was first introduced at the Fifth Ministerial Conference on Environment and Development (MCED) in Seoul, South Korea in 2005. It was at this conference

that the Seoul Initiative Network on Green Growth was established. In the aftermath of the financial crisis of 2007-2008, several international organizations began to focus on green growth as a potential solution. The specific term "green growth" gained prominence around 2010-2011 as policymakers and international organizations sought to promote economic growth while also addressing environmental concerns. The OECD report "Towards Green Growth" (2011) is often cited as a key milestone in the development of the concept, while the World Bank's report "Inclusive Green Growth" (2010) helped to popularize the term. The United Nations also embraced the concept of green growth leading up to the Rio+20 conference in 2012 (United Nations, 2011).

Three major international institutions - the OECD, the United Nations Environment Program (UNEP), and the World Bank - are key proponents of the green growth theory. Around the time of the Rio+ 20 Conference in June 2012, each of these organizations released flagship reports on green growth. In 2011, the OECD launched its green growth strategy, entitled "Towards Green Growth," while UNEP published a report titled "Toward a Green Economy: Pathways to Sustainable Development and Poverty Eradication" (UNEP, 2011). The World Bank also published a report on green growth in 2012, titled "Inclusive Green Growth: The Pathway to Sustainable Development" (World Bank, 2012). At the Rio+ 20 Conference, these institutions collaborated with the Global Green Growth Institute to establish the Green Growth Knowledge Platform, a tool for advancing green growth initiatives globally.

2. THE DEFINITION OF GREEN GROWTH

Each of these organizations has a different definition of green growth and has developed its own strategies and initiatives on the topic.

OECD (Organisation for Economic Co-operation and Development):

"Green growth means fostering economic growth and development while ensuring that natural assets continue to provide the resources and environmental services on which our well-being relies." (OECD, 2011, p. 7-11)

World Bank

"Green growth is a development path that encourages sustainable economic growth and simultaneously reduces negative environmental impacts and preserves natural capital." (World Bank, 2012, p. ix)

The United Nations Environment Programme (UNEP)

The United Nations Environment Programme (UNEP) defines a "green economy" as one that results in "improved human well-being and social equity, while significantly reducing environmental risks and ecological scarcities"(UNEP, 2011, p. 16).

Although the definitions of green growth provided by OECD, World Bank, and UNEP are quite similar, there are some differences in the emphasis they place on certain aspects of the concept.

The OECD's definition of green growth highlights the need to balance economic development with environmental sustainability. In particular, the definition emphasizes the importance of natural assets in supporting human well-being. The OECD also stresses the need for policies that can promote green growth in a cost-effective manner. The World Bank's definition of green growth places a greater emphasis on the idea that economic growth and environmental sustainability can be mutually reinforcing. The definition highlights the potential for green growth to reduce negative environmental impacts while preserving natural capital. The World Bank also emphasizes the importance of inclusive growth that benefits all segments of society. UNEP's definition of green growth is similar to that of the OECD, but places a greater emphasis on the need to eradicate poverty and achieve sustainable development. The definition highlights the potential of green growth to create new opportunities for employment and economic development, particularly in developing countries. UNEP also stresses the importance of transformative change that can shift societies towards more sustainable economic models.

The definitions of the three institutions differ in terms of their prerequisites for the impact of growth on the environment. The World Bank aims to "minimize" the environmental impact of growth without reducing impact from its present levels. The OECD has a slightly stronger stance as it aims to "maintain" resources and environmental services. However, it does not necessarily require a reduction in impact. The UNEP report provides the strongest definition as it emphasizes the need to reduce environmental impact and ecological scarcities, while also calling for the "rebuilding" of natural capital (Hickel and Kallis, 2020).

The views of the World Bank and OECD can be categorized as "weak green growth," while the UNEP view can be seen as "strong green growth," using an analogy with the differentiation between weak and strong sustainability. According to the weak view, there are often trade-offs between income growth and environmental preservation, but these trade-offs can be mitigated through appropriate policies while capitalizing on win-win opportunities that may exist. This perspective is widely recognized in the field of neoclassical environmental economics (Smulders et al., 2014).

On the other hand, the strong green growth perspective takes a more comprehensive approach and argues that economic growth can only be truly sustainable if it reduces environmental harm and ecological scarcities, and rebuilds natural capital. This approach recognizes that the global ecosystem is a finite system with limits to growth, and therefore, the economic growth cannot continue indefinitely if it undermines the health and resilience of the natural systems on which it depends. The strong green growth perspective challenges the assumption that economic growth can continue indefinitely without regard for environmental constraints, and instead offers a more nuanced and holistic vision of sustainable development that takes into account the interdependence between the economy and the environment (Dasgupta and Mäler, 2003).

The three institutions share a common vision on the means of attaining green growth. They believe that technological advancements and substitution can enhance the ecological efficiency of the economy, and that governments can accelerate this process through appropriate regulations and incentives. However, there are differences in the level of clarity in their claims. The World Bank does not address whether policy-driven innovations alone will be adequate to reduce environmental impact. The OECD, on the other hand, explicitly states that green growth can only be achieved if technology becomes efficient enough to enable "decoupling" of economic growth from environmental impact. UNEP takes this a step further and places "decoupling" at the core of their analysis. Thus, UNEP provides the most explicit and robust definition of green growth in terms of policy, stating that green growth necessitates achieving absolute decoupling between GDP and resource consumption and environmental effects, as such a mere "minimization" of environmental impact is insufficient; instead, it is imperative to expeditiously decrease it to safe levels (Hickel and Kallis, 2020).

3. ADVANTAGES AND DISADVANTAGES OF GREEN GROWTH

Green growth has numerous potential advantages, both in terms of economic development and environmental sustainability.

Job creation: Green growth can lead to the creation of new jobs in sectors such as renewable energy, sustainable agriculture, and eco-tourism (OECD, 2011). For example, a study by the International Labour Organization found that investments in renewable energy could create up to 24 million new jobs globally by 2030 (ILO, 2012).

Reduced environmental impacts: Green growth can help to reduce negative environmental impacts by promoting sustainable resource use and reducing pollution (World Bank, 2012). For example, a study by the Global Commission on the Economy and Climate found that transitioning to a low-carbon economy could reduce greenhouse gas emissions by up to 50% by 2030 (GCEC, 2014).

Improved resilience to climate change: Green growth can also help countries to adapt to the impacts of climate change by promoting the use of climate-resilient technologies and infrastructure (UNEP, 2016). For example, a study by the World Bank found that investing in climate-resilient infrastructure could generate up to \$4.2 trillion in benefits globally over the next 15 years (World Bank, 2016).

While green growth offers many potential benefits, there are also some disadvantages to consider.

High costs: One of the biggest challenges to achieving green growth is the high cost of implementing new technologies and infrastructure (Dasgupta et al., 2013). For example, renewable energy sources such as solar and wind power often require significant upfront investment, which can be difficult for developing countries to afford (World Bank, 2012).

Inequality: Green growth may also exacerbate existing social and economic inequalities (UNEP, 2011). For example, the transition to a green economy may lead to job losses in industries such as fossil fuels, which could disproportionately affect workers in certain regions or communities (OECD, 2011).

Resource constraints: Finally, there may be limits to the availability of natural resources required for green growth (World Bank, 2012). For example, the production of biofuels may compete with food production, leading to higher food prices and food insecurity (OECD, 2011).

4. OBSTACLES TO ACHIEVING GREEN GROWTH

The concept of green growth has been widely debated in recent years, with some arguing that it represents a viable pathway to sustainable development (OECD, 2017), while others have questioned its feasibility (Dasgupta et al., 2013). While there are certainly challenges to achieving green growth, many experts argue that it is both possible and necessary. By promoting investment in renewable energy, sustainable agriculture, and other green sectors, countries can create new economic opportunities while also reducing their environmental footprint (UNEP, 2011).

One key challenge to achieving green growth is the need to balance economic development with environmental sustainability (OECD, 2017). This requires policymakers to consider a wide range of factors, including energy use, resource efficiency, and social equity. Additionally, green growth may require significant investment in new infrastructure and technologies, which can be costly and difficult to implement (Dasgupta et al., 2013).

There are also a number of other obstacles to achieving green growth.

Lack of political will: One major obstacle is the lack of political will to implement policies that promote green growth (OECD, 2011). Some policymakers may be hesitant to invest in new technologies or infrastructure due to concerns about cost or potential resistance from stakeholders (World Bank, 2012).

Institutional barriers: Another obstacle to green growth is the presence of institutional barriers that limit the ability of policymakers to implement effective policies (Dasgupta et al., 2013). These may include regulatory barriers, lack of coordination between government agencies, or inadequate capacity to enforce regulations (UNEP, 2011).

Limited access to finance: Finally, limited access to finance can also be a significant obstacle to achieving green growth (World Bank, 2012). This can be particularly challenging for developing countries, where financing for new technologies and infrastructure may be difficult to obtain (OECD, 2011).

5. CONCLUSION

The concept of green growth emerged after the effects of industrialization and economic growth on the environment became apparent following the industrial revolution. Green growth refers to an approach towards economic growth that aims to be environmentally sustainable. The assumption underlying the concept of green growth is that economic growth and development can be sustained while simultaneously mitigating the negative impacts on the environment. Our analysis reveals that three major international institutions - the OECD, the United Nations Environment Program (UNEP), and the World Bank - are key proponents of the green growth theory. However, each of these organizations has a different definition of green growth and has developed its own strategies and initiatives on the topic.

Lack of political will, institutional barriers, limited access to finance are obstacles to achieving green growth. Nevertheless, the benefits of green growth – including job creation, reduced pollution, and greater resilience to climate change – make it a worthwhile goal.

Is the Failure of Silicon Valley Bank Different from Previous Bank Failures?

Rasim YILMAZ¹

ORCID: 0000-0002-1084-8705

Abstract: Silicon Valley Bank was closed by regulatory authorities in the USA on March 10, 2023, following a bank run on the bank's deposits on March 9, 2023. This article investigates the case of Silicon Valley Bank's failure in the USA by comparing it with previous failures. Specifically, this study seeks to answer what the differences are between this failure and previous failures. The failure of SVB can be attributed to a combination of factors, including the impact of the Federal Reserve's interest-rate hikes, maturity mismatch, concentration of lending, lack of diversification, inadequate risk management strategies, and insufficient regulatory monitoring. Collectively, these factors contributed to the ultimate failure of SVB. While there are similarities and differences between SVB's failure and previous bank failures in the USA, a notable difference is that SVB's investment in what is considered one of the most secure investment tools, USA T-bills, did not protect the bank from failure. This case highlights the importance of diversification, robust risk management strategies, and effective supervision in the banking industry.

Keywords: Bank Runs, Bank Failure, Fed's Interest Rate Policy

1. INTRODUCTION

A bank run is a phenomenon in which a large number of depositors suddenly withdraw their funds from a bank due to concerns about its solvency or stability, thereby creating a liquidity crisis and potentially leading to the bank's failure.

The Diamond-Dybvig model is a theoretical framework that helps explain the causes, consequences, and dynamics of bank runs. According to Diamond and Dybvig (1983), a bank run occurs when depositors, who have the option to either withdraw their funds immediately or leave them in the bank for a longer period, are uncertain about the true state of the bank's financial health. If a large number of depositors simultaneously decide to withdraw their funds, it can trigger a self-fulfilling prophecy where other depositors also become anxious and start withdrawing their funds, leading to a chain reaction of withdrawals and ultimately causing the bank to fail.

This can lead to banks taking on excessive risks and depositors not observing the health of the banks they deposit, which in turn can lead to the failure of the banks. Thus, the model suggests partial insurance on the deposits.

The Diamond-Dybvig model proposes that banks can avoid runs by offering depositors a form of insurance against liquidity risk, such as deposit insurance or the ability to withdraw funds on demand. However, full insurance on deposits can create moral hazard and adverse selection problems where depositors and banks take on more risk than they otherwise would, knowing that they are protected by insurance (Calomiris and Gorton, 1991). This can lead to banks taking on excessive risks and depositors not observing the health of the banks they deposit, which in turn can lead to the failure of the banks. Thus, the model suggests partial insurance on the deposits.

This study investigates the reasons and results of a bank run on Silicon Valley Bank, which is the 16th largest bank in the United States, on March 9, 2023.

2. THE CHRONOLOGY OF SILICON VALLEY BANK FAILURE

Silicon Valley Bank was closed by regulatory authorities in the USA on March 10, 2023, upon a bank run on the bank's deposits on March 9, 2023. The Federal Deposit Insurance Corporation (FDIC) of the USA announced that it took control of the deposits of the bank. This failure is recorded as the second-biggest bank failure in the USA in history, and since the global financial crisis in 2001 (See Table 1).

Table 1: Biggest Bank Failures Since 2001 in the USA

	Assets (billion USD)	Deposits (billion USD)
Washington Mutual	307	188
Silicon Valley Bank	212	173
Indymac	32	19
Colonial Bank	25	20
Guaranty Bank	13	12

Source: Pound (2023).

The failure of Silicon Valley Bank was unexpected, considering that it had been recognized by Forbes as one of America's Best Banks in 2022. Additionally, the bank had a favorable rating of A from Moody's, indicating a low credit risk.

Silicon Valley Bank (SVB), with its impressive asset size of USD 212 billion, held the distinction of being the 16th largest bank in the United States. The bank experienced substantial growth during and after the pandemic, with its deposits tripling between 2018 and 2021. This remarkable expansion catapulted SVB from being the 34th largest bank to the 16th largest in the USA (Pound, 2023). The bank's remarkable growth can be attributed to the low interest rate policy implemented by the Federal Reserve (Fed) during the pandemic. The Fed's decision to maintain low interest rates on government bonds prompted investors to deposit their funds in banks, including SVB.

A closer examination of the bank's depositors reveals that a staggering 99% of them hail from the corporate sector, with a majority being large depositors. Interestingly, only 7% of these corporate depositors had deposits below USD 250K and were eligible for deposit insurance. Among these depositors, the majority are venture capital firms, with over 2,500 such firms having deposits in the bank (Pattabhi and Ramarpitha, 2023). The decision of these venture capital firms to deposit their funds in SVB can be attributed to the low interest rate policy of the Federal Reserve during the pandemic, which resulted in increased liquidity in the market. As a result, these firms sought to achieve higher returns on their funds by depositing them in banks, as opposed to investing in government bonds.

A closer examination of the bank's liabilities reveals that they primarily consist of credits extended to start-ups and venture-backed firms, along with long-dated government bonds and mortgage-backed securities. The main focus of the bank was to provide financing to startups and venture-backed firms, reflecting its strategic direction and business model. In fact, a significant portion of the venture-backed technology and health care initial public offerings (IPOs) in 2022, accounting for 44%, were clients of Silicon Valley Bank, underscoring its importance in supporting the growth of such firms (Gobler and Velasquez, 2023).

However, the outbreak of the pandemic posed challenges for start-ups and venture-backed firms, which in turn affected Silicon Valley Bank's investment opportunities. Despite having a significant amount of deposits, the bank encountered difficulties in finding suitable investment avenues, leading to its decision to invest in long-dated government bonds and mortgage-backed securities. Although these assets tend to offer relatively low returns, they also come with relatively low risk. Prior to its failure, the bank had invested a total of 120 billion USD in long-dated government bonds and mortgage-backed securities, with 91 billion USD allocated to mortgage-backed securities (MBS) and 29 billion USD in treasury bonds (Pattabhi and Ramarpitha, 2023).

As the Federal Reserve began to raise interest rates in response to high inflation, Silicon Valley Bank encountered difficulties. Some of the bank's large depositors started withdrawing their deposits due to their own financial troubles, while others sought better yields elsewhere.

The bank's efforts to sell its bonds to repay depositors' money proved challenging, as the value of the bonds declined due to the Federal Reserve's interest rate increases. Initially, the bank sold 20 billion USD of securities to Goldman Sachs in an over-the-counter (OTC) sale, resulting in a loss of 2 billion USD (Pattabhi and Ramarpitha, 2023). As depositors demanded more funds, additional mandatory asset sales followed. On March 8, 2023, Silicon Valley Bank announced a loss of 1.8 billion USD on its bond portfolio, along with plans to sell common and preferred stock to raise 2.25 billion USD. Moody's subsequently downgraded the bank's long-term local currency bank deposit and issuer ratings, which was perceived as a warning sign by investors. On March 9, 2023, the stock for Silicon Valley Bank's holding company, SVB Financial Group, plummeted at the market opening, and other major banks also experienced stock price declines. As most of the depositors were

not covered by federal insurance, they initiated a run on the bank, resulting in withdrawals totaling 42 billion USD on March 9, 2023, ultimately leading to the bank's failure (Gobler and Velasquez, 2023).

3. THEORETICAL REASONS OF SILICON VALLEY BANK'S FAILURE

1) Rising Interest Rates

Bank failures in the United States have historically been correlated with interest-rate hikes by the Federal Reserve. In the 1980s, the Federal Reserve's decision to raise interest rates led to a wave of bank failures, particularly among savings and loans (S&Ls) institutions.

During the late 1970s and early 1980s, both inflation rates and interest rates experienced significant increases. Savings and loans (S&Ls) institutions were particularly vulnerable to these changes due to their heavy reliance on mortgages for lending and short-term deposits for funding. The impact of rising interest rates on S&Ls was twofold. Firstly, the interest rates they could offer on deposits were set by the government and were lower compared to other alternatives, leading to deposit withdrawals. Secondly, S&Ls primarily issued long-term fixed-rate mortgages, which lost value as interest rates increased, eroding the net worth of the S&L industry. As inflation accelerated and interest rates rose rapidly, many S&Ls suffered extensive losses. The cost of attracting deposits increased, while the earnings from long-term fixed-rate mortgages remained unchanged (Robinson, 2013).

There are similarities between the failures of S&Ls in the 1980s and the failure of Silicon Valley Bank, including a reliance on short-maturity deposits for funding, concentration of lending in long-term fixed-rate mortgages, and a lack of hedging against maturity-mismatch risk.

2) Maturity Mismatch

Maturity mismatch is a term used to describe the situation when a bank's liabilities (such as deposits) have a shorter maturity than its assets (such as loans), creating a risk that the bank may not be able to meet its obligations if depositors suddenly withdraw their funds. Banks that engage in maturity transformation (i.e. borrowing short-term funds and lending long-term) are vulnerable to runs and other forms of financial distress. If depositors lose confidence in a bank and begin to withdraw their funds, the bank may not be able to quickly sell its long-term assets to meet the short-term demand for funds, leading to a liquidity crisis and potentially causing the bank to fail (Berger and Udell, 2006).

There is evidence to suggest that maturity mismatch played a role in the failure of Silicon Valley Bank. The bank's high exposure to long-term fixed-rate securities and reliance on large depositors with short maturities led to a significant maturity mismatch, ultimately leading to its failure.

3) Concentration of Lending and Lack of Diversification

Silicon Valley Bank (SVB) was a financial institution that focused on providing banking services to technology and innovation companies. One of the key factors contributing to SVB's failure was its heavy reliance on the technology industry. As a specialized bank catering to technology and innovation companies, SVB's fate was closely intertwined with the success of its clients. SVB engaged in aggressive lending practices, offering loans to high-risk technology startups that other banks deemed too risky. This resulted in a portfolio of high-risk loans for SVB, which ultimately played a role in its downfall.

The rise in interest rates increases the cost of borrowing, posing challenges for businesses in repaying their loans. This impact was particularly significant for SVB, as it had a portfolio of loans to high-risk technology startups that were already grappling with repayment difficulties. The Federal Reserve's interest-rate hikes further compounded SVB's problems by making it harder for the bank's borrowers to meet their loan obligations, exacerbating the bank's challenges.

4) Inadequate Risk Management Strategies

Insufficient risk management strategies were also a contributing factor to SVB's failure. The bank's inadequate risk assessment practices and lack of effective risk management measures played a role in its downfall. SVB failed to adequately evaluate the risk associated with its loan portfolio and long-term security investments and neglected to implement appropriate risk mitigation measures. Additionally, the bank did not effectively hedge against the risks inherent in its portfolio. A more diversified asset portfolio and proper risk hedging could have potentially mitigated the risks faced by SVB.

5) Lack of Enough Regulatory Monitoring

The Dodd-Frank Act, a major banking regulation enacted in response to the 2008 financial crisis, originally mandated that banks with assets exceeding 50 billion USD would be subject to additional oversight and regulations. However, the 2018 Economic Growth, Regulatory Relief, and Consumer Protection Act changed this requirement significantly, raising the threshold to 250 billion USD. Despite being the 16th largest bank in the country, Silicon Valley Bank did not have sufficient assets to meet the revised threshold and be subject to the additional rules and oversight. If the threshold had not been changed, SVB would have been subject to closer regulatory scrutiny (Gobler and Velasquez, 2023).

4. THE RESPONSE OF AUTHORITIES TO THE FAILURE OF SVB

The FDIC provides insurance for bank deposits of up to USD 250,000 per depositor per bank for each account category. This means that if someone had USD 250,000 or less in a Silicon Valley Bank account, s/he would be fully insured and receive all of his/her money back in case of a bank failure. However, many accounts in Silicon Valley Bank held deposits exceeding USD 250,000, which means that most of the funds were not fully insured. In such cases, account holders would risk losing any amount above the insurance threshold.

Initially, the authorities announced that account holders would lose any money above the deposit insurance threshold. However, this announcement caused panic among depositors, leading to a run on regional banks, which ultimately resulted in the failure of Signature Bank and Silvergate Capital.

After the failure of three banks, on March 12, the Federal Reserve announced its decision to invoke a systemic risk exception, which meant that all depositors, including those with uninsured funds, would be fully compensated. Federal regulators took the decision to provide full insurance and protection to all depositors and their balances at Silicon Valley Bank due to the fear of contagion, which refers to the potential impact of the bank's collapse on the overall economy. The repercussions of the bank's failure were not limited to Silicon Valley Bank alone, as other banks also experienced a decline in their stock prices. The high-profile failure of Silicon Valley Bank could have undermined consumer confidence in the banking system, exacerbating the issue of depositors rushing to withdraw funds from banks that may not have sufficient funds to cover them. This risk of contagion could have far-reaching effects on not just banks, but also the broader economy as a whole.

Besides, following the collapse of Silicon Valley Bank, the government introduced the Bank Term Funding Program (BTFP) as authorized by the Federal Reserve. This program provides loans to banks, credit unions, and other deposit institutions to help them meet their depositors' needs for up to one year. The BTFP aims to prevent financial institutions from being forced to sell high-quality securities quickly in order to obtain cash when needed. The program became effective on March 12, 2023, and is currently scheduled to remain in effect until at least March 11, 2024 (Gobler and Velasquez, 2023).

5. CONCLUSION

Silicon Valley Bank was closed by regulatory authorities in the USA on March 10, 2023, following a bank run on the bank's deposits on March 9, 2023. The failure of SVB cannot be attributed to one single factor, but rather a combination of factors. The failure of SVB can be attributed to a combination of the following factors: the Federal Reserve's interest-rate hikes, maturity mismatch, concentration of lending, lack of diversification, inadequate risk management strategies, and insufficient regulatory monitoring for banks.

While there are similarities and differences between SVB's failure and previous bank failures in the USA, a notable difference is that SVB's investment in what is considered one of the most secure investment tools, USA T-bills, did not protect the bank from failure. This case highlights the importance of diversification, robust risk management strategies, and effective supervision in the banking industry.

Özet: Gerek ulusal düzeyde gerekse ulusal düzeyde gerekli tedbirlerin alınması ve uygulanmasındaki yetersizlikler, ülkeler arasında sorunun çözümünde iş birliği eksikliği ve küresel düzeyde meydana getirdiği etkiler göz önüne alındığında, küresel ısınma içinde yaşadığımız yüzyılda ve gelecekte mücadele edilmesi gereken en kritik meselelerden birisi olarak önemini koruyacaktır. Küresel ısınmaya neden olan çeşitli etmenlerden birisi de tarımsal faaliyetlerdir. Tarımsal faaliyetler neticesi ortaya çıkan çeşitli atıklar, küresel ısınmaya neden olmaktadır. Aynı zamanda, küresel ısınma da tarım üzerinde bazı olumsuz ve olumlu etkilere sahip olmaktadır. Genel olarak ele alındığında, küresel ısınmanın tarım üzerindeki olumsuz etkilerinin, olumlu etkilerine kıyasla daha fazla olması söz konusudur.

Küresel ısınmanın tarım üzerindeki etkileri, ekonomik ve sosyal vs. sorunların ortaya çıkmasına zemin hazırlamaktadır. Küresel ısınmanın tarım üzerinde meydana getirdiği etkiler kaynaklı ortaya çıkan üretimdeki dalgalanmalar, enflasyon, istihdamın azalması, gelir dağılımındaki adaletsizler gibi ekonomik, sosyal, vs. sorunlar ise devlet bütçesinin gelir ve gider kısımlarını etkilemektedir.

Bütçenin gider tarafı, küresel ısınmanın neden olduğu ekonomik, sosyal ve sağlık gibi sorunların çözümüne yönelik harcamaların artması nedeniyle etkilenmektedir. Devlet bütçenin gelirler kısmının en önemli kalemi olan vergi geliri ise tarım ve küresel ısınma arasındaki etkileşimin neden olduğu etkilerin, vergi kapasitesi üzerinde meydana getirdiği etkiler suretiyle etkilenmektedir. Bu etkilerin sonucu olarak, zaman içinde bütçenin giderleri ve gelirleri arasında ortaya çıkan muhtemel bir uyumsuzluk da devletin bütçe dengesinin bozulmasına neden olmaktadır.

Tarım ve küresel ısınma arasındaki etkileşim ve bu etkileşimin neden olduğu etkiler, küresel ısınmadan en çok etkilenen bölgelerde yer alan ve tarımın ekonomideki payının yüksek olduğu gelişmekte olan ülkeleri, gelişmiş ülkelerden daha fazla etkileyecektir.

Anahtar Kelimeler: Küresel ısınma, tarım, devlet bütçesi, kamu harcaması, vergi.

The Interaction between Agriculture and Global Warming and the Effects of the Interaction on the Government Budget Balance

Abstract: Considering the inadequacies in taking and implementing the necessary measures at the both national and national level, the lack of cooperation between countries in solving the problem, and its effects at the global levels, global warming will maintain its importance as one of the most crucial issues to be overcome in the century we live in and in the future. One of the different factors causing global warming is agricultural activities. Various wastes stemming from agricultural activities cause global warming. At the same time, global warming has some negative and positive effects on agriculture. In general, the negative effects of global warming on agriculture are more than the positive effects.

The effects of global warming on agriculture lead to the emergence of economic and social problems, and so forth. Such problems as fluctuations in production due to the effects of global warming on agriculture, inflation, decrease in employment, inequalities in income distribution, and so on affect the revenue and expenditure parts of the government budget.

The expenditure side of the budget is affected by the increase of expenditures toward solution of issues, such as economic, social, and health problems caused by global warming. On the other hand, tax revenue, the most important item of the revenue part of the government budget, is affected by the effects of the interaction between agriculture and global warming on taxable capacity. As a result of these effects, a possible mismatch between the expenditures and revenues of the government budget over time causes the budget balance of the state to deteriorate.

The interaction between agriculture and global warming and the effects caused by this interaction will affect developing countries, located in the regions most affected by global warming and where the share of agriculture in the economy is high, more than developed countries.

Keywords: Global warming, agriculture, government budget, public expenditure, tax.

1. GİRİŞ

Tarım özellikle nüfusun büyük bir kısmının kırsalda yaşadığı gelişmekte olan ülkelerde, kırsalda yaşayan bu nüfus çoğunluğunun istihdamı ve yaşamları için gerekli gelirin elde edilmesi açısından, büyük bir öneme sahiptir. Tarım, aynı zamanda temel zorunlu ihtiyaçlardan birisi olan, beslenme için gerekli olan gıdaların temin edilmesi açısından da kritik bir öneme sahip sektördür.

Diğer yandan, günümüzde gerek ulusal düzeyde gerekse uluslararası düzeyde alınan bir takım önlemlere rağmen, küresel ısınma neden olduğu etkiler dikkate alındığında, halen daha önlenmesi için daha ciddi önlemlerin alınması gereken küresel düzeyde bir problem olarak varlığını korumaktadır.

Küresel ısınmanın meydana getirdiği etkilerin, en fazla hissedildiği sektörlerden birisi de üretimin iklim şartlarından önemli ölçüde etkilendiği tarım sektörüdür. Küresel ısınmanın özellikle olumsuz olarak meydana getirdiği etkiler, bir takım arzulanan ekonomik, sosyal vs. sorunlara neden olmak suretiyle tarımdan beklenen fonksiyonların ciddi bir şekilde yara almasına neden olmaktadır. Tarım küresel ısınmadan etkilendiği gibi çeşitli tarımsal faaliyetlerde küresel ısınmaya önemli ölçüde katkıda bulunarak, küresel ısınma sorununun uzun bir süre varlığını korumasına neden olacaktır.

Küresel ısınma ve tarım arasındaki etkileşim neden olduğu olumsuz sonuçlar da devletlerin bütçe dengesi üzerine, önemli bir yük bindirmek suretiyle devletlerin bütçe uygulamalarıyla çeşitli, ekonomik, sosyal kültürel, teknolojik vs. olumsuzlukların üstesinden gelme kabiliyetini azaltmaktadır. Dolayısıyla, küresel ısınma sorunun, tarımdaki sorunların ve bunların neticesi sebep olunan sorunların, daha sağlıklı bir şekilde tespiti ve analizi açısından, küresel ısınma ve tarım arasındaki etkileşimin iyi bir şekilde bilinmesi gereklidir.

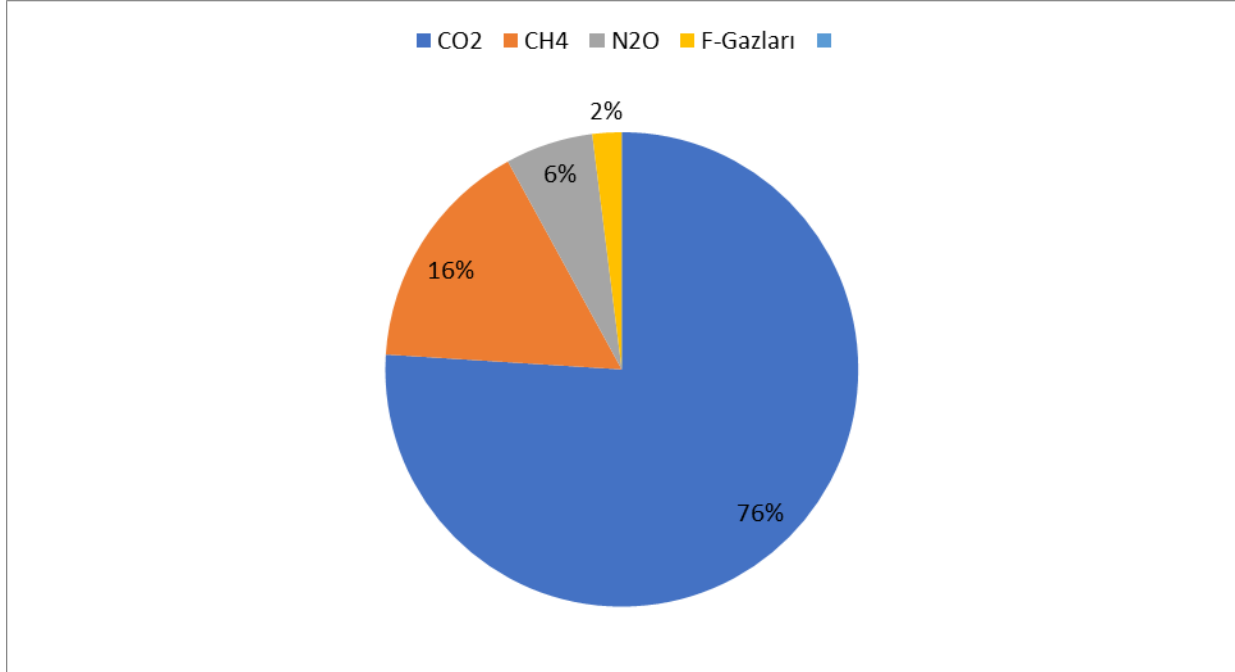

Bu çalışma, küresel ısınma ve tarım arasındaki etkileşimi ve bu etkileşimin devletin bütçe dengesine yansımaları ortaya koymayı amaçlamaktadır. Bu bağlamda, tarımın küresel ısınma üzerindeki etkileri, tarımın küresel ısınmaya katkısı ve bu ilişkilerin devlet bütçesi üzerindeki etkisi merkezi idare bütçesi kapsamında analiz edilecektir. Bu kapsamda çalışmanın 2. Kısımında, önemini ortaya koyma açısından, küresel ısınma problemi ele alınacaktır. 3. Kısımında, tarım ve küresel ısınma arasındaki etkileşim, tarımın küresel ısınma üzerindeki etkisi ve küresel ısınmanın tarım üzerindeki etkileri bazında tartışılacaktır. 4. Kısımında, küresel ısınma ve tarım arasındaki etkileşimin, devletin bütçe dengesi üzerindeki etkisi değerlendirilecektir. Sonuç ve değerlendirmeler ise son kısımda sunulacaktır.

2. KÜRESEL ISINMA PROBLEMİ

Sera gazlarının neden olduğu sera etkisiyle, dünyanın normal sıcaklığındaki artış olarak ifade edilen küresel ısınma, küresel düzeyde çevre kirliliğinin en tipik örneklerinden biridir. Yerel ve bölgesel çevre kirliliğinden farklı olarak, küresel çevre kirliliğinin olumsuz etkileri tüm dünyada hissedilmektedir. Diğer bir deyişle, küresel kirliliğin çevreye verdiği zarar, kirletici kaynaktan çok uzağa uzanmakta ve zararlı etkileri dünya çapında etki yaratmaktadır (Callan & Thomas, 2007: 10). Diğer çevre kirliliklerinin olumsuz etkilerinden yer değiştirmek suretiyle kurtulmak mümkün iken, küresel ısınmanın da örneklerinden biri olduğu küresel çevre kirliliğinin olumsuz etkilerinden, benzer şekilde yer değiştirmek suretiyle kurtulmak mümkün değildir.

Küresel ısınma neden olan sera gazlarının, toplam sera gazları içindeki payı farklı oranlarda olmaktadır. Şekil-1'de, küresel ısınmaya neden olan sera gazlarının, toplam sera gazları içindeki dağılımı görülmektedir. Şekil 1'de de görüldüğü gibi, küresel ısınmaya neden olan sera gazları içerisinde en büyük pay, karbondioksit (CO₂) gazına aittir. Karbondioksit gazını, toplam içindeki ağırlık derecesine göre sırasıyla %16 ile metan (CH₄) gazı, %6 ile azot protoksit (N₂O) gazı ve %2 ile florlu sera gazları (F-Gazları) izlemektedir.

Şekil-1: Sera Gazlarının Dağılımı

Kaynak: IPCC, 2014, Summary for Policymakers. In: Climate Change 2014: Mitigation of Climate Change. Contribution of Working Group III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change [Edenhofer, O., R. Pichs-Madruga, Y. Sokona, E. Farahani, S. Kadner, K. Seyboth, A. Adler, I. Baum, S. Brunner, P. Eickemeier, B. Kriemann, J. Savolainen, S. Schlömer, C. von Stechow, T. Zwickel and J.C. Minx (eds.)]. Cambridge University Press, Cambridge, United Kingdom and New York, NY, USA.

Küresel ısınma konusunda yapılan çalışmalar, gerekli, önlemlerin etkin bir şekilde alınmaması durumunda, küresel ısınmanın zaman içerisinde giderek daha büyük bir problem haline geleceğini göstermektedir. Aşağıdaki kısımda, bu çalışmalardan bazı örnekler yer almaktadır.

NASA'nın Goddard Uzay Araştırmaları Enstitüsü'ndeki (GISS) bilim adamlarının liderliğinde gerçekleştirilen analiz, 1880 yılından bu yana dünyada ortalama küresel sıcaklığın, en az 1,1° derece arttığını ve her on yılda yaklaşık 0,15 ila 0,20°C arasında olmak üzere, küresel ısınmada artışın en fazla 1975 yılından itibaren gerçekleştiğini ortaya koymaktadır (NASA, 2022).

NASA tarafından yapılan başka bir analiz ise, 2022'de dünyanın ortalama yüzey sıcaklığı'nın NASA'nın temel aldığı dönem (1951–1980) ortalamasının, 0,89 derece üzerinde gerçekleştiğini göstermektedir (NASA, 2023).

Bu konudaki diğer önemli analizde Hükümetler Arası İklim Değişikliği Paneline (IPPC) aittir. Bu çerçevede, Bazı Hükümetler Arası İklim Değişikliği Paneli (IPPC) projeksiyonları ise ortalama dünya sıcaklığının 1990 yılından 2100 yılına kadar %0,5 ile %4.5 arasında artacağını belirtmektedir (Nordhaus, 1998:5).

3. TARIM VE KÜRESEL ISINMA ETKİLEŞİMİ

Tarım sektörü ve küresel ısınma arasındaki ilişki, tek yönlü olmayıp çift yönlü bir ilişkidir. Diğer bir deyişle, tarım sektörü küresel ısınma üzerinde etkili olurken, küresel ısınma da tarım üzerinde etkili olmaktadır. Tarımın küresel ısınmaya katkısı, bazı tarımsal faaliyetlerin sera gazların salınımına neden olması ve artırması suretiyle ortaya çıkmaktadır. Küresel ısınma ise sıcaklıklarda meydana gelen artışın sunduğu tehditler ve fırsatlarla, tarımı hem pozitif yönde hem de negatif şekilde etkilemektedir. Bundan sonraki kısımlarda, bu çerçevede ortaya çıkan etkileşimler sırasıyla incelenecektir.

3.1. Tarımın Küresel Isınma Üzerindeki Etkisi

Küresel ısınmaya neden olan sera gazı emisyonlarına katkı, çeşitli sektörlerden gelmektedir. Bu çerçevede, tarımda sanayi, ulaştırma vb. sektörler gibi küresel ısınmaya katkı veren sektörlerden birisidir.

Genel olarak ele alındığında, küresel ısınma neden olan sera gazları salınımının %17'si tarım sektöründen kaynaklanmaktadır (FAO, 2020: 3). Sera gazları itibariyle bakıldığında, tarımın özellikle azot protoksit

emisyonlarına katkısı oldukça yüksektir. Bu çerçevede, tarımsal faaliyetlerin küresel azot protoksit emisyonlarına katkısı %75'dir (Velthof & Rietra, 2018:11). Tarım sektörünün, metan emisyonlarına katkısı ise yaklaşık %40 civarındadır (IEA, 2023).

Tarımsal faaliyetlerin, sera gazları salınımına katkısı ise çeşitli tarımsal faaliyetler itibariyle farklı şekilde olmaktadır. Ormanlar önemli ölçüde karbon depolarlar. Ormanların tarımsal alanların genişletilmesi amacıyla yok edilmesi, önemli ölçüde havaya karbondioksit gazı salınışına neden olmak suretiyle, küresel ısınmanın artmasına neden olacaktır. 2018 yılında tarımsal amaçlı ormansızlaştırmanın, küresel karbondioksit gazı emisyonları içinde payı yaklaşık %8.23¹'tür (WRI, 2023, FAO, 2020:5-6). Buna ilaveten, tarımın karbondioksit gazı emisyonlarına katkısı, tarımda fosil yakıtların enerji kaynağı olarak kullanılmasından da kaynaklanmaktadır.

Tarımsal faaliyetler, çeşitli şekillerde metan gazı emisyonlarının da yayılımına neden olmaktadır. Tarım kaynaklı metan gazı emisyonu yayılımının sebeplerinden birisi, pirinç tarlalarında düşük oksijen koşulları altında bakteriyel metan üretimi sonucu ortaya çıkan yayılımdır (Neue, vd., 1996: 1751). Ayrıca, geviş getiren hayvanların geviş getirmesi esnasında da metan gazı emisyonu yayılımı olmaktadır. Buna ilaveten, ekilen ürünleri beslemek için tarımsal arazilere dökülen bulamaç sığır ve kanatlı hayvan gibi hayvan gübrelerinin, anaerobik şartlarda ayrışması sonucu da metan gazı emisyonları ve azot protoksit gazı emisyonları yayılmaktadır (Chadwick, vd., 2011: 514-516). Pirinç tarlaları ve hayvan gübre kaynaklı metan gazı emisyonları, küresel emisyonların %32'sini oluşturmaktadır (FAO,2023).

Tarımda kimyasal gübre ve ilaç kullanımı, yukarıda ifade edildiği gibi hayvan gübresi kullanımı, tarımda kullanılan motorlu taşıtlarda fosil yakıt kullanımı ve biyokütle yakma gibi faaliyetler de azot protoksit gazı salınımına neden olmaktadır. Tarımsal kaynaklı bu faaliyetler, önemli ölçüde küresel azot protoksit gazı yayılımına neden olmaktadır. Örneğin, tarımda hayvan gübresi kullanımı küresel azot protoksit gazı emisyonlarının %22'sine, sentetik gübreler ise %18'ine neden olmaktadır (Velthof & Rietra, 2018:5).

3.2. Küresel Isınmanın Tarım Üzerindeki Etkisi

Küresel ısınma, bazı durumlarda tarım üzerinde olumsuz etkiye bulunularak, tarım için bir tehdit oluştururken, bazı durumlarda ise olumlu etkilerde bulunmak suretiyle tarım için fırsatlar sunmaktadır. Bundan sonraki kısımlarda, sırasıyla bu etkiler incelenecektir.

3.2.1. Küresel Isınmanın Tarım Üzerindeki Olumsuz Etkileri

Küresel ısınma, tarımsal alanların sular altında kalmasına, kuraklık artmasına, su kaynaklarının azalmasına, zararlı otların ve haşerelerin artmasına, büyüme döneminin azalmasına, hayvanların sağlığının olumsuz etkilenmesine vs. neden olarak tarımsal üretimi üzerinde olumsuz etkiler meydana getirir.

Küresel ısınmanın tarım üzerindeki olumsuz etkilerinden biri, küresel ısınma ile birlikte denizlerin su seviyesinde meydana gelen yükselmelerdir. Küresel ısınma ile birlikte deniz su seviyesinde yükselme, ısınan suyun genişmesi ve kutuplardaki buzulların erimesi sonucu ortaya çıkmaktadır. Yapılan bazı tahminler, sera gazlarının yüksek oranlarda seyretmesi durumunda, 2100 yılına kadar denizlerdeki su seviyesinin 60cm ile 110 cm arasında artacağını, sera gazlarının önemli ölçüde azaltılması durumunda ise aynı rakamların 30 cm ile 60 cm arasında değişeceğini ortaya koymaktadır (NASA, 2021).

Küresel ısınma ile birlikte denizlerin su seviyesindeki artışlar, özellikle deniz seviyesine yakın Bangladeş, Mısır, Vietnam ve Endonezya gibi ülkelerde, tarımsal ekilebilir alanların sular altında kalmasına neden olacaktır. Buna ilaveten, su seviyesinde yükselme aynı zamanda kıyı yer altı sularının ve toprağının tuzluluk oranlarının artmasına neden olarak, sulama açısından elverişli su potansiyelinin azalmasına ve tarım için elverişli toprakların kötüleşmesine neden olmaktadır. Küresel ısınmanın neticesi ortaya çıkan bu etkiler ise tarımsal üretimi olumsuz etkileyecektir. Bu çevrede yapılan bazı tahminlere göre, denizlerdeki su seviyesinin 1 metre yükselmesi durumunda, yaklaşık 13 milyon insanı etkileyecek şekilde Bangladeş'in topraklarının %17.5'i ve ülkenin pirincinin yaklaşık %16'sını üreten 1,2 milyon hektardan fazla tarım arazisi sular altında kalacaktır (Hug, vd., 1995: 47-50).

Sıcaklığın artması ise verimi düşürmek suretiyle, tarımsal üretimi olumsuz etkilemektedir. Sıcaklığın belli bir sıcaklık aralığının ötesinde artması, ekinlerin büyümesini hızlandırarak onların daha az taneye sahip olmasını ve

¹ Bu oran WRI ve FAO'nun 2018 yılındaki ilgili değerlere ait rakamları kullanılarak tarafımızdan hesaplanmıştır

yağışlardan daha yüksek evapotranspirasyona neden olmak suretiyle, daha az ürün elde edilmesine neden olmaktadır (Cline, 2008: 24). Evapotranspirasyon ise suyun toprak yüzeyinden buharlaşma ve bitkilerde terleme yoluyla atmosfere karışım sürecidir (USGS, 2023). Yüksek evapotranspirasyon, özellikle tropikal ve subtropikal bölgelerde daha sık kuraklıkla karşılaşılması ihtimalini artırarak, tarımsal üretim açısından daha büyük bir sorun teşkil edecektir (Lee, vd., 1994: 294).

Bunlara ilaveten, küresel ısınma sonucu su kaynaklarının azalması, yüksek sıcaklığa maruz insanların ve hayvanların verimliliğinin düşmesi, bitkiler için zararlı haşerelerin artması gibi faktörler de tarımsal üretimi olumsuz etkilemektedir.

3.2.2. Küresel Isınmanın Tarım Üzerindeki Olumlu Etkileri

Küresel ısınmanın bir önceki kısımda bahsedilen olumsuz etkilerine karşılık, küresel ısınma bazı açılardan da tarım açısından önemli fırsatlar sunabilir. Bu sunulan fırsatlar birkaç şekilde ortaya çıkmaktadır.

Sunulan birinci fırsat, karbondioksit emisyonlarının artmasıyla, fotosentezin artması olarak ifade edilen Karbon fertilizasyonunun tarımda verimliliği artırmasıdır (Taylor & Schlenker, 2021: 6). Bununla birlikte, bu durum ürünler açısından farklılık arz etmektedir. Buğday, pirinç ve soya gibi C3 bitkileri, Karbon fertilizasyonuna daha fazla duyarlı iken, mısır, şeker kamışı ve darı gibi C4 bitkileri ise daha az duyarlıdır (Cline, 2008:24, Lee, vd., 1994: 289).

Sunulan ikinci fırsat, küresel ısınmanın sıcaklığa ve kuraklığa daha dayanıklı ürünlerin ekim alanlarını genişleterek, tarıma olumlu katkı sağlamasıdır.

Sunulan üçüncü fırsat, küresel ısınmanın daha önce tarım için elverişli olmayan soğuk bölgelerde, yeni ekilebilir tarımsal alanlar üretmek suretiyle, tarımsal ekilebilir alanları genişletmesidir.

4- TARIM VE KÜRESEL ISINMA ETKİLEŞİMİN DEVLETİN BÜTÇE DENGESİ ÜZERİNDEKİ ETKİSİ

Küresel ısınma ve tarım arasındaki etkileşim, meydana getirdiği olumlu ve olumsuz etkilerle, bütçenin gelirler kısmının en önemli gelir kalemi olan vergi gelirlerini ve kamu harcama kalemlerini etkilemek suretiyle, devletin bütçe dengesini etkiler. Tarım ve küresel ısınma etkileşiminin, vergi gelirlerinde meydana getirdiği artış, harcama kalemlerinde meydana getirdiği artıştan fazla olursa, bütçe dengesi olumlu etkilenirken, tersi durumda ise olumsuz etkilenecektir. Bundan sonraki kısımda, bu etkiler ortaya konulacaktır.

4.1. Vergi Gelirleri Üzerindeki Etki

Küresel ısınmanın tarımsal üretimi azaltması durumunda, üretim azalmasına bağlı olarak üretimin piyasa değeri olan Gayrisafi Yurt İçi Hâsıla'da (GSYİH) azalacak, bunun vergileme kapasitesini olumsuz etkilemesi de vergi gelirlerini azaltacaktır. Buna ilaveten, tarımın diğer sektörlerle olan bağlantısı da vergi gelirlerini etkileyecektir. Bu çerçevede, sanayi, üretimde pamuk, kauçuk, şeker gibi bazı temel hammaddeleri tarımdan sağlamakta, tarımdaki artık işgücü, sanayi ve hizmetler sektörü için potansiyel bir emek kaynağı olmakta ve sanayi ve hizmetler sektöründe ürünler ve hizmetler için de tarım önemli bir pazardır (Krishnapillai vd., 2018:233). Dolayısıyla, küresel ısınmanın tarımı olumsuz etkilemesi durumunda, diğer sektörlerdeki üretim azalması, GSYİH' deki ve vergileme kapasitesindeki daralmayı daha da artırmak suretiyle vergi gelirlerini daha fazla miktarda azaltacaktır.

Diğer yandan, küresel ısınmanın tarımsal üretimi azaltması, tarımsal ürün fiyatlarını artıracak, tarımsal ürün fiyatlarının artması ise uluslararası rekabet gücünü azaltarak, ihracatı azaltacaktır. İhracatın azalması ise ihraç edilecek ürünler üzerinden alınacak vergi potansiyelini düşürerek, vergi gelirlerini azaltacaktır. Tarımsal üretimde ve tarımla bağlantılı olarak diğer sektörlerde küresel ısınmaya bağlı üretim azalmasının GSYİH'yi düşürmesi, ülkenin ithalat potansiyelini de düşürerek, ithalat üzerinden alınacak vergi gelirlerini azaltacaktır.

Buna karşılık, küresel ısınmanın üretimi olumlu etkilediği durumlar ise vergi gelirlerindeki azalmanın etkisini hafifletecektir.

4.2. Bütçe Giderleri Üzerindeki Etki

Bir önceki başlıkta da ifade edildiği gibi, küresel ısınmanın tarımsal üretimi azaltması ve tarımla ilişik olarak diğer sektörlerde üretimi azaltması durumunda, emeğin istihdamı da azalacaktır. Emeğin istihdamının azalması, işsizlik probleminin artmasına neden olacaktır.

Düşük gelirli, üretim sürecine ağırlıklı olarak emek faktörü ile katıldığından, emeğin istihdamının azalması, düşük gelirli, gelirlerinin daha da azalmasına veya ortadan kalkmasına neden olarak, gelir dağılımında adaletsizliği artıracaktır. Gelirlerin giderek azalması ve adaletsizliğin daha da artması yoksulluk problemini de beraberinde getirecektir. Buna ilaveten, tarımda üretimin azalması, gıda fiyatlarının da yükselmesine neden olacak, gıda fiyatlarının yükselmesi ise, düşük gelirli bütçelerinde önemli yer tutan gıdalara daha fazla pay ayırmasına neden olarak, düşük gelirli kesimlerin durumlarının daha da kötüleşmesine yol açacaktır. Bunların sonucu olarak, devletin, işsizliği azaltmaya ve gelir dağılımındaki adaletsizliği ve yoksulluğun olumsuz etkilerini azaltmaya yönelik kamu harcamalarını artırması, bütçenin giderlerini arttırma yönünde etkileyecektir.

Diğer yandan, küresel ısınmanın üretimde meydana getireceği azalmanın arz cephesinde tıkanıklıklara yol açması, toplam talebin azalmaması durumunda fiyatlar genel seviyesinde yükselmeye, bu yükselmenin ortaya çıkardığı ekonomik ve sosyal sorunların çözümüne yönelik kamu harcamalarının artırılması ise yine bütçe giderlerini arttıracaktır.

Küresel ısınma ile birlikte sıcaklardaki yükselmenin kalp rahatsızlıklarına, solunum yolu hastalıklarına, sıtma ve kolera gibi bulaşıcı hastalıkların yayılması için elverişli ortam –deniz seviyesi ve sel baskınlarıyla içme suların kirlenmesi, sivrisinek nüfusunun artması vs.- hazırlaması, insan sağlığını olumsuz etkileyecektir. Devletin sağlık sorunlarını azaltmak için, sağlık harcamalarını arttırmak zorunda kalması, bütçe giderlerini arttıracaktır.

Küresel ısınma ile su seviyelerinde yükselmenin neden olduğu baskınları önlemeye yönelik setler yapılması, kamu harcamalarını artırarak bütçe giderlerini artış yönünde etkileyecektir.

Buna karşılık, küresel ısınmanın üretimi olumlu etkilediği durumlar ise, küresel ısınmanın yol açtığı ekonomik, sosyal ve sağlık sorunlarını azaltarak, bütçe giderlerini azalmasına olumlu katkıda bulunabilir.

Gelişmekte olan ülkelerin çoğunun dünyanın en sıcak bölgelerinde yer alması ve küresel ısınmaya uyum kapasitelerinin düşük olması nedeniyle küresel ısınmadaki artış, bu ülkelerde tarımsal üretimi arttırmaktansa azaltacaktır (Cline, 2008:23).

Sonuç olarak, küresel ısınma sonucu gelişmekte olan ülkelerde tarımda üretimin azalmasının kaçınılmaz olması, bu ülkelerde devletin bütçe dengesinin de negatif bir şekilde etkilenmesine neden olacaktır.

5. SONUÇ

Küresel ısınma, bir yandan tarımı olumsuz bir şekilde etkilerken, diğer yandan bir kısım olumlu etkilerin de ortaya çıkmasına neden olmaktadır. Diğer yandan, çeşitli tarımsal faaliyetlerin küresel ısınmaya neden olan sera gazlarının salınımına özellikle yüksek oranda azot protoksit emisyonun yayılımına katkı vermek suretiyle, küresel ısınmanın artmasına sebep olmaktadır.

Küresel ısınma, bir takım ekonomik, sosyal vs. sorunlar neden olmak suretiyle, devletin bütçe dengesi üzerinde etkiler meydana getirmektedir. Bütçenin vergi gelirleri üzerindeki etkiler, tarımsal üretimin ve tarımla ilişkili diğer sektörlerdeki üretimin etkilenmesine bağlı olarak ortaya çıkarken, bütçenin giderleri üzerindeki etkiler, küresel ısınmanın neden olduğu bir takım ekonomik, sosyal, sağlık, altyapı vs. sorunlarına bağlı olarak ortaya çıkmaktadır.

Gerek küresel ısınma sorunun gerekse neden olduğu sorunların çözüm noktalarında, etkin politikaların geliştirilmesi ve uygulanması açısından, küresel ısınma ve tarım arasındaki etkileşimin bilinmesi önemli katkılar sağlayacaktır. Bu çerçevede, tarımın azot protoksit gazı salınımına yüksek katkısı dikkate alındığında, özellikle tarımdaki kimyasal girdilere yönelik desteklerin bu çerçevede dikkatli bir şekilde gözden geçirilmesi gerekmektedir.

Küresel ısınmanın gelişmekte olan ülkeleri daha fazla olumsuz etkilemesi gerçeği, etkileşim neticesi bu ülkelerin devlet bütçesi dengelerinin daha fazla olumsuz etkileneneği ortaya koymaktadır. Bu ülkelerin uyum kapasitesinin yetersizliği de göz önüne alındığında, küresel ısınma probleminin ve meydana getirdiği olumsuz etkilerin giderilmesinde uluslararası iş birliği büyük bir önem arz edecektir.

Ticari Limanların Yıllık Performans Göstergelerini Etkileyen Uygulamalar

Seçkin GÜN¹

¹Dr. Seçkin GÜN, Asyaport Liman Anonim Şirketi, İnsan Kaynakları Departmanı, Tekirdağ/Türkiye,
gun.seckin.doktora@gmail.com, ORCID: 0000-0003-3637-5333

Özet: Ticari limanlar, günümüzde sanayi ve küresel ticari hayatın bağlantı noktası görevini üstlenmektedir. Bu limanlar, ülkelerin ticarete açılan rotaları görevini yerine getirmektedir. Günümüzde artan tüketim alışkanlığı ve sanayi işletmelerinin ithalat ve ihracatlarının giriş ve çıkış noktaları limanlar aracılığı ile sağlamaktadır. Bu kadar önemli bir görevi üstlenen limanlar, hareketli bir çalışma yaşamını bulundurmaktadır. Limanlar, birçok paydaş ile iş süreçlerini yönettiğinden yeni organizasyon yapılarına sahip olabilmektedir. Limanların başarısının ölçütünü oluşturan ve performansının takibinin sağlanması için bazı uygulamalar yapılmaktadır. Limanlarda performans faktörünü sağlayan en önemli unsurlar insan kaynağı ve makine parkuru olarak bilinmektedir. Yıllık konteyner hareketi veya yük tonaj elleçlemesinin dönemsel zamanlaması, limanların belirli bir periyotta performans göstergesi olarak değerlendirilmektedir. Limanlarda hareket bazında performans göstergesi olmakla beraber, uyguladıkları çalışma faaliyetlerinin de birer performans göstergesi bulunmaktadır. İş güvenli politikaları, çevresel politikalar ve teknolojik yapılanmalar limanların performans göstergelerinin durumuna etki eden uygulamaları içermektedir.

Bu çalışmada, limanların hareket ve elleçleme faaliyetlerinin iş süreçlerindeki performanslarına etkisinin ve diğer bileşenlerin bu göstergeye olan etkileri üzerine katkılarına değinilmiştir. Limanlarda insan kaynağının ve elleçleme operasyonlarında vinç grubu ve diğer iş makinelerinin etkin kullanımının liman işletmelerine olan önemi üzerine değerlendirmeler yapılmıştır.

Anahtar Kelimeler: Ticari Limanlar, Performans Ölçümü, Yük Elleçleme

Practices Affecting Annual Performance Indicators of Commercial Ports

Abstract: Today, commercial ports act as the connection point of industry and global commercial life. These ports serve as the routes of countries to trade. Today, the increasing consumption habits and the entry and exit points of the imports and exports of industrial enterprises are provided by ports. Ports, which undertake such an important task, have an active working life. Since ports manage business processes with many stakeholders, they can have broad organizational structures. Some practices are carried out in order to monitor the performance of the ports, which constitute the criterion of success. The most important factors that provide the performance factor in ports are known as human resources and machinery. Annual container movement or periodic timing of cargo tonnage handling is considered as a performance indicator of ports in a certain period. While there are performance indicators on the basis of movement at the ports, there are also performance indicators for the work activities they implement. Occupational safety policies, environmental policies and technological structures include practices that affect the performance indicators of ports.

In this study, the effects of port movement and handling activities on the performance of business processes and the contribution of other components to this indicator are discussed. Evaluations have been made on the importance of human resources and the effective use of crane group and other construction equipment in handling operations in ports for port operations.

Key Words: Commercial Ports, Performance Measurement, Cargo Handling

1. GİRİŞ

Performans kavramı, ölçülebilen değerler ve faktörler üzerine etkinlik, verimlilik ve dayanıklılığı kapsayan işletim sistemidir. Bireylerin performans ölçümü yapılabildiği gibi, işletmelerinde kendi sektörlerinde performans değerlendirme ölçütlerini ortaya koyan çalışmalar ve göstergeleri bulunmaktadır. Liman işletmelerinde ise bu faktörü değerlendiren ölçekler bulunmaktadır (Notteboom, Pallis ve Rodrique, 2022).

Performans kavramından bahsedebilmek için bazı verilerin ve göstergelerin oluşması ve bunların hangilerinin ele alınıp ölçüme tabi tutulacağı değerlendirilmektedir. Ayrıca, bir sürecin performansını ortaya koymak için sadece sayısal göstergeler değerlendirilmemektedir. Ölçüle bilen ve ölçülemeyen faktörler ele alınarak elde edilmek istenen sonuçlar ortaya konmaktadır. Limanlarda elleçleme verileri performans kavramını gösterebildiği gibi sadece bu sayısal veriler genel kapsamlı ölçüt olarak kullanılmamaktadır (Woo, Pettit ve Beresford, 2011).

Limanlar, zaman ile yarışan hizmet işletmeleri olarak sektörde faaliyet göstermektedir. Bu işletmelerde sürenin değeri çok önemli olup, sürekli hedefler ile çalışılmaktadır. İstenen ve planlanan süre içerisinde gemi operasyon

süreçleri planlandığı doğrultuda gerçekleştirilmeyip, gemiye hizmetin verilememesi önemli kayıplara sebebiyet vermektedir (Wanke, 2013). Bu yüzden her bir iş sürecinin analizi iyi tanımlanıp, performans göstergeleri üzerine değerlendirmeler yapılmaktadır.

Müşteriler karşısında değer sağlamak ve kompleks süreçlerin planlı bir şekilde organize edilmesi için performans değerlendirme çalışmaları yapılmaktadır (Han, 2018). Bu analizler ile müşteri memnuniyetinin üst seviyede tutulması sağlanacak olup, liman işletmesinin stratejik hedeflerine ulaşip ulaşmadığı konusunda geri bildirim sağlamış olacaktır (Notteboom, Pallis ve Rodrique, 2022).

Liman işletmeleri, tek bir faktöre bağlı kalmadan sürekli çalışan hizmet işletmeleridir. 7/24 açık olan, sürekli ithalat, ihracat ve transit yüklerin aktarılmasına hizmet vermektedir. Farklı bir kıtadan gelen bir yükün müşterisine ulaştırılması, kıtalar arası yük transferinde yükün son kullanıcısına kadar ulaştırılmasında kadar hizmet vermektedir (Kang ve Woo, 2017). Bir ülkenin yük ve eşyalarının girişinin ve çıkışının yapılmasında önemli bir görevi yerine getirmektedir. Bu yüzden, liman işletmeleri birden fazla etkileşim kurarak farklı faktörler ile iletişim halinde olmaktadır (Wang vd., 2018). Küresel müşteri hareketleri, gemi filosu yönetimi, bölgesel kamu kuruluşları, uluslararası yönetmelik ve mevzuatlar, insan faktörü, entegre ulaştırma türleri, bölgesel riskler, müşteri memnuniyeti, rekabet, ülkeler arası krizler ve doğal hava koşulları gibi faktörlerin yönetiminde ve bu olayların oluşumunda etki sahibi olması, liman işletmeleri için performans göstergelerinin kendi hedefleri ve sürdürülebilirlik çalışmalarında ne kadar önemli olduğunu ortaya koymaktadır (Stopford, 2022).

Performans kavramı sürekli aynı faktörleri değerlendirmeyip, günün koşulları ve beklentilerine göre yenilikler getirerek performans göstergeleri farklılaşabilmektedir (Langenus ve Dooms, 2015). Gemi kapasitelerinin büyümesi, elleçleme araçlarının farklılaşması, teknolojik alt yapı imkanlarının gelişmesi, müşteri ilişkileri yönetiminin değişime tabi olması, vinç ve diğer ekipman parkurunun yeni nesil gemi sınıflarına göre uyumlu yatırımların yapılması bir liman işletmesinin iş yaptığı paydaşlarının beklentilerine uyumlu hale gelmesi performans göstergelerinin bazı temel başlıkları olarak gösterilebilir (Somensi vd., 2017).

Performans kavramına dahil edilen birçok faktör bulunmaktadır. Burada, bu nitelikleri oluşturacak faktör, vinç operatörlerinden yönetim süreçleri görevlerini yerine getiren herkesin farklı performans bileşenlerini ortaya koyması ile oluşturulmaktadır. Liman işletmesinin performans göstergelerinin yükseltilmesi için çok işlevli limanların operasyonel işlevlerini ve stratejik çalışmalarının en iyi şekilde entegre edilmesi önemli bir işlemdir (Notteboom, Pallis ve Rodrique, 2022).

Performans, amaca ulaşmak için istenen niteliklerin sağlanması ve belirli standartlara göre işlemlerin gerçekleştirilmesi ve kriterlerin oluşturularak nitel ve nicel değerlendirmelerin yapılmasıdır (Çalık, 2016). Performans kavramından bahsedebilmek için öncelikle hedefler, istenen değerler ve sonuç faktörlerinin tanımlanması gerekmektedir.

Üretim veya hizmet faktörlerinin en küçük aşamasından en büyük aşamasına kadar olan tüm süreçler verimlilik ve üretkenlik düzeyini etkilemektedir. İşletme içerisinde bulunan her bir iş sürecinin etki düzeyleri iyi tanımlanabildiğinde verimlilik seviyesi artacaktır. Bu yüzden, risk faktörleri tanımlanarak hedefler karşısındaki düzeylerine göre geri bildirim durumları oluşturulmalıdır (Sink, 1985). Bu çalışmalar ile verimliliği etkileyecek faktörler iyi tanımlandığı için kısımlar yakından takip edilebilecektir. Ayrıca, hangi düzeyde oldukları gözlemlenerek kısa sürede müdahaleler ile iyileştirici çalışmalar yapılabilir (Musso ve Sciomachen, 2020). Performans kavramına sektörlerin ne tür başlıkları ortaya koyacakları kendi tercihleri ve sektörün beklentilerine göre değişkenlik göstermektedir. Ancak, her sektörün genel kabul görmüş kriterleri bulunmaktadır (Park ve De, 2015).

Tablo 1: Prokopenko (1987)'e Göre Performansı Etkileyen Faktörler

İç Faktörler	Katı Faktörler	Ürün
		Fiziki Yapı Ekipman Teknoloji Malzeme ve Enerji
	Esnek Faktörler	İnsan
		Örgüt ve Sistemler İş Metotları Yönetim Biçimleri

Yapısal Faktörler		Ekonomik Değişimler Demografik ve Sosyal Değişimler
Dış Faktörler	Doğal Kaynaklar	İnsan Gücü Arazi Enerji Hammadde
	Hükümet ve Alt Yapı	

Kaynak: Prokopenko, J., 1987. Verimlilik Yönetimi Uygulamalı Elkitabı, (Çeviren: Olcay Baykal, Nevda Atalay, Erdemir Fidan), 7. Basım, Ankara, MPM Yayınları

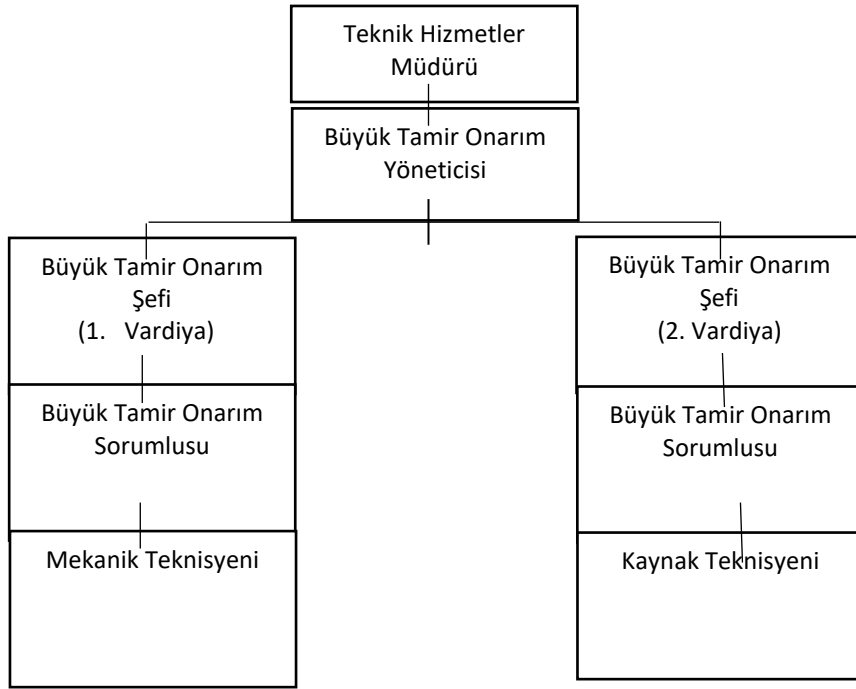

Limanlarda değerlendirilen performans kavramı içerisinde iç ve dış faktörler olarak iki başlık altında kullanılmaktadır. Limanların kuruluş yeri ve operasyon sahasının büyüklüğü bu aşama da önemli yer edinmektedir (Madeira vd., 2012). Art bölge, limanların verimliliği için önemli bir kapasite ölçeğine etki sağlamaktadır. Sanayi bölgelerinin yaygın olması, insan gücü portföyü, deniz derinliğinin uygun oluşu, yıllık rüzgârlı gün sayısının istenen düzeyde olması ve diğer ulaştırma türlerine aktarma imkanının olması limanların performans göstergeleri ve verimliliğinde önemli başlıklardır (Dowd ve Leschine, 1989).

2. Teknik Hizmetler Biriminin Performansa Etkisi

Limanlarda her ne kadar müşteri portföyünün geniş olması ve diğer bölgesel etkenlerin bir arada bulunup, gereksinimlerin sağlanması olsa dahi bir diğer önemli gösterge de teknik ekipmanları ve araç parkurunun istenen seviyede tutulması da performans göstergelerinde önemli bir etkindir (Grosskopf, 1993). Limanlarda, raylı vinçler, lastik tekerlikle çalışan vinçler ve diğer iş makinesi ekipmanları, yüklerin aktarılmasında önemli birer görev üstlenmektedir. Bu ekipmanlar ağır yükleri taşıyarak ve sürekli faal halde bulunduklarından, bakım ihtiyaçları ortaya çıkmaktadır. Liman işletmelerinde planlama ve zamanlama çok önemli bir göstergedir. İş makinesi ekipmanlarının tam kapasite kullanımı yük elleçleme işlemlerinin verimliliğinde etkili olmaktadır (Yücel, 1997).

Limanların teknik departmanları, kendi ihtiyaç ve iş süreçlerine göre farklı organizasyon şemalarından oluşabilmektedir. Ancak bazı ihtiyaçlar ve gereklilikler ortak noktada buluşabilmektedir. Bakım ve onarım işlemlerinde örnek bir organizasyon şeması şu şekilde oluşturulabilir.

Şekil 1: Büyük Tamir ve Onarım Organizasyon Şeması

Büyük tamir onarım birimi vinç parkurunun ve diğer iş makinelerinin ağır revizyonlarını yapan görev tanımından oluşmaktadır. Vinç parkurunun en önemli göstergelerinden olan halatlar, bu işin sürekliliğinde önemli bir yere sahip olmaktadır. Halat değişimleri olası arızalarda veya yıpranmalarda plansız olarak revizyona ihtiyaç duymakla beraber, belirli periyotlarda revizyon bakımları saat/hareket hesabına göre de yapılabilmektedir.

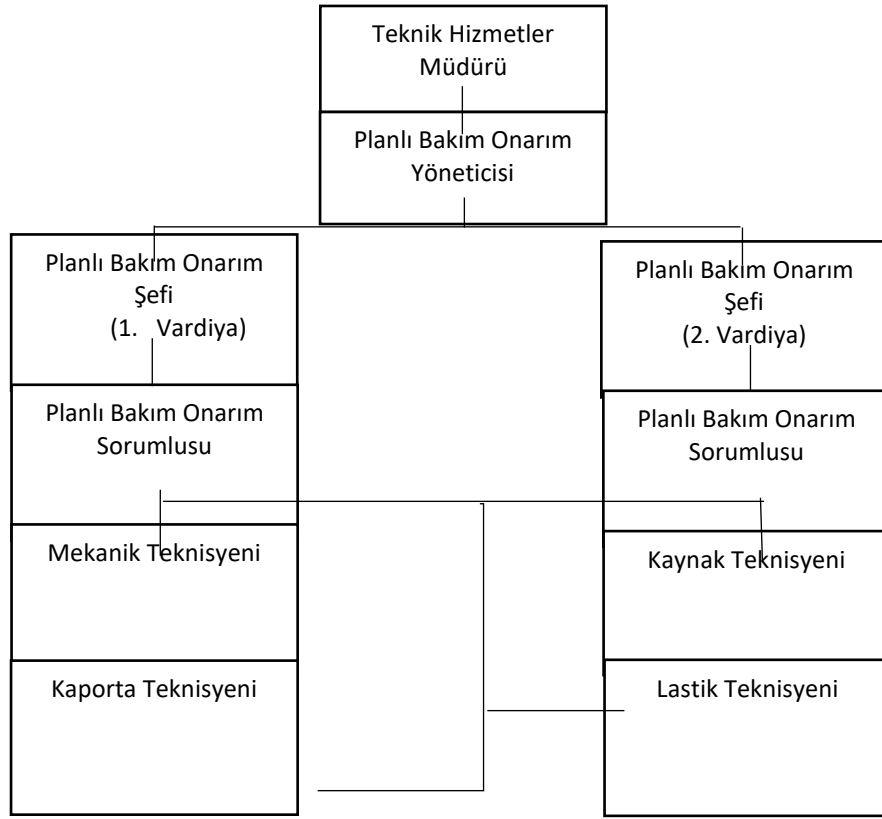

Bu birime BTO (Büyük Tamir Onarım) ekibi de denmektedir. Teknik personeller olası arıza veya planlı bakımları öncelikle çekirdek kadro ile yaparak görevleri tamamlamak istemektedir. Ancak, ekibin yetemediği durumda ise tedarikçiden destek alınarak ekipmanın revizyonu tamamlanabilmektedir. Bu revizyon işlemlerinin yapılma süresinde operasyon departmanının vinç parkurunu boşa çıkartabileceği bir süre gerekmektedir. Gemi operasyon elleçleme aşamasında bu işlemleri yapmak tehlikeli olabilmektedir. Bu yüzden gemi trafiğinin ve posta sayısının daha az olduğu günlerde, operasyon ve teknik birim entegre çalışarak en uygun sürede revizyon işlemlerini yapabilmektedir.

BTO ekibindeki kaynak teknisyenleri konteyner tadilatında da görev alabilmektedir. Yırtilan, ezilen veya taban tahtalarının değişime ihtiyacı olan konteynerlerin bakımı bu ekip tarafından yapılabilmektedir.

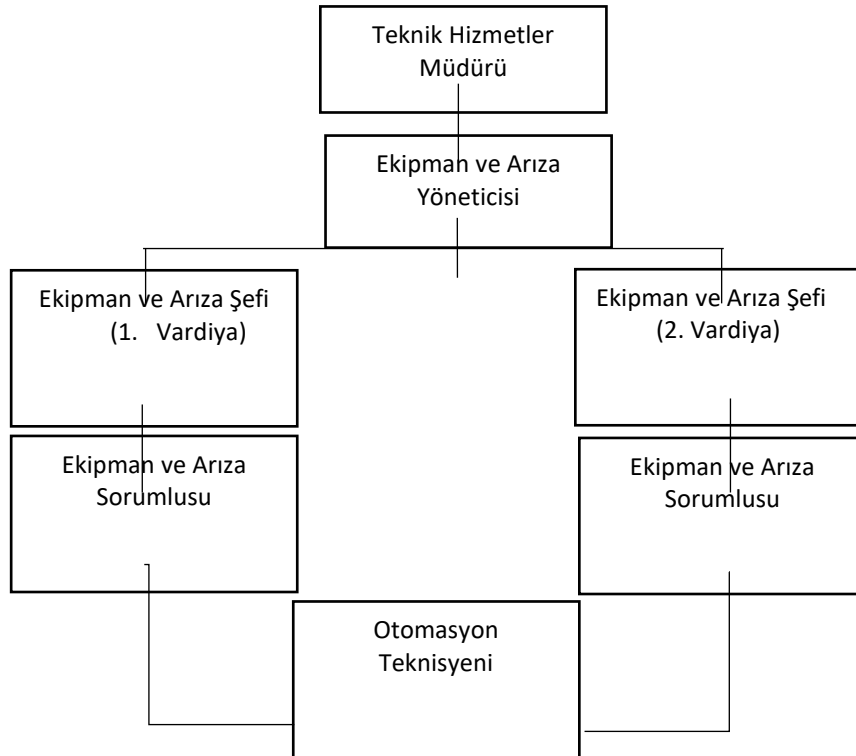

Planlı bakım onarım ekibi, ekipmanların belirli periyotlarda (Aylık, üç aylık, altı aylık ve yıllık) bakımından sorumlu olduğu görev tanımını yerine getirmektedir. Vinç parkuru, çekiciler, lastik tekerlekli ve raylı sistemli diğer elleçleme ekipmanlarının planlı bakım çalışmaları bu ekip tarafından yapılmaktadır.

Ayrıca, kademe tarafından diğer iş makinelerinin bakımları ve ağır revizyonları yapılmaktadır. Ekipmanların yağ analizleri ve takibini yapan bu ekip, takibinde olan tüm bakım verilerini kullandığı ERP programına girerek sayısal verileri analiz edip kayıt altında tutabilmektedir. Planlı bakım ekibinin diğer bir görevi ise ekipmanlarda meydana gelen arızaların ve diğer iş süreçlerinin geliştirilmesi gereken faaliyetlerinin düzenlenmesidir. Bu işlem, SEÇ-K birimi tarafından Düzeltici Faaliyet (DÜF) kayıtları açılarak planlı bakım ekibi tarafından istenen iyileştirici çalışmaların tamamlanmasının ardından, bakım ekibi olarak müdahale edilmektedir. Açılan DÜF kayıtlarının tamamlanmasından sonra Sağlık, Emniyet, Çevre ve Kalite (SEÇ-K) bu kaydı kapatmaktadır.

Şekil 2: Planlı Bakım Onarım Organizasyon Şeması

Şekil 3: Ekipman ve Arıza Organizasyon Şeması

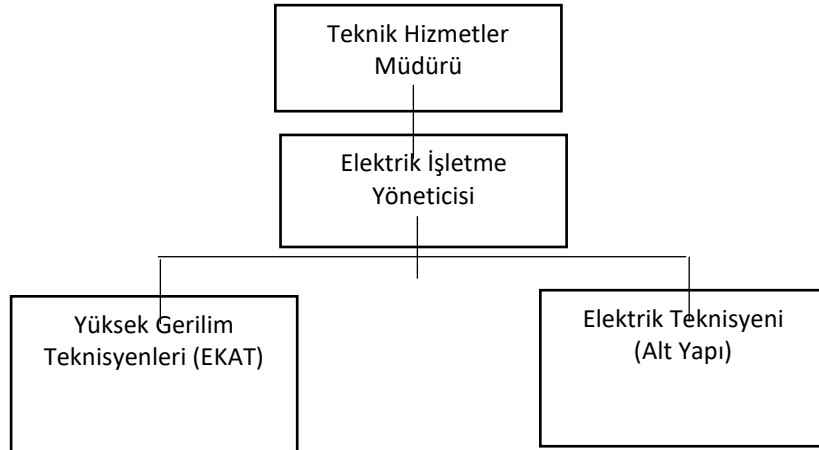

Ekipman ve arıza ekibi, vinç grubunun faal halde tutulması, elleçleme operasyonlarına devam etmesi için çalışan ekip üyelerinden oluşmaktadır. Limanlardaki yük elleçlemesi yapan vinçler otomasyon sistemleri ile çalışmaktadır. Otomasyon sistemlerinde meydana gelen arızalarda bu ekipler arıza tespiti yapıp müdahale

etmektedir. Bu sürecin en kısa sürede yapılması zaman kaybının önüne geçilmesi önemli bir performans göstergesidir.

Limana sefer yapacak gemiler önceden belirlenen programa göre varış ve kalkış süreleri tanımlanmaktadır. Vinç ekipmanının gemi üzerinde elleçleme operasyonunun yapıldığı bir sürede arıza oluşturması ile karşılaşılabilir. Bu da iş kazası veya diğer risk faktörlerini ortaya çıkarmaktadır. Kritik bir arıza esnasında bazı durumlarda vinç ekipmanının operasyondan çekilerek daha derinlemesine bakım çalışmasının yapılmasına ihtiyaç duyulmaktadır. Bu aşamada eğer ekipman çekilemeyecek bir durumda ise arıza grubunun hızlı bir şekilde sorunu çözmesi gerekmektedir. Burada beklenen hedef minimum ekipman duruşu ile elleçlemenin devam ettirilmesidir.

Şekil 4: Elektrik İşletme Organizasyon Şeması

Bu birim iki ayrı iş pozisyonundan oluşmaktadır. Yüksek gerilim hattında çalışan teknisyen grubu bu ekibin ilk üyelerini oluşturmaktadır. İkinci grup ise vinç parkuru ve diğer teknik ekipmanlardaki elektriksel arızalara bakan ekip üyelerinden oluşmaktadır. Her iki grupta arızaların oluşmaması ve gerekli sistem kayıtlarının belirli periyotlar ile tutulup kaydedilmesinden sorumludur.

Limaneler yeşil işletme anlayışını gerçekleştirmek için karbon emisyonunu minimum seviyede tutmaya çalışmaktadır. Bu yüzden yenilenebilir enerji kaynaklarına yönelim artmaktadır. Enerji sisteminin kesintisiz çalışması, elektrik gücü ile çalışan vinç ekipmanlarının elleçleme operasyonlarını aksatmaması için önemli bir fonksiyondur.

Bu ekipteki diğer elektrik teknisyenleri, aydınlatma direkleri, servis binalarındaki teknik işler, kompresör ve jeneratör ekipmanlarının bakımlı ve faal halde tutulmak için görev tanımlarını yerine getirmektedir. Birimlerden gelen taleplere göre ve istenen teknik servis desteği ilgili birime iletilmektedir. Jeneratör dairesi gibi önemli bir alanın belirli periyotlarda kontrol altında tutulması olası ihtiyaç durumunda istenilen desteğin sağlanmasında önemli bir yedekleme anlayışıdır.

Limaneler ağır ve yüksek iş ekipmanlarından oluşan işletmelerdir. Bu denli önemli yatırımları gerektiren limanların ekipman stok deposunun da yeterli düzeyde olması operasyonun başarısı için önemli birer çalışmadır. Liman ekipmanları, kısa sürede elde edilebilecek yedek parçalara sahip olmamaktadır. Bu yüzden depo stoğu ve uzman teknik kadronun oluşturulması elleçleme operasyonlarını da etkilemektedir. Doğru bir organizasyon yapısının kurulması teknik ihtiyaçlara doğru müdahale için önemli bir iş programını göstermektedir.

Yukarıda gösterildiği gibi örnek bir liman teknik hizmetler organizasyon yapısının kademeleri açıklanmıştır. Liman işletmelerinin kendi ihtiyaç ve beklentilerine göre bu organizasyon şemaları farklı gruplar adı altında oluşturabilmektedir.

3. Konteyner Limanlarında Performans Göstergeleri

Konteyner limanlarının performans göstergelerini tanımlayan aşağıdaki tablo, bu alanda iki ana başlık altında değerlendirmeleri özetlemektedir. Birinci başlık olan konteyner terminal değişkenleri, gemi, terminal ve yanaşma yeri olarak üç ayrı alandan oluşmaktadır. Burada, limana sefer yapan gemi sayısı performans göstergeleri üzerinde etkili olarak değerlendirilmiştir. Geminin ETA programı da bu göstergelerden bazılarını içermektedir.

Tablo 2: Konteyner Terminal Performansında Etkili Değişkenler

Kategori	Değişkenler		
Konteyner Terminal Değişkenleri	Gemi ile ilgili değişkenler	Limana doğrudan gelen gemi sayısı	
		Ortalama bağlanma süresi (Kılavuzluk ve römorkör dahildir)	
	Yanaşma Yeri Değişkenleri	Vinç sayısı	
		Net vinç verimi	
		Yanaşma yeri kullanım oranı	
		Terminal çalışma saati	
	Terminal Alanı Değişkenleri	Ortalama istif katı sayısı	
		Alan içindeki toplam yol sayısı	
		EDI sistemi (Var/Yok)	
	Yardımcı Tesis Değişkenleri	Yardımcı tesislere ait genel değişkenler	Kapı/Geçit sayısı
Raylı sistem (Var/Yok)			
Taban alanı			
Dağıtım merkezi			
Yardımcı tesislere ait detaylı değişkenler		Konteyner terminaline olan mesafe	
		IT işletim sistemi (Var/Yok)	
		Toplam operatör sayısı	
		Mülkiyet (Özel veya Kamu)	
Konteyner depolama alanları			

Kaynakça: Korea Maritime Institute, 2005.

Yanaşma yeri değişkenlerini açıklayan diğer bir alt başlıkta ise limanda bulunan vinçlerin sayısı ve bu ekipmanların her biri için verimlilik oranları değerlendirilmiştir. Burada ayrıca yanaşma yeri kullanım oranı ve terminal sahasında operasyonel elleçlemenin saat göstergeleri bazında performansa dahil edilmiştir.

Terminal alanı değişkenleri olan alt başlıkta, liman sahası konteyner istifi kapasitesi ve her bir blokta yer alan istif kapasiteleri değerlendirmeye dahil edilmiştir. Limanda konteyner istifleri/bay'lar arasında yeterli ve kullanışlı yolların aktif olması da performans göstergelerinden bazılarıdır. Risk faktörlerini minimize edecek ve birden fazla çekicinin bu alanlarda rahatlıkla aktarımlarını yapabilmesi için yol kapasitesinin istenen düzeyde olması önemli bir göstergedir.

İkinci bir ana başlık olan yardımcı tesis değişkenleri içerisinde olan genel değişkenler tabloda gösterilmiştir. Piyasa araçlarının ithalat ve ihracat yüklerini liman kapılarından geçerken kullandıkları operasyonel işlemlerini yansıtmaktadır. Bu kapıların gümrük muhafaza kontrolünde liman personelleri ile entegre çalışmaları sonucu aktif olduğu bilinmektedir. Limana girişi veya çıkışı yapılan bu kapıların yeterli sayıda aktif olması operasyonel süreçlerin daha hızlı olması açısından önemli birer performans göstergesidir. Aksi halde istenen düzeyde verimli çalışma sağlanamayıp, kapılarda piyasa araçlarının uzun süre beklemeleri ile karşılaşmaktadır. Gümrük muhafaza ve liman programının teknolojik düzeyinin entegre edilip, uyum içerisinde çalışması kapıların daha aktif olmasında önemli birer etkiye sahiptir.

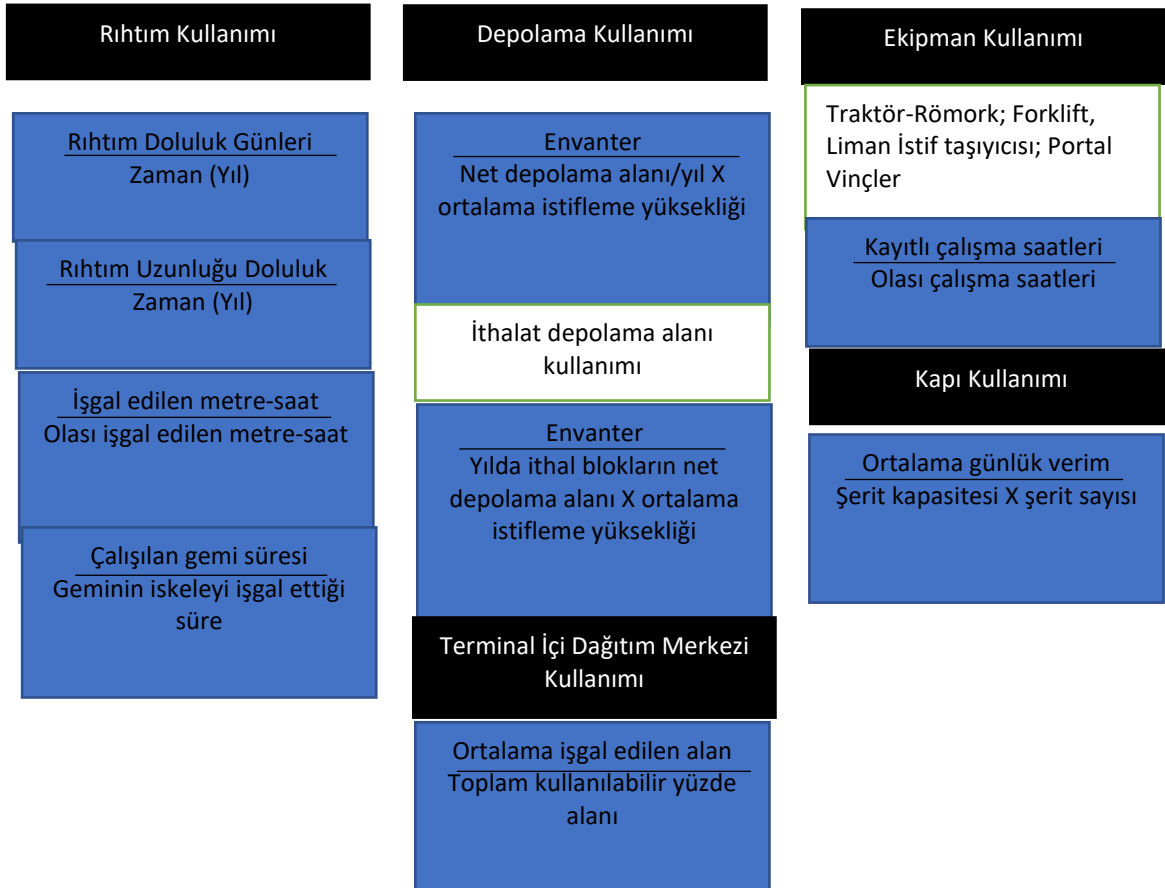

Raylı sistem aktarımının limanlar için ayrı bir önemi bulunmaktadır. Entegre ulaştırma türlerinin liman kapılarında olması, alternatif aktarım imkânı limanları daha tercih edilebilir kılmaktadır. Bu yüzden, raylı sistem taşımacılığı ulaştırma türleri içerisinde vazgeçilmez birer ulaştırma türü olarak bilinmektedir. Liman sahasında yeterli depolama alanlarının olması ve dry konteyner sahası dışında, tehlikeli madde konteyner sahası, sızıntı havuzları, Reefer konteyner sahası ve buna benzer imkanların olması limanların performansını gösteren diğer bileşenlerdendir. Container Freight Station (CFS) sahası ve konteyner operasyonlarına verilecek elleçleme hizmetleri limanlar için hizmet farkındalığını ortaya koyacak uygulamalardır.

Vinç operatörlerinin vardiyalarda yeterli sayıda olması elleçlemenin aksamaması aşamasında önemli birer performans verisini oluşturmaktadır. Information and Communications Technology (ICT) işletim sistemlerinin günün koşullarına uygun donanımda olması önemli birer performans göstergesidir. Haberleşme sistemleri liman sahasında çalışan ekipman ve insan gücü için önemli birer zamanlama aracıdır. İletişim eksikliğinin etkin olmadığı bir liman işletmesi operasyonel süreçlerde süre kaybına ve hatalı işlemlere sebebiyet verebilmektedir.

Performans göstergeleri içerisinde ekipman ve teknolojik yapıların her ne kadar yeterli olması önemli olsa da bu süreçleri tamamlayıcı olarak insan gücü ve motivasyonu ön plana çıkmaktadır. Bu yüzden işinde uzman ve görevini benimsemiş personeller ile bu süreçler istenen seviyede olabilecektir. Liman işletmeleri emek yoğun sermaye anlayışı ile çalışan hizmet sektörüdür. Bu yüzden sadece makine gücünü ve diğer aksamaları değerlendirmeye alarak genel bir değerlendirme yapmak doğru olmayacaktır. Bu aşamada limanların performans göstergelerini oluştururken öncelikle personel faktörünü ilk başa koyarak sonrasında ekipman ve teknolojik yapıları değerlendirmeye almak daha bütüncül bir yaklaşım olacaktır. Bu süreçleri yönetecek olan insan bilgisi olduğundan, ilk aşamada insan kaynağını değerlendirmeye almak daha doğru bir yaklaşım olacaktır.

Limanların performans göstergelerinden kesintilere karşı dayanıklılık ayrı bir değerlendirme faktörü olarak görülmektedir. Bu olayın bazı bileşenleri olan; doğal afetler, küresel sağlık sorunları, hükümetlerin verdikleri yanlış politikalar, ekonomik krizler, siber saldırılar, güvenlik krizleri ve diğer olumsuz olaylar limanların ve tedarik zincirindeki diğer operasyonel süreçleri olumsuz yönde etkilemektedir. Bu durumda birçok sektörde olduğu gibi liman işletmeleri de ek bütçeli ve günün koşullarına göre ayrı yönetimsel kararlar alarak mevcut durumdan en az etkilenecek faaliyetlerine devam etmeyi planlamaktadır. Bu olgular zincirinde işletmenin vermiş olacağı kararlar veya önceden bu tür olaylara karşı alternatif planlarının olup olmaması limanın karşılaşılabilecek olumsuzluklara karşı dirayetinin performansını ortaya koymaktadır.

Şekil 5: Konteyner Terminali Performansı: Kullanım Göstergeleri

Kaynak: Notteboom, T., Pallis, A. ve Rodrigue, J. P. (2022). Çeviri: Gün, S. (2022).

Yukarıdaki şekilde limanlarda performans göstergelerine ait oransal değerlendirmeler gösterilmiştir. Limanlar, mevcut durumlarını değerlendirmek, rakipler ile kendilerini kıyaslamak ve verimliliklerini sayısal değerlere göre ölçüp, somut veriler sağlamak için performans göstergelerini analiz etmektedir. Bu verilerin sonuçlarına göre

gerekli stratejik kararlar alır veya risk durumlarını tespit edebilirler. Performans göstergeleri sadece eksik yönleri ortaya koymak için değil, mevcut durumun daha ileri seviyelere taşımak içinde kullanılabilir. Burada neyin ölçüleceği ve nasıl ölçüleceği sorularının yanıtının doğru verilmesi gerekmektedir.

Şekil 6: Terminalde Konteyner Hareketi Çeşitleri

Gemi/Liman Arayüzü	Rıhtım Transferi	Terminal İçi Hareket
<ul style="list-style-type: none">*Tahliye konteyner hareketi*Yükleme konteyner hareketi*Aktarma konteyner tahliyesi*Aktarma konteyner yüklemesi*Gemi içinde konteyner birleştirme*Rıhtım üzerinden konteyner değiştirme*Gemi içinde yeniden istiflenmiş konteyner*Rıhtım üzerinden yeniden istiflenmiş konteyner*Hatalı konteyner hareketi (iki kez)*Ambar kapağı kaldırma & yerine koyma	<ul style="list-style-type: none">*Boşaltılmış konteynerlerin istiflenmesi*Boşaltılmış konteynerlerin istiftten çıkartılması*Boşaltılmış aktarma konteynerlerinin istiflenmesi*Boşaltılmış aktarma konteynerlerinin istiftten çıkartılması*Saha üzerinden istifleme ve istiftten çıkarma değişimleri*Saha üzerinde istifleme ve istiftten çıkarak yeniden yerleştirme	<ul style="list-style-type: none">*Boşaltma için taşınan dolu konteynerler*Boş istifler için boş konteynerler*İhracat istifleri için taşınan dolu konteynerler*Muayene/Denetim alanı için taşınan konteynerler*Erişim vb. için istif değiştirme*Hatalar

Kaynak: Notteboom, T., Pallis, A. ve Rodrigue, J. P. (2022). Çeviri: Gün, S. (2022)

Liman sahasında birçok operasyonel işlemler bulunmaktadır. Ana rıhtım ve gemi arasında operasyonel hazırlıklar, ana rıhtım ve konteyner istif alanları, CFS ve istif alanları, ithalat/ihracat konteyner sahası, transit konteyner sahası, tehlikeli madde konteyner sahası, sızıntı havuzları, Reefer konteyner sahası vb. birçok alan, farklı konteyner çeşitlerinin elleçlenmesinde kendi içinde operasyonel çalışmaları bulunmaktadır.

Yük çeşitliliği fazla olduğundan her bir yük içinde farklı konteyner türleri ve hizmetleri bulunmaktadır. Bu sayede operasyonel tehlikeler minimize edilerek işlem basamakları karıştırılmamaktadır. CFS sahasında bazı konteynerler için muayene ve tespit işlemleri yapılmaktadır. Bununla beraber hasarlı konteynerlerin içindeki yüklerin diğer konteynerlere aktarımının yapıldığı alanlar ise CFS birimde yapılmaktadır. Liman işletmeleri hizmet sektörünü kapsadıkları için bu tür işlemler liman işletmesi tarafından sağlanmaktadır. Bu sayede yük, güvenli bir şekilde gemi tarafından müşteriye ulaştırılması sağlanmaktadır.

4. Çevresel Performans

İşletmeler günümüzde kapalı organizasyonel işletmecilik anlayışından kurtularak, daha dinamik ve canlı organizasyonlara dönüşmektedir. Bölgesel ve küresel alandaki olgulardan da etkilenecek esnek bir yapıda faaliyetlerine devam etmektedir (Verbeeck ve Hens, 2004). Sürdürülebilir bir işletme anlayışı modern dönemde artık işletmeleri bulundukları bölgeler ile ilişkilerini güçlendirmektedir. İşletmelerin sadece maddi boyut içerisinde faaliyetlerini gerçekleştirerek kazanç sağlamalarının ötesinde üstlendikleri sorumlulukları bulunmaktadır (Rendell ve McGinty, 2004).

Liman işletmeleri de bulundukları çevre ile sürekli büyük çapta etkileşimleri bulunmaktadır. Bu işletmeler, sanayi ve diğer iş sahalarının birbirleri ile iletişim noktasında önemli görevleri üstlenmektedir. Tedarik zincirinin sağlanmasında önemli görevi olan liman işletmeleri, küresel alandaki ihtiyaçların bölgesel lokasyonlara girişinde önemli etkileri bulunmaktadır (Antonioni ve Stamatiou, 2012). Bu büyük sorumluluğu gerçekleştiren liman işletmelerinin günün koşullarında olması gereken çevresel faktörleri de göz önünde bulundurmaktadır.

Kamuoyunun daha duyarlı olduğu günümüzde, çevresel olgular insan faktörü ve gelecek nesillerin daha yaşanabilir bir ortam ve çalışma alanlarının sağlanmasında önemli bir rolü bulunmaktadır. Bundan dolayı, işletmeler bu faktörlerin bazılarının zorunluluk olmasıyla beraber ayrıca farkındalık oluşturmak için kendi fikirlerini de ortaya koyarak çevresel performansları gerçekleştirmektedir. Bu sayede işletmeler arasında anlamlı birer rekabet ortamı oluşmaktadır (Great Lakes Maritime Research Institute, 2012).

Çevresel olgular arasında yıllar itibari ile gündeme yeni yeni konular eklenmektedir. Hava kalitesinin önemli olduğu bir dönem varlığını sürdürürken, iklim koşullarındaki faktörler ile kamuoyuna farklı bir gündem gelmektedir (Pavlic vd., 2014). Günümüzde enerji ihtiyacının kıymete binmesi ile yenilenebilir enerji çalışmaları gündem maddesi olarak göz önünde olmaktadır. Çevresel öncelikler olarak bahsedebileceğimiz bu detayları aşağıda bahsedilen şekil üzerinde görebiliriz (Türk Standartları Enstitüsü, 2012).

Tablo 3: İlk On Çevresel Öncelik

	2004	2013	2017	2020
1	Çöp / Liman atığı	Hava kalitesi	Hava kalitesi	Hava değişimi
2	Tarama: Operasyon	Çöp / Liman atığı	Enerji tüketimi	İklim değişimi
3	Tarama bertarafı	Enerji tüketimi	Gürültü	Enerji tüketimi
4	Toz	Gürültü	Su kalitesi	Gürültü
5	Gürültü	Gemi atığı	Tarama: Operasyon	Yerel topluluk ilişkisi
6	Hava kalitesi	Yerel topluluk ilişkisi	Çöp / Liman atığı	Gemi atığı
7	Tehlikeli kargo	Tarama: Operasyon	Liman geliştirme (Arazi)	Su kalitesi
8	Yakıt ikmali	Toz	Yerel topluluk ilişkisi	Çöp / Liman atığı
9	Liman geliştirme (Arazi)	Liman geliştirme (Arazi)	Gemi atığı	Tarama: Operasyon
10	Gemi tahliyesi (Sintine)	Su kalitesi	İklim değişimi	Liman geliştirme (Arazi)

Kaynak: Notteboom, T., Pallis, A. ve Rodrigue, J. P. (2022). Çeviri: Gün, S. (2022).

İklim değişikliği günümüzde önemli bir çevresel faktör olarak yer edinmektedir. İnsan nüfusunun arz talebini karşılamak için artan üretim faktörleri için harcanan enerji miktarının bir kısmı sera gazı emisyonunun artmasında etken olmaktadır. Bu durum, küresel alanda işletmeler ve ülkeler içinde bazı önlemlerin alınması için daha ciddi programlar ile sera gazı emisyonunun minimum seviyede tutulmasında çalışmalara itmektedir. Yenilenebilir enerji kaynaklarının kullanımının yaygınlaştırılması bu durumda ön plana çıkmaktadır. Şirketler bu aşamada farklı uygulamalar ve yatırımlar yaparak bölgesel ve küresel alanda farkındalık oluşturmaktadır.

Yukarıdaki tablo da görüldüğü gibi farklı dönemler içerisinde çevresel faktörlerin sıralaması değişim göstermektedir. Bu durum, günün koşullarında öncelikler listesinin hangi duruma göre yorumlanması ile ilgili olarak değişim göstermektedir. Ancak, her ne koşul olursa olsun çevre boyutu ile ilişkili konular her zaman kendisini yenileyerek her geçen gün daha geliştirici uygulamalara imkân vermektedir.

Günümüz liman işletmeleri karbon salımının minimum olduğu ekipmanlar ile operasyonel faaliyetlerine hizmet vermektedir. Limanların en önemli ekipman sınıflarından olan raylı sistem vinçler, lastik tekerlekli vinçler ve terminal çekiciler elektrik enerjisi ve LNG yakıtları yeni nesil liman yatırımlarında kullanılmaya başlamıştır. Bu tür yatırımlar diğer liman işletmelerine örnek model olarak fikir sunmaktadır. İş hayatında kıyaslama (Benchmarking) çalışmaları ile işletmeler kendi aralarında ziyaretlerde bulunarak birbirlerinin uygulamalarını yakından inceleme fırsatı yakalamaktadır. Bu çalışmalar aşamasında çevresel boyutlarda yakından takip edilerek uygulama alanları yaygınlaştırılabilmektedir.

Limanların atık kabul tesisi alanları ve bu birimin uygulamaları çevresel atıkların önlenmesinde önemli birer iş tanımını oluşturmaktadır. Gemilerin sefer yaptığı limanlara sintine ve slaç atıklarını profesyonel ekipler ile aktararak gerekli prosedürlerden sonra kamunun belirlediği alanlarda imha işlemleri yapılmaktadır (Satır, 2007).

Geminin limana manevra programı sonrası yanaşma prosedürleri tamamlanmaktadır. Bu işlemlerden sonra gemideki atıklar, atık kabul tesisi teknisyenleri tarafından kimyasallara dayanıklı araçlar ile alınarak atık tesisine boşaltılmaktadır. Burada bulunan seperatörler ve kimyasal testler sonrası atıkların ayrıştırma işlemleri tamamlanmaktadır. Bu durum, atık tesisinde bulunan tankerin hacmine bağlı olarak belirli bir gemi sayısı sonrası atık tesisi teknisyenleri ve işletmede görevli olan çevre uzmanının kontrolünde ikinci aşamada resmi işlemler başlatılmaktadır. Çevre uzmanı limanın bulunduğu bölgedeki Çevre İl Müdürlüğüne başvuruda bulunarak Atık Komisyonunun toplanmasını sağlamaktadır. Belirlenen tarihte çevre il müdürlüğünden gelen memur, gümrük muhafaza memuru, çevre uzmanı ve diğer ilgili kamu yetkililerinin olduğu, limanda oluşturulan bir komisyonda atık aracına aktarılacak atıkların türleri, boyutu, tonajı, araç plakası, aracın gerekli şartlara uygunluğu, şoförün yeterliliklere uygunluğu vb. işlemler tüm ilgililer tarafından kontrol edilerek atık aracına aktarım sağlanmaktadır. Sonraki aşamada ise daha önceden belirlenen ve kamu yetkililerinin uygun gördüğü alanlara araç sevk edilip atıkların imhası işlemleri yapılmaktadır.

Yukarıda bahsedildiği gibi gemi tarafından sevk edilecek katı, sıvı vb. atıkların her biri için prosedürler gerçekleştirildikten sonra imhası yapılmaktadır. Bu durumda geminin boyutunun önemi çok önemli olmamaktadır. Önemli olan bu işlemlerin mevzuata göre uygulanıp, uzman kişilerce yönetilmesidir (Palabıyık, 2002).

Tablo 4: Çevresel Performans Göstergeleri

Çevresel Performans Göstergeleri	Çevresel Yönetim Göstergeleri
Sera Gazı Emisyonu (NO _x , SO _x , PM ₁₀ , VOCs CO ₂)	Bir çevre politikasının varlığı
Karbon ayak izi	Çevre yönetim sertifikasının varlığı (EMS)
Enerji verimliliği	İlgili çevre mevzuatı envanteri
Toprak kalitesi	Önemli çevresel görünüm envanteri
Su kalitesi	Çevresel iyileştirme için amaç ve hedefler
Toplam su tüketimi	Liman çalışanları için çevre eğitim programı
Çöp miktarı/Liman atığı	Çevresel izleme programı (EMP)
Oksijenlenme koşulları	Kilit personelin belgelenmiş çevresel sorumlulukları
Karasal yaşam alanı	Kamuya açık çevre raporu
Tortu kalitesi	

Kaynak: Notteboom, T., Pallis, A. ve Rodrigue, J. P. (2022). Çeviri: Gün, S. (2022)

Yukarıdaki tabloda çevresel performans göstergeleri ve bu süreçteki işlem basamaklarından bahsedilmektedir. Enerji verimliliği, karbon ayak izi vd. birçok çevresel çalışma üzerine işlemler bulunmaktadır. Bu içerikler bize çevre yönetim politikaları üzerine değerlendirmelerin yapıldığı ve geliştirilmelerine yönelik adımların olduğunu göstermektedir. Ayrıca, bu çalışmalar sadece kamu ve özel kuruluşların bünyesinde kalmayıp, web sitelerinden de takip edilebilmektedir.

Günümüzde bu tür çalışmaları Kalite Yönetim Sistemleri uygulamalarında toplayarak buna yönelik önemli araştırmalar ve raporlamalar yapılmaktadır. Bu sayede işlem basamakları gerekli ihtiyaçlara göre toplanarak prosedür ve prosesler tanımlanmaktadır.

5. İş Sağlığı ve Güvenliği Performansı

İş sağlığı ve güvenliği (İSG) günümüzde insana verilen değer ve önemin bir unsuru olarak daha farkındalık oluşturacak bir şekilde uygulanmaktadır. Bu uygulamalar ile işler hem daha standart boyutlara getirilmiş olunmakta, hem de insan kaynağının sağlıklı ve güvenli bir çalışma ortamında faaliyetlerine devam etmesine olanak vermektedir (Dwomoh, Owusu ve Addo, 2013).

Her sektörün kendisine özgü İSG kuralları olmakla beraber mevzuata bağlı olarak bazı standart maddeler ile uygulanmaktadır. İş yerlerinde, risk analizlerine göre gerekli raporlar çıkartılarak uygulamalar için aksiyonlar alınmaktadır.

Liman işletmelerinde ise İSG kuralları hayati önem taşımaktadır. Performans kavramı sadece maddi kazanım veya hareket sayısındaki üretkenlik olmayıp, gerekli standartların oluşturulması ve uygulamadaki başarıları içermektedir (Perera, 2019). İş kazalarının insan sağlığını korumaya yönelik öncelikli olduğu kadar işletmenin faaliyetlerinin kesintisiz devamlılığının sağlanmasında da etkili olmaktadır (Funmilayo, 2014).

Liman işletmelerinde büyük iş makinelerinin varlığı ve sayısı iş kazaları riskini artırmaktadır. Ayrıca limanlar tehlikeli sınıf işletmeler içerisinde yer aldığından dolayı İSG kurallarına daha farklı yaklaşımlarla müdahale edilmektedir (Karadoğan, 2019). Yüksekte çalışmayı gerektiren uygulamalar, vinç altında çalışmayı gerektiren çalışma koşulları, gemi üzerinde lashing/unlashing (kedi yollarında) operasyonel işlemlerinin yapılması gereken alanlarda çalışmaların yapılması, rıhtım tarafında palamar işlemlerinin yapılması, gemide yapılan elleçleme operasyonlarında serdümenlerin sabit bir alanda vinç operatörünü yönlendirmeyi gerektiren iş ortamı vb. çalışma ortamları gibi tehlikeli operasyonlar ile iş süreçlerini yöneten personeller için İSG önemli bir uygulamadır (Tatar ve Özer, 2017). İş sağlığı ve güvenliğine yönelik performans göstergelerini açıklayan maddeler aşağıdaki tabloda gösterilmektedir.

Tablo 5: İş Sağlığı, Emniyet ve Güvenliği Performans Göstergeleri

Emniyet	Güvenlik	İş Sağlığı
Deniz kazaları	Güvenlik suçları	Ölümler
Rıhtım kazaları	Güvenlik suçlarından kaynaklanan zarar	Büyük yaralanma
Kara kazaları	Güvenlik kısıtlamalı alanlarda kazalar	Kayıp iş günleri
Kazadan kaynaklanan zarar	Liman tesislerinde gelişmiş güvenlik seviyelerinin uygulanması	Tıbbi tedavili yaralanma
Çevre kirliliği kazaları	FTE başına doğrudan brüt katma değer	Mesleki hastalıklar

Kaynak: Notteboom, T., Pallis, A. ve Rodrigue, J. P. (2022). Çeviri: Gün, S. (2022)

Yıllık iş kazalarının minimum seviyede olması hedeflenmektedir. Bunun için İSG uzmanlarının sürekli olarak saha tarafında bulunarak gerekli gözlem ve raporlamaları gerçekleştirmesi gerekmektedir (Töz ve Köseoğlu, 2015). Uzmanların saha tarafında gördükleri eksikleri ilgili birimlere düzeltici faaliyet olarak kayıt açarak gerekli iyileştirici çalışmaların alınmasını sağlamaktadır. Limanlarda büyük iş makineleri bulunduğu için iş güvenliği çok önemli bir faktör olarak göz önünde bulundurulmaktadır. İş güvenliği uzman ve teknikerleri ile vardiyalı çalışma düzeninde sürekli operasyon sahasında tespitler ve gözlemler yapan uzmanları görmek iş kazalarının minimum seviyeye indirgenmesinde önemli birer performans çalışmasıdır (Ünal ve Alkan, 2015).

Limanlarda operasyon departmanına bağlı olarak faaliyet gösteren CFS biriminde, beden gücüne bağlı olarak emek yoğun bir görev tanımı bulunmaktadır. Yüklerin konteynerler arasında aktarımının sağlanması aşamasında, numune ve tespit işlemlerinin yapılması, kuru yük gemilerine verilen operasyonel işlemlerde insan gücünün önemi, önemli bir yer edinmektedir. Büyük çuvalarda (Big Bag) bulunan hububatların özel ekipmanlar ile aktarılmasında çalışan personellerin beden gücünü kullanmaları aşamasında operasyonel riskler iş güvenliği uzmanları tarafından analiz edilerek risk oluşturan durumlar tespit edilerek gerekli donanımsal ekipmanlar sağlanarak bilgi eksikliği giderilmektedir (Üngüren ve Koç, 2015). Bu çalışmalarda personellerin durmaları gereken alanlar, vinç aparatına takılan büyük çuvaların çalışanlar tarafından proses yönetiminin nasıl gerçekleştirilmesi gerektiği gibi birçok konu, İSG kuralları ve talimatlarına göre yapılmaktadır.

Kuru yük gemilerinde Bunker ekipmanı ile yapılan yük elleçleme operasyonunda personeller gemi ambarında bulunarak, fırçalar ve Bobcat ile kenar ve dipte kalan hububatı toplayarak Bunker'in alabileceği bir yığın oluşturmaktadır. Bu işlemler aşamasında personeller ekipmanlar ile aynı alanda çalışmak zorunda kalmaktadır. Bu tür çalışma ortamı ve diğer uygulamalar, iş güvenliği eğitimleri ile mesleki olarak iş süreçleri tanımlanmalıdır (Yorulmaz, 2021). Liman işletmelerinde gece çalışmaları da olduğu için bu tür operasyonel işlemler iş güvenliği standartları içerisinde gerçekleştirilmelidir.

Gemi ve saha operasyon çalışmalarında iş güvenliği de önemli bir yer edinmektedir. Gemi operasyon da çalışan personeller gemi üzerinde veya vinç altında görevlerini yerine getirmektedir. Lashing ekipmanları ile gemi

üzerinde lashing veya unlashing operasyonel işlemleri yapılmaktadır. Personeller üç vardiya sisteminde ve açık havada bu görevleri yerine getirmektedir. Hava koşullarının farklılık gösterdiği durumlarda çalışmalar operasyonun durmasına engel olmayacak ise devam etmektedir. Gemi üzerinde konteynerlerin devrilmemesi ve sarsılmaması için birbirlerine bağlayan ekipmanlar ile yoğun çalışma ortamı bulunmaktadır. Bu işlemleri, lashing zinciri (Gerdirme), mapa kilit, hamburger gerdirme (liftin), twistlock (Kilit), lashing bar (Demir çubuk) vb. birçok ağır ve demir ekipman ile operasyonel işlemler yapılmaktadır. İSG uzmanları bu çalışma atmosferini iyi analiz ederek gerekli güvenli çalışma ortamını oluşturmaktadır.

İş makineleri grubunda ise operasyonel hayat biraz daha farklıdır. Personel burada büyük veya yüksek iş makineleri üzerinde çalışmalarını gerçekleştirmektedir. Dikkat ve mesleki uzmanlık burada hayati önem taşımaktadır. Ekipmanın yüksek olması aşağıda çalışanların kör noktada olması durumunda görülmemesine sebebiyet vererek, iş kazası riskini oluşturmaktadır. Terminal çekicilerin manevra alanlarının yeterliliği, konteynerler arasında geçişlerde yön kavramlarının sabit olması, konteynerin dorsede tam oturduğundan emin olunması, vinç operatörünün dorseden konteyneri alırken veya koyarken twistlock'ların söküldüğünden emin olunması gibi durumlar iş güvenliği uzmanlarınca ilgili yöneticinin desteği ile personellere kurallara riayet edilmesi noktasında benimsetilmesi gerekmektedir. Twistlocklar sökülmeden vinç operatörü konteyneri dorseden kaldırmaya kalkar ise çekici ile beraber askıda kalmasına sebebiyet verebilir. Bu tür olumsuz durumlar hem ekipmandaki hem de çevrede diğer görev alan personellere önemli zararlar verebilmektedir.

İş güvenliği, liman işletmelerinde sürekliliği gerektiren bir uzmanlık alanıdır. İlgili uzmanlar sürekli sahada bulunarak gözlemler yaparak iyileştirici çalışmalarını kurul toplantılarına kadar taşıyabilmektedir. İş kazaları hem insan sağlığını etkileyen hem de operasyonel süreçlerin durmasına sebebiyet veren bir olumsuz durumdur. Limanlar zaman ile yarışan işletmeler olduğu için kayıp sürelerin telafisi zor olabilmektedir. Bu tür gecikmelerde ise sadece ilgili liman işletmesi değil, aynı zamanda tedarik zincirindeki diğer paydaşlarda etkilenmektedir.

Limanlarda saha operasyon işlemlerinde, Dry konteyner, Reefer konteyner, tehlikeli madde konteyner, proje yükleri, boş konteyner, sızıntı havuzları ve X-ray işlemleri gibi operasyonel görevler ve konteyner sahaları bulunmaktadır. Dry konteynerin tehlikeli madde konteyner sahasında bulunması önemli bir risk oluşturmaktadır. Reefer konteynerlerin elektrik tesisatlarının saha puantörleri tarafından ihmallerin oluşturacağı elektriksel kazalar meydana gelebilmektedir. X-ray alanının standartlara göre belirli alanda çevrilerek güvenlik alanının oluşturulması personellerin sağlığı için önemli birer çalışmadır. Boş konteynerlerin rüzgâr yönü hesap edilerek araç trafiğinin ve personellerin minimum hareket ettiği bölgede konumlandırılması gerekmektedir. Tehlikeli madde konteynerlerinin istif sahalarında karadan ve denizden müdahale edilebilecek bir alanda istiflenmesi, olağan dışı bir durumda müdahale işlemine esneklik sağlaması için önemli birer planlama organizasyonunu içermektedir. Konteyner istiflerinin standartlara göre uygun konumlandırılması gerekmektedir. Gereğinden fazla istif, elleçleme esnasında veya rüzgârlı havalarda devrilmeye sebebiyet verebilmektedir. Liman içerisinde araç trafiğinin yoğun olması, piyasa araçları ve liman içerisindeki iş makinelerinin trafik yoğunluğundan dolayı çarpışmalara sebebiyet verebilmektedir. Bu aşamada, öncelikli geçiş hakkı ve yol güzergahları bilgilendirme planlaması yapılmalıdır. Operasyonda her bir işaretin ve sesin önemi bulunmaktadır. Gereksiz korna çalma veya başka bir ses türünün engellenmesi, iletişim akışındaki ahengi korumaktadır. Yön tabelaları, bilgilendirici tabelalar hem liman çalışanları hem de dışarıdan gelen misafirler için açık ve belirgin bir şekilde oluşturulmalıdır. Limana giriş yapacak olan misafirlere limanda uyulması gereken kuralların özeti tanıtılmadan içeriye misafirlerin alınmaması gerekmektedir.

Liman sahasında iletişim önemli bir kavramdır. Bu süreçlerin tespit edilmesi için İSG uzmanlarının personelleri yakından gözlemlemeli ve farklı limanların uygulamaları kıyaslanarak geliştirici adımlar atılmalıdır. İletişim, liman sahasında hayati bir öneme sahiptir. Büyük ve geniş alanlardan oluşan limanlar, teknolojik ekipmanlar ile personellerin birbirleri arasında anlaşmalarını sağlamalıdır. Limanda yapılacak olan çalışmalarda ve elleçleme operasyonlarında, işin yapısına göre gerekli sayıda serdümenin bulundurulması diğer çalışanların da güvenliği için açıklayıcı birer faktördür. Kişisel koruyucu ve donanım ekipmanlarının kaliteli ve işin yapısına göre eksiksiz bir şekilde personele temin edilmesi iş kazalarının önlenmesinde önemli bir etkisi bulunmaktadır.

Liman sahasında yürüyüş yollarının belirgin bir şekilde ayrılması personeller ve misafirler için önleyici bir çalışma olabilmektedir. Ayrıca, saha da çalışan personellerin konteyner istifleri arasında nasıl hareket edecekleri belirlenerek riskli bölgeler için uyarıcı levhalar ile donatılmalıdır.

Limanlar, kompleks yapılar oldukları için bahsedilen bu konular çok daha derin ve detaylı çalışmalar ile yapılmaktadır. Genel kapsam itibarı ile burada limanlarda nasıl bir iş atmosferinin bulunduğu dair değinilmiştir.

6. Limanlarda Dijitalleşme

Limanlar, trafik akışının yoğun olduğu ve iş süreçlerinde iletişimin yüksek olduğu işletmelerdir. İş makineleri arasında etkileşimin olması operasyonel süreçlerin başarılı bir şekilde tamamlanmasına olanak sağlamaktadır (Belfkih vd., 2017). Haberleşme sistemleri, otomasyonlar ve diğer el terminalleri liman işletmelerinin operasyonel süreçlerde verimliliği yakalamalarında katkı sağlamaktadır. İş makinelerinin sayısı ve konteyner sayılarının yoğun olduğu bir liman işletmesi, teknolojik yapıyı iyi kullanması sayesinde verimliliğini artırmaktadır (Mlimbila ve Mbamba, 2018).

Yüksek tonajlı yüklerin planlandığı gibi taşınması ve aktarılmasında otomasyonun önemi ortaya çıkmaktadır. Operasyonel süreçler gerçekleştirilirken sistemsel arızalar istenmeyen bir durumdur (Castellano vd., 2019). Bu aşamada, teknolojik yapının sürekli geliştirilmesi ve sürdürülebilir olması limanların başarılarını etkileyen birer etkidir. Ağ tabanlarının liman içerisinde yaygınlaştırılması ve kesintisiz çalışması, personellerin işlemlerinde sürekliliği sağlamaktadır (Karlı ve Tanyaş, 2020). Haberleşme sistemleri ekipmanlar ve insan gücü faktörünün iletişimde önemli rol oynamaktadır (DeChant, 2019).

Limanların planlama departmanlarından iş emri olarak gönderilen veriler, iş makinesinin ekranına düşmektedir. Operatör bu iş emri bilgisine göre yükü liman içerisindeki varış noktasına ulaştırmaktadır. Planlama departmanı, gemi planlama, saha planlama ve rıhtım planlama olarak gerekli iş emirlerini oluşturarak, ilgililere veri yolu ile iletmektedir. Bu iş emirleri, sistemin planlama uzmanına sunduğu seçenekler arasından en uygun olanı ile saha operatörüne veri olarak aktarılmaktadır. Burada, kesintisiz ve doğru bir iletişim operasyonun süresini etkilemektedir. Sistemin doğru yönlendirilememesi operasyonel süreçlerin zaman kaybına yol açmasına sebep vermektedir.

Hangi konteynerin limanın hangi bay bloğunda ve istifinde bulunacağını ve bu operasyonel süreci hangi operatörün yapacağını verisi planlama departmanı tarafından liman yazılımları ile oluşturulmaktadır. Aynı şekilde gemi operasyonunda da yapılacak elleçleme hareketlerinde tahliye veya yükleme operasyonlarında iş emirleri gemi planlama ekibi tarafından sistem aracılığı ile ilgili operatörü iş emri ile veri aktarılmaktadır.

Limandaki vinç ekipmanları otomasyon sistemleri ile çalışmaktadır. Sistemde meydana gelen bir arıza operasyonun aksamasına sebebiyet vermektedir. Otomasyon sistemleri bu ekipmanların hareketlerinin sağlanmasında önemli görevler üstlenmektedir. Liman içerisinde birçok ekipman olduğundan hepsini insan gücü ile takip etmek mümkün olmamaktadır. Bu yüzden sektöre özgü teknolojik yapıların değişiminde dinamik bir yönetimi benimsemek, limanın performansının artırılmasında önemli bir gelişme olarak tanımlanabilmektedir.

Limanda görev alan puantörler, el terminalleri ile konteyner veya diğer yük taşıyan ekipmanların anlık takibinde insan hatasını minimum seviyeye indirgemede faydalı olmaktadır. Yük hareketlerinde kayıt altına alınan veriler hem kontrol hem de elektronik veri arşivine katkı sağlamaktadır.

Dijitalleşme, limanlarda ekipmanlardaki arıza saatinin minimize edilmesi, ekipmanların boşa kalma süresinin minimize edilmesinde, yüksek hizmet kalitesi ve müşteriye anlık cevap verme kapasitesi gibi performans göstergelerini artıran çalışmalar olarak bahsedilmektedir (Wan, vd. 2015; Maksimchuk ve Pershina, 2017).

SONUÇ

Liman işletmelerinde performans kavramı elleçleme hareketleri ve tonaj miktarı ile ölçülmektedir. Ancak, bu iki değerlendirme aracı nicel performans değerlemesini tanımlamaktadır. Genel iş süreçlerinde ve personellerin performansının ölçülmesinde hareket zaman etütleri dikkate alındığı gibi bunun yanında, personellerin aldıkları sorumluluklar, süreç yönetim kabiliyetleri ve başarı endeksleri de değerlendirilmektedir.

Güvenlik görevlisinin performansı görev aldığı saat içerisindeki günlük görev tanımında olan eylemleri oluştururken, bunun yanında mesai saati sürece bulunduğu alandan ayrılmaması da performans kavramını içermektedir. Aynı şekilde santral görevlisinin gün içerisinde aramalara verdiği cevaplar nicel performans kavramını içerirken, aramaların olmamasına rağmen çalışma ortamından ayrılmaması da birer performans tanımını içermektedir.

Performans değerlendirme sadece nicel verileri oluşturmayıp, subjektif kavramları da nitelendirmektedir. Eylemler nicel görevlerin hareketini oluşturma bilmektedir. Ayrıca her bir eylem bir görevin başarılı veya başarısızlığını da ortaya koyabilen faktörler olarak değerlendirilebilmektedir.

Konteyner limanlarında performans kavramını içeren yıllık twenty-foot equivalent unit (TEU) elleçleme verilerini oluşturmaktadır. Yıllık TEU adetinin artışını etkileyen birçok faktör bulunmaktadır. Ekipman parkurunun genişliği, liman sahasının yeterli konteyner barındırmaya imkan verebilecek seviyede büyük olması. Rıhtımın aynı anda alabileceği gemi sayısının verimliliği, profesyonel insan kaynağının etkin işgücünü ortaya koyabilmesi, gemi, rıhtım ve saha planlama işlemlerinin analitik süreçlere göre optimum sürede yönetilmesi bir gemide yapılacak tahliye veya yükleme operasyonlarının verimliliğini yansıtmaktadır.

Genel kargo ve diğer liman hizmetleri arasında da aynı kavramlar ve beklentiler performans kavramının etkinliğine etki etmektedir. Limanlarda yüksek tonajlı hareketler etkin olduklarından, vinç parkurunun önemi ayrı bir performans değerlendirme kavramını içermektedir. Vinç ekipmanlarının saatlik periyodik bakımlarının düzenli yapılması, ekipmanın daha az arızaya sebep olmasını sağlayarak daha fazla verimlilik alınmasını sağlamaktadır.

Vinç operatörlerinin performansı limanın genel işletme performansına etki etmektedir. Yetişmiş vinç operatörlerinin önemi ve ekipman parkurunun bakım faaliyetleri işletme performansını yansıtmaktadır. Bundan dolayı, teknik departman yapılanmasının doğru bir organizasyon yapısında kurulması verimliliğin artırılması açısından önem göstermektedir.

İş gücü kaybı elleçleme operasyonlarında zamanın önemini ortaya koyan birer veri havuzunu içermektedir. İş güvenliği eksikliği veya hatalarından dolayı iş kazalarının fazla olması insan sağlığının tehlikeye girmesini etkilemekle beraber, kayıp çalışma oranlarını da olumsuz etkilemektedir.

İSG uzmanlarının liman sahası, vinç ekipmanları, gemi üstü çalışmalarının risk analizlerini doğru ortaya koyup, yorumlaması verimli iş ortamının sağlanması için önemli birer uygulamadır. İSG uzmanları sahada yaptıkları çalışmalar ile sadece iş kazalarının önlenmesi veya azaltılmasında etkili olmayıp, insan kaynağının etkin çalışması için ortam oluşturmaktadır.

Limanlarda kullanılan teknolojik ekipmanlar doğru haberleşme sistemlerinin kurulması ve uygulanmasında yer almaktadır. Kompleks yapıları içeren limanlar, operasyon ve vinç ekipmanlarının ilişkili departmanlar ile doğru birer iletişim kurmalarında bilgi ve iletişim teknolojileri sayesinde sağlamaktadır. İnternet veya diğer haberleşme sistemlerinin etkin yönetilmesi operasyonun verimliliğinin artmasına olanak tanımaktadır.

Teknolojik sistemler departmanlar arası işlevselliğinin yanında bilgi güvenliğini de sağlamaktadır. Liman işletmeleri gibi büyük organizasyonlar sistem odalarını ve bilgi yedeklemelerini olağan veya olağan üstü durumlar için güvenli alanlarda tutmaktadır. İşletmenin bilgi güvenliği veya sistemsel verimliliğinin sel, deprem, fırtına ve diğer afetler için limanın olduğu sınırlar içinde olmakla beraber, bölgeden daha uzakta ve güvenli birer alanda yedeklemesi yapılabilmektedir.

Limanlar dış ticaret süreçlerine açık işletmeler oldukları için sadece kendi yapılanmaları içerisinde bilgi sistemlerini oluşturmayıp, müşterilere daha iyi hizmet verebilmek ve doğru bir iletişimi kurabilmek için yenilikçi uygulamaları hayata geçirmektedir. Hızlı iletişimi içeren ve tasarrufu sağlayan tek pencere sistemi gibi yazılımlar günümüzde limanlarda kullanılmaya başlanmıştır. Tek pencere sistemi sayesinde müşteriler yükün bulunduğu liman ile elektronik ortamda işlemlerini yapabilmektedir.

Liman işletmelerinde performans kavramından bahsedilen nicel veriler olan TEU ve tonaj elleçlemesi genel itibarı ile öncelikli değerlendirmelerden bilinmektedir. Ancak bahsedilen iş güvenliği çalışmaları, teknolojik yatırımlar, çevresel etkiler, insan kaynağının bilinçlendirilmesi, vinç ve araç parkurunun yeterli kapasitede olması, yönetimin vizyoner kararları gibi birçok etken limanların performans değerlendirmesinde değerlendirilen etkileri içermektedir.

Performans ölçümünde sadece nicel veriler ölçümlenmemektedir. Süreç yönetimi de performansı içeren bir iş kavramıdır. Bir işin standartlara uygun yönetilmesi ve başarıya ulaştırılması da performans göstergesinin bir aşamasıdır. Finansal kaynakların yönetilmesi, yeni yatırımların yapılması ve işletmedeki iş hareketliliğinin arması performans göstergelerini yükselten başlıklardandır.

Sonuç olarak, liman işletmelerinde planlama departmanı, iş makineleri grubu, gemi ve saha operasyon birimi, CFS birimi, teknik hizmetler birimi, insan kaynakları birimi gibi departmanların koordineli çalışması verimliliğin sağlanmasında önemlidir. İdari ve operasyonel süreçlerin doğru yönetilmesi sürdürülebilir bir performansı sağlamaktadır.

Özet: Sürekli değişim ortamında insan kaynağı odağında değişim yönetimi uygulamalarına karşı olası tepki ve direnç halinde amaçlanan uyum seviyesinin gerçekleştirilmesi bazı güçlükleri beraberinde getirebilmektedir. Bu çalışma, insan kaynaklarının değişime uyumu konusunda hem özne olan yönetim ve hem de nesne konumundaki çalışanlar bakımından bu türden zorlukların aşılabilmesi için serbest kürsü yönteminin kullanılmasını ele almaktadır. Bu kapsamda; bir liman işletmesi uygulama örneği üzerinden personele temas etme anlayışıyla serbest kürsü yöntemi kullanımında Güçlü Yönler, Zayıf Yönler, Fırsatlar ve Tehditlerin (GZFT) analizi gerçekleştirilen bu çalışma ile yöntemin uygulanması için geçilecek aşamalar hakkında bir yol haritası oluşturularak değişim yönetiminde serbest kürsü yöntemi kullanılmasına örnek vaka açıklaması getirilmekte ve verimlilik ile maliyetler üzerindeki potansiyel etkileri değerlendirilmektedir. Çalışmanın değişim yönetimi uygulamalarına yönelik serbest kürsü yaklaşımının kazandırılmasını farklı sektörlerdeki işletmeler için de yol gösterici olması beklenmektedir.

Anahtar Kelimeler: Değişim Yönetimi, Uyum, İnsan Kaynakları, Serbest Kürsü.

Potential Efficiency and Cost Effects of the Free Lectern Method in Change Management on a Practice Case of a Port Business

Abstract: In an environment of continuous change, the realization of the intended level of compliance in case of possible reaction and resistance to change management practices in the focus of human resources may bring some difficulties. This study deals with the use of the free lectern method in order to overcome such difficulties in terms of both the management as the subject, and the employees as the object in the adaptation of human resources to change. In this context this study, in which an analysis of Strengths, Weaknesses, Opportunities and Threats (SWOT) in the use of the free stand or lectern method with the understanding of contacting the personnel through a port business application example, a roadmap was created on the stages to be passed for the implementation of the method and an example case description for the use of the free stand method in change management and along with their potential effects on efficiency and costs are thereby evaluated. It is expected that the study will serve as a guide for businesses in different sectors so as to provide and gain a free lectern approach to change management practices.

Key Words: Change Management, Compliance, Human Resources, Free Lectern.

1. GİRİŞ

Değişim yönetimi günümüzde işletmelerin mevcut durumlarının ortaya çıkartılması ve daha iyi koşullarda devamlılığın sağlanması için belirli dönemlerde olağan veya olağan dışı uygulamalar ve nedenlerle ortaya çıkan çalışmaları içermektedir. İşletmelerdeki değişim yönetimi çalışanlar için risk faktörü olarak görülebilmektedir. Her bir çalışan mevcut bilgi ve çalışma ortamını kaybetmek istemeyecektir. Bundan dolayı, değişime başlayacak olan işletmeler bu dönüşüm durumunu çalışanlar karşısında doğru bir iletişim ve güven duygusu içerisinde sağlamak zorundadır.

İşletmelerde değişim konuları birçok faktörü kapsayabilmektedir. Olağan dışı durumlardan dolayı meydana gelen olumsuz faktörlerin yönetilme isteği, olağan bir durumdan dolayı daha iyiye ulaşma ihtiyacı, şirketler arası geçişler, şirketlerin ortaklıkları veya işverenlerin değişmesi, mevcut ekipman parkurunun değişime uğraması ihtiyacı veya modern yapıya geçişi ve diğer yenilikçi faktörlerin getireceği çalışma düzenlerinin değişmesi gibi durumlar bu faktörler arasında sayılabilmektedir.

Değişime ihtiyacın olması maliyetlerin daha akılcı ve doğru yönetilmesi ile takibi için gerekli olabilmektedir. Maliyet kavramı işletmelerin varlıkları ve kaynaklarının yönetilmesi için üzerinde durmaları gereken uygulamaları da içermektedir. Serbest kürsü toplantıları ise değişimin geçiş aşamasında mevcut durumların tespit edilmesi ve maliyet süreçlerine farklı etkileri olan çalışma durumlarının ve etki sonuçlarının ortaya çıkartılmasında katkısı olan yönetim ve çalışan arasındaki iletişimde kullanılan bir iletişim yöntemi veya aracıdır.

1.1. Yöntem

Bu çalışmada, değişim yönetiminin uygulanmasında serbest kürsü toplantılarının etkileri üzerinde nitel veri desenli araştırması ve incelemesi yapılmıştır. Değişim yönetiminin işletmeler için önemi ve anlamı üzerine değerlendirmeler ortaya konulmuştur. Serbest kürsü toplantılarının değişim yönetimindeki etkileyici unsur olma özelliği yansıtılmıştır. İşletmelerdeki maliyetlendirme ve verimlilik faktörlerinin değişim yönetimindeki önemi açıklanmıştır. Bu çalışmada, Gün (2019) yayımlanmamış doktora seminerinden türetilmiş olup varsayımsal bir liman işletmesi olarak Günneport liman işletmesi örneğinde incelemeler ve değerlendirmeler yapılmaktadır.

Serbest kürsü toplantısı ve metodunun kullanılarak yönetiminde insan kaynaklarının rolü ortaya konulmuş olup, yönetimin desteğinin çalışmanın başarılı olmasındaki öneminden bahsedilerek bilimsel literatürde yetersizliğin tespiti üzerine bu eksikliğin bir ölçüde giderilmesi amaçlanmaktadır. Çalışmanın konu başlıkları ile ilgili olan literatür taraması yapılmıştır. Serbest kürsü uygulamasına yönelik varsayımsal bir liman işletmesi örneğinde işletme uygulaması yapılarak serbest kürsü toplantısının güçlü ve zayıf yönleri, tehdit ve fırsatları ile birlikte uygulama aşamaları verilerek çeşitli öneriler de getirilmektedir. Ayrıca, işletmelerdeki değişim yönetimi çalışmalarında serbest kürsü toplantılarının verimlilik ve maliyetlerin kontrol altında tutulmasında etkileri olduğu ortaya konulmaktadır.

1.2. Bulgular ve Tartışma

İşletmeler, varlıklarının devamlılığında insan kaynağına verdikleri önem ve değer ile onların güvenliğini kazandıkları sürece bağlılığı yüksek çalışan portföyünü oluşturmuş ve sürdürülebilir kılmış olmaktadır.

Çalışmamızda da işletmeye karşı bağlılığı yüksek insan kaynağının sağlanmasında serbest kürsü toplantılarının önemi üzerinde yapılan inceleme ve değerlendirmelerin sonuçları paylaşılmakta ve bazı öneriler getirilmektedir.

2. DEĞİŞİM YÖNETİMİ İLE VERİMLİLİK VE MALİYET İLİŞKİSİ

Değişim süreçleri planlı ya da plansız olsa da etkileri bireysel veya organizasyonel düzeyde farklı olabilmektedir. Ekonomik durumlar, siyasal mekanizmalar, sosyal beklentiler, organizasyonel çevreler, rakipler, bireysel tercihler ve yönetim anlayışları ise sürekli değişmektedir. Bu olgular ve anlayışlar işletmeleri, teknolojileri ve yönetsel kararları yönlendirebilme gücü olduklarından organizasyonları bu akışa göre kendilerini garanti altına almayı teyide ve başarıya yönelik aksiyonlar almaya yönlendirmektedir.

Günümüzde değişim olgusu daha hızlı gerçekleşir hale gelmiştir. Son dönemde küreselleşme ve rekabet süreci daha da önem kazanmaktadır. Bu süreçte teknolojinin gelişmesi, yeni üretim sistemlerinin geliştirilmesi, uluslararası standartların netleşmesi ve bu süreçlerin başarılı bir şekilde yönetilmesinin bilinçli ve sürekli gelişime açık insan kaynağı ile mümkün olduğu bilinmektedir.

İnsan kaynaklarının bu süreçlere yön verebilmesi için nitelikli birimlerin oluşturulması gerekmektedir. Bunun için organizasyonu uyumlu ve başarılı bir şekilde yönetmek için insan kaynaklarının bu yönde çalışması gerekmektedir. İnsan kaynakları, iş hayatında verimlilik, üretkenlik ve başarıya ulaşmanın yolunu gösteren bir rehberdir. İnsana değer vermenin ve iş gücünü doğru yönlendirmenin önemini bilen insan kaynakları, bu süreçte başarılı olmak için çeşitli yöntemler kullanmaktadır. Çalışanlarına değer verildiğini hissettiren ve güven bağı kurmuş çalışanlar ile uzun vadeli planlar yapabileceklerine inandıran işletmeler öne çıkabilmekte ve sektörde öncü olabilmektedirler.

İşletmelerde verimlilik anlayışı da yönetimin yakından takip ettiği bir içeriktir. Verimlilik, üretim işletmelerinde elde edilen üretim miktarını açıklarken; hizmet işletmelerinde süre kavramını ortaya koymaktadır. Verimliliğin bazı tanımlamaları ise üretim faktörlerinin tüketim ile karşılaşması sonrası ortaya çıkan net kazanç olarak tanımlanmaktadır (Odabaşı, 1997: 17). Bir karşılaştırma aracı olarak değerlendirilen verimlilik, ekonomik sistem ile de ele alınmaktadır (Doğan ve Tatlı, 2010: 9). Optimum olma aşamasında ise üretim faktörlerinin, işgücü kaynağının ve sermayenin makro düzeyde yapısal gelişmişlik düzeyi üzerinden ekonomik denge konumunu açıklamaktadır (Baş ve Artar, 1990: 10).

Verimlilik ayrıca, giriş hacminde herhangi bir değişiklik olmaksızın çıkış hacmindeki artış olarak tanımlanmaktadır. İnsan kaynakları yönetim sistemlerinde verimlilik, çalışanların çalışma saatlerinde ortaya çıkan üretkenlik veya hizmet etkinliği olarak tanımlanabilmektedir (Prokopenko, 2011: 19).

Değişim yönetimi ise insanların zaman içinde beklentiler ile ilgili değerlerini, bilgilerini, inançlarını ve tutumlarını değiştirmelerini sağlamaktadır. Bunun en önemli öncüsü eğitimidir. Bireysel modlar arasında geçiş yapmak artık

eskisinden daha kolay olabilmektedir. Farklı kültürel unsurlar ve değerler artık daha kolay iç içe geçmektedir. Bununla birlikte, çalışanlar artık daha kolay memnun olmamaktadırlar. Kendilerine tebliğ edilen kuralları detaylı araştırmadan kabul etmemektedirler. Değer görmeyi bekleyen insan kaynağı artık daha bilinçli olabilmekte, soru sormayı öğrenir ve farklı beklentileri ile günden güne bilişsel değişime uğramaktadır. İnsan kaynakları artık bu beklentileri yönetmek ve karşılamak için böyle bir çevrede faaliyet göstermektedir (Sadullah, 2010: 3).

Şirketlerin işgücü maliyetleri için şirketlerde otomasyon sistemlerinin yaygın olarak benimsenmesi, çalışan sayısında azalmaya neden olabilmektedir. Ancak bu süreçten sonra ortaya çıkan bir faktör de yüksek nitelikli personel teminidir. İnsan kaynaklarının doğru yönetim politikaları sayesinde olumlu sonuçlar ortaya çıkabilmektedir. Buna örnek olarak; işgücü devrinde azalma, çalışanlar ve yönetim arasındaki çatışmalarda azalma, çalışan motivasyonunda artış, işe odaklanmada artış, iş gücü etkisinde artış ve memnuniyet düzeyinde gelişmeler meydana gelebilmektedir (Personnel Widens Its Franchise, 1976: 116).

2.1. İşletmelerde İnsan Kaynaklarının Değişime Uyumu

İnsan faktörü, kuruluşun ürün ve hizmetlerini tanımlayan ve amaçlarına ulaşmak, başarıya ulaşmak ve beklentileri karşılamak için gerekli olan insan kaynağını ifade etmektedir. İnsan kaynağı, üretim faktörlerinin amacı ve beklenen çıktının ana özelliklerinden biri olarak ortaya çıkmaktadır. İnsan kaynakları yönetimini anlamak, bir organizasyonun en üst kademesinden en alt kademesine kadar herkesi etkilemektedir. İnsan kaynağı, şirketin sadece kendi içindeki işgücünü değil, aynı zamanda dışarıdan gelecek potansiyel adayları ve yetenekleri de ifade etmektedir. Güçlü sermayeye sahip şirketlerin başarılı olması yeterli olamamaktadır. İnsan yönetimine değer veren ve yeni yetenekleri bulan kuruluşlar, kalıcı bir başarıya sahip olabilmektedir. İşletmelerdeki işgücünün tatminsizliği, isteksizliği ve eğitimsizliği ise iş kalitesini düşürebilmektedir. İnsan kaynaklarının temel amaçları, verimlilik ve daha kalifiye iş gücü yaratarak şirketlerin rekabet gücünü artırmaya yönelik çalışmaları da içermektedir (Sumarth, 1987: 3). Yönetimin liderliğinde markalaşma ve kurumsallaşma süreçlerinde bu faktörleri uygulayabilen şirketler başarılı olarak kurumsal hayatın verimliliği artırılabilirler (Meyer, 1976: 84; Schuler, 1987: 35; Sadullah, 2010: 3).

Çalışanların kendilerini değerli hissetmeleri işletmenin verimliliği için önemli bir faktör olarak bilinmektedir. Bu duruma bağlanan personeller, organizasyonun durumunu insan kaynakları olarak gördüğümüzün göstergesi olabilmektedir.

İşletmelerde yaşanan işgücü devir hızı, devamsızlık, iş kazaları, müşteri şikayetleri ve organizasyondaki tutarsızlıklar da maliyet artışlarını ortaya çıkartabilmektedirler. Artan maliyetler, azalan kalite ve ortaya çıkan verimsizlikler, yönetim için istenmeyen kavramlardır. Bu amaçla; insan kaynakları bu çelişkileri ortadan kaldırmak veya azaltmak için güncel iyileştirici çalışmalar yapmaya odaklanabilmektedirler. İnsan kaynakları yönetiminin araştırması sadece işgücü açığını gidermek için yeterli olmayıp aynı zamanda örgütün ve dolayısıyla şirketin başarısını etkileyen önemli bir yaklaşımdır (Sadullah, 1989: 49).

Örgütsel bir bakış açısından değişim, dünya çapında var olan kaliteli mal ve hizmet seviyelerine ulaşma aşamalarını gösterebilmekte, Johnson'a (1993: 216) göre daha önce var olan normal üretkenlik ve hizmet zihniyetini ifade etmektedir. Değişim, sürekli gelişim anlayışına dayanmaktadır. Örgütsel değişim ise örgütlerin çevrelerine uyum sağlamasıdır. Teknik değişiklikler, iş akışı değişikliği, süreç değişikliği bu adımlardandır. Şirketler başarılarını bu temel değişim aşamalarına borçludur. Çevrecilik ve rekabet avantajı yakalamış şirketler; büyüme, pazar payı artışı ve sürdürülebilirlik gibi farklı aşamaları yaşamaktadır (Çelebioğlu, 1982: 3). Organizasyonlar sadece organizasyonel değişim veya bireysel değişimi ihtiyaç olarak görmek yerine, yeterli değişim araştırması yapıp yapmadıklarını düşünmektedirler. Artık kuruluşların iç prosedürlerini ve süreçlerini değiştirme ihtiyaçları daha derinlemesine araştırılmaktadır.

Aldag ve Stearns, 1987: 520). Değişim, var olana göre farklı bir aşamaya getirmektir. Değişim; teknoloji, süreç, kişisel değişim, kalite, bakış açısı, bireylerin odaklanması ve bilgi geçişi gibi konuları kapsamaktadır.

2.2. İnsan Kaynakları Biriminin İşletmenin Değişim Sürecindeki Önemi

İnsan kaynaklarının değişim sürecinde başarılı olabilmesi için değişimin aşamalarını anlayabilecek yeterlilikte olması gerekmektedir. İnsan kaynakları, değişim sürecini profesyonel bir şekilde yönettiğinde, organizasyonda çalışanları değişikliklere uyum sağlama konusunda etkileyebilmektedir.

2.2.1. Örgüt Kültürü

Değişim ilerledikçe, riskler ve belirsizlikler ortaya çıkabilmektedir. Burada insan kaynakları yöneticisi, belirsizlikle karşılaşan ve risk alabilen çalışanları desteklemelidir. Çalışanlar, değişikliğin neden olabileceği başarısızlıklarla yüzleşmek istemezler. İnsan kaynakları çalışanları, esnek uygulamalar ve fikir destekleyici ortam yaratmalıdır. Bu sayede çalışanların önündeki engeller kaldırılarak sonrasında değişim gerçekleşebilmektedir. Değişim aşamasında çalışanları motive etmek en önemli yönetsel taktik unsurlardan birisidir. Motivasyonun desteği ile çalışanlar, değişimin gerektirdiği yeni bir oluşum yaratmaya teşvik edilebilmektedirler. Değişim aşamasında ise yönetim tarafından alınacak çeşitli tedbirlerle birlikte faaliyetlerin bazı bölümleri için olsa da bazı sorumlulukların çalışanlara bırakılması, çalışanın örgüt kültürüne olan güvenini arttırabilmektedir (Janssen vd., 2004: 129; Atuahene-Gima, 1996: 35).

2.2.2. İletişim

İnsan kaynakları, yönetim ve çalışanlar arasındaki diyalogu uygulayan kritik bir öğedir. Organizasyonda alınan değişim kararlarının çalışanlara nasıl ve hangi düzeyde iletileceğinin planlanması insan kaynakları tarafından yönetilmelidir. İletişimin olmaması veya kötüye kullanılması, birçok kuruluşun sorunlarında önemli faktörler arasındadır. Değişim aşamasında doğru bir iletişim ise, birimler arasında istenmeyen bilgi ortamının oluşmasını engelleyen etkiler yaratabilmektedir (Mchugh, 1997: 345).

2.2.3. Eğitim

İnsan kaynakları eğitimi yoluyla, çalışanların örgütsel değişime tepkileri ortadan kaldırılabilir. Değişimle gelen yeni bilgiyi anlayan çalışanlar, değişimi reddetmek yerine sahiplenme fikrini benimseyebilirler. Bu aşamada çalışanlar örgütün kendilerinden beklediği talepleri karşılayabilirler. Ancak eğitim olmadan çalışanlardan beklenen yanıtlar gelmeyerek ve değişime öncülük eden insan kaynakları biriminin beklentileri karşılayamama durumu ortaya çıkabilmektedir. Çalışan eğitimi, kendisine ve kurumlarına güvenen çalışanlar yaratır. Eğitim sayesinde sürekli gelişme ve değişimin olumlu yanı ortaya çıkmaktadır. Bu süreçte kendiliğinden değişimler de gözlemlenebilmektedir (Oxtoby, 2002: 310).

2.3. Örgütsel Değişim Direnci

Waddell ve Sohal'a (1998: 543) göre örgütsel değişime direnç; çalışanların değişimle ilgili şüphe, güvensizlik, erteleme ve belirsizlik gibi durumları deneyimlemeye başlaması anlamına gelmektedir. Direnç faktörü bireysel veya bölümsel olarak ortaya çıkabilmektedir. Direnç katsayısı arttığında sosyal veya ekonomik kayıplar meydana gelmektedir. Değişim, çalışanlara yeni bilgiler getirmek istese de başta bahsedilen olumsuz etkenler şoklara neden olabilmektedirler. Örgütsel değişim sürecinde özellikle direnç gösteren çalışanlar cezalandırılmamalıdır. Direnci azaltmak için planlı değişiklikler yapılmalıdır. Direnç nedenlerinin şiddeti ve etkisi belirlenmelidir.

2.4. Serbest Kürsü Yöntemi

Öğrenme ihtiyacının temelde insan hayatındaki en önemli faktörlerden biri olduğu tartışılmaz bir gerçektir. İnsan, gününün büyük bir bölümünü yaptığı işe ayırabilmesi ve bu süre zarfında çabalarına saygı duyması, sevmesi ve kabul etmesi için neden çalıştığını bilmesi gerektiği duygusu her zaman bulunmaktadır. Bu nedenle, her çalışanın farklı bir duygu yoğunluğuna sahip olduğunu göz önünde bulundurmak, bağlılığı ve işiyle katma değer yarattığı hissini yaratmak gerekmektedir. Günümüz iş dünyasında, çalışanlar artık şirket içinde değer görme isteklerini dile getirmektedir. Fikirlerinin sisteme alınmasını ve hedefler dahilinde gündeme alınması talep edilmektedir. Yıllardır iş yerinde kullanılan ekipmanların adını söyleyemeyen, tam olarak kullanım amacının farkında olmayan, şirketin gelecekteki hedefinin ne olduğunu bilmeyen, organizasyondaki takım arkadaşlarını tanımayan ve çalışma hayatındaki haklarını bilmeyen personeller sadece çalışma duygularının istendiğini düşünebilmektedirler.

Şirketin büyümesine göre yatırım kararlarının bilinmemesi, finansman bilgisinin sürekli belirsiz olması, çalışanın farkında olmadığı bu gibi pek çok konunun çalışanların şirkete olan güvenini ve verdikleri değeri zedeleyebilmektedir. Serbest kürsü toplantılarının temel amaçları arasında; çalışanların bulundukları şirket ve sektör ile ilgili bilgi alması, düşünce ve önerilerini ifade etmesi, çalışanların birlik ve beraberliğinin anlamını kabul etmesi, şirket içinde aile kavramını kabullenmesi, yaratıcı öneriler sunması, personelin bilinçli yönetimi,

profesyonel anlayışın ortaya konulması, güvenini artıran güçlü kişilerarası becerilerin geliştirilmesi ve uzun vadeli çalışma becerileri ve faaliyetlerde pozitif yönlerin geliştirilmesi yer almaktadır.

Serbest kürsü; çalışanların ortak sorunlarının veya herkesin talep ettiği dilek, öneri ve şikayetler gibi gündem maddelerinin görüşüldüğü profesyonel anlayışları da ortaya koymaktadır. Serbest kürsü toplantıları, grup şirketler içinde veya aynı şirkette farklı departmanların bir araya gelip, Üst Yönetici veya Genel Müdürün liderliğinde bu sürecin yönetilmesini ifade etmektedir. Bu toplantılarda ilk önce yapılması gerekenler arasında; serbest kürsü çalışmasının tarihi ve saatinin belirlenmesi bulunmaktadır. İnsan kaynakları, Genel Müdür ile toplantı öncesinde görüşerek işletme tarafından çalışanlara açıklanması planlanan gündem maddeleri oluşturulmaktadır. Toplantı tarihi, saati ve gündem maddeleri ofis çalışanlarına mail üzerinden bildirilmektedir. Ofis dışındaki çalışanlara ise işletmenin giriş sahası panoları, soyunma odaları panoları, vardiya çizelgesinin olduğu panolar, yemekhane, dinlenme alanları ve ekranlı araçların olduğu talimat ekranlarına duyurular yapılarak tüm çalışanların bilgilendirilmesi sağlanmaktadır.

Toplantının yapılacağı günde ise salonda bulunan çalışanlardan bu bilinçlendirme sürecine katıldıklarına dair imza alınarak eğitim ve destek faaliyeti olarak sistemlere kaydedilmektedir. Genel Müdür'ün kürsüde açılış konuşması sonrası mevcut işletme akışları hakkında bilgi verilerek hangi aşamadan bugün nereye geldiğine dair genel bilgiler çalışanlara aktarılmaktadır. Ayrıca; işletmenin beş yıllık ve daha uzun dönemli planları ve hedefleri hakkındaki bilgiler de açıklanabilmektedir. Bu sunumdan sonra çalışanlar söz alarak işletme hakkında kendilerinin öğrenmek istedikleri konuları, bulunduğu pozisyondaki sorun ve önerilerini Genel Müdür'e sorabilmekte veya belirtebilmektedirler. Soru ve cevap aşamasında sadece Genel Müdür açıklama yapmayıp diğer katılımcılarda konuya dahil olmalarına imkan sağlanmaktadır.

Bu şekilde gündem zenginleştirilip, bilinçli çalışan profili oluşturulması istenmekte, işletmeyi önemseyen çalışan katılımı sağlanması hedeflenmekte, sorumluluk sahibi, kendisini iyi ifade eden, sorgulayıcı, araştıran, merak eden, hevesli, işletmesinin kalkındırılması için mücadele eden ve kalite seviyesini yukarı çeken çalışan atmosferi oluşturulmak istenmektedir. Toplantıda konuşulan tüm maddeler insan kaynakları tarafından not edilip, daha sonra kök neden analizine tabi tutulmaktadır. Çalışanların iyileştirilmesini istediği gündem maddelerinden hayata geçirilenler için tekrardan bir sonraki toplantıda kendilerine bilgi amaçlı geri bildirim sağlanmaktadır. Gündem maddelerinde olup, hayata geçirilemeyen konular ise nedenleri ile birlikte çalışanlara anlatılmaktadır. Serbest kürsü görüşmeleri yılda bir defa yapılmaktadır. Eğer ihtiyaç görüldüğü takdirde yılda iki defa yapılabilme imkanı da sağlanabilmektedir.

Serbest kürsü toplantıları ile verimlilik seviyesinin artması hedeflenmektedir. İşletmelerin temel amaçlarından olan verimlilik ve maliyetlendirme, sürekliliğin sağlanması ve işletmenin kar amacının gelişimine etki eden ana faktörlerdendir. İşletmeler sürekli bu iki faktörün gelişim göstermesi için mevcut durumları analiz ederek iyileştirici yöntemler aramaktadır. Verimlilik, en etkili uygulamalar ile kapasite artışını temsil eden bir kavram olarak tanımlanabilmektedir. Verimliliği sürekli hale getiren işletmeler, rekabetçi avantajı elde tutmaktadır (Kahya ve Polat, 2007: 10). Ayrıca verimlilik, maliyetlerin azaltımında ya da optimum kullanımında önemli bir etki gücünü temsil etmektedir. Ulusal veya uluslararası alanda meydana gelen olağan dışı durumlar işletmeler için risk faktörünü ortaya çıkartmaktadır (Akal, 1994: 27). Bu aşamada her birim ve işlem kalemleri verimliliği amaç edinerek, işletmenin olumsuzluklardan en az etkilenmesi için çalışmaktadır (Toprak, 2003: 27). Verimlilik ve maliyetlendirme kalemlerinin doğru yönetilmesinin birçok yöntemi olmasına rağmen, en önemli aşamaları ise insan kaynağının bu odak noktalarına doğru yönlendirilmesini içermektedir (Lenger, 1997: 25). İnsan kaynağına işletmenin devamlılığı konusunda bu iki amacın sürekliliğinin sağlanmasının çalışanlar için de önemli olduğu benimsenmelidir.

Serbest kürsü toplantıları içeriğinde; değişim yönetimi ile günün koşullarına uyum sağlanması ve işletmenin yenilikçi faktörlere adapte edilmesi için yapılan uygulamalar yer alabilmektedir. Serbest kürsü toplantıları bu amaca giden yolda çalışanları doğru bilgilendirme ile mevcut durumun analizini ortaya koymada herkesin katılımının olduğu bir kurum kültürü ortaya çıkartmaktadır. Değişim yönetiminde yönetsel araç veya model önerisi olarak ele alınan serbest kürsü yaklaşımı ile; bu süreçteki uygulama aşaması, faydaları, çalışanların bakış açısı, serbest kürsü yaklaşımının değişim planındaki etkisi, bu görüşmelerin değişimin tamamlanmasındaki etkileri gibi konular değerlendirmeye alınmaktadır. Serbest kürsü çalışmasının yönetilmesi ise işletme yönetimi ve çalışanların ortak beklentilerini analiz edip başarılı bir çalışma ortamının oluşturulmasını sağlamakla yükümlü olan insan kaynakları departmanı tarafından sağlanmaktadır. Aşağıda Tablo 1'de Gün (2019)'dan türetilmiş serbest kürsü toplantısı iyileştirilmiş yol haritası aşamalar halinde gösterilmektedir:

Tablo 1: Serbest Kürsü Toplantısının Aşamaları

Serbest Kürsü İhtiyacının Tespiti

Serbest Kürsü Toplantısı için Toplantı Takviminin Oluşturulması

Toplantı Gündem Maddelerinin Oluşturulması ve Toplantı Dokümanlarının Hazırlanması

Üst Yöneticinin veya Genel Müdürün Toplantıya Liderlik Etmesi

Personellere Duyuruların Yapılması ve Toplantının Gerçekleştirilmesi:

Bir önceki toplantıda konuşulan gündem maddelerinin değerlendirilmesi
İşletmenin mevcut durumu ve geleceğe yönelik hedeflerinin değerlendirilmesi
Ulusal veya uluslararası alandaki değişimlerin değerlendirilmesi
Personellerden alınan geri bildirimler
İşletmenin mevcut süreçlerindeki performansının analiz edilmesi
Eğitim ihtiyaçlarının ve sosyal aktivitelerin değerlendirilmesi
İyileştirici ve geliştirici faaliyetler için önerilerin alınması
Soru/Cevap şeklinde belirli başlıklarda gündem konusu maddelerinin değerlendirilmesi

Üst Yöneticinin veya Genel Müdürün Toplantı Raporunun Yazılmasına Liderlik Etmesi

Toplantı Sonrası Alınan Kararlar ve Yeni Gündem Maddelerinin Programlarının Oluşturulması

Toplantıda Değerlendirilen Konuların Kök Neden Analizlerinin Yapılması

Değişimin Uygulanması ile Performans, Verimlilik ve Maliyetlere Katkı Düzeyinin İzlenmesi ve Ölçülmesi

Kaynak: Gün (2019)'dan türetilerek geliştirilmiştir.

İşletmenin mevcut durumu ve gelecek vizyonunu oluşturan konuları ilgilendiren, varsa işletmenin değişimine ilişkin alınan kararlarda tehdit edici, güven kırıcı bir oluşum, gizli çalışmalar gibi değerlendirmelere sebebiyet verilmemesi adına serbest kürsü toplantısı doğru bilgiyi ortaya koymak için önemli bir çalışma programını içermektedir. Alınan değişim kararlarında bu sürece tüm çalışanların katılımı ile riskli bir atmosferin olmadığı mesajı verilmektedir. Değişim sürecinin sadece yönetim ve belirli kişilerce yönetilecek bir çalışma olmadığı da serbest kürsü toplantıları ile ifade edilebilmektedir. İnsan kaynakları bu aşamada ani bir değişimin çalışanlar üzerindeki olumsuz etkisini önlemek adına önleyici tedbirler olarak çalışanları değişime hazırlamaktadır.

Bununla birlikte; değişim için kademeli geçiş planları da yapılabilmektedir. Bu uygulamalarda, köklü bir geçiş olmayıp bu süreçte geri bildirimler alınabilmektedir. Öneriler ve şikayetler göz önünde tutulup iyileştirmeler yapılmaktadır.

Sonrasında ise, değişim ile yapılan uygulamalar ve geçişler artık çalışanlarca benimsetilmeye çalışılmaktadır. Yeni gelen kural ve anlayışların kalıcı olması için sürekli kontroller yapılmaktadır. Grup birleşmeleri, finansal birleşmeler ve diğer ortaklıklar bu aşamalarda personellere güven verici bilgi akışını oluşturmaktadır.

Değişimin örgüt ve çalışanlar için gerekli ve önemli olduğu anlatılması katkı sağlayabilmektedir. Değişimi başlatanların konulara hakim olması ve insan yönetimi sürecini iyi idare edebilmesi de gerekmektedir. Değişime öncülük edenlerin tutum eksikliği ile karşı karşıya kalındığında, değişime olan inancın azalması veya çalışanların bunu reddetmesi ihtimali ortaya çıkmaktadır. Çalışanlar için değişim veya değişiklikler nedeniyle herhangi bir hak kaybına yol açılmayacağı bildirilmelidir.

Küreselleşen dünyada işletmeler olumlu ya da olumsuz pek çok neden ile değişebilmektedir. Değişimin sebepleri ise; şirketin finansal darboğazı, bulunduğu bölgede özelliklerine uygun işlerin azalması veya bulunmaması, teknolojik yenilikler, küçülme gereksinimi ile işten çıkarmalar, şirket birleşmeleri, istikrarsızlık ve organizasyonel değişiklikler olabilmektedir.

Bireyler değişimi bazen yeniye alışamama korkusu olarak tanımlayabilirler. Var olan bir süreç bir gün normal karşılanırsa bile zamanla yetersiz hale gelebilmektedir. Bu nedenle şirketler, çalışanlarının sürekli değişen beklentilerine bilinçli ya da bilinçsiz olarak yanıt verebilmekte ve sistemlerini sürekli olarak yenileyebilmekte ve hatta beklenmedik radikal kararlar dahi alınabilmektedir. Örneğin, halka açık şirketler öz sermaye kaynaklarını güçlendirmek veya riskleri paylaşmak isteyebilirler. Bu durumda uluslararası ortamda güçlü bir işletme ile

birleşmeler yapılabilmektedir. Bu noktada çalışanlar, yeni ortaklıklar ve yeni uygulamaları değerlendirmek ve kendilerini olumsuz yönde etkileyebilecek seçenekleri keşfetmek isteyebilirler. Çalışanlar; yeni ortak yönetim, çalışanın görev tanımını yerine getirip getirmediği, kendi ekibini oluşturma isteği, işyerinde değişiklik yaratma, sosyal ve ekonomik haklarda değişiklik, yeni belirlenmiş kurallar olup olmayacağı gibi konulardan bahsedebilirler. Bu aşamada işletme özellikle çalışanları ilgilendiren soruları zamanında yanıtlamalıdır. Birimler içinde belirli aralıklarla yapılan toplantılar dışında bu amaçla serbest kürsü toplantısı da gerçekleştirilebilir. Böylece bu yöntem ile; çalışanları değişim yönetimi aşamasının öncesi ve sonrasında bilgilendirmek, değişikliklere karşı tepkilerini kırmak değil, aynı zamanda bu işi şirketin ortak bir değer sembolü haline getirmek, öğrenmeyi öğrenmek, durumu analiz ederek doğru bilgiyi çalışanlara aktarılabilmesi mümkün hale gelerek katkı sağlayabilecektir. Bu kapsamda her sürecin başında ise bir eğitim ve sonunda geri bildirim faaliyeti bulunmaktadır. Tüm çalışanlar eğitimlerle desteklenir ve özgür bir performans kültürü oluşturulabilir. Bu kültür çalışanlar arasında bir kez benimsendiğinde, her çalışanın sürekli değişimin gerekliliğini anlamaya başlayacağı değerlendirilmektedir. Değişimle birlikte yenilenen işlerin karşılığında düzen, planlama ve finansal imkanlarda artış elde edilebilmektedir. Şirket bu gelişimi çalışanlarına yansıttığında ise her çalışanın motive olarak süreçten keyif almaya başlayacağı düşünülmektedir.

2.5. Bir Liman İşletmesi Uygulama Örneği

Sürekli değişen ortama işletme örgütlerinin hızla ayak uydurabilmeleri, rekabet avantajı elde edebilmeleri ve değişime açık dinamik bir iş anlayışına ulaşabilmeleri için en etkili faktörler arasında sağlıklı ilişkiler veya davranışlar bulunmaktadır. Şirket çalışanları ile üst düzey ilişkiler sürdürmek ve iletişim kurmak; duygusal bağ, iş doyumu ve isteklilik veya arzu gibi davranışları tetiklemektedir. Bu amaçla, çalışanlarla açık diyaloglar şirkete karşı tutumların olumlu yönde değişmesinde etkili olabilmektedir. Çalışanlar, öncelikle şirketin kendileri hakkında sağladığı değer, planlar ve yaklaşımlar gibi faktörlere bakarak bu soruları dikkatlice yanıtlayabilmektedirler. Şirketin önemli birimlerinden olan insan kaynakları uygulamaları ile; çalışanların bu aşamada kendilerini dürüst ve değerli hissettikleri şirkette insan kaynakları faaliyetlerinin iş yerindeki gücü verimlilik ve maliyetlere yansıyabilecektir. Örgütsel adaletin sağlanması, kurumsal kimliğin oluşturulması, güçlü iletişimin sürdürülmesi ve verimli iş akışının korunması gibi süreçler bu ortamı iyi yöneten insan kaynaklarının etkin performansına bağlıdır. Çalışanların birbirlerine veya şirkete bağlılıkları verimliliğin temelini oluşturmaktadır. Grupların birbirine bağlılığını ve bireylerin etkileşimleri için sorumluluk alma motivasyonu arttırmaktır. İş hedefleri açıkça ifade edilmeyen ve yönergeleri tanımlanmayan çalışanlar ise, kötü duygular, kaygı, moral bozukluğu, stres ve düşmanlık gibi olumsuz duyguları besleyeceklerdir. Grup mutabakatına ulaşılabilirse; uygulama aşamasında tüm çalışanların anladığı, desteklediği ve heyecan duyduğu kararların alınması şirketin başarısını arttıracaktır. Çalışma ortamında eşit ve karşılıklı, anlaşılır ve kararlı toplantılar ile örneğin serbest kürsü toplantıları ile iki yönlü bir iletişim ortamının yaratılması desteklenebilmektedir. Böylece tüm çalışanların beklentilerini ifade edebildiği bir organizasyon yapısı oluşturulmasına önemli katkı sağlanması mümkün olabilecektir. Organizasyonlar genişledikçe, işlem yürütme ve bürokrasi arasında çatışmalar ortaya çıkabilmektedir. Düzenin olduğu organizasyonlarda ise işletmelerin değeri artabilmektedir. Serbest kürsü toplantıları sonuçta; grup organizasyonlarıdır ve çalışanların rolleri veya sosyal durumlarıyla ilgili görevleri sunmaları ölçüsünde başarılı olabilmektedir. Aşağıda serbest kürsü toplantısına yönelik Gün (2019)'dan türetilerek yeniden değerlendirilen ve geliştirilerek sadeleştirilmiş SWOT veya GZFT analizi sonuçları Tablo 2, 3, 4 ve 5'te verilmektedir:

Tablo 2: Serbest Kürsü Toplantılarının GZFT Analizindeki Güçlü Yönleri

GÜÇLÜ YÖNLER
1. Çalışanların serbest kürsü toplantılarına katılması farklı bir çözüm bulma imkanı verir.
2. Sorunların ve beklentilerin tartışıldığı bir organizasyonda daha samimi ortam yaratabilmektedir.
3. Sektöre özgü ve şirket çapındaki gelişmeler tartışılarak, işine sadık ve kültürel olarak bilgili çalışan grupları oluşturulabilmektedir.
4. Bu toplantılar çalışanların ve yetkililerin birbirlerini daha iyi tanımaları açısından önemlidir.
5. Serbest kürsü toplantılarında çalışanlar kendi aralarında güçlü bir iletişim kurabilir.
6. İletişimin güçlü olduğu çalışma ortamlarında iş akışlarının verimli, sağlıklı ve kesintisiz olarak yürütüldüğü görülmektedir.
7. Meraklı, sorgulayıcı, hevesli, yaratıcı ve çözüm odaklı çalışanlar yaratmayı hedeflemektedir.
8. Çalışanların günlük faaliyetleri ve yerine getirdikleri veya atandıkları görevler hakkında geri bildirim almak, doğru iletişim için önemli olabilmektedir.
9. Serbest kürsü toplantıları iş değerlerini arttırmak ve büyük aile kavramını benimsetmeye çalışmak için

yapılabilmektedir.

10.Çalışanların o ekipte bir yeri olduğunu veya onlara sahip olmanın önemini ortaya çıkarabilir ve güçlü bir şirkette olduklarını bilmelerini sağlayabilmektedir.

11.Küçük atılımların herkesin katılımı bulunan büyük süreçlerin başlangıcı olabileceği ve bu katılımın şirket vizyonuna ulaşmayı iyileştireceği değerlendirilmektedir.

12.İşini sahiplenen ve geleceği gören çalışanlar ancak daha yüksek verimlilik yaratarak maliyet tasarrufu sağlayabilmektedirler.

Kaynak: Gün (2019)'dan türetilerek geliştirilmiştir.

Tablo 3: Serbest Kürsü Toplantılarının GZFT Analizindeki Zayıf Yönleri

ZAYIF YÖNLER

- 1.Serbest kürsü toplantılarında mevcut gündem maddelerinin veya önceki katılımlardaki konu başlıklarının devamlılığı sağlanmadığında beklenen yararda hedeften sapma oluşabilecektir.
- 2.Çalışanların iş veya üretim süreçleri nedeniyle serbest kürsü toplantılarına katılamaması toplantının beklenen etkiyi yaratamamasına neden olabilecektir.
- 3.Her çalışanın katılımının sağlanmasından kaynaklanan büyük gruplar nedeniyle ortamı yönetmek de kolay olmayabilmektedir.
- 4.Bazı durumlarda gündemdeki konuların tamamı iyi ya da kötü nedenler ile karara bağlanmayabilmektedir.
- 5.Yönetimin serbest kürsü toplantısını desteklememesi, bu sürecin faydalarına inanmaması ve şirket yönetim politikalarını direktiflerle uygulamaması sürece olan güveni sarsabilecektir.
- 6.Bazı durumlarda katılımcı sayısının fazla olması konu karmaşasına sebep olabilmektedir.
- 7.Toplantılarda gereğinden fazla bir konuya odaklanılır ise öncelik listesindeki konular ele alınamayabilmektedir.
- 8.Serbest kürsü toplantısı sırasında çalışanların amirleriyle aynı grupta olması, kendini ifade etmede tereddüt duygusunu ortaya çıkarabilmekte ve ek verimsizlikler yaratabilmektedir.

Kaynak: Gün (2019)'dan türetilerek geliştirilmiştir.

Tablo 4: Serbest Kürsü Toplantılarının GZFT Analizindeki Fırsatları

FIRSATLAR

- 1.Serbest kürsü çalışanlar ile alternatif bir iletişim kanalı oluşturmaktadır.
- 2.Görüşmeleri tek oturumda gerçekleştirerek anlık geri bildirim alınmaktadır.
- 3.Herkesin katılımının olmasından dolayı toplu bilgiyi ve bilgilendirme etkisini yaratabilmektedir. **4.**Önceki gündemlerin sonuçlarının aynı anda açıklanmasına imkan sağlamaktadır.
- 5.Bu toplantılarda yönetimin desteğinin alınması kararların daha hızlı verilmesinde etkili olmaktadır.
6. Verimlilik artışları ile maliyetlerin daha rasyonel yönetilmesi imkanı yaratabilecektir.

Kaynak: Gün (2019)'dan türetilerek geliştirilmiştir.

Tablo 5: Serbest Kürsü Toplantılarının GZFT Analizindeki Tehditleri

TEHDİTLER

- 1.Gereğinden fazla detay bilgi ile şirket hakkında bilgi sızdırma olasılığı ortaya çıkabilmektedir.
- 2.Verilen sözlerin yerine getirilmemesi nedeni ile çalışanlar üzerinde güven kaybı yaratabilmektedir.
- 3.Çalışanların üstleriyle paylaşarak çözemedikleri sorunlar nedeniyle ikili ilişkilerde huzursuzluklar ortaya çıkabilmektedir.
- 4.Şirketin karşı karşıya olduğu olumsuz durumlar paylaşıldığında motivasyon düşerek işletmeye olan güven azalabilmektedir.
- 5.Çalışanların soruları tatmin edici bir şekilde yanıtlanmaz ise bu etkili iletişim kanalına olan güven zayıflayabilmektedir.
6. Hesaplanmamış yeni verimsizliklere ve ilave maliyetlere neden olma ihtimali ve riski vardır.

Kaynak: Gün (2019)'dan türetilerek geliştirilmiştir.

Çalışanlarının gelişimine değer veren şirket, bilinçli bir iş hayatını koruyan ve değişim ihtiyacını kabul eden kuruluş çalışanlarının değişime tepki vermek yerine destekleme olasılığı daha yüksek olacaktır. Bu aşamada aktif ve doğru iletişimin önemi ortaya çıkmaktadır. İnsan kaynaklarının çalışan memnuniyetini ve değişikliklerin tutarlılığını sağlamak ile tepkileri ortadan kaldırmak için alternatif araştırmalar yürütmesi de gerekmektedir. Serbest kürsü yöntemi çalışan ve yönetim arasında iletişim oluşturmak için önemli bir iletişim aracı olarak

kullanılabileceği değerlendirilmektedir. Böylece çalışanlar ile iletişim ve temas arttığı günümüz çalışma koşulları için sürdürülebilir bir araç olacağı düşünülmektedir.

Şirketler arasındaki rekabette şirkete bağlılık duyan yetkin çalışanlar, bütün ve bilinçli bir personel yapısı sayesinde çalışan devir hızında da iyileşme sağlanabilmektedir. Serbest kürsü sadece belirli zamanlar için uygulanan zorunlu veya gelişime yönelik işleri de kapsayabilmektedir. Değişikliğin uygulanması aslında en çok personelinin etkilemektedir. Bu nedenle, değişim çalışmaları tasarlanırken bu süreçte liderlik edenler için doğru ve etkin bir iletişim kanalı oluşturulmalıdır. Bu çalışmaların başlangıç aşamasında çalışanlara gerekli bilgiler açık ve inandırıcı bir yapıda iletilir ve serbest kürsü gibi uygulamalar ile desteklenirse olumsuz durumlar yaşamamaları sağlanabilecek ve uyum düzeyinde artış kaydedilebilecektir. Serbest kürsü uygulamasının en önemli etkisi Genel Müdür seviyesinde bir yöneticinin bu uygulamaya liderlik etmesinin gerekmesi olarak görülebilmektedir.

SONUÇ

Değişim işletmeler için belirli dönemlerde olağan veya olağan dışı biçimde ihtiyaca yönelik olarak uygulanabilmektedir. Bir sürecin değişmesi, herkes için kabul edilebilir durum olarak görülmeyebilir. İşletmeler ve çalışan bireylerin alışık oldukları düzenin değişmesi istenen bir durum olmayıp her zaman kabul edilmemektedir. İşletmeler varlıklarının devamlılığı için dönemsel olarak yeni yatırımlar, finansal ortaklıklar ve yeni uygulamalara ihtiyaç duyabilmekte ayrıca farklı dönemlerde farklı maliyet kaygıları taşıyabilmektedirler. Değişim, ihtiyaçların farklılaşması ve yeni çalışma metodlarının ortaya çıkmasını içermektedir. İşletmelerin teknolojik yapılarında ihtiyaç duydukları yatırımların yapılması aşamasında işgücünün bu yeni yatırım karşısında uygulamaya yönelik tereddütleri olabilmektedir. Bunun yanında farklı işletmeler ile ekonomik gücü artırmaya yönelik yeni ortaklıklar yapılabilmektedir. Bu tür değişimlerin yaşandığı işletmelerde çalışanlar kendilerine ait görev ve iş süreçlerindeki yeni durumları hakkında bilgi edinmek istemektedirler.

İşletmenin değişime uyumu ve başarısında insan kaynağının önemi açıktır. Personellerin işletmenin varlığında itici güç olduğuna inanan işletmeler doğru bilgilendirme yaparak değişimin kademeli olarak neler getireceğini ortaya koymaktadırlar. Belirsiz bir durumda değişimi uygulamayan işletmeler ise personellerin iş üretme verimliliğinde herhangi bir olumsuzluğa sebebiyet vermek istememektedirler.

Değişimi doğru yönetmek, işletme içerisinde profesyonel yapıyı bozmayı engellemeye yönelik çalışmaları içermektedir. Anlık kararlar ve doğru yönetilemeyen değişim aşamalarında sistemde hatalar meydana gelerek verimlilik kaynaklarında düşüş oluşarak ve maliyetlerin bozulmasına yönelik olumsuz durumlar tetiklenebilmektedir. Bu türden verimsizlikler insan kaynağının doğru yönetilmesi ile yeniden etkin üretim ve hizmet kapasitesi düzeyine çıkılabilmektedir. Maliyetlerin optimum düzeyde veya hedeflenen gibi olması veya kalması için ise doğru ve farklı yöntemler içeren yönetsel kararların alınmasına bağlı olabilmektedir.

Çalışma ile önerilen serbest kürsü toplantıları ise değişimin uygulamaya başlandığı aşamada işletme içi güven verici bir bilgi kaynağının kurulmasında kullanılabilmektedir.

Serbest kürsü toplantılarının ayrıca; işletmelerin değişime ihtiyacı olup olmadığının tespitine, mevcut durumun analiz edilip kök nedenlerinin araştırılmasında çalışanlar ile bire bir kaynağında araştırma yapılmasına yönelik potansiyel olarak verimlilik ve maliyetler ile ilgili aşağıda sıralanan katkıları sağlayabileceği değerlendirilmektedir:

1. Serbest kürsü ile motivasyonu artırılan personellerin iş verimi üzerindeki potansiyeli ortaya çıkarak verimlilik artışları ile iş gücü maliyetlerinde iyileşme sağlanacaktır.
2. Kendilerine değerli hissettirilen çalışan grupları, uzun vadeli çalışmayı benimseyerek personel devir hızının en az seviyede olmasına katkı sağlayacaktır.
3. Serbest kürsü gibi programlar ile birim ve görev bazlı iyileştirilmesi gereken alanlar tespit edilerek geliştirici çalışmalar yapılabilmektedir.
4. Çalışma ortamını benimseyen ve görev tanımlarına hakim çalışanlar sayesinde iş ortamında en önemli konulardan olan iş güvenliği riskleri azaltılabilecek ve bu kapsamda olası ilave hukuksal maliyetlerin minimizasyonuna katkı sağlanacaktır.
5. Organizasyon içerisinde herkesin katılımının olduğu bir yapıyı benimseyen işletmelerde ortak aklın sürdürülmesinde ve geri bildirimlerin verilmesinde personeller açısından güven aşılması sağlanabilmektedir.

6. Bilinçli çalışanlar ile faaliyetlerine devam eden işletmeler, üretim ve hizmet kapasitelerini sürekli artırarak ölçek üzerinden işletmenin karlılık düzeyini artırabileceklerdir.
7. Yöneticilerin serbest kürsü içeriğindeki geri bildirimler ile verimlilik ve maliyetlerin ölçülmesinde ayrıntıları ortaya çıkartmalarına katkı sağlanabilecektir.
8. Yalın organizasyona ulaşılması, israfın önlenmesi, çalışanların konfor ve ergonomi gibi konularda kendi görüşlerini kısıtlama olmaksızın dile getirebilmeleri gibi hususlarda değişimin çalışanların koşullarını da iyileştiren yönde ele alınmasını sağlayabilecektir.
9. Çalışanların; değişim ile giderek insandan arındırılan iş ortamında sibernetik etki ve otomasyon ile ikame edilme ihtimalini erken algılamalarını ve işletmeye katkılarının uygun verimlilik düzeyinde sürdürmeleri gerektiğini anlamalarını sağlayacaktır.
10. Üst yönetim tarafından akut biçimde sonuçlar yaratan değişim kararlarının daha yavaş ve olgunlaşmış biçimde alınmalara ve uyuma katkı sağlayabileceği değerlendirilmektedir.
11. Serbest kürsü yaklaşımı öz eleştiri ve değişime açık bir örgüt kültürü oluşmasında da değer katan bir yöntem olarak değerlendirilebilecektir.
12. Serbestçe ifade edilen görüşlerin personelin amaç ve hedefler konusunda ne ölçüde hizmet içi eğitime ihtiyaçlarının olduğunun da belirlenmesine de katkı sağlayacaktır.

Bununla birlikte; serbest kürsü toplantılarına yönetimi temsil eden liderin katılmış olması ile sürecin karar aşamasında ve ilk ağızdan bilgiye ulaşma, toplantılarda değişime neden ihtiyaç olduğu, sürecin kademeleri, karşılaşılabilecek durumlar ve yönetimin personellerden beklentileri ortaya konulurken temsil etkisi artacaktır.

Kendini ifade etmeye imkan veren bu toplantılar ile işletmenin her kademesindeki insan kaynağına bire bir temas edilmesiyle organizasyon yapısı içindeki her bir çalışanın beklentileri ortaya konulabilecektir. Farkındalığı ortaya koymak isteyen işletmeler bu tür toplantılar ile genel durumlarını analiz edebileceklerdir. Bu toplantıların diğer çalışmalardan temel farkı ise anlık soru ve cevap diyalogunun kurulmasıdır. İşletmeler verimlilik ve karlılıklarının yükseltilmesi için çalışmalar yaparken bu tür toplantılar sayesinde mevcut sorunlara ayrıntıda ulaşılarak işin muhatabı veya gerçekleştireninden doğrudan ve yakından bilgi alınabilmektedir.

Bu çalışmada, varsayımsal bir liman işletmesinde uygulanan serbest kürsü toplantısının uygulama aşamaları ve etkileri üzerine inceleme ve değerlendirmeler yapılmıştır. İşletmenin odağına insan gücünün konularak değerli bir çalışan grubunun oluşturulması ile kurumsal işletme anlayışının daha belirgin hale geldiği görülmektedir. Farklı durumlarda ya da değişime ihtiyacın olması halinde serbest kürsü toplantılarının olumlu sonuçları olacağı görülmektedir. Yapılacak olan değişim sadece işletme için olmayıp, işletmede bulunan her bir bireyi etkileyeceği için bunun her bir personele benimsetilmesinin önemi ortaya çıkmakta ve bu durum değerlendirilmeye değer görülmektedir.

Sonuçta verimlilik ve maliyet yönlü geliştirilen çalışma ile sunulan uygulama aşamalarının ve önerilerin, her sektördeki işletmeler için değişim ihtiyacının yönetilmesi konusunda verilen izlencenin kullanılması ve önerilerin dikkate alınması halinde yararlı olacakları değerlendirilmektedir.

Teaching vocabulary to young learners using Edpuzzle

Selma DENEME GENÇOĞLU¹

Semih SORMAZ²

¹Assoc. Prof. Dr., Trakya University, Department of Foreign Languages, selmadeneme@trakya.edu.tr

²MA Candidate, Trakya University, Institute of Social Sciences, semihormaz@gmail.com

Abstract: Vocabulary is one of the most important elements of any language. There are different teaching technics and strategies to teach vocabulary to young learners. In this research, the researcher used Edpuzzle which is a common Web 2.0 tool, to teach target vocabulary. The research focuses on the students' opinions about Edpuzzle in learning vocabulary in the classroom. In this study, the researcher used quantitative research method and the data were gathered by means of a 10- question survey. This study was conducted on the 2nd grade students studying in the International School in Baghdad. The findings of the research will be analyzed, and the opinions of the young learners about the tool will be discovered. It is expected that most young learners will successfully engage in the activities during the implementation of Edpuzzle in teaching vocabulary. The findings of the study will be discussed in detail and necessary suggestions will be made in light of the findings.

Keywords: teaching vocabulary; young learners; learning vocabulary through Edpuzzle; Web 2.0 tool.

1. INTRODUCTION

Young learners learn vocabulary fast, structures slower as the words have concrete, instantaneous meanings, whereas structures are abstract. Children must meet and use words in appropriate contexts to envision them. This helps to establish their association with other words, so a word network is built. Young learners need to pay attention to some aspects of the English language such as pronunciation, spelling, structure, and vocabulary. To master English language skills, students are supposed to acquire some of the vocabulary of the language, that is, a list of words with their meanings as it supports the development of their language skills (Linse, 2005). To be able to communicate and write in English language, children need to learn one to two thousand words (Cameron, 2001). Those words should be presented and served to the young learners in a colorful, interactive, and fun classroom environment. Creating a classroom environment where words are fun and playing with words is encouraged can be a powerful antidote to the very natural fear of making mistakes that can easily hinder learning (Thornbury, 2000). With the development of technology, Web 2.0 tools have also taken their place in the classrooms. By integrating Web 2.0 tools into lessons, it is aimed that learners' learning in a more fun and interactive environment be permanent. In this way, the vocabulary learning processes of young learners will take place more quickly and permanently in their memories.

1.1. Edpuzzle

Edpuzzle is an interactive Web 2.0 tool to create videos. It is an easy way to create interactive video lessons. It is an e-learning platform that allows users to edit literally any YouTube video and add questions. Users can also create their own videos and then use Edpuzzle to make them interactive. Edpuzzle provides a library of user-generated content with added questions, allowing users to find previously edited topics. Currently, most of the videos in the content library are focused on K-12 topics. Edpuzzle allows the users to keep a notebook on the site. Instructors can create class lists and invite students to create accounts on Edpuzzle. Instructors can use this list to see which students have completed assignments, their answers, and their scores. The instructor can also see the answers of students who have not yet finished an assignment. Multiple choice, open-ended and short-answer questions can all be attached to the videos. Edpuzzle automatically grades multiple choice questions. Instructors can also assign videos without adding any questions, so they can see which student have watched the assigned video and how much of it. A basic Edpuzzle account is free. However, if the teachers need the 'Pro' account where some different video creating features are available, they must pay for it.

2. AIM OF THE STUDY

In this study, it is aimed to teach vocabulary to young learners with Edpuzzle, a web 2.0 tool, and as a result, it is also aimed to investigate students' attitudes towards Edpuzzle.

3. RESEARCH METHODOLOGY

In this section, the participants, the design and the instrument of the study will be discussed in detail. Besides, how the data were collected will be explained.

3.1. Design of the Study

In this study, the researcher used quantitative research method and the data were gathered by means of a 10-question survey. The survey questions were designed taking the students' ages into consideration. A pilot study was conducted to evaluate the effectiveness of the survey questions and necessary modifications were made to make the questions understandable to the participants. Besides, two expert teachers were consulted for their opinions and evaluations of the questions to contribute to the validity of the survey used.

3.2. Participants of the Study

This study was applied to 2nd year students studying at the International School in Baghdad. A total of twenty students, eight girls and twelve boys, participated in the study. Most of the students were eight years old and were studying in the international curriculum. The language level of the participants who were studying nine English lessons per week can be qualified as A1.

3.3. Instrument and Data Collection

The data collection instrument of the study is a 10-question survey designed by the researchers. It is designed to evaluate the learners' opinions on the Edpuzzle-integrated lesson and their expectations for future classes and assignments. Taking into consideration the learners' ages, the survey offers two answer options. The participants are supposed to tick one of the emojis in the answers as a reply to survey questions: One is a happy face emoji which means 'I agree', and the other one is an unhappy one which means 'I disagree'.

To gather the data, the researcher prepared three lessons for a theme of "emotions" for grade 2 students. In the first lesson, the students were presented the target vocabulary (happy, upset, excited, nervous, angry, furious) within a video on Edpuzzle in pre-stage of the lesson. In the video, the students were supposed to listen and act the target emotions and were asked few questions about them. In the second lesson, the researcher prepared another video on Edpuzzle for the while stage of the lesson where the students watched listened and were supposed to fill in the gaps in the reading activity that they were given. With the help of skills integration in the while-stage, the researcher aimed to help the learners contextualize the target vocabulary so that they could produce new sentences with them. In the third lesson, the researcher prepared another video including lots of open-ended and multiple-choice questions. It was used for the post-stage of the lesson to check if the learners were able to comprehend the use of target vocabulary. Twenty students were divided into groups of five and were asked to answer the questions as a group on the small boards that were given to each group. Finally, the researcher conducted the survey on the students to gather data. The collected data were analyzed by the researchers in the following section of the study.

4. DATA ANALYSIS

Twenty students were given a 10-question survey after the 3-lesson implementation and were asked to answer the questions. Collected data were analyzed with frequency analysis. Frequency analysis is a descriptive statistical method that shows the number of occurrences of each response chosen by the respondents (Ziółkowska, 2021). After collecting the data, the number of occurrences for the responses were calculated and shown with percentile. The results are shown in Table 1. below.

Table 1: Questions and Percentage Distributions

Q1: It was fun to learn new words with Edpuzzle.	I agree (%95)	I disagree (%5)
Q2: I can use the words in a context.	I agree (%85)	I disagree (%15)
Q3: My teacher should use Edpuzzle more often.	I agree (%100)	I disagree (%0)

Q4: It was enjoyable to use the smartboard when learning new words.	I agree (%95)	I disagree (%5)
Q5: I felt excited during the lessons.	I agree (%90)	I disagree (%10)
Q6: Watching videos on the smartboard motivates me.	I agree (%95)	I disagree (%5)
Q7: English lesson is more enjoyable with Edpuzzle.	I agree (%95)	I disagree (%5)
Q8: I can also use Edpuzzle at home to review the new words.	I agree (%95)	I disagree (%5)
Q9: I like to use technology during the lesson.	I agree (%100)	I disagree (%0)
Q10: I prefer Edpuzzle to writing words on my notebook to learn new words.	I agree (%90)	I disagree (%10)

In Q1, while 19 students agree that learning new words with Edpuzzle is fun, one disagrees. In Q2, 17 of the students agree that they can use the words in a context, 3 students disagree. This question was explained by the researcher to the students so that they do not get confused on the word “context” before they answer the survey questions. In Q3, all the students agree with the idea that the homeroom teacher should use Edpuzzle more often. In Q4, Q6 and Q7, 19 students agree that being able to touch and watching videos on the smartboard makes the language lesson more enjoyable and motivates them. In Q5, 18 of the students find using technology in the class exciting while 2 students disagree. In Q8, 19 students agree to use Edpuzzle as a revision tool at home. In Q9, all the students express their willingness to use technology in the lessons, and in Q10, while learning new words 18 students prefer Edpuzzle to writing words on the notebook.

According to the collected and analyzed data, students find technology-integrated lessons more enjoyable and easier to learn. The findings are discussed in the following section of the study.

5. FINDINGS AND DISCUSSION

Using Edpuzzle which is a Web 2.0 tool with young learners in English lessons to teach the target vocabulary is an effective way for the learners to be able to learn. The learners find it a fun, exciting and motivating learning tool. Being able to touch on the smartboard and keeping eyes on vivid videos help the students to focus better on the activities during the lesson. Since they find it more enjoyable rather than taking notes on the notebooks, their concentration span might last longer. In that way, they are engaged in the lessons more. Some researchers argue that one of the benefits of technology use is increased student motivation (Dunken, 1990) as fun and games are brought into the classroom (Lee, 2000). This fun factor is an important benefit in a language classroom (Galavis 1998; Warschauer & Healey, 1998) In addition to this, the students worked in the groups collaboratively. According to Gillespie (2006), new technology enables students to gather information and interact with provided sources which are pictures and videos. Moreover, all the students want the teacher to use Edpuzzle more during the lessons. As the learners feel more excited in the class, their anxiety level might decrease. According to Brault's study (2006), using computers in language classes brings diversity to the classroom atmosphere, improves students' specific language skills and increases learner autonomy. Besides, vocabulary learning process with an interactive media-EdPuzzle became more enthusiastic, because of the students' habit of using interactive media-EdPuzzle (Prastiyawati in Dakhi & Fitria, 2019). Regarding the use of EdPuzzle in vocabulary teaching, previous studies support the findings that EdPuzzle using an interactive environment enables students to learn vocabulary well.

6. CONCLUSION AND IMPLICATIONS

This paper has attempted to present the use of Edpuzzle when teaching vocabulary to young learners. Findings from the research and the literature showed that using Edpuzzle as a vocabulary teaching tool is effective and enjoyable. It is obvious that the use of technology with young learners helps the students acquire the target vocabulary in a fun way. In Rahaya and Bhaskaro's (2022) study, they also claim that using Edpuzzle as an interactive vocabulary teaching tool is beneficial and fun for the students.

For further studies, it is advised not to use the application for every lesson so that students would not get bored. Having smartboards in the class is a must for the application to be interactive. Besides, the teacher qualification and accessibility to the use of technology are needed to implement the study in the language classes.

Appendix 1: The survey

		
Questions		
1.It was fun to learn new words with Edpuzzle.		
2. I can use the words in a context.		
3. My teacher should use Edpuzzle more often.		
4. It was enjoyable to use the smartboard when learning new words.		
5. I felt excited during the lesson.		
6. Watching videos on the smartboard motivates me.		
7. English lesson is more enjoyable with Edpuzzle.		
8. I can also use Edpuzzle at home to review the new words.		
9. I like to use technology during the lesson.		
10. I prefer Edpuzzle to writing words on my notebook to learn new words.		

Türkiye’de Çeltik Üretimi ve Tarımsal Destekleme Politikalarının Değerlendirilmesi

ORCID: 0000-0002-4733-5874

Özet: Bu çalışmada Türkiye’de 2000 yılından günümüze kadar çeltik üretiminin mevcut durumu ve tarımsal destekleme politikalarında yaşanan değişimler ve gelişmeler incelenmiştir. Çalışmanın ana materyaline ait veriler Türkiye İstatistik Kurumu (TÜİK), Tarım ve Orman Bakanlığı birimlerinden alınan resmi veriler ile Birleşmiş Milletler Gıda ve Tarım Örgütü (FAO)’dan elde edilen ikincil kaynaklardan oluşmuştur. Araştırma bulgularına göre çeltik ekim alanı yıllar itibarıyla artış göstermesine rağmen pirinç ithalatı önemli ölçüde artış göstermiştir. Çeltik üretimine verilen mazot desteği, gübre desteği ve fark ödemesi destekleri cari fiyatlar ile yıllar itibarıyla düzenli olarak artarken reel değeri hesaplandığından dalgalanmalar yaşandığı gözlemlenmiştir. Çeltik üretimine yapılan destekleme politikalarının üretime pozitif yönde katkı sağlayabilmesi için piyasaya uygun biçimde değerlendirilmesi gerektiği düşünülmektedir.

Anahtar Kelimeler: Çeltik, Tarımsal Desteklemeler, Tarım Politikaları

1. GİRİŞ

Tarımsal üretim içerisinde dünyada 2021 yılında 220 milyon ha ile buğday (220.759.739 ha) ve 205 milyon ha ile mısırdan (205.870.016 ha) sonra en fazla ekim alanına sahip bitki çeltiktir. Dünyada çeltik ekim alanı 165.250.620 ha’dır. Bu ekim alanı içerisinde 46 milyon ha ile ilk sırada Hindistan yer almaktadır. Çin, Çin anakarası, Bangladeş ve Tayland ekim alanı bakımından önemli ülkeler arasında yer almaktadır. Dolayısıyla çeltik en fazla Asya kıtasında üretimi yapılmaktadır. Verim incelemesi yapıldığında dünya ortalaması 47.642 hg/ha iken Avustralya 102.031 hg/ha ile en yüksek verime sahiptir. Türkiye ise dünya ülkeleri arasında 129.475 ha ekim alanına sahiptir ve verimi dünya ortalamasının üzerindedir (FAO, 2023).

Tablo 1: Dünya 2021 Pirinç Verileri

Sıra	Ülkeler	Ekim alanı (ha)	Ülkeler	Üretim miktarı (ton)	Ülkeler	Verim (hg/ha)
1	Hindistan	46.379.000	Çin	21.440.387.005	Avustralya	102.031
2	Çin	30.145.222	Bangladeş	5.694.455.397	Tacikistan	93.970
3	Çin (Anakara)	29.921.200	Vietnam	4.385.272.869	Mısır	93.820
4	Bangladeş	11.700.939	Kolombiya	332.652.895	Uruguay	86.404
5	Tayland	11.244.000	Çin anakara	212.843.000	Amerika	83.155
	Türkiye	129.475	Türkiye	1.000.000	Türkiye	77.235
	Dünya	165.250.620	Dünya	78.729.386.741	Dünya	47.642

Kaynak: FAO (2023).

Dünya çeltik ticareti incelendiğinde Amerika, Brezilya, Hindistan, Paraguay ve Avrupa Birliği en büyük ihracatçı ülkeler olduğu görülmektedir. Meksika, Nepal, Venezuela, Vietnam ve Kolombiya ise en büyük ithalatçı ülkelerdir (FAO, 2023). Hindistan dışında dünyada çeltik üretiminde önde gelen ülkeler pirinç ticaretinde alt sıralarda yer alabilmektedir buna en büyük sebep; kalabalık nüfusa sahip ülkelerin pirinci kendi iç pazarlarında tüketmeleridir (Özçelebi ve Yılmaz, 2020). Türkiye ise pirinçte ithalatçı konumda olan bir ülkedir (TEPGE Durum Tahmin Raporu, 2021: 54). Türkiye’nin 2021-2022 piyasa döneminde en çok pirinç ithalatı yaptığı ülkeler %52,3 ile Çin, %13,0 Hindistan, %10,5 Uruguay, %5,7 İtalya ve geri kalanı diğer ülkelerdir. Türkiye’nin en çok çeltik ithalatı yaptığı ülke ise %90,1 oran ile Rusya’dır ardından %9,3 ile Bulgaristan ve %0,6 diğer ülkeler yer almaktadır (TEPGE Tarım Ürünleri Piyasaları, 2022). Türkiye’nin ithalatçı ülke olmasının sebebi; pirinçte kendine yeterliliğin sağlanamamış olması dolayısıyla iç pazarın ihtiyacı ithalat ile karşılanmasıdır.

Bu çalışmada Türkiye’de 2000 yılından günümüze kadar çeltik üretiminin mevcut durumu ve tarımsal destekleme politikalarında yaşanan değişimler ve gelişmeler incelenmiştir.

2. MATERYAL VE METOT

Çalışmanın ana materyalini Türkiye İstatistik Kurumu (TÜİK) ve Birleşmiş Milletler Gıda ve Tarım Örgütü (FAO) ile Tarım ve Orman Bakanlığı birimlerinden alınan resmi veriler oluşturmaktadır. Çeltik özelinde verilen tarımsal destekleme politikalarının ayrıntılı değerlendirilmesi açısından 2000-2022 yıllarına ait zaman serilerinden faydalanılmıştır. Bu serilerde meydana gelen dalgalanma ve değişimler uygulamada olan politikaların değerlendirilmesi için yorumlanmıştır. Tablolar aşağıda görüldüğü gibi çalışmada yer alacaktır.

3. ARAŞTIRMA BULGULARI

3.1. Çeltik Ekim Alanı, Üretimi ve Verimi

Türkiye’de 2000 yılından günümüze kadar olan süreçte çeltik ekim alanı değişimi Tablo 2’de verilmiştir. Türkiye çeltik ekim alanı 2000 yılı baz alınarak değişim oranları ve önceki yıla göre değişim oranları hesaplanmıştır. Buna göre 2000 yılına göre 2,08 kat artarak 1.205.226 da’a ulaşmıştır. Ekim alanı yıllar itibariyle incelendiğinde bir önceki yıla göre en fazla artışın olduğu yıl 2012’dir. En fazla ekim alanı 2021 yılında, en az ekim alanına sahip olunan yıl ise 2000 yılıdır. Türkiye’de çeltik ekim alanına sahip önemli şehirler 2022 yılına göre sırasıyla Edirne, Samsun ve Balıkesir yer almaktadır (TÜİK Bitkisel Üretim İstatistikleri, 2023). Sonuç olarak, Türkiye çeltik ekim alanı son 22 yıllık süreçte artış yönü pozitif olup konjonktürel dalgalanmaların veya mevsimlerin etkisiyle yıllara göre değişim göstermektedir. Sulama suyunun sınırlı olması, pirinçteki arz açığının ithalat yoluyla karşılanması, kaliteli özelliklere sahip tohum kullanımının azlığı, artan girdi maliyetleri, arazilerin parçalı olması, yetersiz drenaj sistemi gibi konular sebebiyle ekim alanlarının artmasını engellemektedir.

Üretim miktarı ekim alanı ve verim gibi çeşitli faktörlere bağlı olarak yıllar itibariyle değişiklik göstermektedir. Türkiye’de 2022 yılı itibari ile çeltik üretimi 950.000 ton’dur. Yıllara göre çeltik üretimi incelendiğinde üretim en fazla 2019 ve 2021 yılında en az ise 2000 yılıdır. 2003 yılından sonra toplam çeltik üretim miktarı açısından önemli bir artış gözlemlenmiştir, bu devam eden artış 2019 yılında tepe noktaya ulaşmıştır. Bu artış veya azalışın değişim yönünü gözlemleyebilmek için 2000 yılı baz yıl olarak alınmış ve yıllara göre Türkiye çeltik üretim miktarı değişim oranları hesaplanmıştır. Buna göre; üretim miktarı 2000 yılına göre 2,71 kat artmıştır. Bu artış ekim alanının artması ile açıklanabilir.

Türkiye çeltik verimi açısından incelemesi Tablo 2’de yapılmıştır. Türkiye’de çeltik verimi 2000 yılına göre 1,31 kat artarak 2022 yılında 788 kg/da verime ulaşmıştır. Türkiye çeltik verimi bakımından dünya ortalamasının üzerindedir (Tablo 1). En fazla verim alınan yıl 2011, en az verim alınan yıl ise 2003 yılıdır. Verimin yıllara göre artış göstermesinin sebebi sertifikalı tohum kullanımı, bilinçli üretici sayılarının artması olacağı düşünülmektedir.

Tablo 2: Türkiye’de Çeltik Ekim Alanı, Üretimi ve Verim

Yıllar	Ekim Alanı (da)	Bir Önceki Yıla Göre Değişim (%)	Baz Yılına Göre Değişim (%)	Üretim (ton)	Bir Önceki Yıla Göre Değişim (%)	Baz Yılına Göre Değişim (%)	Verim (kg/da)	Bir Önceki Yıla Göre Değişim (%)	Baz Yılına Göre Değişim (%)
2000	580.000	-	100,00	350.000	-	100,00	603,45	-	100,00
2001	590.000	101,72	101,72	360.000	102,86	102,86	610,17	101,11	101,11

3.2. Çeltik Destekleme Politikası

Tarım Kanunu'nda tarım sektörüne bütçeden ayrılacak olan kaynak miktarının Gayri Safi Milli Hasılanın %1'inden az olmaması öngörülmektedir (Semerci, 2019: 6). Buna rağmen Kanunun çıkarıldığı dönem sonrasında günümüze kadar bu oranda bir kaynak ayrımı yapılmamıştır (Yüceer vd., 2020: 11). Türkiye'de çeltik destekleme politikaları kapsamında 2022 yılında, havza bazlı fark ödemesi desteği 10 kuruş/kg, mazot desteği 250 TL/da, gübre desteği 21 TL/da, sertifikalı tohum kullanım desteği 50 TL/da, sertifikalı tohum üretim desteği orijinal ise 03,35 TL/kg, sertifikalı kademe ise 0,25 TL/kg'dır. Ek olarak organik tarım desteği, iyi tarım uygulamaları desteği ve toprak analizi desteği de verilmektedir (Resmi Gazete (31989), 2022: 76).

Tarım ve Orman Bakanlığı tarafından çeltik üretiminin geliştirilmesine yönelik olarak verilen destekler Tablo 3'te verilmiştir. Tablo incelemesi yapıldığında mazot gübreyle verilen reel fiyatlarla destek miktarında bir önceki yıla göre artış oranının en yüksek olduğu yıl %325,29 ile 2017 yılı iken; oranın en düşük olduğu yıl 2008'dir. Fark ödemesi desteği incelendiğinde bir önceki yıla göre artış oranının en yüksek olduğu yıl 2006, oranın en düşük olduğu yıl 2022 yılıdır. Cari fiyatlarla mazot gübre destek miktarı yıllar itibarıyla düzenli olarak artarken; reel fiyatlar incelendiğinde son 17 yılda dalgalanmalar yaşandığı gözlenmiştir. Mazot gübre desteği son 17 yılda cari değeri yaklaşık 67,75 kat arttığı tespit edilirken; reel değeri hesaplandığında TL cinsinden 6,16 kat artmıştır. Fark ödemesi destek miktarı yıllara göre incelendiğinde 2009 yılı itibarıyla bir değişim yaşanmadığı gözlemlenmiştir. Buna rağmen cari değeri yaklaşık 3,33 kat artarken; reel değeri TL cinsinden yaklaşık olarak 0,30 kat azalmıştır.

Tablo 3: Çeltik Ürününe Verilen Tarımsal Destekler

Yıllar	Mazot-Gübre Desteği		Bir Önceki Yıla Göre Değişim (%)	Baz Yılına Göre Değişim (%)	Fark Ödemesi Desteği		Bir Önceki Yıla Göre Değişim (%)	Baz Yılına Göre Değişim (%)
	Cari Fiyatlar (TL/da)	Reel Fiyatlar (TL/da)			Cari Fiyatlar (TL/ton)	Reel Fiyatlar (TL/ton)		
2005	4,00	15,44	-	100,00	30	115,82	-	100,00
2006	5,01	17,99	116,51	116,51	60	215,47	186,04	186,04
2007	5,01	18,32	101,85	118,65	90	329,17	152,77	284,20

4. SONUÇ

Türkiye’de kişi başı pirinç tüketimi 2020 yılında 8,1 kg’dır ve kendine yeterlilik derecesi %81,2’dir. Çeltiğin arz açığı olan bir ürün olması, ihtiyaç duyulan pirincin ülke içerisinde temin edilmesi öncelikli politika olmalıdır. Yurt içinde pirinç üretiminde sürekliliğin sağlanabilmesi için üretim planlaması yapılmalıdır. Yapılan etkili planlama politikaları ile de pirinçte dışa bağımlılık azalacaktır.

Bitkisel üretimi arttırmak, verim ve kaliteyi yükseltmek, üretim maliyetlerinin karşılanmasına katkı sağlamak, sürdürülebilirliği sağlamak, kayıtlılığı arttırmak ve çevre dostu tarım tekniklerini geliştirmek için çiftçilere destek verilmektedir (Resmî Gazete (32018), 2022). Fark ödemesi desteği 2009 yılından itibaren değişim göstermemiş ve reel değeri son 17 yılın en düşük seviyesinde kalmıştır. Mazot ve gübre desteğinde ise 2017 yılında önemli bir artış yaşanmıştır. Son dönemde artan girdi fiyatlarına karşın 2022 yılında reel değere göre destek %53,58 artmıştır. Çeltik gibi arz açığı olan ve stratejik öneme sahip ürünlere desteklemelerin zaman içinde giderek artırılması gerekmektedir. Çeltikte verimliliğin artırılması için özendirici bir politika olan sertifikalı tohum kullanım desteğinin, destek fiyatının artırılması gerekmektedir. Genel olarak çeltiğe yapılan destekleme politikalarının üretim maliyetlerini göz önüne alarak planlanması ve üretimi yönlendirecek biçimde ekim öncesinde açıklanması üretimin artmasına katkı sağlaması açısından oldukça önemlidir.

Özet: Çalışmanın amacı, kurumsal yönetim yolunda şirketlerin yönetici ve hissedarları yanı sıra çalışanları gibi paydaşları arasındaki ilişkiyi düzenleyen şeffaflık ve hesap verebilirlik gibi nitelikleri mümkün kılan bir araç olarak faaliyet raporlarının önemini kavramsal bir çerçevede incelemektir. Çalışmada, Türk şirketlerinde hazırlanmakta olan yıllık faaliyet raporları incelenmiş bu bağlamda eksiklikler tespit edilerek yıllık faaliyet raporu hazırlama kılavuzu önerisinde bulunulmuştur. Kapsam olarak çalışma yıllık faaliyet raporları ile şeffaflık ve hesap verebilirlik ilişkisi ortaya konulması ve bunun da hangi içerikte ve kapsamda yıllık faaliyet raporu hazırlamayı gerektirdiği şeklinde belirlenmiştir. Çalışma üç bölümden oluşmaktadır. Birinci bölümde şeffaflık, hesap verebilirlik, yıllık faaliyet raporlarına kavramsal boyutta bakış, ikinci bölümde yıllık faaliyet raporlarının Türkiye’deki yasal düzenlemelerdeki boyutu ve son bölümde ise örnek bir yıllık faaliyet raporu hazırlama kılavuzuna ilişkin açıklamalar yer almaktadır.

Halka açık şirketlerde, şirketler tarafından genel olarak yılda bir hazırlanan ve finansal tablolar ile birlikte denetçi raporunu da içeren yıllık faaliyet raporları içerik olarak zengindir ve olması gerektiği gibi de hazırlanmaktadır. Kullanıcı ve hedef kitlesi değerlendirildiğinde bu içeriğin, şirket hakkında, tüm paydaşlara doğru mesajları iletmesi büyük öneme sahiptir. Böylece kurumsal sürdürülebilirliğin sağlanmasına, kurumsal yönetişimin uygulanmasına ilişkin önemli bilgiler sağlayabilmektedir. Tabii ki şirketlerin ilgili hesap dönemine ait yıllık faaliyet raporlarında, iş ve işlemlerinin akışı, finansal durumu doğru, eksiksiz ve gerçeğe uygun bir şekilde yansıtılması durumunda bu amaçlara ulaşmak mümkündür. Türkiye’de yeterli şekilde yıllık faaliyet raporlarını hazırlayan halka açık şirketler bu amaçlara kolaylıkla ulaşmaktadırlar. Çünkü yasal olarak halka açık şirketler 2012’den beri Kurumsal Yönetim İlkelerini uygulamakla yükümlüdürler. Ancak sorun halka açık olmayan şirketlerde yıllık faaliyet raporlarının gereken içerikte hazırlanmıyor olması bu tür şirketlerin şeffaflık ve hesap verebilirlik ile ilgili amaçlara ulaşamadığının bir göstergesidir. Bu olması gerektiği gibi hazırlanmayan yıllık faaliyet raporları bağlamında da halka açık olmayan şirketler paydaşları ile yasal boyutta büyük sorunlarla yüzleşmektedirler. Dolayısıyla gereği gibi hazırlanan yıllık faaliyet raporları, makro ve mikro ölçekte ekonomide şeffaflığın artmasına, hesap verebilir hale gelmesine, kayıt dışı faaliyetlerin azalmasına, şirketler arasında haksız rekabetin önlenmesine imkân sağlayabilecektir.

Anahtar Kelimeler: Denetim, Entegre Raporlama, Kurumsal Yönetim, Şeffaflık, Şirket Yönetimi

Abstract: The aim of the study is to review the importance of annual reports as a tool that enables the principle of transparency and accountability among the shortcomings such as company managers and fortresses as well as their use in the way of corporate governance. In the study, annual activity reports in Turkish enterprises were examined, deficiencies were determined in this context, and the preparation of the annual report preparation guide was continued. The scope of the study is to reveal the relationship of transparency and accountability with annual activity reports and to use the content and annual report preparation in this. The study consists of three parts. The first output includes transparency, accountability, an overview of the results of annual activity reports, the second output contains explanations on the legal use of annual activity reports in Turkey and the final output of a sample annual report preparation guide.

In publicly held companies, annual activity reports, which are generally prepared annually by companies and include the auditor's report together with the financial statements, are rich in content and are prepared as they should be. When the user and target audience are evaluated, it is of great importance that this content conveys the right messages about the company to all stakeholders. Thus, it will be able to provide important information on ensuring corporate sustainability and the implementation of corporate governance. Of course, it is possible to achieve these goals if the flow of business and transactions, financial situation is accurately, completely and truthfully reflected in the annual reports of the companies for the relevant accounting period. Publicly traded companies that adequately prepare annual activity reports in Turkey can easily achieve these goals. Because legally public companies have been obliged to implement the Corporate Governance Principles since 2012. However, the problem is that the annual reports of companies that are none publicly held companies are not prepared with the required content, which is an indication that such companies cannot achieve their goals related to transparency and accountability. In the context of annual reports that are not prepared as they should be, companies that none publicly companies held face major legal problems with their stakeholders. Therefore, annual activity reports that are prepared properly will enable to increase transparency in the economy, to become accountable, to reduce informal activities, and to prevent unfair competition among companies at macro and micro scales.

Key Words: Auditing, Company Management, Corporate Governance, Integrated Reporting, Transparency

1. GİRİŞ

Özellikle küresel ticaretteki pastadan pay alma yarışındaki kavganın kızıştığı Covid 19 sonrası dönemde, hem sürdürülebilir kalkınmanın sağlanabilmesi ve büyümenin devamlılığı; hem de şirketlerin ayakta kalabilmesi gittikçe zorlaşmaktadır. Bu yüzden şirket faaliyetlerinin yürütülme koşullarındaki mikro ekosistem standartları kadar makro yapıya uyum da gittikçe önemli olmaya başlamıştır. Güney (2018)’e göre şirketler, kuruluş amaçlarını gerçekleştirmek üzere faaliyet gösterirler. Ancak her şirket için önemli olan ilgili amaçların daha önceden planlanması, kimlerin görev alacağını belirlenmesi, nasıl daha verimli olunacağı, işlerin zamanında yetiştirilmesi, çalışmaların denetlenmesi gibi birçok farklı unsurun doğru bir şekilde gerçekleştirilmesi gerekmektedir. Bu sürecin başarısında kurumsal yönetim ilkelerinin şirketler bünyesinde içselleştirilmesi önemlidir. Zira kurumsallaşmanın önemli bir göstergesi olan yıllık faaliyet raporlarının mevzuatta yer alan şekilde şirketler tarafından hazırlanması da bu sürece önemli katkı sağlayacaktır.

Kurumsallaşma yolunda şirketlerin yönetici ve hissedarları yanı sıra çalışanları, paydaşları arasındaki ilişkileri düzenleyen; şeffaflık ve hesap verebilirliği mümkün kılan bir araç olarak faaliyet raporları, makro ve mikro ölçekte ekonomide şeffaflığın, hesap verilebilirliğin artmasına, kayıt dışı faaliyetlerin azalmasına, şirketler arasında haksız rekabetin önlenmesine ortam sağlayabilecektir. Çünkü yıllık faaliyet raporları, şirket faaliyetlerinin izlenebildiği ve kurumsal yönetilip yönetilemediğinin görülmesine olanak sağlayan şirket yönetimleri tarafından hazırlattırılan temel raporlardır. Bu raporlar ile yöneticiler (şirket sahip ve/veya ortakları) deyim yerindeyse, şirket faaliyetleriyle ilgili olarak ortaklara, paydaşlara, bir şekilde hesap vermekte ve böylece daha şeffaf bir yönetim tarzı ortaya koymaktadırlar. Dolayısıyla yıllık faaliyet raporları, şirketlerin kurumsal yönetim yolunda şeffaflaşma ve hesap verebilme yönünde katkı vermektedirler.

Ölçebiliyorsan kontrol edebilirsin, geliştirebilirsin bakış açısıyla özel ve kamu sektöründeki tüm kurumların faaliyetleri, süreçleri, işletme körlüğü riskine karşı, hem üretim hem de idari anlamdaki uluslararası standartların gerektirdiği iç ve dış denetimlere açık olmalıdır. Denetim sonuçlarının da şeffaf bir şekilde; tüm paydaşların ulaşabilmesine olanak sağlayacak platformlarda paylaşılması gerekir. “Şirketlerin Yıllık Faaliyet Raporunun Asgari İçeriğinin Belirlenmesi Hakkında Yönetmelik¹” kapsamında düzenlenen ve ilgili platformlarda paylaşılan yıllık faaliyet raporları çalışmada incelenmiştir.

Düzenlenecek yıllık faaliyet raporları ile şeffaflık ve hesap verebilirlik ilişkisinin araştırıldığı çalışma üç ana bölümden oluşmaktadır. Birinci bölümde şeffaflık, hesap verilebilirlik, yıllık faaliyet raporlarına kavramsal boyutta bakış, ikinci bölümde yıllık faaliyet raporlarının Türkiye’deki yasal düzenlemelerdeki boyutu ve son bölümde ise Yıllık Faaliyet Raporu Örnek Uygulaması yer almaktadır.

2. ŞİRKETLERDE ŞEFFAFLIĞA DUYULAN İHTİYAÇ VE YILLIK FAALİYET RAPORLARINA BAKIŞ

Şirket faaliyetleri hakkında paydaşların bilgi edinebileceği faaliyet raporlarının yeterli bilgiyi içerecek şekilde ve şeffaflıkta hazırlanması önemlidir. Aynı şekilde faaliyet raporlarının bağımsız bir denetim kuruluşu tarafından denetlenmesiyle, raporlara olan güven, şeffaflık ölçütü daha da artacaktır.

Şeffaflık, bir örgütün içinde, örgütler arasında ve kamuoyu da dahil bütün ilgili taraflar arasında kısıtsız enformasyon akışıdır (Bennis ve diğ., 2010: 15). Örgüt içindeki şeffaflık eksikliği, iç ve dış denetim süreçlerinin yetersizliği hileli işlemlere yönelmeyi kolaylaştırabilir. Akçay ve Uysal’a (2019: 55) göre de, işletmede herhangi bir çalışan, yönetici, satıcı veya müşteri maruz kaldığı herhangi bir baskı durumunda gerekli fırsatı ve açığı görürlerse hile yapabilirler. Bu nedenle hile denetimi önem arz eden bir konudur. Geçmişte yaşanan hile skandalları, sadece muhasebede değil denetimde de hilelerin olduğunu ortaya koymuştur bu nedenle hilelerin tespit edilmesi, önlenmesi ve caydırılması gibi nedenlerle hile denetimi kavramı ortaya çıkmıştır. Hile denetimi aynı zamanda adli muhasebenin bir türüdür.

2.1. Yıllık Faaliyet Raporları ile Şeffaflık - Hesap Verilebilirlik İlişkisi

Şirketlerde finans, yatırım, girdi, çıktı, üretim gibi konuları yönetebilmek için öncelikle teorik bilgi ve piyasa tecrübesine sahip olmak gerekir. Ortaya çıkan sonuçların muhasebesini yapmak için de muhasebe bilimini bilmek, bilgi sistemi aracılığıyla hazırlanan faaliyet raporlarını okuyabilmek gerekmektedir.

¹ Bu yönetmelik, çalışmada “ilgili yönetmelik” olarak kullanılmıştır.

Muhasebe bilimi ‘kayı, kasayı ve kantarı’ felsefe bilimi ise ‘merakı, hayreti ve şüpheyi’ korumayı öğütür. Nitekim muhasebe mali olaylarla, felsefe kavramsal olgularla ilgilenir. Muhasebe felsefesi ise finansal olgulara kavramsal açıdan yaklaşır. Başka bir ifadeyle muhasebe, sayılar aracılığıyla parçadan bütüne doğru akan sistematik bir raporlama arayışı; felsefe, kavramlar yardımıyla bütünden parçaya doğru yayılan mantıksal bir sorgulama etkinliğidir. Muhasebe felsefesi ise sayılardan raporlamaya geçiş süreçlerini iyileştiren düşünsel bir arayıştır Yaz’ın (2021: 117) ifade ettiği bu düşünsel faaliyetin önemi gittikçe artmaktadır. Çünkü finansal tablolara temel oluşturan muhasebe kayıtlarındaki bilgilerin doğruluğu, hem şirket yönetimi hem de finansal tablo kullanıcıları için önemlidir.

Şirketin performansı ve karlılığıyla ilgili paydaşların algılarını etkilemek amacıyla yapılan hatalar ve hileli işlemler şirketlerin şeffaflığını olumsuz etkileyecektir. Dolayısıyla şirketlerde şeffaflık ve hesap verilebilirliğin yol haritası olarak kullanılacak yıllık faaliyet raporlarının hazırlanabilmesi için tüm faaliyetlerin gerektirdiği süreçlerin denetlenebilmesi, gerekli izlemelerin, ölçümlemelerin ve doğru kayıtlarının yapılması gerekmektedir. Zira doğru bir şekilde ve araçlarla ölçülebilenler şirkettir, denetimi altındadır yani onları yönetebilir, kontrol edebilir. Özellikle küreselleşme, bilgi teknolojilerinin gelişmesiyle hızlanan iletişim, iş süreçlerinin dijitalleşmesinin avantaj ve dezavantajları, krizlerdeki bulaşıcılık ve yıkıcı rekabet ortamında şirket faaliyetlerinde sürdürülebilirliği, şeffaflık ve hesap verilebilirliği sağlamak için dönüşümcü liderlik tarzıyla, örgüt kültürünün oluşturulması da çok önemli olmaya başlamıştır. Mansurova ve Güney (2018: 40)’e göre örgüt kültürünün ortaya çıkmasında dönüşümcü liderlerin, kendine has tutum ve düşünceleri, neyi iyi neyi kötü olarak gördüğü, neyi cezalandırdığı neyi ödüllendirdiği önemlidir. Yöneticilerin bunları objektif, şeffaf, kapsayıcı bir bakış tarzıyla gerçekleştirebilmeleri için yıllık faaliyet raporları önemlidir. Çünkü ölçebiliyorsan kontrol edebilirsin, geliştirebilirsin. Diğer bir ifadeyle yöneticiler, bilmediğini gözlemleyemez; gözlemleyemediğini ölçemez ve raporlayamaz dolayısıyla raporlayamadığını da yönetemez, kontrol edemez.

2.2. Şirketlerin Paydaşlarıyla İlişkilerinde Yıllık Faaliyet Raporlarının Önemi

Şirketlerin aşırı kazanma hırsları, dünyanın doğal düzeninin bozulmasıyla yaşanan iklim krizinin temel nedenidir. Bu yüzden iş modeli olarak hissedarlar kapitalizmi yerine paydaşlar kapitalizminin, tüm paydaşların menfaatlerine yansıtacak şekilde kurulması gerekmektedir. Çünkü bencillik, iyimserlik, aşırı güven gibi güdülerle yanlışların genel kabul görmesi veya asimetrik bilgiler sonucunda rasyonel olmayan davranışların önüne geçilememektedir. Fakat özellikle ekosistemin gelişmesiyle birlikte şirketlerin faaliyetleriyle ilgili bilgi talep eden paydaşlar veya çıkar grupları olarak adlandırılan taraflar artmıştır. Bunlar yöneticiler, para ve sermaye piyasalarından finansman sağlayanlar, ortaklar, devlet, yatırımcılar, istihdam edilenler, sendikalar, tüketicilerdir. “Çıkar gruplarının, şirket ile alakalı en temel bilgi kaynağı şirket tarafından düzenlenen ve hazırlanan finansal tablolardır. Çıkar grupları, söz konusu finansal tablolardan faydalanarak kendi menfaatleri doğrultusunda eşit kararlar almak durumundadırlar. Bir tarafta işletmenin sunduğu bilgiler, diğer tarafta ise çok farklı bilgilere ihtiyaç duyan şahıs ve kurumlar bulunmaktadır. Bu iki grup arasında, temel bilgi akışını ise finansal tablolar ve faaliyet raporları sağlamaktadır” (Kaval, 2008: 6).

Paydaşlar arasındaki bilgi akışını sağlayan finansal tablolar ve faaliyet raporlarının amacına tam hizmet edebilmesi için raporların, bağımsız denetime tabi olması gerekmektedir. TTK’da bağımsız denetim yükümlülüğü olan şirketler dışında kapsamın genişletilebilmesinin başta kayıt dışı ekonominin önlenmesi; yatırım ortamının iyileştirilmesi; haksız rekabetin ve kazançların, kurumsallaşma önündeki engellerin ortadan kaldırılabilmesi gibi olumlu dışsalıkları olacaktır. Fakat çeşitli nedenlerle denetim zorunluluğu olanlar da dahil olmak üzere finansal tablo ve faaliyet raporunun bağımsız denetimden geçirilmemesi olasılığı vardır. “Bağımsız denetimden geçirilmeme kavramı, bağımsız denetçinin hiç seçilmemesi; bağımsız denetim raporu hazırlandıktan sonra finansal tablo ve faaliyet raporundaki bilgilerde denetim sonuçlarını etkileyebilecek ölçüde değişiklik olması nedeniyle yeniden yaptırılması gereken bağımsız denetimin yaptırılmaması; bağımsız denetçinin olumsuz görüş içeren rapor düzenlemesi veya görüş vermekten kaçınması üzerine yeniden finansal tablo düzenleme ve bağımsız denetim yaptırma yükümlülüklerinin yerine getirilmemesi hallerini de kapsamaktadır” (Manavgat, 2017: 521). Dolayısıyla finansal tablo ve faaliyet raporlarında bu olumsuzlukların yaşanmaması için bağımsız denetimden geçirilmesi sayesinde paydaşların menfaatleri koruma altına alınabilmektedir.

Kısacası şirketler faaliyetlerini yerine getirirken tüm paydaşlarına hizmet edebilmesi, onlar arasında güvenin oluşturulabilmesi için finansal raporlama ve faaliyet raporlarının önemi gittikçe artmaktadır. Çünkü “yüksek kalitede finansal raporlamayı mümkün kılan Türkiye Finansal Raporlama Standartları (TFRS), yatırımcı ve şirketler arasındaki bilgi asimetrisinin azalmasını ve sermaye maliyetinin düşmesini sağlayarak hem sermaye

piyasalarının etkinliğini hem de yabancı yatırımların ülkeye girişini artırdığından, ülke ekonomisinin büyümesine katkı sağlar (Akdoğan ve Sultanoğlu, 2017: 41)”. Bunun için de şirketler, tüm paydaşlarını değer oluşturma zincirine katmalıdırlar. Kurumsallaşma ile başarılacak bu süreçte tüm şirketlerin uzun vadeli politikalar oluşturmaları ve yürütmesi gerekir. Bu süreçte şeffaflığın sağlanabilmesi için hem yerel hem de küresel ölçekteki düzenleyici ve denetleyici yapılara, kalite ve güvence standardı sağlayıcılara önemli görevler düşmektedir. Yani şirketlerin, sürdürülebilir başarıyı yakalayabilmesi için temel koşul olan iç ve dış kontrol sistemlerinin kurulmasını, çalıştırılmasını ve edinilen tecrübelerle geliştirilmesini amaçlayan uluslararası kabul görmüş standartlara göre prosesleri kurması ve işletmeleri gerekmektedir. Bu anlayışla çalışan şirketlerin yıllık faaliyet raporları, bugünü yönetmede ve geleceği planlamada önemli bir pusula olacaktır.

2.3. Şirketlerde Şeffaflık ve Hesap Verilebilirliğin Yeni Yol Haritası: Entegre Raporlama

Entegre raporlama, son on yılda iş dünyasında yaşanan gelişmeler ve artan rekabet sebebiyle şirketler açısından önem arz etmektedir. İşletmelerin temel amacının kar elde etmesi olduğu düşünüldüğünde, entegre raporlama da işletmeye rekabet avantajı sağlayan stratejik bir yönetim yaklaşımı olarak düşünülmektedir. İşletmelerin değerlendirilmesi sırasında sadece finansal bilgilerin yeterli olmadığına anlaşılmıştır, bunun yanında finansal olmayan bilgilerin de dikkate alınması gereğinin ortaya çıkmasıyla, finansal bilgilerle finansal olmayan bilgilerin birlikte raporlanması önem kazanmıştır. Entegre raporlama ile hem finansal hem de finansal olmayan bilgilerin tek bir raporda sunulmasıyla etkinliğin artırılması amaçlanmaktadır. Dolayısıyla finansal ve finansal olmayan raporları kapsayan entegre rapor: ilgili kuruluşun stratejisinin, kurumsal yönetiminin, performansının ve beklentilerinin, kuruluşun paydaşları ile nasıl sağlayacağını kısa ve öz bir şekilde bildirilmesine hizmet etmektedir.

İşletmelerin faaliyetleri hakkında bilgi sağlayan finansal tablo ve faaliyet raporlarının, yeterli bilgiyi içerecek şekilde ve şeffaflıkta hazırlanması büyük önem taşımaktadır. Aynı şekilde işletmeler tarafından büyük bir titizlikle hazırlanan finansal tablo ve faaliyet raporlarının bağımsız bir denetim kuruluşu tarafından da denetlenmesi raporlara olan güveni daha da artıracaktır. Zira işletmelere olan güvenin, sürekliliğinin ve iktisadi sürdürülebilirliğin sağlanmasına hizmet eden yaklaşım olan entegre düşünce esaslı raporlama sistemine ihtiyaç duyulması ve uygulanmaya başlaması da önemli bir girişimdir.

Dijitalleşme ile önemi artan, zaman ve mekân kavramlarından bağımsız bir şekilde çalışılmasına olanak tanıyan yenilikçi iş modellerinin sürdürülebilirliğini sağlamak, yaşanacak siber risklere karşı güvenlik önlemlerini almak, bu uygulamaları şirketlerin politikalarında sürekli hale getirmek önemli bir strateji olmaya başlamıştır. Aras’a (2021) göre de: Günümüzde kâr maksimizasyonu paradigmasının yetersizliğini ortaya koyan, kurumun kaynakları ile birlikte ilişkilerini de içeren çoklu sermaye öğeleri (doğal, insan, sosyal ve ilişkisel, fikri, üretilmiş, finansal sermaye) tarafından açıklanan “kurumsal değer” kavramının giderek artan önemi ile birlikte kurumsal raporlama ekosistemi yeniden şekilleniyor. Küresel ölçekte bu faktörlerin ölçümü ve kurumsal değerın ortaya konulması için sağlam ve kapsayıcı sürdürülebilirlik standartlarının belirlenmesi çalışmalarına olan katkısının yanı sıra, entegre düşünce temeline dayanan entegre raporlama yaklaşımı da, bu dönüşüm sürecinde kurumlara en temel yol gösterici araç olarak ışıık tutuyor.

Bu olumlu yönlerine karşın entegre rapor hazırlama sürecinin zorluklarına ilişkin Kardeş Selimoğlu ve Yeşilçelebi, (birbirinden bağımsız uzmanların fikir ve görüşlerinin alınması ve uzmanların ortak bir görüş üzerinde uzlaşmaya varana kadar) yürüttükleri araştırmada şu temel sonuçları elde etmişlerdir: Bu araştırmaya göre entegre rapor bir değer göstergesi olarak görülmektedir. Entegre rapor hazırlama sürecinde tüm paydaşların yer alması gerektiği düşüncesi hâkimken, üst yönetimin asıl sorumluluk sahibi taraf olduğunda fikir birliği oluşmuştur. Katılımcılar arasında entegre raporların bir güvence sistemine tabi olması gerektiği, bu raporlardaki unsurların, özellikle alanların belirlenmesi gerektiği, sürdürülebilirlik konusunda güvence verilmesi gerektiği, yönetim-iç denetçi-bağımsız denetçinin güvence sağlamaktan sorumlu kişiler olduğu belirtilmiştir. Ayrıca mevcut standartlar entegre raporlara güvence sağlamada yetersiz görülürken, ayrı bir güvence seti oluşturulması gerektiği görüşü ortaya çıkmıştır. Güvence ekibine bağımsız denetçinin liderlik etmesi ve ekipte dış uzmanlardan faydalanılması gerektiği görüşüne varılmıştır. Katılımcılara göre güvence süresi üç ay ile bir yıl arasında değişiklik gösterirken, tahmine dayalı verilerin güvenilirliğini sağlamanın zor olduğu düşünülmektedir. Ayrıca katılımcılar arasında görüş bildirme konusunda tek bir görüş mü yoksa iki ayrı görüş mü verileceği noktasında uzlaşma sağlanamamıştır. Fakat güvence raporunun uzmanlık alanına göre birden fazla kişi tarafından imzalanması gerektiği üzerinde uzlaşılmıştır. Güvence sonucunun ise güvence formatında olması ve risklerin belirtilmesi ve bazı durumların ise eklerde açıklanması düşüncesi ortaya çıkmıştır (Kardeş Selimoğlu ve Yeşilçelebi, 2019: 701).

3. TÜRKİYE’DE YILLIK FAALİYET RAPORLARI İLE İLGİLİ YASAL MEVZUAT

6102 sayılı Türk Ticaret Kanunu’nun (TTK²) tüm sermaye şirketlerini etkileyen hükümlerinden birisi, bu türdeki şirketlerin yönetim organlarına faaliyet raporu hazırlama ve bu raporun denetimini yaptırma yükümlülüğü getirmesidir. Şirket ile ilgili her türlü bilgiyi sunma özelliğine sahip olan faaliyet raporlarındaki bilgilerin doğruluğu ve güvenilirliği bilgi kullanıcıları açısından son derece önemlidir. Bilgi kullanıcılarının, bilginin kaynağına giderek inceleme yapmaları çok zor olduğu için doğru karar alabilmeleri noktasında faaliyet raporlarının bağımsız denetçiler tarafından denetimine ihtiyaçları vardır (Kaya ve Uzay, 2014: 100).

TTK 397. maddesinin 1. fıkrasına göre, denetime tabi olan anonim şirketlerin ve şirketler topluluğunun finansal tabloları denetçi tarafından, Kamu Gözetimi, Muhasebe ve Denetim Standartları Kurumunca yayımlanan uluslararası denetim standartlarıyla uyumlu Türkiye Denetim Standartlarına göre denetlenir. Yönetim kurulunun yıllık faaliyet raporu içinde yer alan finansal bilgilerin, denetlenen finansal tablolar ile tutarlı olup olmadığı ve gerçeği yansıtıp yansıtmadığı da denetim kapsamı içindedir. 2. fıkrasına göre denetime tabi olanlar, hazırlanmış olan finansal tablolarının denetimden geçip geçmediğini, denetimden geçmiş ise denetçi görüşünü ilgili finansal tablonun başlığında açıkça belirtmek zorundadır. Bu hüküm, yönetim kurulunun yıllık faaliyet raporu için de uygulanır. Denetime tabi olduğu hâlde, denetletirilmemiş finansal tablolar ile yönetim kurulunun yıllık faaliyet raporu düzenlenmemiş hükmündedir.

TTK 398. maddesinin 1. fıkrasına göre, şirketin ve topluluğun finansal tabloları ile yönetim kurulunun yıllık faaliyet raporunun denetimi; envanterin, muhasebenin ve Türkiye Denetim Standartlarının öngördüğü ölçüde iç denetimin, 397. maddenin 1. fıkrası çerçevesinde yönetim kurulunun yıllık faaliyet raporunun denetimidir.

TTK m. 514 hükmü çerçevesinde anonim şirketlerin yönetim kurullarının, yıllık faaliyet raporlarını bilanço gününü izleyen hesap döneminin ilk üç ayı içinde hazırlayarak genel kurula sunmaları gerekmektedir. Yönetim kurulu üyelerinden herhangi birinin, yıllık faaliyet raporunda yer alan bilgilerle ilgili farklı görüşte olması halinde, itiraz ettiği konuların gerekçeleri raporda belirtilir. Ayrıca TTK 518. madde gereği, topluluğa ilişkin yıllık faaliyet raporu da, ana şirketin yönetim kurulu tarafından 516’ncı maddeye göre düzenlenir.

Niteliği ve yer alması gereken hususların belirlendiği TTK 516’ncı maddeye göre yıllık faaliyet raporu, şirketin, o yıla ait faaliyetlerinin akışı ile finansal durumunu tüm yönleriyle, doğru, eksiksiz, dolambaçsız, gerçeğe uygun ve dürüst bir şekilde yansıtmaları gerekir. Raporda ayrıca şirketin gelişmesine ve karşılaşması muhtemel risklere de açık bir şekilde yer verilir. Bu konulara ilişkin yönetim kurulunun değerlendirmesi de raporda yer alır. Yönetim kurulunun faaliyet raporu ayrıca aşağıdaki hususları da içermelidir:

- a) Faaliyet yılının sona ermesinden sonra şirkette meydana gelen ve özel önem taşıyan olaylar.
- b) Şirketin araştırma ve geliştirme çalışmaları.
- c) Yönetim Kurulu üyeleri ile üst düzey yöneticilere ödenen ücret, prim, ikramiye gibi mali menfaatler, ödenekler, yolculuk, konaklama ve temsil giderleri, aynı ve nakdî imkânlar, sigortalar ve benzeri teminatlar.

6102 sayılı Türk Ticaret Kanununda yer alan Yıllık Faaliyet Raporu ile ilgili hususlar “Şirketlerin Yıllık Faaliyet Raporunun Asgari İçeriğinin Belirlenmesi Hakkında Yönetmelik” kapsamında aynen yer almıştır.

4. YILLIK FAALİYET RAPORU HAZIRLAMA KILAVUZU³

Kurumsal yönetim yolunda Yıllık Faaliyet Raporu, şirketlerin yönetici ve hissedarları yanı sıra tüm paydaşları arasındaki ilişkileri düzenleyen; şeffaflık ve hesap verebilirlik gibi sorumlulukların yerine getirilmesini mümkün kılan şu temel amaçlara hizmet etmesi beklenmektedir:

- Şirketin kamuoyu ile doğru, açık ve karşılaştırılabilir bilgi paylaşımı
- Yönetim kurulunun, tepe yönetim performansını bağımsız bir şekilde izlemesini ve tepe yöneticilerin hissedarlara karşı hesap verebilirliğini sağlaması

² Çalışmada yer alan TTK ifadesi, 6102 sayılı kanuna işaret etmektedir.

³ TKYD-Deloitte (2014). Anonim ve Limited Şirketler İçin Yıllık Faaliyet Raporu Hazırlama Kılavuzu, Türkiye Kurumsal Yönetim Derneği ve Deloitte Ortak Yayınından yararlanılarak oluşturulmuştur.

4.1. Yıllık Faaliyet Raporu Hakkında Temel Bilgiler

Yıllık Faaliyet Raporu, yönetim organı tarafından TTK ve ilgili yönetmeliğe göre düzenlenen, şirketin ilgili yıla ilişkin yıllık faaliyetlerinin akışı ile her yönüyle finansal durumunun doğru, eksiksiz, dolambaçsız, gerçeğe uygun ve dürüst bir şekilde yansıtıldığı, şirketin gelişmesinin ve karşılaşılması muhtemel risklerin belirtildiği dokümandır (TKYD-Deloitte, 2014: 5).

Yıllık faaliyet raporlarında ilgili firmanın önceki hesap dönemine ait finansal bilgileri eksiksiz ve doğru bir şekilde yansıtmaya zorunluluğu bulunur. Faaliyet raporlarında firma yöneticileri ortaklarına firma faaliyetleri ile ilgili hesap vermektedir. Bu yıllık raporlar hazırlanırken şirketlerin raporlama ilkelerine uyma zorunluluğu bulunmaktadır. Bu ilkeler aşağıdaki maddelerde yer almaktadır.

Sorumluluk ilkesi

Doğruluk ilkesi

Açıklık ilkesi

Tutarlılık ilkesi

Tarafsızlık ilkesi

Tam açıklama ilkesi

Senelik olma ilkesi

Anonim şirketler başta olmak üzere; sermayesi paylara bölünmüş komandit şirketler, limited şirketler gibi tüm sermaye şirketleri tarafından bu raporların hazırlanması zorunludur. Şirketler dışında bakanlık veya belediye gibi kamu kuruluşları da saydamlık ve hesap verilebilirliğin sağlanması için faaliyet raporları düzenlemektedir. Faaliyet raporları şirket türüne göre farklı kurullar tarafından düzenlenmektedir.

Limited şirketlerde yıllık raporlar müdür ya da müdürler kurulu tarafından hazırlanırken anonim şirketlerde yönetim kurulu tarafından hazırlanmaktadır. Daha büyük şirketlerde ise finansal raporlar alt birimlerde bulunan kişiler tarafından düzenlenir. Ancak yönetim kurulu bu rapor içeriklerinden sorumlu tutulur.

Faaliyet raporu hazırlama konusu hakkındaki bilgi Resmi Gazetede “Şirketlerin Yıllık Faaliyet Raporunun Asgari İçeriğinin Belirlenmesi Hakkında Yönetmelik’te” açık bir şekilde verilmektedir. Yıllık raporlar belli başlı bölümlerden oluşmaktadır. Faaliyet raporunda olması gerekenler aşağıdaki maddelerde yer almaktadır.

Genel bilgiler

Yönetici ve denetçi raporu

Kurumsal yönetim bilgileri

Başkanların ifadesi

Yönetim kurulu üyelerine sağlanan mali haklar

Firmanın araştırma ve geliştirme çalışmaları

Üst düzey yöneticilere sağlanan mali haklar

Firma faaliyetleri ve faaliyetlere ilişkin önemli gelişmeler

Finansal performans

Finansal tablolara notlar

Riskler ve yönetim organının değerlendirmesi

Muhasebe politikaları

Diğer hususlar

Kamu kuruluşlarında faaliyet raporları Sayıştaylar tarafından incelenmektedir. Bağımsız denetime tabi tutulan kuruluşlarda ise bu raporlar denetçiler tarafından denetlenmektedir. Denetimi ve incelemesi yapılmayan raporlar, düzenlenmemiş sayılmaktadır.

TTK Madde 375'e göre Yıllık Faaliyet Raporunun düzenlenmesi ve genel kurula sunulması, yönetim kurulunun devredilemez ve vazgeçilemez görev ve yetkileri arasındadır. Raporun, genel kurul tarihinden en az 15 gün önce şirket merkez ve şubelerinde pay sahibi incelemelerine hazır bulundurulması gerekir. TTK Madde 409 uyarınca genel kurulda yönetim kurulunca hazırlanan Yıllık Faaliyet Raporunun sadece okunması değil, aynı zamanda müzakere edilmesi öngörülmektedir. Yine TTK'na göre raporun 10 yıl süreyle saklanması zorunludur. İlgili mevzuat kapsamında hazırlanacak Yıllık Faaliyet Raporu şu temel içeriklere, özelliklere sahip olacak şekilde ilgili taraflara gerekli bilgileri vermelidir:

- Yıllık Faaliyet Raporu içinde yer alan finansal bilgilerin, denetlenen finansal tablolar ile tutarlı olup olmadığı ve gerçeği yansıtır yansıtmadığı bağımsız denetimin kapsamı içerisindedir.
- Bağımsız denetime tabi olduğu halde bağımsız denetimden geçmemiş Yıllık Faaliyet Raporu düzenlenmemiş hükmündedir.
- Yıllık Faaliyet Raporu, tasarım olarak şirketin kurum kültürüne ve içerik olarak da mevzuata uygun olarak hazırlanmalıdır.
- Yıllık Faaliyet Raporu, şirket ile ilgili mesajların, paydaşlara iletilmesinde önemli bir kurumsal iletişim aracıdır.
- Şirket hakkında güncel, doğru, karşılaştırılabilir bilgiler ve şirketin gelecek hakkındaki planları, anlaşılır biçimde paydaşlar ile paylaşılması, şirketin gerçek değerinin ortaya çıkmasına yardımcı olacaktır.

4.2. Yıllık Faaliyet Raporu Hazırlama Gerekliliği ve Kapsamı

Kurumsal yönetimde şeffaflık ilkesinin gereği olan kamuyu aydınlatma esasları, şirket ve paydaşları arasında doğru bilgilendirme ve güvene dayanan bir köprü, öncelikli olarak iyi hazırlanan bir Yıllık Faaliyet Raporu ile mümkün olur.

Yıllık Faaliyet Raporunun en önemli bölümü, şirketin finansal tablolarında, geçmiş yıllarla karşılaştırmalı analiz ve istatistiki bilgilerin de yer aldığı bölümdür. İstatistiki verilerin ve analizlerin sade ve açık olması ise bu bilgilerin Yıllık Faaliyet Raporunda belirtilmesi kadar önemlidir. Zira bilginin kısa ve anlaşılır olması, doğrudan okuyucuya mesajın iletilmesine önemli ölçüde katkıda bulunmaktadır. Öte yandan, şirketin değerleri, vizyonu ve sosyal sorumluluk projeleri de Yıllık Faaliyet Raporlarında, gittikçe artan bir önemde yer almaktadır (TKYD-Deloitte, 2014: 10).

Yıllık Faaliyet Raporu hazırlanmasındaki anahtar, birbirinden farklı menfaat sahiplerinin ya da kuruluşların farklı amaçlar için bu rapora ihtiyaç duymasıdır. Dolayısıyla şirketlerin, Yıllık Faaliyet Raporu ile ilgili beklentileri karşılayabilmesi için öncelikli olarak cevaplanması gereken temel sorular şunlardır (TKYD-Deloitte, 2014: 10):

- Yıllık Faaliyet Raporunda hedef kitleye iletilmek istenen mesaj nedir?
- Mesaj raporda nasıl verilmelidir?

Bu temel soruları cevaplayabilen Yıllık Faaliyet Raporunun işletmelere sağlayacağı katma değerleri şöyle özetleyebiliriz (TKYD-Deloitte, 2014: 8):

- Yasal mevzuat ve düzenleyici kuruluşların standartlarına uyumu sağlar ve bu kuruluşlarla iletişime katkıda bulunur.
- Şirketin gerçek değerinin hisse değerine yansımaya destek olur.
- Yatırımcıların beklentilerini yönetir.
- Şirket menfaat sahipleri (yatırımcılar, tedarikçiler, çalışanlar vb.) ile şirket arasındaki ilişkileri geliştirir.
- Şirket ile menfaat sahipleri arasındaki güven ortamını pekiştirir.
- Yatırımcılar için sağlıklı veri temin eder,
- Şirketin bilinirliğini artırır.
- Şirketle ilgili fırsatların ve şirketin büyüme potansiyelinin anlaşılmasını sağlar.
- Şirketin sermaye piyasalarından yeni fon temin etme yeteneğini artırır.
- Menfaat sahiplerini şirketin karşılaşılabileceği riskler ve bu risklere karşı alınan önlemler konusunda bilgilendirir.

4.3. Yıllık Faaliyet Raporunun İçeriği

Yıllık Faaliyet Raporunun aşağıdaki içeriğin oluşturulmasında dikkat edilmesi gereken hususlar şu şekilde özetlenebilir (TKYD-Deloitte, 2014: 10):

- Rapor, TTK, halka açık şirketler için Sermaye Piyasası Kanunu (SPK) mevzuatı ile Kurumsal Yönetim İlkeleri'ne ve ayrıca ilgili şirketler için Bankacılık Kanunu ve mevzuatına uygun hazırlanmalı.
- Net bir mesaj vermeli.
- Yatırımcılar için bilgi kaynağı olma amacı ile tasarlanmalı.
- Kurumsal kimliğe uygun olmalı.
- Etkileyici ve yaratıcı bir tasarımla sunulmalı.
- İnandırıcı bir başkan mesajı bulunmalı.
- Kaliteli fotoğraflarla desteklenmeli.
- Anlatım bozuklukları ve yazım yanlışlarının olmamalı.
- Kaliteli baskıya sahip olmalı.
- Gerekli tablo ve grafikler doğru kullanılmalı.
- Şirketin kaynaklarını israf ettiğini düşündürecek abartılı uygulamalardan uzak durmalı.
- İçerdiği finansal ve finansal olmayan bilgilerin doğruluğu ve diğer raporlar ile tutarlılığı sağlanmalı.
- Eğer yabancı bir dilde hazırlanıyorsa bir editör tarafından metnin akıcılığı kontrol edilmeli.

4.3.1. Genel Bilgiler

Yıllık Faaliyet Raporu, ilgili yönetmelikle de düzenlenen aşağıdaki genel bilgileri içermelidir:

- Raporun ilgili olduğu hesap dönemi, şirketin ticaret unvanı, ticaret sicili numarası, merkez ve varsa şubelerine ilişkin iletişim bilgileri ile varsa internet sitesinin adresi,
- Şirketin organizasyon, sermaye ve ortaklık yapıları, nihai gerçek kişi ortaklar ile bunlara ilişkin hesap dönemi içerisindeki değişiklikler,
- Varsa imtiyazlı paylara ve payların oy haklarına ilişkin açıklamalar,
- Yönetim organı, üst düzey yöneticileri ve personel sayısı ile ilgili bilgiler,
- Varsa; şirket genel kurulunda verilen izin çerçevesinde yönetim organı üyelerinin şirketle kendisi veya başkası adına yaptığı işlemler ile rekabet yasağı kapsamındaki Yıllık Faaliyetleri hakkında bilgiler.

4.3.1.1. Yıllık Faaliyet Raporunda Genel Bilgiler Bölümüne İlişkin Örnek İçerik⁴

Genel olarak şirket veya topluluğun faaliyet gösterdiği sektörler, dünya veya ülke üzerindeki bölgesel dağılımı ve diğer yerli ve yabancı şirket ya da gruplarla kurulmuş olan ortaklıklar hakkında genel bilgilere yer verilir

Yönetim kurulu başkanının mesajı: Yıllık Faaliyet Raporlarında, şirket başkanının mesajlarını ilettiği bölüm, raporun tamamının inandırıcılığı için çok önemlidir. Başkan tarafından geçmiş yılın genel bir değerlendirilmesinin yapıldığı bu bölümde yatırımcılar aynı zamanda şirket stratejisinin net bir açıklamasını, gelişmelerin özetini, şirketin yol haritasını ve temel performans göstergelerini bulmak isterler.

Yönetim kurulu üyeleri: Yönetim kurulunda görev alan başkan ve üyelerin, muhassas üyelerin ad ve soyadları, görev ve sorumlulukları, bu görevlerinin süreleri, özgeçmişleri, şirket dışında yürüttükleri görevlerle ilgili bilgilere yer verilmelidir. Eğer varsa Yönetim Kurulu'na bağlı komiteler ve denetim kurulu bilgileri. Yönetim Kurulu üyeleri dışında şirketin dönem içinde yönetim komitelerinde ve denetleme kurullarında görev alan başkan ve üyelerinin ad ve soyadları, yetki sınırları, bu görevlerinin sürelerinin başlangıç ve bitiş tarihleriyle verilmesi gerekmektedir.

⁴ Örnek için TKYD-Deloitte (2014) çalışmasından yararlanılmıştır.

Vizyon ve misyon, değerler ve strateji: Vizyon, misyon ve şirket değerleri o şirketin amacını, hedeflerini ve temel fikirlerini temsil eder. Bir şirketin vizyon, misyon ve değerleri, kurumsal karar verme mekanizması hakkında önemli ipuçları içerirler. Pek çok şirketin geçmişte ortaya çıkan başarısızlığının temel sebebi organizasyonların iş yapış ve düşünüş şekillerinde değişikliğe gitmemesi ve değişimi besleyen bir kültür oluşturamaması yatmaktadır. Dolayısıyla kurumlarda misyon ve vizyon sahibi olmak sayesinde hem bugün hem de yarınlarda ayakta kalmak mümkündür. Çünkü misyon sahibi olanlar var olmak nedenini tam olarak ifade edebilmiş ve buna uygun eğitim veya altyapısını kurmaya çalışmaktadır. Vizyon sahibi olanlar da bu kapasitesiyle geleceği görüş açısını, var olma potansiyelini geliştirmeye, eksikliklerini, risklerini bertaraf etmeye çalışmaktadırlar.

İnsan kaynakları: Bu bölümde insan kaynakları politikaları ve organizasyonu hakkında bilgiler verilmelidir. Buna ek olarak, şirketin çalışanları ile ilgili demografik bilgiler, toplu sözleşme uygulamaları, çalışanlara sağlanan hak ve menfaatler belirtilmelidir.

Şirketin Sosyal sorumluluk projeleri: Şirketin kamuoyundaki imajını ve bilinirliğini olumlu yönde etkilemektedir. Eğitimden sanata, spordan bilimsel araştırmalara farklı alanlarda yürütülen sosyal sorumluluk ve sponsorluk projeleri her geçen gün şirketlerin Yıllık Faaliyet Raporlarında daha çok yer edinmektedir.

4.3.2. Yönetim Organı Üyeleri ile Üst Düzey Yöneticilere Sağlanan Mali Haklar

İlgili yönetmelik kapsamında bu bölümde, adı geçen yöneticilere ilişkin aşağıda belirtilen hususların yer alması zorunludur:

- Sağlanan huzur hakkı, ücret, prim, ikramiye, kâr payı gibi mali menfaatlerin toplam tutarları,
- Verilen ödenekler, yolculuk, konaklama ve temsil giderleri ile aynı ve nakdi imkânlar, sigortalar ve benzeri teminatların toplam tutarlarına ilişkin bilgiler.

Söz konusu mali hakların tek bir rakam ve toplam tutar olarak verilmesi yeterlidir. Ancak bu bilginin karşılaştırmalı olarak verilmesi gerekir.

4.3.3. Şirketin Araştırma ve Geliştirme Çalışmaları

İlgili yönetmelik kapsamında bu bölümde, şirketin yürüttüğü araştırma ve geliştirme (AR-GE) faaliyetleri ve yatırımlarına ilişkin aşağıdaki bilgiler verilebilir:

- Şirketin yatırım ve AR-GE politikası,
- Dönem içinde tamamlanan AR-GE ve yatırım çalışmaları ve bu çalışmaların firma kapasite, maliyet ve hasılat döngülerine olan parasal etkileri,
- Sürdürülmekte olan Ar-Ge ve yatırım Yıllık Faaliyetlerinin niteliği ve tamamlanma aşamaları, planlanan tamamlanma tarihleri,
- Dönem içinde yapılan Ar-Ge ve yatırım harcamalarının tutarı, finansman kaynakları,
- Bu çalışmalarının firmanın Yıllık Faaliyetlerine, hasılat, maliyet ve kapasite kullanım oranlarına etkileri konusunda yönetimin beklentisi,
- Şirketin varsa devlet teşviklerinden yararlanma durumu.

4.3.4. Şirket Yıllık Faaliyetleri ve Yıllık Faaliyetlere İlişkin Önemli Gelişmeler

İlgili yönetmelik kapsamında Yıllık Faaliyet raporunun şirket Yıllık Faaliyetleri ve Yıllık Faaliyetlere ilişkin önemli gelişmeler bölümünde yer alması zorunlu hususlar aşağıdaki gibidir:

- Şirketin ilgili hesap döneminde yapmış olduğu yatırımlara ilişkin bilgiler,
- Şirketin iç kontrol sistemi ve iç denetim Yıllık Faaliyetleri hakkında bilgiler ile yönetim organının bu konudaki görüşü,
- Bu bölümde şirketin iç kontrol sistemi ve iç denetim Yıllık Faaliyetleri hakkında bilgiler ile yönetim organının mevcut iç kontrol sisteminin varlığı, operasyonların verimliliği ve etkinliği, finansal raporlamanın güvenilirliği ile politika ve prosedürlere uygunluğun sağlanması; etkin bir iç kontrol yapısının ve şirkette denetlenebilir bir ortam olduğu, mevcut iç denetim Yıllık Faaliyetleri hususlarındaki görüşüne yer verilmelidir.
- Şirketin doğrudan veya dolaylı iştirakleri ve pay oranlarına ilişkin bilgiler,

- Dolaylı ve doğrudan iştiraklerle dönem içinde gerçekleştirilen ticari ve mali ilişkilerin tutarlarını gösteren tablolar,
- Şirketin iktisap ettiği kendi paylarına ilişkin bilgiler,
- Hesap dönemi içerisinde yapılan özel denetime ve kamu denetimine ilişkin açıklamalar,
- Şirket aleyhine açılan ve şirketin mali durumunu ve Yıllık Faaliyetlerini etkileyebilecek nitelikteki davalar ve olası sonuçları hakkında bilgiler,
- Mevzuat hükümlerine aykırı uygulamalar nedeniyle şirket ve yönetim organı üyeleri hakkında uygulanan idari veya adli yaptırımlara ilişkin açıklamalar,
- Geçmiş dönemlerde belirlenen hedeflere ulaşıp ulaşılamadığı, genel kurul kararlarının yerine getirilip getirilmediği, hedeflere ulaşılamamışsa veya kararlar yerine getirilmemişse gerekçelerine ilişkin bilgiler ve değerlendirmeler,
- Yıl içerisinde olağanüstü genel kurul toplantısı yapılmışsa, toplantının tarihi, toplantıda alınan kararlar ve buna ilişkin yapılan işlemler de dâhil olmak üzere olağanüstü genel kurula ilişkin bilgiler,
- Şirketin yıl içinde yapmış olduğu bağış ve yardımlar ile sosyal sorumluluk projeleri çerçevesinde yapılan harcamalara ilişkin bilgiler,
- Şirketler topluluğuna bağlı bir şirketse; hâkim şirketle, hâkim şirkete bağlı bir şirketle, hâkim şirketin yönlendirmesiyle onun ya da ona bağlı bir şirketin yararına yaptığı hukuki işlemler ve geçmiş Yıllık Faaliyet yılında hâkim şirketin ya da ona bağlı bir şirketin yararına alınan veya alınmasından kaçınılan tüm diğer önlemler.

4.3.5. Finansal Durum

İlgili yönetmelik kapsamında Yıllık Faaliyet raporunun finansal durum bölümünde aşağıda belirtilen hususların yer alması zorunludur:

- Finansal duruma ve Yıllık Faaliyet sonuçlarına ilişkin yönetim organının analizi ve değerlendirmesi, planlanan Yıllık Faaliyetlerin gerçekleşme derecesi, belirlenen stratejik hedefler karşısında şirketin durumu,
- Geçmiş yıllarla karşılaştırmalı olarak şirketin yıl içindeki satışları, verimliliği, gelir oluşturma kapasitesi, kârlılığı ve borç/öz kaynak oranı ile şirket Yıllık Faaliyetlerinin sonuçları hakkında fikir verecek diğer hususlara ilişkin bilgiler ve ileriye dönük beklentiler,
- Şirketin sermayesinin karşılıksız kalıp kalmadığına veya borca batık olup olmadığına ilişkin tespit ve yönetim organı değerlendirmeleri,
- Varsa şirketin finansal yapısını iyileştirmek için alınması düşünülen önlemler,
- Kâr payı dağıtım politikasına ilişkin bilgiler ve kâr dağıtımı yapılmayacaksa gerekçesi ile dağıtılmayan kârın nasıl kullanılacağına ilişkin öneri.

4.3.6. Riskler ve Yönetim Organının Değerlendirmesi

Şirket yönetim kurulu ve komitelerin asli görevlerinden biri de işletmenin sürekliliğinin sağlanmasıdır. Bu yüzden Yıllık Faaliyet Raporlarında Yönetim Kurulunun, şirketin karşılaşılabileceği riskler, risk yönetim sistemi ve bu sistemin üst gözetiminin nasıl yapıldığı ve belirlenen risklere karşı alınan önlemler konusunda menfaat sahiplerini bilgilendirmesi gerekir ki bu da, yönetim kurulunun üstlendiği riskleri yönetmesine yardımcı olur.

Yıllık Faaliyet raporunun riskler ve yönetim organının değerlendirilmesi bölümünde aşağıda hususların yer alması zorunludur:

- Varsa şirketin öngörülen risklere karşı uygulayacağı risk yönetimi politikasına ilişkin bilgiler,
- Oluşturulmuşsa riskin erken teşhis ve yönetimi komitesinin çalışmalarına ve raporlarına ilişkin bilgiler,
- Satışlar, verimlilik, gelir yaratma kapasitesi, kârlılık, borç/öz kaynak oranı ve benzeri konularda ileriye dönük riskler.

Tüm paydaşlar açısından işletmenin sürekliliğine ilişkin kurumun finansal ve operasyonel tüm riskleri göz önünde bulundurularak riskler yönetilmelidir. Zira işletme sürekliliğinin sağlanması, risklerin uygun politikalarla yönetilmesi ve gelecek öngörülerinde bulunurken bu veriler aracılığıyla karar verilmesi esasına dayanır.

4.3.6.1. İşletme Sürekliliğinin Sağlanmasında Risklerin Belirlenmesinin ve Yönetilmesi Süreçlerinin Yıllık Faaliyet Raporlarında Yer Almasının Önemi

Risk kavramı⁵ genel olarak kaybetme tehlikesine vurgu yapar. Yani bireylerin ve kurumların sahip olduğu varlıkları veya planlama faaliyetlerini tehdit eden risk kavramı, kaybetme olasılığını ifade eder. Risk yönetiminde temel aşamaları şöyle özetleyebiliriz: Tehlikelerin belirlenmesi ve değerlendirilmesi; risklerin derecelendirilmesi; kontrol önlemlerinin uygulanması ve bunlara yönelik denetim, izleme sonuçlarına göre gözden geçirmenin gerçekleştirilmesi.

Yıllık Faaliyet Raporunun içeriğinde özellikle risk yönetimi ile ilgili önemli değişiklikler yapılması gerekmektedir. Çünkü ekonomik ortamdaki belirsizliklerin, risklerin gittikçe artmasıyla işletmelerde hem sürdürülebilirliğin hem de sürekliliğin sağlanabilmesi zorlaşmaktadır. Dolayısıyla bir organizasyondaki süreçlerin potansiyel risklerinin tanımlanabilmesi için şu soruların sorulması ve bunlara karşı yapılabileceklerin Yıllık Faaliyet Raporlarında da yer alması sağlanmalıdır:

- İşletme süreçlerindeki potansiyel riskler nelerdir?
- Risklerin değişkenleri, göstergeleri nelerdir?
- Bu değişkenleri öngörecektir bilgi birikimi işletme bünyesinde var mıdır?
- İşletme çalışanlarının risk algısı ve yeterlilikleri ölçülebiliyor mu, komiteler oluşturuldu mu, iç denetim çalışıyor mu?
- Risk değişkenleri, kısa ve uzun dönem tahmin modelleri ve fırsata dönüştürebilme kapasitesi oluşturuldu mu?
- İşletmenin en alt sürecinde tanımlanan risklerin, diğer süreçleri de etkileme oranları, ortaya çıkma olasılıkları belirlendi mi?
- Asıl önemlisi işletmenin bağımsız dış denetime bakış açısı nedir?

Kısacası yukarıdaki soru ve cevaplara yönelik şirketin risk yönetimi politikası, risklerin erken teşhisine ilişkin oluşturulmuş komitelerin üyeleri, politika ve çalışma prensipleri, risklerin belirlenmesi, belirlenen risklerin yönetilmesi ve aksiyonların takibi için yapılan çalışmalar ve komite raporları konusundaki esaslara Yıllık Faaliyet Raporunda yer verilmelidir.

4.3.7. Diğer Hususlar

İlgili yönetmelik kapsamında Yıllık Faaliyet Raporunun bu bölümünde, yıllık faaliyet yılının sona ermesinden sonra şirkette meydana gelen ve ortakların, alacaklıların ve diğer ilgili kişi ve kuruluşların haklarını etkileyebilecek nitelikteki özel önem taşıyan olaylara ilişkin açıklamalara yer verilmesi beklenir.

Bu bölümde ayrıca, söz konusu ilgili yönetmelik hükümlerine aykırı olmamak kaydıyla yönetim organının uygun gördüğü ilave bilgilere de yer verilebilir.

Diğer hususlar bölümünde belirtilebilecek konulardan bazıları şunlar olabilir:

- Önemli miktarda varlık alımları ya da satışları
- Şirket aleyhine açılmış önemli davalar
- Sadece o yıla ilişkin tekrarlanmayan ya da olağan dışı işlemler (doğal afet, yeni teknoloji ya da buluşun şirketin yıllık faaliyetleri üzerine etkisi, yeni çıkan bir regülasyonun finansal ve operasyonel süreçlere etkileri gibi)
- İşletme birleşmeleri, bölünmeleri, satın almalar hakkında bilgiler

⁵ Şirketlerin Yıllık Faaliyetlerinden dolayı maruz kaldığı riskler ve bu risklerle gelen fırsatlar, yönetim kurulunun stratejisi net bir ifade ile ortaya konulur. Risk yönetimi ile ilgili Yıllık Faaliyet Raporlarının bu kısımda değerlendirilebilecek başlıklar:

- A. Operasyonel Riskler: Yönetimsel Operasyonlarla ilgili riskler; Kurumsal Riskler; Teknolojik Riskler; Varlık ve Değer Riskleri
- B. Finansal Riskler: Raporlamalarla ilgili Riskler; Sermaye Yapısı ilgili Riskler; Piyasayla ilgili Riskler; Kredibiliteyle ilgili Riskler
- C. Stratejik Riskler: Piyasayla ilgili riskler; Yönetimsel Riskler; Menfaat Sahipleriyle ilgili Riskler
- D. Yönetilemeyen Dış Riskler: Siyasi Riskler; Ekonomik Riskler; Hukuki Riskler; Mevzuata ilişkin Riskler; Doğal Riskler

- Varsa durdurulan yıllık faaliyetler hakkında bilgiler

4.4. Yıllık Faaliyet Raporunun Sunumu ve Denetçinin Sorumluluğu

İlgili yönetmelik kapsamında Yıllık Faaliyet Raporu ilgili olduğu hesap döneminin bitimini izleyen 2 ay içinde hazırlanır. Şirketin yönetim organı başkanı ve üyeleri tarafından imzalanarak onaylanır. Yönetim organı üyelerinden herhangi birinin Yıllık Faaliyet Raporunda yer alan bilgilerle ilgili farklı görüşte olması halinde, itiraz ettiği hususlar gerekçeleri ile birlikte Yıllık Faaliyet Raporunda belirtilir. Yıllık Faaliyet Raporu, Genel Kurul tarihinden en az 15 gün önce, şirket genel merkezinde hissedarların incelemesine hazır bulundurulur.

Bağımsız denetim kapsamında olduğu halde bağımsız denetimden geçmeyen Yıllık Faaliyet Raporları düzenlenmemiş hükmündedir. Türk Ticaret Kanunu Madde 397'ye göre de, denetime tabi olan anonim şirketlerin yönetim kurulunun Yıllık Faaliyet Raporu içinde yer alan finansal bilgilerin, denetlenen finansal tablolar ile tutarlı olup olmadığı ve gerçeği yansıtıp yansıtmadığı denetim kapsamı içindedir.

4.5. Yıllık Faaliyet Raporlarının Geleceği: Entegre Raporlama

Günümüzde iktisadi sürdürülebilirliğin ve işletmelerde sürekliliğin sağlanabilmesi için piyasanın duyduğu ihtiyaç; Şirketin hem geçmiş performansının değerlendirildiği hem de gelecekte karşılaşılabileceği risk ve fırsatlara ilişkin beklentileri anlayarak yatırım kararlarını yönlendirebileceği tek bir raporda tüm bu bilgilerin sunulmasıdır. Bu bağlamda dünyada; bu ihtiyacı gören birçok şirketin stratejileri, kurumsal yapılanmaları ve performansları Yıllık Faaliyet gösterilen ortamın kendine özgü sosyal, çevresel, ticari koşulları da göz önüne alınarak ve bu koşulları değerlendirerek finansal ve finansal olmayan verileri bir arada sunmaya başlamıştır. Bu kapsamlı ve tek raporun adı ise Entegre Raporlamadır.

Entegre raporlama ile şirketler, yatırımcıları ve şirketin performansı hakkında bütünsel resmi görmek isteyen menfaat sahiplerini hedeflemektedir. Önümüzdeki yıllarda entegre raporlamanın dünyada daha fazla şirket tarafından yapılması beklenmektedir. TTK'da da, şirketlerin hazırlaması gereken Yıllık Faaliyet Raporlarında finansal ve finansal olmayan varlıkların şirket ortakları ve menfaat sahipleri ile paylaşılması şirketlerin şeffaflaşması ve kurumsallaşması için önemli bir adımdır (TKYD-Deloitte, 2014: 32).

5. SONUÇ VE ÖNERİLER

Sonuç olarak, Yeni Türk Ticaret Kanunu'nun birçok maddesi şirketlerin kurumsal kimliğini ön plana çıkartmak amacıyla oluşturulmuştur. Kurumsal çalışmalardan bir tanesi olan yıllık faaliyet raporu; şirketin mevcut ve potansiyel iş ortaklarını ve menfaat sahiplerini bilgilendirmek ve etkilemek için hazırlanmış bir dokümandır. Kapsadığı hesap dönemine ilişkin bilgileri, şirketin ilerideki hedeflerini ve bu hedefleri ne şekilde yerine getireceğini anlatan faaliyet raporu, hem tasarım olarak şirketin kurum kültürüne uygun, hem de içerik olarak Yeni Türk Ticaret Kanunu'na ve yönetmeliğe uygun olarak hazırlanmalıdır. Şirketlerin hedeflerine ulaşmasında doğru hazırlanmış bir faaliyet raporu şirketlerin gerçek değerinin doğru algılanmasına büyük katkıda bulunacaktır.

Kolay anlaşılır, güncel, karşılaştırılabilir, doğru bilgileri içeren; şirketin finansal durumunu, geçmiş yıla ilişkin yıllık faaliyetlerini, geleceğe ilişkin stratejilerini şeffaf bir biçimde ortaya koyan, görsel olarak doğru tasarlanmış Yıllık Faaliyet Raporları, şirketlerin paydaşları ile arasında önemli bir kurumsal iletişim aracıdır.

Uluslararası uygulamalarda şirket paydaşlarına ihtiyaç duydukları, sürdürülebilirlik, kurumsal performans, şirketin içinde bulunduğu ticari, sosyal ve çevresel riskler gibi konulara ilişkin değerlendirmeleri içeren, finansal ve finansal olmayan bilgilerin bir arada sunulduğu Yıllık Faaliyet Raporlarının şirket paydaşlarının şirketlere ilişkin bilgi ihtiyaçlarını daha detaylı bir biçimde karşıladığı gözlemleniyor.

Gelişmiş ve yıllık faaliyet raporlarının önemini anlamış ülkelerde bu konuda çeşitli sergiler açılmakta ve paydaşlar bilgilendirilmektedir. Bunların en güzel örneği Almanya'nın Hamburg şehrindeki Sanat Müzesi'nin basılı eserler bölümünde, modern döneme ait çalışmalar arasında; şirketlerin değişen kurumsal yaklaşımlarının uzantısı olan birbirinden etkileyici Yıllık Faaliyet Raporları sunulmaktadır. Burada yer alabilecek Yıllık Faaliyet Raporu ile ilgili performans değerlendirmesi ölçütleri oluşturulmakta, yatırımcılar ve analistlerden alınan geri bildirimler, şirketlerin internet sitesindeki Yıllık Faaliyet Raporu ziyaretçi sayısı, ekonomi, borsa basınından alınan medya kapsamı vb. gibi yöntemlerle Yıllık Faaliyet Raporlarının performans değerlemesini yapmaktadırlar.

Ayrıca yine gelişmiş ülkelerde pek çok büyük şirketin internet sitesinde interaktif Yıllık Faaliyet Raporu alt başlıklar halinde bölümlendirilerek, bilgi kullanıcısının istediği bilgiye bir an önce ulaşması sağlanmaktadır. Bu altyapıları kullanan ülkelerde ve uluslararası düzeyde Yıllık Faaliyet Raporları yarışmaları düzenlenmektedir. Örneğin, yarışmalar sonunda; en iyi rapor, en iyi başkan mesajı, en iyi kapak tasarımı, en iyi iç tasarım, en iyi yazı içeriği, en iyi fotoğraf, en iyi gösterim, en iyi finansal bilgi, en iyi on-line rapor, en iyi sosyal ve kurumsal sorumluluk raporlaması, en iyi basım gibi ödülleri içermektedir.

Bu yaklaşımın Türkiye’de de benimsenmesi; hem Yıllık Faaliyet Raporlarının gelişmesine hem de kurumsal yönetim yolunda şirketlerin yönetici ve hissedarları yanı sıra çalışanları gibi paydaşları arasındaki ilişkiyi düzenleyen şeffaflık ve hesap verebilirlik gibi nitelikleri mümkün kılan bir araç olarak kullanılmasına imkân sağlayacaktır. Ayrıca bir takım vergi teşvikleri, krediye kolay erişim gibi bazı teşvik edici uygulamalarda ülkemizde yıllık faaliyet raporlarının istenilen içerikte hazırlanmasına katkıda bulunacaktır.

Meaning or Pleasure?: The Case of Ankara

Sevcan Ozturk KILIC¹

¹Istanbul Technical University, Graduate School, Management, sevcanzr@gmail.com, ORCID: 0000-0002-5303-4090

Abstract: Individuals now exhibit impulse buying behavior, which is characterized as hedonic consumption, instead of shopping only according to their needs. This form of consumption provides individuals with benefits such as enjoying life, being satisfied, and having fun. However, Frankl (2020) emphasizes that material acquisitions are a trap on the way to achieving happiness, and it is a big mistake to try to gain happiness through objects. This study, it was carried out to measure the relationship between individuals' finding life meaningful and their hopes for life and hedonistic consumption behaviors. Because it is thought that individuals who find their lives meaningful and hope for the future stay away from hedonic consumption behavior. To the extent that individuals lead a meaningful and hopeful life, they will need less instant consumption to enjoy, have fun, and be excited, in other words, be "happy". In this context, individuals over the age of 18 living in Ankara were reached by the snowball sampling method. Seven items prepared with a five-point Likert scale to measure the meaning of life and hope perception of individuals were reduced to two dimensions and the results of the four-question survey measuring hedonistic consumption behavior were reduced to one dimension and the Structural Equation Model was applied. The relations between dimensions and the contribution of the variables to the dimensions were interpreted. As a result of the analysis, it was found that the "meaning of life" dimension had a negative effect on the "the attraction of the unattainable" dimension. On the other hand, it was concluded that the "hope about life" factor did not have a significant effect on the "the attraction of the unattainable" factor.

Keywords: Hedonic Consumption, Meaning of Life, Structural Equation Model.

1. INTRODUCTION

Although before, people found it sufficient to provide the products they need, today the phenomenon of consumption has evolved into a fast, instant, and frequent activity. Even when individuals go shopping with a list in their hands, they have started to find themselves filling various products into their baskets with very strong impulses, even though they are not on their minds or on their lists. There are many studies in the literature investigating the reasons for the prevalence of this behavior. Some studies have pointed out that consumer society tries to find the meaning of life through consumption. This analysis was carried out in Turkey, especially in Ankara, because it is thought that Ankara is one of the largest and most crowded metropolises in Turkey and that the challenging conditions of living in a big city affect people's perception of life as meaningful and inclination towards hedonistic consumption behaviors.

In the second part of the study, the studies in the literature on the relations between the related concepts and the variables covered are included. In the third part, the methodology and findings were detailed in the research while in the fourth part, the discussion was given.

2. CONCEPTUAL FRAMEWORK

2.1. Meaning of Life

The meaning of life has been the focus of the attention of philosophers throughout history and each has developed a different definition. While Plato said that knowledge constitutes the meaning of life in B.C. 400s, Aristotle believed that the concept of 'being well' was the purpose of man's life. The philosophy of cynicism, on the other hand, argued that a simple life constitutes man's ultimate goal. Contrary to Cynicism, hedonism draws attention to the need to minimize pain and experience pleasure at the highest level. According to Epicurism, pleasure is still important, but this understanding of pleasure should be redesigned by human beings by restricting desires. According to the Stoics, if human beings live by recognizing the rules of life, they can stay away from pain. According to Kant, there are some principles and rules in the universe, which are necessary to ensure social order. Nihilism, on the other hand, points out that life has no fundamental purpose and that people have the freedom to behave as they wish throughout their lives. Today, the meaning of life is considered a concept that supports people's well-being (Bonebright et al., 2000) and protects them from negative consequences (Pearson & Sheffield, 1989). Seligman (2002) considers a good life and a meaningful life

as two separate concepts and describes a meaningful life as the ability to live a life in harmony with the values of the individual. Nietzsche defends the view that individuals who find the meaning of life can find answers to all kinds of questions about life. Frankl (2020) stated that in order to achieve happiness, one should choose a goal worth effort and follow this goal. According to him, it is not possible to find happiness by seeking pleasure or avoiding pain.

2.2. Hedonic Consumption Behavior

The view that pleasure constitutes the meaning of life is the basis of the understanding of hedonism. Another view that supports hedonists who believe that pleasure makes life perfect is expressed by Bentham (1996) that pain and pleasure dominate the world. It is seen that materialists who adopt hedonism as a way of life attribute various meanings to consumption. A sense of ownership is a kind of well-being prerequisite for materialists. In this way, they go the way of providing their life satisfaction. The size of their property can be a sign of success for them. In addition, materialists make it a goal to put ownership at the center of their lives, to live for it, and thus to add meaning to their lives.

Bocock (2005) defines consumerism as finding the meaning of life through the purchase of pre-prepared goods and services in the capitalist system by individuals. Hirschman & Holbrook (1982) argued that individuals are satisfied with shopping and that the main purpose is not to benefit from the product obtained.

2.3. The Relationship between Hedonic Consumption Behavior and Meaning of Life

In this study, “the meaning of life” factor, which may be one of the causes of impulsive and instant consumption, taking into consideration that the happiness idea in hedonism is based on increasing the pleasure from life, was examined. However, Frankl (2020) emphasizes that material acquisitions are a trap on the way to achieving happiness, and it is a big mistake to try to gain happiness through objects. In the research, an answer has been sought to the question of whether human beings avoid unnecessary consumption for pleasure only to the extent that they find life meaningful, or do individuals who have no meaning and purpose in life try to complete these deficiencies by jumping into the lap of instant pleasures and avoiding pain as much as possible. One of the biggest handicaps of the consumption society in the literature is the effort to cover up the meaninglessness of life by clinging to short-term pleasures and consumption caused by instantaneous impulses even though it does not appeal to needs. Zhu et al. (2021) argued that individuals who find their life meaningless are more inclined to conspicuous consumption.

Although there are articles on the perception of the meaning of life as consumption according to hedonism, no research has been found in the literature on the effect of life meaning and hope on our perceptions of what we cannot achieve.

3. RESEARCH

3.1. Hypotheses

The null hypotheses of the research are as follows:

H1: There is a significant relationship between 'the meaning of life' and 'the attraction of the unattainable'.

H2: There is a significant relationship between 'the hope about life' and 'the attraction of the unattainable'.

3.2. Method and Data

The variables used in the analysis were defined with a 34-question questionnaire consisting of categorical 4 questions for the determination of demographic characteristics, 12 items prepared with a 5-point Likert scale to measure the meaning and aim of life (Länge et al., 2003) and 18 questions with 5-point Likert scale to measure hedonic consumption behavior (Arnolds & Reynolds, 2003). The survey was applied to individuals over the age of 18 living in Ankara, the second most populous city in Turkey. Survey responses were collected by snowball sampling method via Google Forms. Since the data measures the perceptions, attitudes, feelings, and thoughts of individuals, which cannot be observed directly, but which can be analyzed by embodying them through dimensions, it was necessary to perform a dimension reduction process on this data. Since the sample

size should be at least ten times the number of implicit and observable variables to be used in the analysis, 130 observations seemed sufficient (Westland, 2010). The total number of participants in the survey was 199, only seven of them gave incomplete answers to the questions, and since the analysis was requested to be carried out with full data, seven observations were excluded and the analysis continued. Since a multivariate analysis was made, the multiple normality assumption was tested with Mahalanobis Distance. 48 observations were found to be against multiple normality and were excluded from the analysis. In order to measure the reliability of the questionnaire questions, Cronbach's Alpha test was applied to the population to which the questionnaire was applied, and the coefficient was higher than 0.60, which was an acceptable level for internal consistency (Hair et al., 2010). The average variance extracted (AVE) and the composite reliability (CR) coefficients for the construct validity of the survey questions were also examined. While the AVE value should be at least 0.50 for convergent validity, since the CR coefficient was calculated over 0.60 for all three factors, the questionnaire had construct validity (Fornell & Larcker, 1981).

While confirming the factor analysis, factor loadings which were below the level of 0.50 were removed from the model. Four observable variables for "MEAN", three observable variables for "HOPE" and three observable variables for "ATTRAC" factors were specified.

Table 1. Reliability Tests

<i>Factor</i>	<i>Cronbach's Alpha</i>	<i>Composite Reliability (CR)</i>	<i>Average Variance Extracted (AVE)</i>
MEAN	0.768	0.777	0.473
HOPE	0.735	0.744	0.494
ATTRAC	0.608	0.623	0.364

On the other hand, since it would be useful to use regression analysis to measure the relationship between both observed variables and latent variables, the Structural Equation Model was used, which combines both analyses and offers the opportunity to model the relationship between all endogenous and exogenous variables with a single regression analysis.

The endogenous and exogenous variables used in the analysis are given in Table 2.

Table 2. Variable List

<i>Factor</i>	<i>Item no</i>	<i>Item</i>
DEMOGRAPHICS	Gen	What is your gender?
	Edu	What is your education level?
	Age	How old are you?
	Inc	What is your monthly income?
MEAN	Mn3	Most of the time I think that I have a meaningless and empty life.
	Mn5	I am in a spiritual emptiness and cannot enjoy life.
	Mn7	Most of the time I'm just fed up with everything.
	Mn8	I always find meaning in my life and a reason to live.
HOPE	Hp9	I can't find much about the good and the beautiful in the world I live in.
	Hp10	I don't have much purpose that keeps me in life.
	Hp11	I don't see my future very bright, I'm hopeless.
ATTRAC	Att15	My life would be better if I had some things I don't have.
	Att16	I wouldn't be happier if I had nicer things.
	Att17	I would be happier if I could buy more things.

3.3. Findings

Considering the frequency distribution of the data according to demographic characteristics, the majority of the participants are between the ages of 18-65, university graduates, and individuals whose incomes are higher than the minimum wage of TL 5,500 as of the date of the survey.

Table 3. Demographics

Gender	Number	%
Female	77	53%
Male	67	47%
Total	144	100%
Age	Number	%
18-35	71	49%
36-65	69	48%
>65	4	3%
Total	144	100%
Educational Attainment	Number	%
High school	22	15%
Associate Degree	17	12%
Undergraduate	87	60%
Postgraduate	18	13%
Total	144	100%
Monthly Income	Number	%
≤ 5.500 TL	34	24%
5.501-15.000 TL	70	49%
>15.000 TL	40	28%
Total	144	100%

In order to perform factor analysis, extreme values should be discarded from the data. Therefore, 48 outliers were deleted. In addition, the data must be measured on an interval scale. Since a five-point Likert scale was used in this study, it seems appropriate for factor analysis. Since demographic variables are non-metric variables, they were not included in the factor analysis. According to Bartlett's test results, the hypothesis that the correlations between the variables are different from zero cannot be rejected. Since the KMO test results were above 0.6, the sample size was found suitable for factor analysis (Tabachnick & Fidell, 2007).

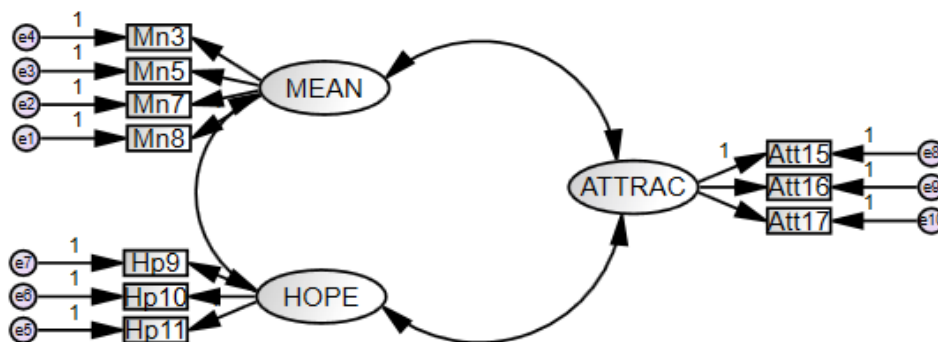

Table 4. KMO ve Bartlett's Test Sonuçları

Kaiser Meyer Olkin Measure of Sampling Adequacy		0.751
Bartlett's Test of sphericity	Approx. Chi-square	417.168
	df	45
	Sig.	0.000

3.3.1. Confirmatory Factor Analysis

According to the model in Figure 1, the Mn3, Mn5, Mn7, and Mn8 variables constitute the "MEAN" factor, the Hp9, Hp10, and Hp11 variables the "HOPE" factor, and the Att15, Att16, and Att17 variables the "ATTRAC" factor.

Figure 1. Confirmatory Factor Analysis

Goodness-of-fit values are within reference ranges. This shows that the sample data fit well with the proposed model.

Table 5. Model Fit

	<i>Model Fit</i>	<i>Value</i>	<i>Acceptance Level</i>	<i>Reference</i>
1	χ^2/DF	2.120	≤ 5.0	Bentler & Bonnet (1980)
2	GFI	0.920	> 0.8	Seyal et al. (2002)
3	CFI	0.907	> 0.9	Lee et al. (1990)
4	NFI	0.842	> 0.8	Hair et al. (1998)
5	AGFI	0.863	> 0.8	Seyal et al. (2002)
6	RMSEA	0.089	< 0.1	Kline (1998)
7	SRMR	0.065	< 0.08	Hu & Bentler (1999)

3.3.2. Structural Equation Model

According to non-standardized estimates, "Mn3" and "Mn5" variables are the variables that contribute the most to the "MEAN" factor. Being in a spiritual vacuum and not enjoying life and believing that they have a meaningless and empty life most of the time are the biggest determinants of the factor. On the other hand, the two variables that least explain the "MEAN" dimension are that they are often fed up with everything and cannot find meaning and reason to live in their lives. "Hp9" and "Hp10" variables explain "HOPE" factor at a higher rate than "Hp11" variable. The state of aimlessness and not being able to see a sign of concepts such as goodness and beauty in life have a greater effect on the explanation of the hope factor in life. In addition, considering that individuals think that it is important to have some things they do not have, it can be concluded that the most determining variable that creates the "ATTRAC" factor is "Att15".

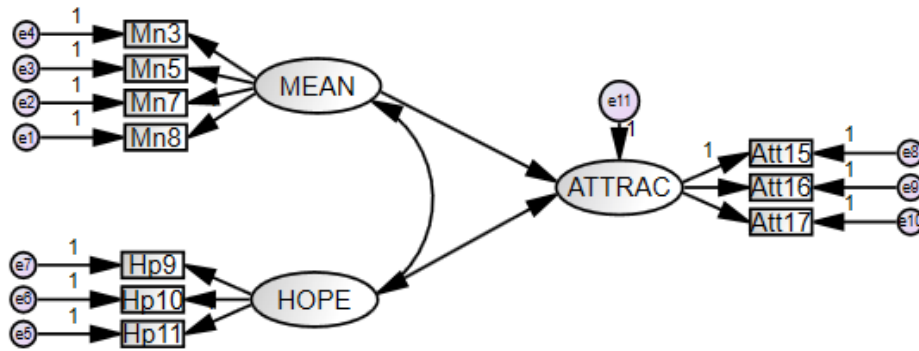

It seems that the "MEAN" variable is significant at a 5% significance level. As seen in the standardized regression coefficients, the meaning of the life factor (-0.496) has a negative effect on the attractiveness of the unattainable. To the extent that individuals find their life meaningful, the attraction to what they cannot achieve decreases. However, the "HOPE" variable is not statistically significant at a 5% level in explaining the "ATTRAC" factor.

Table 6. Structural Equation Model Results

	<i>Standardized</i>	<i>Non-standardized</i>	
	<i>Coefficient</i>	<i>Coefficient</i>	<i>Std. Err.</i>
<i>MEAN > ATTRAC</i>	-0.496	-1.391*	0,632
Mn3	0,791	2.107*	0.373
Mn5	0,785	2.263*	0.402
Mn7	0.627	1.899*	0.374
Mn8	0.506	1	-
<i>HOPE > ATTRAC</i>	0,303	0,429	0,305
Hp9	0.726	0,993*	0,157
Hp10	0.746	0.806*	0,126
Hp11	0.631	1	-
Att15	0.677	1	-
Att16	0.596	0.629*	0,161
Att17	0.528	0.857*	0,222

*p<0,05

Figure 2. Path Diagram

4. DISCUSSION

The aforementioned study was conducted to determine the relationship between the attitudes of adults residing in the province of Ankara toward their lives and their feelings while displaying consumption behavior. In this context, intangible and unmeasurable variables were measured by the survey study, and it was proven that individuals who found life meaningful exhibited less hedonistic consumption behaviors. One of the views that can provide a basis for this result may be the desire of individuals to live their lives, which they consider meaningless due to material and spiritual troubles, daily hustle and bustle, lack of time, not being able to control their life and impossibilities, with some positive emotions. In addition, their urge to approach happiness through short-term pleasures is one of the biggest motivations because they believe in the impossibility of keeping control of their lives, rewarding themselves, and achieving long-term peace and well-being. Since modern times equip individuals with an inexhaustible sense of inadequacy and dissatisfaction, people cannot achieve their inner happiness, but they try to close this gap with external factors. People, especially by ignoring what they have and dreaming of what they don't have, can become even more unhappy and believe that all their unhappiness will come to an end if they get what they can't reach.

In fact, this study is designed as a guide to finding happiness for public authorities, employers, and even individuals themselves because the idea of a much higher income for happiness and the accompanying higher consumption is not realistic at all. Comparison and perhaps the desire to have more, fueled by feelings of jealousy, cannot make any individual's life meaningful at the end of the day. Some application changes prioritized by sustainable development ideas and raising awareness of individuals about environmental losses caused by excessive consumption and dissatisfaction will contribute to the change of this mentality. In this way, people will believe that they can achieve a sense of meaningfulness which can only be gained through ownership and consumption, with the concepts of responsibility, spirituality, and minimalism.

One of the limitations of the study in question is that the research sample was selected from a single city and was conducted with limited sample size. If the sample size is increased, more variables can be included in the study and more generalizable results will be achieved. With the new dimensions created, the model can be made more complex.

Yoksulluk ve Kurumsal İktisat: Seçili Ülke Grupları Üzerine Bir Analiz

Doktora öğrencisi Sevdâ BERİGEL ¹

Prof.Dr. İlhan EROĞLU²

¹Tokat Gaziosmanpaşa Üniversitesi / Lisansüstü Eğitim Enstitüsü, İktisat Bölümü, sevdacaki2002@hotmail.com, ORCID:0000-0002-8573-5369

² TokatGaziosmanpaşa Üniversitesi / İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, ilhan.eroglu@gop.tr, ORCID: 0000-0003-4711-1165

Özet: Kabaca insanların temel ihtiyaçlarını giderememesi, asgari yaşam standartlarına erişememesi olarak tanımlanan yoksulluk tüm toplumları ilgilendirmektedir. Yoksulluk insanlık tarihinin en eski sorunlarından ve toplumları iktisadi, siyasi ve toplumsal olarak etkilemektedir. Yoksulluk, tanımında barındırdığı temel gereksinimler ya da asgari yaşam standardı kavramları kişiden kişiye, toplumdan topluma farklılık gösterdiği için üzerinde uzlaşılan net bir tanımı olmayan yoksulluğun çözüm önerilerinde de farklı yaklaşımlar söz konusudur. Bu çalışmanın amacı seçili ülkelerin kurumsal yapılarının yoksulluk üzerindeki etkisini incelemektir. Bu amaçla yüksek ve düşük gelirli toplam 20 ülkenin 2010-2020 yıllarına ait kurumsal ve yoksulluk göstergeleri kullanılmıştır. Bağımlı değişken olarak Gini katsayısının kullanıldığı çalışmada, kurumsal gösterge olarak ekonomik kurumu temsilen ekonomik özgürlük endeksi, politik kurumu temsilen demokrasi endeksi ve yasal kurumu temsilen hukukun üstünlüğü endeksi kullanılmıştır. Gelişmiş kurumsal yapıya sahip ülkelerde yoksulluğun düşük seyredeceği dolayısıyla kurumsal yapı ile yoksulluk arasında kuvvetli bir ilişkinin varlığı yönündeki hipotez panel veri analiziyle test edilmiştir. Analizin sonucuna göre tüm ülkeler için kurumsal göstergelerden, hukukun üstünlüğü endeksi Gini değişkenini %0,40, demokrasi endeksi ise %0,04 azaltmaktadır. Ekonomik özgürlük endeksi ise Gini değişkenini % 1,4 artırmaktadır. Düşük gelirli ülke grubunda hukukun üstünlüğü endeksi Gini değişkenini % 0,24, demokrasi endeksi % 0,20 ve ekonomik özgürlük endeksi ise % 0,64 artırırken; yüksek gelirli ülke grubunda hukukun üstünlüğü endeksi Gini değişkenini % 0,82 azaltmakta, demokrasi endeksi % 0,44 ve ekonomik özgürlük endeksi ise % 0,80 artırmaktadır.

Anahtar Kelimeler: Yoksulluk, Kurumsal yapı, Kurumsal İktisat

1.GİRİŞ

Neoklasik iktisadın tam bilginin varlığı, iktisadi birimlerin rasyonel oluşu, işlem maliyetlerinin olmayışı gibi gerçekten uzak varsayımları zamanla ekonomiyi tam olarak açıklamaya yetmemeye başlamıştır. Zira gerçek hayatta tüm iktisadi birimler eksik bilgiye sahiptirler ve hiçbir zaman tam olarak rasyonel değildirler. Yanı sıra işlem maliyetleri de her zaman pozitifdir. Bu sebeple kusursuz bir yapının kurulması mümkün değildir. Kurumsal iktisat, Neoklasik iktisadın varsayımlarının yarattığı boşluğu doldurmakla iktisat literatüründe önemli bir yer edinmiştir (Çiçen, 2015: 2; Çetin, 2012: 43; North, 2010: 37).

Her ülkenin kendine has bir geçmişi ve dinamikleri olduğunu ve ülkelerin değerlendirilmelerinin kendi geçmişlerinden bağımsız olamayacağını ve bu yüzden genel geçer toplumsal yasaların oluşturulamayacağını ileri süren kurumsal iktisat, terim olarak ilk kez 1919 yılında Walton Hamilton tarafından kullanılmıştır. Kurumsal iktisat eski ve yeni kurumsal iktisat olarak ayrılmış; yeni kurumsal iktisat neoklasik iktisadın mantıksal boşluklarını dolduran varsayımlara sahip olması aşamasında eski kurumsal iktisattan ayrılmıştır.

Kurum kavramı, iktisadi birimlerin karar alma süreçlerini etkileyen, belirsizliği azaltıp onlara yön veren, toplumsal etkileşim nedeniyle sabit değil de değişim halinde olan, kısaca toplumda oynanan oyunun kurallarıdır (Kama, 2011: 185; North, 2010: 9-13).

Yeni kurumsal iktisat, kurumların yaşamın her alanında olduğu gibi ekonomi üzerinde de etkisinin kesin ve büyük olduğunu ifade etmektedir. Bu sebeple bu çalışmada önemli iktisadi sorunlardan olan yoksulluğun kurumsal yapı ile ilişkisi ekonometrik bir çözümleme ile ele alınacaktır.

2.LİTERATÜR

Kurumsal yapının ekonomiye etkisi çoğunlukla ekonomik büyüme ve kalkınma çerçevesinde incelenmiştir. Buna göre etkin ve güçlü kurumsal yapı ekonomik büyümeyi olumlu etkilemektedir. (Doğan Çalışkan, 2016: 1172). Ülkelerin kurumsal yapılarını oluşturan faktörlerin iyileştirilip geliştirilmesi hem beşeri hem de fiziki sermayenin artmasına, işlem maliyetlerinin azalmasına dolayısıyla kaynakların daha etkili kullanılmasını mümkün kılar. Böylelikle istikrarlı bir büyümenin yolu açılmış olur (Yamak, 2022: 976).

Yoksulluğun açıklanmasında kurumsal yapının etkisine dair çalışmalar genel olarak ekonomik büyüme üzerinden gerçekleştirilmiştir. Yoksulluğun azaltılması amacıyla hayata geçirilecek politikaların ancak etkin ve güçlü kurumsal yapıların varlığıyla olumlu sonuçlar doğuracağı; bu nedenle ülkelerin kendi dinamiklerini göz önünde

bulundurarak kurumlarını iyileştirmeye yönelik adımlar atılması gerektiği vurgulanmaktadır (Gleaser vd. 2004: 6-9; Chang, 2005: 5-7).

Acemoğlu ve Robinson, neden bazı ülkelerin zenginken bazı ülkelerin yoksul olduğu sorusuna yanıt aramışlar ve ülkeler arasındaki bu ayrımın ülkelerin kurumsal yapılarındaki farklılıktan kaynaklandığını savunmuşlardır. Mülkiyet haklarının korunduğu, hukukun üstünlüğünün sağlandığı, hesap verilebilir ve katılımcı bir yönetime sahip toplumların/ülkelerin daha yüksek refah seviyesine erişebildikleri; bu özelliklerden mahrum ülkelerin ise sömürücü, eşitlikten uzak ve düşük refah seviyesinde varlıklarını sürdürdüklerini belirtmişlerdir (Acemoglu ve Robinson, 2010).

Her ülkenin kurumsal yapısının farklı olduğu gerçeğinden yola çıkarak her ülkenin yoksullukla mücadelede farklı stratejiler izlemelidir. Şeffaf bir ekonominin ve demokrasinin olduğu, hak ve özgürlüklerin korunduğu, güçlü ve etkin bir kurumsal yapıya sahip ülkelerde büyüme sürdürülebilir bir yapıya kavuşacak ve yoksulluğun azaltılması mümkün olacaktır (Boyer, 2008: 5).

3. VERİ SETİ VE YÖNTEM

Bu çalışmada ülkelerin kurumsal yapılarının yoksulluk üzerinde etkili olup olmadıkları araştırılmıştır. Analizde kullanılacak değişkenlerin tüm ülkeler için kıstas olmasına dikkat edilmiştir. Bu sebeple gelir dağılımındaki iyileşmenin yoksulluğun azalmasına katkı sağladığı varsayımıyla yoksulluğu açıklaması için Gini katsayısı bağımlı değişken olarak kullanılacaktır.

Kurumsal yapının niteliğini göstermesi amacıyla ise ekonomik kurumu temsilen ekonomik özgürlük endeksi (EFI), politik kurumu temsilen demokrasi endeksi (DI) ve yasal kurumu temsilen hukukun üstünlüğü endeksi (RLI) kullanılacaktır. Çalışmada kullanılacak olan dördüncü açıklayıcı değişken eğitime yapılan hükümet harcamalarının gayri safi yurtiçi hasıla (EDU) içindeki payı olacaktır. Beşinci açıklayıcı değişken ülkelerin toplam nüfusu (POP) iken altıncı ve son açıklayıcı değişken kişi başına düşen gayri safi milli gelir (GDP) olacaktır. Bu endekslere Fraser Institute, Dünya Bankası ve World Justice Project kuruluşlarından erişilmiştir.

Çalışmada 10 yüksek gelirli 10 düşük gelirli olmak üzere 20 ülkenin 2010-2020 yıllarına ait veriler kullanılmıştır. Çalışmada kullanılan yüksek gelirli ülkeler olarak Danimarka, Norveç, Finlandiya, Belçika, Hollanda, İspanya, ABD, Avusturya ve Portekiz ele alınırken düşük gelirli ülkeler olarak ise Honduras, El Salvador, Endonezya, Bolivya, Filipinler, Rwanda, Uganda, Sri Lanka, Vietnam ve Pakistan ele alınmıştır.

Bu çalışmada araştırmacıya pek çok avantaj sağlayan panel veri analizi yöntemi kullanılacaktır. Analiz önce tüm ülkeler için daha sonra sırasıyla düşük gelirli ve yüksek gelirli ülkeler için yapılacaktır. Kullanılan değişkenlere ait temel istatistiki göstergeler aşağıdaki gibidir:

Tablo 1: Tahminde Kullanılan Değişkenlere Ait Temel İstatistiki Göstergeler

Değişkenler	Gözlem sayısı	Ortalama	Standart Sapma	Minimum	Maksimum

Not: * %1 anlamlılık düzeyinde ** %5 anlamlılık düzeyinde *** %10 anlamlılık düzeyini temsil etmektedir.

Tablo:2 'de yer alan sonuçlara göre tüm ülkeler için nüfustaki % 1'lik artış Gini değişkenini % 0,02 artırmaktadır. hükümetin eğitime yaptığı harcamaları Gini değişkenini % 0,13 artırmaktadır. kurumsal göstergelerden, hukukun üstünlüğü endeksi Gini değişkenini %0,40, demokrasi endeksi ise %0,04 azaltmaktadır. Ekonomik özgürlük endeksi ise Gini değişkenini % 1,4 artırmaktadır.

Düşük gelirli ülke grubuna ait sonuçlara bakacak olursak, kişi başına düşen gelir % 1 arttıkça Gini değişkeni % 0,08 azaltmaktadır. Aynı şekilde ülke nüfustaki % 1'lik bir artış Gini değişkenini % 0,02 azaltmaktadır. Kurumsal göstergelerden, hukukun üstünlüğü endeksi Gini değişkenini % 0,24, demokrasi endeksi % 0,20 ve ekonomik özgürlük endeksi ise % 0,64 artırmaktadır.

Yüksek gelirli ülke grubuna ait sonuçlarda kişi başına düşen gayri safi milli gelirdeki % 1'lik bir artışın Gini değişkenini % 0,05 azalttığı görülmektedir. Nüfustaki %1'lik artış ise Gini değişkenini %0,06 artırmaktadır. Kurumsal göstergelerden, hukukun üstünlüğü endeksi Gini değişkenini % 0,82 azaltırken, demokrasi endeksi % 0,44 ve ekonomik özgürlük endeksi ise % 0,80 artırmaktadır. çalışmada kullanılan her üç modelin de R² değeri yüksektir. bu değer, açıklayıcı değişkenlerin bağımlı değişkeni açıklama gücünün yüksek olduğunu göstermektedir.

5-SONUÇ

Bu çalışmada en önemli iktisadi sorunlardan olan yoksulluğun kurumsal yapı ile ilişkisi ele alınmıştır. Yüksek ve düşük gelirli toplam 20 ülkenin 2010-2020 yıllarına ait veriler kullanılarak yoksulluğun ülkelerin kurumsal yapısından etkilenip etkilenmediği araştırılmıştır. Bu amaçla bağımlı değişken olarak Gini değişkeni kullanılmıştır. Açıklayıcı değişkenler olarak ise, ekonomik özgürlük, demokrasi ve hukukun üstünlüğü endeksleri, ülkelerin toplam nüfusları, kişi başına düşen gayri safi milli hasıla ve hükümetin eğitim harcamalarının gayri safi yurtiçi hasıla içindeki payı kullanılmıştır. Tüm değişkenlerin logaritması alınarak yapılan analiz sonucunda kişi başına düşen gayri safi milli gelirdeki artışın her iki ülke grubunda da yoksulluğu azaltıcı etki yaptığı görülmüştür.

Kurumsal göstergeler ise düşük gelirli ülke gruplarında Gini değişkenini artırıcı bir etki göstermiştir. Kurumsal göstergelerden hukukun üstünlüğü endeksi Gini değişkenini azaltarak yoksulluğun azalmasına katkı sağlamaktadır. Bu sonuç yasal kurumların etkin ve güçlü bir yapıda olmasının yoksulluğu azaltacağı öngörüsüyle uyusmaktadır. Ekonomik özgürlük ve demokrasi endeksi ise Gini üzerinde öngörülen etkiyi göstermemiştir. Yüksek gelirli ülkeler için nüfusun artması ile yoksulluk arasında pozitif yönlü bir ilişki söz konusudur. Bu sonuç, yüksek nüfuslu ülkelerde kaynakların daha fazla kişiyle paylaşılacak zorunda kalınmasının yoksulluğu artıracağı öngörüsüyle uyusmaktadır.

Her ülkenin ekonomik, toplumsal ve siyasi kurumlarının yapısının farklı oluşu, bir diğer ifadeyle ülkelerin kültürel birikimlerinin aynı olmayışı ülkelerin iktisadi sorunlardan etkilenme boyutunu değiştirmektedir. Bu

sebeple yoksulluk gibi evrensel bir sorun her ülkede farklı şiddette karşımıza çıkmaktadır. Bir ülkede olumlu sonuçlar doğuran politikalar başka bir ülkede uygulanmaya koyulduğunda aynı sonuçları doğurmayabilir. Söz konusu farklılık, yoksulluğun etkin ve kalıcı çözümüne dair ülkelere has politikalar gerektirmektedir. Yoksulluğun çözümüne yönelik alınacak olan ekonomik, yasal ve politik önlemler ancak etkin ve güçlü bir kurumsal yapının varlığıyla kalıcı sonuçlar verecektir. Bu yüzden ülkelerin yoksullukla mücadeleyle yönelik atacağı adımların en başında, ekonomik, politik ve yasal kurumsal yapılarını ülke dinamiklerini yok saymadan, tüm toplumu kapsayacak ve yoksulluğu bir sorun olarak kabul edecek şekilde değiştirmesi gelmelidir.

Bir İş Fikrinin Doğuşu: Girişimci Adayları Üzerine Bir Araştırma

Dr. Öğr. Üyesi Sevdie Ersoy YILMAZ¹

Dr. Öğr. Üyesi Emine ÇETİNEL²

¹Çankırı Karatekin Üniversitesi / İktisadi ve İdari Bilimler Fakültesi, Uluslararası Ticaret ve Finansman Bölümü, sevdieyilmaz@karatekin.edu.tr, ORCID: 0000-0002-1476-3944

²Çankırı Karatekin Üniversitesi / İktisadi ve İdari Bilimler Fakültesi, Uluslararası Ticaret ve Finansman Bölümü, eminecetinel@karatekin.edu.tr, ORCID: 0000-0001-5957-5886

Özet: Bir iş fikrinin doğuşu iki aşamalı bir süreç olarak değerlendirilmektedir. Buna göre girişimciliğin ilk aşaması literatür kapsamında görece ihmal edilmiş olan iş fikri bulma aşamasıdır. İkinci aşama ise araştırmacıların daha yoğun olarak ele aldıkları bir iş fikrinin ürüne dönüşüp piyasaya sunulmasıdır. Dolayısıyla girişimcilerin iş fikirlerini nasıl oluşturdukları sorusunun yanıtı halen tam olarak verilebilmiş değildir. Bu bağlamda bu çalışma bir iş fikrinin tasarlanmasıyla başlayan iş fikri bulma sürecine yakından bakmak amacıyla gerçekleştirilmiştir. Diğer bir ifadeyle bu çalışma katılımcılara sorulan “girişimci olsaydınız hangi iş fikrini ne şekilde hayata geçirirdiniz?” sorusuna verdikleri yanıtların incelenmesi bağlamında şekillendirilmiştir. Araştırma amacı kapsamında Çankırı Karatekin Üniversitesi Uluslararası Ticaret ve Finansman Bölümünde eğitim gören ve girişimcilik eğitimi alan 22 öğrencinin rol oynama tekniği kapsamında geliştirdikleri iş fikirleri incelenmiştir. Elde edilen veriler NVivo 12 nitel veri analizi programı kullanılarak içerik analizine tabi tutulmuştur. Bu kapsamda yapılan analizler katılımcıların iş fikirlerini oluştururken kendi eğitim alanları ile bağlantılı sektörlerle yönelediklerini ortaya koymuştur. Elde edilen diğer bir bulgu katılımcıların iş fikirlerini oluştururken yaşadıkları çevredeki fırsatları sezinleme eğiliminde olduklarını göstermiştir. Ayrıca yapılan analizlerde katılımcıların mevcut pazarda gözlemedikleri boşlukları fırsata dönüştürmeyi hedefleyen iş fikirleri geliştirdikleri tespit edilmiştir.

Anahtar Kelimeler: İş Fikri, Girişimcilik, Rol Oynama Tekniği

The Birth of a Business Idea: A Study on Entrepreneur Candidates

Abstract: The emergence of a business idea is considered a two-stage process. Accordingly, the first stage of entrepreneurship, which has been relatively neglected in the literature, is the stage of finding a business idea. The second stage is the transformation of a business idea, which researchers have focused more intensively on, into a product and its introduction to the market. Therefore, the answer to how entrepreneurs generate business ideas has not yet been fully determined. In this context, this study was conducted to closely examine the process of finding a business idea that begins with the design of a business idea. In other words, this study was shaped in the context of examining the responses of participants to the question "If you were an entrepreneur, what business idea would you implement and how?". Within the scope of the research, the business ideas developed by the role-playing technique of 22 students who were studying at the Department of International Trade and Finance at Çankırı Karatekin University and receiving entrepreneurship education were examined. The obtained data were subjected to content analysis using NVivo 12 qualitative data analysis program. The analyzes made in this context revealed that the participants focused on sectors related to their own educational fields while generating their business ideas. Another finding obtained showed that the participants tended to sense opportunities in their surroundings while generating their business ideas. Additionally, it was determined that the participants developed business ideas that aim to turn the gaps they observed in the current market into opportunities.

Key Words: Business Idea, Entrepreneurship, Role-Play Technique

1. GİRİŞ

Girişimcilik geçmişten günümüze önemini hiç yitirmemiş aksine ülke ekonomileri için önemi her geçen gün artan bir kavramdır. Kavrama yöneltlen bu ilginin temelinde girişimcilik faaliyetlerinin ekonomik yapıları dönüştürme potansiyelinin olduğunu söylemek mümkündür. Bygrave ve Minniti'nin de (2000) ifade ettikleri üzere girişimcilik, mevcut ve yeni pazarların gelişmesi için gerekli koşulları oluşturan ve bununla birlikte yeni girişimsel faaliyetleri de teşvik eden dinamik yapıya sahip bir olgudur. Yapılan araştırmaların böyle bir yapının ülke ekonomilerinin gelişmesi bağlamında önemli fırsatlar sunduğunu ortaya koyması da girişimcilik olgusunu araştırmacıların odak noktasına taşımaktadır (Hougaard, 2005). Bu bağlamda tüm dünya ekonomileri için bir katalizör görevi üstlenen girişimciler “daha önce tanınmayan kâr fırsatlarını algılayan ve bu fırsatları değerlendirme yeteneğine sahip kişiler” olarak tanımlanabilirler (Bygrave ve Minniti, 2000). Girişimciler belirsiz piyasa şartları içerisinde sınırlı kaynakları katma değer yaratmak üzere kullanan kişilerdir. Bunun için de girişimci faaliyetlerin sonuçları önceden belirlenemez ve tahmin edilemez (Murdock ve Varnes, 2018). Esasında piyasa sürecini yönlendiren aktif güç, kâr peşinde koşan girişimcilerin geleceğin belirsiz koşullarına ilişkin spekülasyon olarak aldıkları kararlardır. Dolayısıyla bir girişimcinin başarısı ya da elde edeceği kâr, gelecekteki tüketici

tercihlerini ve arz şartlarını diğer girişimcilere göre daha iyi tahmin edebilmesine bağlıdır. Bu anlamda girişimci piyasa ekonomisinin olmazsa olmazıdır; onlarsız bir piyasa düşünülemez (Yay, 2010:38).

2. KAVRAMSAL ÇERÇEVE

Girişimcilik genel olarak bir iş fikrinin tasarlanmasıyla başlayan ve bu iş fikrinin bir ürüne dönüşüp piyasaya sunulması ile devam eden iki aşamalı bir süreç olarak tanımlanmaktadır. Buna göre girişimciliğin ilk aşaması iş fikrini bulma, ikinci aşaması ise iş fikrinin hayata geçirilmesine ilişkin faaliyetleri kapsamaktadır (Özdaşlı ve Özkara, 2010; Hougard, 2005). Bununla birlikte girişimcilik literatürüne bakıldığında genel olarak araştırmaların büyük bir kısmının girişimciliğin ilk aşaması olan iş fikri bulma aşamasını göz ardı ederek ikinci aşama olan iş fikrinin hayata geçirilmesi sürecini merkeze aldığı görülmektedir. Bu kapsamda yapılan araştırmalar özellikle girişimciliğin temel belirleyicileri olarak kabul edilen kurumların, sosyal ağların ve kişilik özelliklerinin girişimcilğe etkisini açıklamaya çalışmışlardır (Arentz vd., 2013). Dolayısıyla da girişimcilikte fırsatların nasıl keşfedildiği ve iş fikrine nasıl dönüştürüldüğü konularının halen gizemini koruduğu tespitinde bulunulabilir. Girişimcilikte iş fikri bulma aşaması bir işletmenin kuruluş sürecindeki en belirsiz dönemi temsil ettiği göz önünde bulundurulduğunda bu aşamanın aydınlatılmasına yönelik yapılacak araştırmaların girişimcilik sürecinin anlaşılabilirliği bağlamında önemli katkılar sağlayacağı söylenebilir (Murdock ve Varnes, 2018:256).

Gelecekte pazarda hangi mal ve hizmetlerin ortaya çıkacağını belirleyen bir süreç olarak ele alındığında girişimciliğin temelinde girişimcinin pazarda algıladığı fırsatlar bağlamında üretilen bir iş fikrinin olduğu görülecektir (Sobakinova vd., 2020; Shane ve Venkataraman, 2000). Girişimciler tarafından algılanan bu fırsatların değerlendirilmesiyle birlikte oluşturulan iş fikirleri sayesinde kâr sağlaması beklenen işletmelerin kuruluşu gerçekleşir (Gabrielsson ve Politis, 2012; Bygrave ve Hofer, 1992). Buna göre girişimciliğin ilk aşaması olan iş fikrinin işletme kurmanın en temel gerekliliklerinden biri olduğu tartışmasız bir gerçektir (Hougard, 2005; Klostfen, 2005). Bu bağlamda girişimcilikte ilk adımların oluşturulan iş fikirlerini başarılı bir girişime dönüştürebilme motivasyonu ile atıldığı söylenebilir (Kurtz ve Berston, 2019). Nitekim kurulacak girişimin çıkış noktası olan iş fikri aynı zamanda işletmenin düşünce yapısının da yansıması olacak (Güven vd., 2015:62) ve gelecekteki başarısını bugünden şekillendirecektir. Bu kapsamda iş fikrinin önemi Hougard'ın (2005:7) *“genç girişimciler harika iş planı hazırlıyorlar ancak sorun şu ki bu planların arkasında bir iş fikri yok”* tespitiyle daha görünür hale gelmektedir. Özetle söylemek gerekirse iş fikri girişimcilerin gelecekteki faaliyetlerinin genel görünümünün bugünden tasvir edilmesiyle ilgili bir süreçtir. Aynı zamanda iş fikri girişimcilerin başarılı olabilmek için hangi adımları atmaları gerektiği ve bu adımların maliyetlerinin ve faydalarının ne olacağı soruları çerçevesinde yürütülecek ticari faaliyetlere de rehberlik edecektir (Sobakinova vd., 2020:164; Dew ve Sarasvathy, 2007).

Girişimcilikte iş fikri sürecini araştıran çalışmalarda *“rekabetçi bir pazarda başarılı bir iş fikri nasıl geliştirilebilir ve bu iş fikrinin uygulanabilir olup olmadığı nasıl belirlenebilir?”* soruları en çok tartışılan konular arasında yer almaktadır (Hougard, 2005). Literatürde bu sorulardan ilkinin yanıt arayan araştırmacıların başarılı bir girişimcilik için pazarda fırsatların nasıl ortaya çıktığı ve girişimcilerin bu fırsatları nasıl sezdiklerini anlamaya dönük araştırmalar gerçekleştirdikleri söylenebilir (Arentz vd., 2013). Bu kapsamda literatürde iş fikri fırsatlarının kaynağına ilişkin olarak araştırmacılar arasında yaklaşım farklılıkları olduğu görülmektedir. Buna göre araştırmacıların bir kısmı girişimsel fırsatların kolektif olarak *“inşa edildiğini”* diğerleri ise bu fırsatların *“keşfedildiğini”* ileri sürmektedirler (Murdock ve Varnes, 2018). İş fikri fırsatlarının kaynağı ile ilgili ortaya çıkan bu görüş ayrılığına rağmen araştırmacılar girişimcilerin iş fikrini nasıl oluşturdukları sorusuna iki temel faktör üzerinde uzlaşa sağlayarak açıklama getirmektedirler. Bu faktörlerden ilki girişimcinin yapmaktan hoşlandığı ve iyi yaptığını düşündüğü bir şeyle ilgili iş fikri belirlemesidir. Diğer faktör ise iş fikrinin pazardaki bir ihtiyacı karşılamaya dönük oluşturulmasıdır (Kurtz ve Berston, 2019:161). Buna göre bir iş fikri bazen tesadüfen ortaya çıkabileceği gibi bazen de uzun araştırmalar sonucunda bulunabilir. Bu bağlamda iş fikirleri yeni geliştirilmiş olabileceği gibi mevcuttan hareket ederek de oluşturulabilirler. Sonuç olarak yeni iş fikirlerinin buluşa ve transfer/adaptasyona dayalı olmak üzere ikiye ayrıldığı, mevcuttan hareket eden iş fikirlerinin ise mevcudun kopyalanmasına ve mevcudun geliştirilmesine dayalı olarak belirlendiği söylenebilir (Güven vd., 2015:51).

Daha önce de ifade edildiği üzere literatürde pazarda fırsatların nasıl ortaya çıktığı sorusu gibi bu fırsatların girişimciler tarafından nasıl sezdikleri sorusu da sıklıkla araştırmacılar tarafından tartışılmaktadır. Araştırmacıların kaynağının keşif veya inşa süreci olarak ifade ettikleri girişimsel fırsatların, her iki durumda da gelecekteki girişimlerin temelini oluşturduğu açıktır (Foo vd., 2005). Burada asıl üzerinde önemle durulması gereken konu girişimcilerin çevredeki fırsatları nasıl sezdikleridir. Nitekim bu alanda araştırmalar yapan akademisyenlerin uzun süredir *“neden bazı kişiler pazardaki fırsatları tanımlayabiliyorken diğerleri bunu*

gerçekleştiremiyor?” sorusuna odaklandıkları söylenebilir (Arentz vd., 2013; Gabrielsson ve Politis, 2012). Bu bağlamda girişimsel fırsatların nasıl tanındığı sorusuna yanıt arayan çalışmaların özellikle fırsat tanıma kavramı üzerine yoğunlaştıkları söylenebilir. Buna göre fırsat tanıma, *“bireylerin değer yaratma potansiyeli taşıyan her türlü karşılanmamış ihtiyaç ve piyasa boşluklarını algılamak ve fırsat olarak adlandırılabilir formda dönüştürebilmek için gerçekleştirdiği faaliyetler dizisi”* olarak ifade edilmektedir (Karabey ve Bingöl, 2010:20). Diğer bir ifadeyle fırsat tanıma, fırsatların algılanması, keşfi veya yaratılması ve fikri iş kavramına dönüştürme aşamasıdır (Onan ve Güğercin, 2021:5). Bu bağlamda literatürde girişimci adayları tarafından fırsatların nasıl tanındığı sorusunu tartışan bazı araştırmalar konuya beşeri sermaye teorisinin varsayımları ile açıklık getirmeye çalıştıkları söylenebilir. Buna göre fırsat tanıma konusuna farklı bir bakış açısı kazandıran beşeri sermaye kavramı ilk kez Becker (1964) tarafından *“bireylerin ekonomik değer üretebilmek için sahip olmaları gereken bilgi, yetenek ve deneyimler birikimi”* olarak ifade edilmiştir. Beşeri sermaye teorisinin varsayımlarından hareketle girişimci adaylarının iş fikirlerine temel teşkil eden fırsatları nasıl tanıdıklarına ilişkin olarak gerçekleştirilen araştırmalar eğitim, iş deneyimi, yetenek ve problem çözme gibi faktörlerin etkisi üzerinde durmuşlardır (Davidsson ve Honig, 2003). Bununla birlikte özellikle araştırmacıların beşeri sermayenin bir bileşeni olan eğitim değişkeninin fırsat tanıma sürecindeki rolünün anlaşılmasına yönelik pek çok çalışma yaptıkları görülmektedir (Sobakinova vd., 2020; Arentz vd., 2013; Gabrielsson ve Politis, 2012). Elbette ki araştırmacıların fırsat tanıma sürecinde eğitim değişkenine yönelttikleri bu ilginin nedensiz olmadığı söylenebilir. Nitekim Manga ve arkadaşlarının (2015) da ifade ettikleri üzere beşeri sermayenin oluşmasında eğitimin temel bir role sahip olması bunun en geçerli sebebidir. Buna göre beşeri sermayenin oluşmasında önemli bir katkısı olan eğitim birikimi örgün eğitim, örgün olmayan ya da işbaşında eğitim yoluyla kazanılmaktadır (Manga vd., 2015 47). Bu kapsamda girişimcilik eğitimlerinin bireylerin beşeri sermayelerinin oluşturulmasında ve girişimci faaliyetlerinin artırılmasında özel bir öneminin olduğunu söylemek yanlış olmayacaktır. Zira her düzeyde verilen girişimcilik eğitimleri sayesinde bireylere bir iş kurmak için gerekli olan bilgileri öğretme, nitelikleri kazandırma, girişimci olma potansiyelini ortaya çıkarma, iş fikri geliştirebilme, piyasadaki fırsatları görebilme ve sosyal fayda oluşturabilme gibi çıktılar üretmeleri desteklenebilecektir (Özdemir, 2019:102). Literatür kapsamında araştırmacıların da girişimcilik eğitimlerinin hem teorik hem de pratik açıdan önemli etkileri olduğunu savundukları görülmektedir (Klofsten, 2005). Bu bağlamda yapılan bir çalışmada girişimcilik eğitimi ile üretilen iş fikirleri sayısı arasındaki bağlantı araştırılmış ve pozitif bir ilişki bulgulanmıştır (Sobakinova vd., 2020). Yapılan başka bir çalışmada üniversite öğrencilerinin aldıkları girişimcilik eğitiminin iş fikri üretmeye yönlendirilmelerinde etkili olduğu tespit edilmiştir (Özdemir, 2019:101). Gabrielsson ve Politis’in (2012) gerçekleştirdikleri bir diğer araştırmada ise katılımcıların iş fikri üretme süreçlerinde iş deneyimi ve bireysel öğrenme tercihlerinin ilişkili olduğu görülmüştür. Bu bağlamda araştırma sonuçlarının girişimcilik eğitiminin iş fikirlerinin geliştirilmesinde ve hayata geçirilmesinde önemli bir destekleyici role sahip olduğunu ortaya koyduğu söylenebilir (Morais, 2001).

Girişimcilikte rekabetçi bir pazarda başarılı bir iş fikri geliştirdikten sonra gündeme gelen bir diğer konu bu iş fikrinin uygulanabilirliğinin nasıl değerlendirileceğidir. Bu anlamda çalışmada daha önce de belirtildiği gibi *“iş fikrinin uygulanabilir olup olmadığı nasıl belirlenebilir?”* sorusu iş fikri sürecine odaklanan çalışmaların en çok tartıştığı ikinci konu olarak karşımıza çıkmaktadır. Bu soruya cevap bulmak üzere yapılan çalışmalarda yeni ve uygulanabilir iş fikirlerinin günümüzün sürekli değişen pazarlarında başarılı bir işletmenin kurulması ve bu başarının uzun vadede sürdürülebilmesi için girişimcilik sürecinin ayrılmaz bir parçası olduğu vurgusu dikkat çekmektedir (Weinberger vd., 2018). Buna göre bir iş fikrinin uygulanabilirlik açısından doğru bir şekilde değerlendirilmesinin girişimcilikte özel bir önem arz ettiği söylenebilir. Nitekim araştırmacıların da belirttikleri gibi iş fikirleri oldukça fazladır ancak bu iş fikirlerinin hangilerinin uygulanabilir olduğu veya başka bir ifadeyle hangilerinin gerçek ticari potansiyele sahip olduğu sorusu girişimcilerin çözmek zorunda oldukları belki de en önemli sorun alanını oluşturmaktadır (Foo vd., 2005; Kim ve Mauborgne, 2000). Bu bağlamda girişimciler potansiyel müşteriler ve rakiplerin analizini kapsayan pazar boyutunun bir iş fikrinin uygulanabilirliğini etkileyen en önemli faktör olduğunu göz önünde bulundurmalıdırlar (Hougaard, 2005). Zira araştırmacılar bu kapsamda girişimcilerin başarılarını farklılaştıran en önemli özelliğin pazarı doğru analiz etme diğer bir ifadeyle bu pazarda henüz karşılanmayan müşteri ihtiyaçlarını belirleme ve tahmin etme yeteneği ile ilişkili olduğunu ifade etmektedirler (Gabrielsson ve Politis, 2012). Doğru bir pazar analizinin girişimcilik başarısı için önemine vurgu yapan araştırmacılar aynı zamanda potansiyel müşterilere yeni deneyimler sağlayacak yaratıcı iş fikirlerinin de girişimcilere benzersiz avantajlar sağlayacağı gerçeğinin altını çizmektedirler (Kim ve Mauborgne, 2000). Ancak burada göz ardı edilmemesi gereken en önemli nokta oluşturulan yaratıcı iş fikrinin pazardaki boşlukların ve fırsatların değerlendirilmesi bağlamında ortaya çıkmasıdır (Heinonen vd., 2011). Diğer bir ifadeyle piyasada karşılığı olmayan yaratıcı bir iş fikrinin ticari başarı kazanması mümkün olmayacaktır. Özetle söylemek gerekirse yaratıcı ve uygulanabilir bir iş fikrinin oluşturulabilmesi için girişimcilerin en başta bu iş fikrinin hayata geçirildiği

taktirde pazardaki hangi boşlukları dolduracakları veya hangi fırsatları değerlendirecekleri konusunu doğru ve açık bir şekilde ifade etmeleri gerekmektedir. Bununla birlikte uygulanabilir bir iş fikrinin, iş yapma biçiminin ne olacağı ve organizasyon şemasının nasıl oluşturulacağı sorularına da yanıt verebilecek bilgileri kapsamı gerektiği söylenebilir (Klofsten, 2005). Özellikle iş fikrinin hayata geçirilmesi konusunda potansiyel yatırımcılardan destek talep edileceği durumlarda ise iş fikrinin uygulanabilir olması konusu farklı bir önem kazanacaktır. Çünkü girişimciler destek alabilmek için iş fikirlerinin uygulanabilirliği konusunda yatırımcıları ikna etmek zorunda kalacaklardır (Foo vd., 2005). Dolayısıyla da iş fikirlerinin piyasa şartlarından hareketle gerçekçi tespitlerle objektif bir şekilde temellendirilmesi gerektiğini söylemek yanlış olmayacaktır. Buradan hareketle başarılı bir girişimcilik faaliyetinin gerçekleştirilebilmesi için geliştirilecek iş fikirlerinin pazardaki boşlukların ve fırsatların değerlendirilmesi bağlamında uygulanabilir bir düzeyde belirlenmesi gerektiği açıktır.

3. YÖNTEM

Girişimcilik genel olarak bir iş fikrinin tasarlanmasıyla başlayan iş fikrini bulma aşaması ve bu iş fikrinin bir ürüne dönüşüp piyasaya sunulması ile devam eden iş fikrinin hayata geçirilmesi olmak üzere iki aşamalı bir süreçtir. Bununla birlikte literatür kapsamında yapılan araştırmalara bakıldığında girişimciliğin ilk aşaması olan iş fikri bulma aşamasının araştırmacılar tarafından görece ihmal edilen bir konu olduğu dikkat çekmektedir. Dolayısıyla girişimcilikte fırsatların iş fikrine dönüştürülme sürecinin halen gizemini koruduğunu söylemek mümkündür. Bu bağlamda bu çalışma bir iş fikrinin tasarlanmasıyla başlayan iş fikrini bulma sürecine yakından bakmak ve girişimcilik eğitimi alan öğrencilerin iş fikirlerini analiz etmek amacıyla gerçekleştirilmiştir. Diğer bir ifadeyle bu çalışma potansiyel girişimci adaylarına sorulan “*girişimci olsaydınız hangi iş fikrini ne şekilde hayata geçirirdiniz?*” sorusuna verdikleri yanıtların incelenmesi bağlamında şekillendirilmiştir. Buna göre araştırmanın verileri Çankırı Karatekin Üniversitesi Uluslararası Ticaret ve Finansman Bölümünde eğitim gören 22 öğrenciden toplanmıştır. Uluslararası Girişimcilik dersini alan bu öğrenciler, olasılık dışı örnekleme yöntemi kullanılarak araştırmaya dâhil edilmiştir.

Araştırma kapsamında Uluslararası Girişimcilik dersini alan öğrencilere girişimcilik ile ilgili teorik bilgiler verildikten sonra öğrencilerden “*girişimci olsaydınız hangi iş fikrini nasıl hayata geçirirdiniz?*” sorusuna girişimci rolü oynamak suretiyle yanıt vermeleri istenmiştir. Bu bağlamda araştırmada veri elde etme yöntemi olarak rol oynama tekniği kullanılmıştır. Buna göre girişimci adayları belirledikleri iş fikirlerini kendilerine verilen yarı yapılandırılmış form aracılığıyla detaylandırmışlardır. Söz konusu yarı yapılandırılmış form literatür taraması kapsamında iş fikrinin neden seçildiği, iş fikirlerinin hangi faktörlerin etkisiyle ortaya çıktığı, mevcut ve potansiyel rekabette nasıl farklılık yaratılacağı, iş fikrinin nerede hayata geçirileceği, gelecek hedeflerinin ne olduğu, ürün ve hizmetlerin tüketicilere hangi yöntemlerle tanıtılacağı ve gerekli sermayenin nereden sağlanacağına ilişkin konuları kapsayacak düzeyde oluşturulmuştur. Katılımcılara projelerini hazırladıkları her aşamada danışmanlık desteği de sağlanmıştır. Araştırma kapsamında yarı yapılandırılmış formlar aracılığıyla ulaşılan veriler NVivo 12 nitel veri analizi programına aktarılmıştır. Verilerin çözümlenmesinde içerik analizi yöntemi kullanılmıştır. Çalışmanın güvenilirliğini sağlayabilmek için birbirinden bağımsız olarak iki araştırmacı verileri çözümlenmişlerdir. Benimsenen bu yöntem literatürde de ifade edildiği üzere nitel çalışmalarda analizlerin güvenilirliğinin sağlanabilmesi için sıklıkla araştırmacılar tarafından tercih edilmektedir. Nitekim bu yöntemde bağımsız temalar ve kodlar iki bağımsız araştırmacı tarafından tanımlanmakta sonrasında ise benzerlikler ve farklılıklar üzerinde yapılan tartışmalar ışığında nihai tema ve kodlara ulaşılmaktadır. Bu bağlamda araştırma güvenilirliği, kodlayıcılar arası uzlaşının bir ölçüsü olarak ifade edilmektedir (O'Connor ve Joffe, 2020). Araştırma kapsamında birbirinden bağımsız iki araştırmacının ulaştığı veriler karşılaştırılmış ve üzerinde görüş birliği sağlanan nihai kod listesi belirlenmiştir. Elde edilen bu veriler araştırma sorusu bağlamında tartışılmıştır.

4. BULGULAR

Tablo 1 katılımcıların geliştirdikleri iş fikirlerine ilişkin bulguları kapsamaktadır. Tablodan da görüleceği üzere katılımcıların 12'si kadın, 10'u ise erkektir. Geliştirilen iş fikirlerine bakıldığında 6 iş fikrinin otomat teknolojisi kapsamında oluşturulduğu dikkat çekmektedir. Diğer taraftan 3 katılımcının kafe iş fikrini seçtikleri görülmektedir. Tabloda yer verilen 7. ve 10. iş fikirleri bilinen bir markanın isim hakkının kullanımını mümkün kılan franchising modeli kapsamında oluşturulmuştur. Geliştirilen iş fikirlerinin hangi sektörde yer aldığına ilişkin bulgular iş fikirlerinin 20'sinin hizmet, 1'er tanesinin de tarım ve üretim sektörleri kapsamında yer aldığını göstermektedir.

Tablo 1. Katılımcılar Tarafından Geliştirilen İş Fikirleri

No	Cinsiyet	İş Fikri	Sektör
1	Kadın	Şarj Otomatı	Hizmet
2	Kadın	Çamaşır Makinesi Otomatı	Hizmet
3	Kadın	Dergi Cafe	Hizmet
4	Kadın	Özel Dikim Atölyesi	Hizmet
5	Erkek	Sigara Otomatı	Hizmet
6	Kadın	Green Cafe & Bistro	Hizmet
7	Erkek	Bowling Salonu	Hizmet
8	Erkek	El İşlemeleri ve Özel Dikim	Hizmet
9	Kadın	Doğal Cafe	Hizmet
10	Erkek	Hamburgerci	Hizmet
11	Kadın	Sağlık ve Güzellik Merkezi	Hizmet
12	Kadın	Yaşam ve Eğlence Merkezi	Hizmet
13	Erkek	Seracılık	Tarım
14	Kadın	Hijyen Malzemesi Otomatı	Hizmet
15	Erkek	Kurye Hizmeti	Hizmet
16	Kadın	İnternette Türk Kahvesi Satışı	Hizmet
17	Erkek	Atık Yağları Geri Dönüştürme	Üretim
18	Kadın	Sağlık Kabini	Hizmet
19	Erkek	Fatura Ödeme Otomatı	Hizmet
20	Kadın	Kuaför	Hizmet
21	Erkek	Çamaşır Makinesi Otomatı	Hizmet
22	Erkek	Parti Malzemeleri Satışı	Hizmet

Araştırma bağlamında katılımcıların iş fikirlerinin ortaya çıkmasına neden olan faktörlerin neler olduğunu ortaya koyan içerik analizi sonuçlarına Tablo 2’de yer verilmiştir.

Tablo 2. İş Fikirlerinin Ortaya Çıkmasına Neden Olan Faktörlere Yönelik İçerik Analizi Sonuçları

Kod	Frekans
Mevcut Pazardaki Boşluğu Değerlendirme	18
Müşteri Talebi Farkındalığı	11
İş Fikriyle İlgili Deneyim Sahibi Olma	8
İlgi Duyulan Alan	6
Alana İlişkin Yetenek Sahibi Olma	5
Sosyal Sorumluluk Farkındalığı	4
Farklılık Yaratma	3
Kazanç Elde Etme Güdüsü	3
Alanda Eğitime Sahip Olma	2
Hayalini Gerçekleştirme Güdüsü	2
Toplumsal Cinsiyet Farkındalığı	2

Tablo 2 katılımcıların iş fikirlerinin ortaya çıkmasında en çok “*mevcut pazardaki boşluğu değerlendirme*” (18) faktörünün etkili olduğunu göstermektedir. Ayrıca bu kapsamda yapılan analizler “*müşteri talebi farkındalığı*” (11), “*iş fikriyle ilgili deneyim sahibi olma*” (8), “*ilgi duyulan alan olma*” (6) ve “*alana ilişkin yetenek sahibi olma*” (5) faktörlerinin katılımcıların iş fikirlerinin oluşturulmasında önemli düzeyde etkili olduğunu ortaya koymuştur. Elde edilen bu bulgulardan hareketle literatürde de ifade edildiği üzere katılımcıların iş fikirlerini oluştururken en çok pazardaki bir ihtiyacı karşılama amacı taşıdıkları söylenebilir. Nitekim bu kapsamda katılımcılar pazarda henüz karşılanmayan müşteri ihtiyaçlarına yönelik sezdikleri fırsatları değerlendirme amacıyla iş fikirleri geliştirmişlerdir. Ayrıca gerçekleştirilen analizler yapılacak işe ilgi duyma, bu alanda yetenek ve deneyim sahibi olma gibi faktörlerin de iş fikrinin geliştirilmesi sürecindeki etkisini göstermektedir. Katılımcıların iş fikirlerinin ortaya çıkmasına neden olan faktörlere ilişkin ifadelerinden dikkat çekenler aşağıdaki gibidir:

“...Bu iş fikri benim ve arkadaşımın hayaliydi.” (Katılımcı 5)

“Yıllardır bu sektörün içinde çalıştım ve bir süre sonra işletmeyi bir iş olarak değil de evim gibi hissettiğimi, hayalimdeki işin bu olduğunu fark ettim. Yani geçmiş tecrübelerim ve hayalimin olması bu iş fikrinin doğmasına sebep oldu.” (Katılımcı 6)

“Bu iş fikrini yaşadığım şehirde gözlemediğim eksiklikten dolayı seçtim. Çünkü gluten alerjisi olan, şeker hastaları ve vegan kişilerin dışarıda da beslenme düzenlerini koruyabilecekleri bir mekân bulunmamaktadır. Bunun için de bu iş fikrinin farklılaşma yaratacağını düşünüyorum.” (Katılımcı 9)

“...Ülkemde kadınların doğum ve doğum sonrasında fiziksel ve manevi olarak yeterince desteklenmediğini düşünüyorum. Bu iş fikrini de bazı akrabalarımın yaşadığı sorunları göz önünde bulundurarak seçtim.” (Katılımcı 11)

“...Üniversitenin olduğu bölgede öğrencilere eğlenme imkânı sunan bir yer bulunmamaktadır.” (Katılımcı 12)

“...Ayrıca işletmenin kurulacağı bölgede diğer işletmeler tarafından atık yağlar doğaya bırakılmaktadır. Bunun için de çevre kirliliğini önlemek esas amaçlarımızdan biri olacaktır. Bu iş fikriyle doğayı temiz tutmakta bizim de küçüğe olsa katkımız olacaktır.” (Katılımcı 17)

“Çalışanların ve özellikle öğrencilerin en büyük problemlerinden biri kirli çamaşırların yıkanması. İnsanlar yoğunluklarından dolayı çamaşırların yıkanması için çok zaman ayırmak istemiyorlar...” (Katılımcı 21)

Tablo 3. Mevcut ve Potansiyel Rekabette Farklılaşma Stratejilerine Yönelik İçerik Analizi Sonuçları

Kod	Frekans
Pazara İlk Giren Olma Avantajı	17
Rakiplerden Farklılaşma	7
Kolay Ulaşılabilir Olma	7
Müşteri Memnuniyeti	5
Kişiyeye Özel Üretim/Hizmet	4
Kalite Odaklı Faaliyet	3
Marka Bilinirliğinden Faydalanma	2
Maliyet Avantajı	2
Çevreye Duyarlı Olma	2
Şeffaflık	1
Yenilikçi Faaliyetler	1

Araştırma kapsamında sorulan “oluşturulan iş fikri ile mevcut ve potansiyel rekabette nasıl farklılık yaratılacaktır?” sorusuna katılımcıların verdikleri yanıtlardan elde edilen içerik analizi sonuçlarına Tablo 3’te yer verilmiştir. Tablodan da görüleceği gibi “pazara ilk giren olma avantajı” (17), “rakiplerden farklılaşma” (7), “kolay ulaşılabilir olma” (7), “müşteri memnuniyeti” (5) ve “kişiyeye özel üretim/hizmet” (4) en çok tekrar eden kodlar olarak öne çıkmaktadır. Ayrıca katılımcılar tarafından “kalite odaklı faaliyet” (3), “marka bilinirliğinden faydalanma” (2), “maliyet avantajı” (2), “çevreye duyarlı olma” (2), “şeffaflık” (1) ve “yenilikçi faaliyetler” (1) argümanları ile rekabette farklılık yaratılabileceği ifade edilmiştir. Bu noktada rekabette marka bilinirliği avantajını kullanabileceklerini dile getiren katılımcıların franchising modeli kapsamında iş fikri geliştirdiklerini belirtmek gerekmektedir. Bu bağlamda yapılan analizlerde katılımcıların yoğun bir şekilde pazarda rekabet tehdidinin düşük olduğunu dile getirdikleri dikkat çekmektedir. Nitekim bu bulgu katılımcıların iş fikirlerinin ortaya çıkmasında en çok pazardaki boşluğu değerlendirme faktörünün etkili olduğu bulgusuyla birlikte ele alındığında daha anlamlı bir görünüm kazanmaktadır. Sonuç olarak katılımcıların pazarda sezdikleri boşlukların yarattığı fırsatlardan hareketle iş fikirlerini belirlediklerini ve bu bağlamda da düşük rekabet öngörüsüne sahip oldukları pazarlara girmeyi tercih ettiklerini söylemek yanlış olmayacaktır. Geliştirilen iş fikirlerinin mevcut ve potansiyel rekabette nasıl farklılaşacağına ilişkin katılımcıların ifadelerinden bazılarına aşağıda yer verilmiştir:

“...Müşterilerin hayallerine hiçbir şekilde müdahale edilmeyecek ve tamamen onların istekleri karşılanacaktır. Onların özel olma isteklerine karşılık verilecektir. Dolayısıyla da ürünler tamamen özel ve tek olacaktır.” (Katılımcı 4)

“...İnsanların hayal güçlerine hizmet edileceği için farklılaşmanın bir sınırı yoktur. Bunun için de pazardaki pek çok fırsat değerlendirilebilecektir...” (Katılımcı 22)

Katılımcıların iş fikirlerini nerede hayata geçirmek istediklerini belirlemek üzere yapılan analizlerde “yaşanılan şehir” (11), “öğrenim görülen şehir” (7) ve “İstanbul” (4) olmak üzere 3 kategori bulgulanmıştır. Buna göre katılımcıların en çok yaşadıkları bölgelerin pazarlarındaki eksiklerini ve tüketici ihtiyaçlarını gözlemleyerek iş fikirlerini oluşturdukları görülmektedir. Yapılan başka bir analizde katılımcıların oluşturdukları iş fikirlerinin hepsinin gelecek projeksiyonu olarak büyümeyi hedefledikleri tespit edilmiştir. Bu kapsamda katılımcıların en çok tercih ettiği büyüme hedefinin “yeni şubeler açmak” olduğu görülmektedir. Bununla birlikte katılımcıların “uluslararası pazarlara açılma” (6), “marka oluşturma” (5), “işgücüne yatırım yapma” (1) ve “teknolojiye yatırım yapma” (1) gibi büyüme hedeflerinin de olduğu dikkat çekmektedir. Araştırma kapsamında yapılan bir diğer analiz sonucuna göre katılımcılar iş fikirlerini hayata geçirdikten sonra ürün ve hizmetlerini müşterilere tanıtmak için “sosyal medya” (16) ve “web sitesi” (12) seçeneklerini kullanmayı planlamaktadırlar. Bu bağlamda katılımcıların günümüzde yoğun bir biçimde kullanılan online tanıtım araçlarının önemini kavradıklarını söylemek yanlış olmayacaktır.

Tablo 4. İş Fikrinin Finansman Planına İlişkin Sonuçlar

Kod	Frekans
Aile	14
KOSGEB	10
Kendi Birikimleri	7
Kredi	6
Yatırımcılar	3

Tablo 4 katılımcıların iş fikirlerini hayata geçirebilmek için gerekli olacak sermayeyi nereden karşılayacaklarına ilişkin bulguları kapsamaktadır. Tablodan da görüleceği gibi katılımcılar gerekli sermaye için en çok “aile” (14), “KOSGEB” (10), “kendi birikimleri” (7), “kredi” (6) ve “yatırımcılar” (3) seçeneklerini kullanmayı planlamaktadırlar. Katılımcıların iş fikirlerini hayata geçirebilmek için en çok aileden destek almayı hedefledikleri bulgusu kültürel bağlamla birlikte değerlendirildiğinde beklenen bir durum olarak karşımıza çıkmaktadır.

5. SONUÇ VE TARTIŞMA

Girişimciler daha önce tanınmayan fırsatları iş fikrine dönüştürerek ekonomik gelişimin adeta katalizörü rolünü üstlenen kişilerdir. Bu bağlamda girişimciler tarafından geliştirilen iş fikirlerinin yeni ürünler, yeni pazarlar ve yeni müşterilere ulaşılmasını mümkün kıldığı söylenebilir (Weinberger vd., 2018). Dolayısıyla iş fikirlerinin ortaya çıkışında rol oynayan dinamikleri anlamak önemli bir çaba olarak kabul edilebilir. Literatür kapsamında araştırmacıların da söz konusu dinamikleri yakından inceledikleri ve bu bağlamda bir iş fikrinin doğuşunun iki aşamalı bir süreç olarak değerlendirdikleri görülmektedir. Buna göre girişimciliğin ilk aşaması literatür kapsamında görece ihmal edilmiş olan iş fikri bulma aşamasıdır. İkinci aşama ise araştırmacıların daha yoğun olarak ele aldıkları bir iş fikrinin ürüne dönüşüp piyasaya sunulması bir diğer ifadeyle hayata geçirilmesidir. Dolayısıyla girişimciler tarafından fırsatların nasıl keşfedildiği ve iş fikrine nasıl dönüştürüldüğü soruları halen tam olarak cevap bulmamış sorular olarak kalmaya devam etmektedir. Bu bağlamda bu çalışma kapsamında bir iş fikrinin tasarlanmasıyla başlayan iş fikrini bulma sürecine yakından bakılmaya çalışılmıştır. Bu doğrultuda Çankırı Karatekin Üniversitesi Uluslararası Ticaret ve Finansman Bölümünde eğitim gören ve girişimcilik eğitimi alan 22 öğrenci tarafından geliştirilen iş fikirleri incelenmiştir. Bir diğer ifadeyle elde edilen veriler araştırma kapsamında girişimci rolü oynayan katılımcılara sorulan “girişimci olsaydınız hangi iş fikrini ne şekilde hayata geçirirdiniz?” sorusuna verdikleri yanıtlardan elde edilmiştir.

Araştırma kapsamında yapılan analizler geliştirilen iş fikirlerinin neredeyse tamamının hizmet sektöründe faaliyet göstermek üzere tasarlandığını ortaya koymuştur. Elde edilen bu bulgu İnaltekin ve Kirman Bilgin’in (2019) çalışmalarında ulaştıkları sonuçlarla da paralellik göstermektedir. Buna göre araştırmacılar, fen bilimleri öğretmen adaylarının hazırladıkları iş planlarını inceledikleri söz konusu çalışmada katılımcıların otlu yoğurt, şeker pancarı reçeli, süt reçeli, kaz yağından sabun, pekmezli kahve, organik diş macunu, ışık otlu ve sarı kantaronlu sabun gibi üretim odaklı iş fikirleri geliştirdiklerini belirlemişlerdir. Bu kapsamda araştırmacılar katılımcıların fikirlerini kendi alanları ile ilişkilendirerek oluşturdukları sonucuna varmışlardır. Dolayısıyla uluslararası ticaret ve finansman öğrencilerinin bu çalışmanın örneklemini oluşturduğu göz önüne alındığında analiz edilen iş fikirlerinin neredeyse tamamının hizmet sektöründe faaliyet göstermek üzere tasarlandığı bulgusu anlamlı hale gelmektedir. Bir diğer ifadeyle bu araştırma kapsamında da katılımcıların iş fikri

geliştirirken kendi eğitim alanları ile bağlantılı sektörlerle yönelediklerini söylemek mümkündür. Bunun yanı sıra yapılan analizler katılımcıların bu iş fikirlerini daha çok yaşadıkları veya öğrenim gördükleri şehirlerde hayata geçirmek üzere tasarladıkları da ortaya koymuştur. Bir diğer ifadeyle katılımcıların genellikle yaşadıkları çevredeki fırsatları sezinleme eğiliminde oldukları tespit edilmiştir. Bu bağlamda katılımcıların yaşadıkları çevrede ortaya çıkan girişimsel fırsatları tanıma özelliklerinin güçlü olduğunu düşünmek mümkündür.

Araştırma kapsamında iş fikirlerinin ortaya çıkmasına hangi faktörlerin etkili olduğu sorusu cevabı aranan bir diğer soru olmuştur. Bu bağlamda yapılan analizler iş fikrinin ortaya çıkmasına neden olan faktörler arasında “mevcut pazardaki boşluğu değerlendirme” ve “müşteri talebi farkındalığı” faktörlerinin katılımcılar tarafından en sık tekrar edilen faktörler olduğunu ortaya koymuştur. Bu bulgu Helvacı'nın (2017) girişimcilerin iş fikri bulmada en çok fırsatçılık yönteminden yararlandıkları bulgusu ile de örtüşmektedir. Buna göre katılımcıların pazarda tatmin edilmeyen müşteri talebi potansiyelini tespit ederek pazardaki bu boşluğu fırsata dönüştürmeyi hedefleyen iş fikirleri planladıklarını söylemek mümkündür. İş fikirlerinin ortaya çıkmasına hangi faktörlerin etkili olduğu sorusu kapsamında yapılan analizler sonucunda katılımcılar tarafından en sık dile getirilen diğer faktörler ise “iş fikriyle ilgili deneyim sahibi olma”, “ilgi duyulan alan olma” ve “alana ilişkin yetenek sahibi olma” olmuştur. Bir diğer ifadeyle gerçekleştirilen analizler yapılacak işe ilgi duyma, bu alanda yetenek ve deneyim sahibi olma gibi faktörlerin de iş fikrinin geliştirilmesi sürecinde etkisi olduğunu ortaya koymuştur. Daha önce de dile getirildiği üzere literatür kapsamında araştırmacılar, girişimcilerin iş fikrini nasıl oluşturdıkları sorusuna girişimcinin yapmaktan hoşlandığı ve iyi yaptığını düşündüğü bir şeyle ilgili iş fikri belirlemesi ile iş fikrinin pazardaki bir ihtiyacı karşılamaya dönük oluşturulması olmak üzere iki temel kategori bağlamında cevap vermektedirler. Dolayısıyla bu araştırma kapsamında elde edilen sonuçların literatürde yapılan diğer araştırmalarla paralellik gösterdiğini ve incelenen iş fikirlerinin ortaya çıkmasına neden olan faktörlerin her iki kategoriyi de yansıttığı söylenebilir.

Özetle söylemek gerekir ki iş fikri, girişimci tarafından pazara ne sunulacağı ve bu faaliyetinden ötürü nasıl kâr elde etmeyi planladığını gösterir (Klofsten, 2005). Bu nedenle iş fikrinin ortaya çıkış süreci dikkatle ele alınması gereken bir süreçtir. Dolayısıyla girişimcilerin iş fikirlerini nasıl geliştirdikleri literatür kapsamında görece ihmal edilen bir araştırma alanı olmaktan çıkarılması gerektiğini söylemek mümkündür. Bu bağlamda gelecekte, hayata geçirilmiş ve başarılı olmuş iş fikirlerinin ortaya çıkış süreçlerini analiz eden çalışmaların yapılması önerilebilir. Bunun yanı sıra katılımcılar tarafından geliştirilen iş fikirlerinin uygulanabilirliği çeşitli simülasyon araçları da kullanılarak yatırım potansiyeli bağlamında test edilebilir. Son olarak iş fikirlerinin geliştirildiği adresler olarak üniversitelerde kuluçka merkezlerinin kurulması ve yaygınlaştırılması da önerilebilir.

Özet: Bütçe açıkları, ekonomik açıdan ülkelerdeki ekonomi yönetimlerinin çözüm bulmak zorunda olduğu önemli makroekonomik sorunlardan birini teşkil etmektedir. Bununla birlikte bütçe açıklarının pek çok olumsuz etkisinin bulunduğunu da söylemek mümkündür. Denk bütçe ilkesinin bir gereği olarak bütçe açıklarının kapatılması zorunluluğu, para talebinde artışlara neden olmak suretiyle faiz oranlarının yükselmesine ve özel yatırımların azalmasına, ayrıca işsizlik oranında artışlara neden olabilmekte bu ise üretim hacminde azalışlara ve enflasyonun yükselmesine neden olmaktadır. Ayrıca üretim hacmindeki azalışlar, bir yandan ihracatta azalışlara neden olurken diğer taraftan da yurtiçi üretimle karşılanamayan ihtiyaçların ithalat ile karşılanmasına, buna bağlı olarak da dış ticaret açıklarının artmasına neden olmaktadır. Türkiye’deki bütçe açıklarının seçilmiş makroekonomik değişkenler ve özellikle dış ticaret üzerindeki etkisini incelemek ve ortaya çıkan etkilerin teori ile uyumluluğunu ortaya koymak amacıyla hazırlanmış olan bu çalışmada T.C. Hazine ve Maliye Bakanlığı’ndan elde edilen 2006-2022 dönemine ilişkin yıllık bütçe istatistiklerinden ve Türkiye Cumhuriyeti Merkez Bankası (TCMB)’den, Trade Map’den ve Dünya Bankası’ndan elde edilen dış ticaret verileri ve diğer seçilmiş makroekonomik değişkenlere ait verilerden yararlanılmıştır. Yapılan inceleme ve analiz neticesinde özellikle kırılma yıllarında bütçe açıkları ile ihracat arasındaki ilişkilerin beklentiler dahilinde gerçekleştiği ve bütçe açıklarında meydana gelen artışın ihracatı azalttığı, diğer yıllarda ise beklentilerin dışında gelişmelerin söz konusu olduğu, ithalat harcamaları ile bütçe açığı arasındaki ilişkilerde ise beklentiler doğrultusunda birlikte artış ve azalışların söz konusu olduğu, zaman zaman da beklentilerin tersine durumların ortaya çıktığı tespit edilmiştir.

Anahtar Kelimeler: Bütçe açıkları, Dış Ticaret, Türkiye, Balkan Ülkeleri, Karşılaştırmalı Analiz

Comparative Analysis of the Effects of Budget Deficit on Selected Macroeconomic Variables and Foreign Trade: The Case of Turkey

Abstract: Budget deficits are one of the most important macroeconomic problems that the economic administrations of countries have to find solutions to in economic terms. However, it is also possible to say that many negative effects of budget deficits are overwhelmed. As a requirement of the equilibrium budget principle, the obligation to close budget deficits can cause an increase in the demand for money, which leads to an increase in interest rates and a decrease in private investment, as well as an increase in the unemployment rate. In addition, while the reduction in production volume leads to a decrease in exports, it also means that the needs that cannot be met by domestic production will be met by imports, thus leading to an increase in foreign trade deficits. In this study, which was prepared to examine the effect of budget deficits in Turkey on selected macroeconomic variables and especially on foreign trade and to show the compatibility of the effects with the theory, annual budget statistics for the period 2006-2022 obtained from the Ministry of Treasury and Finance and foreign trade data and other selected macroeconomic variables obtained from the Central Bank of the Republic of Turkey, Trade Map and the World Bank were used. As a result of the study and analysis, it was found that the relations between the budget deficits and exports were realised within the expectations, especially in the break years, and the increase in the budget deficits decreased the exports, and in the other years there were developments outside the expectations. It was noted that from time to time there are situations that are contrary to expectations.

Keywords: Budget Deficits, Foreign Trade, Turkey, Balkan Countries, Comparative Analysis

1. GİRİŞ

1700-1920 yılları arasında iktisatçılar ve toplumun çeşitli kesimleri tarafından kabul gören, klasik iktisadi yaklaşım, bütçe açıklarının ekonomik istikrarsızlığa neden olacağını ileri sürmüştür. Klasik iktisadi yaklaşım eğitim, sağlık, adalet ve savunma gibi kamusal mal ve hizmet haricinde ekonomiye devlet müdahalesinin olmaması gerektiği savunmuş olmasına karşın 1929 yılında ABD’ de ortaya çıkan Büyük Buhranı açıklamakta yetersiz kalmıştır. Klasik iktisadi yaklaşımın Büyük Buhranı açıklamakta yetersiz kalmasının ardından ekonomiye devletin müdahale etmesi gerektiği görüşünü savunan Keynesyen yaklaşım ortaya çıkmış ve denk bütçe kanununun terk edilebilir bir ilke olduğunu, kamu gelirleri ve kamu giderleri aracılığıyla uygulamaya konulan açık bütçe politikasının geçerliliğini ve bütçe politikasıyla makroekonomik değişkenler arasındaki ilişkiyi

vurgulamıştır. Çalışmanın amacı, Türkiye’de bütçe açıklarının dış ticaret üzerindeki etkisini 2006-2022 dönemine ilişkin veriler kullanarak incelemektir. Çalışmada bütçe açıkları, bütçe açıklarının ortaya çıkma nedenleri ve bütçe açıklarını etkileyen temel makroekonomik değişkenlerden bahsedilmiştir. Ardından bütçe açıkları ile seçilmiş makroekonomik değişkenler ve özellikle de dış ticaret değişkenleri arasındaki ilişki ortaya konularak bütçe açıklarının büyüme, enflasyon, işsizlik, faiz oranları gibi seçilmiş makroekonomik değişkenler ve özellikle dış ticaret üzerindeki etkisi, Türkiye özelinde değerlendirilmiştir.

2. LİTERATÜR TARAMASI

Literatürde bütçe açıklarının dış ticaret üzerindeki etkisini inceleyen pek çok çalışma bulunmaktadır. Tablo 1 de bu çalışmalardan bazılarını ve bu çalışmalarda elde edilen bulgulara yer verilmiştir.

Tablo 1. Literatür Taraması

Yazarlar	Ülkeler ve Yıllar	Yöntem	Sonuç
Vamvoukas (1999)	Yunanistan (1948-1994)	Nedensellik	Bütçe açığı ile dış ticaret açığı arasında hem kısa ve hem de uzun dönemde pozitif bir nedensellik ilişkisinin olduğu tespit edilmiştir.
Başar (1999)	Türkiye (1980-1997)	Nedensellik	Bütçe açıklarının, faiz haddi ve döviz kuru vasıtasıyla dolaylı olarak dış ticaret açıklarına neden olduğu, dış ticaret açıklarının ise doğrudan bütçe açıklarını etkilediği tespit edilmiştir. Ayrıca yine aynı çalışmada hem bütçe açıklarının hem de dış ticaret açıklarının ulusal geliri etkilediği sonucuna ulaşılmıştır.
Kutlar ve Şimşek (2001)	Türkiye (1984-2000)	ECM, Eşbütünleşme ve Granger Nedensellik Testi	Granger nedensellik testi sonuçlarına göre bütçe açıkları ile dış ticaret açıkları arasında güçlü bir nedensellik ilişkisinin bulunduğu ve Koentegresyon testi sonuçlarına göre de uzun dönemli bir ilişkinin varlığı tespit edilmiştir. Bu sonuçlar Keynesyen yaklaşımı destekler niteliktedir.
Yılmaz (2002)	Türkiye (1980-2001)	Granger Nedensellik Testi	Çalışmada, bütçe açıkları ve dış ticaret açıkları arasında iki yönlü nedenselliğin olduğu, 1980-2001 yılları arasında bütçe açıkları ve dış ticaret açıkları arasında beş dönem gecikmeli karşılıklı bir ilişkinin bulunduğu tespit edilmiştir.
Utkulu (2003)	Türkiye (1950-2000)	Koentegrasyon ve Nedensellik Testi	Çalışma sonuçları, Keynesyen ikiz açık teorisini destekler nitelikte olup uzun dönem nedensellik ilişkisinin çift yönlü olduğunu ortaya koymuştur.
Erceg, Guerrieri ve Gust (2005)	ABD (1983-2003)	Karşılaştırmalı Analiz	Çalışmada, bütçe açığındaki %1’lik bir azalmanın dış ticaret açığını yaklaşık %0,2 oranında artırdığı tespit edilmiştir.
Güriş ve Yılğör(2008)	OECD Ülkeleri (1990-2005)	Nedensellik ve Eşbütünleşme Testi	Çalışma sonucunda 29 OECD ülkesinin bütçe açıkları ve dış ticaret açıkları arasında eş bütünleme ilişkisinin bulunduğu ve Holtz Eaken-Newey Rosen nedensellik test sonuçlarına göre dış ticaret açıklarından bütçe açıklarına doğru tek yönlü bir nedensellik ilişkisinin bulunduğu tespit edilmiştir.
Barışık ve Kesikoğlu (2010)	Yükselen Ekonomiler (12 ülke) (1991-2007)	Nedensellik Testi	Çalışmada 12 yükselen piyasa ekonomisi için bütçe açığı ile cari açık arasında çift yönlü nedensellik ilişkisi tespit edilmiştir.
Mangır (2012)	Türkiye (1980-2011)	Johansen Eşbütünleşme Testi	Çalışmada Türkiye için bütçe açığından cari açığa doğru tek yönlü ve uzun dönemli bir nedensellik ilişkisinin bulunduğu tespit edilmiş ve bulguların Geleneksel Keynesyen Yaklaşımı desteklediği sonucuna ulaşılmıştır.

Baigonushova ve Pirimbayev, (2016)	Kırgızistan (2000-2013)	VAR, Regresyon ve Granger Nedensellik Testi	Çalışmada, bütçe açığı ile dış ticaret açığı arasındaki ilişki regresyon analizi yapılarak ortaya konulmuş, analiz sonucunda bütçe açığındaki 1 dolarlık bir artışın dış ticaret açığını 0,83 dolar artırdığı tespit edilmiştir. Granger Nedensellik sonuçları da değişkenler arasındaki ilişkinin aynı yönlü olduğunu ortaya koymuştur. Ayrıca VAR sonuçlarına göre devlet harcamalarındaki azalış, ihracatı azaltmakta, ithalatı ise kısa dönemde etkilememektedir.
------------------------------------	-------------------------	---	---

3. BÜTÇE AÇIKLARI

Bütçe kavramı, kamu kesiminin toplumsal ihtiyaçlarının karşılanması adına mal ve hizmet üretiminin gerçekleştirilmesi için yapılan harcamalar ve söz konusu harcamaların finansmanında kullanılacak gelirlerden oluşmaktadır. Bu anlamda bütçe uygulamalarına ilişkin politikalar belirlenirken uygulanacak olan bu politikaların kamu maliyesi ve özel kesim harcamaları üzerinde ortaya çıkaracağı etkilere dikkat edilmesi gerekmektedir (Tüğen, 2013: 356). Bütçe kanunu ise devletin gelecek döneme ilişkin gelir ve harcama tahminlerini içinde bulunduran, harcamaların gerçekleştirilmesi ve gelirlerin tahsil edilmesi yetkisini ve iznini veren kanun şeklinde nitelendirilmektedir (Sayar, 1974). Söz konusu kanun diğer kanunlardan farklı olarak 1 yılı kapsayan geçici kanun olmasının yanında tahminleri de bünyesinde barındırmaktadır.

Bütçe açığı kavramı ise gelişmiş ve gelişmekte olan ülke ekonomilerinde çok sık rastlanan bir kavram olarak devletin bütçe gelirleri ile bütçe harcamaları arasındaki farktan oluşmaktadır ve bir anlamda bütçe giderlerinin bütçe gelirlerinden fazla olduğu durumu ifade etmektedir (Fischer ve Easterly, 1990: 127). 1970’li yıllar itibarıyla kamu maliyesinin en önemli sorunlarından biri olan bütçe açıkları, gelişmiş ve gelişmekte olan ülke ekonomilerinin de kronik sorunlarından bir hale gelmiş durumdadır. Bu bağlamda bütçe açıkları, enflasyonun en önemli nedenlerden birini teşkil etmektedir. 1973 yılında meydana gelen ilk petrol şoku öncesinde sanayileşmiş ülkeler, denk bütçeye ulaşmayı hedeflemiş, ancak petrol şoku sonrasında bütçe açıklarını normal karşılamaya başlamışlardır. Genel bir değerlendirmeye bütçe açıklarının en önemli nedeninin vergi gelirlerindeki yetersizlik olduğu söylemek mümkündür. Vergi gelirindeki yetersizlik nedeniyle ortaya çıkan bütçe açıkları ise devlet tarafından borçlanılarak kapatılmaktadır (Dağ, 2018: 44; Egeli ve Özen, 2013: 73).

3.1. Bütçe Açıklarının Nedenleri

Bütçe açıklarının ortaya çıkmasının nedeni gelişmiş ve gelişmekte olan ülke ekonomilerine göre farklılık göstermektedir. Bu anlamda gelişmiş ülke ekonomilerinde bütçe açıkları, sosyal devlet uygulamaları, düşük büyüme seviyeleri ve sosyal güvenlik transferlerine bağlı olarak ortaya çıkmakta ve artış göstermektedir. Buna karşın gelişmekte olan ülke ekonomilerinde ise bütçe açığı, dış ödemeler dengesinde meydana gelen açıklar, yüksek enflasyon, dış ödemeler dengesi açıkları, kişi başına milli gelir seviyesindeki azalma ve kamu harcamalarındaki artışa karşın kamu gelirlerinin beklenen seviyeye ulaşmaması ve benzer yapısal faktörler gibi nedenlerle meydana gelmektedir (Dağ ve Tüğen, 2018: 219). Bunlara ilaveten ülkelerin iktisadi gelişme düzeyi, devlet gelirlerindeki artış hızı, devlet gelirlerinde meydana gelen istikrarsızlık, devletin ekonomi içindeki payı ve devlet harcamalarının boyutu gibi nedenler de yine bütçe açıklarına neden olabilmektedir. Bütçe açıkları gelişmiş ve gelişmekte olan ülke ekonomilerine göre farklılık göstermekle beraber bütçe açığı ile dış ticaret arasındaki ilişkinin yönü ve derecesi de ülke ekonomilerinin gelişmişlik düzeylerine göre farklılık göstermektedir.

3.2. Bütçe Açıklarının Etkilediği Temel Makroekonomik Değişkenler

Bütçe açıklarının pek çok makroekonomik değişken üzerinde etkisi bulunmaktadır. Bunlardan bazılarını büyüme, enflasyon, istihdam ve dış ticaret şeklinde sıralamak mümkündür. Bütçe açıkları her makroekonomik değişken üzerinde farklı etki yaratabilmektedir. Dolayısıyla bütçe açıklarının bir değişken üzerindeki etkisi olumlu yönde olabilirken, diğer bir değişken üzerindeki etkisi olumsuz yönde olabilmektedir. Tablo 2’de bütçe açıkları ile ekonomik büyüme, enflasyon, işsizlik oranı, faiz oranı, ihracat ve ithalatın 2006-2022 dönemindeki gelişimine ilişkin verilere yer verilmiştir.

Tablo 2: Bütçe açıkları ve Temel Makroekonomik Değişkenlere Ait Göstergeler

Yıllar	Bütçe Açıkları (Milyar TL.)	Ekonomik Büyüme (%)	Enflasyon (%)	İşsizlik Oranı (%)	Faiz Oranları (%) (Borç Alma)	İhracat (Milyar \$)	İthalat (Milyar \$)
2006	-5,8	6,95	9,65	8,72	17,50	85,5	139,5
2007	-14,5	5,04	8,39	8,87	15,75	107,2	170
2008	-17,9	0,82	10,06	9,71	15,00	132	201,9
2009	-53,1	-4,82	6,53	12,55	6,50	102,1	140,9
2010	-41,3	8,43	6,4	10,66	1,50	113,8	185,5
2011	-18,9	11,20	10,45	8,8	5,00	134,9	240,8
2012	-30,4	4,79	6,16	8,15	5,00	152,4	236,5
2013	-19,9	8,49	7,4	8,73	3,50	161,4	260,8
2014	-23,3	4,94	8,17	9,88	7,50	166,5	251,1
2015	-25,1	6,08	8,81	10,24	7,25	143,8	207,2
2016	-32,8	3,32	8,53	10,84	7,25	142,6	198,6
2017	-49,3	7,50	11,92	10,82	7,25	156,9	233,7
2018	-72	2,98	20,3	10,89	22,50	167,9	223
2019	-126,1	0,78	11,84	13,67	10,50	180,8	210,3
2020	-178,1	1,94	14,6	13,11	15,50	169,6	219,5
2021	-206,1	11,35	36,08	11,97	12,50	225,2	271,4
2022	-137,2	5,61	64,27	10,31	7,5	254,1	363,7

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>),

Trade Map (www.trademap.org) ve TCMB (www.tcmb.gov.tr), World Bank (www.worldbank.org)

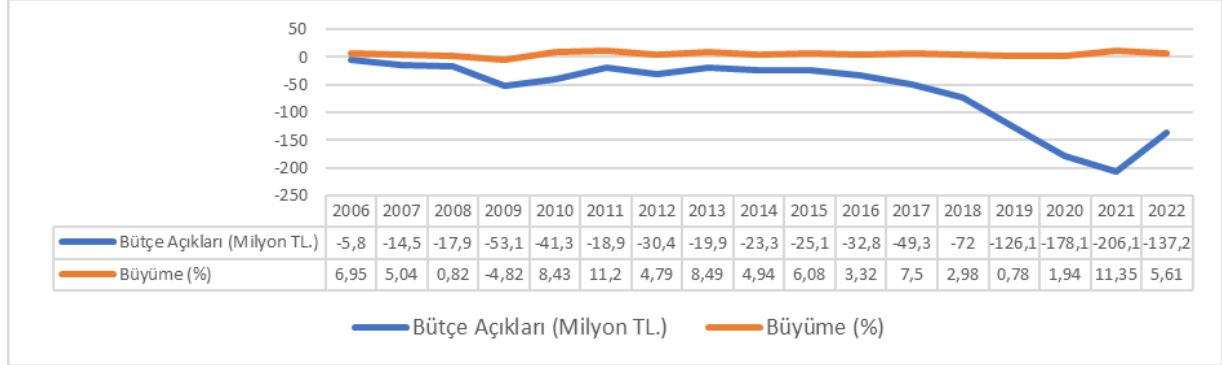

Bütçe açığı ve diğer makroekonomik değişkenlerin yer aldığı Tablo 2 incelendiğinde bütçe açığının 2006-2012 döneminde dalgalı bir seyir izlediği ancak 2013 yılından itibaren sürekli olarak artış gösterdiği görülmektedir. Bütçe açığı, 2020 yılında ise bir önceki yıla kıyasla önemli bir azalış göstererek yaklaşık 137,2 milyar TL. olarak gerçekleşmiştir. Aynı tablodaki ekonomik büyümeye ilişkin veriler incelendiğinde ise incelenen dönem itibarıyla istikrarsız bir yapının söz konusu olduğu anlaşılmaktadır. 2006-2022 döneminde ekonomik büyümenin 2011 ve 2021 yıllarında yaklaşık %11 büyüyerek en yüksek seviyeye ulaştığı, 2009 yılında ise, 2008 yılında yaşanan küresel krizin etkisiyle bir önceki yıla kıyasla 4,8 oranında küçüldüğü görülmektedir. Enflasyonun ise 2006-2017 döneminde % 6,4 ile % 11,9 arasında inişli çıkışlı bir seyir izlediği, 2018 yılında % 20'lere kadar yükseldikten sonra yapılan müdahaleler sonrası 2019 yılında tekrar % 11 seviyelerine gerilediği görülmektedir. Ancak 2020 yılından itibaren enflasyon oranlarında hızlı bir yükselişin söz konusu olduğu 2021 yılında enflasyonun bir önceki yıla kıyasla % 157 oranında arttığı, 2022 yılında ise yine bir önceki yıla kıyasla % 77 oranında artış göstererek % 64,27 oranında gerçekleştiği görülmektedir. İncelenen dönem itibarıyla işsizlik oranları ise % 8,15 ile % 13,67 aralığında değişim göstermiş, en düşük işsizlik oranı 2012 yılında, en yüksek işsizlik oranı ise 2019 ve 2020 yıllarında gerçekleşmiştir. 2019 ve 2020 yıllarına işsizlik oranının yüksek olmasında pandeminin etkisinin bulunduğunu söylemek mümkündür. Borç alma faiz oranları ise 2006 yılında %17,50 seviyesinde iken 2010 yılında % 1,50 seviyesine kadar düşürülmüştür. Ancak sonraki yıllarda faiz oranları tekrar artış eğilimine girmiş ve 2018 yılı itibarıyla %22,50 seviyesine kadar yükselmiştir. Sonraki yıllarda ise inişli çıkışlı bir seyir izleyen borç alma faiz oranı 2022 yılı itibarıyla %7,5 seviyesinde gerçekleşmiştir. İhracat gelirlerinin ve ithalat harcamalarının ise 2006 yılında 2013 yılına kadar olan süreçte 2009 yılı hariç birlikte hareket ettiği ve hem ihracatın hem de ithalatın artış eğiliminde olduğu görülmektedir. 2009 yılındaki azalışlarda ise 2008 krizinin etkilerinin bulunduğunu söylemek mümkündür. 2013 yılından sonraki dönemde ise hem ihracat gelirlerinin hem de ithalat harcamalarının inişli çıkışlı bir seyir izlediği ve 2022 yılı itibarıyla ihracat gelirlerinin 254,1 milyar dolar, ithalat harcamalarının ise 363,7 milyar dolar olarak gerçekleştiği görülmektedir.

3.2.1 Bütçe Açıklarının Büyüme Üzerindeki Etkisi

Bütçe açıklarının etkilediği temel makroekonomik değişkenlerden biri olan ekonomik büyüme oranı, devletin kamu harcamalarını arttırmasıyla olumlu yönde etkilenmektedir. Ayrıca devlet tarafından gerçekleştirilen altyapı yatırımlarına yönelik kamu harcamalarındaki artışa bağlı olarak ortaya çıkan ekonomik büyüme

oranındaki artışlar, özel yatırımları teşvik etmekte ve beşeri sermayenin gelişmesine olanak sağlamaktadır. Buna ilaveten iktisadi yapının gelişim göstermesi için gerekli olan idari ve yasal kararların alınması, işgücü ve sermayenin etkinliğini arttırarak ekonomik büyümeyi hızlandırmaktadır (Barışık ve Kesikoğlu, 2015: 64). 2006-2022 dönemine ait bütçe açıkları ile ekonomik büyüme arasındaki ilişki şekil 1’de görülmektedir.

Şekil 1: Bütçe Açıkları ve Büyüme Arasındaki İlişki

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>)

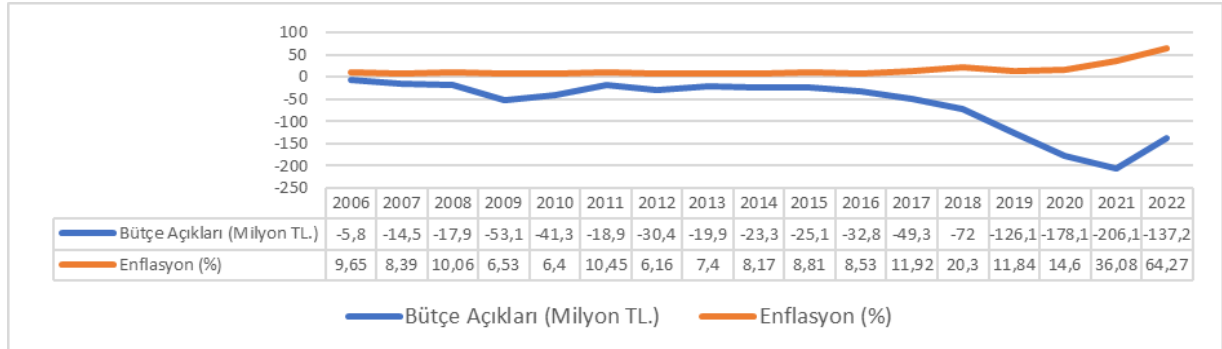

ve World Bank (www.worldbank.org)’ dan elde edilen verilerle oluşturulmuştur.

2006-2022 döneminde bütçe açıkları ve ekonomik büyüme arasındaki ilişkiyi ortaya koyan Şekil 1 incelendiğinde Türkiye’de 2017 yılına kadar olan dönemde en yüksek bütçe açığının 2009 yılında gerçekleştiği 2018 yılından itibaren ise bütçe açıklarında hızlı artışların yaşandığı, ancak 2022 yılında önemli bir toparlanmanın gerçekleştiği görülmektedir. Buna karşın ekonomik büyümede 2009, 2011 ve 2021 yılları hariç çok önemli kırılmalar meydana gelmemiştir. Bütçe açığının artış gösterdiği 2009 yılında ekonomi de küçülmüştür. Bu sonuç teori ile uyumludur. Zira bütçe açıklarındaki artış, para talebinde artışlara neden olmak suretiyle faizleri yükseltmekte ve yatırımların azalmasına neden olmakta, yatırımların azalması nedeniyle de üretim ve gelir azalışları meydana gelmekte ve bu durum ekonominin küçülmesinin nedenlerinden birini teşkil etmektedir. Bütçe açıklarının artış gösterdiği 2017-2020 döneminde de ekonomik büyümenin yavaşladığı ve bu durumun beklentilerle uyumlu olduğu görülmektedir. Ancak 2021 yılına gelindiğinde hem bütçe açıklarının hem de ekonomik büyümenin zirveye çıktığı görülmektedir. Bu durumu ise kamu harcamalarındaki artışa bağlı olarak artan talep karşısında, mal ve hizmet üretimindeki artışı ile açıklamak mümkündür. Zira kamu harcamalarındaki artış nedeniyle mal ve hizmetlere yönelik talep artmakta, bu ise üretimin artmasına, dolayısıyla da ekonomik büyümenin gerçekleşmesine neden olmaktadır. Bütçe açığı ile ekonomik büyüme arasındaki ilişkiler beklentilerle uyumlu olarak gerçekleşmiş durumdadır.

3.2.2. Bütçe Açıklarının Enflasyon Üzerindeki Etkisi

Bütçe açıklarının etkilediği makroekonomik değişkenlerden biri de enflasyondur. Bütçe açıklarının, para basılarak veya borçlanmaya gidilerek finanse edilmesi enflasyona neden olmaktadır. Merkez Bankası, bütçe açıklarını finanse etmek için para basarak para arzının artırmakta ve para arzının artması da enflasyon oranlarının yükselmesine neden olmaktadır (Gürbüz, 1997:7). 2006-2022 dönemine ait bütçe açıkları ile enflasyon arasındaki ilişki şekil 2’de görülmektedir.

Şekil 2: Bütçe Açıkları ve Enflasyon Arasındaki İlişki

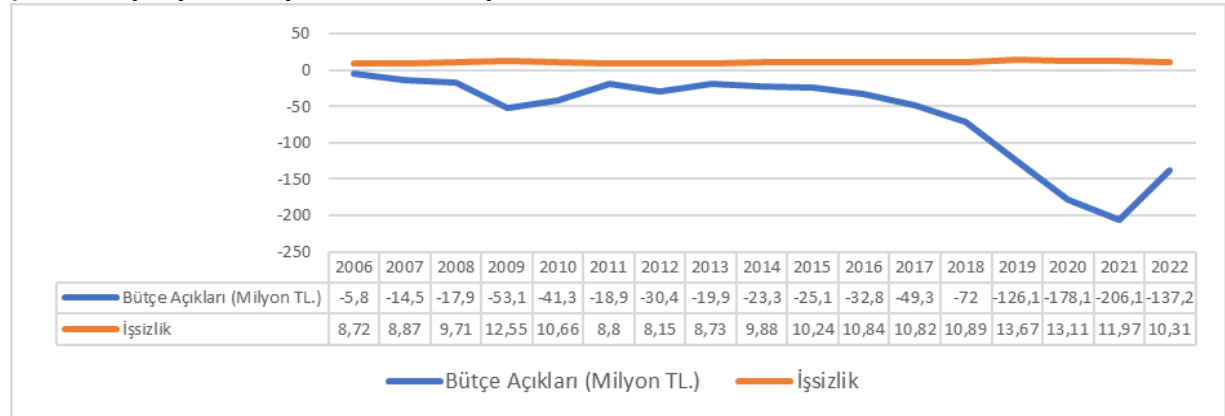

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>) ve World Bank (www.worldbank.org)’ dan elde edilen verilerle oluşturulmuştur.

2006-2022 döneminde bütçe açıkları ve ekonomik büyüme arasındaki ilişkiyi ortaya koyan Şekil 2’de bütçe açığının 2009 yılında hızlı bir şekilde arttığı ancak enflasyon oranının bir önceki yıla kıyasla gerilediği görülmektedir. Bu bağlamda 2009 yılında bütçe açığında meydana gelen artışlar karşısında enflasyonun gerilediğini ve beklentilerin tersine bir sonuç ortaya çıktığını söylemek mümkündür. Zira bütçe açığındaki artışların, para talebinde artışlara neden olmak suretiyle öncelikle faizleri artırması, akabinde de üretim hacmini azaltmak suretiyle enflasyona neden olması beklenir. Ayrıca bütçe açığındaki artışların kamu harcamalarındaki artışlar nedeniyle ortaya çıktığı düşünüldüğünde, kamunun mal ve hizmet talebindeki artışların da enflasyon oranını artırması beklenir. Ancak 2009 yılında bu beklentilerin aksine bir durum ortaya çıkmıştır. Benzer bir durum 2019 yılında ve 2022 yılında da gerçekleşmiştir. Bütçe açıklarında yükselişlerin yaşanmaya başladığı 2017 ve 2018 yıllarında bütçe açıklarındaki artışlara beklentiler doğrultusunda enflasyondaki artışların eşlik ettiği görülmektedir. Ancak 2019 yılında bütçe açığı hızlı bir şekilde artış gösterirken enflasyonun aynı hızda gerilediği görülmektedir. 2020 ve 2021 yıllarında bütçe açıkları ile enflasyon arasında yine beklentiler doğrultusunda bir gelişme söz konusu iken, bir diğer ifadeyle her iki değişken birlikte artış gösterirken 2022 yılında yine beklentilerin tersine bir durumun ortaya çıktığı görülmektedir. Bu bağlamda bütçe açıklarının enflasyona neden olan faktörlerden biri olmakla birlikte enflasyon üzerindeki etkilerinin sınırlı olduğunu, enflasyonun bütçe açıklarından ziyade başka değişkenlerden çok daha fazla etkilendiğini söylemek mümkündür.

3.2.3. Bütçe Açıklarının İşsizlik Üzerindeki Etkisi

Bütçe açıklarının işsizlik üzerinde de önemli etkileri bulunmaktadır. Devletin cari ve yatırım harcamaları, toplam harcamalar içinde önemli bir yere sahiptir. İşsizlik oranlarının yüksek olduğu ülkelerde, devlet tarafından yapılan kamu harcamaları, toplam talebi artırmak suretiyle işsizliğin azalmasına katkıda bulunabilmektedir. Ayrıca devlet tarafından yapılan altyapı harcamaları, özel sektörün üretim yapmasına ve gelişmesine neden olmak suretiyle özel sektörde faaliyette bulunan yada bulunacak olan iş gücüne yönelik yatırım ve istihdamın artmasına da neden olmaktadır. Bununla birlikte kamu harcamalarındaki artışlar, bütçe açıklarına neden olmak suretiyle öncelikle para talebini, ardından da faiz oranlarını artırmakta, faiz oranlarındaki artışlar ise özel yatırımları dışlamaktadır (Bulut, 2002:73). Özel yatırımlardaki azalışlar ise işsizliğin artmasına sebebiyet vermektedir. 2006-2022 dönemine ait bütçe açıkları ile işsizlik arasındaki ilişki Şekil 3’de görülmektedir.

Şekil 3: Bütçe Açıkları ve İşsizlik Arasındaki İlişki

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>) ve World Bank (www.worldbank.org)’ dan elde edilen verilerle oluşturulmuştur.

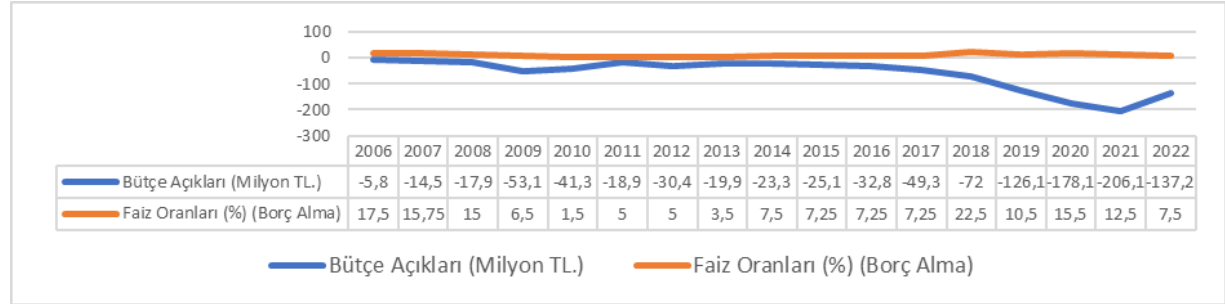

Şekil 3’te, bütçe açıkları ile işsizlik oranları arasındaki ilişki gösterilmiştir. 2006 yılından 2019 yılına kadar geçen süreçte bütçe açığında önemli artış ve azalışlar yaşanmış ancak işsizlik oranı bu artış ve azalışlardan çok fazla etkilenmemiştir. Ancak 2019 yılında ve 2020 yılında hem bütçe açıkları hemde işsizlik oranları hızlı bir şekilde artış göstermiştir. 2019 ve 2020 yıllarında işsizlik oranındaki artış da kuşkusuz pandeminin önemli etkisi bulunmaktadır. Ancak kamu harcamalarındaki artış nedeniyle faizlerdeki artışa bağlı olarak özel yatırımlardaki azalışların da işsizlik oranının artışında etkili olabileceğini söylemek mümkündür. Zira 2022 yılında bütçe açıkları önemli ölçüde azalmış, işsizlik oranında da önceki yıllara kıyasla azalışlar meydana gelmiştir. Doaylsıyla bütçe açıkları ile işsizlik arasındaki ilişki son yıllarda beklentilerle uyumlu bir şekilde gerçekleşmiştir.

3.2.4. Bütçe Açıklarının Faiz Oranları Üzerindeki Etkisi

Bütçe açıkları ile faiz oranları arasında doğrudan bir ilişkinin varlığı kabul edilmektedir. Merkez Bankasının faiz oranlarında öncelik verdiği politika, istikrar sağlayıcı bir politikadır. Bu bağlamda bütçe açıklarının faiz oranlarını arttırması muhtemel olduğundan Merkez Bankası faiz oranlarında meydana gelen artışa engel olabilmek adına para arzını arttırmaktadır. Bütçe açıklarının para talebini arttırması ise iç faiz oranlarının artmasına neden olmaktadır.

Politika düzenlemelerinin yer almadığı bir ülke ekonomisinde bütçe açıklarındaki artış, faiz oranlarının artmasına neden olmaktadır. Kamu kesiminin krediye olan talebinin artması, kredi arzının artmadığı bir durumda faizlerin yükselmesine neden olmaktadır. Bir diğer ifadeyle, kamusal borçlarda meydana gelen bir artışa karşın, para arzının sabit kaldığı bir durumda, faiz oranları yükselmektedir. Bu anlamda mali otoriteler, bütçe açıklarının parasal büyüme üzerinde ortaya çıkan etkilerini ortadan kaldırmak adına faiz oranlarında artış yolunu seçmektedir. Söz konusu uygulama enflasyonu kontrol etmek için önemlidir. Mali otoritelerin bu yaklaşımı bankacılık kesimi haricinde özel kesimin yatırım kararları üzerinde de önem arz etmektedir (Kesbiç ve d., 2005: 86). 2006-2022 dönemine ait bütçe açıkları ile işsizlik arasındaki ilişki şekil 4’de görülmektedir.

Şekil 4: Bütçe Açıkları ve Faiz Oranları Arasındaki İlişki

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>) ve TCMB (www.tcmb.gov.tr)’ den elde edilen verilerle oluşturulmuştur.

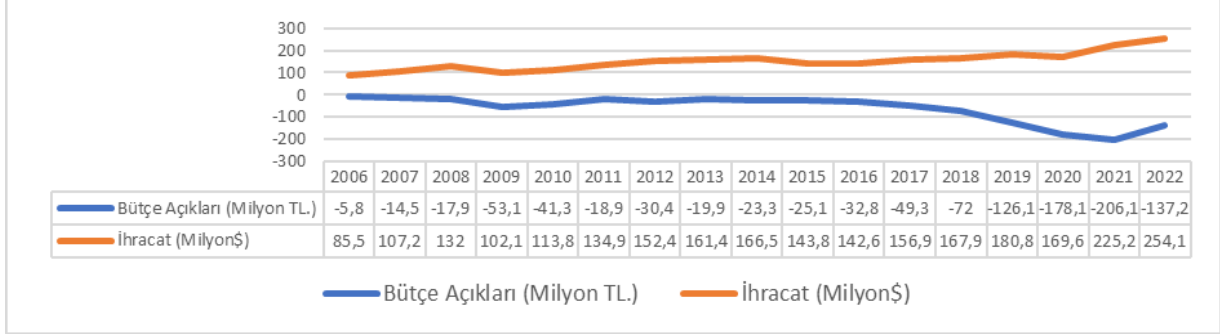

Şekil 4’te bütçe açıkları ile faiz oranları arasındaki ilişki değerlendirilmektedir. Bütçe açıklarındaki kırılmaların, 2008 küresel ekonomik krizi ve pandemi döneminde meydana geldiği, ancak faiz oranlarının bu kırılmalara eşlik etmediği görülmektedir. Zira bütçe açıklarının artış gösterdiği dönemlerde para talebindeki artış nedeniyle faiz oranlarının da artış göstermesi beklenir. Ancak incelenen dönem itibarıyla böyle bir durum gerçekleşmemiştir. Bütçe açıklarında kırılmanın yaşandığı 2009 yılında bütçe açıkları bir önceki yıla kıyasla neredeyse 3 kat artış göstermiş, faiz oranı ise yine 3 kata yakın azalmıştır. Bu durum beklentilerin dışında bir gelişmeyi ifade etmektedir. Bütçe açıklarındaki bir diğer kırılmanın da 2021 yılında meydana geldiği ve bütçe açıklarının önemli ölçüde arttığı, ancak faiz oranı bir önceki yıla kıyasla yaklaşık 300 baz puan gerilediği, 2022 yılında ise bütçe açıklarının önemli ölçüde gerilediği bu gerilemeye faiz oranlarının da eşlik ettiği ve bir önceki yıla kıyasla 500 baz puan gerilediği görülmektedir. Bu bağlamda faiz oranlarındaki artış ve azalışlarda bütçe açıklarının etkisi bulunmakla birlikte bu etkinin sınırlı olduğunu ve faiz oranının bütçe açıklarından ziyade diğer makroekonomik değişkenlerden çok daha fazla etkilendiğini söylemek mümkündür.

3.2.5. Bütçe Açıklarının Dış Ticaret Üzerindeki Etkisi

İktisatçılar, bütçe açıkları ile dış ticaret arasında doğrudan bir ilişkinin bulunduğunu ifade etmektedir. Devlet, bütçe açıklarını finanse etmek için para talebini arttırmakta para talebindeki artışlar ise faiz oranlarını yükseltmektedir. Faiz oranlarının yükselmesi iki etki meydana getirmektedir. Bunlar, ilki özel yatırım harcamalarını caydırıcı etkisi olarak adlandırılan dışlama etkisi ve ikincisi de yurtiçi finansal yatırımların yabancı ülke vatandaşları için çekici hale gelmesidir (Barışık ve Kesikoğlu, 2015:63). Yurtiçi finansal kaynakların çekici hale gelmesi yurt içine yabancı fonların akışını da beraberinde getirmektedir. Söz konusu durum, döviz kurlarındaki azalışa neden olmak suretiyle ulusal paranın aşırı değer kazanmasına neden olmaktadır. Ulusal paranın aşırı değer kazanması ise ithalatın artmasına, ihracatın ise azalmasına neden olmaktadır. Dolayısıyla bütçe açıklarındaki artış dış ticaret açıklarını arttırmaktadır (Ball and Mankiw, 1995:98-99). Bütçe açıkları, devletin para talebinde artışlara neden olmak suretiyle iç faiz oranlarının yükselmesine, özel yatırımların azalmasına ve işsizlik oranında artışlara neden olmakla beraber, üretim hacminde azalışlara ve enflasyonun artmasına da neden olmaktadır. Üretim hacmindeki azalışlar, bir yandan ihracatta azalışlara neden olurken diğer taraftan da yurtiçi üretimle karşılanamayan ihtiyaçların ithalat ile karşılanmasına, buna bağlı olarak da

yine dış ticaret açıklarının artmasına neden olmaktadır. Mundell (1963)’e göre, ekonomide genişletici bir maliye politikasının uygulanması durumunda, ortaya çıkan bütçe açığının borçlanma ile finanse edilmesi, birtakım ekonomik sonuçların ortaya çıkmasına neden olmaktadır. Bütçe açıklarının borçlanma suretiyle finansmanı, faiz oranlarında artışlar neden olmakta, iç faiz oranlarındaki artış ise ülkeye yabancı sermaye girişini arttırmak suretiyle ulusal paranın değerlenmesine neden olmaktadır. Bu durum ise doğal olarak ihracatın düşmesine ve ithalatın da artmasına neden olmakla suretiyle dış ticaret dengesinin bozulmasına sebebiyet vermektedir. Sonuç itibarıyla bütçe açıkları dış ticaret açıklarının ortaya çıkması ile sonuçlanmaktadır. 2006-2022 dönemine ait bütçe açıkları ile ihracat arasındaki ilişki şekil 5’te görülmektedir.

Şekil 5: Bütçe Açıkları ve İhracat Arasındaki İlişki

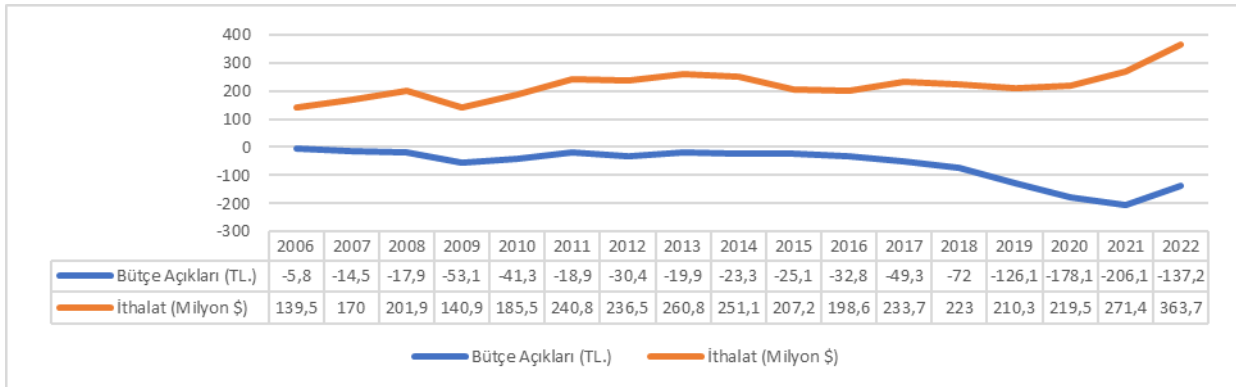

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>) ve Trade Map (www.trademap.org)’ten elde edilen verilerle oluşturulmuştur.

Şekil 5’te, bütçe açıklarının ihracat üzerindeki etkisi değerlendirilmiştir. Bütçe açığında kırılmanın yaşandığı ve bir önceki yıla kıyasla yaklaşık 3 kat artış gösterdiği 2009 yılında ihracat, bir önceki yıla kıyasla yaklaşık % 30 oranında gerilemiştir. Benzer bir durum 2020 yılı için de geçerlidir. 2020 yılında da yine bütçe açığı önemli ölçüde artmış, ihracat ise bir önceki yıla kıyasla yaklaşık 11 milyar dolar azalmıştır. Bu sonuçlar beklentilerle uyumludur. Zira bütçe açıklarının faiz oranlarında artışlara neden olmak suretiyle yatırım, üretim ve dolayısıyla ihracatta azalışlara neden olması beklenmektedir. Ancak 2021 bu eğilimin tersine döndüğü, 2021 yılında bütçe açıklarının artmasına karşın ihracatın azalması beklenirken, bir önceki yıla kıyasla arttığı gözlenmektedir. 2022 yılında ise bütçe açığı yaklaşık %30 oranında azaldığı, ihracatın ise bir önceki yıla kıyasla % 10 oranında artış gösterdiği görülmektedir, ki bu durum beklentilerle uyumludur. Bu kapsam dahilinde özellikle kırılma yıllarında bütçe açıkları ile ihracat arasındaki ilişkilerin beklentiler dahilinde gerçekleştiği ve bütçe açıklarında meydana gelen artışın ihracatı azalttığı, diğer yıllarda ise beklentilerin dışında gelişmelerin söz konusu olduğu tespit edilmiştir.

2006-2022 dönemine ait bütçe açıkları ile ihracat arasındaki ilişki ise şekil 6’te görülmektedir.

Şekil 6: Bütçe Açıkları ve İthalat Arasındaki İlişki

Kaynak: T.C. Hazine ve Maliye Bakanlığı (<https://muhasabat.hmb.gov.tr/merkezi-yonetim-butce-istatistikleri>) ve Trade Map (www.trademap.org)’ten elde edilen verilerle oluşturulmuştur.

Şekil 6’da 2006-2022 dönemine ilişkin kullanılan veriler dahilinde bütçe açıklarının ithalat üzerindeki ilişkisi değerlendirilmiştir. 2008 yılında meydana gelen küresel ekonomik kriz döneminde ve pandeminin ortaya çıktığı yıllarda bütçe açıklarına ilişkin kırılmaların yaşandığı, bir diğer ifadeyle bütçe açıklarının önemli oranda arttığı görülmektedir. Bu dönemler itibarıyla küresel krizin ekonomik etkilerinin ortaya çıktığı 2009 yılında, bütçe

açıklarındaki artışa karşın ithalatın önemli ölçüde gerilediği görülmektedir. Bu gelişme beklentilerle uyumlu değildir. Zira bütçe açıkları nedeniyle para talebindeki artışların faizleri artırması, ülkeye sermaye girişinin artış göstermesi, dolayısıyla da ulusal paranın değerlenmesi nedeniyle ithalatın artış göstermesi beklenir. Ancak 2009 yılı için böyle bir durum gerçekleşmemiş, bütçe açıkları artmış buna karşın ithalat azalmıştır. Benzer bir durum 2019 yılı için de geçerlidir. 2020 yılında ise bütçe açıkları bir önceki yıla kıyasla artış göstermiş, ithalatta beklentiler doğrultusunda bir önceki yıla kıyasla artmıştır. Aynı şekilde bütçe açıkları 2021 yılında artmaya devam etmiş, buna paralel olarak beklentiler doğrultusunda ithalat harcamaları da artış göstermiştir. Ancak 2022 yılında bütçe açıklarının azalmasına karşın ithalat harcamalarının artmaya devam ettiği görülmektedir. Bu ise beklentilerle uyumlu bir gelişme değildir. Bu bağlamda ithalat harcamaları ile bütçe açığı arasındaki ilişkilerin beklentiler doğrultusunda gerçekleştiği ve bütçe açıkları ile ithalat harcamalarında birlikte artış ve azalışların söz konusu olduğunu zaman zaman da beklentilerin tersine durumların ortaya çıktığını söylemek mümkündür

SONUÇ

Ülke ekonomileri açısından önem arz eden konulardan biri de bütçe açıklarıdır. Bütçe açıkları temelde kamu gelirlerinin kamu giderlerinden düşük seviyelerde kalması durumunda ortaya çıkan ekonomik bir sonuçtur. Bütçe açıklarının önemi, pek çok makroekonomik değişkeni etkilemesinden kaynaklanmaktadır. Bu değişkenlerden birini ihracat bir diğerini de ithalat oluşturmaktadır. Bütçe açıklarının dış ticaret üzerindeki etkilerini ortaya koymak amacıyla hazırlanmış olan çalışmada, veri analiz yönteminden yararlanılmıştır. 2006-2022 dönemine ait yıllık veriler kullanılarak yapılan incelemelerde, bütçe açığı ile ekonomik büyüme arasındaki ilişkilerin beklentilerle uyumlu olarak gerçekleştiği, bütçe açıklarının enflasyon üzerindeki etkilerinin sınırlı olduğu, bir diğer ifadeyle enflasyonun bütçe açıklarından ziyade başka değişkenlerden çok daha fazla etkilendiği, bütçe açıkları ile işsizlik arasındaki ilişkinin son yıllarda beklentilerle uyumlu bir şekilde gerçekleştiği, faiz oranlarındaki artış ve azalışlarda bütçe açığının etkisinin bulunduğu ancak bu etkinin sınırlı olduğu ve faiz oranının bütçe açığından ziyade diğer makroekonomik değişkenlerden çok daha fazla etkilendiği, özellikle kırılma yıllarında bütçe açıkları ile ihracat arasındaki ilişkilerin beklentiler dahilinde gerçekleştiği ve bütçe açıklarında meydana gelen artışın ihracatı azalttığı, diğer yıllarda ise beklentilerin dışında gelişmelerin söz konusu olduğu, ithalat harcamaları ile bütçe açığı arasındaki ilişkilerin ise beklentiler doğrultusunda gerçekleştiği ve birlikte artış ve azalışların söz konusu olduğu, zaman zaman da beklentilerin tersine durumların ortaya çıktığı tespit edilmiştir. Bu sonuçlar doğrultusunda bütçe açıklarının makro ekonomik değişkenler üzerinde etkisinin bulunduğunu ancak bu etkilerin sınırlı düzeylerde söz konusu olduğunu ve bütçe açıklarının makro ekonomik değişkenleri etkileyen değişkenlerden sadece biri olduğunu ve farklı makroekonomik değişken üzerindeki etkilerinin farklılık arz ettiğini, son olarak da kamu harcamalarını artırmak suretiyle ekonomiye yapılacak müdahalelerin etkinliğinin sınırlı olacağını söylemek mümkündür.

Özet: İnsanoğlunun günümüzde yaşadığı sosyal ve ekonomik düzen, geçtiğimiz yüzyıllarda yaşanmış çeşitli dönüşümler sonucunda şekillenmiştir. Dönüşüme neden olan sebeplerden birisi, yaşanmış olan bilimsel ve teknolojik gelişmelerdir. Her bir teknolojik gelişme, üretim sürecini etkilemenin yanı sıra insanoğlunun sahip olduğu bilgi ve beceri düzeyini de etkilemiştir. Dolayısıyla insan becerilerinin ekonominin her dalında yarattığı etkinin ölçüsü olan beşeri sermaye kavramı; 18.yüzyıldan günümüze kadar birçok iktisatçı tarafından farklı açılardan değerlendirilmiştir.

Fizyokratlar tarafından toprağa, merkantalistler tarafından kıymetli maden stoğuna bağlanan zenginlik ve gelişme kavramları, sanayi devriminin ortaya çıkması ile birlikte, daha dinamik analizler yapılarak beşeri sermaye kavramı da zenginliğin kaynakları arasında gösterilmeye başlanmıştır.

Beşeri sermaye kavramı, direkt olarak açıklanmasa da ilk olarak klasik iktisadın kurucusu olarak kabul edilen Adam Smith tarafından değerlendirilmiştir. Daha sonraki yıllarda bir teori çerçevesinde olmasa da; Heinrich von Thünen, Alfred Marshall, Thomas Malthus, John Stuart Mill ve Simon Kuznets beşeri sermaye olarak isimlendirmeseler de, emek faktörünün çeşitli özellik ve nitelikler elde ederek gerek üretim sürecinde gerekse sosyo-ekonomik yapıda meydana getireceği farklılıkları ortaya koymaya çalışmışlardır. İnsanların beceri ve yeteneklerinin beşeri sermaye teorisi kapsamında ele alınışı Theodore Schultz ile başlamaktadır.

Bu çalışmada, beşeri sermaye kavramının ortaya çıkışını ve onu etkileyen faktörleri açıklayarak beşeri sermaye kavramı ile ilgili her bir iktisadi ekolün görüşlerine yer verilmiştir.

Anahtar Kelimeler: Beşeri Sermaye, İktisat Ekolleri, Beşeri Sermayeyi Etkileyen Faktörler.

1. GİRİŞ

Orta Çağ'da ekonomik büyüme sürecini hızlandırmanın en önemli unsuru tarımsal verimliliği arttırmak iken, beşeri sermaye kavramı sadece nitelik boyutu ile düz işgücü olarak anılmaktaydı. Sanayileşme ile birlikte, sanayileşmeye hizmet edecek sayıda ve vasıfta işgücü ekonomik gelişim adına zorunlu hale gelmiştir. Dolayısıyla beşeri sermaye konusunun öneminin kavranması bu dönemle başlamıştır.

Kavram olarak beşeri sermaye kavramı merkantilist dönemine dayanmaktadır. Bu dönemde farklı ülkelerde birçok iktisatçı tarafından farklı düşünceler ortaya atılmıştır. Fakat o dönemde beşeri sermaye kavramı iktisadi düşünce anlamında bir bütünlük kazanmamıştır.

İktisat literatüründe beşeri sermaye kavramı klasik iktisadın ortaya çıktığı dönemden beri bulunmaktadır. Klasik iktisatçılar beşeri sermaye kavramının gelişmesine katkıda bulunmuşlardır. Sermaye stokunun bir zenginlik göstergesi olarak kabul edildiği bu dönemde, insanların sahip oldukları beceri ve bilgi uzmanlaşmayı olumlu etkilediğini söylemişlerdir.

İleriki dönemlerde iktisat ekollerinin yaptıkları araştırma sonuçlarına göre beşeri sermayenin, bir ülkenin ekonomik büyümesi için en önemli faktörlerinden biri olduğunu ortaya koymuşlardır.

Beşeri sermaye bireyin doğuştan sahip olduğu yetenektir ve bu yeteneğin gelişmesine yardımcı olan etkenler vardır. Çalışmamızda beşeri sermayeyi etkileyen en temel faktörlere yer verilmiştir. Çalışmanın amacı, beşeri sermayenin iktisat literatürüne kazandırılma aşamasını ve ekonomik büyüme için önemini iktisat ekollerinin görüşleriyle destekleyerek açıklamaktır.

2. BEŞERİ SERMAYE KAVRAMI

Beşeri sermaye bireylerin doğuştan sahip oldukları ve daha sonra çalışarak edindikleri becerilerin değeri olarak tanımlanmaktadır. Bireyler becerilerini arttırmak için kendi eğitim ve sağlıklarına yatırım yapmaktadırlar ve bu yatırımlarla gelirlerini arttırmayı hedeflemektedirler (Tunç, 1997: 85).

Bir diğer tanıma göre beşeri sermaye daha iyi eğitilmiş ve beceri kazandırılmış insan kaynağıdır. İyi eğitim almış insan gücü ve yeterli fiziki sermaye birikimi ekonomik büyümenin önemli faktörleridir. Fiziki sermaye ve beşeri sermaye kaynağı birbirinin ikamesi değil tamamlayıcıdır. İyi eğitim almış ve becerili, sağlıklı ve dengeli beslenme imkanına sahip olan kültürlü bireyler, üretim sürecine katılarak emek verimliliğinin artışına katkıda bulunmaktadır (Han ve Kaya, 2006: 112).

Beşeri sermaye, insanların yaşam kalitesinin üst düzeye çıkarılmasında kolaylık sağlayan bireylerin bilgi ve becerilerinin toplamını ifade etmektedir (Çalışkan, 2010: 11).

Beşeri sermaye kavramının temelleri Adam Smith'in "Ulusların Zenginliği" adlı kitabını yazdığı 1776 yılına kadar uzanmaktadır. Ancak beşeri sermaye kavramının bir teori halini alarak kuramsallaşması ve ölçüm tekniklerinin geliştirilmesi 1960'lı yılları bulmaktadır. Beşeri sermaye teorisinin kurucusu sayılan ve beşeri sermaye teorisini iktisat literatürüne kazandıran isim Theodore Schultz olmuştur.

18. yüzyıldan 20. yüzyıla kadar uzanan dönem içerisinde önemli iktisatçılar daha ziyade beşeri sermaye kavramının sınırlarını ve gelişim yolunu aramışlardır. 20. yüzyılın ikinci yarısından, günümüze uzanan çalışmalar ise daha ziyade beşeri sermayenin iç dinamiklerini araştırmaya yönelmişlerdir.

Beşeri sermaye bir ülke ekonomisi için önemlidir çünkü bir toplumda bulunan tüm bireylerin bilgi, yetenek ve deneyimleri üretim süresine yansımaktadır. Bu nedenle iktisat literatüründe beşeri sermaye, ülke ekonomilerinin gelişmişlik düzeyinin göstergesi olan büyüme ve kalkınma kavramları ile birlikte incelenmektedir (Meçik, 2010:26). Ülke ekonomilerinin esas sorunu servetin yaratılması değil, serveti yaratacak olan beyin gücünün yaratılmasıdır (Kaynak, 2007: 304).

Üretim sürecinde nitelikli işgücünün niteliksiz işgücüne oranla daha üretken olmaları ve ileri teknolojileri daha kolay yönlendirebilmeleri beklenmektedir (Fuente and Ciccone, 2002: 11). Beceriler, eğitilmiş bir işgücü ile hâlihazırdaki üretim süreçlerinde gerçekleştirilen kademeli iyileştirmeler ve teknolojik gelişme, verimlilik artışına yol açmaktadır.

Becker beşeri sermayeye yapılan yatırımları eğitim, sağlık ve beceri kazandırma faaliyetleri alanlarına harcama yapılması olarak ifade etmektedir. Becker, toplam üretim miktarını arttırmak için işgücüne yönelik genel ve spesifik eğitimlerin yapılmasının önemli olduğunu vurgulamaktadır. Eğitilmiş bireylerin yeni ürün geliştirmede gösterdikleri üstünlüklerden dolayı beşeri sermaye ekonomik büyümeyi doğrudan etkilemektedir. Diğer taraftan beşeri sermaye, başka ülkelerden ithal edilen teknolojilerin üretim süreçlerine uyarlanmasında büyük rol üstlenmektedir. Bireylerin becerilerini geliştiren yatırımlar, iş tecrübeleri yoluyla ortaya çıkan "yaparak öğrenme", iş başında eğitim ve yeteneklerin üretken kullanımına yol açan faaliyetleri kapsamaktadır. Bu durum öğrenme ve tecrübe edinme yoluyla gerçekleşebileceği gibi Ar-Ge çalışmaları veya eğitim süreçleri sonucunda da gerçekleşebilmektedir (Ranis, 2011: 4).

Ekonomik büyümeye büyük katkısı sağlayan beşeri sermayenin, günümüzde teknolojinin gelişmesiyle önemi daha da artmaktadır. Beşeri sermayenin gelişmesini dikkate almayan ülkelerin dünya ekonomisinde söz sahibi olma ihtimali bulunmamaktadır. Gelişmiş ülkeler beşeri sermayeye ve beyin gücüne önem vermektedirler ve milli gelirin bir kısmını düzenli olarak Ar-Ge çalışmalarına ayırmaktadırlar (Kaynak, 2007: 34).

3. BEŞERİ SERMAYENİN TARİHİ

Beşeri sermaye kavramı ilk olarak merkantilist dönemde ortaya çıkmıştır (Duran, 2001:17). Geleneksel şekilde bakıldığında merkantilist dönem, ulusal ekonomi politikasında ve Avrupa iktisadi düşüncesinde 1500 ile 1800 yıllarını kapsamaktadır. Bu geniş dönemde birçok farklı ülkede birçok farklı iktisatçı tarafından beşeri sermaye ile ilgili çeşitli düşünceler öne sürülmüştür ve bunları tek bir başlık altında toplamak oldukça güçtür. Bu sebeple iktisat tarihçileri konu ile ilgili açıklamaları merkantilist başlığı altında açıklanmasının mümkün olmadığını söylemişlerdir. Merkantilist düşünceleri ilk yazılı olarak 1613 yılında İtalyan tüccar Antonino Serra tarafından yazılan "Maden Kaynağına Sahip Olmayan Ülkelerde Altın Ve Gümüşü Bollaştıran Nedenler Üzerine Kısa Bir İnceleme" adlı broşürle ortaya koymuştur. Merkantilizmi savunan son eser ise Sir James Steuart tarafından 1767 de kaleme alınan "Politik Ekonominin İlkeleri Üzerine İnceleme" adlı yayınlanan kitap olmuştur (Savaş, 2007: 137).

Alman iktisatçısı olan F.K.Mann onaylamadığı üç yüz yıl kadar devam eden bu sistemde iktisadi düşünce anlamında bir bütünlük oluşmasa da merkezi devletlerin iktisat politikaları ve politik iktisat sistemi kavramları

oluşturmuştur. Dönemin yazarları olarak Jean Bodin (1530-1596), Sir Josiah Child (1630-1699), Sir William Petty (1623-1687), Thomas Mun (1571-1641) ve John Locke (1623-1704) vd. gösterilmektedir (Turanlı, 1988: 27).

“Fransızlar çok hızlı büyüyor” ifadesiyle büyüme ve kalkınmanın temelini oluşturan İngiliz istatistikçi ve iktisatçı William Petty olmuştur. Aynı zamanda Petty, milli gelirin hesaplanmasında kullanılan gelir ve harcama yöntemini oluşturan iktisatçıdır (Yendi, 2011: 357). Ayrıca Petty zenginliğin babası olarak tanımladığı emeğin, milli gelirin artmasında önemli bir rol olduğunu öne sürmüştür. Petty 1697 yılındaki çalışmasında İngiltere’nin gücünü, ulusal para değer kaybını, savaşlarda kaybedilen insanların parasal değerini ve göçün ekonomik etkilerini göstermek amacıyla beşeri sermayeyi unsur olarak kullanmıştır. Fakat cinsiyet, yaş ve ekonomik statü gibi parametreleri çalışmasında kullanmadığı için beşeri sermaye ile ilgili olan bölüm yetersiz kalmıştır (Tunç, 1997: 26).

Klasik iktisadın ortaya çıktığı 1776 yılından beri beşeri sermaye kavramı iktisat literatüründe bulunmaktadır (Kwon, 2009: 3). Bu dönemde beşeri sermaye kavramının gelişmesine katkı sağlayan iktisatçılar Adam Smith (1723-1790), Thomas Malthus (1776-1834) ve David Ricardo (1772-1823)’dır (Taban, 2008: 23).

Fransa’da Fizyokratlarla birlikte oluşan iktisat, Adam Smith ile bilim olarak ele alınmıştır. Adam Smith iktisadı “servet bilimi” olarak tanımlamıştır ve bir ülkenin zenginliğini işgücüne bağlamıştır (Çelik, 2019: 19). Smith’e göre bir ülkenin zenginliği o ülkenin sermaye stokuna bakılarak ölçülür ve ekonomik büyümenin en önemli etkeni de sermaye stokudur. Smith beşeri sermayeyi elde edilmiş yetenek olarak gördüğünü ve bu yetenekleri elde etmek için o ülkenin sabit sermayesinden yararlanıldığını savunmaktadır. Smith bireylerin bu becerileri maliyeti olan ve bunlardan kar elde edilmesi gereken makine olduğunu düşünmüştür (Teixeira, 2002: 3).

Smith beşeri sermayenin bireyin zihnini kullanarak elde ettiği emek sonucunda ortaya çıktığı ve ülkelerin zenginlik kaynaklarının biri olan işbölümünün sebebi olduğunu söylemektedir. İşbölümü, bireylerin yaratıcılığını, yeteneklerini ve ustalıklarını etkilemesine yardımcı olarak işgücü verimliliğini arttırmaktadır (Tuba Türker, 2000: 46). İnsanların becerilerini sermaye olarak kabul eden Smith, bu sermayenin ve işgücünün üretim için etkili bir faktör olduğunu ortaya koymuştur. İnsanların edindikleri beceri ve bilgi uzmanlaşmayı olumlu etkilemektedir (Karaman, 2007: 23).

Say’ın beşeri sermayeye bakış açısı Smith ile aynı düşüncededir. Yani becerilerin ve yeteneklerin elde edilmesi sürecinde belli bir maliyet ödenmesi gerekmektedir ve bu yetenekler ve beceriler işgücü verimliliğini yükseltmektedir. Bu sebeplerden dolayı bireylerin sahip oldukları beceriler ve yetenekler sermaye olarak kabul edilmektedir (Say, 1821/1971: 93).

Klasik İngiliz okulunun kurucularından olan ve liberal düşünceye ayrı bir yön veren David Ricardo (1772-1823), emek verimliliğinin ülkeler ve sektörler arasında farklı olduğunu araştırmalarında belirtmiştir. Ricardo’ya göre herhangi bir malın üretimde kullanılan işgücü miktarı o malın değerini belirlemektedir. Emeğe ödenen ücretlerin farklı olması malın fiyatını etkilememektedir (Ricardo, 1821/2008: 7). Ricardo emeğin homojen olduğunu söyleyerek, çalışmalarını iki tür emek üzerinden gerçekleştirmiştir. Birincisi doğrudan emek yani işgücünü, dolaylı emek yani sermayeden bahsetmiştir. Malın bedeli ise hem doğrudan hem dolaylı emek tarafından belirlenmektedir (Küçükcalay, 2011: 229). Ricardo, teknolojik yeniliklerin endüstrilerde verimin artmasına neden olacağını söylemesine rağmen, bu yenilikleri kullanabilecek emeğin becerisi, niteliği ve eğitimi ile ilgili araştırmalarında bahsetmemiştir (Aksu, 2016: 92).

1960 yıllarda Smith’in görüşünü, Denison, Schultz ve Becker gibi iktisatçılar yeniden değerlendirerek ve bu görüşten yararlanarak beşeri sermaye kuramını geliştirmişlerdir. Denison, 1910-1960 seneleri verilerinden yararlanarak ABD’nin milli gelirindeki artışta her bir üretim faktörünün ayrı ayrı katkısını belirlemek amacıyla üretim fonksiyonu kavramını kullanmıştır. Bu çalışmada milli gelirin artmasına eğitimin, işgücü becerisinin yani nitelikli emeğin ve verimlilik kapasitesinin doğrudan etki ettiği tespit edilmiştir. Üstelik ABD’de gerçekleşen büyüme oranının yaklaşık %23’ünün emeğin eğitim düzeyinde ortaya çıkan artıştan kaynaklandığı hesaplanmıştır (Denison, 1967: 124).

1968 yılında Schultz çalışmasında fiziki ve beşeri sermayenin getiri oranını göz önünde bulundurarak eğitimin ekonomik büyümeye olan katkısını ölçmüştür. Çalışma sonucunda beşeri sermaye yatırımları içinde eğitimin önemli etken olduğunu ve eğitim harcamalarının kişisel gelirin belirlenmesinde önemli unsur olduğunu ortaya koymuştur (Schultz, 1968: 22).

4. EKOLLERE GÖRE BEŞERİ SERMAYE

Beşeri sermaye kavramını ilk olarak klasik iktisatçı Adam Smith tarafından ortaya atılmıştır. İleriki dönemlerde farklı iktisatçılar tarafından yorumlanmıştır.

4.1. Adam Smith

Merkantilistlere göre servet kavramı kıymetli maden stoğu ile açıklanmaktadır. Fizyokratlarda bu kavram sahip oldukları toprak miktarı ile açıklanırken, Adam Smith ile beraber insan emeğinin mahsulü olarak yorumlanmıştır (Ülgüner, 1991: 9)

Adam Smith ünlü eserinde zenginliğin esas kaynağının insan faktörüne dayandığını ortaya koymuştur. İşbölümü ve uzmanlaşma kavramlarını açıklayarak insan faktörü üzerinden oluşan ekonomik zenginliğe vurgu yapmıştır (Sweetland, 1996: 343).

Smith, fiziksel ve beşeri sermaye kavramlarını ayırtırmasa da sonraki dönemlerde birçok iktisatçı bu kavramları ayrı değerlendirmiştir. Değerlendirmeler sonucunda bireylerin kabiliyeti ve yetenekleri sonucunda ortaya koydukları farklılıklar neticesinde insana yapılan yatırımlardan daha yüksek getiri elde edileceğini belirtmişlerdir (Kiker, 1966: 485).

- Smith, doğal kaynak bakımından yetersiz olan Hollanda’nın o dönemde ulaştığı ekonomik ilerlemeyi emek verimliliğinden kaynaklandığını vurgulamıştır. Smith eserinde emek faktörünü aşağıdaki gibi yorumlamıştır (Turanlı, 2000: 67);
- Emeğin verimliliği (emeğin niteliği)
- Emeğin yoğunluğu (emeğin niceliği)

4.2. Heinrich von Thünen

H.V.Thünen iktisatçıların insani kazanımları parasal olarak açıklama konusundaki isteksizliklerini eleştirmiş ve bu konunun ekonomi politikası içerisindeki noksanlardan birisi olduğunu söylemiştir. Aynı zamanda toplumun üst meslekteki kişilerin ekonomi içerisindeki verimliliklerinin hem niteliksel hem de niceliksel eğitimlerinin artan bir fonksiyonu olduğunu açıklamıştır.

Thünen, “Der isolierte Stat” isimli eserinde gösterdiği örneklerde vergi düzenlemelerini beşeri sermaye lehine yapıldığı taktirde, esas amaç olan milli gelir artışını uzun dönemde arttıracaklarını belirtmiştir (Kiker, 1969: 339).

4.3. Alfred Marshall

Alfred Marshall beşeri sermayenin ekonomi için önemli bir unsur olduğunu vurgulamıştır. İnsanoğluna yapılan bütün yatırımların ve hatta dış faktörlerinden meydana gelecek etkilerin de bireyin ekonomi içerisindeki verimliliğini olumlu yönde etkileyeceğini belirtmiştir.

Marshall, beşeri sermaye kavramının ekonomi açısından hayal dışı bir yapısı olduğunu söylemiş ve bu sebeple fizyokratlardan buyana yoğun bir biçimde üzerinde durulan çalışmalar arkaya planda kalmaya başlamıştır (Kiker, 1966: 481).

O dönemde Alfred Marshall kendi görüşlerini matematiksel olarak ortaya koyamamış olsa da, beşeri sermayenin ekonominin ana çekirdeği olduğunu savunmuştur (Schultz, 1961: 3).

Alfred Marshall’ın oluşturduğu analiz tekniği, beşeri sermayeyi daha sınırlı bir alanda değerlendirmektedir. Çünkü Marshall beşeri sermayeyi sanatsal ve felsefik kapsamda sabit getiri sağlayıcı bir etken olarak yorumlamıştır. Fakat endüstrileşmenin gelişmesiyle beraber Alfred Marshall’ın sınırlarını daralttığı beşeri sermaye kavramının, gerçekte bilgi üreten bir sektör olarak ekonominin önemli belirleyicilerinden biri olduğu ortaya çıkmıştır (Schultz, 1974: 6).

4.4. Robert Malthus, John Stuart Mill

Robert Malthus, beşeri sermayeyi Adam Smith kadar önemsemiştir ve çalışmalarında ekonomi için yaratacağı getirilerden bahsetmiştir. Fakat eğitime yapılacak yatırımların nüfus üzerinde yaratacağı etkilerden dolayı beşeri

sermaye kavramını farklı yorumlamıştır. Nüfusun geometrik, gıda maddelerinin ise aritmetik olarak artış göstermesiyle eğitim yolu ile nüfusu kontrol altında tutulabileceğini öne sürmüştür. Malthus'a göre kontrolü sağlanan nüfus nedeniyle, emek gücünde azalış meydana gelirken milli gelirde daha yüksek seviyede bir artış sağlanacaktır (Bowman, 1966: 113).

John Stuart Mill, Adam Smith'in görüşlerini benimsemiştir fakat Adam Smith'in ortaya koyduğu sabit sermaye kavramını benimsememiştir. İnsani becerilerin somutlaştırılması ile sabit fayda elde edilebileceğini ve sadece fizikçiler, profesörler, bürokratlar değil, rahipler, ahlak bilimciler, sanatçıların sağlayacağı tüm gelişimin de bu sabit fayda içerisinde yer alacağını belirtmiştir (Sweetland, 1996: 343).

Bu durumda John Stuart Mill'in sosyal sermaye kavramına daha yakın bir yaklaşımı savunduğunu söylemek mümkündür. John Stuart Mill, insanoğlunu bir sermaye olarak gruplandırılmayacağını, zenginliğin insanlığın hizmetinde olan bir kavram olduğunu öne sürmüştür.

4.5. Simon Kuznets

Simon Kuznets, Adam Smith ile başlayıp beşeri sermaye teorisinin kurulmasına kadar geçen süreçte beşeri sermaye kavramını bir iktisadi dinamik olarak benimseyen ilk iktisatçı olmuştur. Ayrıca beşeri sermaye kavramını tüm çalışmalarının merkezinde tutarak Nobel ödülüne sahip olan ilk iktisatçı olmuştur. Kuznets, Nobel ödülünü 1971 yılında yapmış olduğu çalışması ile almış olsa da beşeri sermayenin önemli olduğunu vurgulayan çalışmalarına 1940'lı yıllarda başlamıştır.

Simon Kuznets, sürdürülebilir ekonomik büyüme kavramını açıklamış ve kısa dönem dinamiklerine çözüm bulunmadan uzun dönem ekonomik büyümenin yorumlanması için güç olduğunu belirtmiştir. Kuznets, ekonomik büyümenin ölçülmesi ile ilgili çalışmasında söz konusu zorlukları aşağıdaki gibi özetlemiştir (Kuznets, 1947: 10-18);

- Bir ekonominin doğal kaynaklarında ortaya çıkan değişimlerin ekonomiye etkileri tam olarak hesaplanamaz.
- Konumuz ile ilgili olan stok büyüklükler, özellikle gelişmiş ekonomilerde stok halinde bulunan insan, teknoloji ve bilgi unsurları tam anlamıyla parasal olarak ifade edilemez. Oysa büyüme sürecinde en büyük etki bu faktörler aracılığıyla sağlanır.
- Birbirleri ile çapraz bağları kuvvetli olan değişkenlerin dar ya da geniş bir çerçevede toplulaştırılması açıklayıcı olmaktadır. Örneğin, doğal kaynaklarda ortaya çıkan bir değişim nüfus hareketi sağlarken üretken sermayede değişiklik yaratacaktır. Fakat bu noktada parasal bir ifade oluşturmak imkansızdır.

4.6. Theodore Schultz

Theodore Schultz, beşeri sermaye kurucularından biri olarak görülmektedir. Theodore Schultz 1961 yılında yaptığı çalışmasında nesnel sermayenin getiri oranı ile beşeri sermayenin getiri oranlarını baz alarak eğitimin ekonomik büyüme üzerindeki rolünü araştırmıştır. Shultz beşeri sermayenin 1960 yılına kadar iktisadi anlamda analizlere dahil edilmemesinin sebeplerinden birisinin beşeri sermayenin marjinal verimliliğe tabi tutulamayacak, doğuştan gelen beceri olarak görülmesine bağlamıştır (Schultz, 1974: 6).

Toplam sermayenin gelire oranının aynı oranda kalabilmesinin sebebi beşeri sermayenin toplam sermaye içine dahil edilmemesine bağlamıştır. Gelirlerin artmasıyla beraber fiziksel sermaye stoklarının düşmesine rağmen beşeri sermaye stokunun arttığını belirtmiştir. Bireyin iktisadi beceriye ulaşabilmesi için eğitim, sağlık, göç ve mesleki eğitim gibi alanlarda yatırım yapması gerektiğini savunmuştur. Ayrıca ücret ve maaşların ise söz konusu beşeri sermaye yatırımlarına karşı duyarlılıklarının diğer her şeyden baskın olduğunu vurgulamıştır. Son olarak, beşeri sermaye yatırım artışlarının gelir dağılımı adaletsizliğinin ortadan kaldırılması anlamında en önemli unsur olduğunu söylemiştir (Schultz, 1962: 1).

4.7. Edward Denison

Beşeri sermaye teorisinin ilk savunucularından biri olan Edward Denison, beşeri sermayenin önemini vurgulamış, ekonomik büyüme ve verimlilik kavramlarının benzerliklerini çözümlemeye çalışmıştır. Denison, ağırlıklı olarak Schultz'un eğitim üzerinde yaptığı araştırmaları genişletmiş ve beşeri sermaye kavramının niteliklerini daha geniş bir çerçevede değerlendirmiştir.

Edward Denison, çeşitli ülkelerin ekonomik büyüme sürecini ele alan birden çok çalışma yapmıştır. Çalışmalarında emek faktörünün niteliğinin önemi ön plana çıkmıştır. Her bir ülkenin ekonomik büyümesi için fiziksel sermayenin yanı sıra beşeri sermayenin de zaruri olduğunu ortaya koymuştur (Denison, 1962: 109).

Denison ile beraber beşeri sermaye teorisinin ampirik çalışmaları oldukça artmıştır. 1960 sonrası meydana gelecek gelişmelerin eğitim, sağlık, teknoloji, bilginin üretilmesi gibi etkenlerin etrafında şekilleneceğini eserlerinde belirtmiştir. Bu nokta da Danison, tarım ve sanayi olarak kabul ettiği yapı içerisinde tarımsal nüfusun sanayi sektörüne geçiş yapması ve emeğin verimliliğinin bu kanal ile artırılmasının önemini vurgulamıştır (Denison, 1967: 326).

5. BEŞERİ SERMAYEYİ ETKİLEYEN UNSURLAR

Beşeri sermaye doğuştan gelen yetenektir ve sonradan edinilen bilgi birikimi ile arttırılmaktadır. Söz konusu bilgi biriminin arttırılmasında beşeri sermayenin unsurları yardımcı olmaktadır. Bu unsurlar eğitim, sağlık, beyin göçü ve diğerleridir. Beşeri sermayeyi etkileyen unsurlar bu başlık altında ayrıntılı bir şekilde açıklanmaktadır.

5.1. Beşeri Sermaye ve Eğitim

Günümüz toplumlarında nitelikli insan gücü, yüksek rekabetin göstergesidir. Nitelikli insan gücünün oluşturulmasında rol oynayan en önemli unsur eğitimidir. Bu sebeple beşeri sermaye konusunu içeren birçok çalışmada beşeri sermaye stokunun en gözde göstergesi eğitim kabul edilmektedir. Eğitim, ülkeleri birbirinden ayıran en önemli unsurdur ve bunun yanı sıra bu unsura yapılan yatırımlar ülke ekonomilerinin büyümesine büyük katkı yapan faktördür.

Adam Smith'in Milletlerin Zenginliği adlı kitabında, bireylerin uzmanlaşma oranındaki artış ile birlikte sermaye stokunda genişleme ve verimlilik artışı sağlanacağını ön görmüştür. Bu artış ve genişleme milli gelir düzeyinin artmasını ve dolayısıyla ülkenin refah seviyesinin artmasını sağlamaktadır (Taban, 2008: 26). Smith nitelsiz işgücü ve nitelikli işgücü arasındaki ayrımı bireylerin kendilerine yapmış oldukları yatırımlara göre açıklamıştır (Çalışkan, 2010: 11).

II. Dünya Savaşı sonrasında sırasıyla gelişmiş, gelişmekte olan ve az gelişmiş ülkeler ülke gelişmesinde eğitimin ne kadar önemli olduğunu anlamışlar ve kalkınma planlarında eğitim unsuruna yer vermişlerdir. Böylelikle eğitimin öneminin, yaygınlaştırılmasının ve kalitesini artırılmasının ekonomik büyüme açısından değeri ülkeler tarafından anlaşılmıştır (Karagül, 2002: 32).

Mikro iktisadi seviyede eğitimin ekonomik etkileri bireylerin ve firmaların yatırım kararları, fayda maliyet analizlerine dayalı getiri oranı şekliyle irdelenmektedir. Eğitim insanların işgücü becerilerini arttırmakta kullandıkları bir araçtır ve kişisel gelir dağılımındaki farklılıklar direkt eğitim seviyesi farklılıklarından kaynaklanmaktadır. Bunların dışında eğitim, işgücü verimliliğini ve gelir seviyesini arttırmaktadır. Ayrıca eğitim, bireylerin mesleki pozisyonunu yükselterek sosyal getiriden daha çok özel getirilerini arttırmaktadır. Makro iktisadi seviyede eğitimin etkileri ise, ekonomik büyüme ile milli gelir arasındaki ilişkiler bakımından, üretim fonksiyonu yoluyla incelenmektedir. Eğitimli işgücü, diğer üretim faktörlerini ve teknolojik gelişmeye tesir ederek ekonomik büyümeyi etkilemektedir.

Marshall'a göre çıktı düzeyinde ortaya çıkan artışların fiziki sermaye birikimiyle açıklanamayan kısmı insan faktörü ile açıklanmaktadır. Marshall, her durum eninde sonunda azalan verimler kanuna tabii iken sadece insan faktörü artan verimler kanuna tabii olduğunu söylemiştir. Ekonomik büyüme sürecinde insan faktörünün tartışmasız önemi kadar eğitime yapılan yatırımın da önemini vurgulamıştır. Eğitime yatırım yapılmasıyla meydana gelen nitelikli emek birikimi, artan getirilerin kaynağını oluşturmaktadır (Çakmak ve Gümüş, 2005: 90).

Başka bir iktisatçı Mill eğitimi, insanın kendini sürekli geliştirmesi olarak ifade etmektedir. Malthus eğitimin, nüfus artış hızının kontrol altına alınması ve ekonomik büyümenin olumsuz etkilenmemesinde önemli faktör olduğunu belirtmiştir (Kaya Kıracılar, 2005: 85). Bunun yanı sıra Malthus, eğitimsiz nüfus artışının huzursuzluk yaratacağını ve bu durumun ülke ekonomisinin büyümesini engelleyeceğini savunmuştur. Klasik iktisatçılar arasında en çok eğitimle ilgili çalışma yapan Nassau W. Senior ise eğitim ile nüfus artışının üzerinde bir ilişki kurmak için eğitimin zorunlu tutulması gerektiğini açıklamıştır (Doğan ve Bozkurt, 2003: 173).

Schultz 1960 yılında ilk olarak Cobb-Douglas üretim fonksiyonunu kullanarak beşeri sermayenin ekonomik büyüme üzerindeki etkisini araştırmıştır (Varsak ve Bakırtaş, 2009: 50). Nobel ödül sahibi Schultz, ABD'nin 1900-1975 yılları arasındaki büyüme verilerini inceleyerek yaptığı araştırmasında eğitimin ekonomik büyümeye

katkısını ölçmeye çalışmıştır ve elde ettiği sonuca göre eğitimin ulusal gelirden artış sağlayarak ekonomik büyümeye katkı sağladığını ortaya koymuştur (Tunç, 1997: 163).

1964 senesinde Becker ABD’de gelir farklılıklarının nedenini tahmin etmek için beşeri sermaye ve getiri oranını ele alarak bir model çalışması yapmıştır. Becker çalışmasında beşeri sermayenin bireylerin elde ettikleri kazançlarının ömür boyunca artmasını sağlayan bir sermaye çeşidi olduğunu ve sağlık harcamaları, bilgisayar kursları, okul gibi yatırımları içerdiğini ifade etmiştir. Becker’e göre her bir insan kendisine yaptığı yatırımları ileride fazlasıyla geri alacaktır (1975:16). Becker 1939-1958 seneleri verilerini kullanarak ABD’de kolej ve yüksekokul eğitimi alan bireylerinin getiri oranlarını tahmin etmiştir ve çalışma sonucunda yüksekokul mezunlarının gelir oranları kolej mezunlarının gelir oranına nazaran daha fazla olduğu sonucunu elde etmiştir. Bu çalışma sonucuna göre yüksekokullara yapılacak yatırımların kolejlere yapılacak yatırımlardan daha kazançlı olduğunu ortaya koymuştur (Tunç, 1997: 139).

Lucas’ın 1988 yılında ve Rebelo’nun 1991 yılında ortaya koydukları iktisadi modellerde fiziksel sermayenin yanı sıra beşeri sermayeyi de üretim faktörü olarak yorumlamışlardır. İlave olarak Lucas, ülke yönetiminin teknolojik alt yapıların ve eğitimin gelişmesi için yapılan yatırımların beşeri sermayeyi olumlu yönde etkilediği ve bunun da ekonomik büyümeyi fiziki sermayeye yapılan yatırımdan daha büyük ölçüde etkileyeceğini savunmuştur (Kar ve Ağır, 2003: 58).

Barro, beşeri sermaye ve ekonomik büyüme arasındaki ilişkide sağlık faktörünün önemini vurgulayarak yaptığı çalışmada iki unsur arasındaki ilişkiyi ölçmek için esas olarak eğitim faktörünü kullanmıştır. 2000 yılında yaptığı bu çalışmada bağımlı değişken olarak kişi başına GSYH’yi incelemiştir. Çalışmada OECD ülkelerinin 1995-2000 yılları arasındaki eğitim süresi verilerini kullanmıştır. Eğitim süresini veri olarak kullandığı bu araştırmasında yaş, cinsiyet ve eğitim seviyelerini dikkate alarak bireyleri gruplandırmıştır. Uygulamalı çalışma sonucunda genç nüfus ile kişi başı GSYH ile olumlu yönde bir ilişki olduğu sonucuna ulaşmıştır (Kaya Kıracılar, 2005: 85).

Eğitimin ekonomik büyüme sürecinde önemli bir yatırım olarak görülmesi 1950’li senelerinde ABD’de ortaya çıkmıştır. Abramovitz ve Denison yaptıkları araştırma da sanayi ülkelerin ekonomik büyümesinin yalnızca o ülkenin sahip olduğu fiziki sermaye ve işgücüne bağlı olmadığını, bu iki unsur kadar beşeri sermayenin de üretim sürecinde önemli etken olduğunu vurgulamışlardır. Eğitim, temel olarak ekonomik bir yatırım olarak görülmektedir. Eğitimi ve işgücünü ülkenin ihtiyaçlarına göre yönlendirilerek, üretimde verimliliği arttırmak, ekonominin yapısal gelişimini hızlandırmak ve daha iyi istihdam imkanlarını sağlamak mümkündür. Bu anlamda eğitimin ekonomik büyüme oranını arttırmasında katkıda bulunduğundan dolayı literatürde beşeri sermaye olarak ifade edilmektedir.

Eğitim ile beşeri sermaye arasındaki ilişkiden söz ederken dikkat edilmesi gereken konu da nasıl bir eğitimden bahsedildiğidir. Bu anlamda az gelişmiş ülkelerde, eğitimin özgün olmaması, ortalama eğitim süresinin diğer ülkeler ile karşılaştırıldığında daha az olması eğitim sisteminin günümüz şartlarına uygun olmaması eğitim ve beşeri sermaye arasındaki bağlantıları zayıflatmaktadır (Karagül, 2002: 34).

5.2. Beşeri Sermaye ve Sağlık

Bir ülkenin ekonomik büyümesi için eğitime yapılan yatırımlar ne kadar önemliyse sağlık sektörüne yapılan yatırımlar da en az onun kadar önem arz etmektedir. Çünkü sağlıklı bireyler daha iyi eğitilebilecek ve bu bireylerin eğitim yatırımlarından daha uzun yararlanma olanakları olacaktır. Bu sebeple sağlık ile eğitimin birbirini tamamladığı, ekonomik büyüme açısından fiziki sermaye ve eğitime yapılan yatırımların benzerleri sağlık sektörüne de yapılması gerektiği gerçeği ortaya çıkmaktadır (Kar ve Taban, 2004: 138).

Sağlık harcamaları, bebek ölüm oranları, ortalama yaş sınırı gibi göstergeler ülkelerin ekonomik kalkınması için önemlidir ve ülkelerin gelişmesinde olumlu katkılar sağlamaktadır. Ekonomik büyümeyi ve kalkınmayı amaçlayan bir ülkenin önceliği sağlıklı bir nüfustur (Karagül, 2002: 65).

Bir ülkeye kalkınmış ülke denilebilmesi için o ülkedeki toplumun sağlık seviyesinin iyileştirilmesi gerekmektedir. Çünkü sağlık hizmetleri hem ekonomik büyüme üzerinde hem de diğer göstergeler üzerinde etkilidir. Bu etkilerden en dikkat çekini ise sağlık hizmetlerine önem veren ülkelerde sermaye stokunun artmasıdır (Mazgit, 1998: 2).

Mushkin çalışmasında, sağlık unsurunun beşeri sermayenin oluşumunda önemli rol oynadığını ifade etmiştir. Bu ifade birçok iktisatçı tarafından desteklenerek büyüme literatürüne katkı sağlanmıştır. Sağlık sektörüne yapılan harcamalar toplumun çalışma gücünü güçlendirerek, oluşabilecek hastalıkları önlemektedir. Böylelikle sonraki dönemlerde sağlık harcamalarını azaltarak tasarruf sağlanmaktadır (Mushkin, 1962: 130).

Grossman'ın yaptığı araştırmasında sağlık sermayesinin ayrı bir sermaye olduğunu ilk defa ortaya koymuştur. Çalışmaya göre beşeri sermaye ile sağlık sermayesinin özellikleri birbirinden farklıdır. Söz konusu farklılıklardan en önemlisi, beşeri sermayenin bireylerin yalnızca piyasalardaki üretkenliğine etki ederken, sağlık sermayesinin bireyin para ve mal edinme zamanının miktarını da etkilemektedir (Grossman, 1991: 4).

Sağlık harcamalarının ekonomik büyüme üzerindeki etkilerini aşağıdaki maddelerle açıklamak mümkündür (Tuba Türker, 2000: 34).

- Hastalık sebebiyle ortaya çıkacak işgücü kaybının önlenmesi ve üretimin devam ettirilmesi,
- Sağlık alanına yapılan yatırımlar yardımıyla bireylerin sağlıklı bir şekilde eğitimlerine devam etmelerinin sağlanması,
- Hastalık yüzünden sağlık harcamalarına ayrılacak kaynakların başka alanlara yönlendirilmesi,
- Hastalık sebebiyle kullanılamayan kaynakların işletilmesi sağlanmaktadır.

Sağlık harcamalarına yapılan yatırımlardaki artış toplumun yaşam süresini arttırarak ekonomik büyümeyi olumlu yönde etkilemektedir (Taban, 2006: 36). Sağlık sektörünün iyileşmesiyle beşeri sermayenin temel kaynaklarından biri olan eğitimin yaygınlaşması sağlanmaktadır. Çünkü doğumdaki artışla yaşam beklentisi oranı eğitime olan talebi arttırmaktadır. Böylelikle eğitime yapılan yatırımların getiri oranında da artış meydana gelmektedir. Okullaşma oranının artmasıyla işgücündeki verimlilik oranı artacaktır ve kişi başı milli gelir seviyesinin yükselmesiyle ülkelerin refah düzeyi artacaktır (Dağdemir, 2009: 88).

5.3. Beşeri Sermaye ve Beyin Göçü

Beyin göçü, az gelişmiş ülkelerde hayatını devam ettiren eğitim düzeyi yüksek nitelikli bireylerin daha yüksek gelir elde edebilmek için ve daha iyi yaşam kalitesine sahip olabilmek için gelişmiş ülkelere yaptıkları göç olarak ifade edilmektedir (Kaya Kırarlar, 2005: 85).

Beyin göçü yaşam kalitesi daha yüksek olan ABD, Avustralya, Kanada, Fransa, İngiltere gibi ülkelere gerçekleşmektedir. Beyin göçü sebebiyle gelişmiş ülkeler ile az gelişmiş ülkeler arasında gelişmişlik farkı ortaya çıkmaktadır (Kaynak, 2007: 310).

Beyin göçünün nedenleri aşağıdaki gibidir (Akça, 2014: 28).

- Ekonomik nedenler (ekonominin istikrarsız olması, ücretlerin düşük olması vb),
- Politik nedenler (farklı etnik kökenlerin varlığı, siyasal istikrarın olmaması vb),
- Bilim ve teknoloji politikalarında yapılan yanlışlıklar (Ar-Ge'ye yeterli önemin gösterilmemesi, buluşların desteklenmemesi),
- Eğitim sistemindeki yanlışlıklar (eğitimde fırsat eşitsizliği, kişi başına yapılan harcamaların yetersiz kalması),
- İşsizlik (üniversite mezunlarının iş bulamaması ve kendi meslekleri dışında başka mesleklerde çalışmak zorunda kalmaları vb),

Kamuoyuna oluşturulan medya aracı kurumların ve fuarların özendirilmesi (AB Fonları-Erasmus, medya aracılığıyla öğrencileri yurt dışına özendirilmesi vb).

Eğitimli bireylerin az gelişmiş ülkelerden göç etmesi hem toplumsal bakımdan hem de ülke ekonomisini olumsuz yönde etkilemektedir. Az gelişmiş ülkeler gelişmişlik düzeyine ulaşabilmek için beyin göçünü en az seviyeye indirmeleri gerekmektedir. Diğer yandan az gelişmiş ülkelerden gelişmiş ülkelere gerçekleşen beyin göçünün olumlu yanları da vardır. Eğer gelişmiş ülkeye göç eden beyin gücü, yaşadığı ülkede kazandığı gelirin bir miktarını kendi ülkesine yani az gelişmiş ülkeye götürüyorsa, gelişmiş ülkenin iş ve teknolojik imkanlarını kendi ülkesine taşıyorsa, kendi ülkesi ile yaşadığı ülkenin ticari bağlarının kuvvetlenmesine destek oluyorsa ve belirli bir zaman sonra ülkesine geri dönerek edindiği tüm bilgi ve tecrübelerini kendi ülkesinin büyümesi için kullanıyorsa bu durumların sonucunda beyin gücünün olumlu etkilerinden bahsedilebilmektedir (Kaynak, 2007: 316).

Beyin göçü sadece az gelişmiş ülkelerden gelişmiş ülkelere değil aynı zamanda gelişmiş ülkeler arasında da gerçekleşebilmektedir. Gelişmiş ülkeler arasındaki gerçekleşen beyin göçünün en temel sebebi düşük ücret ve vergi politikalarıdır (Akça, 2014: 30). Böylelikle son elli yıldır beşeri sermayenin önemi artmıştır. İktisat literatüründe ilk kez Neo-klasik modelde üretim fonksiyonunda "artık" olarak karşımıza çıkan beşeri sermaye kavramı günümüz ekonomisine içsel büyüme teorileri aracılığıyla ulaşmıştır (Oluç, 2015: 8).

5.4. Beşeri Sermayeyi Etkileyen Diğer Unsurlar

Sağlık ve eğitimin beşeri sermayeyi etkileyen en temel faktörler olduğu ve bu faktörlerin üretimi etkileyerek ekonomik büyümeyi olumlu yönde etkilediğini birçok çalışma ortaya koymuştur. Fakat beşeri sermayenin daha verimli kullanılması için bazı ek tedbirlerin alınması gerekmektedir. Bunlar beşeri sermayenin motivasyonu ve sosyal sermaye, ücretler, fiziki sermaye ile beşeri sermayenin arasındaki dengenin kurulmasıdır.

Beşeri sermayenin verimli olmasındaki en önemli etkenlerden biri sosyal sermayedir. Kamu kurumları, aile, sosyal gruplar, sivil toplum örgütleri, firmalar ve etnik yapı toplumun sosyal sermaye gelişmesine katkı sağlayan birimlerdir. Bahsedilen sosyal gruplar ve kurumlar arası iletişimin güvenli ve yeterli olması, söz konusu toplumun her anlamda sağlıklı olduğunu kanıtıdır. Bunun yanı sıra toplumda yeteri kadar sosyal sermaye olduğunun işaretidir. Sonuç olarak yeterli düzeyde sosyal sermayeye sahip olan bireyin iş ortamında daha özverili çalıştığını araştırmalar ortaya koymuştur.

Beşeri sermaye ile fiziki sermayenin arasındaki dengenin sağlanması, beşeri sermayenin daha verimli kullanılmasıyla üretime daha fazla katkıda bulunmaktadır. Fiziki ve beşeri sermaye arasındaki tamamlayıcılık ilişkisinde nitelik ve nicelik açısından uzlaşmanın olması önemli şartlardan biridir. Aynı miktar para ile elde edilen beşeri ve fiziki sermayeden aynı miktarda ürün üretilebiliyorsa sözü edilen denge nicelik olarak sağlanmıştır. Diğer taraftan elde edilen beşeri ve fiziki sermaye yatırımları aynı alana yönlendiriliyorsa söz konusu iki unsur arasındaki denge nitelik açısından gerçekleşmiştir. Beşeri sermayeyi etkileyen unsurlardan bir diğeri de ücret seviyesidir. Beşeri sermayenin özverili çalışmasındaki kilit nokta ücret olarak görülmektedir. Beşeri sermayeye sahip olan bir kişi iş yerinden hak ettiği ücreti alamıyorsa beşeri sermayesini kullanmayarak işletmeyi verim kaybına uğratabilmektedir. Bir ülkede kaynakların optimum kullanılması ve üretimin arttırılması için rasyonel bir ücret politikası uygulanmalıdır.

Beşeri sermayeye sahip olan bireylerin üretime daha fazla katkı sağlaması için bu bireylerin iş konusunda motive edilmesi önemlidir. Bu bireylerin çalışmasıyla elde ettikleri maddiyatın ötesinde ülkesine ve çevresine önemli yararlar sağladığı düşüncesini kabul ettirilerek, bireylerin hayatlarına ve işlerine olan düşüncelerini değiştirmek mümkündür. Böylece bireylerin mutluluğu artarak verimlilikleri olumlu etkilenecektir (Karagül, 2002: 86-98).

6. SONUÇ

Merkantalist döneminden günümüze kadar gelen beşeri sermaye, daha iyi eğitilmiş insan kaynağı olarak ifade edilmektedir. Ekonomik büyümenin ve kalkınmanın en önemli kaynaklarından biri de iyi eğitilmiş insan kaynağı olan beşeri sermayedir. Beşeri sermaye ekonomik büyümenin sosyal alt yapısına yapılan yatırım olarak da tanımlanmaktadır. Ülkelerin gelişmişlik düzeylerini belirleyen en önemli unsurlardan birisi beşeri sermayeye yapılan yatırımlardır.

Beşeri sermayenin gelişimi için yapılan yatırımlar ülkelerin üretim hacmini ve gelir düzeyini olumlu yönde etkilemektedir. Ülkelerin kalkınmasının temel amacı sadece ekonomide iyileşme yaratmak değildir aynı zamanda ekonomide iyiye gidişi devam ettirecek donanımlı insan gücünün oluşmasını sağlamaktır.

Merkantalistler bir ülkenin zenginliğini, o ülkenin sahip olduğu servet stoku ile açıklamaktadırlar. Fizyokratlar sahip oldukları toprak miktarı ile açıklarken, klasiklerin kurucusu Adam Smith servet kavramını insan emeğinin ürünü olarak ifade etmiştir. Böylece iktisat literatürüne giren beşeri sermaye kavramının tarihten bugüne her dönemde ekonominin esas kaynaklarından biri olduğu iktisatçılar tarafından ortaya konulmuştur.

Yapılan araştırmalar ve analiz sonuçlarına göre bireylerin gelişimine, eğitime önem veren ülkelerin ekonomilerinin çok daha iyi yerlerde olduğu görülmektedir.

Dönüşümcü Liderlik Konulu Makaleler Üzerine Bibliyometrik Bir Analiz

Dr. Tolga TÜRKÖZ¹

¹İstanbul Aydın Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme (İng.) Bölümü, tolgaturkoz@aydin.edu.tr,
ORCID: 0000-0002-0805-0219

Özet: Bu araştırmanın amacı, 1987-2022 yılları arasında yönetim alanında yapılan dönüşümcü liderlik çalışmalarının bibliyometrik bir analizini yapmaktır. Analizde kullanılan akademik yayınlar Web of Science (WoS) veri tabanı üzerinden seçilmiştir. Çalışmada yer alan makalelerin elde edilmesinde kullanılan parametrelerde en çok üreten ve atıf alan yazar, en çok yayın yapan ve atıf alan ülke ve dergilerin dağılımı, yayın miktarının yıllara göre değişimi yer almaktadır. Dönüşümcü liderliğin son 35 yıldaki yönetim alanındaki gelişimine ışık tutan toplam olarak 582 makale analize dâhil edilmiştir. Analizlerden elde edilen sonuçlara göre çalışmaların büyük çoğunluğunu çok yazarlı makaleler oluşturmaktadır. Toplam yayın sayısında son beş yılda yapılanların oranı %34,3'dür. Buna göre alana olan ilginin artışı yavaşlamaya başlamıştır. Alanda söz konusu olan başlıca ülkelerin sırasıyla ABD, Çin, Almanya, Avustralya ve Birleşik Krallık olduğu anlaşılmıştır. Alanda en fazla yayın yapan ve en fazla atıf yapılan araştırmacı Bruce J. Avolio'dur. Bu alanda en fazla yayının yer aldığı dergi "Leadership & Organization Development Journal" olmuştur. En fazla atıf alan derginin ise "Leadership Quarterly" olduğu görülmüştür. En fazla yayın yapan yazarların ülkeleri ise "ABD, Çin, Almanya, Avustralya ve Hollanda" olarak tespit edilmiştir. Araştırma neticesinde dönüşümcü liderliğe yönetim yazınındaki akademik ilginin 2020 yılına kadar giderek arttığı, 2021 ve 2022 yıllarında ise azalma olduğu görülmüştür. Bu bildiri, dönüşümcü liderlik alanındaki son 35 yıla ilişkin sunmuş olduğu bulgularla, kavramı çalışmak isteyen araştırmacılara bu alanda önde gelen hangi yazar, makale ve dergilerin incelenmesi gerektiğine ilişkin bir kılavuz olma görevi üstlenmektedir.

Anahtar Kelimeler: Dönüşümcü Liderlik, Dönüştürücü Liderlik, Bibliyometrik Analiz, Bibliyoshiny, R Programlama

A Bibliometric Analysis of Articles on Transformational Leadership

Abstract: The aim of this research is to make a bibliometric analysis of transformational leadership studies in the field of management between 1987-2022. Academic publications used in the analysis were selected over the Web of Science (WoS) database. The parameters used in obtaining the articles included in the study include the most productive and cited author, the distribution of the most published and cited countries and journals, and the change in the amount of publications over the years. A total of 582 articles that shed light on the development of transformational leadership in the field of management in the last 35 years were included in the analysis. According to the results obtained from the analyzes, the majority of the studies consist of multi-authored articles. The ratio of those made in the last five years in the total number of publications is 34.3%. Accordingly, the rate of increase in the interest in the field has started to slow down. It has been understood that the main countries in the field are USA, China, Germany, Australia and UK, respectively. The most published and cited researcher in the field is Bruce J. Avolio. The journal with the highest number of publications in this field was the "Leadership & Organization Development Journal". It was seen that the most cited journal was "Leadership Quarterly". The countries with the highest number of publications were determined as "USA, China, Germany, Australia and the Netherlands". As a result of the research, it was seen that the academic interest in the management literature on transformational leadership gradually increased until 2020, and decreased in 2021 and 2022. This article is a guide for researchers who want to explore the last 35 years in the field of transformational leadership and the concept of which leading authors, articles and journals should be reviewed.

Key Words: Transformational Leadership, Leadership, Bibliometric Analysis, Biblioshiny, R Programming

1. GİRİŞ

Liderlik teorileri arasında son yıllarda en sık çalışılan konu hiç şüphesiz ki dönüşümcü liderliktir (Barling, 2014: 4; Robertson ve Barling, 2017: 23). Dönüşümcü liderliğin sıklıkla araştırılmasının nedenlerinden birisi, bu liderlerin yenilik ve değişim yaratma konusunda özel bir yetenekle benzerlerinden kolaylıkla ayırt edilebilen özellikler taşımalarıdır (Samson, Donnet ve Daft, 2021: 491). Değişime önderlik etmeye odaklanan dönüşümcü liderler, yaşanan değişime takipçileri de dâhil ederek hem takipçilerinde hem de organizasyonlarında önemli bir değişim yaratmakta ve işletmeleri rekabetçi çevrede başarılı kılmaktadırlar (Harms ve Crede, 2010). Bu nedenle, dönüşümcü liderlik kavramı değişime adapte olabilme arzusunun en yüksek olduğu bilgi ve teknoloji çağındaki günümüz işletmeleri için hayati önem taşımaktadır (Koh vd., 2019).

Dönüşümcü liderliğin alan yazında çok ilgi görmesinin bir diğer gerekçesi ise dönüşümcü liderlik becerilerinin yerleşik kişilik özellikleri olmaması nedeniyle öğrenilebilir olmalarıdır (Samson vd., 2021: 492). Eğer ilgili bireyin kişilik özellikleri dönüşümcü liderlik ile uyumluysa bu durumda becerinin öğrenilmesi ve gelişimi daha da kolay olabilmektedir. Örneğin uyumlu olmak, dışa dönüklük, duygusal denge ve empati birer kişilik özelliğidir ve

dönüşümcü liderlik becerilerinin gelişimi için oldukça gereklilerdir (Rubin, Munz ve Boomer, 2005). Dönüşümcü liderlik, örneğin çalışanın işle bütünleşmesi (Juyumaya ve Torres, 2023: 35) ve yaratıcı çözümler bulabilme (Xanthopoulou vd., 2009) gibi birçok çalışan tutum ve davranışıyla da ilişki içindedir. Alandaki araştırmalar dönüşümcü liderliğin takipçilerin gelişiminde ve performanslarında olduğu gibi ekip ve örgüt seviyesindeki performanslarla da pozitif yönde ilişkili olduğunu göstermektedir (Wang vd., 2011: 223). Dönüşümcü liderler, takipçilerine kendi potansiyellerine inanmaları için ilham verebilirler, böylelikle takipçilerini hem kişisel olarak kendisine inandırırılar hem de işletme için daha iyi bir gelecek hayal etmelerine ve yaratmalarına esin kaynağı olmuş olurlar (Harms ve Crede, 2010). Dönüşümcü liderlerin takipçilerini karar alma süreçlerine dahil etmesi, takipçilerin karar verirken eleştirel düşünce ve bakış açısıyla yaklaşımlarını kolaylaştırırken her çalışanın da kendi potansiyelinin farkına varmasına yardımcı olmaktadır (Avolio vd., 2004: 953). Dolayısıyla işletmelerin dönüşümcü liderliğe olan ihtiyaçları artmaktadır ve dönüşümcü faaliyetlerinin işletmelerde kabul görmesi için daha fazla çalışmalarla desteklenmesine ihtiyaç olduğu düşünülmektedir. Liderlik yazınındaki en sık kullanılan kavram olması da bu beklentiye desteklemektedir.

Her ne kadar dönüşümcü liderlik alanında yapılan çalışmaların sayısı oldukça fazla olsa da kavramı bibliyometrik özellikleri bakımından inceleyen ve yapılan çalışmaları bir arada ele alan araştırmanın bulunmadığı görülmüştür. Bu nedenlerle mevcut çalışmada dönüşümcü liderliğin bibliyometrik olarak ulaşılabilecek bilgilerinin incelenmesine odaklanılmıştır. Bu çalışmada sadece yönetim yazınında dönüşümcü liderlik konusuna odaklanılmış, bu alanda son 35 yılda ortaya çıkan gelişmelerin bibliyometrik bir perspektifle incelenmesi hedeflenmiştir. Bu amaca ulaşarak yönetim alanındaki dönüşümcü liderliğin yapısı ve akademik gelişim düzeyi incelenmeye çalışılmıştır. Bu düşüncelerle Web of Science (WoS) veri tabanı kullanılarak 1987-2022 yılları arasında Yönetim alanında yayınlanan 582 adet bilimsel araştırmanın detaylı bilgisine ulaşılmıştır. Dönüşümcü liderlik konusu disiplinlerarası bir kavramdır ve farklı araştırma alanlarında değişik bakış açılarıyla incelenebilen bir konudur. Dolayısıyla bu araştırmanın analizlerinde kullanılmak üzere seçilen veri seti içinde yer alanlar İşletmecilik alanı içinden filtreleme yapılarak Yönetim kategorisinde yer alan belirli sayıdaki çalışmayla sınırlandırılmıştır. Veri setinin bibliyometrik olarak incelenmesiyle dönüşümcü liderlik alanının yıllar içindeki gelişmesi, yayın çeşitleri, bu alandaki söz sahibi olan yazarlar ve dergiler, alandaki lider kuruluşlar ve en sık atıf yapılan araştırmacılar belirlenmiştir. İş yaşamındaki paydaşlara ve işletme yöneticilerine dönüşümcü liderliğin gelişimi ve mevcut durumu hakkında bilgi vermenin, alandaki mevcut bilgi birikimine katkı sunacağı düşünülmektedir.

2. TEORİK ÇERÇEVE

Geçtiğimiz yıllarda akademisyenlerin, liderlik tarzlarına olan ilgisinde gözle görülür bir artış olmuş ve farklı liderlik tarzları hakkında yapılan çalışmalar sıklaşmıştır (Bass ve Riggio, 2006). Liderlik, liderlerin takipçilerini etkilemek için belirli davranışlar sergilediği bir süreç ve özellikler bütünüdür (Jago, 1982). Liderlik tarzları ya da bir başka söyleyişle liderlik stilleri ise, liderlerin takipçilerinin davranışlarını etkilemek ve onlara önderlik etmek amacıyla kullandıkları davranış kümelerini ifade etmektedir (Bass ve Riggio, 2006). Dönüşümcü liderlik, “takipçilerin hedeflerini genişleterek ve yükselterek ve onlara örtülü veya açık değişim anlaşmasında belirtilen beklentilerin ötesinde performans göstermeleri için güven vererek” astları etkilemek olarak tanımlanmaktadır (Dvir, Eden, Avolio ve Shamir, 2002: 735). Dönüşümcü liderlik kavramı, teori oluşturma ve uygulama için geniş çıkarımlara sahiptir ve bu nedenle en çok çalışmaya konu olan en önemli liderlik türlerinden birisidir (Avolio vd., 2022: 443).

Dönüşümcü liderler, hem ürün ve teknolojilerde yeniliği teşvik ederken aynı zamanda işletmenin misyonu, stratejisi, yapısı ve kültüründeki değişikliklere de öncülük ederler, hem de vizyon, paylaşılan değerler ve fikirler gibi gözle görülemeyen somut niteliklere de odaklanırlar, böylelikle sosyal ağ ilişkileri kurarlar ve çeşitli etkinliklere anlam kazandırırılar (Samson vd., 2021: 492). Dönüşümcü liderler, takipçilerini işlerine daha çok kendilerini verme konusunda motive ederek onların örgütsel bağlılık düzeylerini artırabilirler (Walumbwa ve Lawyer, 2003). Bass’a göre (1990: 22) dönüşümcü liderlerin karizma özelliği takipçilerinde vizyon ve misyon duygusu kazandırır, gurur duymalarını sağlar, saygı ve güven hissi kazandırır. Dönüşümcü liderler ilham verici özelliği sayesinde çalışanlarla daha yüksek beklentilerle iletişim kurabilirler, başarıya odaklamak için bazı semboller kullanır ve örgüt için önemli amaçların çok basit yollarla takipçilere ifade edebilmesini sağlar. Bu tür liderlerde entelektüel uyarım yeteneği oldukça güçlüdür. Böylelikle takipçilerinde mevcut zekâyı, akılcılığı ve dikkatli problem çözme yeteneklerini desteklerler. Bireyselleştirilmiş ilgi özellikleri sayesinde her bir takipçiye kişisel ilgi gösterebilirler, her bir çalışana bireysel davranabilir, mentorluk yapabilir ve danışmanlık sunabilirler (Bass, 1990).

Dönüşümcü liderlik teorisi çalışanların uzun vadeli gelişiminin, entelektüel teşvik (uyarım) veya bireyselleştirilmiş ilgi (değerlendirme) yoluyla elde edilebileceğini, ya da idealize edilmiş etkiyi karakterize eden anlık kişisel kazançlardan açık bir şekilde uzaklaşmalarıyla veya çalışanların uzun vadeli bir vizyona dahil edilmesiyle sağlanabileceğini vurgulamaktadır (Barling, 2014: 8). Dönüşümcü liderlik pozitif davranış içeren dört alt bileşenden oluşmaktadır. Bunlar: (1) İdealleştirilmiş etki: Etik davranışa odaklanmak ve yüksek standartlarda rol modeli teşvik etmek; (2) Takipçilere ilham vermek: Çalışanların tutkusunu, iyimserliğini ve motivasyonunu artırıcı ilham kaynağı sunmak; (3) Entelektüel teşvik: Takipçileri farklı düşünmeye zorlamak ve onları düşünmeye teşvik etmek, kendilerini yeni şekillerde ifade etmelerine izin vermek; (4) Bireyselleştirilmiş ilgi: Takipçileri lider olmaya teşvik etmek, bireyin kendi duygusal ihtiyaçlarına özgü ve kişiye özel spesifik ilgi göstermektir (Bass ve Bass, 2009; Barling, 2014: 6-7; Robertson ve Barling, 2017: 23).

Dönüşümcü liderlik, çalışanların yaratıcılığı (Jauss ve Dionne, 2003; Gong vd., 2009: 765); yöneticilerin yaratıcılık performansı (Juyumaya ve Torres, 2023: 34); takipçilerin performansı; davranışları; iyi oluşluk düzeyleri (Nielsen ve Daniels, 2012: 383); temel iş karakteristikleri; içsel motivasyon; örgütsel vatandaşlık davranışı ve iş performansı (Piccolo ve Colquitt, 2006: 328); duygusal zeka (Harms ve Crede, 2010: 12) ile pozitif yönde, stres ve tükenmişlik (Skakon vd., 2010) gibi değişkenlerle ise negatif yönde ilişkili olarak bulunmuştur.

Görüldüğü üzere dönüşümcü liderlik üzerine birçok çalışma yapılmıştır. Bu çalışmaların yıllar içerisindeki gelişimini analiz etmek de alanda çalışmak isteyen araştırmacılara rehber olabilecek bir nitelik taşımaktadır. Örneğin bibliyometrik analiz çalışmaları, araştırılmak istenen alandaki farklı disiplinleri, disiplinlerarası geçişleri, tarihsel gelişimi, yıllara göre baskın kavramları ve temaları, yeni bilgilerdeki gelişmeleri, büyük sayıdaki bir veriyi inceleyebilmeyi, en çok üreten yazarlar ve üniversiteler gibi birçok farklı boyutu “büyük resim” şeklinde okuyucuya sunabilen objektif ve güvenilir bir yöntemdir (Crane, 1972).

Bibliyometrik araştırmalar alandaki çok sayıdaki çalışma hakkında bilgi biriktirmeyi kolaylaştırmakta, önceki çalışmaların sunduğu bilimsel kanıtları toplamayı mümkün kılmakta, literatür incelemesiyle mevcut bilgi tabanını etkili bir şekilde kullanmaya yardımcı olmakta, bir araştırma hattına dair kanıta dayalı farkındalık oluşturmak ve geçmiş araştırma bulgularını sentezlemekte önemli bir rol üstlenmektedir (Rousseau, 2012). Çalışmanın bir sonraki bölümünde dönüşümcü liderlik alanında yapılan çalışmaların bibliyometrik olarak analiz edilmesine ilişkin yürütülen süreçte yer verilmiştir.

3. ARAŞTIRMA METODOLOJİSİ

Bibliyometrik araştırmalar, belirli bir çalışma alanının dinamikleri hakkında araştırmacılara ön fikir vermek için alandaki yayınlar, yazarlar, atıflar ve dergiler arasındaki bilgilerden hareket ederek aralarındaki ağ bağlantılarını, disiplinin doğasını ve yapısını incelemektedir (Kumar ve Kushwaha, 2015). Böylelikle araştırılan disiplinde farklı dönemlerde yürütülen çalışmaların içeriklerini, sonuçlarını ve yeterliliklerini analiz ederek araştırma yapılan alandaki eğilimleri yansıtmaya ve gelecekteki çalışmalara ışık tutabilmektedir. Bibliyometrik analiz, kurumlar ve anahtar kelimeler hakkında da istatistiksel bilgileri değerlendirmekte sıklıkla tercih edilebilmektedir (Xu vd., 2018).

Aria ve Cuccurullo (2017: 960), bibliyometrik analizlerin yapılmasına ilişkin olarak Bibliometrix paketini geliştirmiştir. Bu paket ile klasik bir mantıksal bibliyometrik iş akışını izleyen yeniden yapılandırılmış ve R dilinde geliştirilmiş kapsamlı bir araç önerilmektedir. R yazılımının çekirdek takımı, R programını istatistiksel bilgi işlem ve grafikler için bir dil ve ortam olarak tanımlamaktadır (R Core Team, 2016). R programı çeşitli istatistiksel ve grafiksel teknikler kullanılmasına imkân sunan ve genişletilebilmeye açık bir fonksiyonel yazılımdır (Matloff, 2011).

R programıyla bilimsel haritalama sürecinin nasıl ilerlemesi gerektiğine ilişkin standart olarak önerilen beş aşamalı süreç (Zupic ve Cater, 2015), mevcut çalışmada da kullanılmıştır. İki, üç ve dördüncü aşamalar farklı alt aşamalar içermektedir ve yazılım desteklidir.

3.1. Araştırma Tasarımı: Bibliyometrik analiz belirli bir zamanı inceleyerek gerçekleştirilmektedir. Çünkü bu analiz türü, araştırma yapılan andaki ilgili kavrama ilişkin durağan bir anda bir resim çekme ve o anı temsil etmek için kullanılmaktadır (Aria ve Cuccurullo, 2017: 960). Bu nedenle çalışmanın yürütüleceği zaman aralığını (ya da aralık dilimleri) belirleme kararı tasarımın oluşması için önemlidir. Bu çalışmada zaman aralıkları son 35 yıl (1987-2022) olarak belirlenmiştir. Bu aralığın seçilmesinin nedeni konuya ilişkin olarak WoS veri tabanında yer alan ilk çalışmanın 1987 yılında olması, son yıla ait tüm verilere de en son 2022 yılında ulaşılabilir olmasıdır. Bu nedenle 2023 yılı çalışmaları analize dâhil edilmemiştir.

Seçilmiş olan veri tabanı üzerinden araştırma konusuyla ilgili dokümanlara ulaşabilmek için ilk olarak arama motorunda kullanılacak olan anahtar kelime/kelimelere karar verilmesi gerekmektedir. Bu çalışmada “dönüşümcü liderlik” kavramına karşılık gelen İngilizce “transformational leadership” kelimeleri kullanılmıştır. Bu iki sözcük birlikte kullanılmış olması ve sadece çalışma başlıklarında yer almaları koşuluyla aramaya dâhil edilmiştir. Arama filtreleri ile 1987-2022 yılları arasında toplam olarak 582 adet yayının içeriğine ulaşılmıştır. Araştırma veri setinde yer alan bilgiler ışığında aşağıda yer verilen araştırma soruları oluşturulmuş ve cevapları aranmıştır. Dönüşümcü liderlik alanındaki makaleler;

- Yıllık yayın üretimine ve atıf sayılarına,
- En üretken dergilere,
- En üretken araştırmacılara,
- En üretken kuruluşlara,
- En üretken ülkelere,
- En fazla atıf yapılan çekirdek çalışmalara göre nasıl dağılım göstermiştir?

3.2. Veri Toplanması: Bu aşamada verileri toplamak amacıyla bibliyometrik verilerin kullanımına uygun içeriğiyle WoS veri tabanı seçilmiştir. WoS veri tabanı kullanılmasının ana gerekçeleri, burada yer alan çalışmaların tarandığı alan indekslerinde yer alan dergilerin etki faktörlerinin yüksek olması (Demir ve Erigüç, 2018) ve bibliyometrik analiz için uygun veri sunuyor olmasıdır (Aria ve Cuccurullo, 2017: 960). Verilerin toplanması 27 Ocak 2023 tarihinde WoS Core Collection üzerinden gerçekleştirilmiştir. Türkçe çalışma bulunamadığı için veriler sadece İngilizce dil tercih edilerek yapılmıştır. Araştırmada yer alacak belgelerin veri seti filtrelenmiş olarak WoS veri tabanından dışa aktarılmıştır.

3.3. Veri Analizi: Bibliyometrik analizlerle araştırılan konuya ilişkin gözle görülemeyen ağ bağlantılarının ortaya çıkarılması ve alandaki resmi olmayan fakat var olan ortak düşünce okullarının görünür hale getirilmesi sağlanabilmektedir (Crane, 1972). Bu çalışmada bibliyometrik yazılım aracı olarak R programı ve Bibliometrix analiz paketi ile Biblioshiny ara yüzü kullanılmıştır.

3.4. Veri Görselleştirilmesi: Veri analizi sonuçları üzerinde görselleştirme işlemleri Bibliometrix paket yazılımı ve Biblioshiny üzerinde yapılmıştır.

3.5. Yorumlama: Bu aşamada analizlerden elde edilen bulgular yorumlanmıştır. Araştırılan alan hakkında detaylı bilgiye sahip olan araştırmacılar, bibliyometrik analizlerden elde edilenlere nazaran daha üstün bir avantaja sahiplerdir. Unutmamak gerekir ki, bibliyometrik yöntemler araştırılan dönüşümcü liderlik alanının yapısına ilişkin farklı bakış açısıyla yeni bilgiler sunuyor olsa da, elde edilen bulgu ve yorumlar bu alandaki klasik tarzda kapsamlı literatür okuması yapmanın yerine geçmemektedir.

4. ANALİZ BULGULARI

Çalışmada 1987-2022 yılları arasında, dönüşümcü liderlik konulu İngilizce dilindeki İşletme başlığı altındaki sadece Yönetim yazınında yer alan yayınlardan makaleler incelenmiştir. Bibliyometrik bulgular dönüşümcü liderlik alanının genel ve mevcut durumu hakkında bilgi sunması bakımından önemli bir rehber görevi üstlenmektedir. Çalışmada yer alan araştırma sorularına yönelik analize dâhil edilen dokümanlardan elde edilen bulgular aşağıda yer almaktadır.

WoS veri tabanında Topic başlığı altında “Transformational Leadership” olarak arama yapıldığında 10.681 adet çalışmaya ulaşılmıştır. Bu çalışmalardan sadece başlığında (Title) dönüşümcü liderlik olanlar filtrelenmiş ve sayı 2.416’ya düşmüştür. Daha sonra sırasıyla yayın aralığı 1982-2022 yılları arası (son 40 yıl), doküman türü makale, dil İngilizce, WoS Kategorisi İşletme (Business) altında yer alan Yönetim (Management), WoS İndeksinde sadece SSCI olacak şekilde yeniden filtreleme yapılmıştır. Bu durumda 607 makaleye ulaşılmıştır. Veriyi analiz etmek üzere R Programı Bibliometrix paketinde Biblioshiny ara yüzüne veri dosyası yüklenmiştir. Veri dosyasında işleme başlamadan önce yeniden filtreleme yapılmış, ilk yayının olduğu yıl olan 1987 ile 2022 yılları arası ve sadece İngilizce olanlar seçilmiştir. Bu işlem sonunda çalışmada yer alan verilerin sayısı 582’ye düşmüş ve tüm analizler bu veri seti ile yürütülmüştür.

Araştırma veri setinde yer alan yayınlara ait betimleyici istatistikler Tablo-1’de sunulmuştur. 582 adet yayında toplam olarak yer alan yazar sayısı 1485’dir. Tek yazarlı olanlar azınlıkta ve 39 adettir. Çalışmaların uluslararası ortak yazarlık iş birliği oranı ise %35,4’dür.

Tablo 1: Betimleyici İstatistikler

Veri Seti Hakkında Açıklama	Sonuç
Yıl Aralığı	1987-2022
Kaynak Sayısı (Dergi, Kongre vb.)	105
Doküman Sayısı	582
Yıllık Büyüme Yüzdesi	%5,97
Doküman Ortalama Yaşı	9,2
Doküman Başına Ortalama Atıf Sayısı	78,06
Toplam Referans Sayısı	21833
Doküman İçeriği	
Anahtar Kelimeler Artı	1150
Yazar Anahtar Kelimeleri	1372
Yazarlar	
Yazar Sayısı	1485
Tek Yazarlı Dokümanların Yazar Sayısı	39
Yazarlar İş Birliği	
Tek Yazarlı Dokümanlar	48
Doküman Başına Ortak Yazarlar	3,13
Uluslararası Ortak Yazarlıklar	%35,4

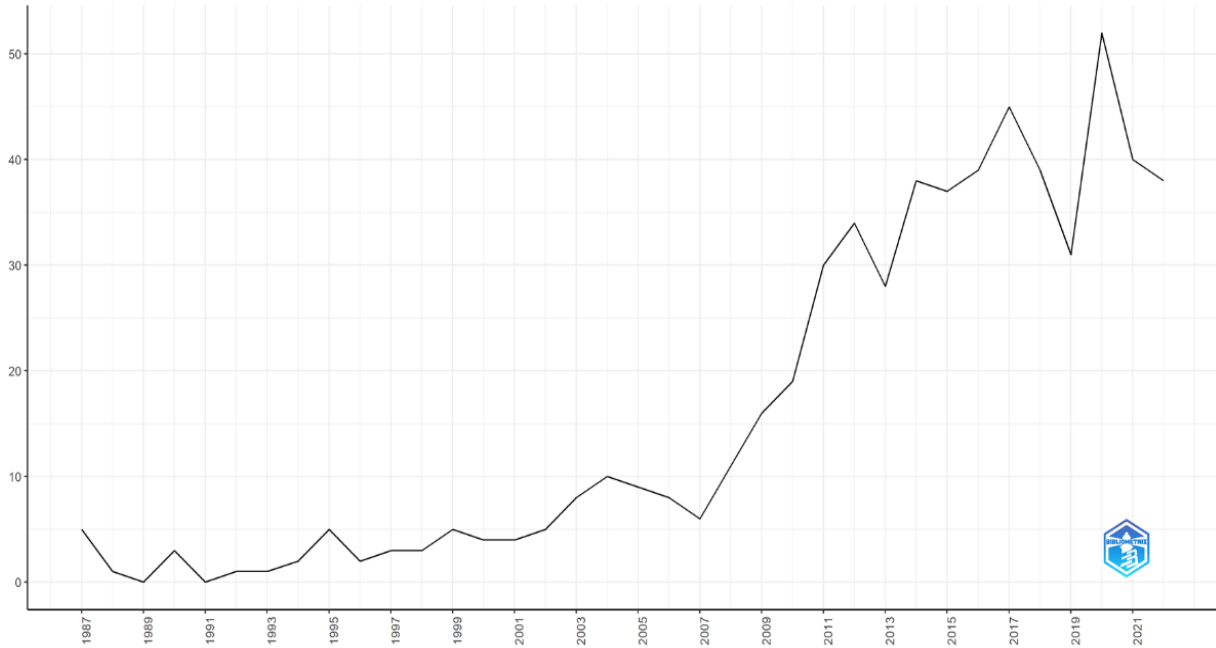

1987 yılından itibaren yıllara göre yayınların dağılımı Tablo 2’de gösterilmektedir.

Tablo 2: Yıllık Yayın Üretimi

Yıllar	Toplam Yayın Sayısı	Her bir Yayın için Ortalama Atıf	Yıllar	Toplam Yayın Sayısı	Her bir Yayın için Ortalama Atıf
1987	5	132	2005	9	201,89
1988	1	116	2006	8	231
1989	0	-	2007	6	202,83
1990	3	581,67	2008	11	171,91
1991	0	-	2009	16	175,88
1992	1	249	2010	19	90,74
1993	1	804	2011	30	79,03
1994	2	95,5	2012	34	57,35
1995	5	275,4	2013	28	67,57
1996	2	345	2014	38	60,84
1997	3	220	2015	37	43,03
1998	3	27,33	2016	39	46,56
1999	5	220,6	2017	45	37,64
2000	4	219,5	2018	39	43
2001	4	110,25	2019	31	29,77
2002	5	415	2020	52	16,75
2003	8	356,75	2021	40	11,05
2004	10	248,5	2022	38	4,47

Şekil 1’de yıllara göre toplam makale üretimi grafiğine yer verilmiştir. 1987-2022 yılları arası toplam 582 yayın bulunmaktadır. En fazla atıf alan yayınlar 1987-2000 yılları aralığındakilerdir. Bu yıllar arasında yer alan 35 adet yayın alanda öncül olmalarıyla ilişki olarak tüm yayınlara yapılan atıfların %55’ine sahip oldukları görülmüştür. Alanda en çok kabul gören yayınların bu yayınlar olduğu söylenebilir. 2001-2022 arasında yapılan çalışmalar ise 547 adettir. Yayın sayısı hızlı bir artış göstermiş ve bu dönemde yapılan çalışmalar alanın %94’üne denk gelmesine rağmen atıf sayısı olarak ilk 35 makalenin yarattığı etkiye henüz ulaşamamıştır. 2009 yılıyla birlikte yayın sayısında dikkat çekici bir artış gözlenmiştir. Bu alanda son 5 yıl içinde (2018-2022 yılları arasında) toplam yayın sayısı 200 adet olmuştur. Özetle alandaki yayınların yaklaşık olarak %34,3’ü son 5 yıl içinde yayınlanmıştır ve bir artışa işaret etmektedir. Fakat 2021 ve 2022 yıllarındaki yayın sayısının azalışı dalgalanmaya neden olmuştur. Bu durum Covid-19 salgını döneminde işletmelerde araştırma yapılamaması ve yayın sayısında azalma yaşanmasıyla ilişki olabileceğini düşündürmektedir.

Şekil 1: Yıllara Göre Toplam Yayın Sayısı Grafiği

Bu alanda yayın yapan dergilerden en yüksek H İndeksine sahip olan, en fazla atıf alan, en fazla yayının çıktığı ve yayınların başlangıç yıllarına ilişkin bilgiler Tablo-3'dedir. Buna göre Leadership Quarterly H İndeksinde ilk sıradadır. En fazla yayının yapıldığı ilk beş dergi sırasıyla "Leadership & Organization Development Journal (73)", "Leadership Quarterly (63)", "Journal of Leadership & Organizational Studies (21)", "Journal of Applied Psychology (18)" ve "Journal of Nursing Management (18)" dergileridir. En fazla atıf alan dergilerden ilk beş tanesi sırasıyla "Journal of Applied Psychology", "The Leadership Quarterly", "Academy of Management Journal", "Journal of Management" ve "Journal of Organizational Behavior" dergileridir. Dergilerden tarihsel açıdan ilk yayını yapanların daha çok atıf almış olmaları yayın yılının erken olması gerekçesiyle beklenen bir durumdur.

Tablo 3: Etki Faktörü Sıralamasına Göre Alandaki Dergilere İlişkin Bilgiler

Dergiler	H İndeksi	Toplam Atıf	Yayın Sayısı	İlk Yayın Yılı
1 Leadership Quarterly	50	8404	63	1994
2 Leadership & Org. Dev. Journal	23	1621	73	2011
3 Journal of Applied Psychology	17	6675	18	1993
4 Journal of Organizational Behavior	15	2325	16	1995
5 Group & Org. Management	14	1594	15	1996
6 Int. Jour. of Human Resource Man.	14	759	17	2003
7 Journal of Leadership & Org. Stud.	14	525	21	2012
8 Jour. of Occup. & Org. Psyc.	14	1761	16	1997
9 Jour. of Org. Change Management	13	1011	14	1999
10 Europ. Jour. of Work & Org. Psyc.	12	410	15	2006
11 Jour. of Nursing Management	11	404	18	2010
12 Personnel Review	10	390	16	2011
13 Academy of Management Journal	9	5209	9	2002
14 Journal of Management	9	1552	10	1987
15 Leadership	9	271	12	2005

	Dergiler	H İndeksi	Toplam Atıf	Yayın Sayısı	İlk Yayın Yılı
16	Human Relations	8	792	9	1990
17	Int. Jour. of Contemp. Hosp. Man.	8	272	8	2010
18	Journal of Managerial Psychology	8	174	8	2013
19	European Management Journal	7	335	8	2014
20	Asia Pacific Jour. of Management	6	208	6	2012

Alandaki en etkili yazarların bilgisi Tablo-4’de sunulmuştur. En üretken ilk beş yazar sırasıyla Avolio; Barling; Bass; Turner; Walumbwa’dır. Yayınlarına en çok atıf alan ilk beş yazar ise sırasıyla Avolio; Shamir; Dvir; Eden; Barling’dır.

Tablo 4: Alanda En Etkili İlk 20 Yazar

	Yazarlar	h-indeksi	Toplam Atıf	Yayın Sayısı	Yayın Başlangıç Yılı
1	Avolio BJ	11	3914	12	1987
2	Barling J	8	1760	9	1996
3	Bass BM	8	2763	8	1987
4	Walumbwa FO	7	1312	7	2003
5	Kelloway EK	6	1652	6	1996
6	Lei H	6	401	6	2017
7	Sosik JJ	6	797	6	1997
8	Turner N	6	409	7	2002

12	Le PB	5	355	5	2018
13	Shamir B	5	1940	5	2002
14	Wang Z	5	141	5	2012
15	Yammarino FJ	5	696	5	1990
16	Ayoko OB	4	72	4	2013
17	Bruch H	4	245	4	2009
18	Diebig M	4	57	4	2017
19	Felfe J	4	199	4	2010
20	Kim S	4	107	4	2017

En çok yayın çıkaran kuruluşların bilgilerine Tablo-5’te yer verilmiştir. Alandaki en üretken kuruluşlardan ilk beş sırada Arizona State University; University of Queensland; Pennsylvania State University; Shanghai Jiao Tong University ve National Sun Yat-sen University yer almaktadır. Bu listeye göre alana hâkim durumda olanların ülkelerinin Amerika, Çin ve Avustralya olduğu söylenebilir. Bu bulgu, Tablo 6’daki sorumlu yazarlara göre yayınların en çok üretildiği ülkeler sıralamasından da anlaşılacağı gibi alanda en çok yayının yapıldığı ülkelerle benzerlik içermektedir.

Tablo 5: En Çok Yayın Yapan İlk 20 Kuruluş

	Kuruluşlar	Yayın Sayısı
1	Arizona State University	20
2	University of Queensland	18
3	Pennsylvania State University	17
4	Shanghai Jiao Tong University	17
5	National Sun Yat-sen University	16
6	Sch Management	16
7	Erasmus University	15
8	University of Nebraska	14
9	University of St. Gallen	14
10	Hunan University	12

	Kuruluşlar	Yayın Sayısı
11	National Taiwan Univ. Sci. Tech.	12
12	Queens University	12
13	University of Maryland	12
14	Hong Kong Polytech University	11
15	Tilburg University	11
16	University of Groningen	11
17	University of Iowa	11
18	University of Valencia	11
19	San Diego State University	10
20	University of Haifa	10

Tablo-6’da çalışmadan sorumlu yazarlara göre yayınların en çok üretildiği ülkeler sıralaması verilmektedir. Buna göre en çok yayın yapan ülkeler içinde ABD, Çin, Almanya, Avustralya ve Hollanda bulunmaktadır. Türkiye ise 11’inci sıradadır. Ülkelerin toplam yayın sayılarına göre ise ABD’nin 548 yayınlı ilk sırada olduğu listede Türkiye 28 adet yayınlı 14’üncü sıradadır.

Tablo 6: Sorumlu Yazar Sayılarına Göre Ülke Sıralaması

	Ülkeler	Yayın Sayısı	Tek Ülke Yazarlı	Çok Ülke Yazarlı	Sıklık	Çok Ülke Yazarlı Oranı
1	ABD	153	115	38	0,263	0,248
2	Çin	103	61	42	0,177	0,408
3	Almanya	38	25	13	0,065	0,342
4	Avustralya	31	18	13	0,053	0,419
5	Hollanda	25	13	12	0,043	0,48
6	İngiltere	24	13	11	0,041	0,458
7	Kanada	22	16	6	0,038	0,273
8	Kore	17	6	11	0,029	0,647
9	Pakistan	15	11	4	0,026	0,267
10	İspanya	9	7	2	0,015	0,222
11	Türkiye	9	5	4	0,015	0,444
12	Danimarka	8	4	4	0,014	0,5
13	Finlandiya	8	7	1	0,014	0,125
14	Hindistan	8	8	0	0,014	0
15	Norveç	8	3	5	0,014	0,625
16	Fransa	7	2	5	0,012	0,714
17	İsrail	7	5	2	0,012	0,286
18	Japonya	7	3	4	0,012	0,571
19	Malezya	7	4	3	0,012	0,429
20	İsviçre	7	4	3	0,012	0,429

Yayınlar arasında en çok atıf alan ilk 20 çalışmanın bilgileri Tablo-7’dedir. 1990 yılında Bernard M. Bass tarafından *Organizational Dynamics* dergisinde yayınlanan makale, yönetim alanında dönüşümcü liderlik konusunda en çok atıf alan makale olarak bulunmuştur. İkinci olarak 2009 yılında Gong, Huang ve Farh tarafından *Academy of Management Journal*’da yayınlanan makale yer almaktadır. Üçüncü sırada ise 2006 yılında Piccolo ve Colquitt tarafından *Academy of Management Journal*’da yayınlanan makale yer almaktadır. Dördüncü sırada 2002 yılında Dvir vd. tarafından *Academy of Management Journal*’da yayınlanan makale yer almaktadır. Beşinci sırada 1993 yılında Howell ve Avolio tarafından *Journal of Applied Psychology* dergisinde yayınlanan makale yer almaktadır. En çok atıf alan ülke sıralamasında 19.906 toplam atıf sayısı ile ABD birinci sıradadır. Türkiye ise aynı sıralamada 414 toplam atıf ile 13’üncü sırada yer almaktadır.

Tablo 7: Alanda En Çok Atıf Alan Yayınlar

	Yayın Künyesi	Atıf Sayısı
1	Bass, B. (1990). From transactional to transformational leadership: Learning to share the vision. <i>Organizational Dynamics</i> , 18(3), 19-31.	1393

Yukarıda sunulan analizlerin bulgularına ilave olarak Türkiye'nin alandaki pozisyonuna ilişkin bilgiler şu şekildedir: Türkiye'den sorumlu yazarın olduğu ilk çalışma 2009 yılında Bilkent Üniversitesi yazarları Gümüşlüoğlu ve İlsev tarafından yapılmıştır. Türkiye'deki yazarlardan, toplam 9 çalışma içinde 2 farklı çalışmada yer alan Gümüşlüoğlu öncü yazarlardan birisi olarak belirtilebilir. Ayrıca Türkiye'deki üniversiteler arasında 3 yayınlı en çok yayın yapan Bilkent Üniversitesi olmuştur. Türkiye sorumlu yazara göre ele alınan çalışmalarıyla

ülke üretkenliği sıralamasında 11'inci sırada, ülkelerin aldıkları atıflara göre 414 atıfla 13'üncü sırada yer almaktadır.

5. SONUÇ VE ÖNERİLER

Günümüz bilgi çağına uygun olan ve geleceğin liderliğini temsil eden modellerden birisi de dönüşümcü liderliktir (Polat, 2022: 165). Konuya ilişkin ülkemizde yapılan bir çalışmada geleceğin işletmecileri olacak Z kuşağının çağdaş liderden beklentisinin dönüşümcü liderlik tarzı olduğu bulgusu rapor edilmiştir (Şahbaz, 2019: 80-81). Dolayısıyla dönüşümcü liderlik işletmeler ve çalışanlar için bugün olduğu gibi gelecekte de çok önemli olmaya devam edecektir (Koh vd., 2019). Dönüşümcü liderliğin gelecekle ilişkilendirilmesi bu alanda çok sayıda çalışma yapılmasıyla sonuçlanmıştır. Dijitalleşmenin de artması akademik veri tabanlarında dönüşümcü liderlik hakkında yer alan çok sayıda dokümana hızlı bir şekilde erişebilmeyi mümkün kılmıştır. Hızlı erişim çalışma yapan araştırmacıların işini basitleştirmekte fakat lüteratüre hâkim olmalarını da bir o kadar güçleştirmektedir. Bu zorlukların aşılmasında önemli bir araç olarak bibliyometrik analizlerden faydalanılabilmektedir (Zhang vd., 2015: 967). Yönetim alanında yer alan dönüşümcü liderlik ile ilgili çalışmaların bibliyometrik analizinin yapılmamış olması ilgili literatürde bir ihtiyaç olarak kabul edilmiş ve bu çalışmayla alandaki bu boşluk doldurulmaya çalışılmıştır. Ayrıca diğer araştırmacılara yönetim yazınında dönüşümcü liderlikten nasıl yararlanabileceklerini ilişkin panoramik bir bakış açısı sağlanması amaçlanmıştır.

Çalışmada 1987-2022 yılları arasında “dönüşümcü liderlik” konusunda Web of Science veri tabanında İşletme başlığı altında yer alan Yönetim alanı kapsamında yapılan yayınlar bibliyometrik analiz yöntemiyle incelenmiştir. Toplam olarak incelenen yayın sayısı 582 adettir. Mevcut çalışma, bu yayınların yıllara göre gelişimi göstererek dönüşümcü liderlik alanında araştırma yapmayı planlayan araştırmacılar için incelenmesi gereken temel makale, yazar ve dergilerin belirlenmesine kolaylık sağlayan kılavuz bir çalışma olma özelliğine sahiptir.

Yönetim yazınında dönüşümcü liderlik başlığı altında 1987-2000 yılları arasında toplam 35 yayın, 2001-2022 yılları arasında toplam 547 yayın yapılmıştır. Toplam olarak 582 yayının 200'ü son 5 yıl içinde yapılmıştır. Bu artış alana olan ilginin son dönemde giderek arttığını göstermektedir. Son iki yılda yapılan çalışmaların sayısının ise yayın sayısındaki hızlı ivmeyi azalttığı görülmektedir. Bu durumun Covid-19 salgını nedeniyle sahaya inerek veri elde edememe nedeniyle yaşanmış olabileceği düşünülmektedir. Dergilerin aldıkları atıf sayılarına bakıldığında, dönüşümcü liderlik alanında Leadership Quarterly ve Journal of Applied Psychology dergilerinin diğerlerine nazaran daha önde olduğu görülmektedir. Örneğin; Academy of Management Journal yayın sayısı az olmasına rağmen atıf sayısında üçüncü sıradadır. Bunun neden kaynaklanabileceği düşünüldüğünde Gong; Piccolo; Dvir; Shin; Wang gibi yüksek atıf sayısına sahip yazarların bu dergide çalışmalarını değerlendirmeleriyle açıklanabilecektir. Alandaki en yüksek etkiye sahip dergi Leadership Quarterly hem yayın sayısı hem de aldığı yüksek atıf sayısı ile alanın çekirdek dergisi olarak öne çıkmaktadır.

En çok yayın yapan yazarlardan sırasıyla Avolio B.J; Barling, J; Bass B.M.'nin yayınlarının aldığı atıf sayısının yüksek olması, bu alandaki başucu eserlerin yazarları olarak kabullerini sağlamaktadır. Alandaki en fazla yayın ABD, Çin, Almanya ve Avustralya'da yapılmaktadır. ABD yazınının bu alanda baskın rolü olduğu söylenebilir. Yayıncıdan sorumlu olan irtibat kurulacak yazarların ülkelerine bakıldığında ABD'nin önde olduğu, hemen ardından da Çin'in geldiği görülmektedir.

Bu araştırmanın bazı sınırlılıkları mevcuttur. İlk olarak bu çalışma sadece yönetim alanındaki yayınlarla kısıtlanmıştır. Bundan sonraki çalışmalarda incelenen yayın sayısı İşletme alanındaki diğer alt başlıklarla genişletilebilir. Ayrıca çalışmada dönüşümcü liderlik konulu çalışmalar topluca ele alınmış, bireysel ve gruplara yönelik yapılan araştırmalara göre bir sınıflandırma yapılmamıştır. Gelecekte sadece dönüşümcü liderliğin bireysel ve grup seviyesindeki çalışmalarına dayalı bir analizi de yapılabilir. Bu çalışmada sadece İngilizce yayınlara odaklanılmıştır, farklı dillerde yapılan çalışmalar kapsam dışı tutulmuştur. Gelecekteki çalışmalarda farklı diller de veri setine dâhil edilerek yayın sayısı genişletilebilir. Çalışmada sadece makalelere odaklanılmış olması da bir diğer kısıttır. Gelecekte kitaplar, kitap bölümleri, bildiriler ile doküman sayısı genişletilebilir. Web of Science eksenindeki çalışmalara yer verilmiş olması bir diğer araştırma sınırlılığıdır. Bu konuda çalışmak isteyen diğer araştırmacılar farklı türdeki yayınları örneğin bildiri, kitap bölümü gibi ya da TR DİZİN, SCOPUS, Ulusal Tez Merkezi, ProQuest ve Google Scholar gibi farklı veri tabanlarını da inceleyebilirler. Bu çalışmada dönüşümcü liderlikle ilişkili anahtar kelimeler, ilgili kavramlar çalışmaya dâhil edilmemiş ve teorik olarak destek aldığı temalara yer verilmemiştir. Bundan sonraki incelemelerde çalışmalara dönüşümcü liderlik ile birlikte çalışılan kavramların sistematik olarak incelenmesi yapılabilir.

Özet: Son yıllarda teknolojinin gelişmesi, internetin yaygınlaşması ve sosyal ağların kullanımının artması ile birlikte şiddetin dijital ortama taşındığı görülmektedir. Bu kapsamda dijital şiddet kavramından söz edilebilmektedir. Dijital şiddet özel yaşamda olduğu kadar iş yaşamında da bireyleri olumsuz etkileyen bir şiddet türüdür. Dolayısıyla kadın/erkek, genç/yaşlı fark etmeksizin her çalışanın yaşayabileceği dijital şiddetin iyi tanımlanması, anlaşılması ve kavranması gerekmektedir. Bu çalışmada, iş yaşamında dijital şiddet olgusunun güncel örneklerden hareketle açıklanması amaçlanmaktadır. Bu amaç doğrultusunda çalışmada iki aşamadan oluşan nitel bir yöntem benimsenmektedir. İlk olarak, dijital şiddet kavramı, türleri ve özellikleri açıklanmaktadır. İkinci olarak ise iş yaşamında dijital şiddet olgusu güncel araştırmalar ve örneklerden hareketle açıklanarak alınabilecek önlemlere yönelik öneriler geliştirilmeye çalışılmaktadır. Çalışma sonucunda, iş yaşamında dijital şiddetin önemli bir sorun olduğu ancak üzerinde yeterince durulmadığı/önemsenmediği ve bilinçli/bilinçsiz bir şekilde yapıldığı belirlenmiştir. Bu nedenle dijital şiddetle mücadele konusunda bireylere ahlaki/manevi (doğruluk, dürüstlük, saygı, sevgi, nezaket, vicdan, adalet, duygudaşlık, merhamet, duyarlılık, özgecilik, vefa vb.) değerler ilgili eğitimlerin verilmesi önerilmektedir.

Anahtar Kelimeler: Şiddet, Dijital Şiddet, İş Yaşamı, Ahlaki/Manevi Değerler

Digital Violence in Business Life and Current Examples

Abstract: In recent years, with the development of technology, the widespread use of the internet and the increase in the use of social networks, it is seen that violence has been transferred to the digital environment. In this context, the concept of digital violence can be mentioned. Digital violence is a type of violence that negatively affects individuals in business life as well as in private life. For this purpose, a qualitative method consisting of two stages is adopted in the study. First, the concept of digital violence, its types and characteristics are explained. Secondly, the phenomenon of digital violence in business life is explained with the help of current research and examples, and suggestions for measures that can be taken are tried to be developed. As a result of the study, it was determined that digital violence is an important problem in business life, but it is not emphasized enough / paid attention to and it is done consciously / unconsciously. For this reason, it is recommended that individuals be given training on moral/spiritual (truth, honesty, respect, love, kindness, conscience, justice, sympathy, compassion, sensitivity, altruism, loyalty, etc.) values in the fight against digital violence.

Keywords: Violence, Digital Violence, Business Life, Moral/Spiritual Values

1. GİRİŞ

Şiddet, insanlık tarihi kadar eski bir geçmişe sahip olup, günümüzde insan yaşamını tehdit eden psikolojik ve sosyolojik önemli bir sorundur. Arapça kökenli bir sözcük olan şiddet, Türk Dil Kurumu sözlüğünde “*bir hareketin ya da gücün derecesi, bir hareketten doğan güç, karşıt görüşte olanlara kaba kuvvet (güç) kullanma, duygu veya davranışta aşırılık, hız, sertlik*” olarak tanımlanmaktadır (TDK, 2022: 1). Bununla birlikte “*herhangi bir coğrafya ya da kültüre has olmayan, temelinde güç bulundurma potansiyelinin olduğu, bireyler ya da grupları baskı altında tutmayı amaçlayan davranış kalıplarının tümü*” olarak nitelendirilebilmektedir. Şiddet, yalnızca fiziksel bir eylem olmayıp, yapılan araştırmalar fiziksel, duygusal, sözel, psikolojik, cinsel, ekonomik, dijital gibi birçok türünün olduğunu ortaya koymaktadır (Sarışın, 2022: 262-263). Bu bağlamda günümüzde teknolojinin gelişmesi, internetin yaygınlaşması ve sosyal ağların kullanımının artması ile birlikte şiddetin dijital ortama taşındığı görülmektedir. Bu kapsamda yeni bir şiddet türü olan dijital şiddet olgusu ortaya çıkmıştır. Dijital şiddet özel yaşamda olduğu kadar iş yaşamında da bireyleri olumsuz etkileyen önemli bir sorundur. Dolayısıyla kadın/erkek, genç/yaşlı fark etmeksizin her çalışanın yaşayabileceği dijital şiddetin iyi tanımlanması, anlaşılması ve kavranması önem arz etmektedir (Aytekin ve Gurdalar, 2022: 1).

Bu çalışmada, iş yaşamında dijital şiddet olgusuna yönelik bir değerlendirme yapılması amaçlanmaktadır. Bu amaç doğrultusunda çalışmada öncelikle dijital şiddet hakkında bilgi verilmekte, sonrasında güncel araştırmalar ve örneklerden hareketle iş yaşamında dijital şiddet olgusu açıklanmaktadır. İlgili literatürde iş yaşamında dijital

şiddet olgusuna yönelik az sayıda araştırmaya ulaşılabildiğinden, bu bağlamda böyle bir çalışmanın ilgili literatüre katkı sağlayacağı düşünülmektedir.

2. DİJİTAL ŞİDDET

İletişim, toplum içinde tarih boyunca sürekli olarak değişime uğramıştır. Teknolojinin hızlı bir şekilde gelişmesi sonucu iletişim, kaynak ve hedefin bilgiyle olan etkileşiminin çeşitlenmesini sağlamıştır. Söz konusu bu çeşitlilik, televizyon, dergi ve gazete gibi konvansiyonel medyayı oluşturan iletişim kanalları ile başkalaşmıştır. İnsanların bilgi aktarımına sürekli dahil olmak ve iletişim üzerinde daha fazla etkiye sahip olmak istekleri nedeniyle konvansiyonel medyadaki tek yönlü iletişim modeli yerini yeni medya modeline bırakmıştır. Böylece hedeften kaynağa bilgi aktarımı meydana gelmekte ve bu geri dönüşler sayesinde bilgi oluşum süreci, iletişim tarihinin en hızlı ve en kısa sürelerine ulaşma yolunda ilerlemektedir (Bayrak, 2017: 33). Bu durum bilgi ve iletişim teknolojilerinin gelişimini sağlayarak insan yaşamını kolaylaştırmakla birlikte bazı toplumsal sorunların da artmasına ve/veya boyut değiştirmesine neden olmuştur. Bu sorunların başında şiddet olgusu gelmektedir. Şiddet, uygulanan ve uygulayan kişiler, şiddet uygulayanın mağdura yakınlığı, uygulama nedeni ve uygulandığı yer gibi faktörlere göre farklı isimler alabilmektedir. Bu faktörler göz önünde bulundurulduğunda şiddete verilen isimler “kendine karşı şiddet, aile içi şiddet, eş şiddeti, baba şiddeti, yönetici şiddeti, çocuğa yönelik şiddet, terör, toplumsal şiddet, akran şiddeti, öğretmen şiddeti, polis şiddeti ve komşu şiddeti” şeklinde olabilmektedir. Dolayısıyla sosyal medyada/internette gerçekleşen şiddete dijital şiddet adı verilmektedir (Çınar, 2021: 39). “Siber şiddet, sanal şiddet, çevrimiçi şiddet, siber zorbalık ve siber taciz” olarak da adlandırılan dijital şiddet, bilişim teknolojileri kullanılarak insanlara zarar verici birtakım davranışların gerçekleştirilmesi nedeniyle diğer şiddet türlerinden ayrılmaktadır. Dijital şiddet kontrol edilemediği durumda fiziksel, sosyal, psikolojik ve ekonomik birçok soruna neden olmaktadır (Seçgin ve Tarı Selçuk, 2023: 203). Dijital şiddet, klasik şiddetin tüm özelliklerini taşımasına rağmen, dijital şiddeti uygulayan kişi şiddeti özgürce ve sıklıkla sanal ortamda gerçekleştirebilmektedir. Dijital ortamlardaki şiddet, tıpkı yüz yüze şiddette olduğu gibi doğrudan zarar verecek şekilde tasarlanmakta ve şiddetin tüm unsurlarını içermektedir (Cezlan, 2021: 56). Bilgi ve iletişim teknolojileri beş nedenden dolayı dijital şiddetin oluşumunu kolaylaştırmaktadır (Fascendini ve Fialová, 2011: 26-27):

- **Anonimlik:** Dijital teknolojinin yaygın kullanımı, bir istismarcının anonim kalma potansiyelini artırmaktadır. Yakın bir partner, tanıdık, iş arkadaşı veya yabancı, yerel bir fotoğraf laboratuvarı veya posta ofisi gibi kamusal alanlara fiziksel olarak girmeden tacizde bulunabilmektedir.
- **Otomasyon:** Otomasyon, görev/işlerde insan emeğini azaltmak için bilgi teknolojilerinin kullanılmasını ifade etmektedir. Özellikle gözetleme ve takip etme ile ilgilidir. Bu nedenle tacizcilerin insanların cep telefonlarındaki mesajları kontrol etmelerine, sosyal ağ etkinliklerini izlemelerine, tarayıcı geçmişlerini kontrol etmelerine ve çok az bir çabayla kişisel hesaplarına giriş yapmalarına olanak tanımaktadır.
- **Uzaktan eylem:** Bilgi ve iletişim teknolojileri, tacizcilerin dünyanın herhangi bir yerinden dünyanın herhangi bir başka yerine taciz edici mesajlar göndermelerine izin vermektedir. Bu durum mağdurun bir istismarcıyı tespit etmesini ve ona karşı harekete geçmesini zorlaştırmaktadır.
- **Satın alınabilirlik:** Yeni bilgi ve iletişim teknolojileri aynı zamanda bilginin üretimi ve yayılmasının zorluğunu ve maliyetini önemli ölçüde azaltmıştır. Özellikle Web 2.0, etkileşimli bilgi paylaşımını, kullanıcı tarafından oluşturulan içeriği ve dünya çapındaki web üzerindeki işbirliğini destekleyen bir platformdur. Cep telefonu olan herkes fotoğraf veya video çekip yükleyebilmektedir. Bir e-posta uygulamasında, Facebook veya Youtube'da tek tıklamayla birden çoğa ve çoktan çoğa dağıtım, görüntülerin ücretsiz olarak binlerce kez çoğaltılmasına olanak tanımaktadır.
- **Yayılma:** Siber uzay ortamlarında, tüm yıl boyunca her gün kötüye kullanım olabilmektedir. İnternet her şeyi kaydetmekte ve hiçbir şeyi unutmamaktadır. Rahatsız edici metin ve görüntülerin sürekli trafiği, daha fazla dolaşımın izini sürmeyi ve durdurmayı imkansız değilse bile zorlaştırmaktadır. Dahası, metinlerin ve görüntülerin yayılması, insanların (özellikle kadınların) yeniden mağdur edilmesine yol açabilmektedir. İnsanlar evde, işte ve okulda her yerde, bilgisayarları veya cep telefonları açık olduğu her an kesintisiz olarak takip edebilmektedir.

Dijital şiddet, bireyi kontrol etmek, aşağılamak, cezalandırmak, bir şeyi yapmaya/yapmamaya zorlamak amacıyla teknolojik araçlar kullanılarak yapılan her türlü tutum ve davranışlardır (Güllü ve Çiftçi, 2022: 7). Dijital şiddetin birçok türü bulunmaktadır. Willard (2007: 5-10) “parlama, taciz, kötüleme/aşağılama, kimliğe bürünme, ifşa etme ve düzenbazlık, dışlama ve siber takip” olmak üzere yedi dijital şiddet türünden söz etmiştir:

- *Parlama (Flaming)*: Genellikle herkese açık iletişim ortamlarında yaşanan kısa süreli, kırıcı, saldırgan, kaba, hakaret ve tehdit içerikli tartışmalardır.
- *Taciz (Harassment)*: Hedef kişiye sürekli olarak genellikle e-posta ve anlık mesajlaşma gibi kişisel iletişim kanallarının kullanılarak gönderilen saldırganlık içeren kırıcı mesajlardır.
- *Kötüleme/aşağılama (Denigration)*: Hedef alınan bir kişi hakkında zararlı, gerçek dışı ve acımasız sözlerin paylaşılmasıdır. Bu mesajlar belirli bir çevrimiçi ortamda yayınlanabilmekte veya mağdurun arkadaşlık ilişkilerini bozmak veya itibarını zedelemek amacıyla başkalarına gönderilebilmektedir.
- *Kimliğe bürünme (Impersonation)*: Dijital şiddete bulunan kişinin, hedef aldığı kişinin kimliğine bürünmek suretiyle onu kötü gösterecek veya arkadaşlık ilişkilerini bozacak içeriklerin paylaşılmasıdır.
- *İfşa etme ve düzenbazlık (Outing and trickery)*: İfşa, bir kişinin özel bilgilerinin, sırlarının veya görüntülerinin, özellikle başkalarına, kamuya açık olarak yayınlanması veya gönderilmesi anlamına gelmektedir. Burada dijital şiddet uygulayan kişi, seçtiği kişiyi aralarında samimi ve mahrem bir iletişim olduğuna inandırarak kişinin sırlarını öğrenebilmekte ve bunları başkalarıyla paylaşabilmektedir.
- *Dışlama (Exclusion)*: Dışlama, çevrimiçi oyun ortamlarında ve grup bloglarında, hedeflenen kişiyi kasıtlı bir şekilde gruptan çıkarmak /gruba dahil etmemek suretiyle gerçekleştirilebilmektedir.
- *Siber takip (Cyberstalking)*: Hedef seçilmiş bir kişiye tehdit içerikli, saldırgan ve korkutucu gibi aşırı düzeyde rahatsız edici mesajların sürekli bir şekilde gönderilmesidir.

3. İŞ YAŞAMINDA DİJİTAL ŞİDDET

Çalışma Yaşamında Şiddet ve Tacizin Önlenmesi Sözleşmesi'ne göre iş yaşamında şiddet ve taciz, fiziksel, psikolojik, cinsel veya ekonomik yönden zararı amaçlayan, bunlarla sonuçlanan veya sonuçlanma ihtimali olan, bir defaya mahsus olan veya tekrarlanan, bir dizi kabul edilemeyen davranış ve uygulamaları veya bunlarla ilgili tehdit içerikli ifadeleri ve toplumsal cinsiyete dayalı şiddet ve tacizi içermektedir. Bilgi ve iletişim teknolojilerinin iletişimi kolaylaştırmasıyla birlikte teknoloji ile ilgili şiddet olaylarının farklılaştığı ve arttığı görülmektedir. İş yaşamında çalışanlar meslektaşları tarafından iş yerinde, işyeri dışında veya evinde sosyal medya gibi dijital teknolojiler aracılığıyla 7/24 takip ve taciz edilerek "yeni kuşak şiddet" olarak da adlandırılan dijital şiddete maruz kalmaktadır. Söz konusu bu dijital şiddet örneklerinden bazıları şu şekildedir (Güllü ve Çiftçi, 2022: 3-7):

- Kişinin cep telefonuna sürekli mesaj göndermek ya da kişiyi mesaj göndermesi için zorlamak,
- İstenmeyen ve rahatsız edici içerikli mesajlar ya da e-postalar göndererek kişiyi rahatsız etmek,
- Sosyal ağ sitelerinde uygunsuz yaklaşma teşebbüsünde bulunmak,
- Cep telefonundan ısrarla arama yapmak veya akıllı telefon uygulamalarını kullanarak takip ve kontrol etmek,
- İletişim bilgilerini kişiden izin almadan başkalarına vermek ve bu kişilerin rahatsız edici mesaj ve görüntüler göndermesini istemek,
- Çıplak fotoğraflar çekmek veya çekmekle tehdit etmek, gizli kamera ile kaydedilmiş bu kayıtları internet üzerinden yaymak veya yaymakla tehdit etmek,
- Kişinin sosyal medya hesaplarını karıştırmak ve buradaki bilgilerle kişiyi kontrol etmeye çalışmak,
- Kişiyi tehdit etmek, sosyal medyada kişiyi aşağılayıcı, hakaret ve nefret içeren paylaşımlar yapmak.

İş yaşamında dijital bir şiddet türü olan siber zorbalık, gerçek ve tüzel kişiler bağlamında incelenebilmektedir. Gerçek kişiler açısından siber zorbalık, iş hayatını olumsuz etkileyen, mağdurların özel ve sosyal yaşamlarını tehdit edebilen bir olgudur. İş yaşamında tüzel kişiler olarak kurum, kuruluş, sivil toplum örgütleri ve işletmeler gibi kurumsal yapılar da siber zorbalığa maruz kalabilmektedir. Bu konuyla alakalı bulgular sınırlı düzeyde olmakla beraber iş yaşamında tüzel kişilikleri hedef alan potansiyel vakalarda izlenen yöntemler arasında; tüzel kişiliği ya da bu kişiliğin temsil ettiği misyonu yererken, rakipleri öven bir dil kullanımı, yine rakip ya da alternatif tüzel kişiliklerin bulunduğu çevreler ve temsil ettikleri misyonlar yararına siber algı yönetimi, taraftar toplama, hedef alınan tüzel kişiliği kamu yararı ya da kişisel çıkarlar bakımından tartışmaya açma, karalama kampanyası yürütme ve asılsız haberler yaymanın öne çıktığı söylenebilmektedir. Kamu kurumlarını veya uluslararası işletmeleri hedef alan siber zorbalık vakalarında, bu yöntemlerin ideolojik bir motivasyonun yanı sıra ilişkisel bir bütünlük ve organizasyona sahip olduğu görülmektedir (Atatanır, 2022: 472). Bu bağlamda Dredge vd. (2014:

16) gençlerde Facebook kullanımı ile siber zorbalık arasındaki ilişkiyi inceledikleri araştırmalarında, katılımcıların yarısından fazlasının son altı ay içerisinde birçok kez siber zorbalığa maruz kaldıklarını tespit etmiş olup, Facebook üzerinden edinilen arkadaş sayısındaki artışın, profil yazılarının sıklığının ve negatif etkiye sahip duvar yazılarındaki artışın siber zorbalığa maruz kalma riskini arttırdığı sonucuna ulaşmışlardır. Türkiye’de Dijital Şiddet Araştırması sonucunda ulaşılan bulgular ise şu şekildedir (Şener ve Abınık, 2021: 4):

- Türkiye’nin yaklaşık %20’si dijital şiddete uğramaktadır.
- Dijital şiddete en fazla gençler maruz kalmaktadır.
- Kadınlar cinsiyetleri ve fiziksel görünüşlerinden dolayı, erkekler ise politik görüşlerinden dolayı dijital şiddete maruz kalmaktadır.
- İnsanlar en fazla tanımadıkları kişiler ve troller tarafından dijital şiddet görmektedir.
- Dijital şiddetin en fazla gerçekleştiği sosyal medya platformları Instagram, Facebook ve Twitter’dır.
- Dijital şiddetle mücadelede en sık tercih edilen yöntemler bloklamak/engellemek ve siber zorbaya şikayet etmektir.

Araştırmalar, dijital şiddetle mücadele etme konusunda mağdurların kendilerini muhafaza etmek için siber şiddet uygulayıcıyı engellemek, hesap şifrelerini değiştirmek, cep telefonu numarasını değiştirmek, servis sağlayıcısı ile iletişime geçmek ve hukuki yolları kullanmak gibi yöntemlere başvurduklarını göstermektedir. Ayrıca siber şiddet mağdurunun tercih ettiği yöntemler arasında şiddet uygulayıcıyı uyarmak, yardım çağrısı yapmak, aynı şekilde karşılık vermek, dijital ortamdan uzaklaşmak ve görmezden gelmek de yer almaktadır. Türkiye’de dijital şiddet konusunda doğrudan bir hüküm ya da kanun bulunmamaktadır. Ancak “5237 sayılı Türk Ceza Kanunu’nda yer alan Tehdit (Madde 106), Kişilerin Huzur ve Sükûnunu Bozma (Madde 123), Hakaret (Madde 125), Haberleşmenin Gizliliğini İhlal (Madde 132), Kişiler Arasındaki Konuşmaların Dinlenmesi ve Kayda Alınması (Madde 133), Özel Hayatın Gizliliğini İhlal (Madde 134) ve Kişisel Verilerin Kaydedilmesi (Madde 135)” gibi maddelerin gerçekleşen siber şiddet tipinin özel olarak incelenerek değerlendirilmesi sonucunda uygulama alanı bulabilmesi mümkün olmasına rağmen siber şiddete yönelik düzenlenecek bir mevzuata gereksinim duyulmaktadır (Türk ve Şenyuva, 2021: 473-474).

Dijital şiddetle mücadele konusunda kişisel bilgilerin gizlenmesi, delil içeriklerinin kayıt altına alınması, dijital okuryazar olma, dijital ebeveynlikte bulunma, açık ve güçlü iletişim kurma, yasal mücadele yollarına başvurma gibi alınabilecek birçok önlem bulunmakla birlikte bunların içerisinde en etkili yöntemin “değerler eğitimi” olduğunu söylemek mümkündür. Değerler eğitimi, saygı, nezaket, vicdan ve adalet, empati ve merhamet, duyarlılık gibi ahlaki/manevi değerlerin kazandırıldığı bir eğitim olup, dijital şiddet konusunda bilgi düzeyinin artmasını, toplumsal bir farkındalık oluşmasını ve ahlaki bilinci yüksek kişilerin yetişmesini sağlamaktadır (Aytekin ve Gürdalar, 2022: 1).

4. DEĞERLENDİRME VE SONUÇ

Son yıllarda dijital araç ve uygulamaların sosyalleşmeye olan katkısı, mesafeleri anlamsız kılması, günlük yaşamı kolaylaştırması nedeniyle kullanımının çok fazla yaygınlaşması, interneti günlük hayatın vazgeçilmez bir unsuru haline getirmiştir. Özellikle sosyal paylaşım ağları eğlenceli zaman geçirme, iş, eğitim, öğrenme ve sosyalleşme gibi birçok gereksinimi karşılamakta ancak söz konusu sosyal paylaşım ağları bireylerin yaşamında risk faktörü olabilecek tehlikeli durumları da içermektedir. Dolayısıyla teknolojik gelişmeler insanlığın yararına (iletişim, iş vb.) kullanılabileceği gibi zararına (savaş, güvenlik ihlali vb.) da kullanılabilmektedir (Oğuz Özgür ve Özkul, 2022: 553-554). Bu bağlamda internet kullanıcılarının gün geçtikçe dünyada ve Türkiye’de artması ve güvenlik zafiyetlerinin bulunması nedeniyle dijital şiddet olaylarında artış meydana gelmiştir (Karaboğa ve Işık, 2022: 2). Dijital şiddet, klasik şiddetin dijital ortama taşınması olarak tanımlanabilmektedir. Bu çalışmada iş yaşamında dijital şiddet olgusu tartışılmıştır.

Sonuç olarak, son yıllarda teknolojinin gelişmesi, internetin yaygınlaşması ve sosyal ağların kullanımının artması ile birlikte iş yaşamında dijital şiddet vakalarında artış olduğu bulgusuna ulaşılmıştır. Bu bağlamda dijital şiddetin iş yaşamında bireylerin iş performansını olumsuz etkileyen önemli bir sorun olduğu ancak üzerinde yeterince durulmadığı/önemsenmediği ve bilinçli/bilinçsiz bir şekilde yapıldığı söylenebilmektedir. Bu nedenle dijital şiddetle mücadele konusunda bireylere doğruluk, dürüstlük, saygı, sevgi, nezaket, vicdan, adalet, duygudaşlık, merhamet, duyarlılık, cömertlik, güvenlik, özgecilik, alçak gönüllülük ve vefa gibi ahlaki/manevi değerler ilgili eğitimlerin verilmesinin faydalı olacağı düşünülmekle birlikte değerler eğitimi noktasında bir

meslek organizasyonu olan Ahilik Teşkilatı örnek alınabilmektedir (Kaya, 2013: 41). Dolayısıyla dijital şiddetle mücadele hususunda Ahilik Teşkilatı değerlerinin benimsetilmesine yönelik akademik araştırmaların yapılması ve projelerin geliştirilmesi önem arz etmektedir.

Abstract: This paper analyses the negative economic effects of the recent energetic crisis that affect real home values in touristic countries. We chose a case study that involves three Mediterranean countries for the period 2019-2022 and we proposed a generalized VAR regression model to describe the correlation between the House Price Index variation, Unemployment index, the GDP variation and the Energy Inflation.

Keywords: Financial stability, Energetic Inflation, House Price Index

JEL classification codes: Q41; G41; F47

1. Introduction

Since the start of 2021, fuel prices have risen sharply as a result of global tensions in energy markets, first fuelled by the recovery in world trade after the economic crisis caused by the Covid-19 epidemic, then by the conflict in Ukraine. Similarly, prices related to heating and home maintenance have increased significantly (gas, electricity, wood, heating oil). This increase in energy prices led to a general increase in consumer prices for current products, affected the employment rate, but also affected the real estate market.

The current study aims to analyse, first of all, the influence of Energy Inflation on the real estate price index, but also its correlation with GDP variation and unemployment in countries with a strong tourist tradition. As a case study, we chose three Mediterranean countries: Croatia, a country with a wide opening to the Adriatic Sea and a preferred destination for central European tourism, Greece and Türkiye, both experiencing a large flow of tourists from both Western and Eastern Europe. The study covers the period January 1999, October 2022 to capture both the effect of the 2020-2021 Covid pandemic and the 2022 energy crisis that affected the European continent.

2. Review of literature

Inflation is the general increase in prices of goods and services over time. It is usually measured as the percentage change in the consumer price index (CPI) over a certain period of time, such as a month or a year. Inflation can be caused by a variety of factors, including changes in the supply and demand for goods and services, changes in the cost of production, and changes in the money supply.

Energy inflation refers to increases in the price of energy, such as electricity, gas, coal and oil. Energy prices can be influenced by a number of factors, including changes in the cost of production, changes in demand, and changes in the availability of energy sources.

A first global study of the role of Energy Inflation on the real estate market was proposed in 2012 by a paper of European Commission ([1]), proving, after analysis of 18 OECD countries over a period more than 30 years, that the correction dynamics of house prices is direct dependent on the energy price. The paper proposed a linear regression model between Energy price inflation and House prices, including some additional terms.

A nonlinear ARDL approach between inflation components and house prices in Malaysia was proposed in 2017 ([2]). However, in the wake of the global financial and subprime mortgage crises, non-linearities in the housing market are clearly visible, as pointed out in 2018 ([3]).

Another recent paper ([4]) pointed out that a Vector Auto-Regression model is a more adapted framework to estimate the effect of oil price shocks on house market in Canada.

A comparison of three different models: GLR (Generalised Linear Regression), VAR (Vector Auto-regression) and ARIMA (Auto-regressive integrated moving average model) for house price forecasting in Türkiye was proposed in 2020 [5], showing a strong dependence of House Price Index on inflation, price of gold and foreign exchange rate.

Last year, Stenvall et al. ([6]) proposed a quantile regression model for the house prices dependence on energy market, finding a significant negative correlation between gas, oil and coal price and house market dynamics.

3. The initial data

Greece, Türkiye, and Croatia are three countries located in the eastern Mediterranean and southeastern Europe regions, respectively. Our main purpose was to identify and quantify the connexion between House Price index (*HPR*) and Energy Inflation (*EInf*) for each of these countries, by proposing and testing a non-linear regression model of correlation. These two indicators were computed on a monthly basis, on a monthly basis, reported as a percentage variation compared to the corresponding month of the previous year. We included in the model two other economic indicators: monthly GDP variation (*GDP*), and unemployment (*Unemp*). The initial data were obtained from Word Bank Database ([7-8]), covering the period 1 January 2019- 31 October 2022.

The three countries were chosen for reasons of orientation of the study towards a region strongly dependent on tourism. However, each of these has its own characteristics.

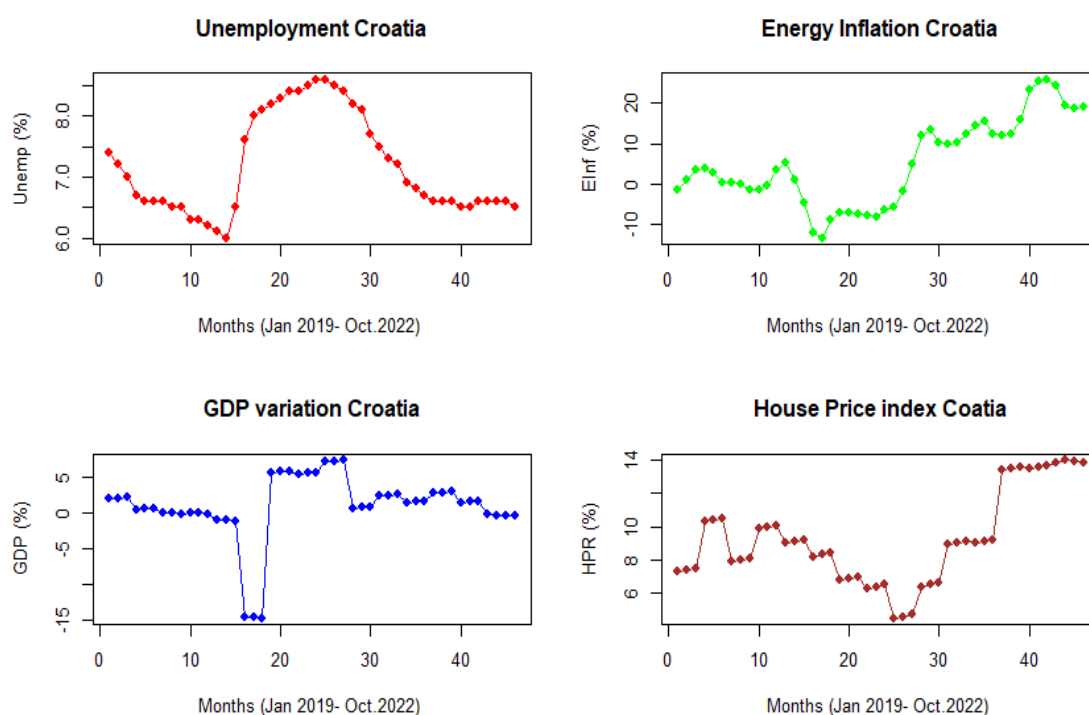

Croatia is a small country located in south-eastern Europe, along the Adriatic Sea. It has a long history, with influences from a number of different cultures, including Roman, Slavic, and Austro-Hungarian. The Croatian economy is primarily driven by the service sector, including tourism and shipping, as well as agriculture and industry.

Greece is known for its ancient civilization, which made significant contributions to art, philosophy, and science, and is home to a number of iconic landmarks such as the Acropolis in Athens and the Temple of Apollo in Delphi. The country has a diverse economy, with significant contributions from the service sector, including tourism and shipping, as well as agriculture and industry.

Türkiye is a diverse country with a mix of cultural influences from Europe, Asia, and the Middle East. It is home to a number of ancient sites, including the city of Istanbul, which was once the capital of the Ottoman Empire. The Turkish economy is driven by a number of industries, including manufacturing, tourism, and agriculture.

The data for the case of Croatia is represented in Fig.1.

Fig. 1 Unemployment, Energy Inflation, GDP variation and House Price index (1999-2022) for the case of Croatia. Source: Word Bank Database (2022).

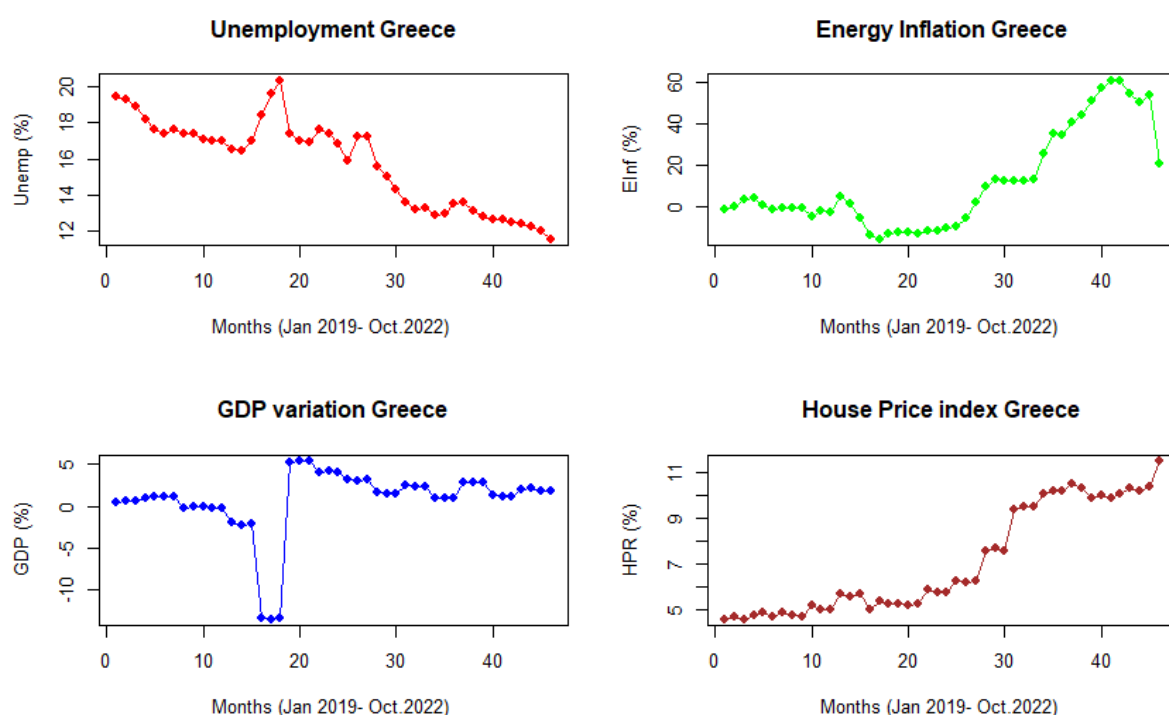

Croatia has undergone significant economic and financial developments over the past decade. The country has implemented measures to support businesses and households affected by the pandemic, including temporary unemployment benefits and financial assistance for small and medium-sized enterprises. These measures have helped to mitigate the economic impact of the pandemic, but they have also put pressure on the government's finances and increased public debt.

Croatia since it uses a vast amount of gas from Russia he had a logical fluctuation that was from -9% up to 10%. But since like before there is conflict in Ukraine, the energy inflation has risen up to 25,8% which is the biggest energy inflation in the recent history of Croatia and it is occurred in June 2022. The fluctuation of the GDP in Croatia was strongly influenced by start of the Covid pandemic. The House price variation also increases after this date.

The data for the case of Greece is represented in Fig.2.

Fig. 2 Unemployment, Energy Inflation, GDP variation and House Price index (1999-2022) for the case of Greece. Source: Word Bank Database (2022).

Greece was hit hard by the global financial crisis in 2009, which exacerbated its already high levels of public debt and budget deficits. In response, the government implemented a series of austerity measures, including cuts to public spending and increases in taxes, in an effort to reduce its debt and restore economic stability.

Despite these efforts, Greece's economic recovery was slow and uncertain, and the country was forced to seek financial assistance from international organizations, including the European Union (EU) and the International Monetary Fund (IMF). In return for this assistance, Greece had to implement further austerity measures and structural reforms, which were often unpopular and led to social and political unrest.

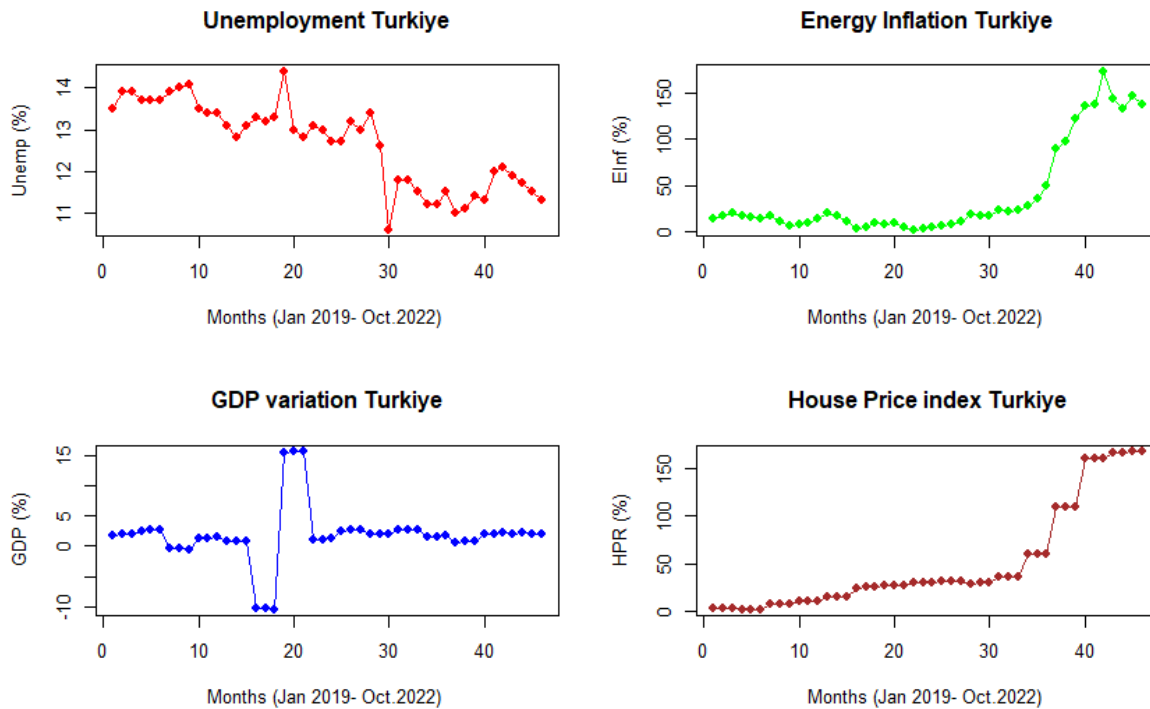

In recent years, Greece's economic situation has improved somewhat, with GDP growth returning to positive territory and the unemployment rate declining. However, the country still faces significant economic challenges, including a large public debt burden and ongoing structural problems, such as a weak banking sector and an inefficient public sector.

The unemployment rate in Greece in 2019 was increased by as much as 19,1%. That was because of the lack of the jobs in Greece and the massive debts that employers had to the government. Now the last three years the rate has decreased and from October 2022 the unemployment rate is stable at 11,2%. The GDP and Energy

inflation known a similar variation in Greece, like in the case of Croatia. The house prices from 2019 started increasing slowly. And in 2022 it has gone up to 10,2%. This is an effect of the inflation in the country.

The data for the case of Türkiye is represented in Fig.3.

Fig. 2 Unemployment, Energy Inflation, GDP variation and House Price index (1999-2022) for the case of Türkiye. Source: Word Bank Database (2022).

Türkiye's economic performance over the last decade has been mixed, with strong growth and development accompanied by a number of economic challenges. GDP variation index in Türkiye has increased and decreased from time to time since 2019. The lowest was seen in the beginning of 2020 with -10.5, and the highest in 2020 with 15.7. It was stable at level 2 in 2022. Unemployment in Turkey has not increased excessively since 2019. Energy inflation, which started to decline after 2019, increased to 170% as of 2022. We can see that housing prices in Turkey have increased by more than 100% due to the instability of inflation and exchange rate. The most recently measured rate (October 2022) is a record 168.2%.

4. The proposed regression model

We present a regression model associating an independent variable to three dependent variables, inspired by the VAR model of Nazlioglu et al. ([9]), which originally includes a Fourier-Granger term of time variation using trigonometric functions. The independent variable is House Price Index (HPR), the main dependent variable is Energy Inflation (EInf) and the two secondary dependent variables are the Unemployment (Unemp) and GDP variation (GDP):

$$\begin{aligned}
 HPR \sim & c_0 + c_1 EInf + c_2 Unemp + c_3 GDP + 100 \cdot c_4 \sin\left(\frac{EInf}{100}\right) \\
 & + 100 \cdot c_5 \cos\left(\frac{EInf}{100}\right)
 \end{aligned} \quad (1)$$

The coefficients c_4 and c_5 measure the non-linear dependence of House price index (HPR) to the variation of Energy Inflation (EInf) and are expressed in scalar terms. The model is an extension of generalized linear regression model and includes the first two terms of Fourier expansion of EInf variable:

The values of regression coefficients were computed using least square residual method, in R code language ([10]).

For the case of Croatia, the coefficient estimation in R is presented in Fig. 3.

Fig. 3 The estimation of regression coefficients of model(1) in the case of Croatia

```

Coefficients:
              Estimate Std. Error t value Pr(>|t|)
(Intercept)    446.81551   101.96144    4.382 8.27e-05 ***
EInfCr         -29.72915    11.48824   -2.588 0.013398 *
UnempCr        -2.53806     0.34796   -7.294 7.33e-09 ***
GDPCr           0.08850     0.05871    1.507 0.139610
I(100 * sin(EInfCr/100)) 29.71001    11.48489    2.587 0.013428 *
I(100 * cos(EInfCr/100)) -4.21189     1.00635   -4.185 0.000152 ***
---
Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 1.204 on 40 degrees of freedom
Multiple R-squared:  0.8339,    Adjusted R-squared:  0.8131
F-statistic: 40.16 on 5 and 40 DF,  p-value: 1.455e-14
> |
    
```

In condition of a significance level 0.05 (corresponding to a relevance threshold of 95%), one observes that the term representing the influence of GDP variation (GDPCr) on the House Price Index is irrelevant, the estimated coefficient do not pass the Student test because $\Pr(t_{\text{critic}} > |t \text{ value}|) = 0.1396 > 0.05$.

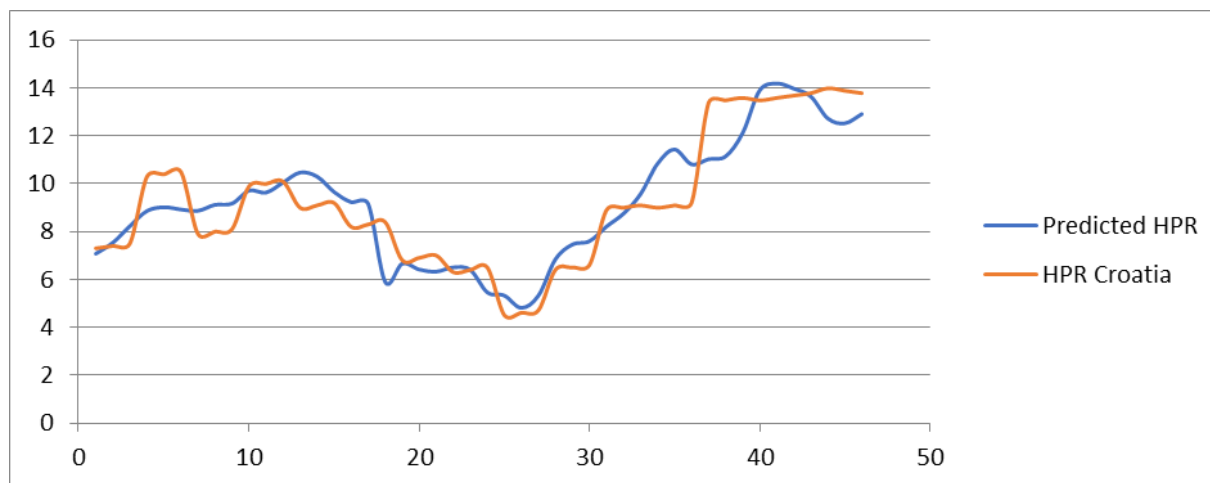

The regression model (1) become:

$$\begin{aligned}
 HPR \sim & 446.81 - 29.73 \cdot EInf - 2.538 \cdot Unemp + 0.088 \cdot GDP + \\
 & + 2971 \cdot \sin\left(\frac{EInf}{100}\right) - 421.1 \cdot \cos\left(\frac{EInf}{100}\right)
 \end{aligned} \quad (2)$$

The nonlinear terms expressed in trigonometric function are dominant terms and implies a direct correlation between the house price increase and energy inflation. There is a negative dependence of the price of houses to unemployment, but with reduced impact. The model passes the Fisher test of significance, having p-value for F-statistic $\sim 10^{-14}$ (the probability of null hypothesis).

Computing the correlation between predicted and initial values of House Price, we obtain $\text{Corr}(\widehat{HPR}, HPR) = 0.913178$. The predicted values for House Price index versus initial values were represented in Fig. 4, where the horizontal axis is the number of months from 1 January 2019. The strong increase of House prices in the autumn of 2021 (the 35th -36th months of analysis) can be explained by the relaxation of the Covid pandemic restriction and foreign tourist increasing interest in Croatia's house market.

Fig. 4. The predicted values of House Price index versus initial values for regression model (2) in the case of Croatia

For Greece, the estimation in R of regression coefficients for the model (1) is presented in Fig. 5.

Fig. 5 The estimation of regression coefficients of model(1) in the case of Greece

```

Coefficients:
              Estimate Std. Error t value Pr(>|t|)
(Intercept)    66.22016   12.12396   5.462 2.69e-06 ***
EInfGr         -2.56039    0.59015  -4.339 9.46e-05 ***
UnempGr        -0.70534    0.07930  -8.895 5.05e-11 ***
GDPGr          -0.04893    0.02359  -2.074 0.04454 *
I(100 * sin(EInfGr/100)) 2.58624    0.59099   4.376 8.43e-05 ***
I(100 * cos(EInfGr/100)) -0.48495    0.12466  -3.890 0.00037 ***
---
Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 0.5656 on 40 degrees of freedom
Multiple R-squared:  0.9482,    Adjusted R-squared:  0.9417
F-statistic: 146.4 on 5 and 40 DF,  p-value: < 2.2e-16

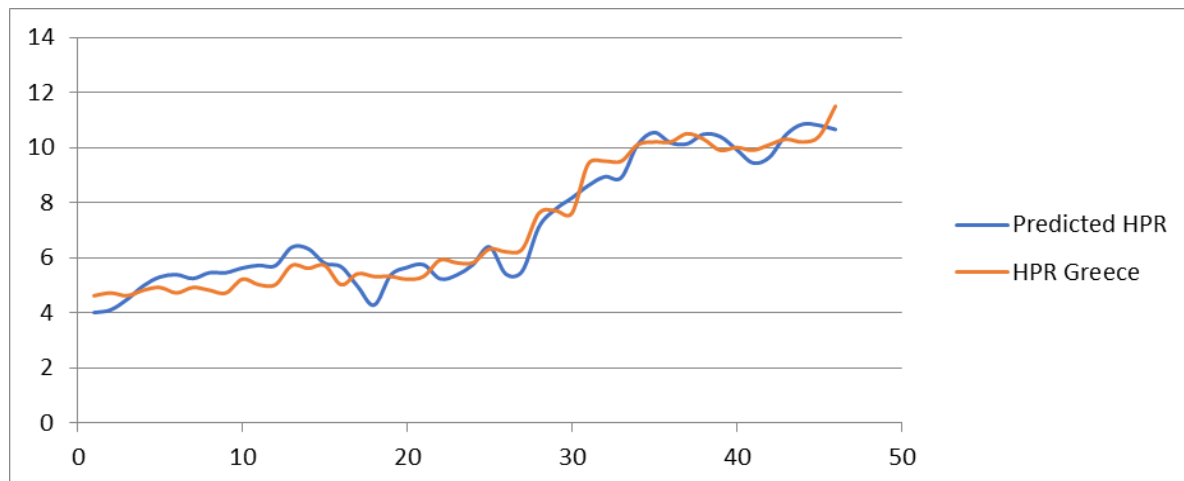

> cor(predict(model1), HPRGr);
[1] 0.9737522
>
    
```

The regression model (1) become:

$$\begin{aligned}
 HPR \sim & 66.22 - 2.56 \cdot EInf - 0.705 \cdot Unemp - 0.048 \cdot GDP + \\
 & + 258.6 \cdot \sin\left(\frac{EInf}{100}\right) - 48.5 \cdot \cos\left(\frac{EInf}{100}\right)
 \end{aligned} \quad (3)$$

In this case all the dependent variables are relevant. There is a negative dependence of the price of houses to unemployment, but with reduced impact. The model passes the Fisher test of significance, having p-value for F-statistic $\sim 2.2 \cdot 10^{-16}$ (the probability of null hypothesis). The correlation between predicted and initial values of House Price, is $\text{Corr}(\widehat{HPR}, HPR) = 0.973752$, greater that in the case of Croatia, meaning that the model can be used in forecasting the House Price index. The predicted values for House Price index versus initial values were represented in Fig. 6, where the horizontal axis is the number of months from 1 January 2019.

Fig. 6. Predicted values of House Price index versus initial values for regression model (2) in the case of Greece

In the case of Türkiye, the computation of regression coefficients gives:

Fig. 7 The estimation of regression coefficients of model(1) in the case of Türkiye

```
Residuals:
    Min       1Q   Median       3Q      Max
-33.460  -5.062   -0.164    5.245   18.108

Coefficients:
              Estimate Std. Error t value Pr(>|t|)
(Intercept)    684.3508    99.5733   6.873 2.82e-08 ***
EInfTr         -4.4633     1.0524  -4.241 0.000128 ***
UnempTr        -13.4212     2.2002  -6.100 3.42e-07 ***
GDPTTr          0.2930     0.3165   0.926 0.360155
I(100 * sin(EInfTr/100))  3.4337     0.7898   4.348 9.21e-05 ***
I(100 * cos(EInfTr/100)) -4.7970     0.8567  -5.600 1.73e-06 ***
---
Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 10.23 on 40 degrees of freedom
Multiple R-squared:  0.9697,    Adjusted R-squared:  0.9659
F-statistic: 256.1 on 5 and 40 DF,  p-value: < 2.2e-16

> cor(predict(model3), HPRTr);
[1] 0.9847356
```

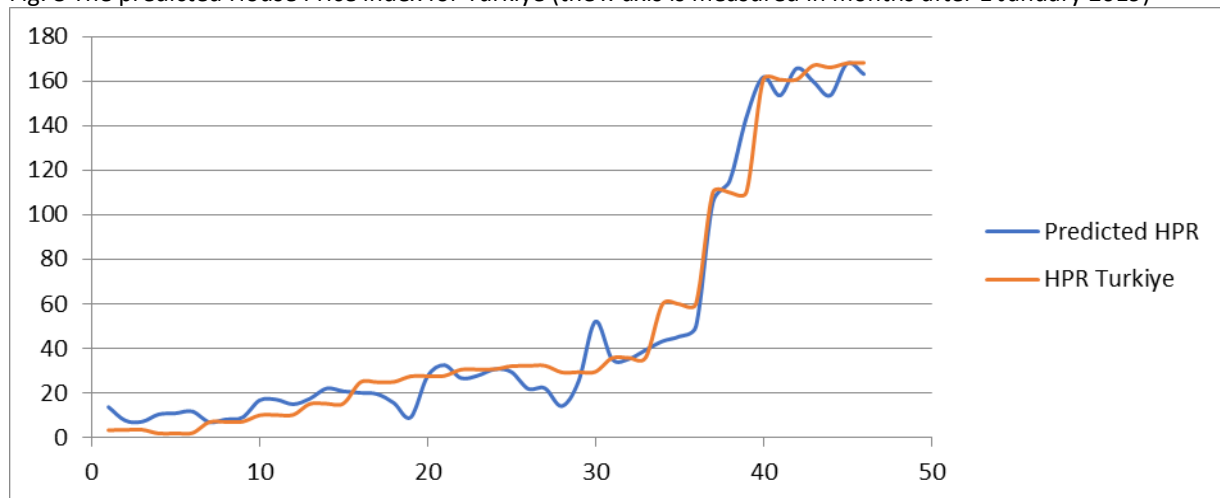

The influence of GDP variation on the House price in this case is irrelevant, the term containing the GDP can be dropped and, after re-estimation of remaining coefficients we obtained the model:

$$HPR \sim 379.7 - 4.40 \cdot EInf - 13.38 \cdot Unemp + 3.39 \cdot \sin\left(\frac{EInf}{100}\right) - 4.75 \cdot \cos\left(\frac{EInf}{100}\right) \quad (4)$$

The negative dependence of the House Prices on Unemployment is more accentuated in the case of Türkiye. The correlation between predicted and initial values of House Price is in this case $\text{Corr}(\widehat{HPR}, HPR)$

=0.9847356, greater even than in the case of model (3). The predicted values representation for House Price index for the period January 2019- October 2022, compared to the initial data, can be found in Fig. 8.

Fig. 8 The predicted House Price index for Türkiye (the x-axis is measured in months after 1 January 2019)

The regression model (4) insert a more significant variation of the House price depending on the unemployment rate that was observed in the sample of initial values, but the model can be used as a predictive one for future forecasting.

5. Conclusions

The economy of emergent countries may suffer as a result of rising energy costs, which will also raise the cost of other goods and services. Our analysis shows the strong interdependence of House price variation and the Energy Inflation for the three countries Croatia, Greece and Türkiye.

Our proposed non-linear regression model for House Price index has a better prediction capacity than in the case of Stenvall et al. model [6], measured by the R square values, superior to 0.94 in the case of Greece and Türkiye, and by the high correlation between prediction and original data. Note that this proposed regression model does not involve any temporary effect of natural catastrophes or political crisis, as in the case of the earthquakes of 2023.

On the other hand, the real estate prices are weakly correlated with the GDP variation and unemployment rate, being influenced rather through the increase or decrease of inflation.

Abstract: The discussion on investments, growth and social progress has become more sophisticated in the new world of technologies and innovations. Social innovation (SI) can be an effective alternative for improving the country's innovation performance and sustainability. Considering the research gap and the lack of social innovation practices in Albania, an assessment of the impact of some important factors within the stock of social innovation capital, such as human capital, social capital, and technological capital to SI can be useful for examining the prerequisites for its development. The paper's objective is an analysis of the SI approach in Albania and the impact of variables such as age, social innovations knowledge, human and social capital, internet connectivity and technological capital. The results of the model show that older ages and social innovations knowledge affect the increase of social innovations approach. Social innovation knowledge and techniques are suggested as very important factors to the SI approach of organizations and institutions.

Key words: social innovations approach, social innovation capital (SIC), human capital, social innovation knowledge.

1. INTRODUCTION

Climate change challenges, lockdowns and other possible instabilities, and the development of renewable energies and innovations have broadened the theoretical debate on future growth models. These issues currently characterize the discussions on entrepreneurship, competitiveness and investments. The approach to foreign investments is related to the level of integration of the markets, competitiveness and innovative performance of the country and can be improved by the spread of social innovation (SI). While SI represents an interesting multidisciplinary–scientific term re–dimensioned (mainly) in the last decade within the evolutionary and complexity theories, new paradigms of innovation, economics, technology and enterprises and relevant epistemological approaches (eg positive) used with social and dialectal change (Mulgan 2012), etc., it constitutes a subject with potential and still unstudied in Albania. Studies point out the scope and ambiguity of its definition (Pol et al. 2009; Anderson et al., 2014; Osburg, 2014; etc.), underlining the linkage of SI with the main forms of capital, such as human and social capital, technological and structural capital (Cabello–Medina et al. 2011; Păunescu, 2014).

In a broad economic, social, institutional and technical–organizational sense (figure 1), by contributing to institutional and law improvement, the renewal of human, social and technological capital and sustainability, social innovation (SI) can be defined as critical for progress in developing countries. Kowal et al. (2014), point out that there is a tendency in developing countries in Europe for empowering the stock of human and social capital, of knowledge on social and technological innovation and this goes along with the growth,

competitiveness, sophistication of the market and enterprises, organizations and institutions. By Boudes et al. (2022), in the conditions of the decline of the legitimacy of institutions and the crisis of trust, social innovation is the answer to improving the performance of the markets and restoring trust. SI in Albania is (perhaps) the terminology used, as policies (target groups, instruments, financing and evaluations) are missing. So, an observation of the SI approach at the individual level and the influence of several factors as antecedents of the social innovation capital (SIC) and the main potential for IS development represents an actual issue of research interest.

The discussion on SI has been enriched in recent years. The authors define SI as a new process to make sustainable decisions on social emergencies by creating added social and economic value (Mulgan 2012; Howaldt et al. 2015; Dobeles, 2015). The approach of individuals to social issues (eg development or change) represents an important part of social norms and by Berkowitz (2004), the latter can have a greater impact on the behavior of individuals than biological, personality, familial, religious or cultural implications. Loogma et al. (2013), argue that the SI approach is useful for the identification and understanding of the level of changes in society and the possible future. Given the demographic deterioration, the researchers emphasize the importance of new techniques and that the experience of new solutions makes older people, especially in favor of new IS practices (Tröger et al., 2012; Pan et al., 2019). Franz et al. (2012), show that social innovation knowledge influences the paradigm of industrial society and SI. Chierici et al. (2020), emphasizing the importance of innovative knowledge in the world of digital companies, underline its impact on social innovation.

McElroy (2002), while explaining the importance of human capital, social capital and technological capital, underlines their essential role in the composition of social innovation capital (SIC). Bennewoth et al. (2015) support that universities and higher education institutions (HEI) through human capital can better contribute to SI's. Šlaus et al. (2011), argue the importance of human capital and social capital for resource productivity and sustainability and highlight their critical importance for social innovations. By De Clercq et al. (2009), social capital can contribute to reducing the level of conflicts in society, being particularly specific for organizational progress and innovation. Cho et al. (2022), emphasize that internet connectivity and digitalization have transformed socio-economic life by influencing institutional processes and SI. Certomà (2021), shows that the new interconnected digital tools have influenced SI by creating new and independent categories. Chiffolleau (2018), argues that technological capital is essential for social innovation processes. Mulgan (2019), in a multidisciplinary way, highlights the importance of technological capital for social progress and the development of SI.

2. Objectives and hypotheses

The objective of the paper is an observation of the spread of social innovation (urban) in Albania, through an assessment of the influence of some important factors such as age, SI knowledge, human capital, social capital, internet connectivity and technological capital on social innovations approach, according to citizens' perception in the city of Tirana.

The paper's hypotheses are:

H₁ — with increasing age, the social innovation approach increases;

H₂ —with increasing social innovations knowledge, the social innovation approach increases;

H₃ —with increasing human capital, the social innovation approach increases;

H₄ —with increasing social capital, the social innovation approach increases;

H₅ —with increasing internet connectivity, the social innovation approach increases;

H₆ —with increasing technological capital, the social innovation approach increases.

3. Measurement procedure

The questionnaire designed for the realization of the study was applied in the city of Tirana (respectively in municipalities no. 1, no. 5, no. 7 and 8) according to the procedure (by random choice). Independent variables were measured according to scales from 1 – 5. The following statistical model was used from the provided data (table 1).

Table 1. Variables according to the statistical model.

Model: OLS, using observations 1–220 (n = 202)

Missing or incomplete observations dropped: 18

Dependent variable: SI_approach

	<i>Coefficient</i>	<i>Std. Error</i>	<i>t-ratio</i>	<i>p-value</i>	
const	1.13842	0.237906	4.785	<0.0001	***
SI_know	0.174444	0.0448400	3.890	0.0001	***
Age	0.0535903	0.0313844	1.708	0.0893	*
Education	–0.0543522	0.0254468	–2.136	0.0339	**
Soc_cap	–0.0252304	0.0292333	–0.8631	0.3892	
Inter_conn	0.0352890	0.0536240	0.6581	0.5113	
Tech_cap	–0.00225166	0.0368562	–0.06109	0.9513	
Mean dependent var	1.356436	S.D. dependent var	0.519934		
Sum squared resid	45.61990	S.E. of regression	0.483682		
R-squared	0.160421	Adjusted R-squared	0.134588		
F(6, 195)	6.209878	P-value(F)	5.53e-06		
Log-likelihood	–136.3453	Akaike criterion	286.6906		
Schwarz criterion	309.8484	Hannan-Quinn	296.0603		

Source: Data provided by authors.

The selected statistical model was the best model. All included variables determine 16% of the variance of the dependent variable SI_approach. The first three variables have a significant impact on SI_approach and the other three have not. The variables SI_knowledge and Age have a positive influence, while Education has a negative effect and the latter need in–depth research regarding the sign of the effects. Social capital (soc_cap), Inter_con and Tech_cap, unlike they are hypothesized, have no impact on the SI approach. All independent variables can stay in the model because it is proven that there is no correlation between the independent variables. Several limitations characterized the measurement procedure.

4. CONCLUSIONS AND RECOMMENDATIONS

The paper provides an analysis of social innovation (at the individual level) in Albania, examining the impact of some variables such as age, social innovations knowledge, human capital, social capital, internet connectivity and technological capital on the social innovations approach of the interviewed citizens in the urban area (Tirana). Given the general insufficiencies of IS and deficits of some important factors (eg social capital), we applied face-to-face interviews, but nevertheless, several limitations (eg conceptual, semantic, etc.) were observed and this should be considered in future research. When we discuss innovations, we even intuitively paraphrase them within the “digital age”, and perceptions are that among the age groups, the younger ones may be more representative of them, but this may actually be discussible. The increase in life expectancy is one of the triumphs of welfare and social progress, and it constitutes an argument regarding the importance of maturity as wealth and part of the stock of skills capital. Considering the complexity and interactive processes, techniques and experiences (eg positive) related to SI, aging can be seen as an achievement and this is supported by literature (Biggs et al., 2012). Moreover, the way traditional societies function has its own age explanation and this may require further–finer research. SI is characterized by added–value and the very significant impact of social innovations knowledge is explainable. SI's are intertwined with specific, high–technical–professional characteristics, etc., of knowledge and efficiency at work (eg within new networks and institutions). We presented the importance of the development of SI as an important social and economic potential and especially for (foreign) investments and growth. Deep knowledge, therefore is required to interact more efficiently in an ever more sophisticated world (or region). Economic, demographic, climate challenges, and new digital technologies (eg DSM, Libohova et al., 2023), have transformed the environment, economy and social activities. SI knowledge characterizes smart–people and green human capital, as part of innovative resources and their impact on SI, is well–supported (Barraud–Didier et al., 2002). SI as a “structural change” (Schumpeter, 2013), can contribute to organizational sophistication and the creation of new efficient–networks (Edwards–Schachter, et al., 2012), where living labs (LL) can generate the potential of SIC by renewing

(especially missing) social capital and increasing the social innovation approach for improving investment orientation, sustainability and ecosystems.

Web 2.0 Tools for Young Learners: A sample Lesson Plan

Selma DENEME GENÇOĞLU, PhD¹

Ogultumar HEZRETKULİYEVA, MA Candidate²

¹Assoc. Prof. Dr., Trakya University, Department of Foreign Languages, selmadeneme@trakya.edu.tr

²MA Candidate, Trakya University, Institute of Social Sciences, tumarhezretkulieva@gmail.com

Abstract: The purpose of this study is to explore the benefits of Web 2.0 tools during the class and showing the best web tools which are more effective in the classes and preparing a sample lesson plan in accordance with the Web 2.0 tools. Giving examples and information about Web 2.0 tools and technology is the main objective of this study. By integrating technology to the classroom, teachers can motivate the learners and in doing so, support and enrich students' learning and their learning environment.

As teachers of young learners we must also apply technology in our classes in a way that fosters the learning of the young learners. Technology motivates and encourages children to learn the language and makes the classroom more enjoyable and pleasurable, collaborative for them and by using them properly teachers can bring dynamism and interactivity into their classroom environment.

In this study, web 2.0 tools that young learners can use while learning English will be introduced in detail and as an application, a sample lesson plan will be presented using the "Kahoot" and "Voxopop" web 2.0 tools to teach speaking and vocabulary in foreign language classes.

Key words: Young learners, web 2.0 tools, kahoot, voxopop, speaking, vocabulary

1. INTRODUCTION

In recent years, unprecedented advances and revolutionary changes have been experienced in the information and communication technology (ICT) and these advances affect every aspect of our life and especially, the fields of education. Technology with its ever-changing nature has many advantages on students' success when exploited effectively; "it can increase motivation, decrease anxiety, foster more student-centered activities, provide students with authentic materials and audiences" (Erben, 2008, p. 17). For about a century, technology has become widespread in our lives and therefore, our dependence on technology, digital tools and the internet has been increasing and now it seems impossible to imagine human life without technology. Importantly, technology leads proliferation of new ideas, understandings, new teaching and learning methods, techniques in the fields of education. Additionally, technological tools or applications accelerate the learning process of learners and offer a wide range of opportunities to both teachers and learners. With its magic power, technology has made our lives easier than ever before and, in this way, it changed our lives completely. Technology which is the recent production of human power has its numerous advantages as well as disadvantages that negatively affect our health and behavior. However, profound, vital role and value of the technology is now well recognized. That is why, we must use the technology properly. When we use it properly it saves our time, but on the other hand when it is not used properly it wastes our time and becomes time-consuming and reduces human creativity.

Technology allows us to access web 2.0 tools and apply them during class. There are many web 2.0 tools: blogs, wikis, web services and etc. They allow teachers and learners to collaborate and share their assignments, edit previous documents, exchange ideas and share any kinds of content and information with one another. Students and teachers can create accounts for web 2.0 tools. In general, these tools are free and user generated. Importance of applying Web 2.0 tools in teaching is pointed as "Web 2.0 technologies in teaching include (1) interaction, communication and collaboration, (2) knowledge creation, (3) ease of use and flexibility, and (4) writing and technology skills" (An & Williams, 2010, p.44). We can see these tools as the best helpers of the learners and teachers because they serve as a library to find required books, relevant information, or other materials. Evidently, technology gives teachers more opportunities in choosing teaching methods and thus, abilities of teachers are enhanced by these opportunities. By actively participating in Web 2.0 tools, participants can create contents that are helpful for learners and teachers. Thanks to the tags of the users, participants can easily access the information or books and broad range of resources that they are looking for.

2. WEB 2.0 TOOLS AND THEIR IMPORTANCE

There are many definitions of Web 2.0 tools, but it depends on what we use them for and in what areas we integrate them. In last decades, globalization has become the main issue and has caused a lot of controversy. By harmonizing technology into the classroom environment, enjoyable classroom can be achieved in teaching English. English is considered as a lingua franca and thus, learning English is crucial. Teachers must utilize the technology in teaching language which facilitates the learners' learning process, yet they are faced with many problems arising from technology usage in order to integrate technology to the classroom (Tütüniş et al., 2021). If the teacher does not have sufficient proficiency in utilizing technologies, it can waste the time allocated to the lesson, and consequently can cause the lesson to be inefficient. More importantly, it is not always possible for teachers to keep students interested. Nowadays, it is possible to get education through internet or technology (Greenhow et al., 2009). Technology prepares a perfect base for interaction, communication, and language learning. "The use of Web 2.0 tools becomes inevitable especially in higher education where students already bring their laptops or smart phones to the classes well-equipped for internet access" (Balbay & Erkan, 2018, p. 48). Technology should be properly introduced to students, otherwise they may have prejudices about using technology. Since the technology makes their learning process easier, they can get used to that life and neglect the importance of the books. Thus, teachers must integrate technology into the classroom by considering these aspects and assert that the technology could not replace the books. As we know, students can be easily distracted when using technology by advertisements or other distracting contents, which is one of the reasons technology cannot replace books although its usage is widespread. Reading books can have positive effects in the readers' minds; on the other hand, technology makes it possible for us to read whatever, whenever, wherever we want even if we don't have our books with us.

Thanks to Web 2.0 technologies, which are integral part of education; teachers and learners can collaborate in an innovative way and these tools make powerful and fruitful learning environment for learners. There are also easy-to-use tools to increase dynamism in the classroom and enrich the learning environment. During the lesson, learners can share their ideas with each other and these shared ideas generate new creative ideas. Thus, it leads to the enhancement of learners' thinking skills, creativity, alertness and supports their learning abilities. It provides teacher and student-centered classroom, because teachers can give feedback to the production or responses of the learners and exchange ideas. Today, there is a great need for technology in education, as in all areas of our lives, because it is the cornerstone of our time, and serves as a pen and paper in education, thus we must experience it (Warlick, 2006). Obviously, it provides fun and enjoyable, effective, and efficient lesson. Additionally, it allows teacher-student-parent interaction because parents also can access their children's assignments or classroom activities and observe what they have done during the class.

Even though there is a belief that technological tools have negative aspects, their positive aspects are countless. Since it is easy to use technology, it provides motivation which is the most important variable in learning a foreign language. Thus, according to many researchers, technology is more than a motivational tool, it is, at the same time, a crucial appliance in the language learning process (Chapelle & Voss, 2016). Briefly, Web 2.0 tools sweep away probable obstacles in the teaching and learning environment. Therefore, teachers must be aware of the importance of these technological tools and must know how to use them beneficially in order to meet the needs of the learners. Learners can learn not only in the class but also out of the class, and as a result of this cycle, learners experience self-learning and notice their errors. It means that the learners can practice everywhere. However, it is not affordable for all the students which means not all of them cannot use web 2.0 tools outside of the classroom. According to Vygotsky (1978) interaction in learning language takes place in the center of the learning process. Therefore, Web 2.0 tools should not be disregarded by teachers. Especially, in order to integrate young and very young learners in a classroom, it would be the best way. However, technology is not always available when we imagine rural life or some countries where there is no internet, resulting in tech-free classrooms while others with access to technology use high tech in learning environments. Recently, language teachers take new steps in order to integrate technology into their classes and in this ways, teachers must determine the appropriate tools. The importance and effects of technology is expressed in the progression of the educational system as follows:

"One of the greatest impacts that these changes brought on by technological developments has occurred in the field of education, which, given the new educational requirements of this digital generation, have rendered it necessary to make profound revisions to the educational system" (Özpinar, 2020, p.815).

Using these tools also has a huge impact on our nature. Instead of printed materials, we can use technology for many purposes from displaying visual materials to interacting students by making participate them in games in the classroom. It also improves students' communication skills, which is essential in learning a foreign language. Communication skill enables learners to communicate easily and efficiently with native speakers. With the entrance of technology into the field of education, the learning process becomes more enjoyable to the learners and motivates them to learn the things that they do not know. This is why, teachers must take innovative steps in order to integrate technological tools into their classes. We know that the technology is limitless. In this case, we must use it properly and in a way that saves our valuable, priceless time. We as teachers must know how to integrate web 2.0 tools into the classroom. There are many definitions of Web 2.0 tools. So, it is impossible to define it in one sentence, because everybody has his/her own definition in accordance to the way they use these tools (how they use or for what they use). Başal and Aytan stressed in their article called *Using Web 2.0 Tools in English Language Teaching as follows*:

“Millions of people have been using the tools that are called Web 2.0. Although there is no consensus on exactly Web 2.0 is, the term refers to a second generation of World Wide Web, making it available for people to collaborate and share information online easier” (2014, p.372).

As it is defined above, other conducted studies also explore importance of Web 2.0 tools and their impress on learners. These kinds of studies are increasing day by day because it is a bit difficult to catch the speed of technological developments because it is growing every second.

3. MOST APPROPRIATE TOOLS FOR THE YOUNG AND VERY YOUNG LEARNERS

There is a broad range of Web 2.0 tools and teachers can choose the appropriate one according to students' interests and needs. Teachers can find Web 2.0 tools on the internet for teaching, and they must know how to use these tools in line with the objectives of language lesson. At first, teachers must know how to plan their lessons and they must have their objectives in order to apply these tools in their classes. These tools make it easy to plan their lessons efficiently and effectively and keep organized. Some of the tools are free for the learners and teachers. When choosing the tools to integrate into classroom, teachers must take into consideration the age level of the learners and interests. Because all the age group students' needs are not same, they show difference from each other. Not only age but also gender can be a factor in selecting appropriate tools. Preparing lesson for the very young learners and also using that lesson plan for the young learners cannot be effective. Utecht (2006) pointed as “If we want to engage students in learning, we need to first understand their world. This world is without borders, boundaries, and is limited only by the speed of one's Internet access” (Utecht, 2006, as cited in Solomon and Lynne, 2007, p. 22). By taking into consideration these factors, innovative steps can be taken to meet the needs of the learners.

Nowadays using technology in teaching language for the young learners is not a complex task because they get used to it easily. “Generations are identified by many under different names however there is no doubt that the generation of twenty-first century is natural outcome of technology and digital worlds. They are called as Generation Z” (Uçar & Yazici, 2021, p. 336). When the subject is young learners, some questions can raise in our minds “Are the learners ready to utilize technology in the classroom environment?”, “Does technology have negative effect on students' behaviors, attitudes and their health?”, “What kind of tool or method can be appropriate for them?”, “What tool can meet their needs?”. Another point is that teachers can collaborate and communicate with their students in a sympathetic and polite way without interrupting them while observing their needs. Unfortunately, nowadays some teachers have little or no experience on these tools. Due to their insufficient competence in utilizing technology properly can interrupt the lesson flow. In this context, teachers do not need to be an expert but at least they must have technological skill in order to keep pace with the technology (Jonassen, et al., 1999). In general, educators must reflect these opportunities to their success of their students by using them properly and effectively. In order to promote desired learning outcomes, teachers must provide internet and technology based classroom for the learners.

Nowadays, students use technology out of the classroom, too. However, many students do not prefer to use technological tools in their daily lives. This case is expressed by Oblinger (2008) as, “Not all students have computers, not all are skilled users, and not all want to use technology” (p.18). Some students are accustomed to traditional learning styles without technology and they are uncomfortable with new technological tools. Thus, using technology cannot motivate them. Importantly, teachers should provide support and scaffolding to the learners in their learning process. Since young learners are attentive, curious, self-confident, and open to learn new things, not afraid to make mistakes, they can easily keep up with technology. From an early age,

students are exposed to the internet and technology in their everyday lives. For instance, they submit their assignments or projects via internet (e-mail or other communicative applications). With the rapid development of the technology number of the different tools devices is increasing. In this case, teachers are indecisive to choose the appropriate tool which is effective in language teaching. That is why, they should evaluate the learning abilities and grades of the learners.

3.1. Kahoot!

As it is mentioned above, there is a wide range of web 2.0 tools. Along with the technology, English language has evolved, and it has become global language for the people around the world. Therefore, learning English is seen very compulsory and it has a vital and profound role in educational process. When teaching, language teachers must integrate different kinds of enjoyable games into their classes. Integrating gamification into the lessons is the best way to teach the language to the young and very young learners and make them focus on the lesson. They can do it with the help of game-based platforms one of which is called Kahoot!, which is also known as “Kahoots”, is a digital learning platform. It develops the games for the learning subjects. Since Kahoot! is based on gamification, it motivates learners and makes the learners active in the classroom environment to learn the language. This platform has its application, and learners and educators can use this application by downloading it to their phones or laptops. It can bring the learners and educators together in one platform. It is the most appropriate tool for the young and very young learners because it provides fun and interactive games. It is irreplaceable and integrate every single student during the class. By engaging students, it sweeps away their stresses and anxieties against learning foreign language. Therefore, learners can easily achieve successful learning.

Teachers should relate the games or other activities to the real life of the learners. When they organize their lesson in this way, it may be more enjoyable and awesome for the learners. Teachers also can integrate the learners in a group or teamwork which enables interaction. In Kahoots, learners can play games as a team. With the help of Kahoots children can choose their own learning way and it helps them to be confident in the class. There are also family games which can be played with children's parents out of the classroom. Briefly, it is a student friendly and learner-centered platform because it helps the learners to foster their education. In this application learners can give response to their teachers and can get quick feedback which enables them to notice their errors. Additionally, Kahoot increases learners' enthusiasm and curiosity in the learning process, thus motivating them to learn. (Bicen & Kocakoyun, 2018).

This application helps learners to improve their four skills as well as their vocabulary knowledge. Importantly, beginner learners learn vocabulary first to move to the next step to make sentences and communicate. With the help of the games young and very young learners learn vocabulary in every play by exposing to new words. However, just learning vocabulary is not enough in learning a foreign or second language. Syahputri and Solo (2022) stated this situation in their article called “The effect of using Kahoot! application on students' vocabulary” as:

“Many studies in the field of education have proven that game-based learning is one of the effective media in the teaching and learning process, with creativity and diversity, lessons are easier to understand. Because basically English is very important to learn, mastering basic skills in English such as listening, reading, writing and speaking will make it easier for students to continue their studies to a higher level and other needs in the future” (p.25).

By training and practicing vocabulary and other skills learners become fluent in language. Another advantage of this application is that it enables teachers to give learners assignments online and students can do their assignments whenever or wherever they want in accordance with the given deadline. These opportunities allow learners to learn the foreign language faster and interestingly. Importantly it creates enjoyable, relaxed and fun environment for the learners contrary to the traditional teaching. Since learners enjoy in the lesson thanks to gamification, they forget how time passes and it prepares fruitful basis for them. Students can discuss and brainstorm together.

3.2. Voxopop

Voxopop is an online voice-based e-learning tool that is used in teaching speaking to the learners. In this tool, instead of written texts or questions, there are voice questions that is designed to enhance students' listening and speaking ability. Especially, this tool is used in teaching language for the learners. By enhancing their oral

speaking skills, it helps them how to communicate, collaborate and exchange their ideas with others. Students can practice speaking easily by using this tool, also, it can be implemented in the class with the students in speaking lessons. Besides educators, parents can use this tool, too. “It can be used to help students develop their oral speaking skills by having students reply to questions using voice recorded answers and by hearing the recorded answers from other students” (Nugroho, 2017, p.1).

Voxopop has several advantages in developing the learners’ personality and built up their confidence. Since this tool is online and free, learners practice speaking and listening out of the class and feel comfortable by themselves. It makes students attentive in the class and makes them feel comfortable while practicing.

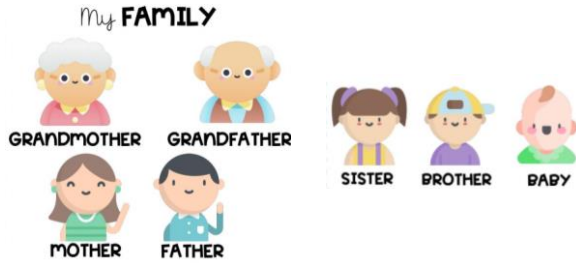

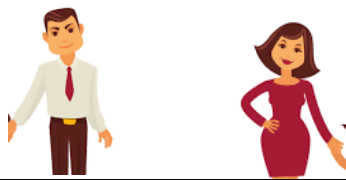

4. CONCLUSION

To sum up, it can be asserted that when we use the technology properly it saves our time and to make the things easier than ever before. This is why teachers must integrate technology to the classroom in order to provide interaction, provide communication in the classroom. While technology is changing and developing day by day, we must prefer more recent one in the class. Nowadays, younger learners are engaged in Web 2.0 tools, because of young learners’ curiosity, they have positive attitudes towards technological tools. Their curiosity makes them good learners in acquiring language.

Furthermore, teacher must decide how to plan their lesson and make these tools useful to the students in an effective and efficient way. Blending lessons with technology helps teachers to improve learners’ reading, listening, writing, and speaking skills. Meanwhile, its major benefit is that it improves learners’ communicative skills which is very important in learning language and expressing themselves. All these tools which have a good effect on the teaching and learning process in the classroom creates pleasurable, enjoyable, supportive, and collaborative classroom for the young and very young learners.

5. SAMPLE LESSON PLAN

Name: Ogultumar Hezretkulyeva	Date: 19.03.2023
Lesson: English Language	Class: 2 A
Skill Focus: Speaking and vocabulary	Duration: 45 minutes
Objectives:	By the end of this lesson students will be able to: improve their speaking level, boost their knowledge of vocabulary, communicate with their friends, use daily conversations, talk about themselves and their family, improve their pronunciation.
Materials:	Board markers, worksheets, realia, pictures, interactive board, Web 2. 0 tools, paper copies, videos, flashcards.
Anticipated problems:	Students may have a problem about pronouncing English words. They may have grammatical problems. They may not know new words.
Solutions:	Have them repeat difficult words to master pronunciation and watch videos to learn new words. Make them notice their errors without interrupting classroom environment and correct their errors by giving feedback to the learners in order to make explanations clear.
Greetings Greet students	Time: 2 min. T: “Hello! Friends, how are you today?” Ss: Good, thank you teacher. How are you? T: I am excellent T: How was your day yesterday? What did you do yesterday?

	<p>Ss: It was good. I met my friends...</p> <p>T: Today we have a very exciting, enjoyable lesson ahead of us.</p>								
Warm up	<p>Time: 3 min.</p> <p>Divide the class into two groups to write indoor and outdoor activities. Then one student from each group will tell those activities and other group will try to know the activity type; whether that is an indoor or outdoor activity.</p> <table border="1"> <thead> <tr> <th>Indoor entertainment</th><th>Outdoor entertainment</th></tr> </thead> <tbody> <tr> <td>Watching TV</td><td>Playing at the playground</td></tr> <tr> <td>Reading book</td><td>Shopping</td></tr> <tr> <td>.....</td><td>.....</td></tr> </tbody> </table> <p>At the end. By counting up their points applause the winning team.</p>	Indoor entertainment	Outdoor entertainment	Watching TV	Playing at the playground	Reading book	Shopping
Indoor entertainment	Outdoor entertainment								
Watching TV	Playing at the playground								
Reading book	Shopping								
.....								
Vocabulary teaching	<p>Time: 5 min.</p> <p>First, I will teach the vocabulary related to speaking activities by showing pictures. For example, family members, words related to talking about yourself and etc.</p> <ul style="list-style-type: none"> Teach them how to pronounce the words correctly. Repeat the words with students. <p>My FAMILY</p>  <p>GRANDMOTHER GRANDFATHER</p> <p>SISTER BROTHER BABY</p> <p>MOTHER FATHER</p>								
Vocabulary activity Kahoot!	<p>Time: 5 min.</p> <p>Use Kahoot! when teaching new words. Prepare pictures and names of those pictures on Kahoot!. Ask the students to look at the pictures on the board and match them with the proper words. Tell students to note their answers in their notebooks and check the answers together. Click the picture that students state. If students are unfamiliar with those words, give them extra information about those words in order to provide interaction in the class or show videos about new words. Click the correct answer! <u>Mother</u></p> 								

Speaking and Listening Activity

Time: 5 min.

Make the students watch about Tom's family introduction and give questions to them about the video. For example: *What is Tom's mother's name? Where do they live? How old is Tom? How many siblings does Tom have?* Students will send their answers through Voxopop. Then, pair up your students and tell them to talk about their family with their partners in order to improve their communication skills.

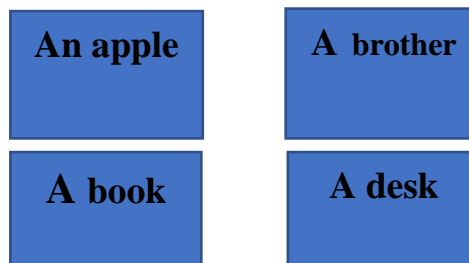

Game

Time: 6 min.

Guess who or what I am!

Divide students into two groups and give them cards in which words are written and one of the students chooses one card without showing the word on it to another group. He/she describes it to his/her friends without saying its name.

Voxopop

Time: 5 min.

By using this tool, make the learners listen to the voice questions and make them answer these questions that are related to the learned lesson, orally.

1. What is your brother's name?
2. Do you have a friend?
3. What is your friend's name?
4. How many siblings do you have?

Vocabulary Activity

Time: 5 min.

Write on the board family member names like *father, mother, sister, brother, grandmother or grandfather*. Then give students flashcards, they will choose randomly one the flashcards and stick it to the board. For example, if the student sees the picture of sister on the flashcard s/he will stick it under the sister which is written on the board.

Vocabulary Game

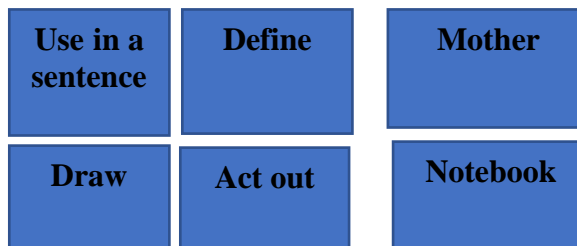

Time: 5 min.

Use in a sentence, Define, Draw, Act out

Prepare four cards by writing each card these phrases as **use in a sentence, define, draw, act out**. Also, write new learned words on the cards. Then, make the learners choose two cards.

One from these

and one from these

For example, if one student chooses “mother” and “draw”, s/he must draw a picture of that word and other students try to know what that is.

Homework

Time: 2 min.

Prepare a topic to talk about your favorite colors and be ready to talk about it in the next lesson.

Goodbye

Time: 2 min.

Goodbye, everyone! It's time to say goodbye!
Goodbye, everyone! It's time for us to fly!

I know that I will see you another day.
But now we have to go, it's time to say...

Goodbye, everyone! It's time to say goodbye!
Goodbye, everyone! It's time for us to fly!

I know that I will see you another day.
But now we have to go, it's time to say...

Eğitimi Anabilim Dalı, Edirne. asutay@trakya.edu.tr. ORCID-ID NO: 0000-0002-0533-7708

Abstract: The subject of this article is the utilization of fairy tale films in teaching German as a foreign language. The fairy tale film *Cinderella* (2011) should serve as an example to illustrate the didactic recommendations developed for this purpose. The choice of topic was made primarily due to the learners' considerable familiarity with the literary genre of fairy tales, which is often true of all age groups. Additionally, a fairy tale film adaptation could be digitally illustrated using current media technology. This means that the use of fairytale films in German lessons might motivate students to learn the language. Based on this, the discussion of the significance and value of employing fairy tale film adaptations in German language classes is the next objective of this paper. The current state of the research is then presented in this regard. Following that, the theoretical underpinnings for implementing fairy tale films in German language instruction are explained, and the didactic teaching suggestions are formulated. Turkish German learners in Turkey will be addressed in this context in the respective positions because they are the target group for this work. Concluding remarks are made at the end of the article.

Key Words: Teaching German as a Foreign Language, Fairy Tale Films, Didactic Suggestions, Language Exercises

1. INTRODUCTION

This article discusses the use of fairy tale films in German as foreign language lessons. The term *fairy tale film* should first be defined before moving on to achieving the work objectives. The fairy tale is a literary genre that consists of fictional narratives.¹ It contains both human and non-human protagonists. The narrative is told in a fantastical and supernatural context (Greenhill and Matrix, 2010: 1).² Based on this, fairy tale films can be described as films produced by filming fairy tales. It should be noted in this regard that in addition to recreating known tales, this might also be the cinematic adaptation of original screenplays having substantial fairy tale elements. Additionally, one can trace the canonical establishment of classic Western fairy tales back to the beginning of the twentieth century. On the other hand, mass media, including films, were used for their dissemination (Zipes, 2011: 9 and 19).³

The topic was selected primarily because students of all ages are, in principle, quite familiar with the literary genre of fairy tales.⁴ In light of this, using fairytale films in German language teaching could be an influential motivational factor. A fairy tale film also presents the possibility of a digital visualization in keeping with the nature of modern media technology. One could speak more broadly in this context about the potential to improve students' ability to receive genre-specific instruction for the film medium or, to be more precise, its structure. The utilization of fairy tale films in the classroom would also help students develop their language skills (speaking, listening, reading, and writing), as (authentic) films can be thought of as audiovisual teaching materials that can be complemented with other components in the didactic process, such as oral or written tasks.⁵ This would further assist multisensory learning.⁶ Besides that, the approach adopted could be more

¹ For further information on the thematic structure of fairy tales, see Jones (1995: 19ff.).

² For a detailed discussion of the fairy tale literary genre, see Sikharulidze (2012).

³ To examine fairy tale films from an international viewpoint, see the anthology edited by Zipes et al. (2016).

⁴ In this regard, Simon (2022: 1) underlines the format-related aspect of fairy tales, and based on this, he speaks of their increased linguistic-cultural accessibility for the students compared to other forms of literary works.

⁵ For an in-depth examination of the application of authentic films in the language learning process, see Mishan (2005: 216ff.).

⁶ For an example of the usage of multichannel learning in the context of teaching English as a foreign language to enhance word recognition, see the study by Sarudin et al. (2019).

tailored to the target group. This could be accomplished, for instance, by comparing and contrasting the German and the learners' native country's cinematic adaptations of the respective fairy tale.

For these reasons, this article discusses the potential application of fairy tale films employing the example of the state television station ARD's 2011 *Cinderella* remake. This should help enhance the quality of German instruction, especially for Turkish students. Moreover, *Cinderella* is one of the most beloved **Children's and Household Tales** of the **Brothers Grimm**. WDR produced its film adaptation for the ARD fairy tale series (Rundfunk Berlin-Brandenburg, 2022). In this respect, it is essential to add that there are several film adaptations of the fairy tale, such as from 1955 or 2010. However, the work from the ARD fairy tale series is included in this work because it is the most recent version. Furthermore, the fairy tale was also filmed in Turkey, which would assist the work's addressee-specific structure while formulating the practice recommendations.⁷ After the previous statements in the introduction part, the second chapter of the paper describes the current situation of using fairy tale films in foreign language teaching. Contemporary studies are presented for this purpose. Theoretical foundations for adopting fairy tale films in foreign language teaching are then covered. Following that, didactic suggestions for how to apply them in the classroom are provided. The target group of the work – German learners whose mother tongue is Turkish – receives particular focus at relevant points simultaneously. The conclusions are offered at the end.

2. CURRENT STATE OF RESEARCH

This chapter briefly covers the current state of research concerning the use of fairy tale films in German as a foreign language teaching. The foundation for this comes from recent studies. The purpose of this approach is to enhance subject understanding.

Ecke's article examines the application of fairy tale films produced by DEFA or Deutsche Film-Aktiengesellschaft (German Film Corporation) in foreign language instruction. It then *addresses* the educational significance of fairy tale films and explains the exciting aspects in this context. This discussion is centered, as already mentioned, on the DEFA fairy tale films and their DVD versions. The author continues with a more detailed description of the DEFA collection of fairy tale films. He tabulates the DEFA fairy tale films released on DVD up to the article's publication date. This table displays the year of production for each DVD film, the film's duration, the language(s) to be selected, the (non-)existence of a narrator and his language(s), the film's overall rating, and its degree of difficulty in relation to the period of its classroom use. After that, the author emphasizes six films for instructional purposes. Finally, some application recommendations for German instruction are developed (Ecke, 2008). The focus of Serdinsky's master's thesis is the implementation of fairy tale films in teaching German as a foreign language. The author introduces the terms fairy tale, film, and then fairy tale film in this regard. She describes the intended target groups and applicability considerations in the framework of the relevant discussion. Following that, three selected fairytale films are analyzed regarding their application potential and viability when teaching German. Next, the data and methodological foundations are introduced in this analytical evaluation. The presentation of the results follows the process of analysis. The final part addresses fairytale films' potential benefits and applicability for German lessons. Future demands are expressed for their increased utilization in educational contexts (Serdinsky, 2014).

Merkuryeva and Shadrina discuss German fairy tale adaptations on screen in their journal article. Their complex text analysis was to be conducted concerning the media education principles and goals. Three *King Thrushbeard* screen adaptations are thematized for this purpose. These texts are examined from linguistic, aesthetic, and semiotic viewpoints. Specifically, the work explores the formal development of the original fairy tale through a process of expansion or transformation. Those changes also pertain to the functional role of linguistic elements such as vocabulary and grammatical forms. This is due to the respective adaptation concept of the director. In addition, YouTube comments on the examined films are used to illustrate the possibility of analytic viewing of the contemporary German language. Regarding the work's methodology, it should be noted that it combines media literacy and foreign language instruction. Its reflection occurs through the previously mentioned complex text analysis utilized in German classes at a language university. This is intended, among other things, to foster the students' communicative competence. In the article's conclusion, it is stated that comparing various adaptations of fairy tales on screen makes it possible to observe students' language development and support the development of their foreign language speaking skills, for instance (Merkuryeva and Shadrina, 2020).

⁷ See chapter 4 of the present work more thoroughly in this regard.

3. THEORETICAL UNDERPINNINGS OF UTILIZING FAIRY TALE FILMS IN GERMAN CLASSES

This chapter examines the theoretical foundations of applying fairy tale films in German teaching. In the following part of the study, they will be employed to formulate proposals for didactic classroom instruction. The statements of Kováčová and Jurková are the main subject of the film-related work. This is because the class discussion of the film is tied to periods. Thus, the use of films in German classes could be subdivided into different activities before, during, and after viewing the film, referring to the authors. The pre-viewing phase would motivate the learners and activate their prior knowledge, among other purposes. However, the students are given various linguistic tasks during the viewing phase. The post-viewing phase is centered around students' reflections on the film (Kováčová and Jurková, 2019: 72f.).⁸

Bimmel, Kast, and Neuner's established lesson planning model for teaching German as a foreign language consists of the phases of introduction, presentation, semantization, and practice. Thus, the topic is brought in during the introductory phase. A global comprehension of the language material is pursued during the presentation phase. In contrast, during the semantization phase, students deal with new words and structures, and during the practice phase, various exercise activities consolidate the material presented in the classroom (Bimmel, Kast, and Neuner, 2011: 74ff.).⁹ On this basis, the following offers an argument for extending the phasing of Kováčová and Jurková (2019: 72ff). This should be accomplished by first discussing the film-related activities at the level of presentation. The learners are then introduced to the semantization phase through appropriate tasks. The practice phase should come next. By dividing the film-viewing part into two stages, the objective is to progressively prepare students for the practice phase's productive language use. In other words, doing this should enhance the quality and effectiveness of teaching and learning processes. Consequently, the framework implemented in this study for utilizing films is as follows: 1. Pre-viewing activities in the introductory phase 2. Presentation activities during the film viewing 3. Semantization activities during the film viewing 4. Post-viewing exercise activities.

Further, to limit the study's scope, the film is employed solely to improve listening comprehension.¹⁰ Dahlhaus's relevant work is employed for that purpose. This is due to the suitability of its detailed, well-structured, and simultaneously plain explanations for achieving the objectives of the present study. Dahlhaus differentiates between tasks before, listening, and after listening. The pre-listening tasks are utilized to introduce the topic to the students. The while-listening tasks should promote extensive and selective listening on the one hand and intensive listening on the other. The post-listening tasks should be performed to examine the text in-depth (Dahlhaus, 2006: 52ff.).¹¹ The exercise typology of Dahlhaus (2006, 52) is adapted to this paper. Based on the functional similarity aspect, it happens through the combination with the individual teaching steps of the instructional film application framework that was previously provided. This results in the following structure: 1. Pre-viewing activities in the introductory phase ↔ Pre-listening tasks. 2. Presentation activities during the film viewing ↔ Extensive and selective while-listening tasks. 3. Semantization activities during the film viewing ↔ Intensive while-listening tasks. 4. Post-viewing exercise activities ↔ Post-listening tasks.

4. DIDACTIC TEACHING SUGGESTIONS

This chapter's objective is to provide practical instruction suggestions for the fairy tale film *Cinderella* (2011). The work's target group consists of Turkish learners of German. It is presumed that they have a B1-B2 proficiency level. As indicated previously, the third chapter of the paper applies the theoretical foundations to provide practical recommendations. Based on the fairy tale film, the presented instructional modeling guidelines should be addressed in greater detail in this context. Additionally, Turkish students should be included in the teaching process using a comparative perspective. After thoroughly explaining the practical suggestions, emphasis is put on this matter.

⁸ For an illustration of how to apply pre-viewing, while-viewing, and post-viewing activities in the context of teaching German as a foreign language through the use of films, see the study by Moore and Lay (2020: 90ff.).

⁹ For an example of a different model of lesson planning in terms of structure and content in the context of English teaching, see Farrell (2002: 33).

¹⁰ For an illustration of the application of films for improving listening skills in language teaching, see the study by Safranji (2015).

¹¹ For further details on the functions of pre-listening, while-listening, and post-listening exercises, see Movva et al. (2022: 1501f.).

Therefore, the lesson's first phase consists of activities before viewing the film.¹² To realize this, the teacher might produce an associogram by asking the students what they already know about the fairy tale *Cinderella* (introduction to the lesson material).¹³ In the extensive listening phase, the students are prompted to cross off given general statements as true or false. For instance, they could be asked if Cinderella must bring rabbits for sale to the village to fulfill her stepmother's assignment at the beginning of the film, with the correct answer being piglets (presentation of the lesson material, timestamp 3:53-4:03). In contrast, the students should complete a matching task made up of statements related to the film while engaging in selective listening. In light of this, they should, among other things, match what Cinderella discusses with her stepmother, sometimes in the presence of others before her second encounter with Prince Viktor (continuation of the lesson material presentation; timestamps 12:15-14.10, 18:42-20:31, and 27:06-28.09). In intensive listening, however, the students must respond to global W-questions. They should explain, for example, why Cinderella caught Prince Viktor's intense attention at the ball to the point where he wanted to pursue her when she had to leave the ballroom (semantization of the lesson material, timestamp 44:50-48:34). As part of the tasks to be performed following listening, the students should consider the moral of the fairy tale. Above all, the distant and cold attitude of Cinderella towards her stepmother after the prince's marriage proposal should be discussed from a reactive point of view in this regard (exercise for the lesson material, timestamp 57:53-58:34). Moreover, the Turkish film adaptation of the fairy tale *Cinderella* (1971) could be utilized to give special attention to Turkish German learners. The students could then be assigned homework to view the Turkish version of the film and answer the given questions. In the meantime, they should emphasize the possible similarities and differences between the two film versions. This would be the primary way to achieve the intercultural learning objectives.¹⁴ In this context, it should also be pointed out that the lexical-grammatical level should be regarded as a vital aspect of the study. For instance, the initial formula *Es war einmal ein/eine* (It was once a, the German equivalent of *Once upon a time*) is commonly used to start German folktales. Turkish fairy tales, on the other hand, generally begin with the phrase *Bir varmı, bir yokmu* (*Once there was, once there was not*, the Turkish equivalent of *Once upon a time*). Accordingly, such stylistic distinctions between the German and Turkish cultures of fairytales should be discussed with the students.¹⁵

5. CONCLUSIONS

This article examined the implementation of fairytale films in teaching German as a foreign language. *Cinderella* (2011) served as the basis for this. The current state of research was presented after introducing the topic on the foundation of recent studies. The theoretical fundamentals of employing fairy tale films in German classes were explained afterwards. They were then incorporated into the formulation of instructional recommendations. In order to limit the extent of the work, the second chapter omits a more extensive examination of the current studies. Also, for the same reason, the theoretical foundations of film application and the practical teaching suggestions were not provided in a more detailed manner.

Further, the research conducted for this paper's presentation of the current state of research in the second chapter reveals, among other things, that there are only few studies on the use of fairy tale films in German as foreign language instruction. Taking this into account, special consideration could be given to the design of large-scale studies on this topic to address this research gap. For example, *Cinderella* has been adapted for film in many countries. On this basis, an empirical study could compare the use of the *Cinderella* film adaptations produced in Germany (2011), Turkey (1971), and the United States (2015) in German classes with Turkish students. The information given in the third and fourth chapters of the paper could serve as the initial foundational elements in this respect. Moreover, this could promote the application of tertiary language didactics in Turkey, enhancing the quality of the country's German education.¹⁶ This goal should ideally be accomplished by simultaneously incorporating the linguistic and cultural elements of German, Turkish, and

¹² The film is available at <https://www.daserste.de/checkeins-kinder/maerchenfilm/videosextern/aschenputtel-112.html>

¹³ The lesson opening suggested by Lundquist-Mog (2012: 44) (task 1) could inspire this.

¹⁴ For more details on the importance of intercultural learning in the context of teaching German as a foreign language, see Tapan (1995).

¹⁵ For an example of the contrasting viewpoints on German and Turkish fairy tales in formal terms (and in relation to supernatural phenomena), see Obruk Canpolat's (2018) study.

¹⁶ On the significance of implementing the tertiary language didactic concept in Turkey based on the language constellation German after English, see Polat and Tapan (2010: 101f.).

English into the design of German lessons. In addition, examining the literary text structure of the fairy tale genre would be emphasized more with such a film didactic approach. Apart from that, the various interpretations of *Cinderella* are currently a fascinating study area. For example, Lopez (2015) approaches the narrative from a feminist perspective in her children's picture book *Vegetarian Cinderella*. Such viewpoints, which deviate from the traditional structure of the fairy tale, could be discussed with Turkish learners of German in relation to its film adaptation.¹⁷ By doing so, teaching could be made more interesting and motivating. In this context, it is essential to note that, in addition to developing listening skills, other skills, like reading and writing, could also be improved in combination with the utilization of the film. Since the medium of film could be characterized as image-assisted audio material, the development of audiovisual reception would be recommended as another significant component of future research.¹⁸

Abstract: Banks, the most significant financial institution in the world, are the main ones responsible for the progress of a country's major economic progress and at the same time for potential local and worldwide financial crises. These financial institutions contribute to a country's economic development through their main weapon, credit. The rate of growth in non-performing loans relative to total loans is one of the troubling issues for the economy of these countries as it reveals the rising insolvency for businesses and individuals and poses the whole system at risk, and eventually a whole country. This paper consists of the analysis of non-performing loans for Central and Eastern European countries. The aim of this study is to determine the variables, mainly from a macroeconomic perspective, that affect the nonperforming loans of commercial banks in CEEs from 2000 to 2020. The independent variables chosen are the rate of growth of GDP, inflation, unemployment rate, and the Return on Assets. To achieve this purpose multiple regression is performed and empirical findings reveal that GDP growth and ROA negatively impact the level of NPLs; whereas, inflation and unemployment are found to be insignificant for the period considered.

Keywords: credit risk, nonperforming loans, commercial banks; macroeconomy; regression.

JEL Classification: C5, E5, G2, and G21

1. INTRODUCTION

Financial institutions have faced difficulties for a variety of reasons over the years, but one of the main causes of problems for banks is directly related to poor borrowers' standards, poor credit risk management, and a series of economic problems that are not addressed and lead to a continuous deterioration of lending in banks. Proper and efficient management of credit risk is a very important component for the long-term success of financial institutions.

CEE countries include the countries located in Central Eastern and South Eastern Europe as well as the Balkans. The term CEE means their inclusion in the Eastern bloc as former communist countries. In the last decade of the 20th century, most of the countries of Central and Eastern Europe began to take a leap of development in their banking systems. After breaking away from communism, the measures taken for development have led to considerable similarities between most of the countries in this region.

It is known that for banks, loans are their biggest financing. Regardless of how skilled the bankers are to manage the asset, and liability or to manage the capital adequacy of a bank, they will be failures if these bankers are not skilled to manage credit risk. Banks are interested in carrying out the lending process, but not always the lending process can be seen as a process that generates income, this is due to the fact that banks are always exposed to the risk of loan default. There are many problems that banks the second they can face when they fail to collect the loans they have approved. The process of a personal banker in granting a loan does not end in its approval, but his process continues in the collection of this loan. Credit risk is determined by the fact that the debtor will not be able to pay the principal and interest according to the terms specified in the loan agreement. Credit risk means that these payments may be delayed or not paid at all. Despite major developments that have been done over the years in the banking and financial services sector. Credit risk remains the main and major cause of bank failure since more than 80% of a page of the balance sheet of these banks is related to risk management. There are three main types of credit: 1) Consumer or individual risk 2) Business or corporate risk 3) Country or sovereignty risk.

Financial institutions use two important techniques to reduce credit risk: risk diversification and credit analysis. Risk management in the bank defines the whole set of risk management processes and models that enable banks to implement risk-based policies and practices. They cover all the management techniques and tools

required to measure, monitor and control risks. The spectrum of models and processes extends to all risks: credit risk, market risk, interest rate risk, liquidity risk, and operational risk, to name just the main areas.

2. LITERATURE REVIEW

According to several studies conducted in relation to problem loans, different analysts have linked the level of problem loans directly to two types of factors: macroeconomic factors and banking factors. Keeton and Morris (1987) examined 2470 banks in the US to understand the changes in the level of loans from one bank to another. According to them, some banks have large losses as a result of chance, while others have mismanagement. Of the lending process, on the other hand, some banks have had the opportunity to create well-diversified portfolios, which have helped these banks maintain a low lending risk. Rinaldi and Tanaskovic and Jandric (2015) found that low debt and high house prices are associated with a lower ratio of non-performing loans. Nkusu (2011) did a study using data for a small number of countries with few variables and noticed that the decrease in the level of unemployment and the increase in the level of tv GDP are accompanied by a decrease in non-performing loans for a short-term period. Nikolaidou and Vogiazas (2012) researched the determinants of non-performing loans in the Romanian banking system and concluded that macroeconomic variables such as inflation, the unemployment rate, and the country's external debt to GDP affect credit risk. According to Louzis et al (2012) and according to Klein (2013) the quality of loans can be explained by macroeconomic variables. They studied data from several Central and Eastern European countries to understand the behavior of non-performing loans using macroeconomic factors and banking factors. Staehr and Uusküla (2017) found that macroeconomics plays a very important role in predicting future developments in non-performing loans. They analyzed the impact of GDP growth, inflation, the unemployment rate, current account balance, and real house prices in non-performing loans of EU countries. GDP growth, which has an inverse relationship with NPL-s, is one of the most important variables influencing NPL-s. GDP growth, inflation, debt, and unemployment. However, the first three have the same inverse association with NPL-s, but unemployment has a positive relationship in Western Europe and a negative relationship in Central and Eastern Europe, presumably reflecting differences in the business cycles in the two areas. Khemraj and Pasha (2009) saw a negative impact on GDP due to high-interest rates.

In a research on the Czech banking system, Kjosevski and Petkovski (2021) discovered a negative association between NPLs and GDP growth and inflation, but a positive relationship with unemployment. Bogdan (2017) discovered that the predictors of bad loans in Central and Eastern European banks include the GDP growth rate (%) and inflation rate with a negative influence, and the unemployment rate, with a positive effect. Leka, Bajrami, and Duci (2019) discovered that GDP growth had the strongest inverse association with NPL in a study of ten transition nations in Central and Eastern Europe. Gozgor (2013) observed a negative association between GDP increases and NPL ratio, as well as a positive relationship between foreign currency loans ratio, exchange rate level, and NPL ratio in a study of selected CEEC and SEE countries including Albania. A variety of micro, domestic variables impacting bad loans are identified, most of which are connected to financial performance indicators: bank profitability and loan loss reserves to total loans. An increase in banking performance, i.e. an increase in ROA, leads to a decrease in the level of non-performing loans, on the other hand, an increase in the level of inflation and unemployment leads to an increase in the level of non-performing loans, while an increase in GDP leads to a decrease in non-performing loans (Furuoka & Munir, 2014). Bushi's (2016) study, regarding Credit Risk in commercial banks, concludes that banks are 77.4% maximally oriented towards reducing problem loans and speeding up legal procedures for accounting transition to the collateral asset. Hoda (2019) states that the low power of macroeconomic factors to explain the fluctuations of NPLs can be due to various causes. NPL ratios are non-stationary indicators. When we use monthly series changes, we lose a lot of data. A possible solution is to use vector error, correction models.

3. METHODOLOGY

In order to achieve the objectives of this paper, data processing is done through quantitative methods and the statistical program Eviews 10, so that the data obtained in the study for the years 2000 - 2020 are processed as accurately as possible. We test the impact of macroeconomic variables such as GDP growth, inflation, unemployment rate, and ROA on the level of non-performing loans. Most research works use these variables despite the fact that there are many other variables that affect the level of non-performing loans in these countries.

Regression analysis is one of the most important econometric modeling analyses. This analysis is used to describe and analyze the relationship between a certain variable (dependent) and one or several other variables (independent or explanatory), that is, it explains the changes in the dependent variable, based on the changes in one or more variables of independent. The multiple regression model that will be built in this paper is as follows:

$$npl = \beta_0 + \beta_1gdpgr + \beta_2inlf + \beta_3unempl + \beta_4roa + \epsilon$$

So, the built model is a regression model with five variables, one dependent and four independent ones. The research question of this study is as follows:

To what extent are nonperforming loans affected by macroeconomic and performance indicators?

In order to give an answer to this question, the following hypotheses are raised:

H₁: GDP growth has a negative impact on NPLs.

H₂: Inflation has a positive impact on NPLs.

H₃: The unemployment rate has a positive impact on NPLs.

H₄: ROA has a negative impact on NPLs.

4. ANALYSIS OF RESULTS

Our research aims to examine the relationship between the independent variables GDP growth, Inflation level, Unemployment rate, Return on assets, and the dependent variable Nonperforming Loan. In this part, the analysis of factors influencing bad loans will be presented. These factors were subjected to descriptive analysis, correlation analysis, and panel multiple regression analysis. The aforementioned analyzes and their results are presented below.

Variable	Coefficient	t-Statistic	Prob.
C	5.112549	2.271477	0.0247
GDP_GROWTH	-0.249383	-2.08278	0.0391
INFLATION_RATE	-0.060382	-0.826336	0.4101
UNEMPLOYMENT	0.306515	1.260266	0.2097
ROA	-0.595219	-2.205675	0.0291
R-squared	0.69389	F-statistic	9.944666
Adjusted R-squared	0.624115	Prob(F-statistic)	0.000

The coefficient of determination ($R^2=0.69$) shows that the independent variables in the regression explain 69% of the change in the dependent variable, i.e. the level of problem loans. Regarding the statistical significance of the econometric model, we get the probability $p = 0.000$, which confirms that the model is statistically significant since we have a high value of F and a fairly small probability, lower than 0.05.

Data for GDP growth show that a 1% increase will bring about a 24% decrease in NPLs. In the model, this variable is statistically significant and has an indirect relationship. Hence H₁ is accepted. This conclusion is observed in the study as with the increase in GDP, the welfare of the society increases, in this way the ability to pay for loans increases.

Also, ROA is statistically significant with an indirect relationship. A 1% increase in ROA will lead to a 59% decrease in NPL. Therefore H₄ is accepted. Return on assets (ROA): measures how efficiently a company uses the firm's assets to generate operating profits. ROA also measures the total return to all capital providers (debt and equity). For banks, this factor is very important, this is also noticed in the results of the study.

Inflation and unemployment rate regardless of the sign resulted to be insignificant for the period considered. Hence, H₂ and H₃ are rejected.

5. CONCLUSIONS

The analysis and management of bank credit risk is a very important process that aims to minimize the creation of a high-quality credit portfolio, giving the banking business the opportunity to be successful. Banks in Central, Eastern, and South-eastern Europe see increasing demand for credit while credit standards have been tightening, particularly on loans to smaller companies and corporates. Different studies on problem loans have presented different variables as influencing factors. In this study, we tried to identify the macroeconomic and banking variables that can affect the level of non-performing loans for Central and Eastern European countries. Throughout the paper, we built an econometric model, which investigated the relationship between the independent variables: GDP growth, inflation level, unemployment rate, return on assets, and the dependent variable: problem loans. The results show that the increase in GDP has a positive impact on the reduction of non-performing loans, on the other hand, the increase or decrease in the level of unemployment and the increase in inflation were found to have no significant effect on the level of non-performing loans. Among the banking factors that were examined was the return on assets and it turned out that the increase in the ROA of the banks of these countries leads to a decrease in the level of non-performing loans.

Özet: Büyük Buhran sonrası dönemde, ekonomi politikalarında planlama faaliyetleri ön plana çıkartılmıştır. Böylece iktisadi planlama, özellikle az gelişmiş ve gelişmekte olan ekonomilerin kalkınma politikaları açısından önemli hale gelmiştir. Sektörel düzeyde iktisadi planlama, endüstriler arası bağımlaşma kavramını ön plana çıkarmaktadır. Girdi-çıkı analiz, sektörler arası bağımlaşma ilişkisini niceliksel olarak ortaya konmasını sağlamaktadır. Bu çalışmada öncelikli olarak, dairesel akış diyagramından günümüze girdi-çıkı analizinin tarihsel süreçteki gelişimi vurgulanmaktadır. Modelin teorik ve matematiksel yapısının ortaya konulduğu çalışmada, miktar çözümünün ile karşılaştırmalı-durağan analizinin nasıl gerçekleştiği aşamalı bir şekilde ifade edilmektedir.

Input-Output Analysis: Historical Development, Theoretical and Mathematical Structure

Abstract: Economic policies brought planning activities to the forefront after the Great Depression. As a result, economic planning has become an increasingly important component of development policies for underdeveloped and developing countries. Inter-industry dependency is at the core of economic planning at the sectoral level. Using input-output analysis, it is possible to quantify the correlation between sectors. In this study, the historical development of input-output analysis is discussed from the circular flow diagram to the present day. A stage-by-stage description is given in the study, which reveals the theoretical and mathematical structure of the model and how the quantitative solution and the comparative-stationary analysis are achieved.

Keywords: Input-Output Analysis, Comparative-Static Analysis

* Bu çalışma Ege Üniversitesi Sosyal Bilimler Enstitüsü, İktisat Anabilim Dalı Doktora Programı'nda savunulan "Kırgız Cumhuriyeti ekonomisi için sektörler arası bağımlaşmanın zaman içerisindeki değişimi" isimli tezden türetilmiştir.

Finansal Şeffaflık: Nedir, Ne Değildir? Genel Bir Değerlendirme

Cumhur ŞAHİN¹

¹ Doç. Dr., Bilecik Şeyh Edebali Üniversitesi Bozüyük Meslek Yüksekokulu Bankacılık ve Sigortacılık Programı,
cumhur.sahin@bilecik.edu.tr, ORCID: 0000-0002-8790-5851

Özet: 2000' li yılların başlarında ayyuka çıkan, özellikle Enron, Arthur Andersen gibi muhasebe skandallarından dolayı, yatırımcıların gerek finansal piyasalara ve gerekse de muhasebecilik endüstrisine karşı itimadı radikal bir biçimde sarsılmıştır. Ortaya çıkan skandalların akabinde, yatırımcılar açısından, firmaların çok daha şeffaf bir biçimde finansal raporlama yapması ve denetçilerin daha etik hareket etmesi zarureti doğmuştur. Şeffaflık ya da eş anlamlısı olarak saydamlık sözcüğü aleniyet, bir nesne veya olgunun göz önünde olması, berraklık, anlaşılır olmak manasına gelmektedir. ABD'de 1970'li ve 1980'li yıllarda ortaya çıkan, 1990'lı yıllarla birlikte ABD dışındaki ülkelerde de yaygınlaşmaya başlayan kurumsal yönetimin temel ilkelerinden biri olan şeffaflık kavramı, yatırımcı haklarının korunması ve kamu güveninin kazanılması için bir ihtiyaçtan öte zorunluluktur. Finansal şeffaflık ise firmanın finansal tabloları, denetim raporları ve benzeri dışsal raporlar ile bütçe, muhasebe yönergesi gibi destekleyici ya da tamamlayıcı belgelerin ve bilgilerin kamuya açık olması olarak tanımlanabilir. Bu çalışmada finansal şeffaflık kavramı hakkında genel bilgiler verilmek suretiyle bir bakış açısı ortaya konmaya çalışılmıştır.

Anahtar Kelimeler: Finansal şeffaflık, Hesap verebilirlik, Kurumsal yönetim

Financial Transparency: What It Is And What It Isn't? A General Evaluation

Abstract: Due to the accounting scandals especially such as Enron, Arthur Andersen in the early 2000s which smelt to heaven, trust of the investors to the financial markets and the accounting industry had been radically shaken. Soon after the scandals that had happened, from the perspective of investors, an obligation had emerged for firms to do financial reporting much more transparent and for auditors to act more ethically. The word "transparency" or, as a synonym, "lucency" means publicity, an object or phenomenon being in sight, clarity, being intelligible. The concept of transparency, which is one of the basic principles of corporate governance that emerged in the USA in the 1970s and 1980s and started to become widespread also in countries outside the USA with the 1990s, is a necessity rather than a need for protecting investor rights and acquiring public trust. "Financial transparency", on the other hand, can be defined as the public availability of financial statements, audit reports and similar external reports, as well as supporting or complementary documents and data such as budget, accounting directive. In the present study, the purpose was to present a perspective in this respect by providing general information on the concept of "financial transparency".

Özet: Bu çalışmada tüketicilerin organik gıdalara yönelik tutumları güvenilirlik, sağlık, kolay erişim, fiyat, tanıtım, marka, kalite ve statü gibi temel belirleyici değişkenlere göre ortaya koyulmuştur. Bu araştırmanın birincil verileri araştırma kapsamına alınan İzmir ilindeki 150 tüketici ile Google Forms ile internet üzerinden yapılan anketlerden elde edilmiştir. Tüketicilerin organik gıda ürünleri konusundaki tutumlarını değerlendirmek amacı ile beşli Likert Ölçeği ile sunulan çeşitli önermeler kullanılmıştır. Katılımcıların en çok katıldığı üç önerme denetim, sağlık ve organik gıda ürünlerine kolay erişim üzerine olmuştur. Katılımcıların organik gıda satın alımında gördüğü en önemli sorunlar sırasıyla; organik ürünlerin fiyatının yüksek olması, satış noktalarının yetersiz olması ve ürünlerin üretim sürecine olan güvensizliktir. Organik ürünlerde arzın artırılması, birim maliyetlerin düşürülmesi, organik ürün pazarlarının tüm ülke genelinde yaygınlaştırılması ve üretim sürecinde tüketicilere güven verecek bir denetim mekanizmasının oluşturulması için politika stratejilerinin oluşturulması önemli görülmektedir.

Özet: Bu çalışmanın temel amacı tüketicilerin organik gıda tercihlerinin sosyo-ekonomik değişkenlere göre değişip değişmediğini ortaya koymaktır. Çalışmanın birincil verileri İzmir’de farklı ekonomik ve sosyokültürel yapıya sahip toplam 150 tüketici ile çevrimiçi yapılan anketlerden elde edilmiştir. Tüketicilerin organik gıda ürünlerine yönelik tercihlerini etkileyen faktörleri değerlendirmek amacı ile beşli Likert Ölçeği kullanılmıştır. Cinsiyet, medeni durum, eğitim, hanehalkı büyüklüğü, yaş ve gelir grupları gibi sosyo-ekonomik özellikler ile tüketicilerin organik gıda tercihlerini etkileyen olası faktörler arasında anlamlı bir fark olup olmadığını belirlemek amacıyla Mann-Whitney U ile Kruskal Wallis H testleri uygulanmıştır. Tüketicilerin organik gıda tercihlerinde öne çıkan en önemli üç faktör sırasıyla; sağlıklı koşullarda üretim, ürünlerin kimyasal madde içermemesi ve ürünlerin kaliteli olması şeklinde belirlenmiştir. Elde edilen bulgular, tüketicilerin organik gıda tercihlerini etkileyebilecek olası faktörlere verilen önem düzeyinin sosyo-ekonomik değişkenlere göre değişiklik gösterdiğini, ancak temelde çok önemli bir farklılık olmadığı sonucunu ortaya koymaktadır.

²ÇOMU, Ziraat Fakültesi, Tarım Ekonomisi Bölümü, selmakayalak@comu.edu.tr, ORCID: 0000-0002-1317-5227

Özet: AB mevzuatlarına uyum sağlanması ve mevzuatların uygulanabilmesi için gerekli altyapının oluşması için 2007 yılında Tarım ve Kırsal Kalkınmayı Destekleme Kurumu (TKDK) kurulmuştur. TKDK aracılığı ile uygulanan, Katılım Öncesi Mali Yardım Aracı Kırsal Kalkınma Bileşeni IPARD (Instrument for Pre-Accession Assistance Rural Development) Programı ile AB fonlarının kırsal kalkınmada kullanımı sağlanmaktadır. Bu fonların kırsal kalkınmanın gerçekleşmesinde etkin bir şekilde kullanılması, bölgesel ölçekte kırsal kalkınmaya, ulusal ölçekte ekonomik kalkınmaya ve gelir dağılımı dengesinin oluşmasına önemli katkılar sağlamaktadır.

Kalkınma sorunu özellikle kırsal kalkınma, Türkiye gibi gelişmekte olan ülkelerin önemli sorunlarından. Türkiye’de kırsal alanlarda yaşayan insanların neredeyse tamamı tarımsal faaliyet ile uğraşmakta olduğu için kırsal kalkınma ile tarım bütünleşmektedir.

Bu çalışmada, Çanakkale ilinde IPARD programı kapsamında çiftlik faaliyetlerinin çeşitlendirilmesi ve geliştirilmesi fonundan yararlanan işletmelerin sosyoekonomik profillerinin belirlenmesiyle, fonların kırsal ve tarımsal kalkınmada kullanıcı profilinin ortaya konularak, gelecekte kullanıcı profili değerlendirmelerinin sağlıklı yapılmasına yardımcı olmayı amaçlamıştır.

Çanakkale TKDK İl Koordinatörlüğü’ne bağlı çiftlik faaliyetlerinin çeşitlendirilmesi ve geliştirilmesi fonundan yararlanan 46 işletme ile anket çalışması yapılmıştır. Çanakkale TKDK İl Koordinatörlüğü’nden çiftlik faaliyetlerinin çeşitlendirilmesi ve geliştirilmesi fonundan yararlanan işletmelerin sosyoekonomik profillerinin belirlenmesi, başvuru ve uygulama süreçlerindeki sorunların tespiti ve bu desteklemelerin bölge için yarattığı ekonomik katkının ortaya konulmasıyla desteklemeler şekillenecek ve desteklemelerin sosyal ve ekonomik etkinliğinin artması için düzenlemeler yapılabilecektir. İşletmelerin, uyguladıkları projeler sayesinde büyüme performanslarına bakıldığında; satış miktarları, nakit akışları, karlılıkları, firma tanınırlıkları, teknoloji kullanım düzeyleri, yerel ekonomiye katkıları ve müşteri sayıları IPARD projelerinden sonra artış göstermiştir. IPARD projeleri ile işletmelerin; cirolarında, üretim miktarlarında, kullanılan hammadde girdi miktarlarında, kapasite kullanım oranlarında, birim maliyetleri ve işletme giderlerinde artış görülmektedir. Ancak işletmede çalışan personel sayılarında değişiklik olmamıştır.

Anahtar Kelimeler: IPARD II, Çanakkale, Kırsal Kalkınma

Katılımcı Demokrasinin Bir Aktörü Olarak Vatandaş ve Katılım Süreçlerindeki Sorumlulukları

Dr. Öğr. Üyesi. Miray ÖZDEN¹

¹Tekirdağ Namık Kemal Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu, Yerel Yönetimler,
mirayozden@nku.edu.tr, ORCID: 000-0001-7998-9699

Özet: Katılımcı demokrasi, esasında temsili demokrasinin neden olduğu krizin önüne geçebilmek için ortaya atılmış bir fikirdir. Temsili demokrasinin, seçkin bir anlayışa doğru evirildiği ve yönetimde belirli grupların temsiliyetinin sağlandığı, bu sebeple de seçimlere katılım oranlarının düştüğü eleştirilerine istinaden çözüm yolu olarak sunulmuştur. Katılımcı demokrasinin toplumsal eşitsizliğin önüne geçebilme ve sivil toplumu harekete geçirme idealizmi bir bakıma, demokrasinin çözüm alanı olarak görülmüştür. Bu aşamada demokratik sürecin zeminini genişletebilmek, vatandaşın da dâhil edildiği yeni modern varsayımların devreye girebilmesinin başarısına bağlı kılınmıştır. Katılımcı demokraside vatandaşın bir aktör olarak önemli bir konuma sahip olması, demokrasinin sürdürülebilir ve uygulanabilir olmasına katkı sağlamaktadır. Katılımcı demokrasiyi savunanlar, etkin bir vatandaş katılımının sadece daha iyi karar vermeye neden olmakla kalmayıp, aynı zamanda topluluk hissi ve toplu karar alma sürecini geliştirerek yönetim sürecinin kabul ve saygısını arttıracak ve böylelikle toplumsal istikrarı kolaylaştırdığını iddia etmektedir. Bu maksatla çalışmada öncelikle katılımcı demokrasinin temel dinamikleri tartışılacak ve katılımcı demokrasi sürecinde etkin olan aktörlerden vatandaşın yeri ve önemi aktarılacaktır. Çalışma içerisinde örnek vatandaş katılım uygulamaları da, katılımcı süreçler açısından değerlendirilecek ve vatandaşların katılım süreçlerinde üstlenmesi gereken rollere ilişkin değerlendirmeler yapılacaktır.

Anahtar Kelimeler: Katılımcı demokrasi, Vatandaş, Katılım Uygulamaları

Citizens as an Actor of Participatory Democracy and Their Responsibilities in Participation Processes

Abstract: Participant democracy is essentially an idea put forward to prevent the crisis caused by representative democracy. It is presented as a solution to the criticism that representative democracy has evolved into an elitist understanding, where certain groups are represented in governance, and therefore, voter turnout has decreased. The idealism of participant democracy to prevent social inequality and mobilize civil society has been seen as a solution for democracy in a sense. At this stage, it is dependent on the success of expanding the democratic process and introducing new modern assumptions that involve citizens. In participant democracy, the significant role of citizens as actors contributes to the sustainability and applicability of democracy. Advocates of participant democracy argue that effective citizen participation not only leads to better decision-making but also improves the sense of community and the collective decision-making process, increasing acceptance and respect for governance processes and facilitating social stability. For this purpose, the basic dynamics of participant democracy will be discussed in this study, and the importance of citizens as actors in the participant democracy process will be conveyed. Sample citizen participation practices will also be evaluated in terms of participant processes, and assessments will be made regarding the roles citizens need to undertake in the participation process.

Keywords: Participatory Democracy, Citizenship, Participation Methods.

Davranışsal Boyuttan TCMB'nin Enflasyonla Mücadele Politikasına Bir Bakış

Dr. Öğr. Üyesi Nalan KANGAL¹

¹Tokat Gaziosmanpaşa Üniversitesi, Almus MYO, Sosyal Güvenlik Programı, nalan.kangal@gop.edu.tr

Özet: İktisadi faaliyetler farklı deneyimlere dayalı tecrübeler sonucunda şekillenmekte ve bir davranış haline dönüşmektedir. İktisadi tercihleri ve bunun sonucunda ortaya çıkan davranışları şekillendiren temel unsur sebep sonuç ilişkilerine dayanan inanışlardır. Zira bu inanışlarla şekillenen iktisadi davranışlar iktisadi sorunların çözümünde de referans çıkış noktası olmaktadır. Makro iktisadın önemli sorunlarının başında gelen enflasyon, politika yapıcılarının bu sorunun çözümünü diğer sorunlara göre daha öncelik vermekte ve bu sorun çözülmeden iktisadi hedef olarak sürdürülebilir bir büyüme hedefine ulaşmanın zor olacağı düşünülmektedir. Bu kabullenışten hareketle merkez bankalarının çoğu fiyat istikrarını iktisat politikalarının temel amacı olarak görmektedir.

Türkiye Cumhuriyet Merkez Bankası (TCMB)'da 4651 sayılı Merkez Bankası kanunu kapsamında fiyat istikrarını para politikasının temel amacı olarak görmüş ve bu kapsamda TCMB aldığı kararların bu temel hedefle çelişecek kararlar olmaması gerektiği düşünülmüştür. Pandemi ile başlayan Türkiye'nin karşılaştığı yüksek enflasyon olgusu para politikası uygulamalarında yeni bir paradigmanın başlamasını neden olarak enflasyonla para politikası aracı olarak politika faizi arasında sebep sonuç tartışmasını gündeme getirmiştir.

Bu konuda literatüre hâkim olan görüşlerden birisi enflasyonun artması nedeniyle faiz oranlarını artırması gerekliliğini savunan görüş (Fisher Eşitliği) diğeri ise faiz oranlarının artması sonucunda enflasyonun arttığına dair görüştür (Neo-Fisheryan). Bu görüşler çerçevesinde TCMB önce enflasyondan faiz oranlarına bir nedensellik ilişkisini referans alarak para politikasına yön vermiş daha sonra faiz oranlarından enflasyona doğru bir nedenselliğin olduğu düşünülerek yüksek enflasyon karşısında düşük faiz politikası uygulamaya başlamıştır. Bu durum TCMB'nin fiyat istikrarı yanında örtülü bir büyüme ve istihdam hedefinin ortaya çıktığını ancak bu durum nihai hedef olan fiyat istikrarı ile uyumlu olmadığı anlaşılmaktadır. Bu çalışmanın amacı; TCMB'nin enflasyonla mücadele politikasında karar alıcıların davranışlarını etkilemeye yönelik politika tercihleri ile ilgili bir değerlendirme yapmaktır. Bu noktada araştırmanın sonucu; TCMB enflasyonla mücadele politikalarında başarılı olabilmek için ya piyasa aktörlerinin inançlarını değiştirecek ve iktisadi karar alıcıların değişen inançlara göre davranmasını ya da TCMB geleneksel inançların gereğini yaparak iktisadi karar alıcıların beklenen şekilde davranmasına yönelik politika takip etmesi gerekliliğini ortaya koymaktadır.

Anahtar Kelimeler: Enflasyon, Merkez Bankası, Para Politikası, Fisher Eşitliği

A Overview From The Behavioral Dimension To The Cbrt's Fighting Inflation Policy

Abstract: Economic activities are shaped as a result of experiences based on different experiences and turn into a behavior. Beliefs based on cause and effect relationships are the main elements that shape economic preferences and the resulting behaviors. Because the economic behaviors shaped by these beliefs are also the starting point of reference in the solution of economic problems. Inflation, which is one of the most important problems of macroeconomics, gives priority to the solution of this problem compared to other problems, and it is thought that it will be difficult to reach a sustainable growth target as an economic target without solving this problem. Based on this acceptance, most of the central banks see price stability as the main objective of their economic policies.

The Central Bank of the Republic of Turkey (CBRT) also considered price stability as the main objective of monetary policy within the scope of the Central Bank Law No. 4651, and in this context, it was thought that the decisions taken by the CBRT should not be inconsistent with this basic objective. The phenomenon of high inflation, which started with the pandemic, has led to the start of a new paradigm in monetary policy practices, and has brought up the cause-and-effect debate between inflation and the policy rate as a monetary policy tool.

One of the views dominating the literature on this subject is the view that argues that interest rates should increase due to the increase in inflation (Fisher's Equation), and the other is the view that inflation increases as a result of the increase in interest rates (Neo-Fisheryan). Within the framework of these views, the CBRT first guided its monetary policy by taking a causal relationship from inflation to interest rates as a reference, and then, considering that there was a causality from interest rates to inflation, it started to implement a low interest policy in the face of high inflation. This situation reveals that the CBRT has an implicit growth and employment target besides price stability, but this situation is not compatible with the ultimate goal of price stability. The aim of this study; It is to make an assessment about the policy choices of the CBRT to influence the behavior of decision makers in the fight against inflation. At this point, the result of the research; In order to be successful in anti-inflation policies, the CBRT reveals that it is necessary to either change the beliefs of the market actors and act according to the changing beliefs of the economic decision makers, or the CBRT must follow traditional beliefs and follow a policy for the economic decision makers to behave in the expected way.

Endüstri 5.0 ve Toplum 5.0

Doç. Dr. Nihat Kamil ANIL¹

Öğr. Gör. Ayşe ANIL²

¹Kırklareli Üniversitesi / Vize MYO, nka@klu.edu.tr, ORCID: 0000-0002-2816-1450

²Kırklareli Üniversitesi / Vize MYO, ayse.anil@klu.edu.tr, ORCID: 0000-0002-4983-0692

Özet: Gerçekleşen sanayi ve toplum devrimleri gerek üretim gerekse de toplumlar için önemli değişimleri beraberinde getirmiştir. Endüstri 5.0, teknoloji ve üretim süreçlerinin otomasyonunun üretim sektörlerinde daha da ilerlemesiyle birlikte gelişen sanayi devrimidir. Sadece üretim sektörü ile sınırlı olmayıp diğer tüm sektörlerde de bir dönüşüm yaratmıştır. bu dönüşümde odak noktası insandır. İnsan fikir, beceri, yetenek ve kabiliyetlerinin üretim sürecinde daha aktif katılımı ve önemli roller üstlenmesi gerektiğini vurgulamaktadır. Toplum 5.0, teknolojinin kullanımını ile insanların ihtiyaçlarının karşılanması ve yaşam kalitesini artırmayı hedefleyen bir sosyal dönüşüm süreci- devrimdir. “Süper Akıllı Toplum” olarak da adlandırılan Toplum 5.0, Endüstri 4.0 ve 5.0’ın sunduğu teknolojik gelişmelerden ve sağladığı faydalardan kaynağını almaktadır. Bir diğer değişle Toplum 5.0 her iki endüstri devriminin bileşkesidir. Akıllı robotlar sayesinde toplum sağlığını bozmayacak çevre ile uyumlu üretim dengeleri kurulması odak noktasıdır. Amacı insan merkezli, refah içinde yaşayan bilgi toplumunun oluşturulmasıdır. Siber alan ile fiziksel alandaki verilerin birleştirilmesi sayesinde gelecekte oluşabilecek sorunları önlemesi, daha demokratik, mutlu, eşitlikçi, katılımcı, barışçıl bir toplum yapısı ve daha yüksek refah ve yaşam standartları hedeflenmektedir. Çalışmamızda ilk olarak endüstri devrimleri, ikinci olarak toplumsal devrimlere değinilmektedir. Ardından Endüstri 5.0 ve Toplum 5.0 arasındaki fark ve benzerliklere değinilmekte ve uygulama örneklerine yer verilmektedir.

Anahtar Kelimeler: Endüstri 5.0, Toplum 5.0, Türkiye, Endüstriyel ve Sosyal Devrim

Kişilik Özellikleri ve Beklentiler: Gençlerin Tasarruf Davranışı Üzerine Bir İnceleme

Arş. Gör. Özge Selvi KHAZAEI¹

Prof. Dr. Devrim DUMLUĞAĞ²

¹Tekirdağ Namık Kemal Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, Maliye Bölümü, osyavuz@nku.edu.tr, ORCID: 0000-0001-7369-3395

²Marmara Üniversitesi, İktisat Fakültesi, İktisat Bölümü, dumludag@marmara.edu.tr, ORCID: 0000-0002-4366-2317

Özet: Bu çalışma Beş Faktör Kişilik Özellikleri ve geleceğe yönelik beklentilerin gençlerin tasarruf davranışı üzerindeki etkisini araştırmaktadır. Gençlerin tasarrufları ile ilgili literatürdeki az sayıdaki araştırma genellikle finansal okuryazarlık ve ekonomik sosyalizasyonun etkilerine, birkaç çalışma ise öz kontrol ve gençlerin varlık inşa etmeleri arasındaki ilişkiye odaklanmıştır. Bilgimiz dahilinde kişilik özellikleriyle gençlik tasarruflarını araştıran yalnızca bir çalışma bulunmakta, beklentileri içeren bir çalışma ise bulunmamaktadır. Çalışmamız, gençlik tasarrufları literatürüne ekonomik sosyalizasyon etkisini kontrol ederek, kişilik özelliklerinin ve gelecekteki iş hayatı başarısına dair beklentilerin etkilerini dahil etmektedir. Kişilik özellikleri ve beklentilerin etkisi, Alman Sosyo-Ekonomik Panelinin Gençlik Modülü veri seti ve Genelleştirilmiş Sıralı Logit Modeli kullanılarak tahmin edilmiştir. Sonuçlar beş kişilik faktörünün de tasarruflar üzerinde en azından %10 anlamlılık düzeyinde etkili olduğunu göstermektedir. En yüksek etkiye sahip olan sorumluluk ve deneyime açıklık kişilik özellikleri %1 anlamlılık düzeyinde gençlerin tasarruf etme olasılığını pozitif yönde arttırmaktadır. Nevrotiklik ve dışadönüklük kişilik özellikleri beklenildiği gibi tasarruf etme olasılığını azaltmaktadır. Gençlerin gelecekteki iş hayatında başarılı olacaklarına dair olumlu beklentiler tasarruf etme ihtimalini artırırken, negatif beklentiler istatistiksel olarak anlamlı değildir. Çalışmamız kişilik özellikleri ve beklentilerin etkilerini özgün bir şekilde ortaya koyarken aynı zamanda gençlik tasarrufları literatüründe yaygın olarak kabul edilen ekonomik sosyalizasyonun etkilerini de doğrulamıştır.

Anahtar Kelimeler: Gençlik Tasarrufları, Beş Faktör Kişilik Özellikleri, Genelleştirilmiş Sıralı Logit

Emek Teorilerine Heterodoks Bir Yaklaşım

Saadet Yağmur KUMCU¹

Süleyman Emre ÖZCAN²

¹Öğr. Gör. Dr. Uşak Üniversitesi, Finans-Bankacılık ve Sigortacılık Bölümü

²Doç. Dr. Celal Bayar Üniversitesi, Salihli İİBF, İktisat Bölümü

Özet: Emek, kapitalist sistemin üretim modelinde, ücret geliri elde etmek ve bazı sosyal haklar sağlamak için kiralanmış bir güç olarak görülmektedir. İşgücünün üretim miktarının, elde edilen gelirin ve harcamalarının büyüklüğü; GSYH değeri olarak o ülkenin ekonomik gelişmişliğinin ve büyüklüğünün göstergesi olarak kabul edilmektedir. Bu çalışmada, büyüme göstergesinde yer alan işgücünün, ücretli ya da ücretsiz olmasına odaklanılarak, emek teorileri içinde kadın emeğinin değeri Heterodoks bir yaklaşımla analiz edilmiştir. Ev kadını olmayı tercih ettikleri için istihdam dışında kalan ev kadınları, sınırlı rasyonel bireyler olarak tanımlanmaktadır. Bu aşamada ücretsiz ev kadını emeği, emek üzerine yapılan ekonometrik ölçümlerde bir emek değişkeni olarak kavramsallaştırılmakta ve önerilmektedir. Teorik analizin son bölümünde ise emeğin ekonomik bir değer olduğu gerçeği cinsiyetten arındırılmaya çalışılmıştır.

Anahtar Kelimeler: Heterodoks ekonomi, emek, ev kadını emeği, ekonomik büyüme, GSYH

A Heterodox Approaches to Theories of Labor

Abstract: In the production model of the capitalist system, labor is seen as a hired force to earn wage income and provide some social rights. GDP value, which is the amount of production of the labor force, the size of the income and expenditures; It is accepted as an indicator of the economic development and size of that country. In this study, the value of women's labor within labor theories has been analyzed with a heterodox approach, focusing on whether the workforce, which is included in the growth indicator, is paid or unpaid. Housewives who are excluded from employment because they prefer to be housewives are defined as limited rational individuals. At this stage, unpaid housewife labor is conceptualized and suggested as a labor variable in econometric measurements on labor. In the last part of the theoretical analysis, the fact that labor is an economic value has been tried to be purified from gender.

Keywords: Heterodox economy, labor, housewives' labor, economic growth, GDP

Deprem Nedeniyle Kurumlara Yönelik Getirilen Ek Vergi Düzenlemelerinin Anayasal Vergileme İlkeleri Yönünden İncelenmesi

Dr. Öğr. Üyesi Selçuk TEKİN¹

¹Trakya Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, Maliye Bölümü, selcuktekin@trakya.edu.tr

ORCID: 0000-0003-2725-0651

Özet: Kahramanmaraş merkezli yaşanan deprem nedeniyle ortaya çıkan kamu finansman açığının giderilmesine yönelik olarak 7440 sayılı Bazı Alacakların Yeniden Yapılandırılması ile Bazı Kanunlarda Değişiklik Yapılmasına Dair Kanun'un 10'uncu maddesinin 27'nci fıkrası hükmü 12.03.2023 tarihi itibarıyla yürürlüğe girmiştir. Bu hükümle depremin yaşandığı 11 il ile Sivas İli Gürün İlçesi dışında bulunan kurumlar vergisi mükelleflerinden 2023 hesap döneminde verecekleri kurumlar vergisi beyannamelerinde yararlandıkları bazı istisna ve indirim tutarları ile indirimli kurumlar vergisi beyan eden mükelleflerden beyan ettikleri matrahları üzerinden ilgisine göre %5 ve/veya %10 oranında ek vergi alınması düzenlenmiştir. Getirilen bu yeni ek vergi düzenlemesi bir kısım kurumlar vergisi mükelleflerini kapsamadığı gibi bir kısım istisna ve indirimleri de içermemektedir. Yaşanılan deprem sebebiyle ihdas edilen ek verginin bir 'vergi' niteliğinde bulunması bir yanıyla verginin genelliği ilkesi gereği genel bütçe gelirleri içerisinde yer alacağından depreme tahsis edilebilmesi hususunda çeşitli kuşkular yaratmaktadır. Öte taraftan bu vergi gelirlerinden yerel yönetimlere pay verilmeyeceği gibi ek vergilerin uygulanmasına yönelik usul ve esasları belirleme yetkisinin Hazine ve Maliye Bakanlığı'na verilmesi de vergilendirme yetkisi açısından tartışılması gereken bir husus olarak ortaya çıkmıştır.

Ek verginin henüz beyanname verme dönemi gelmemiş ancak kapanmış geçmiş dönemlere ilişkin bulunması hususunun bir yandan geriye yürütülmemesi genel kuralı çerçevesinde bir yandan da içerdiği hükümler itibarıyla anayasal bazı ilkelere göre değerlendirilmesi gerekmektedir.

Çalışmamız, ek vergi düzenlemesinin anayasal vergileme ilkeleri ışığında incelenmesi amacını taşımaktadır.

Anahtar Kelimeler: Ek Vergi, Vergilendirme İlkeleri, Deprem

Online Anlık ve Hedonik Satın Alma Davranışlarında Ölüm Korkusunun Moderatör Rolü

Arş. Gör. Dr. Sevi BALOĞLU-SEVİNÇ¹

Dr. Öğr. Üyesi Mahmut Selami AKIN²

¹Tekirdağ Namık Kemal Üniversitesi, İİBF, İşletme Bölümü, sbaloglu@nku.edu.tr, ORCID: 0000-0001-8623-4251

²İstanbul Medipol Üniversitesi Sosyal Bilimler MYO, Pazarlama ve Reklamcılık Bölümü, selamiakin@medipol.edu.tr, ORCID: 0000-0002-8175-4618

Özet: Son yıllarda yaşanan COVID19 salgını ve doğal afetler beraberinde bireylerin ölüm korkusu başta olmak üzere, birçok psikolojik problemle karşı karşıya kalmalarına sebep olmuştur. Önceki çalışmalar tüketici davranışlarında ölüm kaygısının belirli etkilerini gözlemlemiştir (Rahimah vd., 2018; Partouche-Sebban, 2021). Dolayısıyla tüketicilerin duyduğu ölüm korkusunun davranışlarını nasıl şekillendirebileceği günümüzde önem kazanmıştır. Ölüm kaygısı taşıyan tüketicilerin satın alma karar süreci kısalabilmekte, bu durum durumsal faktörlerin tüketici üzerindeki etkisini artırabilmektedir. Diğer yandan, tüketiciler alışveriş eylemi aracılığıyla ölüm kaygısını azaltma ve ortadan kaldırma eğilimine girebilmektedir. Bununla birlikte, alışverişte zaman ve mekan kısıtlarının ortadan kalktığı e-ticaret platformlarında, hem tüketicilerin ürünlere erişebilirliği artabilmekte, hem de tüketiciler kolay ve hızlı bir şekilde alışveriş yapabilmektedir. Dolayısıyla online ortamda ölüm kaygısı taşıyan tüketiciler, irrasyonel satın alma davranışları sergileyebilmektedir. Anlık ve hedonik satın alma davranışları bu duruma örnek gösterilebilmektedir.

Çalışmanın amacı, ölüm korkusu duyan tüketicilerin internet üzerinden alışverişleri kapsamında anlık ve hedonik satın alma davranışlarını incelemektir. Bu bağlamda Teknoloji Kabul Modeli (TAM) temelinde geliştirilen araştırma modeline göre Algılanan kullanılabilirlik, algılanan kullanım kolaylığı ve yenilikçiliğin internetten satın almaya yönelik tutumu, internetten satın almaya yönelik tutumun ise anlık satın alma davranışı ve hedonik satın alma davranışını etkileyeceği öngörülmüştür. Ayrıca ölüm kaygısı ise internetten satın alma davranışı ile anlık ve hedonik satın alma davranışları üzerinde moderatör değişken olduğu öngörülmüştür. Çevrimiçi alışveriş yapan bireylerden veri toplanarak kurgulanan araştırma modelinin test edilebilmesi için ön koşul olarak cevaplayıcıların son 6 ayda çevrimiçi alışveriş yapmaları belirlenmiştir.

Anahtar Kelimeler: Anlık Satın Alma Davranışı, Hedonik Satın Alma Davranışı, Ölüm Korkusu, Teknoloji Kabul Modeli

İktisadi Büyüme Modelleri Kavramları Üzerine Bir İnceleme

Öğr. Gör. Dr. Seyfi AKTOPRAK¹

¹Trakya Üniversitesi/ Uzunköprü Meslek Yüksekokulu, Yönetim ve Organizasyon Bölümü,
seyfiaktoprak@trakya.edu.tr, ORCID: 0000-0003-4842-2424

Özet: İktisadi büyüme, her gelişmişlik düzeyindeki devletler açısından büyük bir önem arz etmektedir. Farklı iktisadi büyüme kuramlarında teknolojik ilerlemeye ve beşerî sermayeye farklı önemler belirlendiği yazında sıklıkla dillendirilmiştir. Teknolojik ilerleme ve beşerî sermayenin iktisadi büyümenin bir mühim bir aracı olarak ekonomik değişkenlerden etkilenmediğini, ancak uzun vadede iktisadi büyümenin esas belirleyicisi olduğunu savunan modelleri dışsal iktisadi büyüme modelleri olarak anılmaktadır. Yine içsel büyüme modeli ise iktisadi büyümeyi piyasa içinde faaliyet gösteren ekonomik birimlerin içsel olarak belirlendiğini görüşünü ortaya atmaktadır. Çalışmamız yukarıda sayılan modellerin temel kavramlarını tespit etmek amacıyla kaleme alınmıştır. Bu minvalde anılan teorilerin hangi kavramları öncelediğini ve bunlara nasıl anlamlar yüklediği sorusuna yanıt aranacaktır. Analiz için yukarıda sayılan modellerin temel eserleri veri olarak kullanılmıştır. Temel eserlerin Maxquda 2023 programı ile benzerlik matrisi, vaka modeli ve vaka modeli karşılaştırılması, sıklık ve kelime bulutu ile çözümlenecektir. Çalışmanın yol haritasında birinci bölümde giriş ve yöntem yer almıştır. İkinci kısımda ise iktisadi büyüme ve modelleri tanımlanmış ve temel nitelikleri bağlamında kısa bir değerlendirme yapılmıştır. Çalışmanın üçüncü bölümünde ise araştırmaya konu olan modellere ilişkin bulgular analiz edilmiştir. Sonuç kısmında ise tespit edilen bulgular değerlendirilmiş ve tartışılmıştır.

Anahtar Kelimeler: İktisadi büyüme, İçerik Analizi, İçsel ve Dışsal Büyüme Modelleri

An Analysis on the Concepts of Economic Growth Models

Abstract: Economic growth is of great importance for states at every level of development. It has been frequently mentioned in the literature that different economic growth theories place different emphasis on technological progress and human capital. Models that argue that technological progress and human capital are not affected by economic variables as an important tool of economic growth, but that they are the main determinants of economic growth in the long run are referred to as external economic growth models. Again, the endogenous growth model puts forward the view that economic growth is determined internally by the economic units operating in the market. Our study was written in order to determine the basic concepts of the models mentioned above. In this way, an answer will be sought to the question of which concepts the aforementioned theories prioritize and what meanings they attribute to them. The main artifacts of the above-mentioned models were used as data for analysis. The comparison of the main works with the Maxquda 2023 program with the similarity matrix, case model and case model will be analyzed by frequency and word cloud. In the roadmap of the study, the introduction and method are included in the first part. In the second part, economic growth and its models are defined and a brief evaluation is made in the context of its basic characteristics. In the third part of the study, the findings related to the models that are the subject of the research were analyzed. In the conclusion part, the findings were evaluated and discussed.

¹Çanakkale Onsekiz Mart Üniversitesi/Ayvackı Meslek Yüksekokulu, Finans-Bankacılık ve Sigortacılık Bölümü, sehnazbakir@comu.edu.tr, ORCID: 0000-0002-5541-2462

Özet: Bu çalışma, Covid-19 pandemi krizinin ardından, dünyanın önde gelen merkez bankalarının (Federal Reserve ve Avrupa Merkez Bankası) yaygın olarak kullandığı ve geleneksel olmayan bir para politikası aracı olan “Niceliksel Gevşeme” (Quantitative Easing) nin finansal ve reel piyasalar üzerindeki etkisini araştırmaktadır. Niceliksel gevşeme ya da parasal genişleme, merkez bankasının ekonomik faaliyeti genişletmek için büyük ölçekte devlet tahvilleri veya diğer finansal varlıkları satın aldığı bir para politikasıdır. Niceliksel gevşemenin amacı, nominal harcamaları canlandırmak amacıyla ekonomiye para enjekte etmektir. Bu etki, beklentiler ve kredinin kullanılabilirliği yoluyla gerçekleşmektedir. Makale, Federal Reserve ve Avrupa Merkez Bankası’nın verilere dayalı deneyimlerini sunmaktadır. Veriler, ABD ve Euro bölgesinde, Covid-19 pandemi krizinde uygulanan niceliksel gevşeme (QE) politikasının, toplam talep, enflasyon ve GSYİH üzerinde önemli etkisinin olduğunu göstermektedir.

Anahtar kelimeler: para politikası, niceliksel gevşeme (QE), covid-19.

The Covid-19 Pandemic Crisis and the Use of Quantitative Easing Instrument in Monetary Policy Application: An Evaluation with Examples of Developed Countries

Abstract: This study investigates the the effect of Quantitative Easing, an unconventional monetary policy instrument widely used by the world's leading central banks following the Covid-19 pandemic crisis, on financial and real markets. Quantitative easing or monetary ex is policy in which a central bank purchases government securities or other financial assets on a large scale to inject money into the economy to expand economic activity. Quantitative easing is one of the most widely used instruments in times of crisis. The aim of quantitative easing is to inject money into the economy in order to revive nominal spending. This effect come about through expectations and the availability of credit. The article presents the experiences of the Federal Reserve and the European Central Bank based on fundamental data. The data show that during the Covid-19 pandemic crisis, quantitative easing has a significant impact on aggregate demand, inflation and GDP in the US and Eurozone.

Key words: monetary policy, quantitative easing (QE), covid-19.

The Rise Of Mechanical Organisations In Agriculture And The Impacts On Humans

András SCHLETT¹

¹Pázmány Péter Catholic University Budapest, Hungary

Abstract: In a dynamically changing environment, organisations are constantly evolving, adapting and reorganising. The modern economy is characterised by a diversity of labour organisations, but there is a general tendency for mechanical (or industrialized) organisations to come to the fore, which often replace traditional labour organisations. This is no different in agriculture. The shift can be described in a number of different ways emphasising its characteristic aspects, e.g., large-scale, specialised, industrialised or artificial input production.

Although the successive technological revolutions are taking place in a context of becoming independent from biological and environmental determinants, the agricultural sector, which has undergone significant changes, is still different from industrial production. This is also the reason why the characteristics of the shift towards a mechanical world in agriculture are more contoured. This study examines how this shift in agricultural organisation affects the content of work, worker autonomy and work attitudes, and how it affects the relationship between the individual, the community and man and nature.

Keywords: Agricultural work culture, mechanical labour organisation, organic labour organisation, worker autonomy, interest, attachment, work attitude

Title: Unhappy leaving the young from Albania - a study on the reasons and the influence of government policies on this decision.

Dr.Alerta BASHA¹

Prof.Dr. Diana SHEHU²

¹Department of Mathematics and Informatics, Faculty of Economy and Agribusiness, Agricultural University of Tirana/ Tirana, Albania

²Department of Management of Tourism, Faculty of Economy and Agribusiness, Agricultural University of Tirana/ Tirana, Albania, Corresponding author; E-mail: ashtepani@ubt.edu.al , cell: +355682991566

Abstract: This is a study of the tendency of young people today to leave Albania. This number of leaving every year is growing at an alarming rate. According to surveys conducted in high schools and universities, the young say that they do not find themselves in this country and want to increase their standard of living abroad. The study uses data collected through a special survey for 950 individuals, where the population of interest was that of leaving emigrants. To conduct the study, the literature desk study, descriptive statistical method, and exponential binomial modeling method are used. Considering the recent events, the earthquake, the pandemic, and most recently the war in Ukraine, which have somewhat damaged the economy and led to an increase in prices, this is influencing their unhappy leaving. The main goal is to highlight the problems faced by the youngest individual in our country and how effective government policies are today. Poor health services and public services in general and poor political stability are other reasons for migration. Persons who are unemployed, and students which want to study abroad, have a stronger tendency to re-migration. The study also highlights the lack of effective policies in support of them and emphasizes the need for the inclusion of young people in the drafting of the government's political development agendas, which would ensure faster economic development in the country and their return.

Keywords: New generation, emigrant, government policies, the factor of migration, statistical model

Moving minds: Virtual Mobility as a New Form of Academic Mobility

Anastasia Romanova, PhD¹

Academy of Economic Studies of Moldova, anastasia.romanova@ase.md, ORCID 0000-0003-2683-9827

Abstract: The COVID-19 changed the nature of teaching and learning for students and faculty to an online model. The sudden transition opened great opportunities for innovation in virtual mobility and collaboration. Higher Education Institutions around the world are likely to take forward at least some digitalized practices in the long term. The impact of the pandemic in higher education has been diverse, profound and different for each institution and country, showing in general great efforts in all levels to be resilient and adapting rapidly to changes.

One of the COVID-19 impacts on universities was the increase of using new information and communication technologies. It also gave new challenge for academic mobility - virtual mobility.

In higher education, academic mobility has become increasingly important for learners as well as for institutions. But today's mobility schemes are first and foremost aimed at physical mobility.

Virtual mobility refers to university students and teachers using another institution outside their own country to study or teach for a limited time, without physically leaving their home. It complements physical mobility in which students travel to study abroad, such as within the Erasmus Programme. Student and teacher mobility are perceived as important quality issues in higher education.

Virtual mobility has been defined as an activity that offers access to courses and study schemes in a foreign country and allows for communication activities with teachers and fellow students abroad via the new information and communication technologies.

The need to offer all students in higher education the possibility of an international experience and the European strategy of boosting student mobility requires the expansion of virtual mobility. The European Association of Distance Teaching Universities (EADTU) initiated an operational analysis of virtual mobility under the e-move project. Different models of virtual mobility have been developed, analysed and put into practice.

Striving for a European educational space, the Academy of Economic Studies of Moldova (ASEM) considers virtual mobility as a necessary addition to the traditional ways of studying abroad that require travelling.

My university offers to incorporate virtual student mobility as an additional form of student mobility, which can play a key role in reshaping the internationalization of higher education in the post-pandemic landscape. This paper will explore how a particular virtual mobility scheme can be put into practice and what is required from an organisation to implement this model and incorporate it into its own curriculum.

The aim of this report is to prove that students can continue to benefit from intercultural exchanges through the use of technology. These new forms of learning would make student mobility possible not only face-to-face but also virtually.

Keywords: academic mobility, COVID-19 impacts, virtual mobility

The Transformation Of The Retail Networks And The Potentials For Relocalisation

András SCHLETT¹

Marietta Balázsne LENDVAI²

Judit BEKE³

¹Pázmány Péter Catholic University Budapest, Hungary

²Budapest Business School, Hungary

³Budapest Business School, Hungary

Abstract: Over the past decades, the food retail network has been rapidly transformed. Hypermarkets and supermarkets have opened one after the other. At the same time, there has been fierce price competition between them, which has benefited consumers, but has been less welcomed for small shops, which have been unable to compete with their prices. Hypermarkets and supermarkets, with their capital power, can completely reshape the commercial map of a region, using aggressive branding and pricing to eliminate local competitors.

The rise of hypermarkets is evidenced by their rapidly growing share of household consumption in recent decades. They have taken an increasing share of the sales of food products too. These international retail chains are based on economies of scale, appealing to the consumers' price and time sensitivity and shopping convenience (everything is in one place!). Although hypermarkets have their advantages, such as offering a wide range of products at low prices, they can't provide the personal touch, trust and credibility that smaller sellers often do. Moreover, small shops may leverage new innovative opportunities that allow them to compete with larger retailers.

Consumer behaviour tends to change less dynamically, but in recent years there has been a trend reversal. This can be described as a shift towards consumer awareness and a real demand for personalisation and traceability. Hungarian and international research show that there is a growing demand for products that are produced in a healthy, responsible and environmentally friendly way. There is an increasing number of consumers who attach importance to the quality of food products, their place of origin and a closer personal relationship and trust with producers.

In our research, we first identified the basic attitudes that determine consumer trends. These then enabled us to identify different consumer groups and to measure the changes and trends that have occurred.

Keywords: food retailing, relocalisation, food consumer trends, retail network, consumer attitudes

The importance of the Law for private international law, concrete case for persons with multiple citizenships

Mr.Sc. Argona Kuçi¹

¹Department/Research Institute, University, Country Graduated in Master Studies, Faculty of Law, the Chicago Kent, USA; e-mail: argona.kuci@gmail.com;

Abstract: In a legal relationship created between the subjects of the law, the foreign element can also appear, for example in the subjects of the law, or in the object. In all these cases, when a foreign element appears in a legal relationship, special provisions and special laws have been defined which provide solutions to the legal issue in the event that there are ambiguities or disputes in the elements of the relationship. We can have a concrete case when a subject, as the main element of the legal relationship, has two or more citizenships, for which case in Kosovo the issue is resolved through the law on private international law. Thus, on the basis of this law, it is emphasized that the same contains rules for assigning the competent law to legal-private relations with an international element, rules for the competence of the court and other bodies for the clarification of relations and procedural rules. So all this in the event that the subject of the right has two or more citizenships, and the same creates a legal relationship with another subject that has only one citizenship. In these cases, the dilemma arises as to which law should be applied to create the legal relationship, and in the event of a dispute, which law should be applied. Therefore, in the case that the person has two or more citizenships, he can also use the law of Kosovo on international law and that if the person who is not a citizen of The Republic of Kosovo has two or more foreign nationals, for the application of this law is considered to have citizenship of that country whose citizen he is and in which he has it usual place of residence. It is also emphasized that if the person who has two or more citizenships has no habitual abode in neither of the countries of which he is a citizen, for the purposes of this law are considered to have the citizenship of the country of which he is a citizen and with which it is most closely related. So it is important to make a solution for the specific case. The clarification of the law on private international law of Kosovo will be discussed in more detail in the presentation of this paper.

Keywords: law, private international law, legal relationship, foreign element, citizenship.

The direct and collision method for the regulation of legal-private relations with a foreign element

Mr.Sc. Argona KUÇİ¹

¹ Department/Research Institute, University, Country Graduated in Master Studies, Faculty of Law, the Chicago Kent, USA; e-mail: argona.kuci@gmail.com;

Abstract: In the event that a foreign element appears in a legal-private relationship, either in the object, the subject of rights and obligations, then the question arises as to which provisions of the laws will be used to regulate this legal-private relationship, the provisions of local or international laws. We can say that this is determined on the basis of the citizenship of the subjects, but two ways have been determined in relation to this issue, the direct way and the collision way. Based on the direct method, it is said that legal-private relations with a foreign element are regulated as in all other branches of the legal system, where only the law of one's own country is always applied, i.e. based on the nationality of the subject of the law. . In this case, the substantial norms of the legal system of the country are applied. In contrast to the method of collision or indirect, where according to this method the juridical-private relationship with a foreign element is not regulated directly, but it is determined whether the law of the country or the foreign law will be applied to regulate the concrete relationship in its entirety and definitively. In this way, specific norms are applied which are called collision norms. This means that the conflict of law norms do not regulate the legal relationship but guide the material law which must be applied the law of the country's state or of a foreign state or rather the rights of foreign states. The definition and importance of direct or conflicting norms will be discussed in more detail during the presentation of this paper.

Keywords: international law, direct way, indirect way.

Entrepreneurship and Career Counseling: A Bibliometric Data Analysis

Aristidis Bitzenis¹

Nikos Koutsoupias²

Chrysanthi Oraiopoulou³

¹University of Macedonia, bitzenis@uom.edu.gr, ORCID: 0000-0001-7047-9406

²University of Macedonia, nk@uom.edu.gr, ORCID: 0000-0003-1664-5404

³University of Macedonia, c.oraiop@uom.edu.gr, ORCID: 0000-0001-8829-352X

Abstract: Career counseling strategies are designed to help individuals and particular groups enhance their chances of finding employment. These approaches can provide guidance and assistance to people in various areas related to entrepreneurship, such as teaching them how to acquire and nurture entrepreneurial skills throughout their educational and professional journeys, as well as supporting both novice and seasoned entrepreneurs in their personal and career growth and helping them identify their unique requirements. Employment leaders play a critical role in promoting entrepreneurship, encouraging individuals to adopt entrepreneurial mindsets, and fostering growth opportunities for both job seekers and employees. Career counseling professionals are proactively developing and implementing interventions to deliver novel employment services. Meanwhile, the scientific community is actively researching various aspects of how career counseling can assist entrepreneurs. As a result, the body of scientific literature dedicated to this important topic has grown significantly. This study aims to examine and map the global literature on topics related to career counseling and entrepreneurship. To achieve this goal, we conducted a search of the Scopus scientific database using the terms "entrepreneurship," "business," and "career" or "job" or "profession," along with "counseling" or "counselling" in the titles, summaries, and keywords of journal articles. With a dataset of 291 research publications indexed in Scopus, we conducted a bibliometric analysis using data visualization tools, namely Bibliometrix and Biblioshiny in R language. The data analysis led to conclusions about the scope of career counseling for entrepreneurs in general and the development of entrepreneurial skills, as well as the mapping of mainstream scientific trends and their change over time (scientific mapping). Future research is also discussed as an important next step in the field's development.

Keywords: Entrepreneurship, Career Counseling, Bibliometric Analysis.

Two sides to every story- Telemedicine is no different Research on the quality and effectiveness of telemedicine interventions from different stakeholders' perspectives

Aslı GOKSOY¹

¹American University in Bulgaria

Abstract: Today, telemedicine has become more relevant than ever. The Covid-19 pandemic has brought telemedicine to center stage, and everyone is talking about how it can be, could be, should be, and is being used. One thing is clear- it is here to stay.

Telemedicine is generally defined as “the use of information technology to loosen the bounds of time and place on health care delivery.” In another source, telemedicine is described as the provision of remote clinical services, via real-time two-way communication between the patient and the healthcare provider, using electronic audio and visual means. The real role of telemedicine at present lies in the convenience it offers to patients and practitioners by obviating the necessity for a physical visit to get medical advice or treatment. It is also cost-effective in comparison to the process of waiting to see a doctor or other healthcare provider. Besides the key player (patients and physicians), insurance companies, policymakers, and software companies have also a critical role in telemedicine and have a strong presence in the integration of telehealth/telemedicine in healthcare.

Advances in wireless technology and the expansion of broadband - the conditions that made apps opened the door for innovators to expand options for routine and non-emergency telemedicine consultations. Estimated to be worth almost \$17 billion dollars, the industry continues to dazzle with promising new technologies aimed at dramatically and efficiently improving diagnostics as well as treatment. There is a considerable body of evidence supporting the quality and effectiveness of telemedicine interventions and technologies. For many clinical applications, virtual care has been shown to be either equivalent to or even better than in-person care in some cases.

Patients clearly like telemedicine. Upwards of 80% of patients who used it during the pandemic were satisfied with it and a comparable number want to continue using it, even after the pandemic winds down. On the other hand, many doctors seem to disagree and want a return to the status quo. They cite a number of reasonable reasons for doing so, from personally connecting with patients to preventing patients from delaying those exams unsuited to telehealth care visits.

There's a lot to be optimistic about in the future of telemedicine. With rapid advances in technology, it's likely that telemedicine will only become easier and more widely accepted in the coming years. It is clear that telemedicine will be a permanent, integrated care delivery system in many countries. For this reason, it will be very meaningful to examine this issue in depth.

In this article, the literature review will include telemedicine today- the quality and effectiveness of telemedicine interventions from different stakeholders' perspectives- patients, doctors, and insurance companies- and the future of telemedicine. Survey results and interviews will be included in the methodology part followed by the conclusion and recommendation for future studies.

Edebiyyatda Heyder Aliyev Karakteri

Dr.Aynur SEFERLİ¹

¹İçişleri Bakanlığının Polis Akademisi, Dil Eğitimi Bölüm Öğretmeni, Polis baş komiseri, seferli_1988@bk.ru

Özet: Büyük önder Heydar Aliyev'in Azerbaycan edebiyatının gelişmesiyle ilgili çalışmaları, eşsiz fedakarlıkları Azerbaycan edebiyat tarihinin hafızalarına silinmez izler bırakmıştır. Heydar Aliyev, hayatından ve biyografisinden edebiyata bir bölüm olarak değil, bir kader olarak geçmiş bir insandır. Siyasi faaliyeti edebiyatla bu kadar kesişen ve ortak bir düzeye gelen çok az lider vardır. Heydar Aliyev bu anlamda müstesna şahsiyetlerden biridir. Bu dahi şahsiyet, Dede Korkud, Babek, Nizami, Nesimi, Hüseyin Cavid, Şehriyar'a Azerbaycan'ın kapılarını açmış, hatta Azerbaycan'ın ideolojik yapısını belirlemiştir.

Heydar Aliyev'in edebî şahsiyetlere olan sevgisi tek taraflı olmamıştır, çeşitli türlerde eserler vererek bu şahsiyetin faaliyetlerini sürekli aydınlatmışlardır. 1974 yılında Güney Azerbaycanlı şair Bulud Garaçorlu Sahand'ın "İlimimin dayanağı, memleketimin şerefi Heydar hocaya" şiiri daha sonra bir çok takipçiler tarafından devam ettirilmiştir. Bağımsızlık döneminde aynı konulu çok sayıda lirik şiir yazıldığı gibi büyük çaplı şiirler de yazılmıştır. Elhan Zal Karakhanlı'nın "Anıt Mezar Destanı", Zalimhan Yakub'un "Sonsuzluk Destanı", Sabir Mustafa'nın "Dönüş", Ramiz Mammadzade'nin "Zirve", Fikret Goca'nın "Bu Günleri Görmeliydin", Feride Lema'nın "Zaman Onu Seçti", Rafig Zeka Handa'nın "Heydar Baba", Elman Habib'in "Heydarname", Ramiz Duygu'nun "Cumhurbaşkanının Kalbi", Ramiz Heydar'ın "İlhamlı Gelecek", Mirkazim Seyidov'un "Heydar'ın Dehası" vb. örnek olarak gösterebiliriz. Aynı zamanda Hidayat'ın "Buradan Bir Süvari Geçti" adlı oyunu, Adil Babayev'in "Koroğlu'nun Çamlıbel'e Dönüşü", Akşin Babayev'in "Kurtarıcı" adlı oyunu ve İftihar Priyev'in "Kurtuluş Destanı" adlı oyunu örnek olarak verilebilir. Heydar Aliyev'in hayatı ve faaliyetinin sadece sanat eserlerine değil, araştırma çalışmalarına da yansıdığını belirtmek gerekir. İmadeddin Nesimi'den bahsederken Nesimi'nin mahareti Heydar Aliyev'in imajında öne çıkıyor. Muhammed Fuzuli'den söz edilirken Heydar Aliyev, Fuzuli'nin asaletinin koruyucusu ve en yüksek makamın tercümanı olarak anlatılır. Akademisyen Nizami Ceferov, "Türkiye Atatürk'ün, Azerbaycan Heydar Aliyev'in eseridir" adlı kitabında her iki tarihi şahsın milletine, Türk dünyasına ve bir bütün olarak insanlığa hizmetlerini kapsamlı bir şekilde yorumlamıştır. 1 Kasım 1999'da Ulu Önder'e Uluslararası Atatürk Barış Ödülü'nün verilmesi de bu tarihsel paralelliğin meşru bir sonucu olarak değerlendirilmektedir.

Anahtar kelimeler: Heydar Aliyev'in imajı, edebiyat kaygısı, devasa faaliyet, edebi şahsiyet

Character of Heydar Aliyev In Fiction Literature

Aynur SAFERLİ¹

¹Teacher of the Department of Language Training of the Police Academy of the Ministry of Internal Affairs, Doctor of Philosophy in Philology, Senior Lieutenant of Police , seferli_1988@bk.ru

Abstract: The great leader Heydar Aliyev's work in connection with the development of Azerbaijani literature, his incomparable sacrifice, were engraved in the memory of the history of Azerbaijani literature with indelible traces. Heydar Aliyev is a person who passed literature from his life and biography not as an episode, but as a destiny. There are very few leaders whose political activity intersects with literature so much and comes to a common level. Heydar Aliyev is one of the exceptional personalities in this sense. This genius opened the doors of Azerbaijan to Dada Gorgud, Babekh, Nizami, Nasimi, Huseyn Javid, Shahriyar and in fact defined the ideological nature of Azerbaijan.

Heydar Aliyev's love for literary figures was not one-sided, they constantly illuminated the activities of this personality with works in various genres. In 1974, the South Azerbaijani poet Bulud Garachorlu Sahand's poem "The support of my knowledge, the honor of my country to teacher Heydar" was later continued by many people of Ardj. During the period of independence, many lyrical poems with the same theme were written as well as large-scale poems. Examples of these works are Elkan Zal Karakhanli's "Monument Tomb Epic", Zalimkhan Yagub's "Eternity Epic", Sabir Mustafa's "Return", Ramiz Mammadzadeh's "Peak", Fikret Goca's "You Should Have Seen These Days", Farida Laman's "Time Chosen Him", Rafig Zaka Khanda's "Heydar Baba", Elman Habib's "Heydarname", Ramiz Duygu's "President's Heart", Ramiz Heydar's "Inspirational Future", Mirkazim Seyidov's "Heydar's Genius", etc. we can show. At the same time, we can cite Hidayat's play "A Horseman Passed Here", Adil Babayev's "Koroglu's Return to Chanlibel", Agshin Babayev's "Saviour", and İftikhar Priyev's drama "Salvation Saga" as examples of stage productions created with the image of Heydar Aliyev. It should be noted that the life and activity of Heydar Aliyev was reflected not only in artistic works, but also in research works. While talking about İmadaddin Nasimi, Nasimi's skill is highlighted in the image of Heydar Aliyev. When talking about Muhammad Fuzuli, Heydar Aliyev is described as the protector of Fuzuli's nobility and the translator of the highest position. Academician Nizami Jafarov in his book "Turkey is the work of Atatürk, Azerbaijan is the work of Heydar Aliyev" extensively commented on the services of both historical figures to their nation, the Turkish world and humanity as a whole.

The awarding of the great leader with the International Atatürk Peace Prize on November 1, 1999 is considered as a legitimate result of that historical parallelism.

Key words: the image of Heydar Aliyev, concern for literature, titanic activity, literary figure.

Advancing the T-Shaped Business Professional

Dr. Carole GLYNN¹

¹Technological University of the Shannon, carole.glynn@tus.ie ORCID: <https://orcid.org/0009-0006-8502-4176>

Abstract: It can be posited and expected that competent business managers would continue to advance their professional, industry, or sectoral knowledge across the span of their careers, both in terms of their technical competencies as well as their managerial skills. However recent global evaluations have shown that thought leaders continue to see deficits within the management skillsets of their organisations that need to be addressed. For example Forbes (August 2020) noted that subject matter experts can lack boundary-spanning competencies, while generalists may lack deep disciplinary knowledge. Similarly the McKinsey Global Survey (February 2022) found that 87% of business leaders acknowledged ongoing shortfalls in the management skills of their workforce which they would like to address. The aim of this paper is to propose that advancing the T-Shaped business professional offers organisations the best opportunity to successfully respond to these ongoing challenges for the business manager.

The T-Shaped method or framework considers both the contextual environment and the specific requirement skills of the business manager. Where an organisation is managed by a discipline expert who has industry or sectoral specific skills, professional competences or standards of proficiency, they may look to balance these expert skill-sets with project management, leadership, ethical practice or service quality competencies, as appropriate to the environment.

In corollary to that concept, the generalist manager can be afforded the opportunity to bring depth to their skillsets by investing in three fundamental competencies: the first being '*consolidative competencies*', which include interdisciplinary collaboration and integrative competencies; the second as '*core competencies*' such as adaptability, critical thinking and interpersonal skills; and lastly the third being '*sectoral competencies*' based on problem solving, needs analysis and an understanding of the contextual environment.

In conclusion the advance of the T-Shaped method or framework in the business management arena will concurrently deliver a number of competency and skill needs, responding to the recognised deficits in this field. It will facilitate a well-rounded manager who has the flexibility to lead in a cross-functional role, it will offer a clear and robust means to assess or self-evaluate continuous professional development needs and it will enhance the employability of business professionals.

The importance of the arbitration procedure in the resolution of economic-commercial disputes

Mr.Sc. Dafina VLAHNA¹

¹ Affiliation: Albanian; e-mail: dafinaa_55@hotmail.com; ORCID: 0000-0003-1977-4076

Abstract: The arbitration procedure is an alternative way to resolve disputes that arise from economic income or trade organized by legal entities. All parties who come across economic-commercial disputes want their case to be resolved as quickly and easily as possible, although in most cases with greater expenses, but in favor of the parties again since commercial disputes they want a solution to the dispute as soon as possible. As in other countries and in the state of Kosovo, through the law on arbitration, the legal provisions are defined on the basis of which the arbitration procedure can be developed. For this reason, the law on arbitration was formed and also in the state of Kosovo, it is allowed for the parties to resolve their disputes through arbitration procedures. A procedure which the parties consider in their favor, since the main elements of the procedure development are determined by themselves. This means that the parties choose the law by which they want to conduct the arbitration procedure, then they choose the place where the arbitration procedure will take place, they choose the arbitrators, they can choose the language of the procedure, and some other elements for which the parties define them themselves. We can say that this is also the reason why the parties want their contentious matter to be resolved through arbitration procedures. The procedure and the importance of the arbitration procedure will be discussed in more detail during the presentation of the paper.

Keywords: Arbitration, dispute resolution, commercial-economic disputes.

The importance of public borrowing in Kosovo

Mr.Sc. Dafina VLAHNA¹

¹Affiliation: Albanian; e-mail: dafinaa_55@hotmail.com; ORCID: 0000-0003-1977-4076

Abstract: As in any other country, and for the state of Kosovo, special importance is given to public revenues, specifically public loans, since the state budget is based on them. Based on the latest data, almost the number of public loans received by states or institutions abroad has increased. This increase came as a result of the pandemic, and the war in Ukraine, and as a result of these, the state of Kosovo had a decrease in revenues from designated public revenues, as expenses were very high while revenues began to decrease. Thus, it was definitely necessary to request public loans, in order to cover the expenses created by the state of Kosovo. From 2020 onwards, public loans for the state of Kosovo are given by the organization of the European Union, with a significant amount, to help the people of Kosovo. But it should be borne in mind that all this loan must be returned to the lender, and for this a good management of the received loan must be done, i.e. where will the money received be spent, otherwise any improper management, the consequences the state of Kosovo itself thus falling into debt. So, public loans have a special importance for each state and also for the state of Kosovo, since by taking them, it is considered that the state will come out of a created financial crisis. But always bearing in mind that taking public loans have their own consequences, after which the lenders must be returned at the time specified in the Contract, otherwise, if they do not return, they will suffer sanctions from the lender. I will speak more broadly about the importance of public loans during the presentation of this paper.

Keywords: importance of public loan, borrowing, loan management.

Current aspects of the accounting system of companies listed on the Bulgarian Stock Exchange

Desislava ALEKSANDROVA¹

¹PhD Student, Department of Accounting, Tsenov Academy of Economics, Svishtov, Bulgaria

Abstract: Bulgarian Stock Exchange, established as a result of the merger of several regional exchanges, is the driving force that contributes to the successful development of Bulgaria stock market. The main mission is to assist in organizing and regulating the stock market. In this way, exchange members and their clients will be provided with equal access to stock market information and equal conditions for participation in securities trading.

Currently, the accounting system of companies listed on the Bulgarian Stock Exchange is characterized by many peculiarities of a heterogeneous nature. The purpose of the study is to analyze the impact of the registration of companies on the Bulgarian Stock Exchange on the meaning and content of accounting reporting. The following research tasks have to be settled for reaching the above-mentioned goal: 1) to analyze the accounting policy of companies listed on the Bulgarian Stock Exchange as an effective tool of their management; 2) to pay particular attention to reporting for regulatory purposes and disclosure; 3) to focus on the functions of accounting in the management system; 4) to analyze the audit procedures in companies listed on the Bulgarian Stock Exchange. In the course of the study shall be justified the thesis that current legislative aspects and regulatory challenges require strict compliance with regulations and looking for adequate approaches and solutions regarding the technique, technology and organization of the accounting process.

The results of the research are expressed in tracing the important aspects in the preparation of the financial reports: semi-annual, annual audited, annual non-audited, in compliance with the Public Offering of Securities Act and Ordinance No 2 of 09.11.2021 on initial and subsequent disclosure of information in the event of a public offering of securities and the admission of securities to trading on a regulated market as well as the trend for presenting non-financial information in the context of social responsibility and sustainable development of companies listed on the Bulgarian Stock Exchange.

Keywords: accounting system, companies listed on the Bulgarian Stock Exchange, annual financial report, social responsibility, sustainable development

Elçin ORUCOV¹

Azerbaycan Cumhuriyeti İçişleri Bakanlığı Polis Akademisi daire başkanı, e.orucov@mia.gov.az

Özet: Dahiler halktan, milletten ne alırsanız alın, o yaşar dedi. Halkın dilini elinden alırsanız ulusal kimliğini kaybeder ve yok olur. Bu tarihsel olarak test edilmiş bir gerçektir. Dil, insanların milli zenginliğidir, onu yaşatan ve oluşturdukları örnekleri gelecek nesillere aktaran bir araçtır. Halkın ulusal kimliğinin bir göstergesidir. Azerbaycan dili çeşitli gelişim aşamalarından geçerek oluşmuş ve gelişmiştir. Dile kayıtsızlık, halkın tarihine, kültürüne ve varlığına büyük bir darbedir. Sovyet döneminde "Rusça düşünüp Azerice ifade etme" ilkesinin uygulanması dilsel düşünceyi yok etmeye yönelikti. Halkı tarihinden ve kültüründen uzaklaştırmak, tarihi hafızasını silmek için bu dönemde iki kez Azerbaycan alfabesi değiştirilmiştir. Milli aydınların Ruslaştırma politikasına muhalefeti önlenmiş, milli ve manevi değerlere karşı kayıtsızlık oluşmuştur. Sovyet döneminde 250.000 Azerbaycanlı milli duygu ve düşüncelerin gelişmesini engellemek için baskılara maruz kalmıştır.

Haydar Aliyev, ana dilin insanları yaşatmadaki rolünü çok takdir etti. Gençlerimize dünyayı ana dillerinde anlamalarını ve bu dili mükemmel bilmelerinin yanı sıra yabancı dilleri de öğrenmelerini tavsiye etti. Haydar Aliyev, Azerbaycan dilini halkın manevi bir değeri olarak sevmeyi, dilin zengin söz varlığını ustaca kullanmayı, saflığını korumayı ve bu dille gurur duymayı tavsiye etti. Milli liderin "Azerbaycan benim kalbidir" ve "Azerbaycanlı olmaktan gurur duyuyorum" sözleri bugün her Azerbaycanlı için bir gurur kaynağı olmuştur. Haydar Aliyev'in girişimiyle Azerbaycan dili Anayasa'da devlet dili statüsü aldı. Onun dil politikası üç prensipe (demokratik, öngörü, nesnellik) dayanmaktadır.

Bağımsızlık döneminde Azerbaycan diline ilgi artmış ve bu dil dünyanın çeşitli üniversitelerinde (Chicago, Los Angeles, Washington, New York, San Francisco, Harvard ve s.) okutulmaktadır. Şu anda Azerbaycan dili Asya ve Avrupa ülkelerinde ilgi görüyor.

Haydar Aliyev, Azerbaycılık ile Türkçülüğü birleştiren ve dünya Azerbaycanlılarını tek bir ideoloji etrafında birleştirmeyi başaran bir fikir için sürekli mücadele etti.

Anahtar Kelimeler: Haydar Aliyev, dil politikası, milli-manevi değerler, Azerbaycanlılık

Language Policy in Haydar Aliyev's Political and Ideological Activity

Abstract: Geniuses said that whatever you take away from the people, the nation, it will live. If you take away the language of the people, it will lose its national identity and as a result will disappear. This is a historically tested fact. Language is the national wealth of the people, it is a tool that keeps it alive and transmits the examples they have created to future generations. It is an indicator of the national identity of the people. The Azerbaijani language has been formed and improved through various stages of development. Indifference to the language is a great blow to the history, culture and existence of the people. During the Soviet period, the application of the principle of "thinking in Russian and expressing in Azerbaijani" was aimed at destroying language thinking. In order to distance the people from their history and culture, to erase their historical memory, the Azerbaijani alphabet was changed twice during this period. The opposition of national intellectuals to the policy of Russification was prevented, and indifference to national and moral values were formed. During the Soviet era, 250,000 Azerbaijanis were victims of repression in order to prevent the development of national feelings and ideas.

Heydar Aliyev highly appreciated the role of the mother tongue in keeping the people alive. He advised our young people to understand the world in their mother tongue and to learn foreign languages in addition to knowing this language perfectly. Heydar Aliyev recommended to love the Azerbaijani language as a spiritual asset of the people, to skillfully use the rich vocabulary of the language, to protect its purity, and to be proud of this language. The national leader's words "Azerbaijan is my heart" and "I am proud to be an Azerbaijani" have become a source of pride for every Azerbaijani today. On the initiative of Heydar Aliyev, the Azerbaijani language received the status of the state language in the Constitution. His language policy is based on three principles (democracy, foresight, objectivity).

During the period of independence, interest in the Azerbaijani language increased, and this language is studied in various universities of the world (Chicago, Los Angeles, Washington, New York, San Francisco, Harvard and etc.). Currently there is an interest to the Azerbaijan language in Asian and European countries.

Heydar Aliyev consistently fought for an idea that combines Azerbaijaniism and Turkism and was able to unite the world's Azerbaijanis around a single ideology.

Keywords: Heydar Aliyev, language policy, national and moral values, Azerbaijaniism

Objective Arbitrability Of Industrial Property Disputes

Emilija GJORGJIOSKA¹

Dijana GORGIEVA²

¹Assistant Professor, Faculty of Economics-Prilep, University “St. Kliment Ohridski” - Bitola, Republic of North Macedonia, emilija.mateska@uklo.edu.mk, ORCID:0000-0002-4061-8062

² Assistant Professor, Faculty of Law - Gostivar, University “International University Vizion” - Gostivar, Republic of North Macedonia, dijana.gjorgieva@vizyon.edu.mk, ORCID: 0009-0006-6077-0463:

Abstract: As well know method for resolving disputes, especially when involving parties are from different countries, the arbitration has become very popular nowadays. National legislators have a fully freedom to regulate the limits of objective arbitrability in the lex nationalis. As a result of this, we can testify inconsistency in comparative law when defining the boundaries of objective arbitrability, especially arbitrability of industrial property rights. Intellectual property disputes have a few characteristics that may be better addressed by arbitration than by civil procedure. The subject of analysis of this paper are the comparative solutions that regulate the objective arbitrability of industrial property disputes. According to this analysis we can make a conclusion that some countries have broader approach to arbitrability of industrial property rights, but some still does not. The analysis shows that most of the countries are unanimous that arbitration is allowed for disputes which are arising from disposable industrial property rights. This analysis was made in order to see if it is necessary in which types of industrial property disputes it is justified to expand the limits of objective arbitrability pro futuro.

Key Words: arbitration, objective arbitrability, industrial property rights.

Implementation of the most favorable law according to the Criminal Code of Kosovo

Prof.Asoc.Dr. Enver BUQAJ¹

¹ Department of Criminal Law,/ University of Pristina “Hasan Prishtina”, Pristina, Republic of Kosovo;
enver.buqaj@uni-prizren.com

Abstract: The commission of illegal acts must be sanctioned on the basis of the relevant provisions provided by the states in their Criminal Codes. As well as in the state of Kosovo, any perpetrator of illegal actions will be sanctioned as provided by the provisions of the Criminal Code of Kosovo. In these cases, in addition to looking at the provision, importance is also given to cases where there may be any change in legislation and in these cases which law would be used for the imposition of criminal sanctions. Based on this case, the criminal code of Kosovo provides that the law that was in force at the time of the criminal offense is applied to the perpetrator. Based on this provision, it is understood that at the moment when the criminal offense occurred, it is looked at which provision was in force, it will be used for the imposition of the sanction against the perpetrator of the criminal offense. It is also emphasized that if the law in force changes before the pronouncement of the final decision, then the law that is more favorable is applied to the perpetrator. So in all cases, the time of committing the criminal offense is looked at and at that time which law was in force, which means that the law which was in force at the time when the illegal action took place, will be judged by that law the criminal legal case, or concretely, the perpetrator will be sanctioned based on that law. The implementation of the most favorable law will be discussed in more detail during the presentation of this paper.

Keywords: criminal code, illegal action, law enforcement, the most favorable law.

Mediation Procedure in Criminal Offenses

Prof.Asoc.Dr. Enver BUQAJ¹

¹Department of Criminal Law,/ University of Pristina “Hasan Prishtina”, Pristina, Republic of Kosovo;

Email: enver.buqaj@uni-prizren.com

Abstract: The mediation procedure as an alternative procedure for the resolution of disputes has recently been quite requested and used by the courts, in almost all cases both from the field of civil and criminal matters. At the moment when we say that mediation can be used and in cases where we are dealing with a violation of the Criminal Code, then we say that it is permissible for this to happen! Based on the mediation law of Kosovo, it is emphasized that even in cases of criminal offenses, the method of mediation can be used in the courts, either by the parties themselves or by the courts. We say this based on the provision of the Law on Mediation, according to which it is stated that mediation in the criminal field is applied in cases where a fine and a prison sentence of up to three (3) years are provided, except for the cases provided for in paragraph 3. of of this article. These cases that include paragraph 3 of article 3 are: domestic violence or any dispute for which the exclusive responsibility of the court or any other competent body is foreseen. Also, the mediation procedure cannot be used for criminal offenses that are punishable by more than 3 years, including theft, fraud, or any other illegal action for which the sentence is greater than 3 years. So the mediation procedure is given special importance in criminal proceedings, but only in criminal offenses punishable under 3 years, and so at the moment when we use this procedure, then I have to rely on the law on mediation. The importance of mediation in criminal offenses will be discussed in more detail during the presentation of this paper.

Keywords: mediation procedure, criminal offense, illegal action, sentences under 3 years.

Current aspects of the accounting information system for the activity of insurance companies

Assoc. Prof. Galina CHIPRIYANOVA¹

¹PhD, Department of Accounting, Tsenov Academy of Economics, Svishtov, Bulgaria, g.chipriyanova@uni-svishtov.bg, ORCID: 0000-0002-8339-3238

Abstract: The activity of insurance companies finds expression in offering of direct insurance or reinsurance services, providing financial protection from possible hazards in the future. However, the role of a responsible attitude is increasingly strengthened by insurance companies that support socially engaged causes outside the scope of their business activities. And social responsibility is emerging as an increasingly discussed topic among senior management, including insurance companies. Then the problem of creating information from the main system in insurance companies about the development of human resources, favorable working environment, lifelong learning, using of alternative energy sources and others, becomes relevant.

The subject of the study is the insurance and reinsurance activity as an object of accounting reporting. The purpose of the study is to analyze the most important aspects of the current accounting process in insurance companies and their annual accounting closing in the context of socially responsible business.

The following research tasks have to be settled for reaching the above-mentioned goal: 1) to analyze the contemporary regulatory framework and the applicable accounting standards in the context of the activity of insurance companies; 2) to focus on IFRS 17 Insurance contracts – meaning, role, impact on the financial reporting of insurance companies; 3) to pay particular attention to the specific objects of accounting in the activity of insurance companies; 4) to analyze the current guidelines for preparing annual financial statements and non-financial information in insurance companies. In the course of the study shall be justified the thesis that accounting is the main reporting and information system in the insurance companies. It provides management with reliable, accurate and timely information for making adequate management decisions. But for a competitive insurance business nowadays, as well as good labour, environmental and anti-corruption practices and social innovations must be ensured. All of them must be gradually integrated into the information system of insurance companies in order to achieve maximum comprehensiveness, complementarity and sustainability over time.

The results of the research are expressed in tracing: 1) the role of innovation in the insurance and reinsurance activity and in the context of the accounting information system; 2) the importance of risk management for accountability in insurance companies; 3) the well-argued choice between a conservative or an innovative accounting information system in insurance companies; 4) the relationship “socially responsible insurance and reinsurance activity-accounting-accounting system”.

Keywords: insurance companies, insurance and reinsurance activity, accounting information system, socially engaged causes, non-financial information

The Factors that Determine Financial Freedom of a Country: Case of Albania

Gerta Gogo¹

¹Ph.D, Agricultural University of Tiranagogo@ubt.edu.al, ORCID: 0000-0002-4945-9459

²Ph.D, Bank of Albania, fbaholli@yahoo.com, ORCID: 0000-0003-2936-1363

³ Associate Professor, Agricultural University of Tirana, agjoni@ubt.edu.al, ORCID:0000-0001-7875-0387

Abstract: This study is realized to identify the factors that impact a country's financial freedom. The data used in this paper are received from the Heritage Foundation database for 180 countries, aiming at the analysis of financial system freedom as an important measure of banking efficiency and independence from government control and intervention in the financial sector. Study findings showed that trade freedom, government integrity, and investment freedom play an important role in defining financial freedom. The role of government in financial freedom proved to be significant in the model. Legal efficiency and monetary freedom after the study did not prove important for determining the financial freedom of a country and consequently were removed from the model studied. Based on the findings of the study, the respective limits and recommendations are discussed.

Key Words: financial freedom, freedom of trade, government integrity, investment freedom

The influence of international law on local law

Hajredin KUÇI¹

Kastriote VLAHNA²

¹Affiliation: Albanian; e-mail: hajredin.kuci@uni-pr.edu; ORCID: 0000-0001-6100-5794

²Affiliation: Albanian; e-mail: kastriote.vlahna@uni-prizren.com; ORCID: 0000-0001-6100-5794

Abstract: The right of each state is determined by the constitution and the laws of the country, this is due to the fact that for each subject of the law, be it a natural person or a legal entity, rights and obligations are created by means of the norms defined in the law. In most cases, it happens that in order to solve a certain issue, legal loopholes appear, which led us to look at the laws of other countries to solve a certain legal issue. For this case and in the constitution of Kosovo, a provision has been defined according to which international agreements are given precedence over local laws, in those cases where local laws cannot be used to resolve the specific case. Then we look at which international country our country has an agreement with, in order to take as a basis the legislation of that country that we currently have an agreement for the implementation of the legislation of that international country. We can say that this is a help for the subjects of the law, since in this case it is possible for you to solve their legal case in a reasonable way and time, since now only the legal provisions provide the solution of the case for them. which parties have a legal interest to make a solution, either to protect the right, to create, change, or to extinguish the existing right! More about international agreements will be discussed during the presentation of this paper!

Keywords: International law, local law, international agreements, supremacy of laws, enforcement of laws.

The Specifics of the Application of the EU Policies of Smart Specialization in the Agricultural Field

Irina MANOLESCU¹

Mihai TALMACIU²

¹Alexandru Ioan Cuza University of Iasi, Romania, irina.manolescu@gmail.com, <https://orcid.org/0000-0002-1869-1343>

²Alexandru Ioan Cuza University of Iasi, Romania, mtalm@uaic.ro, <https://orcid.org/0000-0001-8957-5991>

Abstract: The rural development policies and programs initiated by the European Union are based on stakeholder and multi-level governance approaches, within which negotiation processes arise in order to harmonize the interests of relevant public and private actors at the level of a certain territory. This complex harmonization process involves multi-stakeholder approaches in which different entities from the local/ zonal/ regional level collaborate on different levels. Thus, the sustainable development of the rural space is shaped by stakeholders who share different values, have different visions regarding the entire development process, have their own interests and objectives. However, the agricultural sector, due to its particularities, is the framework for the manifestation of some contradictory influences - direct dependence on multiple external factors leads to a low predictability of economic results, the need for major investments and the reduced flexibility of human resources make it difficult to quickly implement innovative solutions. Therefore, in regions with a pronounced agricultural character, the application of smart specialization strategies becomes a challenge, requiring increased efforts to create collaborative structures. The paper aims to identify, in a comparative manner, the characteristics of regional clusters in the agricultural sector, highlighting the importance of networks and social relations in promoting innovative development initiatives, necessary and valuable for the development of the agricultural sector in conditions of competitiveness and performance.

Keywords: rural development; clusters; resilience; competitiveness; agricultural sector.

The importance of Alternative Procedures in Civil and Commercial Disputes

Dr.Sc. Kastriote VLAHNA¹

Prof. Dr. Hajredin KUÇI²

¹Albanian; e-mail: kastriote.vlahna@uni-prizren.com; ORCID: 0000-0001-6100-5794

²Albanian; e-mail: hajredin.kuci@uni-pr.edu; ORCID: 0000-0001-6100-5794

Abstract: Alternative procedures for the resolution of disputes nowadays have a special importance for the parties who are affected by civil or commercial disputes. In order to give you the easiest and fastest solution to these disputes arising from the legal relationship created by the parties, then they use one of the alternative ways to resolve the dispute, before going to court. These alternative ways are the arbitration procedure, the mediation procedure, and the negotiations established between the parties involved in the dispute. In the state of Kosovo, there are separate laws for these alternative methods, such as the law on arbitration, and then the law on negotiations, based on which the procedure chosen by the parties is developed. Specifically, when it comes to the mediation procedure, usually the court itself proposes to the parties in dispute that they first negotiate among themselves, with the claim that no agreement is reached between the disputing parties, and then in the event that the mediation procedure is shown to be effective, then the court continues with the development of the contested civil procedure. While in the arbitration procedure to start the contested legal matter, it is the parties themselves who with their own will create the arbitration agreement, specifically the agreement to start the arbitration procedure. Since these alternative procedures are very much in favor of the parties, then for this reason they have created a special importance among the subjects of law. The importance of alternative dispute resolution procedures will be discussed in more detail during the presentation of the paper.

Keywords: alternative procedures, arbitration, mediation, negotiation, dispute resolution.

The Recovering Attributes of Self Enhancing Humour as Microbreaks and Employee Performance

Kyriakos Tsamantouridis¹

Angeliki Tsameti²

Victoria Bellou³

¹ University of Thessaly, tsamanto@uth.gr, ORCID: 0000-0003-2662-7146

² University of Thessaly, atsameti@uth.gr, ORCID: 0000-0002-2741-2297

² University of Thessaly, vbellou@uth.gr, ORCID: 0000-0002-2151-8234

Abstract: Humor can act as a buffer against stressors' effects on burnout. Especially, its self-enhancing and affiliative dimensions could be seen as coping strategies. Self-enhancing humor helps people attain distance from problems derived from stressful situations, while affiliative humor describes a person's tendency to facilitate relationships by telling jokes and engaging in funny banter. Both can be perceived as micro-breaks (short work breaks during which employees stop the work task they were occupied with and it is not directly work-related) in the sense that when employees engage in humorous situations they completely (or partially) cease their current work.

Building on the Conservation of Resources Theory, we perceive that the use of humor acts as a countermeasure to the extended resource investment during the workday. It takes the form of a micro-break, in order to replenish invested resources and/or conserve the remained ones. Revitalized employees have the potential for increased performance, as they have a resource reserve to invest after their micro-breaks.

Therefore, the present research hypothesizes the existence that workplace humor positively affects employees' performance. Deeping into the recovery potential of humor, two recovery experiences (i.e. psychological detachment and relaxation) are investigated as moderators of the relationship between humor and performance. On that matter, it is hypothesized that the more detached and relaxed employees feel during humorous situations, the positive effects of self-enhancing and affiliative humor exerted on performance are boosted.

The present study was conducted among Greek employees from both the private and public sectors. A total of 508 fully completed questionnaires were collected via a self-reported online questionnaire.

Data were analyzed with SPSS Process Macro model 2, to test for both the direct and the moderating effects.

Results confirm the hypothesis that humor affects employee performance. More precisely, it is suggested that self-enhancing and affiliative humor, during a workday, has a beneficial impact on employees' performance during the same workday. As expected, both psychological detachment and relaxation boost the positive effects of workplace humor on employee performance. This underlines that recovery experiences during humorous situations enhance the unwinding attributes of humor, maximizing its beneficial effects.

Keywords: Workplace Humor, Employee Performance, Psychological Detachment, Relaxation, Microbreaks

COVID-19 Pandemic and Internal Migration. A comparative analysis

Laura Diaconu (Maxim)¹

Cristian C. Popescu²

¹ Professor, PhD., Department of Economics and International Relations, Faculty of Economics and Business Administration, “Alexandru Ioan Cuza” University of Iasi, Romania, e-mail: lauradiaconu_07@yahoo.com, ORCID: <https://orcid.org/0000-0001-5745-3850>

² Professor, PhD., Department of Economics and International Relations, Faculty of Economics and Business Administration, “Alexandru Ioan Cuza” University of Iasi, Romania, e-mail: popescu@uaic.ro, ORCID: <https://orcid.org/0000-0002-0424-8754>

Abstract: The COVID-19 pandemic has affected socio-economic and cultural environments around the world in unprecedented ways. Various measures were implemented by governments in order to limit the spread of the virus, such as social distancing, restrictions of international and national travel and lockdowns. Consequently, the pandemic was associated with a historic decline in daily mobility and travel volume. However, despite all the literature emphasizing the negative consequences of pandemic, little research has yet been dedicated to the impact of the COVID-19 on internal migration. Previous work underlined only how the pandemic constrained international migration and increased internal migration from large cities to rural areas. It is known that internal migration supports the efficient functioning of the economy, by bringing knowledge and skills to those areas where they are needed. Moreover, by enabling individuals to pursue their goals and aspirations, internal migration is widely regarded as an integral component of human development. Considering all these aspects, the present paper intends to analyse the extent of the change in the patterns of internal migration in several EU states, during 2020 and 2021, by using the 2019 year as a benchmark. In order to achieve our purpose, we used time-series data of annual inter-counties migrations flows for the analyzed states, offered by the national institutes of statistics. Our results allow us to draw two important conclusions. First of all, we noticed a decline in the internal migration flows in the period February-August 2020, compared to the same period in 2019, in all the analyzed states. Secondly, our results suggest that the COVID-19 pandemic had an impact on the redistribution of population between urban and rural areas in the sense that positive internal migration rates were registered in the largest cities and negative rates in the rural areas.

Keywords: COVID-19, internal migration, EU states.

Current aspects of accounting and information provision for effective management of the enterprises from the mining industry in Bulgaria

Miglena MARINOVA¹

¹PhD Student Department of Accounting, Tsenov Academy of Economics, Svishtov, Bulgaria

Abstract: The research is focused on the current problems of accounting as a system that provides management in the enterprises from the mining industry with every kind of information it needs.

The leading purpose is to analyze the costs in the enterprises of the mining industry and the possibilities of realizing improvements in the generation of accounting information for them in an effort to increase the efficiency of their management.

Research tasks are regarding to: 1) analyze the relationship between costs, volume and profit; 2) visualize cost accounting cycle through the view of the enterprises from the mining industry; 3) evaluate the pros and cons of using different types of cost accounting in the mining industry and disclosure of the deviations; 4) focus on the specifics of calculation in the enterprises of the mining sector; 5) mark the distinctive features of cost accounting and management accounting in the context of mining industry.

The thesis of the study is that compliance with the specifics of the mining activity and the implementation of modern approaches in cost accounting and calculation lead to an increase in their informational usefulness in making adequate management decisions.

The results of the research helped to define ideas and proposals for improvements in generating analytical accounting information about costs and different calculation models which can be successfully used in the enterprises from the mining industry in Bulgaria. In addition, important effects of using of ERP systems in management accounting were evaluated.

Keywords: accounting, enterprises, mining industry, expenses, cost accounting

Accounting information as a factor for effective management of energy sector companies

Niya MARINOVA¹

¹PhD Student, Department of Accounting, Tsenov Academy of Economics, Svishtov, Bulgaria

Abstract: The energy sector involves companies engaged in the production of energy, its delivery to consumers via the electricity supply network and sale of energy. The importance of energy industry for the economy and human life is enormous. The development of other industrial branches, agriculture and the service sector, as well as the territorial organization of public life, depends on its condition and management.

In the course of the study shall be justified the thesis that at the current moment of development of economic science and practice, accounting information is treated as a key factor for optimizing the management of enterprises, including energy sector companies. A number of new and important aspects are identified, which require in-depth research with a view to the search for innovative approaches and alternative solutions in the context of organization and digitalization of the accounting process.

The purpose of the study is to analyze the activity of energy sector companies as an object of accounting reporting and to mark the features of the management and accounting systems. The following research tasks have to be settled for reaching the above-mentioned goal: 1) to establish the importance of the accounting information system for effective management of energy sector companies; 2) to analyze the impact of new information technologies on the generation and processing of accounting information in energy sector; 3) to carry out a critical assessment of the approaches in preparing the accounting budgets, as well as the specifics and good practices of the operating and financial budgets.

The results of the research are expressed in tracing innovation and digitalization aspects about the accounting process in energy sector companies. *First.* ERP solutions to support the accounting activity in energy sector companies. *Second.* Possibilities for effective use of ERP systems for financial and management accounting. *Third.* Application of a system for performing business analyzes through dashboards and Key Performance Indicators. *Fourth.* Methods and systems of accounting budgeting – fragmentary approbation. *Fifth.* Contemporary (modern) forms of budgets in the accounting practice of energy sector companies.

Keywords: accounting, energy sector companies, digitalization, ERP, accounting budgeting

The Importance Of Information For Decision-Making In Management Accounting

Radosveta Krasteva-Hristova¹

¹ Tsenov Academy of Economics, Svishtov, Bulgaria, r.krasteva@uni-svishtov.bg, ORCID: 0000-0002-6388-0987

Abstract: Decision making is essentially a process of choosing between different alternatives, comparing the outcomes of each to choose the most favorable one. They can be short-term (operational) or long-term (strategic) business decisions. Costs are the focus of a comprehensive management analysis regarding their appropriateness, relevance and adequacy. Management accounting has appropriate instruments for manage the costs to support successful management in various situations. The **aim** of the study is to trace the importance of cost information in the process of managerial decision-making. To achieve the goal, several **tasks** are also set: to examine the steps in the process of making similar decisions, to outline the role of costs in it, as well as to establish the most common reasons for making management decisions. The research **methodology** includes theoretical research (application of analysis and synthesis, comparative method and content analysis) and practical research (survey). The conducted research of the literature and the results of the survey among managers and chief accountants of enterprises from the sewing industry in Northern Bulgaria served for the conclusions of the research. The process of decision-making goes through the following steps: identification of the problem; determination of possible alternative solutions; evaluation of the financial results of each alternative; identifying influencing factors that do not have a value expression and, if possible, evaluating them with measurable results and determining their relative importance; selection of the most appropriate alternative, which becomes the management decision taken. The role of the management accounting system is to provide managers with appropriate and timely information about the relevance of costs and revenues of a given management decision. There are two main categories of costs: relevant costs, corresponding to the specific decision and irrelevant costs, not corresponding to the specific decision. There is another category of costs - sunk costs. These are specific non-conforming costs, which, however, are not future, but already past. These are the costs that have already occurred before the selection of the various alternatives and are also independent of the decision taken. They are always past, actual costs and cannot be avoided in any way. The concept of relevant and irrelevant costs can be applied in the process of making various business decisions, namely: own production or purchase of individual elements for business activity; removing or continuing the production of a product; removing or continuing to carry out an activity; acceptance or rejection of special sales orders; preparation of favorable decisions regarding the assortment; decisions on renewal of fixed assets; solutions for combined production, etc. In **conclusion**, there are further opportunities for using cost information in managerial decision-making. It should be used very carefully regarding the time horizon of their action, because the behavior of costs in the long term is fundamentally different from their behavior in the short term. At the same time, the influence of all specific operating, and even possibly emerging, factors on the economic activity should be foreseen, in order to guarantee the quality of the decisions and increase their economic efficiency.

Keywords: management accounting, decision-making process, relevant costs, irrelevant costs.

Dijital Ekonomide İşgücü Piyasasının Rolü

Ruhangiz ALİYEVA¹

Hanım KULUYEVA²

¹Azerbaycan Bakü, Azerbaycan Üniversitesi, ruhangiz.aliyeva@au.edu.az, ORCID; 0000-0001- 5744-9042

Özet: Makalede, modern çağda işgücü piyasasının dönüşümü ve çalışma ilişkileri konuları irdelenirken, ekonominin dijitalleşmesi sürecinde işgücü piyasasının karşılaştığı sorunlar irdelendi. İşsizliğin dinamiklerini etkileyen faktörleri belirledikten sonra, dijital ekonominin ölçeğinin genişlemesi nedeniyle çalışanlar ve işverenler arasındaki ilişkilerin değişme süreçlerini analiz etti. Dijitalleşmenin işgücü piyasasına etkisinin tahmin edilmesi sorunu, istihdam artışına neden olan faktörlerin ve işsizliğin artmasına neden olan faktörlerin kümülatif etkisinin değerlendirilmesinin karmaşıklığında ele alınmaktadır. alandaki mevcut meslekler için, daha fazla kişinin iş aramak için internet hizmetlerini kullanması nedeniyle iş arama süresinin azalması ve çalışanların uzaktan çalışacağı iş yeri sayısındaki önemli artış analiz edilmiştir. Dijital devrim, yaşamlarımızı ve toplumumuzu benzeri görülmemiş bir hız ve ölçekte değiştiriyor. Bu, aynı anda hem büyük fırsatlar hem de büyük zorluklar yaratır. Yeni teknolojiler, özellikle yapay zeka, bazı alanlarda iş kaybına, bazı alanlarda ise çok büyük yeni fırsatların yaratılmasına yol açarak işgücü piyasasında önemli değişikliklere yol açmakta ve sürdürülebilir kalkınma hedeflerine ulaşılmasına önemli ölçüde katkıda bulunmaktadır.

Anahtar Kelimeler: işgücü piyasası, bilgi teknolojileri, istihdam, işsizlik, dijital ekonomi

The Principle of Proportionality Based on The Jurisprudence of European Union Court of Justice

Simeana BESH¹

¹Faculty of Law, University “Ukshin Hoti” Prizren, Republic of Kosovo, Email: simeana.beshi@uni-prizren.com

Abstract: In this article, the proportionality principle in the context of avoiding, abusing, and preventing tax evasion is analyzed in relation to the practice set by the ECJ. The article's goal is to try to address the topic of what function the proportionality principle provides in VAT law, with an emphasis on the practice set by the ECJ. In an increasingly globalized economy, international trade in goods and services has increased quickly as Value Added Tax has extended over the globe. The methodology for this article will be a qualitative analysis. Given that VAT has the potential to distort international trade and that this situation is hindering business activity, slowing economic growth, and distorting competition, it is essential that jurisdictions benefit from principles that ensure that VAT systems and policies interact consistently to facilitate rather than hinder market.

The results highlight the findings based from the case law of the European Court of Justice as well as from international dialogues including members, partners, and other interested parties such as academic institutions and industry organisations.

Kültürel Çeşitlilikte Afrika Kültürü

Ulker İMAMALİYEVA ¹

¹Doctor of Philosophy, Baku State University, e-mail:lmameliyeva_ulker@mail.ru

Özet: Afrika, Avrasya kıtasından sonra dünyanın ikinci büyük kıtasıdır ve dünya yüzeyinin yüzde 22'sini kaplar. Bu kıtada 54 egemen devlet var. Afrika, doğal koşulları, flora ve faunası, nüfusunun antropolojik, etnik ve dilsel bileşimi nedeniyle dünyanın en renkli kıtalarından biridir. Bilim adamları, gezegenimizdeki ilk yaşamın burada ortaya çıktığına inanıyor. Afrika hem fakir hem de zengin bir kıtadır. Yüzyıllar boyunca insanların etkileşimi sayesinde burada mimari, sanat ve müzikte belirli stiller ortaya çıktı. Afrika'da 3 büyük ırkın (Avrupalı, Zenci, Moğol ve karışık ırk) temsilcileri yaşamaktadır.

Dünya kültür sisteminde Afrika kültürü, Avrupa ve Asya kültürüne göre daha az çalışılsa da, zengin gelenekleri, ulusal zenginliği, çeşitli insan potansiyeli ve kültürü ile bir kıta olarak ilgi çekicidir. Afrika etiği, Avrupa'da olduğu gibi dini temeller üzerine değil, ortak bir yaşam biçimi temelinde oluşturulmuştur. Afrika kıtasında farklı gelişim düzeyleri, gelenekleri, ritüelleri ve hayata bakış açıları olan farklı kabileler yaşıyor. Afrika kültürü, 17.-18. yüzyıllarda Avrupa kolonizasyonu döneminde değişikliklere uğradı. Afrika ancak 20. yüzyılda sömürge baskısından kurtuldu. Ancak birçok millet, kabile ve etnik grup kadim zamanların geleneklerini korumayı başarmıştır. 1963 yılından bu yana Afrika kıtasında her yıl 25 Mayıs günü "Kurtuluş Günü" kutlanmaktadır.

Afrika kültürü, dünya kültürüne önce Mısır üzerinden, ardından Kuzey Afrika'nın fethi sırasında Araplar aracılığıyla nüfuz etti. Üçüncü aşama, 16. ve 17. yüzyıllarda siyah kölelerin Amerika'ya ihraç edilmesiyle. 20. yüzyılın başından itibaren, Picasso, Matisse, Rimbaud'u büyük ölçüde etkileyen Afrika kültürüne yeni bir ilgi ortaya çıktı. Afrika'nın modern halkları, farklı antropolojik tiplere ve ırksal gruplara ayrılmıştır. Çeşitli kaynaklara göre Afrika, küçük uluslar ve etnik gruplar da dahil olmak üzere 500 ila 8.000 kişiye ev sahipliği yapıyor. Bazılarında birkaç yüz kişi var.

Afrika kültür ve medeniyeti, Batı medeniyetinden farklıdır ve "kolektivizm" ilkelerini yansıtan Hint ve Çin kültürlerine yakındır. İnsan topluluğu, Afrika'nın en temel değerlerinden biridir. Bu kıtada İslam ile Hristiyanlık arasında misyonerlik yarışı vardır. Sudan, Senegal ve Nijerya'da Müslümanlar, Güney Afrika ülkelerinde ise Hristiyanlar çoğunlukta bulunmaktadır. Nijerya dışında, çoğu Afrika ülkesi diğer dinlere karşı hoşgörülü bir tavır sergiliyor. Gelenek ve görenekler kıtanın kültürel mirası olarak kabul edilir. Afrika kabileleri her zaman garip yaşam tarzları, gelenekleri ve inançları ile ayırt edilir.

Anahtar Kelimeler: Afrika, kültür, gelenek, kabile, nüfus

African Culture in Cultural Diversity

Abstract: Africa is the second largest continent in the world after the Eurasian continent and covers 22 percent of the earth's surface. There are 54 sovereign states on this continent. Africa is one of the most colorful continents in the world due to its natural conditions, flora and fauna, anthropological, ethnic and linguistic composition of its population. Scientists believe that the first life on our planet originated here. Africa is both a poor and a rich continent. Thanks to the interaction of peoples over the centuries, specific styles in architecture, art and music have emerged here. Representatives of 3 major races (European, Negro, Mongolian and mixed race) live in Africa.

In the world cultural system, although African culture is less studied than European and Asian culture, it is interesting as a continent with rich traditions, national wealth, diverse human potential and culture.

African ethics were formed not on religious grounds, as in Europe, but on the basis of a common way of life. The African continent is inhabited by different tribes with different levels of development, traditions, rituals and outlook on life. African culture underwent changes during the period of European colonization in the 17th-18th centuries. Africa was freed from colonial oppression only in the 20th century. However, many nations, tribes and ethnic groups have been able to preserve the traditions of ancient times. Since 1963, the African continent has been celebrating "Liberation Day" every year on May 25.

African culture penetrated world culture first through Egypt and then through the Arabs during the conquest of North Africa. The third stage was the export of black slaves to America in the 16th and 17th centuries. From the beginning of the 20th century, a new interest in African culture arose, which greatly influenced Picasso, Matisse, Rimbaud. The modern peoples of Africa are divided into different anthropological types and racial groups. According to various sources, Africa is home to between 500 and 8,000 peoples, including small nations and ethnic groups. Some of them have several hundred people.

African culture and civilization is different from Western civilization and it is close to Indian and Chinese cultures which reflect the principles of "collectivism". Human community is one of Africa's most fundamental values. There is a missionary race between Islam and Christianity on this continent. Muslims are the majority in Sudan, Senegal and Nigeria, and Christians are the majority in South African countries. With the exception of Nigeria, most African states have a tolerant attitude towards other religions. Traditions and customs are considered the cultural heritage of the continent. African tribes have always been distinguished by their strange lifestyles, customs and beliefs.

Abstract: The paper analyses the effect of corruption on entrepreneurship in a sample of EU post-transition countries. As one of the biggest obstacles to countries' economic and social development, corruption can also significantly affect entrepreneurship rates. However, the effects of corruption vary across countries due to the larger number of economic, social and political factors. Conversely, some analyses show how corruption could help overcome too stringent regulations and bureaucratic obstacles. In this paper, we analyze the effect of various forms of corruption on entrepreneurship in a sample of EU post-transition countries, for the 2006-2020 period by the means of panel data analysis. The forms of corruption included in the analysis cover public sector corruption, political corruption and judicial corruption. The outline of the paper is as follows. After the Introduction, Section 2 offers an overview of the existing literature on the relationship between corruption and entrepreneurship. Further, Section 3 delivers a comparative analysis of the existing data on various types of corruption and entrepreneurship development in EU post-transition economies relative to the old member states. In Section 4, an econometric analysis of the corruption effects on entrepreneurship will be performed. Finally, section 5 will conclude.

Energy Crisis and The Role of Monetary Policies (Intra and Cross-Border Basis)

Zainab Williams-Adeyanju¹

¹Department of Economics, Epoka University, Tirana, Albania, zwilliamsadeyanju21@epoka.edu.al

Abstract: This study analyzes the role and effectiveness of monetary policies in ensuring the stability of the financial system as well as maintaining price stability during the global energy crisis. There have been several mixed perspectives on the impact of conventional and unconventional monetary policies in earlier literature, while some predict a positive effect in subduing inflation in the advanced economies, others predict an upward inflationary pressure on developing economies and emerging markets at the same periods. This paper examines the effects of the oil price shocks and the cutbacks in natural gas supplies on the real economies of developing countries, advanced countries, and emerging markets and findings reveal that the economic structure and openness of an economy are factors affecting the type and effectiveness of monetary policies to be adopted. While unconventional policies appeared to be appropriate for the developed economies, they were not enough to stimulate the economies of the developed economies and emerging economies.
